Signal Warrant Rule #1: [vehicle-hours=0.0]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=14]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=155]
   FAIL - Total volume less than 650 for intersection
          with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Signal Warrant Rule #2: [approach volume=52]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=1148]
   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Approach[eastbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.5]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=15]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=2507]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Signal Warrant Rule #1: [vehicle-hours=14.4]
   SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=267]
   SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=2860]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

   SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=423]
   SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=2770]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Signal Warrant Rule #3: [approach count=3][total volume=155]
   FAIL - Total volume less than 650 for intersection
          with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Approach[westbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.0]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=7]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=349]
   FAIL - Total volume less than 650 for intersection
          with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Approach[northbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=22.3]
   SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=480]
   SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=1624]
   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
Approach[southbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.2]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=56]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=1624]
   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

```

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Signal Warrant Rule #1: [vehicle-hours=24.1]
   SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=273]
   SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=2487]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Approach[westbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=39.5]
   SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=364]
   SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=2634]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Approach[westbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=80.7]
   SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=402]
   SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=2723]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=14]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=155]
   FAIL - Total volume less than 650 for intersection
          with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

```

SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed this warrant are probably more likely to meet one or more of the other volume based signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction. Consideration of the other signal warrants, which is beyond the scope of this software, may yield different results.

Signal Warrant Rule #1: [vehicle-hours=20.4]
   SUCCEED - Vehicle-hours greater than or equal to 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=472]
   SUCCEED - Approach volume greater than or equal to 100 for one lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=1607]
   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
Approach[southbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=0.2]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=55]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=1607]
   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=4][total volume=1482]
   SUCCEED - Total volume greater than or equal to 800 for intersection
             with four or more approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

Approach[eastbound][lanes=1][control=Stop Sign]
Signal Warrant Rule #1: [vehicle-hours=1.7]
   FAIL - Vehicle-hours less than 4 for one lane approach.
Signal Warrant Rule #2: [approach volume=27]
   FAIL - Approach volume less than 100 for one lane approach.
Signal Warrant Rule #3: [approach count=3][total volume=2553]
   SUCCEED - Total volume greater than or equal to 650 for intersection
             with less than four approaches.
--------------------------------------------------------------------------------
SIGNAL WARRANT DISCLAIMER
This peak hour signal warrant analysis should be considered solely as an
"indicator" of the likelihood of an unsignalized intersection warranting
a traffic signal in the future.  Intersections that exceed this warrant
are probably more likely to meet one or more of the other volume based
signal warrant (such as the 4-hour or 8-hour warrants).

The peak hour warrant analysis in this report is not intended to replace
a rigorous and complete traffic signal warrant analysis by the responsible
jurisdiction.  Consideration of the other signal warrants, which is beyond
the scope of this software, may yield different results.

## Trip Generation Analysis

Hexagon Transportation Consultants, Inc.

## Memorandum

---

**Date:** October 13, 2021

**To:** Ms. Kirsten Chapman, ICF

**From:** Gary Black
Shikha Jain

**Subject:** Trip Generation for the Proposed Facebook Willow Village Campus in Menlo Park, California

---

Hexagon Transportation Consultants, Inc. has developed trip generation estimates for the proposed Facebook Willow Village Campus in Menlo Park, California. The project site, which is approximately 59 acres in area, is located on Willow Road between the Joint Powers Board (JPB) Rail Corridor in the north and O'Brien Drive in the south. The site is accessed via Hamilton Avenue and two driveways that connect directly to Willow Road. Existing uses on the site include approximately one million square feet of industrial, office, and warehouse space. The project proposes to replace the existing uses with a mixed-use village that include residential, retail, recreational, hotel, and office uses.

# Trip Generation

Trip generation estimates for the mixed-use development are based on standard trip generation rates published in the Institute of Transportation Engineers (ITE) Trip Generation, 10th Edition manual. A variety of trip reduction credits were applied to the project's gross trip generation estimates based on the project's mixed-use nature, physical design features, and geographic location. The resulting trip generation was then subject to a 20% site-wide TDM trip reduction requirement to derive a site-wide trip cap.

Net project trip generation on the surrounding roadway network was estimated by further crediting potential pass-by trips and trips generated by the existing land uses on site.

## Gross Project Trip Generation

A description of the source of trip generation rates for each land-use is provided below:

- ***Facebook Office***. Initial trip estimates for Facebook office uses are based on ITE Land Use code 710: General Office Building.
- ***Residential.*** The trip estimate is based on the ITE Land Use code 221: Multifamily Housing (Mid-Rise), which includes apartments, townhouses, and condominiums located within the same building with at least three other dwelling units and that have between three to ten levels. Some of the apartments are designated as senior housing, which could have a lower trip rate. Thus, the trip generation estimate for the apartments is conservative.
- ***Retail.*** Trip estimates are based on ITE Land Use code 820: Shopping Center, which includes several types of retail uses like restaurants, movie theaters, bowling alleys etc. that are typically present in shopping centers.
- ***Hotel.*** Trip estimates are based on ITE Land Use code 310: Hotel.

- ***Public Park.*** Trip estimates are based on ITE Land Use code 488: Soccer Complex due to the programmatic design of the park, which will have play structures and open field areas for warm-ups or casual play.
- ***Community Space.*** Trip estimates are based on ITE Land Use code 495: Recreational Community Center

**Internal Capture**

Since this project is mixed-use in nature, a portion of the trips generated by the project will both begin and end within the development, also called as internal capture. Internal capture trip estimates were made for each of the Project's land uses based on the specific mix of uses, sizes, and location within the Project utilizing a combination of two internal capture methodologies: the Transportation Research Board (TRB) *National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Internal Trip Capture Estimation for Mixed-Use Developments,* and US EPA *Mixed Use Trip Generation Model v.4 (MXD),* 2010.

NCHRP Report 684 includes an assessment of on-site land-use categories including retail, office, residential, restaurants, theaters, and hotels within the site land use mix when generating internal capture. The EPA MXD method does not explicitly differentiate subcategories such as restaurants, theaters, and hotels but it does account for location factors influencing the project, including regional location, transit availability, density of development, walkability factors, and the sociodemographic profile of site residents and businesses. Given the strengths and weaknesses of both methodologies, an integrated approach for internal capture was developed as described in *Getting Trip Generation Right: Eliminating the Bias Against Mixed-Use Development, PAS Memo, American Planning Association, May 2013.* In accordance with the PAS memo, the full EPA MXD methodology and NCHRP 684 methodology were applied to get internal capture from each method. The results of the two methods were then combined in terms of percentages of trips remaining internal to the development site using proportioning factors provided in the PAS Memo (see Appendix A).

Local area characteristics inputs into the EPA MXD model are described in Table 1.

**Table 1**
**Input for EPA MXD Model V4**

| Factor | Input Value | Source |
|---|---|---|
| Project Acearage | 59 acres | Project Plan |
| Number of intersections within or on the perimeter of the MXD | 6 | Project Plan |
| Is transit present within the site or across the street | Yes | Project Plan |
| Is the site a Central Business District or TOD | No | -- |
| Employment within one mile of the MXD | 20,851 | http://onthemap.ces.census.gov/ |
| Employment within a 30 min transit trip | 43,479 | http://onthemap.ces.census.gov/ |

**External Walk, Bike, and Transit**

External walk, bike, and transit trip reduction is based on trips to the site using these alternative modes of transportation. This reduction is dependent on local area characteristics like availability of transit near the site, intersection density, etc. EPA MXD accounts for local area characteristics (see Table 1) to provide trip reductions based on external walking, biking, and transit.

The internal capture and external walk, bike and transit reductions were credited against the initial trip generation estimates (using ITE rates) to derive the gross project trip generation. Some of the external walk, bike, and transit (tram) trips would be to the other facilities of the Facebook campus. The gross project trip generation would be subject to the 20% site-wide TDM requirement, discussed below.

As shown in Table 2, the project trips generated by the proposed land uses after internal capture and external walk, bike, and transit reductions are 34,254 daily trips, including 3,123 AM peak hour trips (2,223 inbound trips and 900 outbound trips), and 3,834 PM peak hour trips (1,241 inbound trips and 2,593 outbound trips).

## Table 2
## Trip Generation Estimates

| Land Use | ITE Code [1] | Size | | Daily Rate | Daily Trips | AM Peak Hour Rate | AM Peak Hour In | AM Peak Hour Out | AM Peak Hour Total | PM Peak Hour Rate | PM Peak Hour In | PM Peak Hour Out | PM Peak Hour Total |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

Notes:

emp = employees; ksf = 1,000 square feet; du = dwelling unit; rms = rooms

1 Daily, AM, and PM peak hour average rates published in *ITE Trip Generation Manual, 10th Edition, 2017* were used for each land use.

2 Internal Capture developed using *National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Internal Trip Capture Estimation for Mixed-Use Developments* and *US EPA Mixed Use Trip Generation Model v.4, 2010* per the methodology described in *Getting Trip Generation Right: Eliminating the Bias Against Mixed-Use Development, PAS Memo*, American Planning Association, May 2013.

3 External walk, bike, and transit reduction developed using *US EPA Mixed Use Trip Generation Model v.4, 2010*.

4 ITE Trip Generation Manual, 10th Edition, 2017 provides trip rates per field for a soccer complex. The park is planned for 4 acres. Number of soccer fields on 4 acres of land was estimated based on the size of a standard soccer field.

5 Daily TDM reduction based on Willow Village Adjustment Request: Transportation Demand Management. *Peak Hour TDM reduction based on proposed peak hour trip caps for Facebook, and a 10% TDM reduction for non-Facebook uses.*

6 Pass-by trip reduction is based on the average pass-by trip reduction rate published in the ITE Trip Generation Handbook, 3rd Edition. Hexagon assumes no pass-by trip reduction during the AM peak hour and half of the PM peak pass-by reduction for daily trip generation.

7 Existing use Trip Estimates based on driveway counts conducted over three days in September 2019 per *Facebook Willow Traffic Counts Memorandum*, Fehr & Peers, March 26, 2020. 8-9 AM in the AM peak period and 4-5 PM in the PM peak period have been considered as peak hours since they have the highest trips.

### Transportation Demand Management (TDM)

The City of Menlo Park requires all new developments to reduce their trip generation by 20 percent via TDM strategies. The TDM reduction is applied to the trip generation after the internal capture and the proposed project location and ambient mode split have been accounted for. This method of accounting for the 20 percent reduction is applied to the peak hour trips. For daily trips, the project has requested an exemption to have the 20 percent reduction applied to the trip generation before the internal capture and other trip reductions.

Per the Willow Village VMT and Trip Generation Analyses Assumptions Memorandum developed by Fehr & Peers dated August 9th, 2021, the Facebook offices will be capping their trips to a much lower trip generation level during the AM and PM peak hours by using aggressive TDM measures. These TDM measures are estimated to achieve a reduction of 20 percent from ITE trip rates on daily trips. During the AM and PM peak hours, the project proposes TDM greater than 20 percent from ITE trip rates after accounting for internal capture and external walk, bike and transit trips. Accordingly, a lower TDM trip reduction is needed for the other proposed land uses on the site to achieve an overall TDM reduction of 20 percent for the proposed project. A TDM trip reduction of 3 percent was assumed for the other proposed land uses for daily trips and a TDM trip reduction of 10 percent was assumed for the other proposed land uses for peak hour trips.

After accounting for the Facebook trip cap and the TDM reduction for all other proposed land uses, the main campus is estimated to generate 33,263 daily trips, including 2,396 AM peak hour trips (1,638 inbound trips and 758 outbound trips), and 2,907 PM peak hour trips (1,061 inbound trips and 1,846 outbound trips).

## Net Project Trip Generation

Net project trip generation estimates the number of new project trips generated onto the surrounding roadway network. The following categories of trips are credited from the site-specific trip cap to derive the net project trip generation.

**Pass-By**

The retail uses would attract some of their customers from people who are passing by the site on Willow Road or Bayfront Expressway heading towards their destination. These customers would not need to make a separate vehicle trip to come to the Project Site. Such vehicle trips are categorized as pass-by trips as they are not new trips generated on the roadway network and should be credited from the project trip generation. A pass-by trip reduction for retail trips was applied based on the average pass-by reduction rate published in the ITE Trip Generation Handbook, 3rd Edition. Pass-by data are typically available only for the PM peak hour. Hexagon assumed no pass-by trip reduction for the AM peak hour and half of the PM peak pass-by trip reduction for daily trip generation.

**Existing Uses**

Trips associated with the existing uses on the Project Site were credited against the new trip generation. The trips generated by the existing buildings on the site were estimated based on driveway counts conducted over three days in September 2019 per Facebook Willow Traffic Counts Memorandum, Fehr & Peers, March 26, 2020. The existing uses on the site generated an average of 11,700 trips daily, including 985 trips in the AM peak hour (699 inbound and 286 outbound trips), and 805 trips in the PM peak hour (250 inbound and 555 outbound trips).

As shown in Table 2, the net proposed project trips generated by the main campus on the roadway network would be 20,537 daily trips, including 1,411 AM peak hour trips (939 inbound trips and 472 outbound trips), and 1,914 PM peak hour trips (719 inbound trips and 1,195 outbound trips). As shown in Table 11, the net trips generated by the Hamilton Parcel are estimated to be 218 daily trips, including 6 AM peak hour trips (3 inbound trips and 3 outbound trips), and 18 PM peak hour trips (9 inbound trips and 9 outbound trips).

Hexagon Transportation Consultants, Inc.

## TRAFFIC SIGNAL WARRANTS WORKSHEET

Analyst: SJ date: 6/22/21

Major Street: O'Brien Drive — Critical Approach Speed* (mph) 25

Minor Street: Adams Drive/ — Critical Approach Speed* (mph) 25

**Posted Speed.*

Critical speed of major street traffic > 50 mph (64 km/h)………………………. ☑ or Rural (R)

In built up area of isolated community of < 10,000 population……………………. ☐

☐ Urban (U)

**AM PEAK PERIOD**

### Warrant 3 - Peak Hour

**PART A**

(All parts 1, 2, and 3 below must be satisfied)

AM PEAK PERIOD

| | Existing | Bkgrd No Proj | Bkgrd + Proj | Cum No Proj | Cum + Proj | Cum w/dumb | Cum w/dumb+P | |
|---|---|---|---|---|---|---|---|---|
| Minor Street Approach Direction w/ Highest Delay | SB | SB | SB | SB | SB | SB | SB | |
| Highest Minor Street Average Delay (sec/veh) | 14.0 | 14.1 | 49.5 | 48.3 | 320.8 | 35.8 | 193.0 | |
| Corresponding Minor Street Approach Volume (veh/hr) | 101 | 103 | 101 | 144 | 105 | 139 | 105 | |
| Minor Street Total Delay (veh-hrs) | 0.4 | 0.4 | 1.4 | 1.9 | 9.4 | 1.4 | 5.6 | |
| 1. The total delay experienced for traffic on one minor street approach controlled by a STOP sign equals or exceeds 4 vehicle-hours for a 1-lane approach and 5 vehicle-hours for a 2-lane approach; AND | No | No | No | No | Yes | No | Yes | |
| 2. The volume on the same minor street approach equals or exceeds 100 vph for 1 moving lane of traffic or 150 vph for 2 moving lanes; AND | Yes | Yes | Yes | Yes | Yes | Yes | Yes | |
| 3. The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with 4 or more approaches or 650 vph for intersections with 3 approaches. | No | No | Yes | Yes | Yes | Yes | Yes | |
| **Signal Warranted based on Part A?** | **No** | **No** | **No** | **No** | **Yes** | **No** | **Yes** | |

**PART B**

AM PEAK PERIOD

| | | Approach Lanes: One | Approach Lanes: 2 or More | Existing | Bkgrd No Proj | Bkgrd + Proj | Cum No Proj | Cum + Proj | Cum w/dumb | Cum w/dumb+P | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Major Street - Both Approaches | O'Brien Drive | X | | 470 | 475 | 1030 | 868 | 1382 | 819 | 1333 | |
| Minor Street - Highest Approach | Adams Drive/ | X | | 101 | 103 | 101 | 144 | 105 | 139 | 105 | |
| **Signal Warranted based on Part B?** | | | | **No** | **No** | **No** | **No** | **No** | **No** | **Yes** | |

The Warrant is satisfied if the plotted point for vehicles per hour on the major street (both approaches) and the corresponding per hour higher vehicle volume minor street approach (one direction only) for one hour (any four consecutive 15-minute periods) fall above the applicable curves in California MUTCD Figure 4C-3 or 4C-4.

# 1. INTRODUCTION

Willow Village will replace approximately one million square feet of industrial, office, and warehouse buildings in the Menlo Science and Technology Park with a mixed-use development. Willow Village creates a new mixed-use community comprised of new housing, retail, hotel, office, and entertainment space. The 59-acre Willow Village site is located in Menlo Park's Bayfront Area. The site is bounded by Willow Road to the west, the Joint Powers Board (JPB) rail corridor to the north, the Hetch-Hetchy corridor and Mid-Peninsula High School to the south and an existing life science office park to the east. **Figure 1** shows the project location and adjacent street network.

The Project will include the following components:

- Community-serving retail – grocery, pharmacy, restaurants, personal services, and entertainment venues
- Below market rate and market rate housing
- A hotel
- Office buildings with associated meeting and conference space
- Open space improvements including a public park and community center
- New bike and pedestrian facilities

The primary purpose of any Transportation Demand Management (TDM) plan is to reduce the amount of vehicle traffic generated by a development by creating measures, strategies, incentives, and policies to shift workers and residents from driving alone to using other travel modes including transit, carpooling/ridesharing, cycling, and walking. TDM strategies can include informational resources, physical site enhancements, monetary incentives, and more. This report presents the comprehensive TDM Plan for the Willow Village development. In addition to reducing vehicles trips, the TDM Plan can reduce the parking demand of the residents and office workers.

The existing and proposed transit, bicycle, and pedestrian facilities near the site are illustrated in this document to provide the transportation context of the Project. The TDM Plan includes attributes of the site's location and physical improvements at the site as well as the TDM measures that will be provided by the Project.

Facebook Willow Village

## 1.1 PROJECT DESCRIPTION AND TDM APPROACH

Willow Village proposes to replace approximately one million square feet of existing industrial, office, and warehouse space in the Menlo Science and Technology Park with a new mixed-use village including up to 1,730 residential units, 200,000 square feet of retail uses, a 193-room hotel, 1,600,000 square feet of office and accessory uses, consisting of a maximum of 1,250,000 square feet of space for office and amenity uses and the balance ( 350,000 square feet, if the office space is maximized) of accessory uses. The proposed site improvements include construction of:

- new circulation improvements to accommodate vehicles, bicycles, and pedestrians,
- utility improvements,
- a community park, an elevated park, and other open space improvements,
- residential mixed-use buildings,
- a hotel, and
- office campus improvements.

**Figure 2** is a site plan showing the roadway network, landscaping, and building locations**. Figure 3** shows the location of the three districts consisting of the Office Campus District, the Town Square District, and Residential/ Shopping District. The Office Campus District includes the office and accessory space that will be used by Facebook. The Town Square District will include the hotel, retail, and restaurants. The Residential / Shopping District will include apartments, a grocery store, and other retail.

Due to the mixture of office, residential, and retail uses, the Project's TDM plan is anticipated to reduce vehicles trips throughout the day as well as during the typical morning and afternoon peak periods of travel. The mix of residential, office, and retail uses within the Project reduces the need to travel long distances to jobs and services. The Project proposes walking and biking improvements including sidewalks and gathering areas for pedestrians as well as on and off-street bike facilities. These facilities reduce the need to use a vehicle to travel within the project.

### 1.1.1 PROPOSED CIRCULATION AND ACCESS

**Figure 2** shows the proposed street network. The Project proposes a new circulation network consisting of approximately 4.6 acres of public rights of way and approximately 7.2 acres of private streets with public access easements. The proposed network will accommodate multiple transportation modes including vehicles, pedestrians, and bicycles. Site access from Willow Road will be primarily provided via two signalized intersections: the realigned Hamilton Avenue intersection and a proposed new intersection at Park Street. Main Street will provide primary north/south access via a new signalized intersection at O'Brien Drive. There

Facebook Willow Village

will also be two right-in/right-out driveways. Both Hamilton Avenue and Park Street connect with Main Street to facilitate circulation throughout the Community. There will also be a connection via the North Loop Road between Hamilton Avenue and Adams Court. In addition to these roadways, the Project includes an off-street pedestrian and bicycle pathways that parallel Main Street and East Loop Road.

### 1.1.2 PROPOSED CAMPUS PARKING AND TRANSIT

Along the eastern edge of the Office Campus District, seated worker parking will be provided in two parking structures with a total of approximately 3,325 parking spaces with an additional 600 valet spaces. Both parking structures include a ground-level transit hub for regional Facebook worker commuter shuttles and intra-campus trams. Intra-campus trams will also operate on Main Street, West Street, and East Loop Road providing service between the Willow Village, Bayfront, and Classic Campuses. Visitor parking for the Office Campus District will be in a shared parking structure in the northwestern corner of the project site. Shared parking is located under the Town Center, Hotel, and Parcel 4 and will be used by the hotel guests and employees, retail patrons and employees, and office visitors.

Reserved residential parking will be located on the residential parcels. On mixed-use parcels with residential and retail uses, provisions will be made to reserve the residential parking spaces. Residential parking spaces will be unbundled to provide flexibility for residents, and it generally keeps car ownership lower which supports the lower end of City's municipal code requirements. The publicly accessible park will have its own surface parking lot and on-street parking will be time limited during the day for general use.

# 2. SITE CONTEXT - TRANSPORTATION SERVICES

The transportation system serving the project site includes roadways, pedestrian and bicycle facilities, and transit services. The existing transit, bicycle and pedestrian facilities, and planned project improvements that will support travel to the site by modes of transportation other than driving alone are described below. The data presented represents transit operating conditions prior to the shelter in place order issued March 16, 2020.

## 2.1 NEARBY TRANSIT SERVICE

The City of Menlo Park encourages the use of transit as an alternative mode of transportation and is served by two major transit providers: SamTrans and Caltrain. San Mateo County Transit District (SamTrans) provides bus service throughout San Mateo County and into parts of San Francisco and Palo Alto. Caltrain provides commuter rail service between San Francisco and San Jose. In addition, Caltrain shuttles provide access from the Menlo Park Caltrain Station to the Willow Road area office buildings during commute hours.

Paratransit services are also available for seniors and people with disabilities. The transit district offers Redi-Wheels paratransit service for persons with disabilities who are unable to take SamTrans regular buses.

**Figure 4** shows the existing transit bus routes and bus stops that serve the Project site. **Table 1** summarizes hours of operation and service frequencies for the bus routes nearest the site.

### 2.1.1 EXPRESS BUS SERVICE BETWEEN THE EAST BAY AND PENINSULA

The Dumbarton Express is an all-day, limited-stop bus service that takes riders from the East Bay to the Peninsula via Dumbarton Bridge on two bus routes. The DB route serves stops on Willow Road in Menlo Park and connects to the Downtown Palo Alto Transit Center. The DB1 route serves stops on Willow Road in Menlo Park north of US 101 and connects to Stanford Research Park via Oregon Expressway. Dumbarton Express bus stops that serve the Willow Village site are located on Willow Road and are accessible within a five-minute walk to and from the site. The closest existing stops are located at the intersection of Willow Road and Ivy Drive and Willow Road and Hamilton Avenue.

### 2.1.2 CALTRAIN

Caltrain provides weekday commuter rail service between San Jose and San Francisco. There are currently 46 trains traveling northbound to San Francisco and 46 trains traveling southbound from San Francisco each weekday. A total of 65 trains that serve the Menlo Park Station each day. The Menlo Park and Palo Alto Downtown stations are located approximately 3.0 miles southwest of the Project site and can be accessed by a twenty-minute bicycle ride, or a thirty-minute bus ride on either M4-Willow Road Shuttle or Dumbarton Express bus routes near the Willow Village site that drop riders off directly in front of the Menlo Park and Palo Alto Caltrain stations. Facebook currently provides additional private shuttle service for their Menlo Park workers to the Palo Alto, Menlo Park and Redwood City Caltrain stations.

### 2.1.3 M4-WILLOW ROAD SHUTTLE

The M4-Willow Road Shuttle is a free commuter shuttle open to everyone. It runs between the Menlo Park Caltrain station and the Willow Road area business parks. The M4-Willow Road Shuttle schedule operates Monday through Friday during the peak period Caltrain schedule. The Menlo Park shuttle service has been in operation since 1989 and is funded through grants from San Mateo City/County Association of Governments, Bay Area Air Quality Management District, and the City of Menlo Park. The closest stops are located south of the Project site along O'Brien Drive, northeast of the intersection of Willow Road and Ivy Drive, and along Hamilton Court and Adams Court.

**TABLE 1: NEARBY TRANSIT SERVICES**

| Route | From | To | Weekdays | | Saturdays | | Sundays | |
|---|---|---|---|---|---|---|---|---|
| | | | Operating Hours | Peak Headway (minutes) | Operating Hours | Headway (minutes) | Operating Hours | Headway (minutes) |
| ***Dumbarton Express*** | | | | | | | | |
| DB | Union City BART | Stanford Oval | 5:20 am to 8:45 pm | 20 | No Service | | | |
| DB1 | Union City BART | 3475 Deer Creek Road | 5:20 am to 8:30 pm | 20 | No Service | | | |
| ***Caltrain Shuttle*** | | | | | | | | |
| M4-Willow Road | Menlo Park Caltrain | Hamilton Court | 7:00 am to 10:00 am & 3:15 pm to 6:15 pm | 60 | No Service | | | |

### 2.1.4 PARATRANSIT

SamTrans paratransit is provided to eligible individuals with disabilities who are prevented from using regular transit services. The San Mateo County Transit District provides paratransit using Redi-Wheels on the bayside of the county and RediCoast on the coast side. Eligible Willow Village residents and employees could use this service to reach nearby destinations.

Figure 4

## Existing Transit Service

Facebook Willow Village

## 2.2 EXISTING PEDESTRIAN AND BICYCLE FACILITIES

### 2.2.1 EXISTING AND PROPOSED PEDESTRIAN FACILITIES

Pedestrian facilities near the site include sidewalks, crosswalks, curb ramps, and pedestrian signals. There is a continuous sidewalk along Willow road on the east side of the street. To access the west side of Willow Road from the Project site, there are two existing signalized crosswalks within walking distance from the proposed development. The existing crosswalks are located at the intersection of Willow Road and Ivy Drive and the intersection of Willow Road and Hamilton Avenue. The majority of the existing pedestrian activity occurs at the Willow Road and Hamilton intersection, which is the closest pedestrian connection to the Bayfront and Classic campuses.

As part of the Willow Village development and to enhance the pedestrian experience, publicly accessible open spaces within the Project site are proposed including a publicly accessible park located northeast of the intersection of Willow Road and Ivy Drive, an off-street bike and pedestrian path connecting O'Brien Drive to the proposed Willow tunnel, town square, retail district, and a dog park near O'Brien Avenue. **Figure 2** shows the location of the proposed open spaces within the Project site.

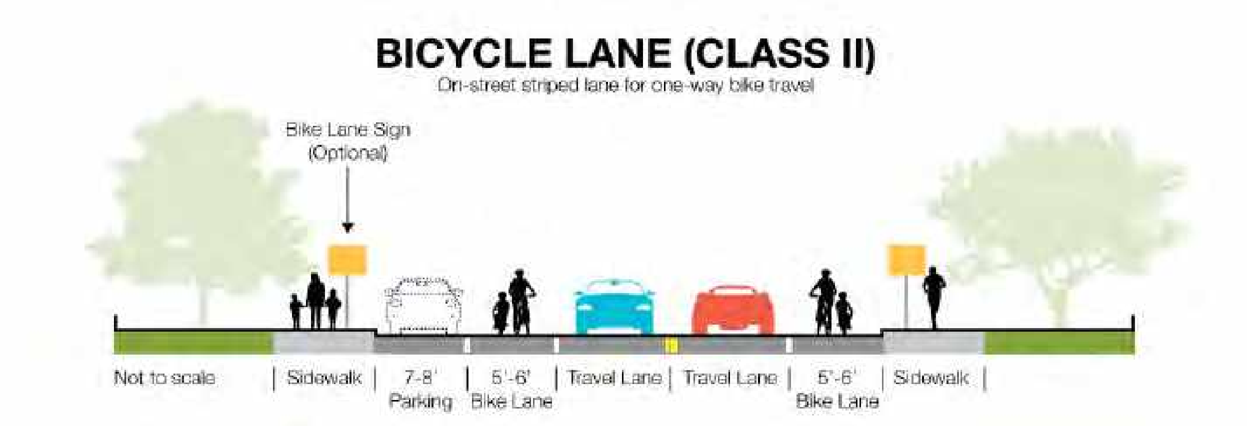
The Project proposes to implement pedestrian crossing improvements along Willow Road. These improvements include installation of new traffic signal at the proposed intersection of Willow Road and Park Street, and sidewalk and landscape improvements. The project will implement a grade separated pedestrian crossing near the Hamilton Avenue and Willow Road intersection via the elevated park. Pedestrian improvements will also be evaluated the intersection of Ivy Drive and Willow Road. Per the proposed site plan, the Project proposes a new intersection at O'Brien Drive requiring new traffic signals with pedestrian crossing considerations.

### 2.2.2 EXISTING AND PROPOSED BICYCLE FACILITIES

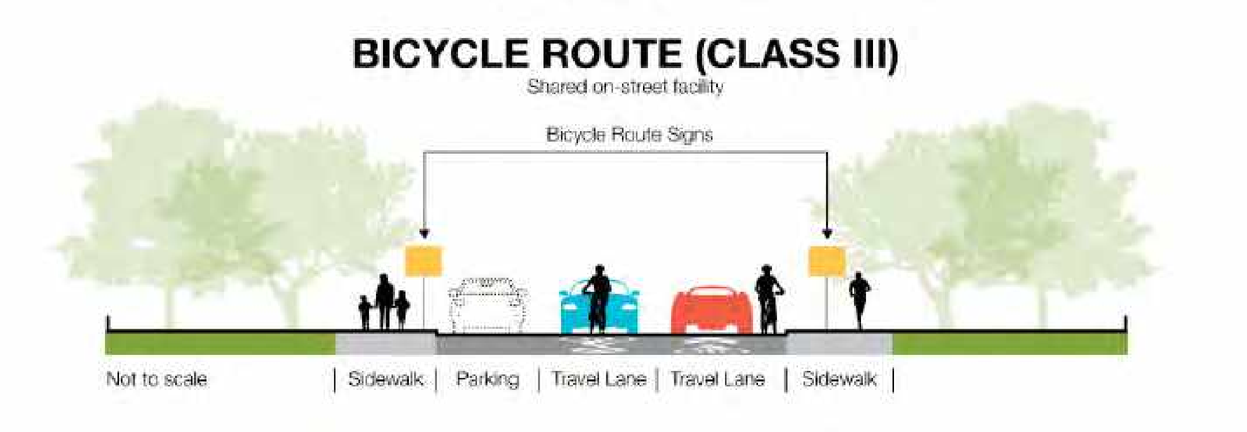
The California Department of Transportation (Caltrans) recognizes four classifications of bicycle facilities:

- **Class I Shared-Use Path**, or commonly referred to as a Bikeway or Bike Path, is a facility separated from automobile traffic for the exclusive use of bicyclists. Class I facilities can be designed to accommodate other modes of transportation, including pedestrians and equestrians, in which case they are referred to as shared use paths.

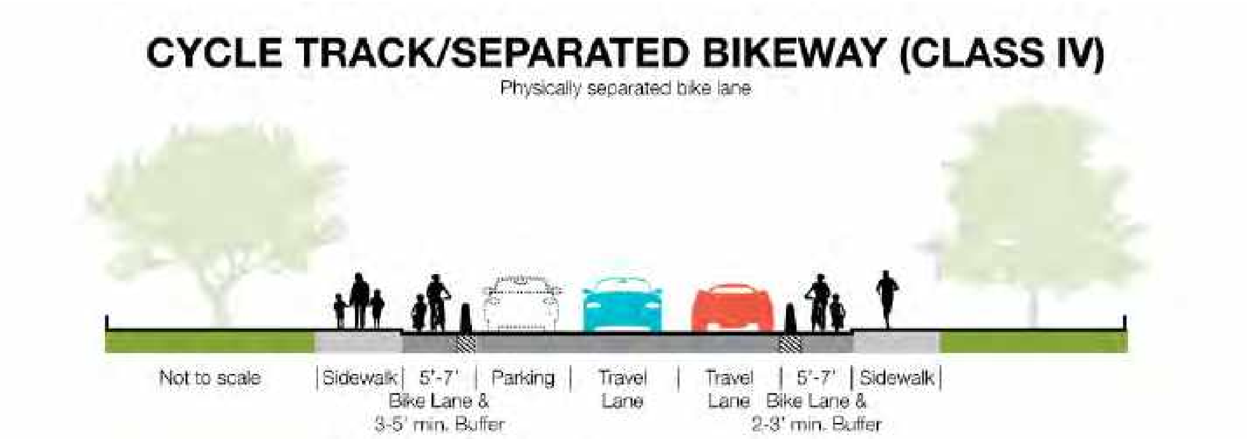
- **Class II Bicycle Lane** is a dedicated facility for bicyclists immediately adjacent to automobile traffic. Class II facilities are identified with striping, pavement markings and signage, and can be modified with a painted buffer to become a buffered bicycle lane (Class II)



- **Class III Bicycle Route** is an on-street route where bicyclists and automobiles share the road. They are identified with pavement markings and signage, and are typically assigned to low-volume and/or low-speed streets.



- **Class IV Cycle Track or Separated Bikeway**, commonly referred to as a protected bicycle lane, is a facility that combines elements of Class I and Class II facilities. They offer an exclusive bicycle route immediately adjacent to a roadway similar to a Class II facility, but provide a physical separation from traffic with plastic delineators, raised curb, or parked automobiles.



Class I shared use path and class II bicycle lanes exist near the site, as shown in **Figure 5**. Willow Road west of the Project site, has class II bike lanes on both sides of the street which are connected to the Bayfront recreational trail shared use path along Bayfront Expressway to the north of the Project site. As part of the Menlo Park Comprehensive Bicycle Development Plan, class II bike lanes are proposed along O'Brien Drive connecting Willow Road to the University Avenue. In addition, Class II bike lanes exist along University Avenue serving local trips with north-south connectivity between East Palo Alto and Bayfront recreational trail. The comprehensive plan recommends class III shared on-street facility along Hamilton Avenue. As part of the proposed Willow Village development, there will be an off-street multi-use pathway adjacent to the East Loop Road that provides north-south connectivity between the proposed North Loop Road and O'Brien Drive within the Project site.

Facebook Willow Village

## 2.3 EXISTING CARSHARE

Carsharing allows members to reserve vehicles by the hour or the day, and is typically used for short-term, local trips. Carsharing supports commute modes of travel such as transit, carpooling, walking, and biking, by providing users with access to a vehicle when needed during the workday. There are several Carsharing providers located near or in Menlo Park include Zipcar, Enterprise, Hertz, Avis, and Budget. Facebook sponsors three existing carshare vehicles operated by Enterprise. There is one existing Zipcar located within the project study area near Facebook Building 58.

Additionally, other carshare services allow residents and neighbors to offer their own vehicles as part of carsharing services (peer-to-peer) such as Getaround, and Turo (formerly Relay Rides).

## 2.4 EXISTING RIDESHARE

Ridesharing is the term to describe grouping travelers into common trips, which allows travelers to better utilize empty seats in passenger cars or vans. Rideshare matching programs, such as 511 Regional Rideshare Program, Scoop, Waze Carpool, Uber Pool, Lyft Carpool, Duet, Carma Carpooling, and other ridesharing apps help carpools and vanpools to form by matching drivers and passengers. Ridesharing services make it easy to coordinate carpools and allows residents or employees to consider downsizing or eliminating the number of vehicles they own.

## 2.5 EXISTING RIDE HAILING

Ride hailing is for-hire, point-to-point transportation services, which include transportation network companies (TNCs) and taxis. Within the last few years, TNCs, such as Uber and Lyft, have become the primary method of ride hailing since the many users can easily utilize smartphone apps to send requests for rides. Similar to carshare and rideshare, ride hailing makes it easy to almost instantly coordinate and reserve a ride, which allows residents and employees to consider downsizing or eliminating the number of vehicles they own.

Facebook has instituted ride hailing lounges on three of their Menlo Park Campuses including the Willow Village campus. The ride hailing lounges provide a centralized location where TNC vehicles are directed to pick up or drop-off their users.

# 3. TDM MEASURES AND STRATEGIES

There are numerous strategies that can be used to encourage residents and workers to use modes of transportation other than driving alone and, therefore, reduce the vehicle miles traveled (VMT) and parking demand generated by a development. TDM is made up of two key components. The first component are the physical design features of a project that allows users not to drive-alone such as combining residential, retail and office uses; building design features such as showers and changing areas and providing pedestrian and bicycle facilities. The second component are the operational programs offered by employers and residential building managers that will reduce drive-alone travel.

The following sections describe a proposed set of programs that could be used to reduce drive-alone trips to the office, residential, retail and hotel components of the project.

## 3.1 OFFICE COMPONENT TDM

It is assumed that Facebook will occupy the office component of the Willow Village project. Facebook currently operates an aggressive TDM program that substantially reduces the number of solo drivers to their Menlo Park campuses. A reduction in solo drivers directly reduces the number of vehicles trips at the campus by two trips - one inbound trip in the morning and one outbound trip in the afternoon. Recent Facebook surveys[1] demonstrated that the drive-alone rate for the Menlo Park campuses is 51%. The drive-alone rate for commuters in San Mateo County is 69% as reported in the 2017 American Community Survey, U.S. Census Bureau. Approximately 34% of Facebook workers use the Facebook shuttles for their commutes.

While the commuter shuttle service is a major component of the TDM program, Facebook offers a broad range of services, subsidies, and amenities to their workers that make it possible to use travel alternatives to driving alone. **Table 2** summarizes the existing Facebook TDM measures that will be available to workers working at office component of Willow Village. These programs include drive-alone alternatives such as transit subsidies, shuttles, carpools, and vanpools. In addition, Facebook provides key support services and amenities such as "last-mile" connections to Caltrain, showers and changing rooms, secure bike storage, preferential vanpool parking, intra-campus trams within the Menlo Park campuses, and carshare that frees workers from needing a personal vehicle at the workplace. The campuses also include other amenities such as banking services, a wellness clinic, fitness centers, and food service. Facebook's TDM program also has an extensive education and marketing program that provides workers information beginning at their initial job orientation.

---

[1] Fehr & Peers conducted ground counts of all driveways serving Facebook's Menlo Park campuses for three days in October 2018. This driveway data was combined with transit ridership, carpool, and vanpool data provided by Facebook to develop mode splits for the 4-hour peak period from 7:00 AM to 11:00 AM. The analysis is documented in Fehr & Peers memorandum *Facebook Menlo Park Campus 2018 Mode Share Monitoring*, December 3, 2019.

| TDM Measure | Description | Facebook Program |
|---|---|---|
| Transit Pass Subsidy | Monthly reimbursement for public transit commute costs (fare). | Full time employees and interns are eligible for a subsidy of up to $260/month toward eligible public transit. |
| New Hire Clipper Card Program | Clipper cards with cash value for use on specific transit agencies. | Clipper cards with $130 e-cash loaded are available to new workers to allow for immediate use of public transportation. |
| Parking at BART, and Caltrain | Monthly reimbursement for parking at specific transit stations. | Up to $100 month reimbursement available for parking at Caltrain and BART. |
| Last-Mile Transit Connections | Shuttles to/from nearby transit facilities. | Facebook will provide dedicated shuttles to nearby transit facilities to provide reliable connections between transit stops and the Menlo Park campuses. |
| Commuter Shuttle Bus Services | Private shuttle service from various regions of the Bay Area to the Menlo Park campuses. | Currently, Facebook provides free direct services between Menlo Park and Sunnyvale, Palo Alto, San Francisco, Mountain View, Cupertino, Campbell, Berkeley, Oakland, Dublin, Castro Valley, Redwood City, San Jose, Fremont, Danville, San Ramon, Los Gatos, Millbrae, San Mateo, Santa Cruz, Scotts Valley, Marin, Saratoga, and other cities for workers. |
| Bicycle Amenities and Perks | Lockers, showers, towel service, bicycle pumps, FixIt self-repair station, etc. | • A 24/7 DIY FixIt station will be located within the office complex along with a free vending machine with emergency parts for repair.<br>• Routine Bike to Work Days with giveaways are held with bike shop staff leading group rides.<br>• Each worker-occupied building has interior bike parking, and a bike cage that offers additional bike parking space. |

| TDM Measure | Description | Facebook Program |
|---|---|---|
| Bike Sales and Rentals | Bikes available for purchase and rental onsite. | Discounted bikes are available for sale onsite and sold below MSRP and include a commuter-ready package with a helmet, lights, and a U-lock.<br><br>Bike rentals are available for periods of 1-2 weeks for visiting employees. |
| Vanpool Program | A program that allows groups of people to share rides to and from work. | Facebook provides vanpools to and from surrounding areas. |
| Carpool Matching with the Internal Ride App | Scoop & Facebook Ride App for carpool match. | Facebook is in the processing of transitioning to Scoop for carpool matching between workers. Previously, they used their Ride App to connect workers to coordinate a carpool. |
| Dedicated Vanpool Parking | Dedicated parking for Vanpools. | Facebook provides preferred parking for Vanpools. |
| Education and Promotion | Educational and promotional events to encourage employees to use alternative modes to travel to and from the workplace. | Drop-in commute advice is available through the Transportation Desk at the transportation hubs. There will be four transportation hubs when Willow Village is open.<br><br>Events and competitions for prizes include bike commuting classes and Bike to Work Days. New workers receive information on various commute options during orientation. |
| Emergency Ride Home | Rides provided for employees in case of emergency. | In the event of an emergency, Facebook provides rides home to all ride share and alternative mode commuters who may not have a vehicle readily accessible. |
| Campus Bike Share Program | Bicycles provided for employee use on campus. | This program provides Facebook Bike Share Bicycles for workers to use for trips around campus. |
| Intercampus Tram and On-Demand Car Service | Tram service to transport workers between buildings. | A fleet of electric and non-electric vehicles to transport employees between buildings, and a separate on-demand car service for moving between campuses at Menlo Park. |
| Carshare | Car sharing available on campus. | A fleet of shared cars that are available to reserve for free if employees use alternative transportation to commute and have a mid-day errand or business appointment offsite. Facebook provides Enterprise vehicles for employees and there are also publicly available Zipcars. |

| TDM Measure | Description | Facebook Program |
|---|---|---|
| Amenities | Provision of services at the campus so workers do not need a vehicle at work or do not need to make mid-day trips. | Facebook provides a wide range of on-site amenities for workers that minimize the need to make trips in personal vehicles. These amenities include:<br>• cafes<br>• banking services/ATMs<br>• dry cleaning services<br>• fitness center(s)<br>• wellness center<br>• bicycle shop & DIY FixIt stations<br>• car wash services<br>• auto services (oil changes)<br>• vehicle fueling |

Source: Fehr & Peers / Facebook Transportation Group, August 2020

As noted above, the Facebook TDM program reduces the commute drive-alone rate to 51% as compared to the county average drive-alone rate of 69%. This is a reduction of 26% in the drive-alone rate over the county average. This level of drive-alone reduction is sufficient to reduce the peak hour trips by more than 20% relative to the Institute of Transportation Engineers general office trip generation for the office component of the Project. There will be additional peak period commute trip reductions due to the presence of nearby housing in the residential/retail portion of the project.

### 3.1.1 TDM ENHANCEMENTS TO REDUCE OFFICE PARKING DEMAND

The *Willow Village Parking Assessment Report* (July 2021) identified that there would be a shortfall in the office seated worker parking supply of 106 spaces (vehicles). Therefore, the Facebook TDM program will need to make modest improvements to shift more seated workers from driving-alone to other commute modes to reduce the office worker parking demand. As stated above the current drive alone for the entire MPK campus (Classic, Bayfront, Willow, and Chilco) is 51 percent. If the parking reduction is assumed to occur only at the Willow Village campus, the drive-alone rate for the Willow Village campus would need to be 49.7 percent. However, Facebook TDM programs are available to all seated workers in Menlo Park. Any enhancements to the TDM programs will be applied to all of Facebook seated workers; therefore, to achieve a reduction of 106 spaces the overall Menlo Park drive-alone rate would need to be 50.6 percent. To achieve this 0.5% reduction, Facebook will need to invest additional resources into their existing programs and, possibly, add to or expand the commute programs often to workers.

As described above, Facebook's has an extensive set of TDM programs that they can utilize to reduce the drive-alone rate by expanding existing programs and/or offering higher incentives not to drive alone. Some of the key TDM programs Facebook could enhance or increase their investment to achieve the reduction in drive-alone rate and reduce the parking demand are:

- Employee shuttle service – expanded service areas or frequency of service
- Bicycle commute incentives – amenities such as showers, lockers, fix-it stations, bike rentals and bike sales to employees
- Carpool matching – service to match Facebook employees to form carpools or van pools
- Vanpools – provision of a van for groups of five or more employees
- Public transit incentives – subsidized transit passes and station parking costs
- Implement flexible work schedules and work from home policies that will reduce the number of workers on-campus during the work week

In addition to these existing TDM programs, Facebook is considering new TDM programs and activities that will promote other modes of travel for commuters including bicycle facility improvements and parking management options.

The Facebook Transportation team monitors TDM program effectiveness and refines the TDM programs to meet the needs of their workers. The TDM program monitoring and evaluation is designed to determine the effectiveness of each individual program and the program's ability to reduce peak period vehicle trips, eliminate drive alone vehicle trips, and reduce parking demand. Programs that are under performing may be replaced with new programs that are designed to better meet workers' commute travel needs. Therefore, this TDM Plan is designed to evolve over time. A description of the TDM monitoring is provided in Section 3.3 Monitoring Program.

## 3.2 RESIDENTIAL/RETAIL COMPONENT TDM

While the Office TDM program will be delivered by Facebook to their workers, the TDM program for the residential, retail, and hotel (Residential/Retail TDM) components will be delivered by multiple entities including property management companies for residential uses and individual businesses for the retail, restaurant, and entertainment uses. Either the property owner's association or a Transportation Management Association will be created to coordinate the delivery of the Residential/Retail TDM Plan. The Association will improve the effectiveness of the programs and potentially reduce the overall costs to deliver the TDM programs. The Association will establish by laws for the operation of the organization and establish a funding mechanism for common services provided by the Association.

The City of Menlo Park will require the Willow Village Project to implement a TDM program that will reduce the trip generation of the proposed land uses by 20% as compared to the trip generation using standard Institute of Transportation Engineers (ITE) trip generation rates. The 20% reduction will be accomplished through both design features of the Project that make it easier to travel without a vehicle, and specific programs or incentives to reduce the number of drive-alone vehicle trips. The Willow Village Residential/Retail TDM program will consist of strategies that are aimed at discouraging single-occupancy vehicle trips and encouraging alternative modes of transportation, such as carpooling, taking transit, walking, and biking. Strategies included in most TDM programs address a wide range of transportation factors, including parking, transit access, shared mobility, bicycle infrastructure, site design, education and encouragement, and management.

TDM reductions for the Project were estimated based on the California Air Pollution Control Officers Association (CAPCOA) research and methodologies as described in Quantifying Greenhouse Gas Mitigation Measures (2010) and more recent research for the California Air Resources Board Zero Carbon Buildings and Communities studies.

Residential and commercial land use TDM credits were calculated separately, as certain TDM measures are more appropriately applied in the commercial arena or vice versa. For example, for commercial tenants, vanpools and rideshare may be effective tools to reduce employee solo vehicle trips. However, vanpools would be difficult to implement for residents who are traveling from the Project to many disparate destinations. For residents, unbundling parking is a more effective strategy as residents are incentivized to reduce car ownership to save on monthly rental costs for a vehicular parking space. Additionally, the net effectiveness of commute trip reductions is reduced for the commercial land uses as those measures are only applicable to the work trips made by commercial land use employees, rather than the trips made by commercial patrons.

**Table 3** provides a list of physical and programmatic TDM actions that could be provided to the retail/hotel employees and Willow Village residents along with an indication of which use or uses they are appropriate. The TDM measures listed in **Table 3** include both physical design measures such as pedestrian and bike facilities and programs that help shift travelers out of their personal vehicles. In addition, **Table 3** also includes reserved measures that could be used to improve the performance of the Residential/Retail TDM plan, as needed in the future.

**TABLE 3: WILLOW VILLAGE RESIDENTIAL/RETAIL TDM PROGRAM**

| TDM | Description | Implementation | Retail/ Hotel Employees | Residents | Reserved Measure |
|---|---|---|---|---|---|
| Transportation Management Association | Create an Association for the mixed-uses. | • Information sharing<br>• Education & marketing function – TDM coordinator<br>• Pooled resources to reduce costs<br>• Provide emergency rides home for workers<br>• Assist in monitoring TDM programs | ✓ | ✓ | |

| TDM | Description | Implementation | Retail/ Hotel Employees | Residents | Reserved Measure |
|---|---|---|---|---|---|
| Increasing diversity of land uses | Increasing developed area dedicated to a complementary but uncommon or nonexistent use in the surrounding neighborhood | Proposed development includes a combination of multi-family residential units with retail spaces including grocery, restaurants, entertainment, and hotel. | ✓ | ✓ | |
| Housing | Housing built near job center | Willow Village development includes multifamily residential units which could accommodate some of the workers working in the office, retail, and hotel components of the development. | | ✓ | |
| Public Transit Improved Service | Coordination with SamTrans to provide potential service options to the site. | The property managers and employers will work with SamTrans staff to encourage SamTrans to improve the service area around the Project site through providing new frequent routes or re-routing the existing SamTrans routes. | ✓ | ✓ | |
| Bicycle Amenities | Lockers & showers | Clothing lockers and shower can be provided in the overall design of the hotel space. | ✓ | | |
| Bicycle network | Integration of the Project site bike network into the City's bike network | The Proposed site plan includes a network of publicly accessible open spaces and a bike and pedestrian path which will be integrated into the City of Menlo Park's bike network. | ✓ | ✓ | |
| Vanpool Program | A program to allow groups of people to share rides to and from work. | Sponsored by mixed-use employers to create carpools. Potentially, a combined service to take advantage of the large number of Facebook workers for ride matching. | ✓ | | |

| TDM | Description | Implementation | Retail/ Hotel Employees | Residents | Reserved Measure |
|---|---|---|---|---|---|
| Carpool Matching | Use of public or private service | Use of 511 RideMatch, SCOOP or WAZE Carpool for employees and residents. There is an opportunity to take advantage of the large number of Facebook workers for ride matching. | ✓ | | ✓ |
| Dedicated Carpool/ Vanpool Parking | Dedicated parking for multiple-occupancy vehicles | Spaces could be provided in parking structures near retail and/or hotel. | ✓ | | ✓ |
| Shared Parking | Provision of shared pool of parking for the mixed-use development | The retail, hotel, office visitors, and residential guests will share a pool of parking. | ✓ | ✓ | |
| Emergency Ride Home | Rides provided for employees in case of emergency | In the event of an emergency, the Association provides rides home to hotel / retail employees that use alternative modes to commute to work. | ✓ | | |
| Wayfinding and Lighting | Provision of wayfinding signage and lighting | The project developer will provide bicycle, pedestrian, transit and vehicle wayfinding signage and lighting throughout the development. | ✓ | ✓ | |
| Carshare | Car sharing located in public parking areas | Shared cars that are available for a fee to retail/hotel employees and Willow Village residents to run errand or business appointment offsite. Fees could be subsidized for employees using alternative modes for their commute. | ✓ | ✓ | |
| Bicycle Parking | Enclosed secure bicycle parking | Incorporated into the design of the residential units, hotel, and retail buildings. | ✓ | ✓ | |
| Bicycle Repair Stations | Do it yourself repair stations located in the development | These facilities allow residents and employees to repair and maintain bicycles that can be used for their commutes. | ✓ | ✓ | |

| TDM | Description | Implementation | Retail/ Hotel Employees | Residents | Reserved Measure |
|---|---|---|---|---|---|
| Bike Sharing | Provision of bike share stations at the development | The property managers and employers will work with the City of Menlo Park to advocate for bike share stations at the development. | ✓ | ✓ | |
| Commute Assistance Center/Website | Information sharing to new residents & employees | A function provided by the Association for the mixed-use component. | ✓ | ✓ | |
| Unbundled Residential Parking / Limit Parking Supply | Separate sale or lease of a vehicular parking | Unbundled parking, which separates the sale or lease of a vehicular parking space from the sale or lease of living units, will be provided for all market-rate residential units. | | ✓ | |
| Metered On-Street Parking | Priced on-street parking | On-street parking would be priced. This measure requires coordination and approval from the City of Menlo Park. | ✓ | ✓ | |
| Off-Street Parking Fees | Priced off-street parking | | | | ✓ |

Source: Fehr & Peers, August 2020

The TDM programs promote use of transit, carpooling, vanpooling, biking, and walking to reduce vehicle trips. These programs are complimented by physical design features such as bicycle parking, pedestrian and bicycle features, and showers/changing areas in large workspaces. Each TDM strategy has an associated range of effectiveness in reducing vehicle trips and the combination of strategies have an overall effectiveness. The overall effectiveness is not simply additive when programs are combined since some of the programs overlap in terms of their markets and effectiveness. For this analysis, we evaluated the range of effectiveness as shown in **Table 4** and have chosen to use the average of the range of the combined strategies effectiveness.

Based on the CAPCOA and CARB research, it is estimated that the Project's Residential/Retail TDM program would reduce the residential, retail, and hotel trips as follows:

- Residential trip reduction 24%
- Retail trip reduction 18%
- Hotel trip reduction 20%

The overall trip reduction from the Residential/Retail TDM program as proposed would be approximately 20%. The estimates represent the average of the potential range effectiveness for each land use supported by evidence from the application of these same measures at other projects reported in the CAPCOA and found in more recent CARB research.

The City of Menlo Park requires that the project monitor the effectiveness of the TDM programs in achieving a 20% reduction in trips. The TDM monitoring program is outlined below for the Mixed-Use and Office Components.

**TABLE 4: WILLOW VILLAGE RESIDENTIAL/RETAIL TDM PROGRAM EFFECTIVENESS**

| TDM Strategy | Residential | Retail | Hotel |
|---|---|---|---|
| **Parking** | | | |
| Unbundle Parking & Reduced Parking Supply | Up to 20% | -- | -- |
| On-Street Parking Fees | 3% to 11% | 3% to 11% | 3% to 11% |
| Off-Street Parking Fee (reserved program) | 6% to 11% | 6% to 11% | 6% to 11% |
| **Bike & Walk** | | | |
| Secure Parking | Up to 1% | Up to 1% | Up to 1% |
| Showers & Lockers | Up to 1% | -- | -- |
| End of Trip Repair Stations | Up to 1% | Up to 1% | Up to 1% |
| Bike Share & Subsidies | Up to 1% | Up to 1% | Up to 1% |
| **Commute Programs / Association** | | | |
| Marketing Program | 3% to 10% | Up to 1% | Up to 1% |

# 4. WILLOW VILLAGE TDM MONITORING PLAN

The City's Zoning Ordinance requires annual reporting to evidence achievement of the intended TDM reduction. While the Zoning Ordinance does not require monitoring, City staff has requested monitoring as a means of demonstrating compliance. This section outlines a TDM monitoring plan designed to measure and document the effectiveness of office and residential / retail TDM plans. As outlined above in Sections 3.1 and 3.2, there are two distinct components in the TDM plan. The office component of the plan will be implemented by Facebook as the sole owner and occupant of the office space. The residential / retail component will have multiple owners, property managers, and tenants; therefore, a Transportation Management Association will be established to assist in the implementation and coordination of the programs included in the residential / retail TDM plan. While the Association can assist in the implementation, the ultimate effectiveness of the residential / retail TDM programs will depend on the execution by each Association member.

## 4.1 OFFICE TDM (TRIP CAP) MONITORING

Since Facebook is proposing an office trip cap for Willow Village office uses that is consistent with the trip caps currently used on the Classic and Bayfront campuses, the trip cap monitoring report will provide information on the driveway vehicle counts as well as a list of TDM programs that are in use on the campus. The monitoring report of the Willow Village Office trip cap, and TDM program, will be packaged with the other trip cap monitoring reports for the Classic and Bayfront campuses.

## 4.2 RESIDENTIAL / RETAIL TDM MONITORING PLAN

As stated above, the TDM Plan monitoring for the residential / retail component introduces a several challenges since there is no single entity responsible for the implementation of the TDM programs. The creation of, and requiring membership in, the Association will provide a means to coordinate the TDM efforts executed by the property owners, property managers, and major tenants. The Association can be used to implement some TDM programs that will benefit from sharing resources between the Association members. However, many of the programs will be implemented by the property owners, property managers, and individual tenants in the retail spaces. The Association can also serve as a clearing house for gathering data, summarizing it, and documenting the TDM performance of the residential properties and retail tenants (including the hotel).

The Association will be responsible for coordinating the monitoring of and report on the residential, retail and hotel components of the Willow Village project. The Association will prepare an annual report documenting the following aspects of the residential and retail TDM plan:

- **Inventory of TDM Facilities** – The Association will establish and maintain an inventory of the TDM Related facilities. The inventory would include a tabular summary and map showing the location of the facilities serving the residential, retail, hotel, and town square parcels. This inventory would include features such as:
    - Bicycle and Pedestrian Networks
    - Bicycle Parking – Long-term and Short-term
    - Bike Share Locations
    - Bicycle Repair Stations
    - Other Bicycle Amenities (i.e., location of public restrooms)
    - Dedicated Carpool/Vanpool Parking Locations
    - Carshare Locations

- **TDM Program Data** – The Association would compile a summary of the TDM programs operated by each member of the organization. This data would include descriptions of the services provided by each of the members and programs sponsored by the Association.
    - Transportation Demand Coordinators – list of names and contact information
    - Commute Assistance Centers/Websites – list of locations and URLs
    - Carpool Matching – number of carpools
    - Vanpool Programs – number of vanpools
    - Transit Subsidies – any subsidies provided to residents or employees
    - Emergency Ride Home – existence of program and operation
    - Unbundled Residential Parking – description of programs and use of program
    - Off-Street Parking Fees (non-residential) – status and rates
    - Metered On-Street Parking – current status and rates
    - Public Transit Improved Service – actions taken by Association

- **Parking Occupancy Data** – Once a year during the spring or fall (agreed to by the City) when school is in session and there are no holidays or special events, the following data will be collected:
    - Parking Occupancy Counts – On two weekdays and one weekend day, parking occupancy counts will be conducted in the parking structures between the hours of 7:00 AM and 7:00 PM. Counts will be conducted in one-hour intervals.

The Association will submit the TDM monitoring report to the City for review. If the City determines that the TDM programs are falling short of the proposed TDM plan, the Association will work with members to improve or expand their individual TDM programs.

# Appendix H
## Internal Intersection Analysis

HEXAGON TRANSPORTATION CONSULTANTS, INC.

## Memorandum

**Date:** April 5, 2021

**To:** Ms. Kirsten Chapman, ICF Jones & Stokes, Inc.

**From:** Ollie Zhou, Katie Riutta

**Subject:** Internal Intersection Analysis for the Proposed Willow Village Project in Menlo Park, CA

Hexagon Transportation Consultants, Inc. has completed an internal intersection analysis for the proposed Willow Village project in Menlo Park, California. The Proposed Project would redevelop an approximately 59-acre industrial site plus two parcels north of Willow Road[1] (collectively, the Project Site) as a mixed-use development. The Proposed Project would demolish all existing onsite buildings and landscaping on the 59-acre portion of the Project Site and construct new buildings, provide open space areas, and install infrastructure within a new Residential/Shopping District, Town Square District, and Campus District. In addition, the Proposed Project would alter two parcels (Hamilton Avenue Parcels North and South[2]) to accommodate realignment of Hamilton Avenue at Willow Road for Project Site access.

The Proposed Project would provide up to 1.6 million sf of space for office and accessory use (consisting of up to 1.25 million sf of office uses and the balance (350,000 square if office use is maximized) of accessory uses[3]) and up to 200,000 sf of commercial/retail space. The Proposed Project would also include up to 1,730 multi-family housing units, an up to 193-room hotel, and open spaces, including publicly accessible parks (e.g. 3.5 acre publicly accessible park, elevated linear park, town square, and dog park).

The Project Site would be bisected by a new north–south street (Main Street) and an east–west street, which would provide access to all three districts. It would include a circulation network for vehicles, bicycles, and pedestrians, inclusive of both public rights-of-way and private streets, that would be generally aligned to an east-to-west and a north-to-south grid. The Proposed Project would also alter parcels north of the industrial site, across Willow Road, on both the east and west sides of Hamilton Avenue (Hamilton Avenue Parcels North and South) to support realignment of the Hamilton Avenue right-of-way and provide access to the new elevated park. This would require demolition and reconstruction of an existing service station (Chevron gas station) and potentially an increase in 1,000 sf on Hamilton Avenue Parcel South and enable the potential addition of up to 6,700 sf of retail uses at the existing neighborhood shopping center on the Hamilton Avenue Parcel North. A total of 7,700 sf could be added to the Hamilton Avenue Parcels.

---

1 For transportation analysis, "North/South" is aligned to be parallel to US 101. Hence, Willow Road and University Avenue are considered east-west streets, whereas Hamilton Road and Bayfront Expressway are considered north-south streets.

2 Hamilton Avenue Parcels North and South consider Hamilton Avenue an east to west street, which differs from the compass directions used for the transportation analysis discussion.

3 Accessory uses could include the following types of spaces: meeting/collaboration space, orientation space, training space, event space, incubator space, a business partner center, an event building (including pre-function space, collaboration areas, and meeting/event rooms), a visitor center, product demonstration areas, film studio, gathering terraces and private gardens, and space for other Meta accessory uses. Accessory uses could occur in spaces located anywhere throughout the Campus District.

Access to the project site would be provided by four intersections on Willow Road (at Hamilton Avenue, one new driveway intersection north of Hamilton Avenue, and two new intersections south of Hamilton Avenue), a new intersection on O'Brien Drive at the southeast corner of the project site, and Adams Court (see Figure 1). This analysis evaluates the internal site's intersection operations, potential queuing issues, and general site access and circulation, and parking. The analysis also evaluates the site access, circulation, and parking for the proposed Hamilton parcels.

A system of new streets would be implemented within the proposed Willow Village area to provide vehicular connections between parking garages in the project area and Willow Road, O'Brien Drive, and Adams Court. Seven new internal streets are planned within the project site, including North Loop Road, East Loop Road, Main Street, West Street, Center Street, East Street, and Park Street. The project proposes 14 parking garage driveways and designated areas for on-street parking within the project area. Most driveways would be full access, but the two garage driveways on Willow Road (Driveways M and N) would be right in right out only. For the purposes of this study, Willow Road is considered to be an east-west roadway.

The new internal streets and project driveways would create 20 new intersections that are listed below and shown on Figure 2.

1. Driveway A & East Loop Road (unsignalized)
2. Driveway B & East Loop Road (unsignalized)
3. Adams Court & East Loop Road
4. Driveway C & East Loop Road (unsignalized)
5. Main Street & Park Street/Driveway D
6. Park Street & Driveway E (unsignalized)
7. Buildings RS6/RS7 & Driveway E (unsignalized)
8. Park Street & East Street (unsignalized)
9. Driveway F & East Street (unsignalized)
10. Center Street & East Street (unsignalized)
11. Main Street & East Street (unsignalized)
12. Park Street & Driveway G (unsignalized)
13. Center Street & Driveway H/Driveway I (unsignalized)
14. Park Street & West Street/Driveway J
15. Center Street/Driveway K & West Street (unsignalized)
16. Driveway L & West Street (unsignalized)
17. Main Street & West Street
18. North Loop Road & West Street (unsignalized)
19. Driveway M & Willow Road (unsignalized)
20. Driveway N & Willow Road (unsignalized)

# Intersection Operations

## Trip Generation

The project trip generation by land use was presented in a trip generation memo by Hexagon Transportation Consultants dated October 13, 2021 and is discussed further in the Transportation Impact Analysis (TIA). As shown in Table 1, the gross project trips generated by the Main Project Site on the roadway network would be 32,237 daily trips, including 2,396 AM peak hour trips (1,638 inbound trips and 758 outbound trips), and 2,719 PM peak hour trips (969 inbound trips and 1,750 outbound trips).

The trip generation by land use was converted to trip generation by parking garage based on the *Willow Village Master Plan Conditional Development Permit* by Peninsula Innovation Partners dated September 7, 2021, and the *Willow Village Parking Assessment* by Fehr & Peers dated July 2021. The trip generation by parking garage considers the respective TDM reductions. Trips were assigned to each parking garage based on the proportion of parking spaces proposed for each garage. Table 2 shows the trip generation for each parking garage. The public on-street and passenger loading parking spaces were assigned to the nearest parking garages.

## Trip Distribution and Assignment

Trips generated by the proposed project were distributed to the study network based on model outputs (see Figures 3 – 4). The proposed office use would typically generate inbound trips in the morning and outbound trips in the evening. The proposed residential, retail, and office/residential visitor uses would typically generate outbound trips in the morning to employment areas and inbound trips in the evening from employment areas. The proposed hotel use would typically generate trips from the nearby office areas.

The peak-hour trips generated by the proposed uses were assigned to the roadway network based on the directions of approach and departure, the roadway network connections, the location of project driveways, and the proposed lane configurations. Retail pass-by trips were added to the network from east and west Willow Road, based on the proportion of through traffic under background plus project conditions. The travel demand forecast model identified some cut-through traffic using the internal roadways within the project site. These were added to the network between Willow Road and O'Brien Drive via Main Street and Park Street based on model outputs (see Figure 5). The proposed lane configurations are shown on Figure 6, the internal intersection project volumes are shown on Figure 7, and the project trip assignment assumptions are detailed in Appendix IIA.A.

## Table 1
## Trip Generation Estimates – Project Buildout (Main Campus)

| Land Use | ITE Land Use Code [1] | Size | Unit | Daily Rate [1] | Daily Total | AM Peak Hour Rate [1] | AM IN | AM OUT | AM Total | PM Peak Hour Rate [1] | PM IN | PM OUT | PM Total |

Notes
*d.u. = dwelling unit, ksf = 1,000 s.f.*
1. Daily, AM, and PM peak hour average rates published in ITE Trip Generation Manual, 10th Edition, 2017 were used for each land use.
2. Office trip generation and TDM reductions reflect the proposed daily, AM and PM peak hour trip caps.
3. The publicly accessibleThe programmatic design of the park has not been determined. In order to provide a conservative estimate of potential traffic generation, it is assumed that the park will have play structures and open field areas for warm-ups or casual play. The park is planned for approximately 3.5 acres. Number of soccer fields on 3.5 acres of land was estimated based on the size of a standard soccer field. park is assumed to be programmable. ITE Land Use "Soccer Field" is analyzed as a proxy. Number of soccer fields was estimated based on the size of a standard soccer field.
4. For the Residential/Shopping and Town Square Districts, the applicant proposes a 20 percent reduction from gross ITE trip generation for daily, and a 20 percent and 27 percent reduction from gross ITE trip generation during the AM and PM peak hours of commute, respectively.
5. Pass-by trip reduction is based on the average pass-by trip reduction rate published in the ITE Trip Generation Handbook, 3rd Edition. Hexagon assumes no pass-by trip reduction during the AM peak hour and half of the PM peak pass-by reduction for daily trip generation.
6. Existing Use trip estimates based on driveway counts conducted over three days in September 2019 per Facebook Willow Traffic Counts Memorandum, Fehr & Peers, March 26, 2020. 8-9 AM in the AM peak period and 4-5 PM in the PM peak period have been considered as peak hours since they have the highest trips.

## Vehicular Access and Circulation

The site access and circulation evaluations are based on the September 7, 2021 site plan[4] prepared by Peninsula Innovation Partners (see Figure 2 of the Transportation Impact Analysis). Site access and on-site vehicular circulation were reviewed in accordance with generally accepted traffic engineering standards.

### Site Access

Access to the internal roadway network would be provided via Willow Road, O'Brien Drive, and Adams Court. The following intersections were studied in the TIA using Vistro software: Hamilton Avenue/Main Street & Willow Road, Park Street & Willow Road, and Main Street/O'Brien Drive & East Loop Road/O'Brien Drive.

**Willow Road Corridor**

The results of the level of service analysis in the TIA conducted separately for this project showed that the two intersections on Willow Road would operate at LOS F during both peak hours under near-term (2025) plus project conditions and under cumulative (2040) plus project conditions. The Willow Road corridor is expected to experience capacity issues due to unserved demand at the intersections. Level of service is discussed further in the TIA.

**Proposed Roundabout**

The need for a roundabout was determined at the intersection of Main Street/O'Brien Drive & East Loop Road/O'Brien Drive. Due to the existing intersection's large and skewed shape, trucks and buses would not be able to make all the turning movements. The proposed roundabout is shown in Figure 1. The results of the level of service analysis in the TIA showed that the roundabout intersection would operate at LOS A during both peak hours under near-term (2025) plus project conditions and during the AM peak hour under cumulative (2040) plus project conditions. The intersection would operate at LOS B during the PM peak hour under cumulative plus project conditions.

**Vehicle Queuing Analysis**

The level of service analysis for the intersections that would provide access to the project's internal roadway network was supplemented with a vehicle queuing analysis for left-turn lanes at intersections where the project would add a substantial number of left turns. This analysis provides a basis for estimating future storage requirements at the intersections under near-term plus project conditions. Vehicle queues were estimated using Vistro software. The following left-turn lanes were selected for evaluation:

- Westbound left and Eastbound left lanes at Hamilton Avenue/Main Street & Willow Road
- Westbound left and Northbound left lanes at Park Street & Willow Road
- All approaches at Main Street/O'Brien Drive & East Loop Road/O'Brien Drive

The results show that two intersections are expected to have insufficient turn lane storage to accommodate the anticipated traffic volumes under project conditions (see Table 3).

[4] A site plan resubmittal was received in December 2021 but had no substantive revisions that might affect this analysis.

[2] Assumes 25 Feet Per Vehicle Queued
[3] Approach shares a turn lane with through and right-turning movements. Volumes represent the total approach volume.

***Westbound Left-turn at Hamilton Avenue/Main Street & Willow Road***

Two left turn pockets are proposed for the westbound approach on Willow Road at Hamilton Avenue/Main Street. The proposed vehicle storage for the westbound left turn pockets would be 310 feet and 150 feet, averaging to 230 feet per lane. Under near-term plus project conditions, the 95$^{th}$ percentile queue would exceed the storage length of each turn pocket by 219 vehicles during the AM peak hour and 16 vehicles during the PM peak hour. The project would add 337 vehicles to the left turn movement during the AM peak hour and 284 vehicles during the PM peak hour. If the left turn lanes at Hamilton Avenue/Main Street become saturated, it is assumed that vehicles would choose to instead enter the project site via Park Street. The westbound approach at Park Street would also provide two left turn pockets, which would be 250 feet per lane. It is assumed that the demand queue could be accommodated between the left turn lanes at these two intersections on Willow Road.

***Northbound Left-turn at Park Street & Willow Road***

One left turn lane and one shared left-right lane are proposed for the northbound approach on Park Street at Willow Road. The proposed vehicle storage between Willow Road and West Street would be approximately 225 feet per lane. Under near-term plus project conditions, the 95$^{th}$ percentile queue would exceed the storage length of each turn pocket by one vehicle during both the AM and PM peak hours. The project would add 352 vehicles to the shared lanes during the AM peak hour and 720 vehicles during the PM peak hour. If the approach becomes saturated, northbound right-turning vehicles could use West Street and Main Street to travel eastbound on Willow Road.

***All Approaches at Main Street/O'Brien Drive & East Loop Road/O'Brien Drive (future intersection)***

The Main Street/O'Brien Drive & East Loop Road/O'Brien Drive intersection is proposed to be a roundabout. All legs of the roundabout would have one approach lane. The 95$^{th}$ percentile queues for all legs were checked and found to be a maximum of 5 vehicles, which would not block any nearby intersections or driveways.

## On-site Circulation

On-site vehicular circulation was reviewed in accordance with generally accepted traffic engineering standards. The project would generally expect sufficient levels of service and left-turn storage capacity at driveways and internal intersections. The internal roadway network would provide adequate wayfinding for motorists. Cut-through traffic would be relatively low. Therefore, on-site circulation is expected to be adequate, with some identified circulation issues described below.

### Intersection Levels of Service

Intersection levels of service were evaluated for informational purposes relative to the City of Menlo Park standards and were calculated using Vistro software. No stop controls were specified for the intersections of Center Street & East Street or Main Street & East Street. Therefore, it was assumed that the westbound approach would be stop controlled for the Center Street & East Street intersection, and the eastbound approach would be stop controlled for the Main Street & East Street intersection (see Figure 6). The results of the internal intersection level of service analysis under project conditions are summarized in Table 4. The intersection levels of service calculation sheets are included in Appendix IIA.B.

**Table 4**
**Internal Intersection Levels of Service Summary**

| # | Intersection | Peak Hour | Traffic Control | Project Conditions | |
|---|---|---|---|---|---|
| | | | | Avg delay[1] | LOS |

| | | PM | | 12.8 | B |
| 17 | West Street & Main Street | AM | Signal | 10.8 | B |
| | | PM | | 16.9 | B |
| 18 | West Street & North Loop Road | AM | AWSC | 10.1 | B |
| | | PM | | 9.3 | A |
| 19 | Willow Road & Driveway M | AM | OWSC | 13.3 | B |
| | | PM | | 16.0 | C |
| 20 | Willow Road & Driveway N | AM | OWSC | 13.2 | B |
| | | PM | | 20.2 | C |

Notes:
OWSC - One Way Stop Control; TWSC - Two Way Stop Control; AWSC - All Way Stop Control

[1]Average delay is reported for signalized and AWSC intersections. For TWSC intersections and OWSC intersections, the delay for the worst stop-controlled movement is reported.
**Bold** indicates substandard level of service

Per City's LOS standard, the City strives to maintain LOS C at all City-controlled minor intersections during peak hours. The results of the analysis show that the intersection of Driveway B & East Loop Road would operate at LOS D during the AM peak hour. Vehicles turning left out of Driveway B would be expected to experience an average delay of 31 seconds while waiting for a sufficient opening on East Loop Road. During the AM peak hour, approximately 101 vehicles (16 heading eastbound and 85 heading westbound) would be expected to exit the garage, which would be one to two vehicles per minute. Therefore, although exiting drivers would experience some wait time, operations at Driveway B are expected to be adequate.

**Vehicle Queuing Analysis**

The analysis of internal intersection levels of service was supplemented with a vehicle queuing analysis for left-turn lanes at intersections where the project would add a substantial number of left turns. This analysis provides a basis for estimating future storage requirements at the intersections under project conditions. Vehicle queues were estimated using Vistro software. The following left turn lanes were selected for evaluation:

- Southbound shared left/right lane at Driveway A & East Loop Road
- Eastbound shared left/through lane at Driveway B & East Loop Road
- Eastbound shared left/through lane at Driveway C & East Loop Road
- Northbound left lane at Main Street & Park Street/Driveway D
- Southbound shared left/through lane at Park Street & West Street/Driveway J
- Westbound shared left/through lane at Driveway L & West Street
- Southbound shared left/through lane at Main Street & West Street

The results show that all intersections are expected to have sufficient turn lane storage to accommodate the anticipated traffic volumes under project conditions (see Table 5).

### *Left Turns from Garage Driveways*

Left-turn lanes with a substantial number of left turns inside the garages were studied to determine how long the turn pockets should be to accommodate the anticipated 95$^{th}$ percentile queues. The southbound shared-left-right lane at Driveway A would be expected to have a 95$^{th}$ percentile queue of 25 feet during the AM peak hour and 50 feet during the PM peak hour. Based on the Master Plan, the north office garage would have enough room to accommodate the anticipated 95$^{th}$ percentile queue.

### *Left Turns near Proposed Roundabout*

The project proposes a roundabout at the intersection of Main Street/O'Brien Drive & East Loop Road/O'Brien Drive. Given the geometric constraints at this intersection, a four-legged signalized intersection would have resulted in insufficient turn spaces for certain movements. A roundabout would resolve the turning movement restrictions caused by the geometric constraints. The queues for left-turn movements on Main Street and East Loop Road near the roundabout were analyzed for functional requirements. The eastbound shared-left-through lane at Driveway C & East Loop Road would be expected to have a 95$^{th}$ percentile queue of 25 feet during both peak hours. The northbound left and shared-left-through-right lanes at Main Street & Park Street/Driveway D would be expected to have a 95$^{th}$ percentile queue of 125 feet during the PM peak hour. Based on the Master Plan, the proposed storage for the left turns near the roundabout intersection could accommodate the anticipated 95$^{th}$ percentile queues and the queues would not be expected to interfere with the roundabout operations.

**East Street "Slow Street" Design**

The section of East Street between Center Street and Main Street would be designed to be a "slow street". As currently proposed, vehicles travelling on southbound Center Street or westbound East Street would only require minor turns to continue along that corridor, whereas vehicles on eastbound East Street would require essentially 90 degree turns.

> **Recommendation:** To discourage vehicle traffic from travelling on the section of East Street between Center Street and Main Street and to clarify to drivers that the main throughfare at this intersection is the 90-degree bend, Hexagon recommends the East Street & Center Street intersection be slightly reconfigured. This could be done by modifying the intersection corners so the southbound left movement does not appear as a throughfare.

**Spillback Queues on Willow Road**

The proposed intersections on West Street at Park Street and Main Street would be located approximately 225 feet from the adjacent intersections on Willow Road.

> **Recommendation:** To prevent southbound queues from spilling back onto Willow Road from Park Street and Main Street, Hexagon recommends coordinating the adjacent signals.

**Emergency Vehicles, Truck Access and Circulation**

Emergency response vehicles would access the project site from the intersections on Willow Road, O'Brien Drive, and Adams Court and would use the internal roadway network. Emergency response vehicles would access the Campus District buildings via Emergency Vehicle Access Easements along the perimeter and through the secure Campus District.

The project proposes five primary loading docks at three buildings in the Campus District. Deliveries for other buildings in the Campus District would use on-street loading zones or the loading docks at other buildings. A grocery loading bay would be located within the parking garage of building RS2. Trucks would enter the garage via Willow Road, back into the diagonal loading bay near the grocery store, and exit the garage via West Street. Rideshare and other delivery vehicles would use the provided on-street parking and loading spaces (see Figure 1). The on-street parking and loading spaces would be located throughout the interior of the project site and would not be expected to create queuing issues onto Willow Road.

## Parking Garage Access and Circulation

**Sight Distance**

The project driveways should be free and clear of any obstructions to optimize sight distance, thereby ensuring that exiting vehicles can see pedestrians on the sidewalk and other vehicles traveling on the roadway network. Landscaping and signage should not conflict with a driver's ability to locate a gap in traffic and see oncoming pedestrians and bicyclists. Adequate sight distance (sight distance triangles) should be provided at the driveways in accordance with Caltrans standards. Sight distance triangles should be measured approximately 10 feet back from the traveled way.

According to the Caltrans *Highway Design Manual*, the minimum stopping sight distance is the distance required by the user, traveling at a given speed, to bring the vehicle or bicycle to a stop after an object ½-foot high on the road becomes visible. Stopping sight distance for motorists is measured from the driver's eyes, which are assumed to be 3 ½ feet above the pavement surface, to an object ½-foot high on the road. The required stopping sight distances are based on the Caltrans *Highway Design Manual*, Table 201.1. The project driveways are located on Willow Road and throughout the internal roadway network. Willow Road has a speed limit of 40 mph, and the internal roads would have an assumed speed limit of 25 mph. Thus, the Caltrans stopping sight distance requirement is 360 feet (based on a design speed of 45 mph) on Willow Road and 200 feet (based on a design speed of 30 mph) on the internal roads.

On the internal roadways where on-street parking would be prohibited, the parking garage driveways would be expected to have adequate sight distance, provided that the trees within the sidewalk would not obstruct visibility. The site plan shows a sharp roadway curve between North Loop Road and East Loop Road, directly east of Driveway A. The roadway curve would restrict sight distance to approximately 50 feet, which is inadequate. This is considered a potential CEQA Transportation Impact related to hazards and is further discussed under Impact TRA-3 of the draft Environmental Impact Report (dEIR) Transportation Chapter. On roadways with proposed on-street parking, vehicles parked directly next to the garage driveways would interfere with sight distance.

**Mitigation:** Per Mitigation Measure TRA-3 as outlined in the dEIR Transportation Chapter, mitigation would require revising the North Garage access design to provide adequate sight distance for the eastern driveway or incorporate other design solutions to reduce hazards to the satisfaction of the Public Works Director. Potential solutions that would reduce hazards to a less than significant level include restricting the eastern driveway to inbound vehicles only or prohibiting exiting left turns, modifying landscaping or relocating the driveway to the west to allow for adequate sight distance for exiting vehicles, or installing an all-way stop or signal.

**Recommendation:** Prior to final design, the project applicant should ensure that landscaping and vegetation would not obstruct visibility at the parking garage driveways.

**Recommendation:** Hexagon recommends including 30 feet of red curb on both sides of all garage driveways to prevent vehicles from parking and obstructing the vision of exiting drivers.

**Recommendation:** If vehicles exiting the garages cannot see oncoming pedestrians on the sidewalk, Hexagon recommends installing warning signs to alert pedestrians when vehicles are exiting the garages.

**Recommendation:** If any driveways are moved from their position on the current site plan, sight distance should be reevaluated.

## Driveway Operations

The project-generated traffic would access the on-site parking garages via 12 full-access driveways, 2 right-in-right-out driveways on Willow Road, and the internal roadway network. According to the City of Menlo Park's *Parking Stalls and Driveway Design Guidelines*, the width for multi-family, office, and retail driveways should be a minimum of 24 feet for two-way driveways and 15 feet for one-way driveways. Based on the *Willow Village Master Plan* dated September 7, 2021, driveways A, B, C, and N would meet the requirement. The driveways of buildings RS6 and RS7 would be approximately 18 feet, which would not meet the requirement. The remaining buildings do not show the driveway widths.

> **Recommendation:** It is recommended that all driveway widths meet the City's requirements.

The parking garage site plans show that gates would be provided at the inbound and outbound lanes of driveways A, B, C, and D of the Campus District garages, driveways I and L of building RS3, and within the basement level of building TSG near driveway N. A garage door is shown at the entrances of buildings RS6 and RS7. A roll-up gate is shown on level B1 of building RS3 at the tunnel connection to the town square garage (building TSG). Measurements between the inbound gates and the roadways are not provided on the site plans.

> **Recommendation:** At garage driveways where gates and garage doors are proposed, Hexagon recommends conducting an operational analysis to ensure that gate opening and closing times would not create queuing issues and cause vehicles to spill onto the roadway network.

> **Recommendation:** Prior to final design, the residential parking on level P1 of building RS2 should be shown to be gated and separated from the retail parking on levels 1 and 2. In addition, the roll-up gate in building RS3 should be clearly shown to separate the retail parking in level B1 and the residential parking in level B2.

## Drive Aisles

The project would provide 90-degree parking stalls throughout all parking garages shown in the *Willow Village Master Plan.* According to the City of Menlo Park's *Parking Stalls and Driveway Design Guidelines,* the City's standard minimum width for two-way drive aisles is 23 feet wide where 90-degree parking is provided. Based on the *Willow Village Master Plan*, the office parking garages, the residential parking garage in building RS7, and the retail/hotel parking garage in building TSG would meet the requirement. The drive aisles of the residential parking garage in building RS6 are shown to be approximately 22 feet wide, which would not meet the requirement. The site plans for the remaining parking garages do not show the drive aisle widths.

> **Recommendation:** It is recommended that all drive aisle widths meet the City's requirements.

The parking garage site plans show dead-end drive aisles in the north office parking garage on level 1, in the south office parking garage on level 1, in the retail parking on level B1 of building RS3, in the residential parking on level 1 of building RS7, and in the retail parking in the basement level of building TSG. The City's *Parking Stalls and Driveway Design Guidelines* do not provide any requirements for turnaround space. However, providing adequate turnaround space at the end of drive aisles allows drivers to back out of the parking space closest to the end or exit the aisle if there are no parking spaces available.

> **Recommendation:** It is recommended that adequate turnaround space is provided at all dead-end drive aisles.

**Parking Stall Dimensions**

According to the City's *Parking Stalls and Driveway Design Guidelines,* parking stalls are required to have a width of 8 feet 6 inches and a length of 16 feet 6 inches. Based on the *Willow Village Master Plan*, the parking spaces in the Campus District garages would meet the requirements. The parking spaces shown in building TSG would meet the width requirement; however, the parking space lengths are not shown. Parking stall sizes for the remaining buildings are not provided.

> **Recommendation:** It is recommended that all parking stall widths meet the City's requirement.

## Parking Analysis

The Willow Village project is located within two bonus zoning districts as defined by the *City of Menlo Park General Plan* and *M-2 Area Zoning Update (ConnectMenlo)*. All proposed land uses on the main Project Site would be within the Campus District or the residential mixed-use district. Based on the *Menlo Park Municipal Code* Sections 16.45.080 and 16.43.090, the parking requirements for each zoning district are provided as a range of permitted parking ratios. The office and accessory use would be required to provide between 2 and 3 spaces per 1,000 square feet. The market-rate residential use would be required to provide between 1 and 1.5 spaces per unit. The Municipal Code does not provide requirements for below-market-rate senior residential uses. Therefore, based on an applicant adjustment request, the senior residential use would be required to provide 0.5 spaces per unit. The retail use would be required to provide between 2.5 and 3.3 spaces per 1,000 square feet. The hotel use would be required to provide between 0.75 and 1.1 spaces per guest room. Table 6 shows the minimum and maximum number parking spaces per the Municipal Code and the proposed number of parking spaces for each land use.

Based on the range of permitted parking ratios, the proposed parking for the office and residential uses would meet the parking requirements. However, the proposed parking for the retail and hotel uses would be included among the shared parking spaces. Given that the project proposes shared parking facilities for retail, hotel and Campus District visitors, a shared parking analysis was performed to determine whether the proposed amount of shared parking spaces would be adequate based on their varying time-of-day demands. The parking demand for these uses throughout the day was calculated based on the time-of-day trend data and parking ratios published in the Urban Land Institute's *Shared Parking*, 3rd Edition.

**Table 6**
**Parking Requirements by Land Use**

| Land Use | Size | Proposed Spaces | Minimum Spaces | Maximum Spaces |
|---|---|---|---|---|
| Office and Accessory[1] | 1,600 ksf | 3,333 | 3,200 | 4,800 |
| Residential | 1,730 du | 1,702 | 1,670 | 2,475 |
| *Market-rate* | *1,610 du* | | *1,610* | *2,415* |
| *BMR Senior Housing* | *120 du* | | *60* | *60* |
| Publicly Accessible Park | 3 fields | 41 | - | - |
| Shared Parking[2] | | 938 | - | - |

Notes:
ksf = 1,000 square feet
du = dwelling unit
[1] The number of proposed spaces does not include proposed valet parking.
[2] The number of proposed spaces does not include proposed on-street parking.

The shared parking spaces would be used by retail customers and employees, hotel guests and employees, and office and accessory space visitors. Residential guests would also use the shared parking facilities, in addition to the on-street parking. The garages with shared parking spaces would also contain residential parking. There would be a physical separation between resident parking and shared parking within the garages. According to the time-of-day trend data, parking demand for retail uses is highest between 12:00 PM and 2:00 PM on weekdays; parking demand for hotel uses is highest in the evening and early mornings; and parking demand for office visitors is highest between 10:00 AM and 11:00 AM. The project proposes a total shared parking supply of 938 spaces among three parking garages, with two of the garages being connected via tunnel. Assuming the minimum parking requirements for retail and hotel, and the estimated peak parking demand for office visitors, the maximum shared parking demand on the site would be 761 parking spaces on a weekday, which would be lower than the proposed parking supply by 177 spaces (see Table 7). Therefore, the shared parking supply is expected to meet the demand for the retail, hotel, and office visitor use.

The project would provide a variety of parking stalls, including standard, accessible, electric vehicle, compact, puzzle, tandem puzzle, and stacker. Puzzle parking is proposed in the residential areas of buildings RS2 and RS3. Tandem puzzle parking is also proposed in the residential area of building RS3. Stacker parking is proposed in buildings RS6, RS7, and TSG. Parking operations are not provided for the puzzle, tandem puzzle, or stacker parking spaces in the Master Plan. The puzzle and stacker parking are assumed to allow for individual vehicle retrieval. The proposed mechanical parking systems would provide tandem puzzle spaces that are individually accessible.

**Table 7**
**Time-of-Day Shared Parking Demand**

| Hour of Day | Retail [1] | Hotel [1] | Office Visitors [2] | Parking Demand |
|---|---|---|---|---|
| 6:00 AM | 5 | 138 | 0 | 143 |
| 7:00 AM | 25 | 131 | 3 | 159 |
| 8:00 AM | 75 | 116 | 42 | 233 |
| 9:00 AM | 175 | 102 | 126 | 403 |
| 10:00 AM | 300 | 87 | 209 | 596 |
| 11:00 AM | 375 | 87 | 95 | 557 |
| 12:00 PM | 500 | 80 | 32 | 612 |
| 1:00 PM | 500 | 80 | 95 | 675 |
| 2:00 PM | 475 | 87 | 199 | 761 |
| 3:00 PM | 425 | 87 | 95 | 607 |
| 4:00 PM | 425 | 95 | 32 | 552 |
| 5:00 PM | 425 | 102 | 21 | 548 |
| 6:00 PM | 450 | 109 | 11 | 570 |
| 7:00 PM | 400 | 109 | 5 | 514 |
| 8:00 PM | 325 | 116 | 3 | 444 |
| 9:00 PM | 225 | 124 | 0 | 349 |
| 10:00 PM | 75 | 138 | 0 | 213 |
| 11:00 PM | 25 | 145 | 0 | 170 |
| 12:00 AM | 0 | 145 | 0 | 145 |
| | | | **Maximum Demand** | 761 |
| | | | **Shared Parking Supply** | 938 |
| | | | **Surplus** | +177 |

Notes:

Time-of-day factors are from Urban Land Institute's *Shared Parking*, 3rd Edition.

[1] The number of retail and hotel spaces represent the minimum requirements from the Menlo Park Municipal Code, which are 500 and 145 spaces, respectively.

[2] The number of office visitor spaces is based on the peak visitor parking demand estimated at 0.03 vehicles per seated worker, as described in the Willow Village Parking Assessment, dated July 2021

## ADA Requirements

The number of accessible parking spaces were evaluated according to the *2019 California Building Code* (Table 11B-208.2). As shown in Table 8, the project would provide at least the required number of accessible parking spaces in the garages included in the Master Plan. Buildings RS4 and RS5 are not shown in the Master Plan.

> **Recommendation:** Prior to final design, Hexagon recommends that the required amount of ADA parking spaces be provided in all parking garages.

**Table 8**
**ADA Parking Requirements**

| Parking Garage | Total Proposed Spaces | Required ADA Spaces | Proposed ADA Spaces |
|---|---|---|---|
| Parcel 2 / RS2 | 634 | 13 | 15 |
| Parcel 3 / RS3 | 639 | 13 | 18 |
| Parcel 6 / RS6 | 181 | 6 | 6 |
| Parcel 7 / RS7 | 63 | 3 | 4 |
| Town Square / TSG | 435 | 9 | 13 |
| North Office / NG | 2032 | 31 | 44 |
| South Office / SG | 1301 | 24 | 34 |

Source: 2019 California Building Code, Table 11B-208.2

## EV Requirements

The *Menlo Park Municipal Code* (Section 16.72.010) references the *2019 California Green Building Standards Code* regarding electric vehicle (EV) parking spaces. Based on Section 4.106.4.2 of the Building Standards Code, new multifamily dwellings are required to provide 10 percent of the total number of parking spaces. Based on Section 12.18.110 of the Municipal Code, non-residential buildings greater than 9,999 square feet are required to provide 15 percent of the total required number of parking stalls. As shown in Table 9, buildings RS6 and RS7, the Town Square garage, and the Campus District garages would meet the requirements. The EV parking for building RS3 would not meet the requirements. The site plan for building RS2 does not show any provided EV parking.

> **Recommendation:** Prior to final design, Hexagon recommends that the required amount of EV parking spaces be provided in all parking garages.

**Table 9**
**EV Parking Requirements**

| Parking Garage | Total Proposed Spaces | Required EV Spaces | Proposed EV Spaces |
|---|---|---|---|
| Parcel 2 / RS2 | 634 | 79 | |
| *Residential* | 351 | 36 | - |
| *Non-residential* | 283 | 43 | - |
| Parcel 3 / RS3 | 639 | 75 | 2 |
| *Residential* | 419 | 42 | 1 |

## Pedestrian, Bicycle and Transit Analysis

### Pedestrian and Bicycle Facilities

The proposed project would include multiple pedestrian and bicycle facilities on the project site and connections between the project site and the surrounding roadway network. The proposed pedestrian facilities are shown in Figure 8 and the proposed bicycle facilities are shown in Figure 9.

The proposed pedestrian facilities include:

- Sidewalks on both sides of realigned Hamilton Avenue, Main Street, West Street, Center Street, East Street, and Park Street.

- Crosswalks at the proposed signalized intersections on Willow Road at Main Street and Park Street that would connect the project site to the Belle Haven neighborhood. Crosswalks would also be provided at most internal intersections. Crosswalks would not be provided at East Street & Center Street or at driveway intersections. A midblock crosswalk would be provided on Main Street.

  **Recommendation:** Hexagon recommends that a crosswalk be provided at the intersection of Center Street & East Street and that midblock crosswalks are provided on Center Street and Park Street to reduce block size and improve pedestrian convenience. Recommended crosswalks are shown on Figure 8.

- An internal pedestrian network connecting Main Street, office buildings, and the transit hubs.
- Pedestrian access to the elevated park connecting the North Loop Road and Willow Road via elevators.
- A subgrade pedestrian connection within the proposed Willow Road Tunnel between the project site and the Meta Bayfront Campus.

The proposed bicycle facilities include:

- On-street bicycle circulation along Park Street, West Street, Center Street, and East Street. Class III bikeways would be provided on Main Street between Willow Road and West Street.
- Bicycle connections to the existing class II/proposed class IV bike lanes along Willow Road via Park Street and Main Street.
- A class IV bike path between the Meta Bayfront Campus via the subgrade Willow Road Tunnel and the project site. The class IV bike path would extend along Main Street within the project site to Park Street, where it transitions into a multi-use pathway. A cross section of Main Street is shown on Figure 10.
- A class I multi-use path along North Loop Road, East Loop Road, and portions of Main Street and O'Brien Drive.
- Bicycle parking available for public use along the internal streets within the project site. Bicycle parking for Meta employees would be located in the North Garage and the South Garage, facilitating bicycle access between Campus District transit stops and the multi-use pathway adjacent to East Loop Road and North Loop Road.
- Bicycle access to the elevated park connecting North Loop Road and Willow Road via elevators.

## Transit Facilities

The proposed project would provide two transit hubs adjacent to East Loop Road exclusively for the Meta Commuter Shuttle and five inter-campus tram routes. These transit services would not be open to the public and would be reserved for Campus District workers.

The inter-campus tram route would loop around the project site via Main Street, East Loop Road, and North Loop Road, and would connect to the Meta Bayfront Campus and other Meta campuses via the proposed Willow Road Tunnel. The trams would also stop at two points along Main Street and at the intersection of West Street/North Loop Road & Willow Road Tunnel (see Figure 11). Along Main Street, the trams would utilize the passenger loading areas in the bus turnouts and would not be expected to block the flow of traffic (see Figure 1).

The proposed Meta Commuter Shuttle routes would be along Willow Road, O'Brien Drive, and Adams Court in the immediate vicinity of the project site, and along Park Street and East Loop Road internal to the project site (see Figure 12). Based on Meta Transportation data from March 2020, there were 59 shuttles that traveled to the South Bay, San Francisco, East Bay, the Peninsula, Santa Cruz/Scotts Valley, and North Bay/Marin District. The total ridership was 6,310 for inbound service and 6,391 for outbound service, which represents approximately 39% of the capacity. It is assumed that the existing shuttle program would have sufficient capacity to serve the proposed project.

## Hamilton Parcels

The Proposed Project would also alter parcels north of the industrial site, across Willow Road, on both the east and west sides of Hamilton Avenue (Hamilton Avenue Parcels North and South) to support realignment of the Hamilton Avenue right-of-way and provide access to the new elevated park. This would require demolition and reconstruction of an existing service station (Chevron gas station) and potentially an increase in 1,000 sf on Hamilton Avenue Parcel South and enable the potential addition of up to 6,700 sf of retail uses at the existing neighborhood shopping center on the Hamilton Avenue Parcel North. A total of 7,700 sf could be added to the Hamilton Avenue Parcels. Access to the Hamilton parcels would be provided by one right-in-right-out driveway each on Willow Road and one full-access driveway each on Hamilton Avenue.

The site access and circulation evaluations of the Hamilton parcels are based on the conceptual site plans in Appendix 7 of the September 7, 2021 master plan prepared by Peninsula Innovation Partners (see Figures 13 and 14). Site access and on-site vehicular circulation were reviewed in accordance with generally accepted traffic engineering standards.

### Access and Circulation

**Sight Distance**

The project driveways should be free and clear of any obstructions to optimize sight distance, thereby ensuring that exiting vehicles can see pedestrians on the sidewalk and other vehicles traveling on the roadway network. Landscaping and signage should not conflict with a driver's ability to locate a gap in traffic and see oncoming pedestrians and bicyclists. Adequate sight distance (sight distance triangles) should be provided at the driveways in accordance with Caltrans standards.

The required stopping sight distances are based on the Caltrans *Highway Design Manual*, Table 201.1. The project driveways are located on Willow Road and Hamilton Avenue. Willow Road has a speed limit of 40 mph and Hamilton Avenue has a speed limit of 25 mph. Thus, the Caltrans stopping sight distance requirement is 360 feet (based on a design speed of 45 mph) on Willow Road and 200 feet (based on a design speed of 30 mph) on Hamilton Avenue.

On Hamilton Avenue, on-street parking may be provided adjacent to the project driveways which may obstruct sight distance for exiting drivers. In addition, landscaping and trees placed within the sidewalk should not obstruct visibility. The driveways on Willow Road would be expected to have adequate sight distance.

> **Recommendation:** Hexagon recommends including 30 feet of red curb on both sides of the project driveways on Hamilton Avenue if on-street parking is provided to prevent vehicles from parking and obstructing the vision of exiting drivers.

**Driveway Operations**

The project-generated traffic would access the Hamilton parcels via two right-in-right-out driveways on Willow Road and two full-access driveways Hamilton Avenue. According to the City of Menlo Park's *Parking Stalls and Driveway Design Guidelines*, the width for multi-family, office, and retail driveways should be a minimum of 24 feet for two-way driveways. The site plans do not show the driveway widths.

> **Recommendation:** It is recommended that all driveway widths meet the City's requirements.

**Drive Aisles**

The project would provide 90-degree parking stalls on surface parking lots as shown in the *Willow Village Master Plan.* According to the City of Menlo Park's *Parking Stalls and Driveway Design Guidelines,* the City's standard minimum width for two-way drive aisles is 23 feet wide where 90-degree parking is provided. The site plans do not show the drive aisle widths.

> **Recommendation:** It is recommended that all drive aisle widths meet the City's requirements.

**Parking Stall Dimensions**

According to the City's *Parking Stalls and Driveway Design Guidelines,* parking stalls are required to have a width of 8 feet 6 inches and a length of 16 feet 6 inches. The site plans do not show the parking stall dimensions.

> **Recommendation:** It is recommended that all parking stall dimensions meet the City's requirements.

## Parking

The Hamilton parcels are located within the C-2-S zoning district, which per Menlo Park Municipal Code Section 16.37(7), will have parking requirements established by the planning commission for each development. The Hamilton North parcel proposes total potential development up to 22,402 square feet and 93 spaces. The Hamilton South parcel proposes total development of 5,760 s.f. and 13 spaces.

> **Recommendation:** It is recommended that the project applicant confirm that sufficient parking is provided for the proposed total development.

## Conclusions

The site plan review evaluated the internal site's intersection operations, potential queuing issues, and general site access and circulation for the proposed seven new internal streets, 14 parking garage driveways, and 20 new intersections. The results of the level of service analysis show that the intersection of Driveway B & East Loop Road would operate at LOS D during the AM peak hour. Vehicles turning left out of Driveway B would be expected to experience an average delay of 31 seconds while waiting for a sufficient opening on East Loop Road. During the AM peak hour, approximately 101 vehicles (16 heading eastbound and 85 heading westbound) would be expected to exit the garage, which would be one to two vehicles per minute. Therefore, although exiting drivers would experience some wait time, operations at Driveway B are expected to be adequate. The results of the queuing analysis show that the intersection of Hamilton Avenue/Main Street & Willow Road is expected to have insufficient turn lane storage to accommodate the anticipated traffic volumes under near-term plus project conditions. However, it is assumed that vehicles would choose to instead enter the project site via Park Street.

Hexagon identified one impact related to a design feature that could increase hazards. This impact is considered less than significant with mitigation, with the following mitigation:

- Per Mitigation Measure TRA-3 as outlined in the dEIR Transportation Chapter, mitigation would require revising the North Garage access design to provide adequate sight distance for the eastern driveway or incorporate other design solutions to reduce hazards to the satisfaction of the Public Works Director. Potential solutions that would reduce hazards to a less than significant level include restricting the eastern driveway to inbound vehicles only or prohibiting exiting left turns, modifying landscaping or relocating the driveway to the west to allow for adequate sight distance for exiting vehicles, or installing an all-way stop or signal.

Hexagon recommends the following regarding the internal project circulation:

### Circulation Related Recommendations

- To discourage vehicle traffic from travelling on the section of East Street between Center Street and Main Street and to clarify to drivers that the main throughfare at this intersection is the 90-degree bend, Hexagon recommends the East Street & Center Street intersection be slightly reconfigured. This could be done by modifying the intersection corners so the southbound left movement does not appear as a throughfare.
- To prevent southbound queues from spilling back onto Willow Road from Park Street and Main Street, Hexagon recommends coordinating the adjacent signals.

### Sight Distance Related Recommendations

- Prior to final design, the project applicant should ensure that landscaping and vegetation would not obstruct visibility at the parking garage driveways.
- Hexagon recommends including 30 feet of red curb on both sides of all garage driveways to prevent vehicles from parking and obstructing the vision of exiting drivers.
- If vehicles exiting the garages cannot see oncoming pedestrians on the sidewalk, Hexagon recommends installing warning signs to alert pedestrians when vehicles are exiting the garages.
- If any driveways are moved from their position on the current site plan, sight distance should be reevaluated.

## Parking Garage Circulation Related Recommendations

- Prior to final design, it is recommended that all driveway widths meet the City's requirement.
- At garage driveways where gates and garage doors are proposed, Hexagon recommends conducting an operational analysis to ensure that gate opening and closing times would not create queuing issues and cause vehicles to spill onto the roadway network.
- Prior to final design, the residential parking on level P1 of building RS2 should be shown to be gated and separated from the retail parking on levels 1 and 2. In addition, the roll-up gate in building RS3 should be clearly shown to separate the retail parking in level B1 and the residential parking in level B2.
- It is recommended that all drive aisle and parking stall widths meet the City's requirements.
- It is recommended that adequate turnaround space is provided at all dead-end drive aisles.

## Parking Related Recommendations

- Prior to final design, Hexagon recommends that the required number of ADA and EV parking spaces be provided in all parking garages.

## Pedestrian Related Recommendations

- Hexagon recommends that a crosswalk is provided at the intersection of Center Street & East Street and that midblock crosswalks are provided on Center Street and Park Street to reduce block size and improve pedestrian convenience.

## Hamilton Parcels Related Recommendations

- Hexagon recommends including 30 feet of red curb on both sides of the Hamilton Avenue driveways if on-street parking is provided to prevent vehicles from parking and obstructing the vision of exiting drivers.
- It is recommended that all driveway widths, drive aisle widths, and parking stall dimensions meet the City's requirements.
- It is recommended that the project applicant confirm that sufficient parking is provided for the proposed total development.

# Appendix IIA.**A**

## Project Trip Assignment Assumptions

## Project Trip Assignment Assumptions

### To/From O'Brien Drive

- Office parking in Building NG: We assumed 100% to travel on East Loop Road enter via Driveway B. We assumed 70% to exit via Driveway B and 30% to exit via Driveway A.
- Office parking in Building SG: We assumed 100% to travel on East Loop Road enter/exit via Driveway C.
- Residential and shared parking in Building RS2*:* We assumed 100% to travel on Main Street to Center Street and enter/exit via Driveway K.
- Residential and shared parking in Building RS3: We assumed 100% to travel on Main Street to Center Street and enter/exit via Driveway I.
- Residential parking in Building RS4: We assumed 50% to travel on Park Street and enter/exit via Driveway G and 50% to travel on Main Street to Center Street and enter/exit via Driveway H.
- Residential parking in Building RS5: We assumed 100% to travel on Park Street to East Street and enter via Driveway F.
- Residential parking in Building RS6 and RS7: We assumed 100% to travel on Park Street and enter via Driveway E.
- Shared parking in Building TSG: We assumed 100% to travel on Main Street to Center Street and enter/exit via Driveway I in Building RS3.
- Public park parking: We assumed 100% to travel on Park Street and enter/exit via Driveway J.

### To/From Adams Court

- Office parking in Building NG: We assumed 100% to travel on East Loop Road enter via Driveway B. We assumed 70% to exit via Driveway B and 30% to exit via Driveway A.
- Office parking in Building SG: We assumed 100% to enter/exit via Driveway C.
- Residential and shared parking in Building RS2: We assumed 100% to travel on Main Street to Center Street and enter/exit via Driveway K.
- Residential and shared parking in Building RS3: We assumed 100% to travel on Main Street to Center Street and enter/exit via Driveway I.
- Residential parking in Building RS4: We assumed 50% to travel on Park Street and enter/exit via Driveway G and 50% to travel on Main Street to Center Street and enter/exit via Driveway H.
- Residential parking in Building RS5: We assumed 100% to travel on East Loop Road to Park Street and enter/exit via Driveway F.
- Residential parking in Building RS6 and RS7: We assumed 100% to travel on East Loop Road to Park Street and enter/exit via Driveway E.
- Shared parking in Building TSG: We assumed 100% to travel on Main Street to Center Street and enter/exit via Driveway I in Building RS3.
- Public park parking: We assumed 100% to travel on East Loop Road to Park Street and enter/exit via Driveway J.

## To/From Willow Road south of Hamilton Avenue

- Office parking in Building NG: We assumed 60% to travel on Park Street to East Loop Road and enter/exit via Driveway B and 40% to travel on Main Street to North Loop Road and enter/exit via Driveway A.
- Office parking in Building SG: We assumed 100% to travel on Park Street and enter/exit via Driveway D.
- Residential and shared parking in Building RS2: We assumed 100% to enter via Driveway M and 100% to exit via Driveway K and travel on West Street to Park Street.
- Residential and shared parking in Building RS3: We assumed 50% to travel on Park Street to West Street and enter/exit via Driveway L and 50% to travel on West Street to Center Street and enter/exit via Driveway I.
- Residential parking in Building RS4: We assumed 100% to travel on Park Street and enter/exit via Driveway G.
- Residential parking in Building RS5: We assumed 100% to travel on Park Street and enter/exit via Driveway F.
- Residential parking in Building RS6 and RS7: We assumed 100% to travel on Park Street and enter/exit via Driveway E.
- Hotel parking in Building TSG: We assumed 100% to enter via Driveway N. Due to the exclusive right-turn onto Willow Road and prohibited U-turns at Willow Road/Bayfront Expressway, we assumed 100% to exit via Driveway L in Building RS3 and travel on West Street to Park Street.
- Public park parking: We assumed 100% to travel on Park Street and enter/exit via Driveway J.

## To/From Hamilton Avenue

- Office parking in Building NG: We assumed 100% to travel on Main Street to North Loop Road and enter via Driveway A. We assumed 70% to exit via Driveway A and 30% to exit via Driveway B.
- Office parking in Building SG: We assumed 100% to travel on Main Street and enter/exit via Driveway D.
- Residential and shared parking in Building RS2: We assumed 100% to travel on Main Street to West Street and enter via Driveway K and 100% to exit via Driveway M.
- Residential and shared parking in Building RS3: We assumed 100% to travel on Main Street to West Street and enter/exit via Driveway L.
- Residential parking in Building RS4: We assumed 100% to travel on Main Street to West Street and enter/exit via Driveway H.
- Residential parking in Building RS5: We assumed 70% to travel on Main Street to East Street and enter/exit via Driveway F. We assumed 30% to travel on Main Street to West Street and Center Street and enter/exit via Driveway F.
- Residential parking in Building RS6 and RS7: We assumed 50% to travel on Main Street to West Street and Park Street and enter/exit via Driveway E and 50% to travel on Willow Road to Park Street and enter/exit via Driveway E.
- Hotel parking in Building TSG: We assumed 100% to enter via Driveway N on Willow Road. Due to the exclusive right-turn onto Willow Road and prohibited U-turns at Willow

Road/Bayfront Expressway, we assumed 100% to exit via Driveway L in Building RS3 and travel on West Street to Main Street.

- Public park parking: We assumed 50% to travel on Main Street to West Street and enter/exit via Driveway J and 50% to travel on Willow Road to Park Street and enter/exit via Driveway J.

### To/From Willow Road north of Hamilton Avenue

- Office parking in Building NG: We assumed 100% to travel on Main Street to North Loop Road and enter via Driveway A. We assumed 70% to exit via Driveway A and 30% to exit via Driveway B.
- Office parking in Building SG: We assumed 100% to travel on Park Street and enter/exit via Driveway D.
- Residential and shared parking in Building RS2: We assumed 100% to travel on Main Street to West Street and enter via Driveway K and 100% to exit via Driveway M.
- Residential and shared parking in Building RS3: We assumed 100% to travel on Main Street to West Street and enter via Driveway L. We assumed 50% to exit via Driveway L and 50% to exit via Driveway N.
- Residential parking in Building RS4: We assumed 100% to travel on Main Street to West Street and enter/exit via Driveway H.
- Residential parking in Building RS5: We assumed 70% to travel on Main Street to East Street and enter/exit via Driveway F. We assumed 30% to travel on Main Street to West Street and Center Street and enter/exit via Driveway F.
- Residential parking in Building RS6 and RS7: We assumed 100% to travel on Willow Road to Park Street and enter/exit via Driveway E.
- Hotel parking in Building TSG: We assumed 100% to travel on Main Street to West Street and enter via Driveway L. We assumed 100% to exit via Driveway N on Willow Road from Building TSG.
- Public park parking: We assumed 100% to travel on Willow Road to Park Street and enter/exit via Driveway J.

## Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
|---|---|---|---|---|---|---|---|
| 1 | East Loop Road and Driveway A | Two-way stop | HCM 6th Edition | EB Left | 0.072 | 10.1 | B |
| 2 | East Loop Road and Driveway B | Two-way stop | HCM 6th Edition | EB Left | 0.109 | 31.0 | D |
| 3 | East Loop Road and Adams Court | Signalized | HCM 6th Edition | EB Right | 0.165 | 4.9 | A |
| 4 | East Loop Road and Driveway C | Two-way stop | HCM 6th Edition | EB Left | 0.004 | 19.6 | C |
| 5 | Main Street and Park Street/Driveway D | Signalized | HCM 6th Edition | EB Thru | 0.191 | 16.3 | B |
| 6 | Park Street and Driveway E | Two-way stop | HCM 6th Edition | NB Left | 0.106 | 13.9 | B |
| 7 | Driveway E and RS6/RS7 | Two-way stop | HCM 6th Edition | EB Left | 0.041 | 8.8 | A |
| 8 | Park Street and East Street | All-way stop | HCM 6th Edition | EB Left | 0.326 | 9.3 | A |
| 9 | East Street and Driveway F | Two-way stop | HCM 6th Edition | WB Left | 0.038 | 8.8 | A |
| 10 | Center Street and East Street | Two-way stop | HCM 6th Edition | SB Thru | 0.006 | 9.5 | A |
| 11 | Main Street and East Street | Two-way stop | HCM 6th Edition | NB Left | 0.017 | 9.5 | A |
| 12 | Driveway G and Park Street | Two-way stop | HCM 6th Edition | SB Left | 0.011 | 12.2 | B |
| 13 | Dwy H/DwI and Center Street | Two-way stop | HCM 6th Edition | NB Left | 0.042 | 9.6 | A |
| 14 | West Street/Dwy J and Park Street | Signalized | HCM 6th Edition | SB Right | 0.253 | 12.0 | B |
| 15 | West Street and Dwy K/Center Street | All-way stop | HCM 6th Edition | SB Thru | 0.095 | 7.4 | A |
| 16 | West Street/Dwy L | Two-way stop | HCM 6th Edition | WB Left | 0.061 | 10.1 | B |
| 17 | Main Street and West Street | Signalized | HCM 6th Edition | SB Right | 0.290 | 10.8 | B |
| 18 | North loop Road/West Street and Willow Road Tunnel | All-way stop | HCM 6th Edition | NB Thru | 0.457 | 10.1 | B |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 19 | Willow Road and Driveway M | Two-way stop | HCM 6th Edition | WB Right | 0.071 | 13.3 | B |
| 20 | Willow Road and Driveway N | Two-way stop | HCM 6th Edition | WB Right | 0.066 | 13.2 | B |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

## Intersection Level Of Service Report
## Intersection 1: East Loop Road and Driveway A

| | | | |
|---|---|---|---|
| Control Type: | Two-way stop | Delay (sec / veh): | 10.1 |
| Analysis Method: | HCM 6th Edition | Level Of Service: | B |
| Analysis Period: | 15 minutes | Volume to Capacity (v/c): | 0.072 |

### Intersection Setup

| Name | East Loop Road | | East Loop Road | | Driveway A | |

# Signal Warrants Report For Intersection 1: East Loop Road and Driveway A

## Warrants Summary

| Warrant | Name | Met? |
|---|---|---|
| #1 | Eight Hour Vehicular Volume | No |
| #2 | Four Hour Vehicular Volume | No |
| #3 | Peak Hour | No |

## Intersection Warrants Parameters

| | |
|---|---|
| Major Approaches | N, S |
| Minor Approaches | W |
| Speed > 40mph | No |
| Population < 10,000 | No |
| Warrant Factor | 100% |

## Warrant Analysis Traffic Volumes

| Hour | Major Streets | | Minor Streets |

**Intersection Analysis Summary**

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
|---|---|---|---|---|---|---|---|
| 1 | East Loop Road and Driveway A | Two-way stop | HCM 6th Edition | EB Left | 0.284 | 11.9 | B |
| 2 | East Loop Road and Driveway B | Two-way stop | HCM 6th Edition | EB Left | 0.141 | 16.5 | C |
| 3 | East Loop Road and Adams Court | Signalized | HCM 6th Edition | SB Thru | 0.172 | 15.2 | B |
| 4 | East Loop Road and Driveway C | Two-way stop | HCM 6th Edition | EB Left | 0.014 | 17.0 | C |
| 5 | Main Street and Park Street/Driveway D | Signalized | HCM 6th Edition | WB Left | 0.205 | 17.1 | B |
| 6 | Park Street and Driveway E | Two-way stop | HCM 6th Edition | NB Left | 0.059 | 12.7 | B |
| 7 | Driveway E and RS6/RS7 | Two-way stop | HCM 6th Edition | EB Left | 0.025 | 8.8 | A |
| 8 | Park Street and East Street | All-way stop | HCM 6th Edition | WB Thru | 0.290 | 9.1 | A |
| 9 | East Street and Driveway F | Two-way stop | HCM 6th Edition | WB Left | 0.024 | 8.9 | A |
| 10 | Center Street and East Street | Two-way stop | HCM 6th Edition | SB Thru | 0.016 | 9.7 | A |
| 11 | Main Street and East Street | Two-way stop | HCM 6th Edition | NB Left | 0.012 | 10.0 | A |
| 12 | Driveway G and Park Street | Two-way stop | HCM 6th Edition | SB Left | 0.011 | 15.4 | C |
| 13 | Dwy H/DwI and Center Street | Two-way stop | HCM 6th Edition | NB Left | 0.029 | 10.4 | B |
| 14 | West Street/Dwy J and Park Street | Signalized | HCM 6th Edition | SB Right | 0.352 | 15.7 | B |
| 15 | West Street and Dwy K/Center Street | All-way stop | HCM 6th Edition | SB Thru | 0.235 | 8.3 | A |
| 16 | West Street/Dwy L | Two-way stop | HCM 6th Edition | WB Left | 0.170 | 12.8 | B |
| 17 | Main Street and West Street | Signalized | HCM 6th Edition | EB Right | 0.339 | 16.9 | B |
| 18 | North loop Road/West Street and Willow Road Tunnel | All-way stop | HCM 6th Edition | SB Thru | 0.367 | 9.3 | A |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 19 | Willow Road and Driveway M | Two-way stop | HCM 6th Edition | WB Right | 0.150 | 16.0 | C |
| 20 | Willow Road and Driveway N | Two-way stop | HCM 6th Edition | WB Right | 0.211 | 20.2 | C |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

# Signal Warrants Report For Intersection 1: East Loop Road and Driveway A

## Warrants Summary

| Warrant | Name | Met? |
|---|---|---|
| #1 | Eight Hour Vehicular Volume | No |
| #2 | Four Hour Vehicular Volume | No |
| #3 | Peak Hour | No |

## Intersection Warrants Parameters

| | |
|---|---|
| Major Approaches | N, S |
| Minor Approaches | W |
| Speed > 40mph | No |
| Population < 10,000 | No |
| Warrant Factor | 100% |

## Warrant Analysis Traffic Volumes

| Hour | Major Streets | | Minor Streets |
|---|---|---|---|
| | N | S | W |
| 1 | 123 | 71 | 348 |
| 2 | 119 | 69 | 338 |
| 3 | 117 | 67 | 331 |
| 4 | 109 | 63 | 310 |
| 5 | 97 | 56 | 275 |
| 6 | 96 | 55 | 271 |

# Appendix I
## Facebook/Meta’s Tram and Shuttle Services

# Memorandum

Date: January 17, 2020

To: Eric Harrison, Signature Development

From: Robert Eckols

**Subject: Facebook Menlo Park Campus Tram Operations**

*SJ18-1860*

This memorandum transmits the existing data related to the Facebook intercampus tram operations. Facebook operates five intercampus tram lines that employees use to move between the four Menlo Park campuses: Willow, Classic, Bayfront, and Chilco. **Figure 1** shows the routes and stops used by each of the five existing Menlo Park tram lines.

Currently, three of the intercampus tram lines serve the Willow Campus - Teal, Gold, and Orange lines. All three of the Willow Campus trams operate on public roadways using: Willow Road, Hamilton Avenue, and Hamilton Court. **Table 1** shows the campuses served by each intercampus line. The tram lines connect two or three of the four Menlo Park campuses. None of the tram lines serve all four campuses.

**Table 1: Facebook Intercampus Tram Routes & Coverage**

| Route | Willow Campus | Classic Campus | Bayfront Campus | Chilco Campus |
|---|---|---|---|---|
| Red Line | | ✓ | ✓ | ✓ |
| Purple Line | | ✓ | ✓ | ✓ |
| Teal Line | ✓ | | ✓ | ✓ |
| Gold Line | ✓ | ✓ | | |
| Orange Line | ✓ | | ✓ | |

Source: Fehr & Peers, 2020

The Teal Line that serves the Willow, Bayfront, and Chilco campuses operates on westbound Bayfront Expressway between Willow Road and Chilco Street. The Orange Line that serves the

Willow and Bayfront campuses operates on westbound Bayfront Expressway between Willow Road and the Building 20 driveway. Within the Willow campus the trams circulate on the public roadways and through the surface parking lots on the South side of the campus to connect between Hamilton Court and Willow Road.

**Table 2** summarizes the hours of operations and headways of the Willow Campus trams. The Teal and Orange trams operate during normal business hours (7:30 am to 6:30 pm) on 5-minute headways. The Gold trams has extended hours from 4:55 AM to 9:55 PM on 5-minute headways. While there is demand for the trams throughout the day, peak usage of the trams occurs during the morning and evening commute peak periods when employees use the trams to access the employee shuttles and mid-day when employees use the trams to travel to lunch venues.

**Table 2: Facebook Willow Campus Tram - Hours of Operations & Headways**

| Route | Hours of Operation | Hours per Day | Headway |
|---|---|---|---|
| Teal Line | 7:30 AM - 6:30 PM | 11 hours | 5 minutes |
| Gold Line | 4:55 AM - 9:55 PM | 17 hours | 5 minutes |
| Orange Line | 7:30 AM - 6:30 PM | 11 hours | 5 minutes |

## Model Validation Memo

HEXAGON TRANSPORTATION CONSULTANTS, INC.

## Memorandum

**Date:** November 10, 2021

**To:** Ms. Kristiann Choy, City of Menlo Park

**From:** Ollie Zhou

**Subject:** Menlo Park Travel Demand Forecasting Model Validation

Hexagon Transportation Consultants, Inc. has completed a model calibration and validation for the City of Menlo Park's travel demand forecast model (ConnectMenlo model) to a base year of year 2019. The ConnectMenlo model is a computerized representation of travel patterns of 14 counties within the larger Bay Area: the nine Bay Area counties, County of Santa Cruz, County of San Benito, County of Monterey, County of San Joaquin, and County of Stanislaus. The ConnectMenlo model was originally developed based on the 2013 update of the City/County Association of Governments travel demand model. It included additional network details as well as a refined traffic analysis zone (TAZ) system within the City of Menlo Park.

The purpose of re-calibrating and validating the ConnectMenlo to year 2019 conditions is to use this model to inform City's VMT policies, and conduct land use and transportation related studies. This model effort is part of the transportation study for the proposed Willow Village project.

## Network System Refinement

The previous ConnectMenlo model employed an enhanced roadway network layer developed from the TomTom North America routable network database for roadways within the City of Menlo Park. While the network layer provided detail in terms of having all roadways within the City coded in the model, major roadways are coded as two one-direction links, which created challenges for extracting turning movement volumes. With the immediate needs of the Willow Village project in mind, the roadway network is simplified to bi-direction links for the roadways and intersections under evaluation.

Hexagon conducted a review of the critical link-level attributes such as number of lanes, lane types, and turn penalties specifically within the Willow Village study areas. In particular, the US 101 interchange at Willow Road is updated to reflect the configuration current as of May 2019, when field work was conducted and approximately when most of the counts were collected (March/April 2019). It is worth noting that in May 2019, the interchange was still under construction and the US 101 northbound off-ramp had only 1 lane of capacity coming off the freeway. This was reflected in the updated base network. This ramp has since opened up to have 2 lanes of capacity coming off the freeway, which will be reflected in a future network.

The transit network in the previous ConnectMenlo model was not coded along the roadway links, meaning their travel speeds were not affected by roadway congestions. The transit network is revised to travel on roadway links.

## Traffic Analysis Zone System Refinement

The 2013 C/CAG model originally had 24 traffic analysis zones (TAZs) covering the City of Menlo Park. The previous ConnectMenlo model provided enhanced detail and split the 24 TAZs into 81 TAZs. Hexagon reviewed the TAZ area coverages and found several coverage lapses surrounding the City of Menlo Park. The TAZ coverages were revised accordingly (see Figure 1).

In preparation for the proposed Willow Village project, additional TAZ details were provided within the project area. To maintain the overall 81-TAZ system, several TAZs throughout the rest of the City were aggregated to free up the necessary TAZs to cover the Willow Village area.

## Development of 2019 Land Use Inputs

Primary inputs to the travel demand model are land use and demographic data. The ConnectMenlo model requires land use and demographic inputs at the appropriate traffic analysis zone level. The main land use inputs variables are:

- Number of single and multi-family households
- Household population
- Employed residents
- Jobs by type (retail, service, other, manufacturing, wholesale and agriculture)
- School enrollment

The previous ConnectMenlo model had land uses for a base year of 2013 and a future year of 2040. For TAZs outside of the City of Menlo Park, the year 2019 land uses were developed via a straight-line interpolation of the previous base year and future year land uses. For TAZs within the City of Menlo Park, land uses were grown based on a list of approved and developed projects since year 2013, supplied by City staff.

### Facebook Buildings

Facebook's Classics campus and Bayfront campus were previously not coded with land uses in the model. Facebook since year 2013 has also occupied numerous other buildings in the Bayfront area. These include buildings MPK 24 to MPK 29, MPK 60, MPK 61 and MPK 64 in the area west of Chilco Street, and buildings MPK 40 to MPK 59 in the Menlo Science and Technology Park. Hexagon adjusted employment data in these zones to reflect the higher employee density characteristic of Facebook buildings. Figures 2 and 3 show the year 2019 residential and employment data by zone for City of Menlo Park zones. Table 1 below summarizes the key land use data for the nine Bay Area counties and for the City of Menlo Park.

**Figure 1**
**Menlo Park TAZ System**

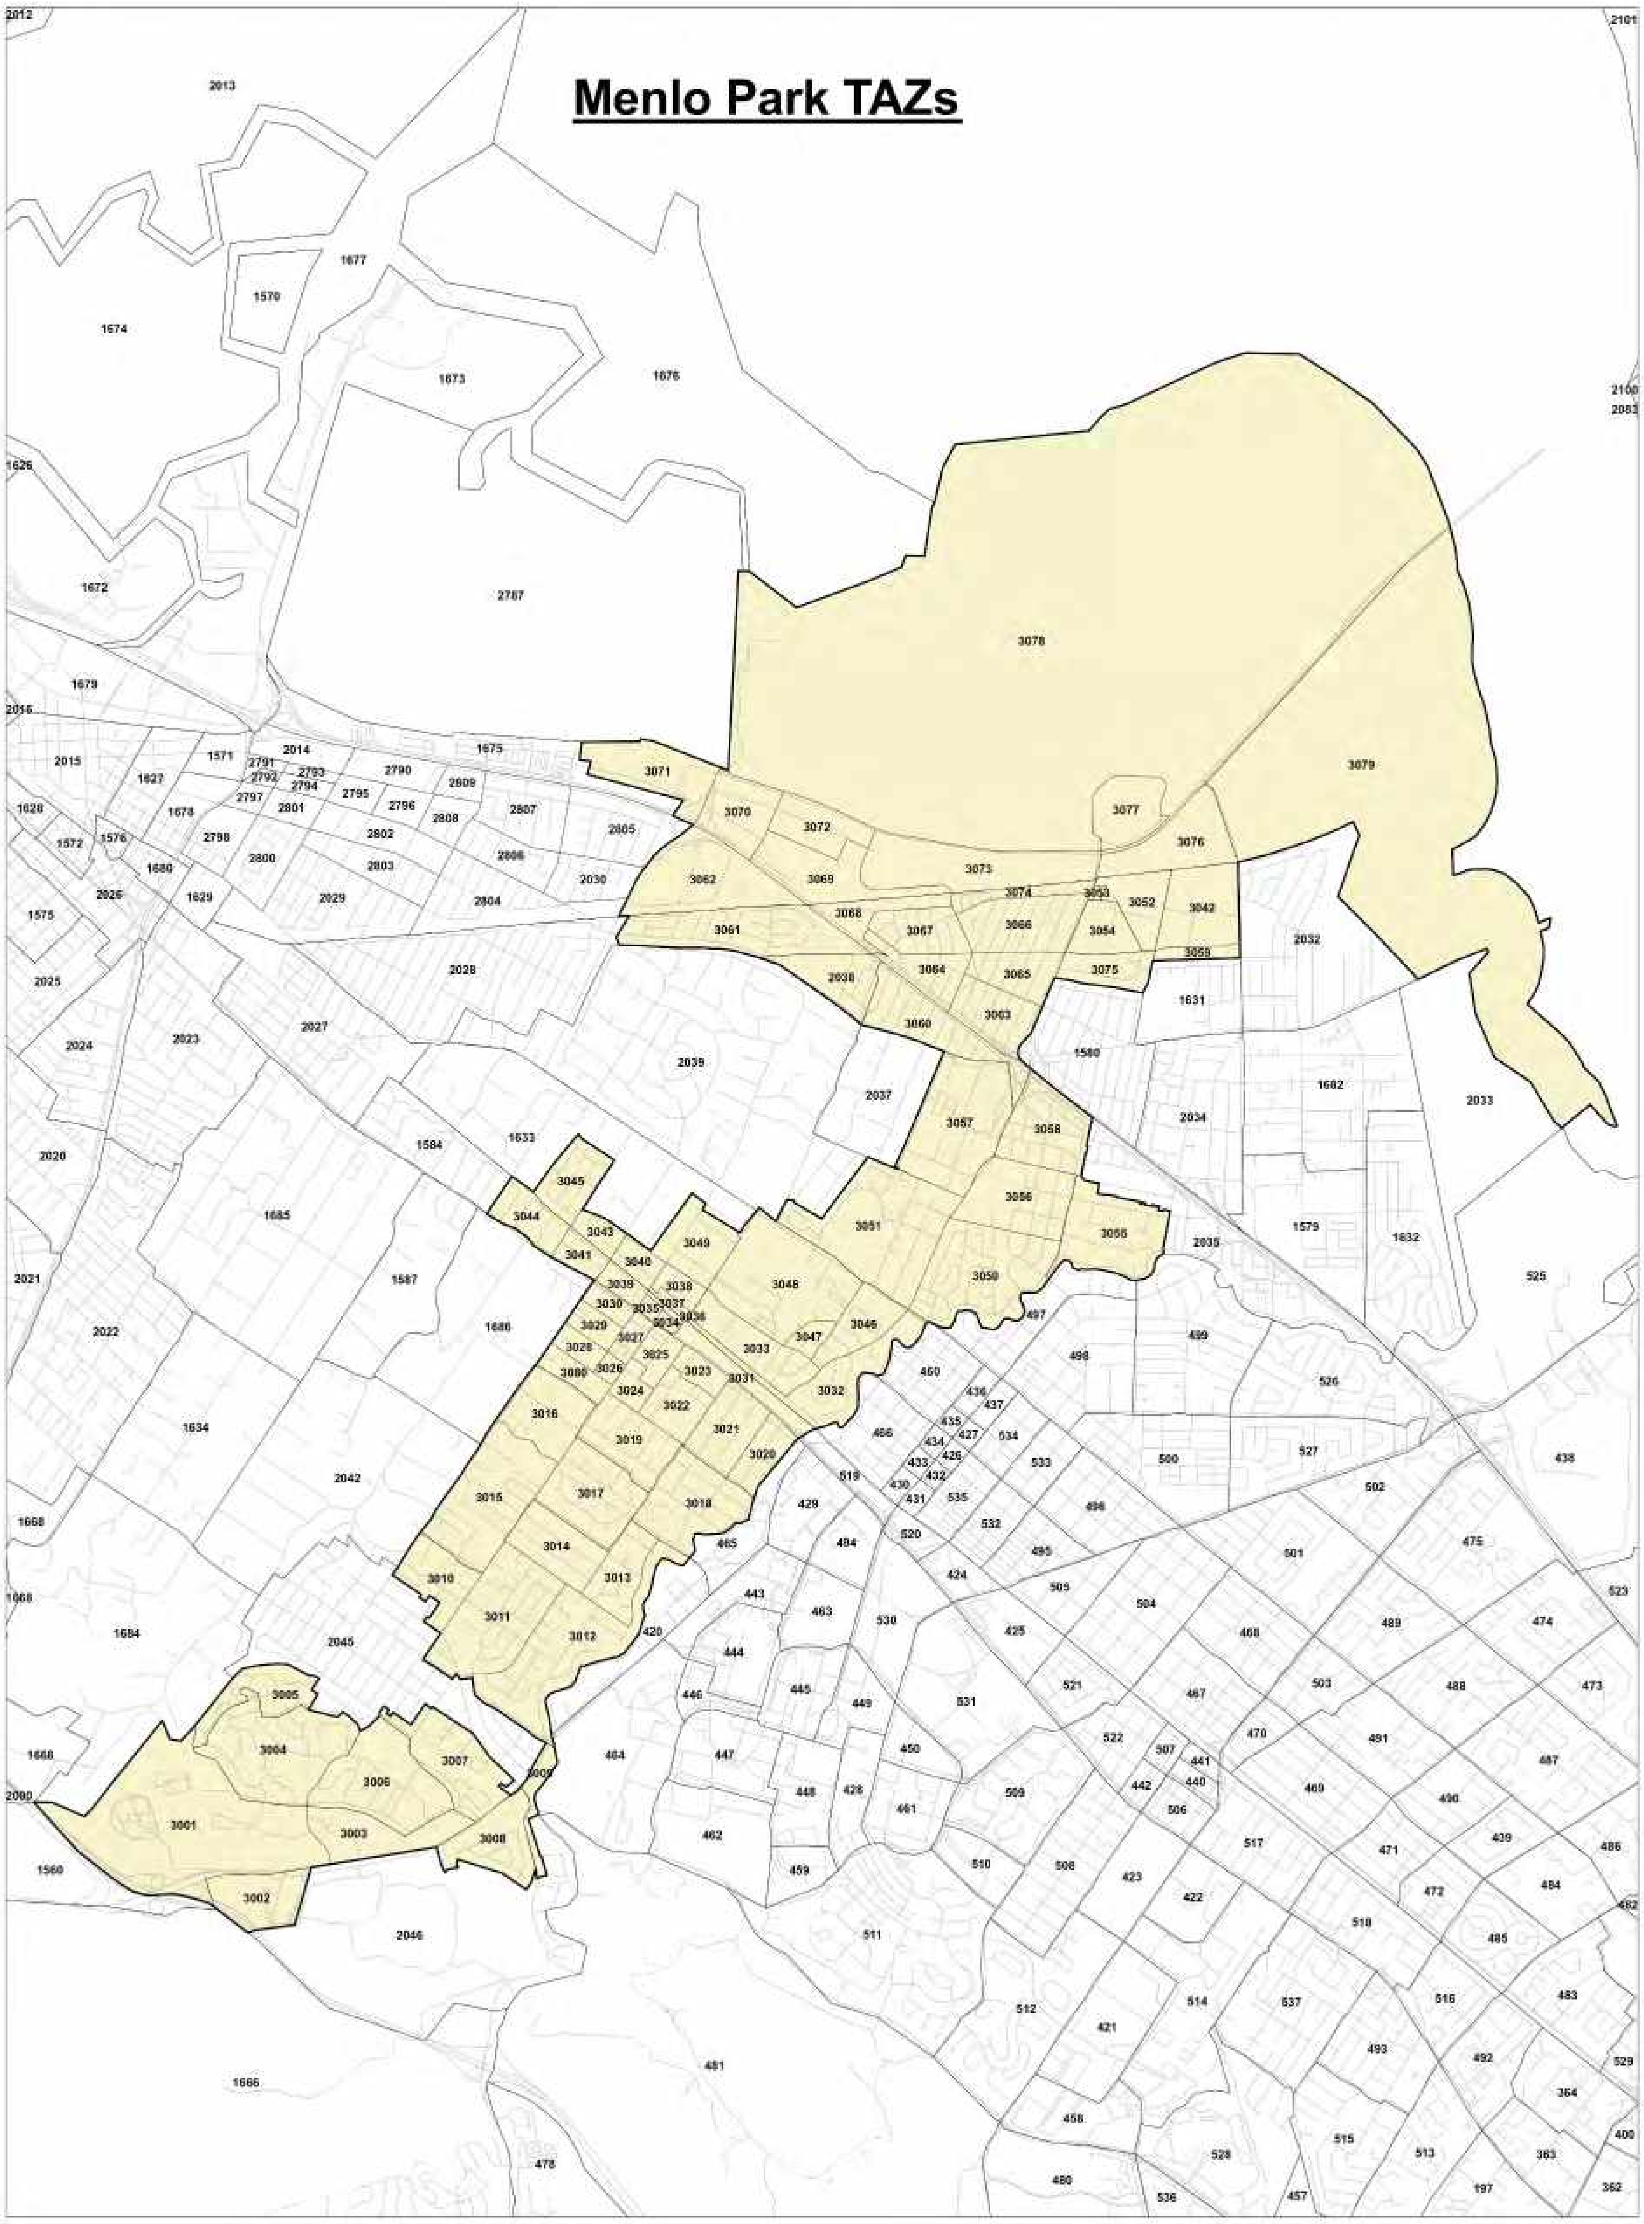

**Figure 2**
**Year 2019 Land Use Inputs – Households**

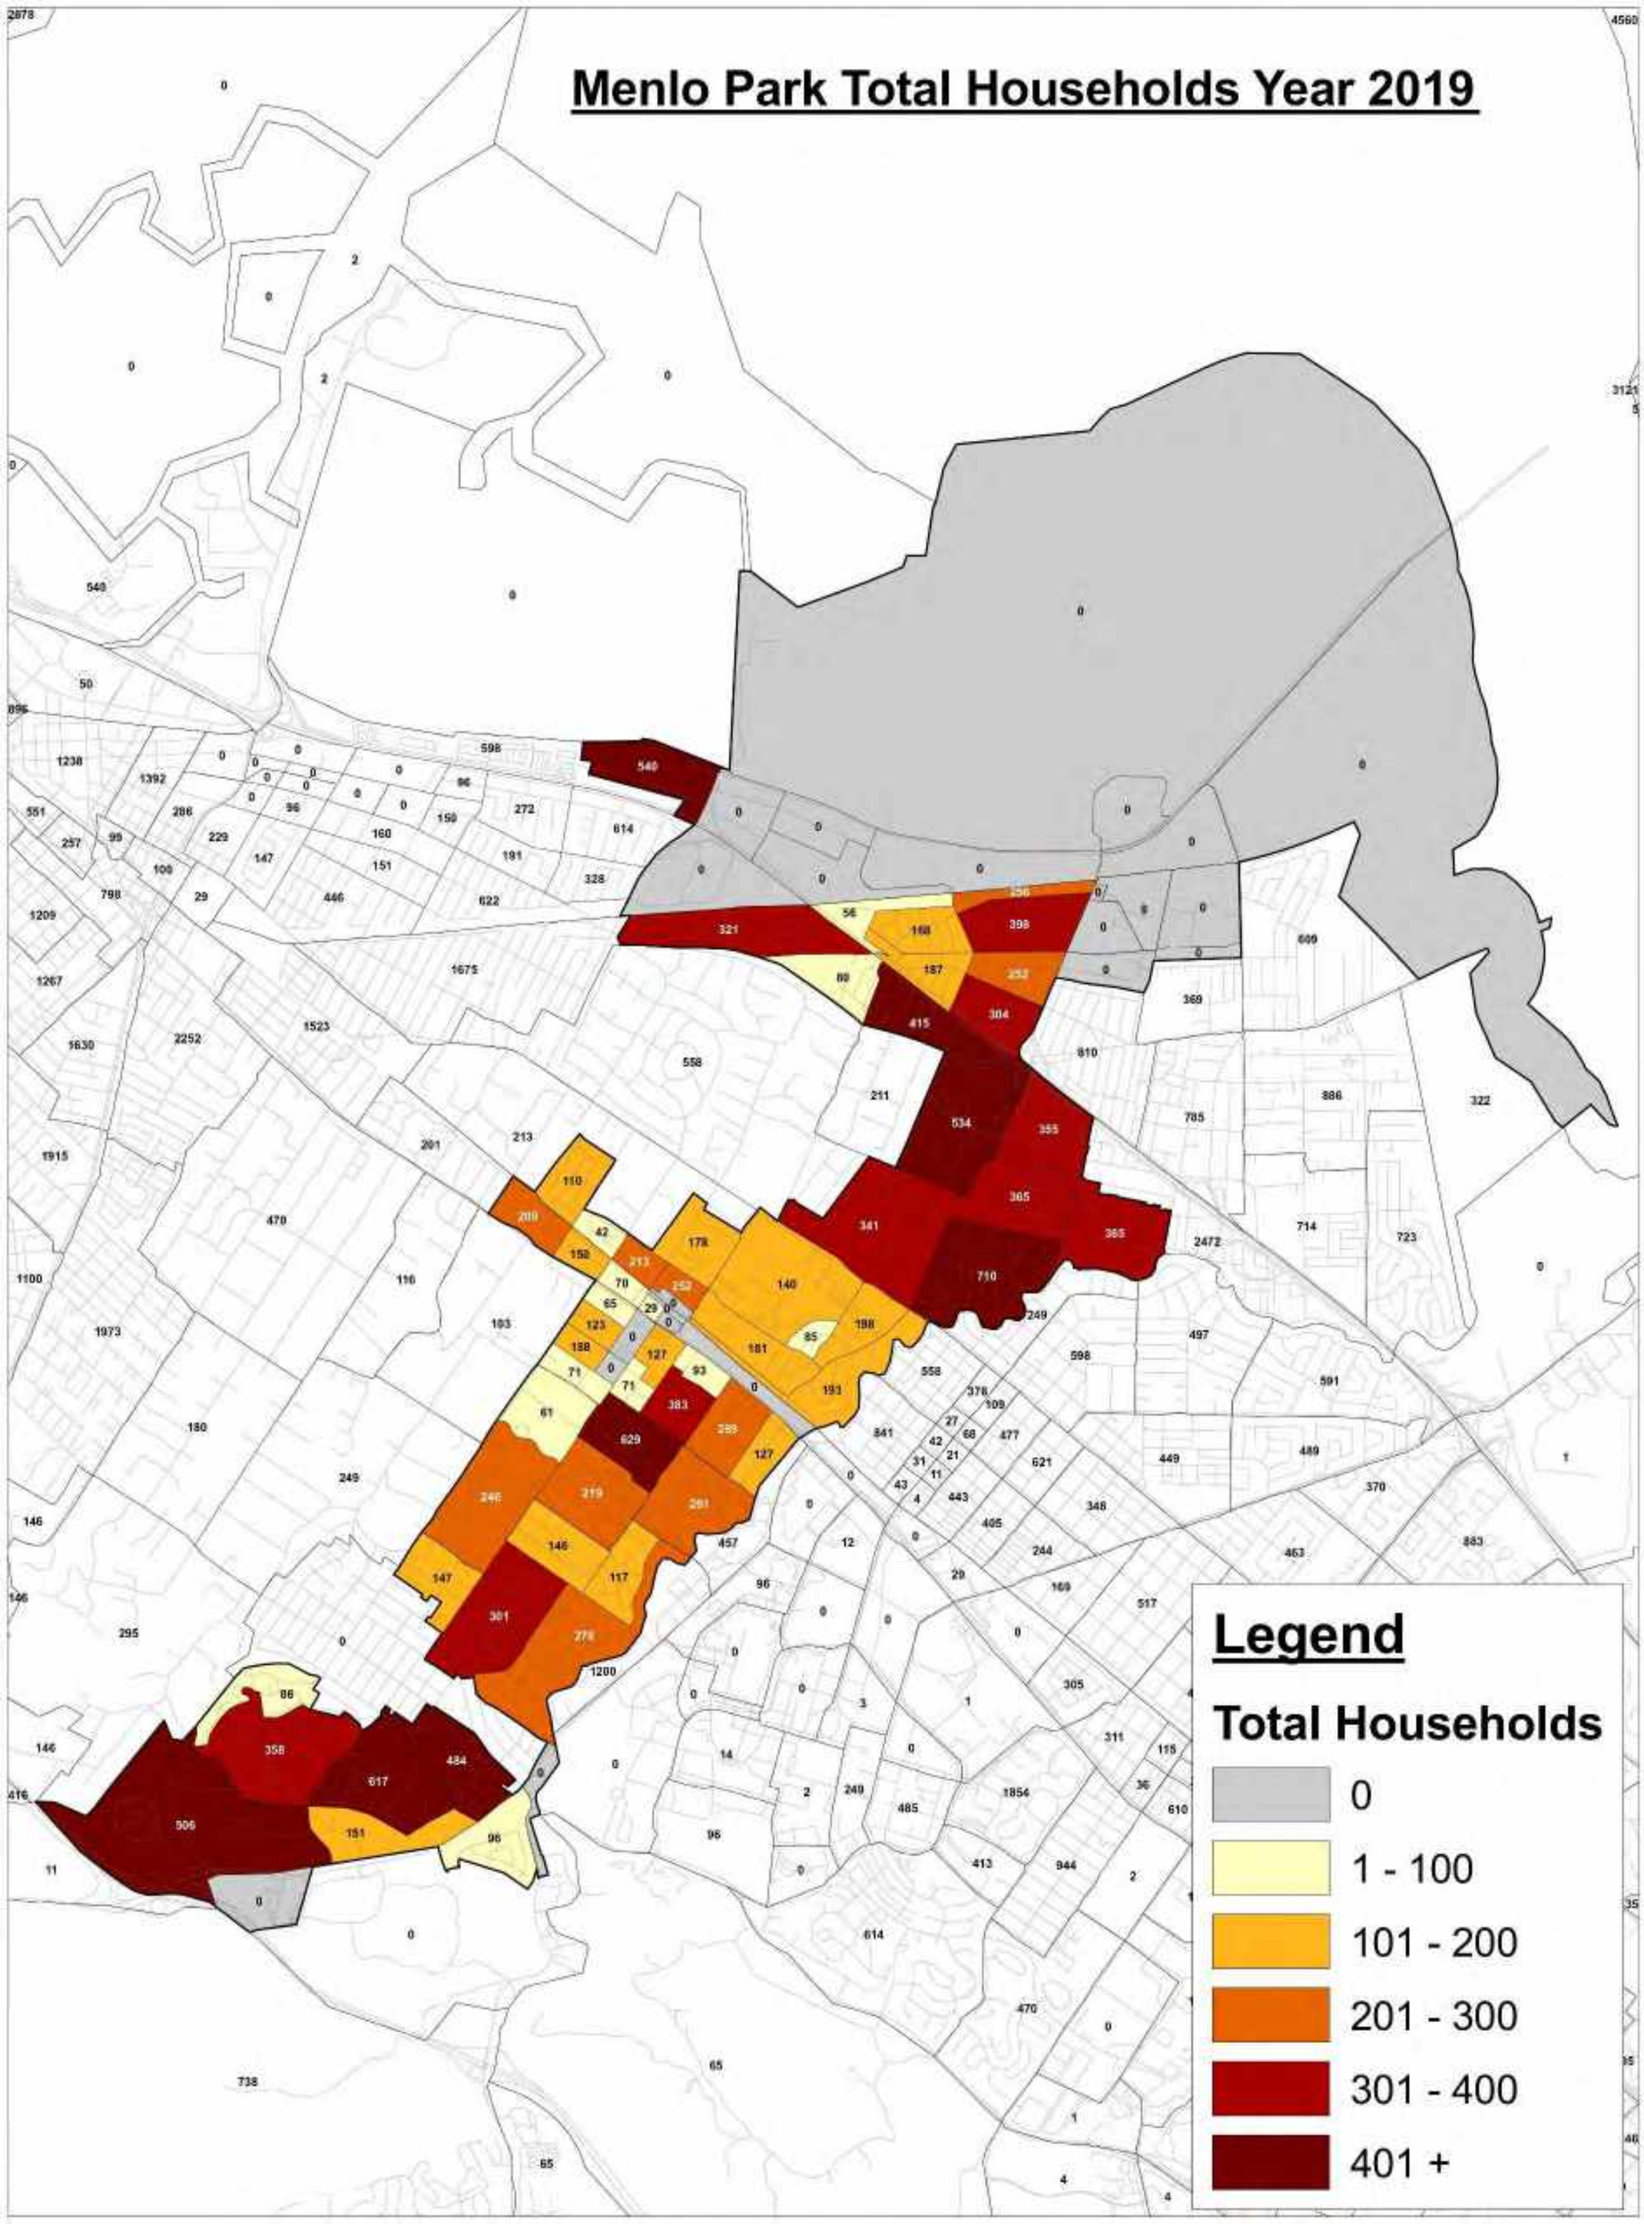

**Figure 3**
**Year 2019 Land Use Inputs – Total Employment**

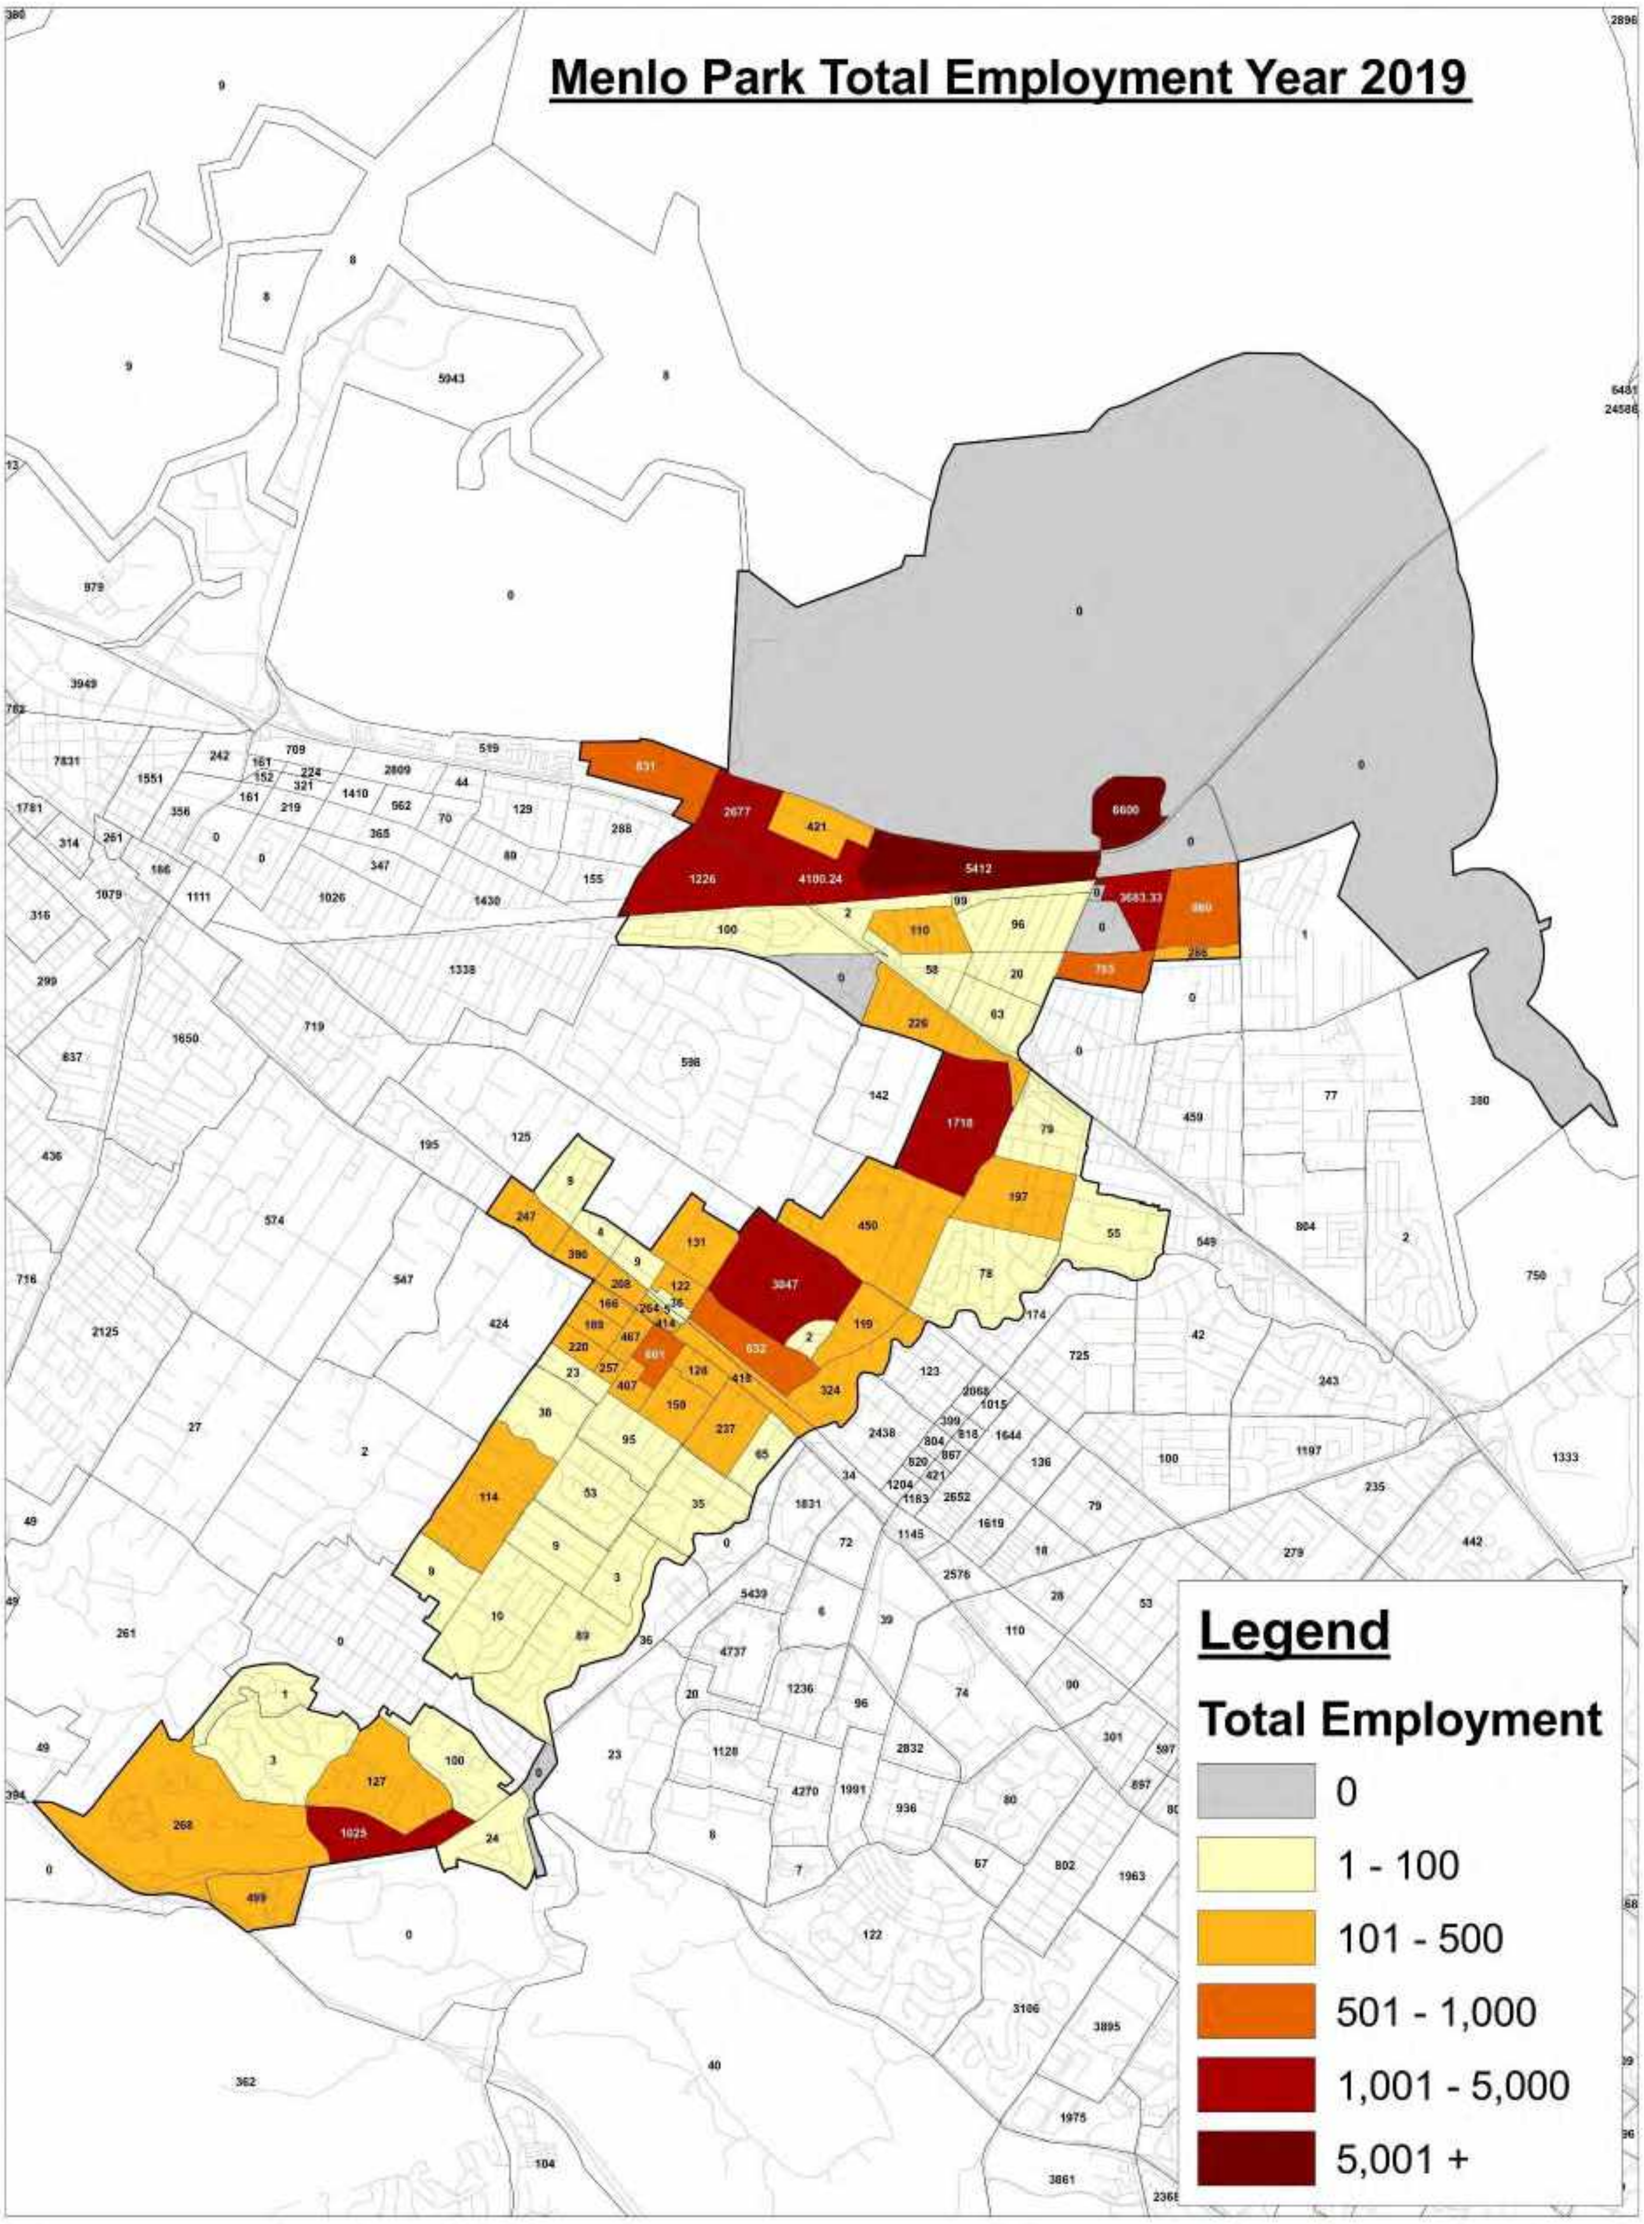

**Table 1**
**2019 ConnectMenlo Land Use Summary**

| County | Year 2019 Model Land Use Data | | | |
|---|---|---|---|---|
| | Total Households | Total Population | Employed Residents | Total Jobs |
| San Francisco | 375,982 | 880,235 | 467,641 | 633,914 |
| San Mateo | 274,743 | 767,106 | 360,057 | 391,547 |
| Santa Clara | 667,403 | 1,957,085 | 894,436 | 1,034,479 |
| Alameda | 592,728 | 1,633,472 | 742,799 | 780,003 |
| Contra Costa | 400,746 | 1,123,666 | 487,731 | 385,759 |
| Solano | 149,764 | 429,836 | 191,463 | 147,984 |
| Napa | 51,084 | 140,907 | 63,841 | 77,204 |
| Sonoma | 196,195 | 512,325 | 233,027 | 214,146 |
| Marin | 105,829 | 254,222 | 118,113 | 116,851 |
| City of Menlo Park | 13,937 | 35,840 | 15,110 | 42,013 |

# Trip Generation and Distribution Calibration

## Trip Generation Calibration

A trip generation and distribution calibration was conducted for the home-based work trip purpose since the previous model didn't include Facebook land uses. Hexagon obtained person-level work-related trip generation data at the county-level from 2019 American Community Survey (ACS) 5-year estimates. The proportions of county-level productions (work trips based on home locations) and attractions (work trips based on employment locations) were used to calibrate the model estimated county-level production and attractions. After calibration, the model-estimated production and attraction proportions well-matched the latest ACS data (see Table 2).

**Table 2**
**Trip Generation Comparison Between Model and Survey Data**

| County | Modelled Proportions | | 2019 ACS 5-Year Estimates | |
|---|---|---|---|---|
| | Productions | Attractions | Productions | Attractions |
| San Francisco | 11.2% | 16.6% | 11.3% | 16.6% |
| San Mateo | 9.0% | 9.1% | 9.1% | 9.1% |
| Santa Clara | 21.6% | 24.5% | 21.6% | 24.3% |
| Alameda | 17.2% | 16.2% | 17.2% | 16.2% |
| Contra Costa | 12.0% | 8.5% | 12.0% | 8.4% |
| Solano | 4.6% | 3.3% | 4.6% | 3.3% |
| Napa | 1.5% | 1.7% | 1.5% | 1.7% |
| Sonoma | 5.5% | 5.0% | 5.4% | 5.0% |
| Marin | 2.6% | 2.5% | 2.6% | 2.5% |
| Rest of Modelled Area | 14.6% | 12.7% | 14.6% | 12.9% |

## Trip Distribution Calibration

Latest county-to-county flow information were obtained from AASHTO's Census Transportation Planning Product (CTPP) 2012-2016 data. The year 2019 flow estimates were derived using the iterative proportional fitting method, with the model-estimated county-level productions and attractions as the targets, seeded with the CTPP data. As shown on Table 3 below, the model-estimated county-level flows well-matched the fitted flow data from surveys.

**Table 3**
**Trip Distribution Calibration**

| Comparison of Model Flows to Survey Flows | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Attraction | | | | | | | | |
| Production | San Franciso | San Mateo | Santa Clara | Alameda | Contra Costa | Solano | Napa | Sonoma | Marin |
| **San Franciso** | 0.99 | 1.00 | 1.03 | 1.11 | 1.07 | | | | 0.99 |
| **San Mateo** | 1.00 | 1.01 | 0.96 | 1.01 | | | | | |
| **Santa Clara** | 0.96 | 0.96 | 1.01 | 0.94 | | | | | |
| **Alameda** | 1.00 | 0.99 | 1.00 | 1.00 | 1.00 | | | | 0.92 |
| **Contra Costa** | 1.03 | 0.96 | 0.99 | 1.01 | 1.00 | 0.98 | | | 0.94 |
| **Solano** | 1.00 | | | 1.03 | 1.04 | 1.00 | 0.98 | | 0.96 |
| **Napa** | | | | | | 1.04 | 1.00 | | |
| **Sonoma** | 1.02 | | | | | | 0.97 | 0.99 | 0.98 |
| **Marin** | 0.99 | | | 1.05 | | | | 0.90 | 1.01 |

Notes:
Ratios are provided only for county-to-county person-level flows with more than 5,000 trips

Based on aggregated data supplied by Facebook for employee's residing cities, Hexagon specifically calibrated the k-factors associated with the Facebook zones. As shown on Table 4, the resulting county-level distributions for the Facebook zones well-represent Facebook employees' residential patterns.

**Table 4**
**Facebook Employee Home-Location Distribution**

| | Facebook Employee Home-Location Distribution | |
|---|---|---|
| County | Model Estimate | Survey Data |
| San Francisco | 14.3% | 15.7% |
| San Mateo | 27.3% | 26.8% |
| Santa Clara | 35.9% | 37.4% |
| Alameda | 18.6% | 15.2% |
| Contra Costa | 2.3% | 1.6% |
| Rest | 1.7% | 3.4% |

# Mode Choice Calibration

## Facebook Mode Splits

Facebook provided 2015 survey results of employee travel mode by County. Because the Facebook Classic campus, the Bayfront campus, and the Facebook buildings (MPK 40 to MPK 59) in the Menlo Science and Technology Park are interconnected via pedestrian/bicycle facilities and enjoy essentially the same TDM benefits, it is assumed that the surveyed employee mode splits would apply to all three areas. As shown on Table 5, factors were developed so that the resulting mode splits for these three areas of Facebook campuses would reflect the surveyed data.

**Table 5**
**Facebook Home-Based Work Mode Split**

| County | Facebook HBW Driving Mode Split | |
|---|---|---|
| | Modeled | Survey |
| San Francisco | 17.2% | 17.4% |
| San Mateo | 75.9% | 75.6% |
| Santa Clara | 62.4% | 62.4% |
| Alameda | 48.9% | 49.4% |
| Contra Costa | 40.5% | 40.8% |
| Marin | 79.0% | 81.3% |

*Source: CHS Consulting Group*

## Menlo Park and San Mateo County Transit Mode Splits

According to 2019 ACS 5-year estimates, San Mateo County's work trip transit mode split was approximately 10% of all work trips. The model estimated transit mode split for San Mateo County work trips was approximately 9%, which well reflects existing conditions.

Using a combination of 2019 ACS 5-year estimates and CTPP data, it was estimated the City of Menlo Park's work trip transit mode split was approximately 9%. The model estimated transit mode split for the City of Menlo Park work trips was approximately 5% prior to adjusting for Facebook's mode split, and approximately 14% afterwards (assuming all shuttle trips are transit trips). Given that ACS surveys do not explicitly specify inclusion of shuttles under public transportation, the slight discrepancies could be due to the way shuttle is interpreted on the survey. Overall, the model results generally reflects existing conditions,

## Caltrain Coding

According to the *Caltrain 2019 Annual Passenger Count Key Findings*, the Menlo Park Caltrain station had on average 1,639 boarding during a typical weekday. After making refinements in the model to the specific access coding at the Menlo Park Caltrain station and surrounding Caltrain stations, the modelled daily boarding at the Menlo Park Caltrain station was 1,722, which is close to the actual observed boarding. At a system level, the model estimated the Caltrain system boarding within 8% of observed boarding.

## Highway Model Validation

Highway assignment validation is the process in which the traffic volumes estimated by the model are compared with observed traffic count data. Because of the excessive congestion issues experienced along major arterials, expressways and freeways within and around the City of Menlo Park during the AM and PM peak periods, this model is set up for 4-hour AM and PM peak period assignments. The 4-hour peak period assignments would allow the model to capture the shoulders of the commute peak hours. The City of Menlo Park conducted extensive daily roadway counts in March 2019. These volumes along with Caltrans PeMS data were used to derive conversion factors between the peak hour and the 4-hour peak period (see Table 6 for the factors).

**Table 6**
**AM and PM Peak 1-hour to 4-hour Volume Conversion Factors**

| | 1-hour to 4-hour Factors | |
|---|---|---|
| Roadway | AM Peak | PM Peak |
| Freeway | 3.65 | 3.71 |
| Expressway | 3.64 | 3.66 |
| Arterial | 3.14 | 3.57 |
| Ramps | 3.33 | 3.43 |
| Local | 2.82 | 3.42 |

Notes:
Freeway factors derived from Caltrans PeMS data

Peak hour volumes are important for forecasting turning movement volumes for intersection level-of-service analysis. The factors shown in Table 6 above would allow the 4-hour peak period model forecasts to be converted to peak 1-hour volumes. Therefore, the 2019 model validation presented in this memo is a system-level validation of the factored 1-hour AM and PM peak period volumes based on statistic validation targets set forth in the *2010 California Regional Transportation Plan Guidelines*, as well as validation by facility type (freeways, expressways, arterials and collectors) following the targets recommended in FHWA's *Travel Model Validation and Reasonableness Checking Manual, Second Edition*.

The specific model validation targets are listed below:

**System Level Validation Targets**

- Percent of links with volume-to-count ratios within Caltrans deviation allowance: over 75%
- Correlation coefficient: over 0.88
- Percent Root Mean Squared Error: 40% or less

**Facility Type Validation Targets**

- All Facility Types: less than 5 percent absolute error compared to observed counts
- Freeways: less than 7 percent absolute error compared to observed counts
- Expressways: less than 10 percent absolute error compared to observed counts
- Arterials: less than 15 percent absolute error compared to observed counts
- Collectors: less than 25 percent absolute error compared to observed counts

**Intersection Level Validation Targets**

In addition, the model was validated at the intersection turning movement level, based on validation criteria used by the Contra Costa Transportation Authority. The goal was to achieve the following tolerances for intersections turning movements:

- 50 percent of all study intersection movements greater than 1,000 vehicles should be within 20% of the count
- 30 percent of all study intersection movements greater than 500 but less than 1,000 vehicles should be within 20% of the count

The discussions below detail the adjustments made during the validation process.

## Traffic Assignment Methodology

The original C/CAG model employed the equilibrium traffic assignment methodology. The equilibrium methodology is an iterative assignment process in which the previous assignment iteration's information (such as travel time, vehicular speed, volume-to-capacity ratios) is used to inform the next iteration's assignment. The network is said to reach an equilibrium if the difference in roadway volumes between successive iterations meet specific targets. However, this method was found to result in considerable "noise" or "random error" when small network changes are made. In recent model work completed by Hexagon, this equilibrium traffic assignment methodology was supplemented with the Bi-conjugate Frank-Wolfe algorithm (ENHANCE = 2, SMOOTH = 10). This assignment method has shown more stable assignments and is therefore used in this model.

## AM and PM Peak Hour Validation Results

Hexagon collected counts conducted by the City of Menlo Park in April/May 2019, as well as Caltrans freeway volumes from the PeMS database for the same time period (see Figure 4). System wide highway validation results for the AM and PM peak-hour peak traffic assignments are summarized in Tables 7 and 8, respectively. The peak-hour model volumes are compared to the counts, stratified by facility type. The tables show that the only suggested target that was not met was the maximum deviation target. Differences in peak-hour modelled and count volumes for the AM and PM peak hours are shown on Figures 5 and 6. Locations that do not meet the maximum deviation target are also shown separately on Figures 7 and 8. As shown, a large portion of the segments exceeding the maximum deviation are local streets that are known to experience cut-through traffic during the peak hour congestion. This is typical of a 4-hour model assignment where local streets are generally low on model assigned volumes. Efforts were made to correct for these via modifying capacity and travel time functions.

**Figure 4**
**Traffic Count Locations and Volumes**

**Table 7**
**Facility Type Validation**

| | | AM Peak Hour | | | | | PM Peak Hour | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Roadway Facility | # of Locations | Traffic Count | Model Volume | Difference | Target | Target Met? | Traffic Count | Model Volume | Difference | Target | Target Met? |
| Freeway and Ramps | 25 | 82,030 | 81,083 | -1% | +/- 7% | Yes | 74,263 | 77,532 | 4% | +/- 7% | Yes |
| Expressway | 23 | 43,763 | 44,431 | 2% | +/- 10% | Yes | 42,118 | 42,736 | 1% | +/- 10% | Yes |
| Arterials | 156 | 151,425 | 161,800 | 7% | +/- 15% | Yes | 149,057 | 145,366 | -2% | +/- 15% | Yes |
| Collectors | 148 | 36,819 | 33,813 | -8% | +/- 25% | Yes | 36,865 | 30,257 | -18% | +/- 25% | Yes |
| All Facilities | | 314,037 | 321,127 | 2% | +/- 5% | Yes | 302,303 | 295,891 | -2% | +/- 5% | Yes |

**Table 8**
**System Level Validation**

| | % Root Mean Squared Error | Target | Target Met? | Correlation Coefficient | Target | Target Met? | Max Deviation | Target | Target Met? |
|---|---|---|---|---|---|---|---|---|---|
| **AM** | 32% | 40% | Yes | 98% | 88% | Yes | 65% | 75% | **No** |
| **PM** | 32% | 40% | Yes | 98% | 88% | Yes | 68% | 75% | **No** |

Table 9 presents the intersection level validation results for the AM and PM peak hours. The table shows that the percent of model estimated turning movements at intersections exceed the targets for both volume levels and for both peak hours (also see Appendix).

**Table 9**
**Intersection Level Validation**

| | AM Peak Hour | | | PM Peak Hour | | |
|---|---|---|---|---|---|---|
| **Turning Movement Volumes** | **Model** | **Target** | **Target Met?** | **Model** | **Target** | **Target Met?** |
| Volumes >1,000 within 20% of count | 60.5% | 50% | Yes | 77.8% | 50% | Yes |
| Volumes between 500 and 1,000 within 20% of count | 35.6% | 30% | Yes | 32.7% | 30% | Yes |

## Screenlines

Focusing in on the Bayfront area, Hexagon conducted two screenline analysis given the limited access points in the area:

1. Traffic Volumes entering and leaving the general Bayfront area bounded by Marsh Avenue to the west, US 101 to the south, the San Mateo County line to the east, and the Bay to the north.
2. Traffic volumes on Marsh Avenue, Willow Road and University Avenue immediately south of the US 101.

As shown on Tables 10 to 12 below, the total model assigned volumes along the screenlines were all within 15% of the total screenline count volumes. In comparison, the FHWA's *Travel Model Validation and Reasonableness Checking Manual, Second Edition* suggested maximum percentage error for screenlines in this volume range would be around 20%.

**Table 10**

# Year 2040 General Plan Scenario

## Network System Refinement

The Year 2040 roadway network included the following improvements compared to year 2019 existing conditions:

- Full build-out of the US 101/Willow Road interchange (assumed partial completion under existing conditions)
- US 101 managed lane project from Whipple Avenue to I-380
- US 101 2-lane managed lane in each direction from Cochrane Road to Embarcadero Road, per latest bi-county model
- BART extension into Santa Clara, per latest bi-county model
- Increased frequency for existing BART lines from 15-minute to 12-minute headways, per latest bi-county model
- Opening of Caltrain San Francisco Downtown station, per latest bi-county model

## Development of 2040 Land Use Inputs

The previous ConnectMenlo model had land uses for a future year of 2040. This was the primary data source for land uses within the City of Menlo Park. Adjustments were made to buildings that will be occupied by Facebook to reflect the higher employee density characteristic of Facebook buildings.

For TAZs outside of the City of Menlo Park, the year 2040 land uses mainly referenced the future year land uses coded in the previous ConnectMenlo model. For TAZs within the City of East Palo Alto, Hexagon obtained a list of approved and pending projects and ensured that the land uses reflected these developments. Figures 9 and 10 show the year 2040 general plan conditions residential and employment land use growth by zone for City of Menlo Park zones. Table 14 below summarizes the key land use data for the nine Bay Area counties and for the City of Menlo Park. Table 15 below compares the City of Menlo Park's land uses between year 2019 and year 2040.

**Figure 9**
**Year 2040 Land Use Growth – Households**

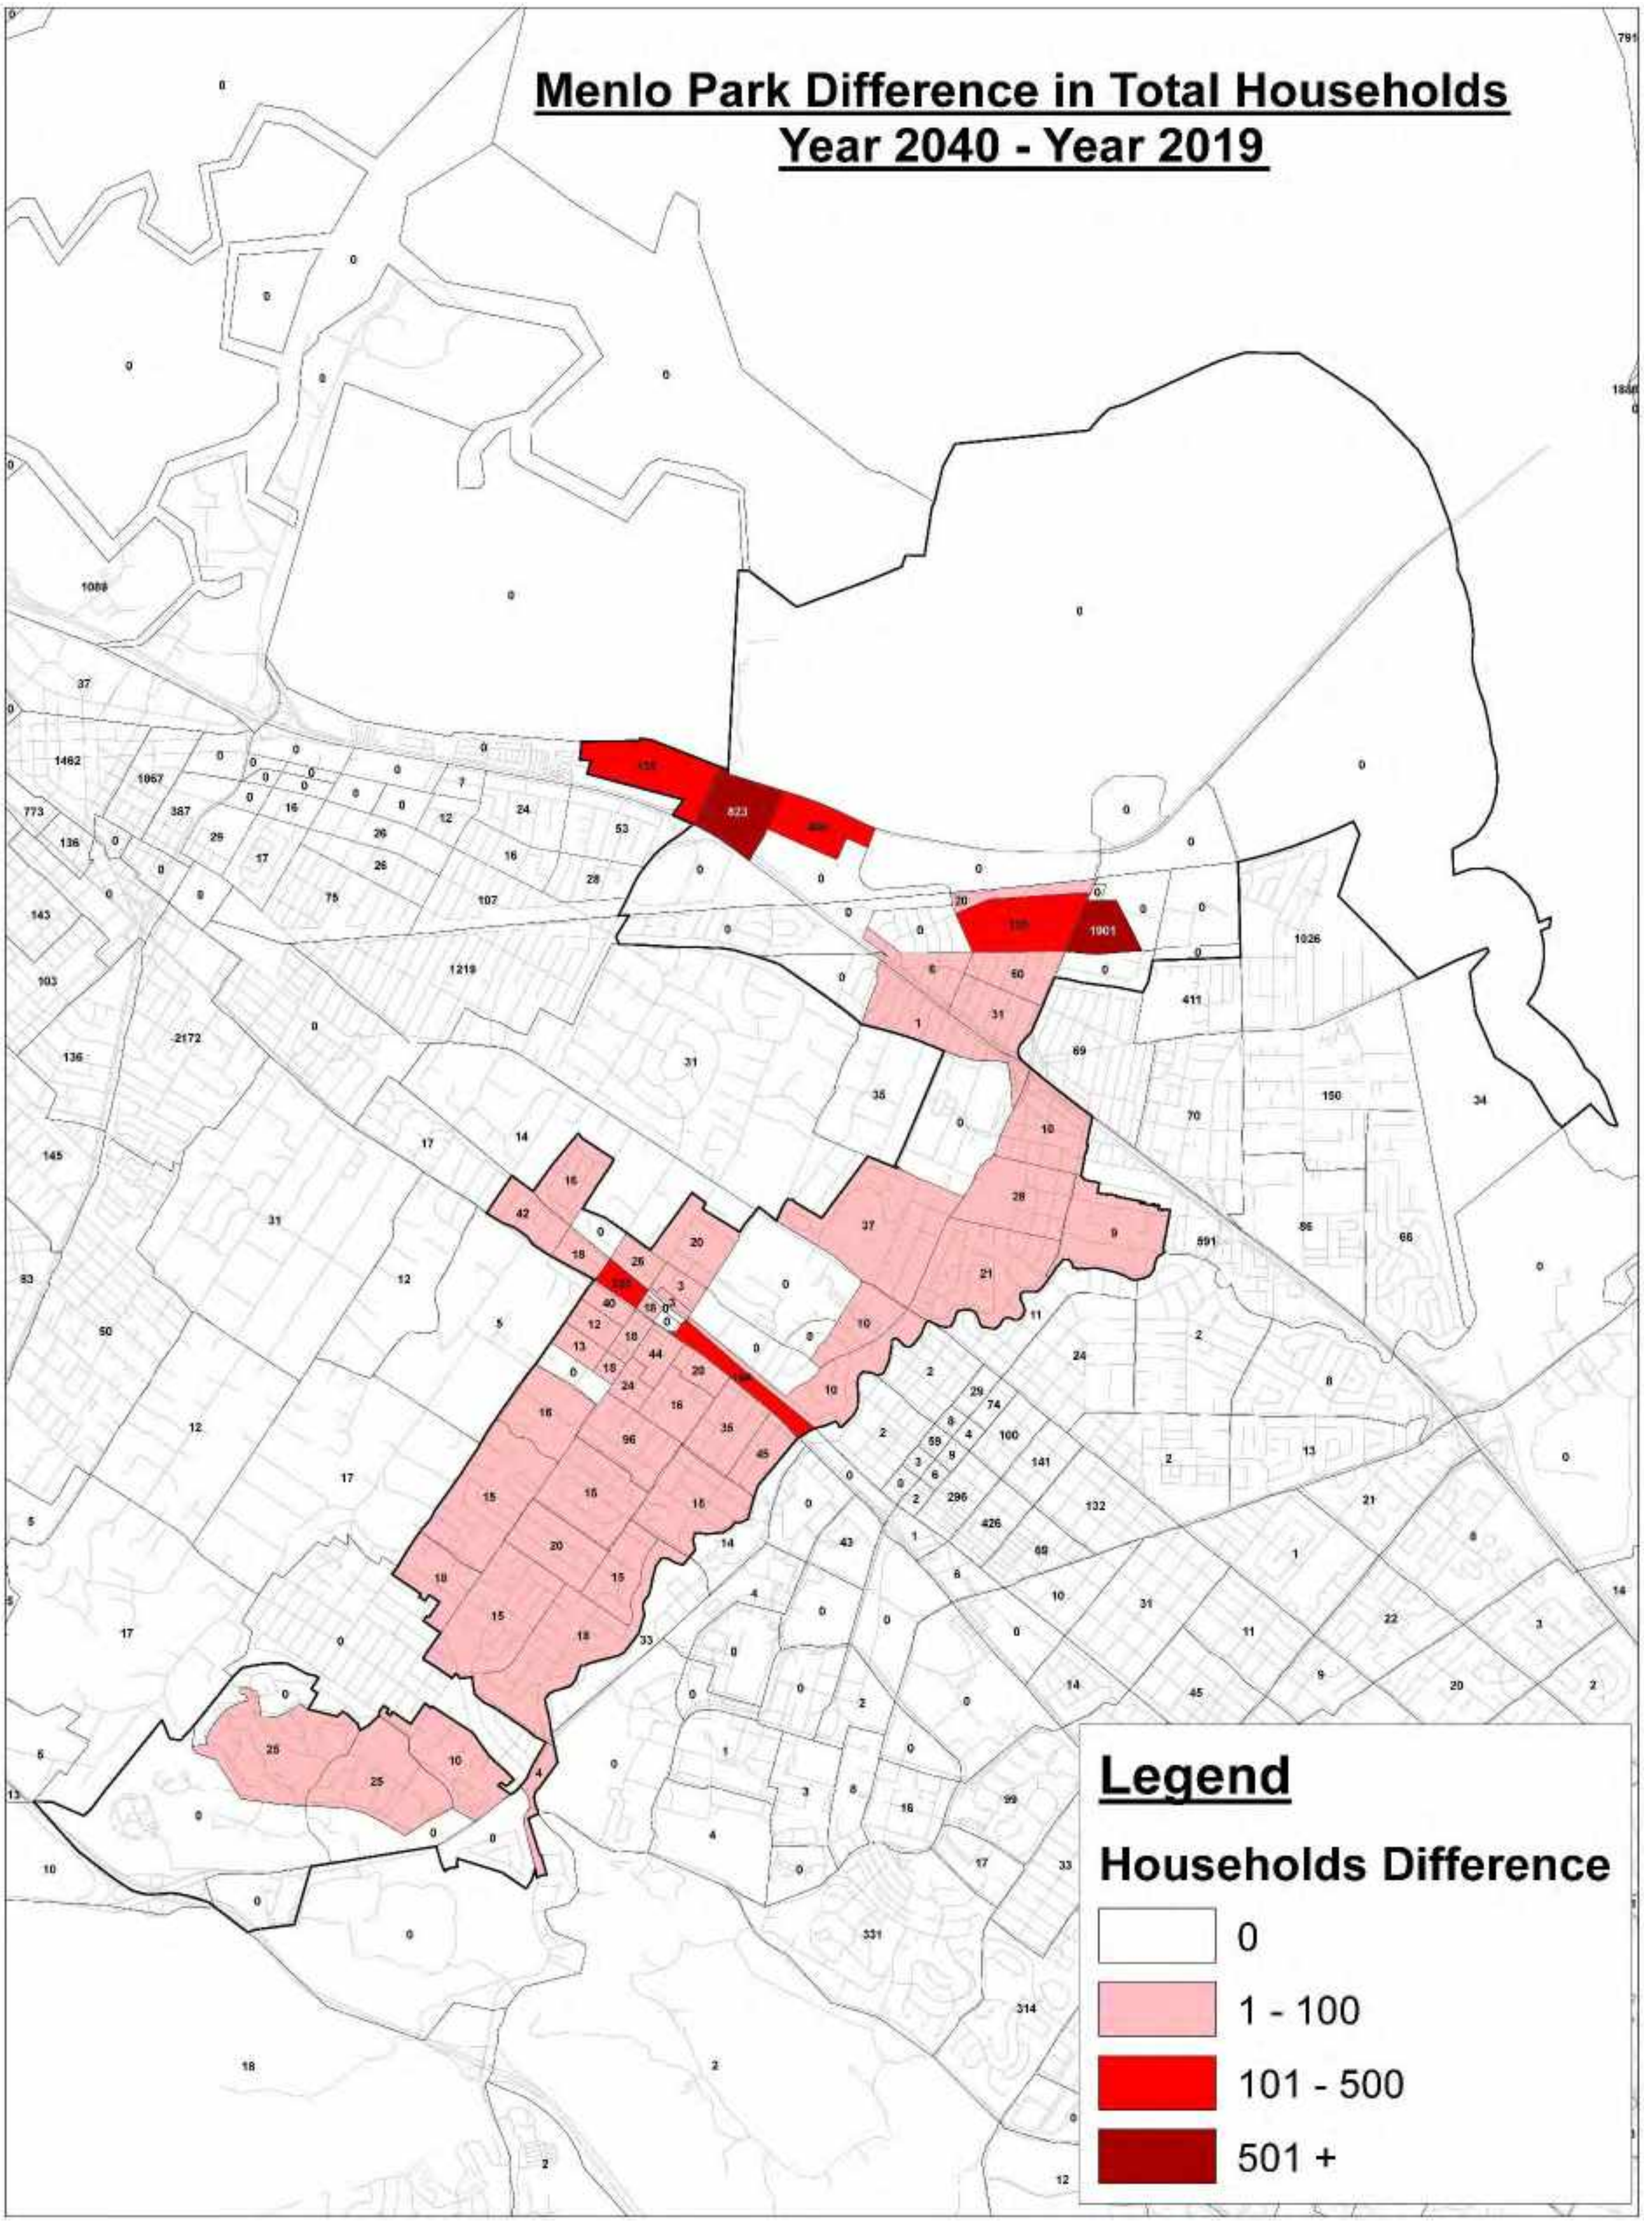

**Figure 10**
**Year 2040 Land Use Growth – Total Employment**

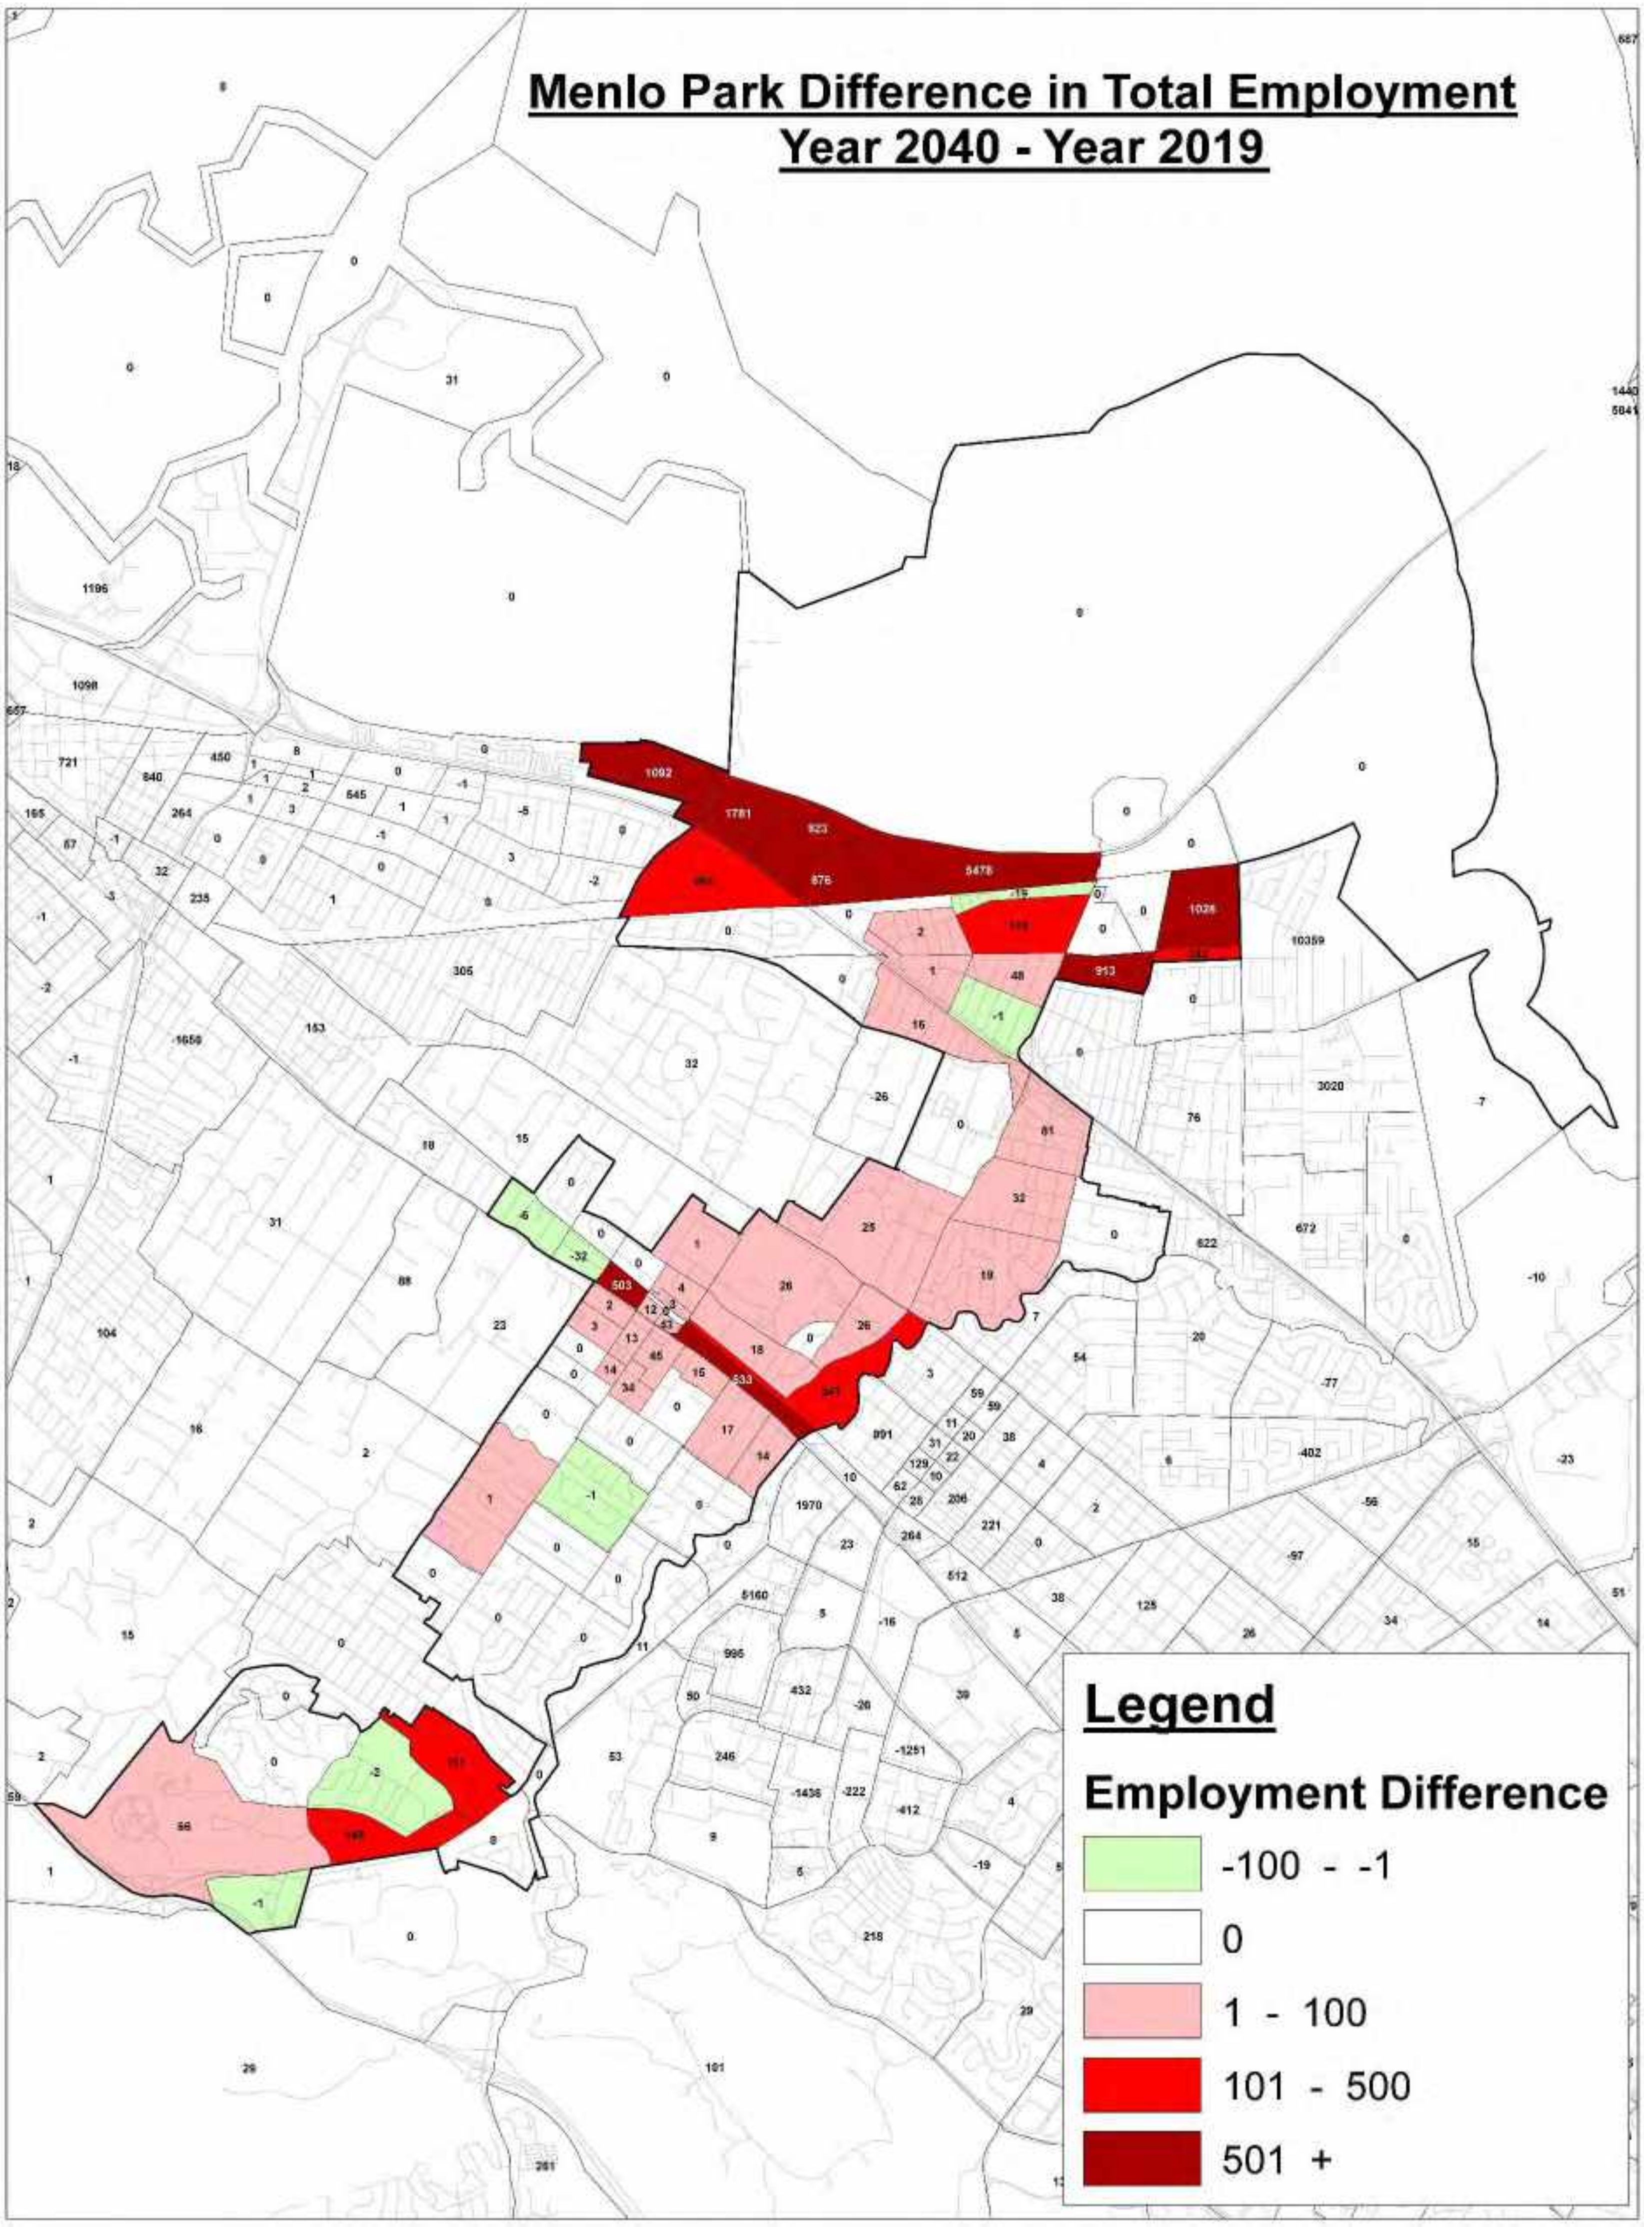

**Table 14**
**Year 2040 Land Use Summary**

| County | Year 2040 Model Land Use Data | | | |
|---|---|---|---|---|
| | Total Households | Total Population | Employed Residents | Total Jobs |
| San Francisco | 447,340 | 1,076,365 | 559,923 | 759,509 |

## Model Estimated Person-Level Trip Generation and Mode Split

Hexagon evaluated the person-level trip generation and mode split as estimated by the model for both year 2019 and year 2040. Table 16 and 17 below present the data for person trips generated by City of Menlo Park land uses, and by San Mateo County land uses, respectively.

**Table 16**
**Daily Person Trip Generation and Mode Split – City of Menlo Park**

| | Daily Person Trips | |
|---|---|---|
| | Existing (Yr 2019) | Future Scenario (Yr 2040) |
| *Mode Split* | | |
| DA | 57.7% | 56.5% |
| S2 | 11.7% | 11.7% |
| S3 | 16.3% | 15.8% |
| Bk | 1.6% | 1.7% |
| Wk | 6.5% | 7.0% |
| Transit | 6.2% | 7.3% |

**Table 17**
**Daily Person Trip Generation and Mode Split – County of San Mateo**

| | Daily Person Trips | |
|---|---|---|
| | Existing (Yr 2019) | Future Scenario (Yr 2040) |
| **Total** | **3,316,797** | **3,927,108** |
| *Mode Split* | | |
| Drive Alone | 56.6% | 55.3% |
| Shared Ride - 2 | 13.4% | 13.2% |
| Shared Ride - 3+ | 17.2% | 16.6% |
| Bike | 1.4% | 1.6% |
| Walk | 7.6% | 8.0% |
| Transit | 3.9% | 5.2% |

## Conclusion

The peak model assignment is set up to produce sensible future forecasts and inform locations of potential future roadway improvements to address peak-period congestions. Although the model validation results do not meet one of the suggested targets, the model balances accounting for a certain degree of cut-through traffic behavior, and accommodating additional traffic on major roadways (i.e. Willow Road, University Avenue, Bayfront Expressway) under future conditions. Therefore, the overall model validation is considered acceptable.

# Section 1. Introduction

This report describes the biological resources present in and adjacent to the area of Meta Platforms, Inc.'s (Meta) proposed Willow Village Master Plan project (project), as well as the potential impacts of the proposed project and measures necessary to reduce impacts to less-than-significant levels under the California Environmental Quality Act (CEQA). This report was prepared to facilitate CEQA review of the Willow Village Master Plan by the City of Menlo Park. In addition, this report contains the information needed to satisfy Mitigation Measure BIO-1 from the ConnectMenlo General Plan Environmental Impact Report (EIR) (Placeworks 2016), which requires preparation of a biological resources assessment containing information specified in that mitigation measure.

## 1.1 Project Description

The proposed project entails the redevelopment of the former Menlo Science and Technology Park, as well as an adjacent area west of Willow Road, to create a contemporary mixed-use district including housing, community-serving retail, new public parks and landscaped areas, and a new campus district to provide additional workspace for Meta. The approximately 64.0-acre project site (inclusive of the "main project site" east of Willow Road and "Hamilton Avenue Parcels North and South" west of Willow Road) is located within Menlo Park's Bayfront Area and is bounded by Willow Road and commercial development to the west, the Dumbarton Rail Corridor to the north, the Hetch Hetchy right-of-way corridor and Mid-Peninsula High School to the south, and an existing life science complex to the east (Figure 1). To the west are existing commercial and multi-family uses and Menlo Park's Belle Haven neighborhood.

The main project site is currently occupied by 20 office, industrial, and warehouse buildings that compose approximately 1,000,000 square feet ($ft^2$) of improvements, as well as surface parking (Figure 2). The Hamilton Avenue Parcels North and South portion of the project site is occupied primarily by restaurants and a gas station. Following the approval of the 2014-2016 update of the Land Use and Circulation Elements of the City of Menlo Park General Plan, identified as ConnectMenlo (City of Menlo Park 2016), Meta undertook an extensive planning effort for the Willow Village Master Plan. The project has been carefully designed to conform to the updated zoning requirements, including the provision for "master planned projects" which allows for a single project or phased development project on sites that exceed 15 acres in size and contain different zoning designations to aggregate density and uses across the entire project site. In addition, the project would aim to comply with all other development standards in the office and residential mixed-use zoning districts, including parking, setbacks, open space, paseos, building design (including bird-friendly design), green and sustainable building, and heritage trees.

Willow Village proposes to replace more than 1,000,000 $ft^2$ of existing industrial, office, and warehouse space in the Menlo Science and Technology Park with a new, mixed-used village that includes up to 1,735 residential units, 200,000 $ft^2$ of retail uses, a hotel with up to 193 rooms and accessory uses, 1,250,000 $ft^2$ of office uses,

August 2022

and 500,000 square feet of accessory uses. The plan will require demolition of all existing site improvements consisting of buildings, streets, and utilities. Proposed improvements include site grading to elevate the property above the FEMA base flood elevation and to create buildable pads, construction of new circulation improvements to accommodate vehicles, bicycles, and pedestrians, utilities, park and open space improvements, residential mixed-use buildings, a hotel, and an office campus. Additional improvements will be completed at key connection points at O'Brien Drive, Park Street, Adams Court, and Hamilton Avenue. Mixed-use buildings will range in height from 55–80 ft; office buildings and associated accessory buildings will have a maximum height of 110 ft and would comply with the average heights as established by *ConnectMenlo's* zoning standards.

In order to accommodate the realignment of Hamilton Avenue (to connect to New Hamilton) and to construct the western access (ramp and elevator) to an elevated park, some of the existing development on the block located at the northwest corner and a portion of the block located at the southwest corner of Willow Road and the existing Hamilton Avenue may need to be reconfigured. The block on the northwest corner is approximately 1.83 acres and currently is developed with approximately 16,000 square feet of retail buildings. The portion of the block located at the southwest corner is approximately 1.34 acres and currently is developed with a gas station with approximately 4,500 sf of retail. Both sites are zoned C-2-S Neighborhood Commercial District Special. To accommodate the Hamilton Avenue road realignment, the gas station would be relocated further north in the retail site. In addition, the existing retail may be removed and replaced with new retail buildings in a new site configuration. It is anticipated that the replacement development would be similar to the existing development in size and use potentially adding 5,000 sf in shops, which could include an additional drive through option. Any construction related activities would occur in Phase 2 of the schedule.

The site lighting for Willow Village will comply with Title 24 and Menlo Park's lighting guidelines for both the Residential Mixed-use and Office zoning districts. All fixtures will be energy-efficient, reduce glare and unnecessary light spillage, while providing safe routes of travel for vehicles and pedestrians.

It is anticipated that most of the existing trees on the project site would be removed. Heritage trees, as defined by the City of Menlo Park, would be replaced on site in an amount equivalent to the appraised value of the removed heritage trees in accordance with City policies for commercial applicants[1]. The conceptual landscape plan envisions a combination of native, drought-tolerant, and adapted species from around the world and calls for approximately 1,780 new trees to be planted. Consistent with Menlo Park municipal codes on landscape design, no invasive species or noxious weeds would be used in landscaping for the redeveloped areas.

A chain of publicly accessible open spaces will be located along Main Street, and a new 2.1-acre elevated pedestrian and bike-friendly publicly accessible park is designed to accommodate pedestrian walking trails, bicycle paths, gardens with native drought-tolerant and adapted species, lawn areas, interpretive horticultural exhibits, seating areas, children's play areas, recreation areas, shading canopies, water features, cafés, picnic areas, and public restrooms, as well as security and safety infrastructure. The elevated park would be constructed

[1] https://menlopark.org/DocumentCenter/View/833/Heritage-Tree-Replacement-Procedures

above grade, providing views south over Willow Village and Town Square, north to the Don Edwards San Francisco Bay National Wildlife Refuge, and east towards San Francisco Bay.

Offsite improvements will be made as well. Safe crossing design improvements will be incorporated in the northwest corner of the site to provide safe pedestrian, bicycle, and vehicular movements at Hamilton Avenue and between the two adjoining office campuses. Improvements along Willow Road will include widening of the right-of-way to accommodate additional left turn pockets, installation of new traffic signals, utility points of connections, sidewalk improvements, and landscape improvements. At the southeast corner of the site, in the Residential/Shopping District, a new intersection is proposed at O'Brien Drive, requiring new traffic signals and roadway layout alterations. Along the southern property line, an existing open channel located both on and off-site within the study area directs storm water flows to an existing storm drain main along the east property line. To accommodate site improvements, the drainage flows within this channel will be undergrounded and the channel filled.

It is currently anticipated that Willow Village will be constructed in two primary phases, with Phase 1 being divided into two sub-phases. Construction will commence on the southern portion of the site and move northward. Each construction phase will include the grading of that phase and construction of the circulation (including transit, auto, bicycle, and pedestrian) and utility infrastructure necessary to serve that phase. There may be some overlap in construction phases.

## 1.2 Bird-Safe Design

In 2014, the City of Menlo Park initiated the process of updating its General Plan Land Use and Circulation Elements as well as its zoning for the M-2 area (also known as the Bayfront Area) in the northern portion of Menlo Park. Collectively, this update to the General Plan and zoning is known as *ConnectMenlo*. On November 29, 2016, the City Council certified the *ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update Environmental Impact Report* (ConnectMenlo EIR) and approved the General Plan Land Use and Circulation Elements. The Willow Village project is located within the ConnectMenlo area.

Mitigation Measure BIO-1 of the ConnectMenlo EIR requires measures to ensure that the project reduces bird collisions with new buildings. Pursuant to Mitigation Measure BIO-1, the project must comply with bird-safe design requirements subsequently incorporated into Municipal Code Sections 16.43.150(6) and 16.43.130(6), which include measures to reduce bird collisions. These requirements are as follows:

A. No more than 10% of façade surface area shall have non-bird-friendly glazing.

B. Bird-friendly glazing includes, but is not limited to, opaque glass, covering the outside surface of clear glass with patterns, paned glass with fenestrations, frit or etching patterns, and external screens over nonreflective glass. Highly reflective glass is not permitted.

C. Occupancy sensors or other switch control devices with an astronomic time clock shall be installed on nonemergency lights and shall be programmed to shut off during non-work hours and between 10:00 p.m. and sunrise.

D. Placement of buildings shall avoid the potential funneling of flight paths towards a building façade.

E. Glass skyways or walkways, free-standing (see-through) glass walls and handrails, and transparent building corners shall not be allowed.

F. Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with roof decks, patios and roofs with landscape vegetation.

G. Use of rodenticides shall not be allowed.

A project may receive a waiver from requirements A through F, subject to the submittal of a site-specific evaluation from a qualified biologist and review and approval by the Planning Commission. A waiver from requirement G is not authorized.

The Willow Village Master Plan incorporates robust bird-safe design measures to minimize bird collisions with project buildings, in accordance with Mitigation Measure BIO-1. H. T. Harvey & Associates (2021a) prepared a *Willow Village Master Plan Bird-Safe Design Assessment* that assessed the potential for bird collisions with various Master Plan components based on the locations of those components and the project's conceptual Conditional Development Permit (CDP) application. For that bird-safe design assessment, H. T. Harvey worked with Meta's design team to identify features of the architecture of project buildings and lighting principles that would reduce the frequency of avian collisions; the components of the City's bird-safe design requirements (from Mitigation Measure BIO-1 of the ConnectMenlo EIR) that Master Plan components could comply with; and proposed waivers from the requirements identified in Municipal Code Sections 16.43.150(6) and 16.43.130(6) and alternative measures that the project would incorporate to meet the intent and effectiveness of any City bird-safe design requirements that the project could not comply with to the letter. In addition, H. T. Harvey also proposed mitigation measures to further minimize impacts related to bird collisions. The *Willow Village Master Plan Bird-Safe Design Assessment* documents that with implementation of these design features, lighting principles, bird-safe design requirements or alternative measures, and mitigation measures, project impacts due to bird collisions with buildings would be reduced to less-than-significant levels under CEQA.

# Section 2. Methods

## 2.1 Background Review

Prior to conducting initial field work, H. T. Harvey & Associates ecologists reviewed the original project plans and description provided by Meta in November 2017; aerial images (Google Inc. 2021); a U.S. Geological Survey (USGS) topographic map; the California Department of Fish and Wildlife's (CDFW's) California Natural Diversity Database (CNDDB 2021); and other relevant scientific literature and technical databases. Previous reports prepared for the project and vicinity were also reviewed, including the arborist report for the main project site (SBCA Tree Consulting 2017); the Final EIRs for the nearby Menlo Park Facebook Campus (Atkins 2012) and the Facebook Campus Expansion Project (ICF International 2016); the Final EIR for the ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update for the City of Menlo Park (PlaceWorks 2016); and the Comprehensive Conservation Plan and Environmental Assessment for the Don Edwards San Francisco Bay National Wildlife Refuge (NWR) (USFWS 2012). In addition, for plants, we reviewed all species on current California Native Plant Society (CNPS) California Rare Plant Rank (CRPR) 1A, 1B, 2A, and 2B lists occurring in the *Palo Alto, California* USGS quadrangle and surrounding eight quadrangles (*Woodside, San Mateo, Redwood Point, Newark, Mountain View, Cupertino, Mindego Hill,* and *La Honda, California*). Quadrangle-level results are not maintained for CRPR 3 and 4 species, so we also conducted a search of the CNPS Inventory records for these species occurring in San Mateo County (CNPS 2021). In addition, we queried the CNDDB (2021) for natural communities of special concern that occur in the project region. For the purposes of this report, the "project vicinity" encompasses a 5-mile (mi) radius surrounding the project site.

After the Willow Village design and program were revised in May 2020, we reviewed the updated plans (Peninsula Innovation Partners 2020) and current CNDDB and CNPS information to ensure that our updated assessment of the project's potential impacts on biological resources was based on up-to-date information. We also reviewed the project's heritage tree removal applications (Peninsula Innovation Partners 2022a-e).

In addition, H. T. Harvey & Associates (2021b) performed a delineation of jurisdictional wetlands and other waters of the U.S./State within the study area in 2021. A field visit for that delineation was conducted in August 2021, and a follow-up visit to assess conditions in a drainage ditch was conducted on December 31, 2021.

## 2.2 Site Visits

The project site discussed in this report includes the area enclosed by the project boundary shown in Figure 2. For the purposes of ensuring evaluation of all potential direct, indirect, and cumulative effects on biological resources, the project's biological resources study area includes the project site (main site and Hamilton Avenue Parcels North and South) and areas within 100 ft beyond the project boundary (Figure 2). Reconnaissance-level field surveys of the main project site, as well as areas within the Dumbarton Rail Corridor both east and west of Willow Road, were initially conducted by H. T. Harvey & Associates senior wildlife ecologist Steve

Rottenborn, Ph.D., on October 26, 2017 and by H. T. Harvey & Associates wildlife ecologist, Stephen L. Peterson, M.S., and plant ecologist Matthew Mosher, B.S., on November 13, 2017, with an additional visit by M. Mosher on November 15, 2017. After the project was redesigned in 2019, S. Rottenborn visited the main project site again on April 22, 2019. After the project was redesigned in 2020, H. T. Harvey & Associates senior wildlife ecologist Robin Carle, M.S., visited the Hamilton Avenue Parcels North and South portion of the site on June 10, 2020 and H. T. Harvey & Associates senior plant ecologist Mark Bibbo, M.S., visited this area on June 12, 2020. The purpose of these surveys was to provide a project-specific impact assessment for the proposed project as described above. Specifically, surveys were conducted to (1) assess existing biotic habitats and general plant and wildlife communities in the study area, (2) assess the potential for the project to impact special-status species or their habitats, and (3) identify potential jurisdictional habitats, such as Waters of the U.S./State and riparian habitat.

In addition, focused surveys for Congdon's tarplant (*Centromadia parryi* var. *congdonii*) were conducted by H. T. Harvey & Associates plant ecologists on November 13, 2017 (main project site) and June 12, 2020 (Hamilton Avenue Parcels North and South). These surveys targeted areas of potential suitable habitat along the Dumbarton Rail Corridor in the northern portion of the study area.

# Section 3. Regulatory Setting

Biological resources on the project site are regulated by a number of federal, state, and local laws and ordinances, as described below.

## 3.1 Federal

### 3.1.1 Clean Water Act

The Clean Water Act (CWA) functions to maintain and restore the physical, chemical, and biological integrity of Waters of the U.S., which include, but are not limited to, tributaries to traditionally navigable waters currently or historically used for interstate or foreign commerce, and adjacent wetlands. Historically, in non-tidal waters, U.S. Army Corp of Engineers (USACE) jurisdiction extends to the ordinary high water (OHW) mark, which is defined in Title 33, Code of Federal Regulations (CFR), Part 328.3. If there are wetlands adjacent to channelized features, the limits of USACE jurisdiction extend beyond the OHW mark to the outer edges of the wetlands. Wetlands that are not adjacent or tributaries to Waters of the U.S. are termed "isolated wetlands" and, depending on the circumstances, typically are not subject to USACE jurisdiction. In tidal waters, USACE jurisdiction extends to the landward extent of vegetation associated with salt or brackish water or the high tide line. The high tide line is defined in 33 CFR Part 328.3 as "the line of intersection of the land with the water's surface at the maximum height reached by a rising tide."

Construction activities within jurisdictional waters are regulated by the USACE. The placement of fill into such waters must comply with permit requirements of the USACE. No USACE permit will be effective in the absence of Section 401 Water Quality Certification. The State Water Resources Control Board (SWRCB) is the state agency (together with the Regional Water Quality Control Boards [RWQCBs] charged with implementing water quality certification in California.

<u>Project Applicability</u>: The project site itself does not support wetland or aquatic habitats. A small, isolated segment of forested wetland that may be claimed as Waters of the U.S. is located in a drainage ditch along the northern edge of the study area, just outside the project boundary (H. T. Harvey & Associates 2021b). Similarly, a linear area of herbaceous-dominated seasonal wetland is present in the Dumbarton Rail Corridor immediately north of the Hamilton Avenue Parcels North and South portion of the project site. Another herbaceous seasonal wetland is present just outside the northeast corner of the project boundary (H. T. Harvey & Associates 2021b). These seasonal wetlands might also be claimed as Waters of the U.S. The San Francisco office of the USACE would ultimately determine whether or not these features are subject to USACE jurisdiction under Section 404 of the CWA (under either current regulations or any amended regulations). It is our understanding that the project will avoid to the extent feasible placing fill in those features, in which case no permit from the USACE would be needed for activities associated with these features even if determined to be jurisdictional. However, if these features are determined to be jurisdictional and are impacted by project grading, a Section

404 permit from the USACE would be required., and mitigation of impacts would be required as described in Mitigation Measures BIO-11 and 12 in Section 6.2.1.

A ditch located partially on-site and partially within the Hetch Hetchy easement corridor immediately south of the main project site (and within the study area) was dominated by upland (non-wetland) vegetation during our April 2019 site visit (as well as the August 2021 site visit for the delineation of waters of the U.S./State [H. T. Harvey & Associates 2021b]), is concrete-lined in at least some locations, and is excavated in uplands to collect stormwater runoff from the surrounding development. A visit to the site on December 31, 2021, after a prolonged, heavy rain event, revealed evidence of only a very small amount of runoff that had flowed through this ditch during the storm. As such, we do not expect this feature to be claimed as Waters of the U.S. by the USACE.

Brackish marsh habitat is present outside and well to the north and northeast of the study area. We expect that this brackish marsh would be considered Waters of the U.S. under both current and proposed definitions of Waters of the U.S. because it is adjacent to tidal channels that would either be considered navigable or tributaries to navigable waters. This brackish marsh habitat is located well off-site, however, and no impacts to this marsh would result from the proposed project.

### 3.1.2 Rivers and Harbors Act

Section 10 of the Rivers and Harbors Act of 1899 prohibits the creation of any obstruction to the navigable capacity of Waters of the U.S., including discharge of fill and the building of any wharfs, piers, jetties, and other structures without Congressional approval or authorization by the Chief of Engineers and Secretary of the Army (33 U.S.C. 403).

Navigable Waters of the U.S., which are defined in 33 CFR, Part 329.4, include all waters subject to the ebb and flow of the tide, and those which are presently or have historically been used to transport commerce. The shoreward jurisdictional limit of tidal waters is further defined in 33 CFR, Part 329.12 as "the line on the shore reached by the plane of the mean (average) high water." It is important to understand that the USACE does not regulate wetlands under Section 10, only the aquatic or open waters component of bay habitat, and that there is overlap between Section 10 jurisdiction and Section 404 jurisdiction. According to 33 CFR, Part 329.9, a waterbody that was once navigable in its natural or improved state retains its character as "navigable in law" even though it is not presently used for commerce as a result of changed conditions or the presence of obstructions. Historical Section 10 Waters may occur behind levees in areas that are not currently exposed to tidal or muted-tidal influence, and meet the following criteria: (1) the area is presently at or below the mean high water line; (2) the area was historically at or below mean high water in its "unobstructed, natural state"; and (3) there is no evidence that the area was ever above mean high water.

As mentioned above, Section 404 of the CWA authorizes the USACE to issue permits to regulate the discharge of dredged or fill material into Waters of the U.S. If a project also proposes to discharge of dredged or fill material or introduce of other potential obstructions in navigable Waters of the U.S., a Letter of Permission authorizing these impacts must be obtained from the USACE under Section 10 of the Rivers and Harbors Act.

Project Applicability: Based on mapping of the historical margins of San Francisco Bay marshes (Nichols and Wright 1971), which depict the margins of baylands being located well north of the project site, no current or historical Section 10 waters are present within the project boundary or elsewhere within the study area (e.g., in the wetlands immediately north and northeast of the project boundary). Therefore, no Section 10 Letter of Permission from the USACE is required for the project.

### 3.1.3 Federal Endangered Species Act

The Federal Endangered Species Act (FESA) protects federally listed wildlife species from harm or "take", which is broadly defined as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in any such conduct." Take can also include habitat modification or degradation that directly results in death or injury of a listed wildlife species. An activity can be defined as "take" even if it is unintentional or accidental. Generally, listed plant species are provided less protection than listed wildlife species. Listed plant species are legally protected from take under the FESA only if they occur on federal lands.

The U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS) have jurisdiction over federally listed, threatened, and endangered species under FESA. The USFWS also maintains lists of proposed and candidate species. Species on these lists are not legally protected under FESA, but may become listed in the near future and are often included in their review of a project.

Project Applicability: No suitable habitat for any federally listed plant or animal species occurs in the study area. Thus, no federally listed species are reasonably expected to occur in the study area.

### 3.1.4 Magnuson-Stevens Fishery Conservation and Management Act

The Magnuson-Stevens Fishery Conservation and Management Act governs all fishery management activities that occur in federal waters within the United States' 200-nautical-mile limit. The Act establishes eight Regional Fishery Management Councils responsible for the preparation of fishery management plans (FMPs) to achieve the optimum yield from U.S. fisheries in their regions. These councils, with assistance from NMFS, establish Essential Fish Habitat (EFH) in FMPs for all managed species. Federal agencies that fund, permit, or implement activities that may adversely affect EFH are required to consult with NMFS regarding potential adverse effects of their actions on EFH, and respond in writing to recommendations by NMFS.

Project Applicability: No EFH is present in the study area.

### 3.1.5 Federal Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA), 16 U.S.C. Section 703, prohibits killing, possessing, or trading of migratory birds except in accordance with regulations prescribed by the Secretary of the Interior. The MBTA protects whole birds, parts of birds, and bird eggs and nests, and it prohibits the possession of all nests of protected bird species whether they are active or inactive. An active nest is defined as having eggs or young, as described by the USFWS in its June 14, 2018 memorandum "Destruction and Relocation of Migratory Bird Nest Contents". Nest starts (nests that are under construction and do not yet contain eggs) and inactive nests are not protected from destruction.

In its June 14, 2018 memorandum, the USFWS clarified that the destruction of an active nest "while conducting any activity where the intent of the action is not to kill migratory birds or destroy their nests or contents" is not prohibited by the MBTA. On February 3, 2020, the USFWS published a proposed rule to codify the scope of the MBTA as it applies to activities resulting in the injury or death of migratory birds (85 FR 5915-5926); the USFWS is currently considering comments on the proposed rule.

Project Applicability: All native bird species that occur in the study area are protected under the MBTA. Mitigation Measures BIO-13, 14, 15, and 16 shall be implemented to ensure that project activities comply with the MBTA as described in Section 6.4.1.

## 3.2 State

### 3.2.1 Porter-Cologne Water Quality Control Act

The SWRCB works in coordination with the nine RWQCBs to preserve, protect, enhance, and restore water quality. Each RWQCB makes decisions related to water quality for its region, and may approve, with or without conditions, or deny projects that could affect Waters of the State. Their authority comes from the CWA and the State's Porter-Cologne Water Quality Control Act (Porter-Cologne). Porter-Cologne broadly defines Waters of the State as "any surface water or groundwater, including saline waters, within the boundaries of the state." Because Porter-Cologne applies to any water, whereas the CWA applies only to certain waters, California's jurisdictional reach overlaps and may exceed the boundaries of Waters of the U.S. For example, Water Quality Order No. 2004-0004-DWQ states that "shallow" Waters of the State include headwaters, wetlands, and riparian areas. Moreover, the San Francisco Bay Region RWQCB's Assistant Executive Director has stated that, in practice, the RWQCBs may claim jurisdiction over riparian areas. Where riparian habitat is not present, such as may be the case at headwaters, jurisdiction is taken to the top of bank.

On April 2, 2019, the SWRCB adopted the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State. In these new guidelines, riparian habitats are not specifically described as Waters of the State but instead as important buffer habitats to streams that do conform to the State Wetland Definition. The Procedures describe riparian habitat buffers as important resources that may both be included in required mitigation packages for permits for impacts to Waters of the State.

Pursuant to the CWA, projects that are regulated by the USACE must also obtain a Section 401 Water Quality Certification permit from the RWQCB. This certification ensures that the proposed project will uphold state water quality standards. Because California's jurisdiction to regulate its water resources is much broader than that of the federal government, proposed impacts on Waters of the State may require Waste Discharge Requirements even if the area occurs outside of USACE jurisdiction. Moreover, the RWQCB may impose mitigation requirements even if the USACE does not, for example for riparian habitats which are buffers to Waters of the State. Under the Porter-Cologne, the SWRCB and the nine regional boards also have the responsibility of granting CWA National Pollutant Discharge Elimination System (NPDES) permits and Waste Discharge Requirements for certain point-source and non-point discharges to waters. These regulations limit impacts on aquatic and riparian habitats from a variety of urban sources.

Project Applicability: No aquatic, wetland, or riparian habitats are present within the project boundary. However, as noted above in Section 3.1.1, a small, isolated segment of forested wetland that would likely be claimed as Waters of the State is located in a drainage ditch along the northern edge of and within the study area, just outside the project boundary (H. T. Harvey & Associates 2021b). Similarly, a linear area of herbaceous-dominated seasonal wetland is present in the Dumbarton Rail Corridor immediately north of the Hamilton Avenue Parcels North and South portion of the project site. Another herbaceous seasonal wetland is present just outside the northeast corner of the project boundary (H. T. Harvey & Associates 2021b). These seasonal wetlands might also be claimed as Waters of the State. It is our understanding that the project will avoid to the extent feasible placing fill in those wetlands, in which case no permit from the RWQCB would be needed for activities associated with wetlands even if these features are determined to be jurisdictional. However, if these features are determined to be jurisdictional and are impacted by the project, Section 401 water quality certification or Waste Discharge Requirements from the RWQCB would be required, and mitigation of impacts would be required as described in Mitigation Measures BIO-11 and 12 in Section 6.2.1. A ditch located partially on-site and partially within the Hetch Hetchy easement corridor immediately south of the main project site (but within the study area) was dominated by upland (non-wetland) vegetation during our April 2019 site visit, is concrete lined in at least some locations, and is excavated in uplands to collect stormwater runoff from the surrounding development. As such, we do not expect this feature to be claimed as Waters of the State by the RWQCB (H. T. Harvey & Associates 2021b).

Brackish marsh habitat is present well to the north and northeast of the study area. We expect that this brackish marsh would be considered Waters of the State because it is adjacent to tidal channels that would either be considered navigable or tributaries to navigable waters. This brackish marsh habitat is located well off-site, however, and no impacts to this marsh would result from the proposed project.

### 3.2.2 California Endangered Species Act

The California Endangered Species Act (CESA; California Fish and Game Code, Chapter 1.5, Sections 2050-2116) prohibits the take of any plant or animal listed as an endangered, threatened, or candidate species. In accordance with the CESA, the CDFW has jurisdiction over state-listed species (Fish and Game Code 2070). The CDFW regulates activities that may result in "take" of individuals (i.e., "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill"). Habitat degradation or modification is not expressly included in the definition of "take" under the California Fish and Game Code. The CDFW, however, has interpreted "take" to include the "killing of a member of a species which is the proximate result of habitat modification."

Project Applicability: No suitable habitat for any state listed plant or animal species occurs in the study area, and thus no state listed species are expected to occur in the study area.

### 3.2.3 California Environmental Quality Act

CEQA is a state law that requires state and local agencies to document and consider the environmental implications of their actions and to refrain from approving projects with significant environmental effects if there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects. CEQA requires the full disclosure of the environmental effects of agency actions, such as approval of a general plan update or the projects covered by that plan, on resources such as air quality, water quality, cultural resources, and biological resources. The State Resources Agency promulgated guidelines for implementing CEQA are known as the State CEQA Guidelines.

Section 15380(b) of the State CEQA Guidelines provides that a species not listed on the federal or state lists of protected species may be considered rare if the species can be shown to meet certain specified criteria. These criteria have been modeled after the definitions in the FESA and the CESA and the section of the California Fish and Game Code dealing with rare or endangered plants and animals. This section was included in the guidelines primarily to deal with situations in which a public agency is reviewing a project that may have a significant effect on a species that has not yet been listed by either the USFWS or CDFW or species that are locally or regionally rare.

The CDFW has produced three lists (amphibians and reptiles, birds, and mammals) of "species of special concern" that serve as "watch lists". Species on these lists are of limited distribution or the extent of their habitats has been reduced substantially, such that threat to their populations may be imminent. Thus, their populations should be monitored. They may receive special attention during environmental review as potential rare species, but do not have specific statutory protection. All potentially rare or sensitive species, or habitats capable of supporting rare species, are considered for environmental review per the CEQA Section 15380(b).

The CNPS, a non-governmental conservation organization, has developed CRPRs for plant species of concern in California in the Inventory of Rare and Endangered Plants (CNPS 2021). The CRPRs include lichens, vascular, and non-vascular plants, and are defined as follows:

- CRPR 1A Plants considered extinct.
- CRPR 1B Plants rare, threatened, or endangered in California and elsewhere.
- CRPR 2A Plants considered extinct in California but more common elsewhere.
- CRPR 2B Plants rare, threatened, or endangered in California but more common elsewhere.
- CRPR 3 Plants about which more information is needed - review list.

- CRPR 4 Plants of limited distribution-watch list.

The CRPRs are further described by the following threat code extensions:

- .1—seriously endangered in California;
- .2—fairly endangered in California;
- .3—not very endangered in California.

Although the CNPS is not a regulatory agency and plants on these lists have no formal regulatory protection, plants appearing as CRPR 1B or 2 are, in general, considered to meet CEQA's Section 15380 criteria, and adverse effects on these species may be considered significant. Impacts on plants that are listed by the CNPS as CRPR 3 or 4 are also considered during CEQA review, although because these species are typically not as rare as those of CRPR 1B or 2, impacts on them are less frequently considered significant.

Compliance with CEQA Guidelines Section 15065(a) requires consideration of plant or animal natural communities. Vegetation types of "special concern" are tracked in Rarefind (CNDDB 2021). Further, the CDFW ranks sensitive vegetation alliances based on their global (G) and state (S) rankings analogous to those provided in the CNDDB. Global rankings (G1–G5) of natural communities reflect the overall condition (rarity and endangerment) of a habitat throughout its range, whereas S rankings are a reflection of the condition of a habitat within California. If an alliance is marked as a G1–G3, all of the associations within it would also be of high priority. The CDFW provides the Vegetation Classification and Mapping Program's currently accepted list of vegetation alliances and associations (CDFW 2010).

Project Applicability: All potential impacts on biological resources will be considered during CEQA review of the project. This Biological Resources Report assesses these impacts to facilitate CEQA review of the project by the City of Menlo Park. Project impacts are discussed in Section 6 below.

### 3.2.4 California Fish and Game Code

Ephemeral and intermittent streams, rivers, creeks, dry washes, sloughs, blue line streams on USGS maps, and watercourses with subsurface flows generally fall under CDFW jurisdiction. Canals, aqueducts, irrigation ditches, and other means of water conveyance may also be considered streams if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife. A *stream* is defined in Title 14, California Code of Regulations Section 1.72, as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and that supports fish and other aquatic life. This includes watercourses having surface or subsurface flow that supports or has supported riparian vegetation." Using this definition, CDFW extends its jurisdiction to encompass riparian habitats that function as a part of a watercourse. California Fish and Game Code Section 2786 defines *riparian habitat* as "lands which contain habitat which grows close to and which depends upon soil moisture from a nearby freshwater source." The lateral extent of a stream and associated riparian habitat that would fall under the jurisdiction of CDFW can be measured in several ways, depending on the particular situation and the type of fish or wildlife at risk. At minimum, CDFW would claim jurisdiction over a stream's bed and bank. In areas that lack a vegetated riparian corridor, CDFW jurisdiction would be the same as USACE jurisdiction. Where riparian habitat is present, the outer edge of riparian vegetation is generally used as the line of demarcation between riparian and upland habitats.

Pursuant to California Fish and Game Code Section 1603, CDFW regulates any project proposed by any person that will "substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the department, or use any material from the streambeds." California Fish and Game Code Section 1602 requires an entity to notify CDFW of any proposed activity that may modify a river, stream, or lake. If CDFW determines that proposed activities may substantially adversely affect fish and wildlife resources, a Lake and Streambed Alteration Agreement (LSAA) must be prepared. The LSAA sets reasonable conditions necessary to protect fish and wildlife, and must comply with CEQA. The applicant may then proceed with the activity in accordance with the final LSAA.

Certain sections of the California Fish and Game Code describe regulations pertaining to protection of certain wildlife species. For example, Code Section 2000 prohibits take of any bird, mammal, fish, reptile, or amphibian except as provided by other sections of the code.

The California Fish and Game Code Sections 3503, 3513, and 3800 (and other sections and subsections) protect native birds, including their nests and eggs, from all forms of take. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered "take" by the CDFW. Raptors (i.e., eagles, hawks, and owls) and their nests are specifically protected in California under Code Section 3503.5. Section 3503.5 states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto."

Bats and other non-game mammals are protected by California Fish and Game Code Section 4150, which states that all non-game mammals or parts thereof may not be taken or possessed except as provided otherwise in the code or in accordance with regulations adopted by the commission. Activities resulting in mortality of non-game mammals (e.g., destruction of an occupied nonbreeding bat roost, resulting in the death of bats), or disturbance that causes the loss of a maternity colony of bats (resulting in the death of young), may be considered "take" by the CDFW.

<u>Project Applicability</u>: The drainage ditches located along the northern and southern edges of the study area are not downstream continuations of terrestrial streams and only collect localized runoff from the surrounding development. Additionally, no flows continue downstream of these features out to the Bay or other stream or slough. As such, these features are not considered rivers or streams and are not regulated by the CDFW under California Fish and Game Code Section 1603 (H. T. Harvey & Associates 2021b).

Most native bird, mammal, and other wildlife species that occur on the project site and in the immediate vicinity are protected by the California Fish and Game Code. Mitigation Measures BIO-13, 14, 15, and 16 shall be implemented to ensure that project activities comply with the Fish and Game Code with respect to nesting birds, as described in Section 6.4.1.

## 3.3 Local

### 3.3.1 Menlo Park Municipal Code

The City of Menlo Park Municipal Code contains all ordinances for Menlo Park. Title 16, Zoning, includes regulations relevant to biological resources on the project site as discussed below.

**Bird-Friendly Design.** Sections 16.43.140 (6) (with respect to the O District) and 16.45.130(6) (with respect to the RMU District) require all new construction, regardless of size, to implement the following bird-friendly design measures:

- No more than 10% of facade surface area shall have non-bird-friendly glazing.
- Bird-friendly glazing includes, but is not limited to, opaque glass, covering of clear glass surface with patterns, paned glass with fenestration patterns, and external screens over non-reflective glass.
- Placement of buildings shall avoid the potential funneling of flight paths towards a building facade.
- Glass skyways or walkways, freestanding glass walls, and transparent building corners shall not be allowed.
- Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with green roofs.
- Use of rodenticides shall not be allowed.

A project may receive a waiver from one (1) or more of the items listed in subsections (6)(A) to (F) of this section, subject to the submittal of a site-specific evaluation from a qualified biologist and review and approval by the planning commission. (Ord. 1024 § 3 (part), 2016).

Project Applicability: Bird-friendly design will be incorporated into the project design as required by the City of Menlo Park Municipal Code. The project's incorporation of bird-safe design is discussed in Sections 1.2 and 6.5.2.

**Landscape Design Plan.** Chapter 12.44.090(a)(1)(G) provides that the use of invasive or noxious plant species is strongly discouraged. Invasive species are defined as those plants not historically found in California that spread outside cultivated areas and can damage environmental or economic resources. A noxious weed refers to any weed designated by the weed control regulations in the Weed Control Act and identified on a regional district noxious weed control list.

Project Applicability: No invasive and/or noxious plant species will be used in the project's landscape design plan.

**Heritage Trees.** Chapter 13.24, Heritage Trees, establishes regulations for the preservation of heritage trees, defined as:

- Trees of historical significance, special character or community benefit, specifically designated by resolution of the City Council;
- An oak tree (*Quercus* sp.), which is native to California and has a trunk with a circumference of 31.4 inches (diameter of 10 inches) or more, measured at 54 inches above natural grade; and
- All trees other than oaks, which have a trunk with a circumference of 47.1 inches (diameter of 15 inches) or more, measured 54 inches above natural grade, with the exception of trees that are less than 12 ft in height, which will be exempt from this section.

To protect heritage trees, Section 13.24.025 requires that a tree protection plan prepared by a certified arborist be submitted for any work performed within a tree protection zone, which is an area ten times the diameter of the tree. Furthermore, all tree protection plans should be reviewed and approved by the Public Works Director or his or her designee prior to issuance of any permit for grading or construction.

The removal of heritage trees or pruning of more than one-fourth of the branches or roots within a 12-month period requires a permit from the City's Director of Public Works or his or her designee and payment of a fee. The Director of Public Works may issue a permit when the removal or major pruning of a heritage tree is reasonable based on a number of criteria, including condition of the tree, need for removal to accommodate proposed improvements, the ecological and long-term value of the tree, and feasible alternatives that would allow for tree preservation.

Project Applicability: The project site includes 327 trees that qualify as heritage trees under the City ordinance, distributed as follows: 284 on the main Willow Village project site, 13 at 1305 O'Brien Drive, 4 at 1330 O'Brien Drive, 8 in the O'Brien Drive right-of-way, and 18 on Hamilton Avenue Parcels North and South (SBCA Tree Consulting 2017, Peninsula Innovation Partners 2020, 2022a-e). It is anticipated that a total of 295 heritage trees, including 276 on the main Willow Village project site, 7 at 1305 O'Brien Drive, 3 at 1330 O'Brien Drive, 6 in the O'Brien Drive right-of-way, and 3 on the Hamilton Avenue Parcels North and South, would be removed as part of the proposed project. Therefore, a permit from the City would be required.

### 3.3.2 Menlo Park General Plan

The City of Menlo Park General Plan includes goals, policies, and programs relevant to the environmental factors potentially affected by the proposed project, including the following:

- *Goal LU-4:* Promote the development and retention of business uses that provide goods or services needed by the community that generate benefits to the City, and avoid or minimize potential environmental and traffic impacts.

- *Policy LU-4.5: Business Uses and Environmental Impacts.* Allow modifications to business operations and structures that promote revenue-generating uses for which potential environmental impacts can be mitigated.
- *Goal LU-6:* Preserve open-space lands for recreation; protect natural resources and air and water quality; and protect and enhance scenic qualities.
  - *Policy LU-6.5: Open Space Retention.* Maximize the retention of open space on larger tracts (e.g., portions of the St. Patrick's Seminary site) through means such as rezoning consistent with existing uses, clustered development, acquisition of a permanent open space easement, and/or transfer of development rights.
  - *Policy LU 6.6: Public Bay Access.* Protect and support public access to the Bay for the scenic enjoyment of open water, sloughs, and marshes, including restoration efforts, and completion of the Bay Trail.
  - *Policy LU-6.7: Habitat Preservation.* Collaborate with neighboring jurisdictions to preserve and enhance the Bay, shoreline, San Francisquito Creek, and other wildlife habitat and ecologically fragile areas to the maximum extent possible.
  - *Policy LU-6.8: Landscaping in Development.* Encourage extensive and appropriate landscaping in public and private development to maintain the City's tree canopy and to promote sustainability and healthy living, particularly through increased trees and water-efficient landscaping in large parking areas and in the public right-of-way.
  - *Policy LU-6.11. Baylands Preservation.* Allow development near the Bay only in already developed areas.
    - *Program LU-6.D: Design for Birds.* Require new buildings to employ façade, window, and lighting design features that make them visible to birds as physical barriers and eliminate conditions that create confusing reflections to birds.

- Goal OSC1: Maintain, Protect, and Enhance Open Space and Natural Resources.
  - *Policy OSC1.1: Natural Resources Integration with Other Uses.* Protect Menlo Park's natural environment and integrate creeks, utility corridors, and other significant natural and scenic features into development plans.
  - *Policy OSC1.2: Habitat for Open Space and Conservation Purposes.* Preserve, protect, maintain, and enhance water, water-related areas, plant and wildlife habitat for open space and conservation purposes.
  - *Policy OSC1.3: Sensitive Habitats.* Require new development on or near sensitive habitats to provide baseline assessments prepared by qualified biologists, and specify requirements relative to the baseline assessments.
  - *Policy OSC1.4: Habitat Enhancement.* Require new development to minimize the disturbance of natural habitats and vegetation, and require revegetation of disturbed natural habitat areas with native or non-invasive naturalized species.

- *Policy OSC1.5: Invasive, Non-Native Plant Species*. Avoid the use of invasive, non-native species, as identified on the lists of invasive plants maintained at the California Invasive Plant Inventory and United States Department of Agriculture invasive and noxious weeds database, or other authoritative sources, in landscaping on public property.
- *Policy OSC1.15: Heritage Trees*. Protect Heritage Trees, including during construction activities through enforcement of the Heritage Tree Ordinance (Chapter 13.24of the Municipal Code).

Project Applicability: The project is located within the Menlo Park General Plan area and would conform to all applicable requirements.

# Section 4. Environmental Setting

## 4.1 General Project Area Description

The 81.1-acre study area (including the approximately 64-acre project site) is located in the *Palo Alto*, *California* 7.5-minute USGS quadrangle. The approximately 64-acre project site (inclusive of the "main project site" east of Willow Road and "Hamilton Avenue Parcels North and South" west of Willow Road) is bounded by Willow Road to the west, the Hetch Hetchy easement corridor to the south, an existing life science complex to the east, and a drainage ditch, rail line, and Extra Space Storage self-storage units to the north. A review of historical aerial photographs indicates that the study area was largely agriculture in 1943. By 1991, the project site was developed with numerous buildings and parking lots known as the Menlo Science and Technology Park. Currently, the site is occupied by 21 office, industrial, and warehouse buildings (Figure 2).

The site is generally level, with elevations ranging from approximately 6 to 13 ft (North American Vertical Datum of 1988) above sea level. The site is underlain by one soil type, Urban land-Orthents, reclaimed complex, 0 to 2 percent slopes (NRCS 2021). This soil type has a variable profile to a depth of approximately 40 inches, with silty clay generally occurring from 40 to 60 inches, and is considered a well-drained soil.

## 4.2 Biotic Habitats

Reconnaissance-level surveys identified four habitat types/land uses in the study area: developed/landscaped (77.16 acres), California annual grassland (3.66 acres), forested wetland (0.07 acre[2]), and herbaceous seasonal wetlands (0.07 acre) (Figure 3). These habitats are described in detail below. Plant species observed during the reconnaissance survey are listed in Appendix A.

Photo 1. Developed/Landscaped habitat.

### 4.2.1 Developed/Landscaped

**Vegetation.** The entire project site, and the vast majority of the study area, are occupied by developed/landscaped land uses (Photo 1) that include office buildings, restaurants, a gas station, parking lots, walking paths, mulched and irrigated areas, and extensive plantings

[2] The depression comprising the footprint of the forested wetland is 0.07 acre in size; the canopy of the willows rooted within that wetland comprise an additional 0.13 acre.

**Figure 3. Habitats Map**
Willow Village Master Plan Biological Resources Report (3375-21)
August 2022

of ornamental trees and other landscaping species. Species characteristic of this area include Canary Island pine (*Pinus canariensis*), Chinese pistache (*Pistacia chinensis*), London plane (*Platanus* x*hispanica*), eucalyptus (*Eucalyptus* sp.), and crepe myrtle (*Lagerstroemia* sp.). Common understory plants include buckbrush (*Ceanothus* sp.) and rosemary (*Rosmarinus officinalis*). Immediately outside the southern edge of the project boundary (but within an area where off-site improvements will be made), a ditch is located partially on-site and partially within the Hetch Hetchy easement area (Photo 2). This ditch was dominated by upland (non-wetland) vegetation during our April 2019 site visit, as well as during the August 2021 site visit conducted for the delineation of waters of the U.S./State, and is concrete lined in at least some locations (H. T. Harvey & Associates 2021b). The ditch collects some water from the surrounding uplands and flows into a stormdrain. However, a visit to the site on December 31, 2021, after a prolonged, heavy rain event, revealed evidence of only a very small amount of runoff in this ditch during the storm. It is evident that this ditch receives little runoff from surrounding areas.

**Photo 2. A drainage ditch in the southeastern part of the site.**

**Wildlife.** The wildlife most often associated with developed/landscaped areas are those that are tolerant of periodic human disturbances, including introduced species such as the European starling (*Sturnus vulgaris*), rock pigeon (*Columba livia*), house mouse (*Mus musculus*), Norway rat (*Rattus norvegicus*), and black rat (*Rattus rattus*). Numerous common, native species are also able to utilize these habitats, especially the landscaped areas, including the western fence lizard (*Sceloporus occidentalis*), striped skunk (*Mephitis mephitis*), and a variety of birds, such as the American crow (*Corvus brachyrhynchos*), Anna's hummingbird (*Calypte anna*), California towhee (*Melozone crissalis*), bushtit (*Psaltriparus minimus*), chestnut-backed chickadee (*Poecile rufescens*), and California scrub-jay (*Aphelocoma californica*), all of which were observed on the project site during the reconnaissance survey. In addition, the eaves of the buildings on the project site may be attractive to other nesting and/or roosting bird species in the area, such as the black phoebe (*Sayornis nigricans*). Further, a number of large eucalyptus trees found in the northern portion of the project site may provide suitable nesting habitat for a pair of raptors, such as the red-tailed hawk (*Buteo jamaicensis*), which was observed in the study area during the reconnaissance survey. However, a focused survey of the study area detected no evidence (i.e., old nests) of raptors having previously nested on the site. Similarly, an examination of trees and structures on the site failed to find any large cavities that might provide suitable bat roosting habitat. Therefore, large roosting or maternity colonies of bats are not expected to occur in the study area. The ditch immediately south of the project boundary provides no aquatic habitat, and therefore no aquatic or wetland-associated wildlife species are associated with this feature.

### 4.2.2 California Annual Grassland

Photo 3. California annual grassland habitat in the northeast corner of the study area.

**Vegetation.** California annual grassland habitat occurs in the northern portion of the study area along the Dumbarton Rail Corridor, primarily outside of the project boundary, but with a very small area encroaching into the project boundary in the northeast corner of the main project site (Photo 3). At the time of the reconnaissance survey, this habitat was dominated by non-native grasses and forbs such as wild oat (*Avena* sp.), fennel (*Foeniculum vulgare*), bull mallow (*Malva nicaeensis*), black mustard (*Brassica nigra*), and bristly ox-tongue (*Helminthotheca echioides*). Many of these non-native plant species are ranked as moderately or highly invasive by the California Invasive Plant Council (Cal-IPC 2021). For example, fennel is highly invasive and has severe ecological impacts on physical processes, plant and animal communities, and vegetation structure. Moderately invasive species, such as wild oats and black mustard, have substantial and apparent ecological impacts (Cal IPC 2021).

**Wildlife.** Wildlife use of California annual grasslands in the study area is limited by frequent human disturbance, the abundance of non-native and invasive species, and isolation of the grassland habitat remnants from more xtensive grasslands. As a result, wildlife species associated with more extensive grasslands, such as the grasshopper sparrow (*Ammodramus savannarum*) and western meadowlark (*Sturnella neglecta*), are absent from the small patches of grassland in the study area. Most of the bird species using this habitat during the breeding season nest in nearby landscaped habitats, using the California annual grassland only for foraging. Such species include the mourning dove (*Zenaida macroura*), lesser goldfinch (*Spinus psaltria*), dark-eyed junco (*Junco hyemalis*), American crow, and Brewer's blackbird (*Euphagus cyanocephalus*). Similarly, a few species nesting on nearby buildings, such as the cliff swallow (*Petrochelidon pyrrhonota*), barn swallow (*Hirundo rustica*), rock pigeon (*Columba livia*), black phoebe, and European starling, also forage on or over the California annual grassland habitat. Several other species of birds use the California annual grassland habitat during the nonbreeding season. These species, which include the golden-crowned sparrow (*Zonotrichia atricapilla*), savannah sparrow (*Passerculus sandwichensis*), and white-crowned sparrow (*Zonotrichia leucophrys*), forage on the ground or in herbaceous vegetation, primarily for seeds.

Few species of reptiles and amphibians occur in the California annual grassland in the study area due to its disturbed nature and low habitat heterogeneity. Nevertheless, reptiles such as the western fence lizard and gopher snake (*Pituophis melanoleucus*) occur in this type of habitat, and amphibians such as the Sierran chorus frog (*Pseudacris sierra*) and western toad (*Anaxyrus boreas*), which breed in freshwater marshes in the area, forage in this habitat. Small mammals expected to be present include the native western harvest mouse (*Reithrodontomys megalotis*) and nonnative house mouse, Norway rat, and black rat. Small burrowing mammals, such as the Botta's pocket gopher (*Thomomys bottae*) and California ground squirrel (*Spermophilus beecheyi*), are also present. Larger mammals, such as the striped skunk, Virginia opossum (*Didelphis virginiana*), raccoon (*Procyon lotor*), and black-tailed jackrabbit (*Lepus californicus*) are also likely to occur here.

### 4.2.3 Forested Wetland

**Vegetation.** A small, isolated segment of forested wetland occurs in a drainage ditch along the northern edge of the study area, just outside of the project boundary (Photo 4). This segment of the ditch is characterized by a dense overstory of willow (*Salix* sp.), with minimal groundcover predominantly consisting of tall flatsedge (*Cyperus eragrostis*) and poison oak (*Toxicodendron diversilobum*). The wetland hydrology here is supported by localized freshwater runoff from the surrounding area, which pools in or saturates the soils in the lowest portion of the drainage ditch during the wet season. No standing water was observed during the November 2017 site visit, but shallow water was pooled here during the April 2019 visit.

**Photo 4. Willow dominated isolated forested wetland located in the northern potions of the study area.**

**Wildlife.** Due to its small size, isolation, and lack of pooled water, wildlife diversity in the isolated forested wetland is fairly low. However, the dense foliage provided by this willow stand is likely to support several species of nesting birds and provide cover and foraging habitat for others. Bird species that may forage in this habitat include many of the same species as described in the habitats above, as well as species such as the Bewick's wren (*Thryomanes bewickii*), northern mockingbird (*Mimus polyglottos*), and the yellow-rumped warbler (*Setophaga coronata*). Amphibians such as the Sierran chorus frog and western toad may also be present in this habitat, and if water ponds long enough in this ditch, these species could potentially breed there.

### 4.2.4 Herbaceous Seasonal Wetlands

**Vegetation.** An herbaceous seasonal wetland is located off-site within the Dumbarton Rail Corridor between Willow Street and Chilco Street in the extreme northwest part of the study area, entirely outside the project boundary. Another herbaceous seasonal wetland is located just outside of the northeast corner of the project boundary. These wetlands are characterized by slight depressions. The northwestern herbaceous seasonal wetland is dominated by Italian rye grass (*Festuca perenne*), Bermuda grass (*Cynodon dactylon*) and bird's foot trefoil (*Lotus corniculatus*), with obligate species such as narrow-leaved cattail (*Typha angustifolia*) and chairmaker's bulrush (*Schoenoplectus americanus*) scattered throughout the feature (Photo 5). The northeastern herbaceous seasonal wetland is dominated by narrow-leaved cattail, with saltmarsh baccharis (*Baccharis glutinosa*) and dallis grass (*Paspalum dilatatum*) also present. Freshwater hydrology in these areas is likely a result of localized runoff and possibly groundwater upwelling that reaches the rooting zone but does not typically cause inundation. At the time of the wetland delineation survey, there was no ponding water observed, but soils were saturated approximately 6 inches below the ground's surface.

**Photo 5. Seasonal freshwater wetland located north of the railway between Willow Street and Chilco Street.**

**Wildlife.** The herbaceous seasonal wetlands in the study area provide only marginal habitat for most wildlife species due to their limited extent and limited depth and duration of ponding, if these wetlands even support ponding at all, and wildlife diversity is expected to be low. However, many of the same bird species described in the developed/landscaped and California annual grassland habitats above may forage in the herbaceous seasonal wetlands, such as the dark-eyed junco, white-crowned sparrow, and California towhee, all of which were observed during the reconnaissance survey. Amphibians such as the native Sierran chorus frog and western toad may also be present in this habitat during wet times of the year but are not expected to breed due to the limited depth and duration of ponding.

### 4.2.5 Nearby Land Uses and Biotic Habitats outside the Study Area

Outside the study area, developed/landscaped land uses dominate surrounding areas to the west and south for miles in each direction. East of the study area, developed lands associated with existing commercial land uses are present, and north of the study area, beyond the inactive Dumbarton Rail Corridor, a storage facility is present. A large brackish marsh is present north of the storage area and on both the north and south sides of the old rail line farther north and northeast. This brackish marsh, which extends north to State Route 84 and east to University Avenue, is dominated by salt marsh and brackish marsh plants and contains several channels. As a result, marsh-associated wildlife species such as the San Francisco common yellowthroat (*Geothlypis trichas sinuosa*), Alameda song sparrow (*Melospiza melodia pusillula*), northern harrier (*Circus hudsonius*), and possibly the salt marsh harvest mouse (*Reithrodontomys raviventris*) may occur in that brackish marsh. Farther to the north and northeast are former salt ponds, now managed as waterbird habitat, and the waters and marshes of San Francisco Bay.

# Section 5. Special-Status Species and Sensitive Habitats

CEQA requires assessment of the effects of a project on species that are protected as "threatened, rare, or endangered"; such species are typically described as "special-status species". For the purpose of the environmental review of the project, special-status species have been defined as described below. Impacts on these species are regulated by some of the federal, state, and local laws and ordinances described in Section 3.0 above.

For purposes of this analysis, "special-status" plants are considered plant species that are:

- Listed under FESA as threatened, endangered, proposed threatened, proposed endangered, or a candidate species.
- Listed under CESA as threatened, endangered, rare, or a candidate species.
- Listed by the CNPS as CRPR 1A, 1B, 2, 3, or 4.

For purposes of this analysis, "special-status" animals are considered animal species that are:

- Listed under FESA as threatened, endangered, proposed threatened, proposed endangered, or a candidate species.
- Listed under CESA as threatened, endangered, or a candidate threatened or endangered species.
- Designated by the CDFW as a California species of special concern.
- Listed in the California Fish and Game Code as fully protected species (fully protected birds are provided in Section 3511, mammals in Section 4700, reptiles and amphibians in Section 5050, and fish in Section 5515).

Information concerning threatened, endangered, and other special-status species that potentially occur in the study area was collected from several sources and reviewed by H. T. Harvey & Associates biologists as described in Section 2.1 above. Figure 4 depicts CNDDB records of special-status plant species in the general vicinity of the project site and Figure 5 depicts CNDDB records of special-status animal species. These generalized maps show areas where special-status species are known to occur or have occurred historically.

## 5.1 Special-Status Plant Species

The CNPS (2021) and CNDDB (2021) identify 89 special-status plant species as potentially occurring in at least one of the nine USGS quadrangles containing or surrounding the study area for CRPR 1 or 2 species, or in San Mateo County for CRPR 3 and 4 species. Eighty-eight of those potentially occurring special-status plant species were determined to be absent from the study area for at least one of the following reasons: (1) lack of suitable habitat types; (2) absence of specific microhabitat or edaphic requirements, such as serpentine soils; (3) the elevation range of the species is outside of the range on the study area; or (4) the species is considered extirpated

from the project vicinity. Appendix B lists these plants along with the basis for the determination of absence. Suitable habitat, edaphic requirements, and elevation range were determined to be present in the study area for one plant species, Congdon's tarplant (*Centromadia parryi* ssp. *congdonii*), which can persist in disturbed grasslands and has been documented by the CNDDB in the project vicinity (Figure 4). While no suitable habitat occurs on the project site itself, there is suitable habitat for Congdon's tarplant within the study area, in the California annual grassland along the old rail line immediately north of the project boundary. However, this species should still have been flowering and detectable during our November 2017 reconnaissance survey, and a focused survey for the species was conducted in the Dumbarton Rail Corridor on June 12[3], yet no individuals of this species were observed. Therefore, this species is determined to be absent from the study area.

## 5.2 Special-Status Animal Species

The protected classifications and likelihood of occurrence in the study area of special-status animal species known to occur, or potentially occurring, in the pregion are presented in Table 1. Most of the special-status species listed in Table 1 are not expected to occur in the study area because it lacks suitable habitat, is outside the known range of the species, or is isolated from the nearest known extant populations by development or otherwise unsuitable habitat. Special-status animal species not expected to occur on the project site for these reasons include the Crotch bumble bee (*Bombus crotchii*), western bumble bee (*Bombus occidentalis*), green sturgeon (*Acipenser medirostris*), Central California coast steelhead (*Oncorhynchus mykiss*), California tiger salamander (*Ambystoma californiense*), California red-legged frog (*Rana draytonii*), western pond turtle (*Actinemys marmorata*), San Francisco garter snake (*Thamnophis sirtalis tetrataenia*), California Ridgway's rail (*Rallus obsoletus obsoletus*), California black rail (*Laterallus jamaicensis coturniculus*), western snowy plover (*Charadrius alexandrinus nivosus*), California least tern (*Sterna antillarum browni*), black skimmer (*Rynchops niger*), burrowing owl (*Athene cunicularia*), northern harrier, loggerhead shrike (*Lanius ludovicianus*), salt marsh harvest mouse, salt marsh wandering shrew (*Sorex vagrans halicoetes*) and American badger (*Taxidea taxus*). Although some of these species, such as the northern harrier, loggerhead shrike, white-tailed kite (*Elanus leucurus*), salt marsh harvest mouse, and salt marsh wandering shrew, may occur in wetland habitats not far outside the study area to the north and northeast, they are absent from the study area itself (including areas of proposed off-site improvements), and the proposed development footprint is well removed from suitable habitat for these species. Several other special-status species have some potential to occur in the study area only as visitors, migrants, or transients, but are not expected to reside or breed on the project site, to occur in large numbers, or otherwise to make substantial use of the project site. These include the San Francisco common yellowthroat, Alameda song sparrow, and pallid bat (*Antrozous pallidus*).

[3] Congdon's tarplant was documented flowering at the Sunnyvale Baylands Park, which is 9.4 miles southeast of the study area, on June 10, 2020. Therefore, given that this species was documented as flowering at a site that is relatively near the study area (but not located on the project site) on June 10, 2020, this species would have been detectable at the time of the June 12, 2020 site visit.

**Table 1. Special-Status Animal Species, Their Status, and Potential Occurrence in the Study Area**

| Name | *Status | Habitat | Potential for Occurrence in the Study Area |
|---|---|---|---|
| **Federal or State Endangered, Rare, or Threatened Species** | | | |
| Crotch bumble bee (*Bombus crotchii*) | SC | Occurs in open grassland and scrub habitats. Like most other species of bumble bees, nests primarily underground (Williams et al. 2014). Generalist foragers that visit a variety of floral resources. | **Absent.** There is one historical record of the species approximately 4 miles southwest of the project site (CNDDB 2021), but there are no recent records in the vicinity. Although the species was historically found throughout the southern two-thirds of California, it now appears to be absent from most of its former range (Xerces Society 2018). It is not recently or currently known from the project area and is not expected to occur currently due to these recent range contractions. |
| Western bumble bee (*Bombus occidentalis occidentalis*) | SC | Occurs in meadows and grasslands with abundant floral resources. Nests are primarily underground. | **Absent.** There are several records of this species from the project vicinity, but all records are historical (CNDDB 2021). Although this species was historically found throughout much of central and northern California, it is now confined to high elevation sites and a small number of records on the northern California coast (Xerces Society 2018). It is not expected to occur in the project area due to these recent range contractions. |
| Green sturgeon (*Acipenser medirostris*) | FT, CSSC | Spawns in large river systems such as the Sacramento River; forages in nearshore oceanic waters, bays, and estuaries. | **Absent.** No suitable aquatic habitat is present in the study area. Green sturgeon may forage infrequently, and in low numbers in the open Bay, which is 1.5 mi north and east of the project site; however, there is no aquatic connection between the Bay and the project site. Determined to be absent. |
| Central California Coast steelhead (*Oncorhynchus mykiss*) | FT | Cool streams with suitable spawning habitat and conditions allowing migration between spawning and marine habitats. | **Absent.** No suitable aquatic habitat is present in the study area. Steelhead may forage in the open Bay, which is 1.5 mi north and east of the project site; however, there is no aquatic connection between the Bay and the project site. Determined to be absent. |
| California tiger salamander (*Ambystoma californiense*) | FT, ST | Vernal or temporary pools in annual grasslands or open woodlands. | **Absent.** No suitable habitat is present in the surrounding study area. Further, populations have largely been extirpated from San Mateo County due to habitat loss, and the species is now considered absent from the majority of the project vicinity, including the study area. The closest occurrence in the project vicinity is at Lake Lagunita on the Stanford campus, which is 4 mi south of the study area (CNDDB 2021). Determined to be absent. |

| Name | *Status | Habitat | Potential for Occurrence in the Study Area |
|---|---|---|---|
| San Francisco garter snake (*Thamnophis sirtalis tetrataenia*) | FE, SE | Prefer densely vegetated freshwater habitats. May use upland burrows for aestivation. | **Absent.** No suitable habitat is present in the study area. Furthermore, the project vicinity is outside of the known range of the species. Determined to be absent. |
| California red-legged frog (*Rana draytonii*) | FT, CSSC | Streams, freshwater pools, and ponds with emergent or overhanging vegetation. | **Absent.** No suitable habitat is present in the study area. Further, this species has been extirpated from the majority of the project vicinity, due to development, the alteration of hydrology of its aquatic habitats, and the introduction of non-native predators such as non-native fishes and bullfrogs (*Lithobates catesbeianus*). The most recent record of the species in the project vicinity is from 2016 near Bear Gulch reservoir, over 4.8 mi to the southwest of the study area (CNDDB 2021). Determined to be absent. |
| California Ridgway's rail (*Rallus obsoletus obsoletus*) | FE, SE, SP | Salt marshes characterized by large expanses of saltmarsh cordgrass (*Spartina* spp.) or pickleweed (*Salicornia* spp.), with well-developed tidal channels. | **Absent.** Although the species is known to occur in the Palo Alto Baylands and the Ravenswood Open Space Preserve located 1 mi east of the study area, as well as on Greco Island 1 mi northwest of the study area, no salt marsh habitat is present in the study area. Further, the only marsh habitat located within 700 ft of the project site (which is equivalent to the size of the non-disturbance buffer typically required around active nests by the USFWS and CDFW) is a mosaic of both fresh water and salt marsh habitats located north of the study area. This marsh habitat lacks extensive patches of cordgrass or pickleweed and tidally influenced, braided channels, and therefore is not considered suitable habitat for the California Ridgway's rail. Determined to be absent. |
| California black rail (*Laterallus jamaicensis coturniculus*) | ST, SP | Breeds in fresh, brackish, and tidal salt marsh. | **Absent.** This species occurs in the project region primarily as a scarce winter visitor, with individuals recently recorded as close as a slough 0.5 mi north of the study area (CNDDB 2021). However, no suitable nesting or foraging habitat for the California black rail is present in the study area. Determined to be absent. |
| Western snowy plover (*Charadrius nivosus nivosus*) | FT, CSSC | Sandy beaches on marine and estuarine shores and salt pans in Bay saline managed ponds. | **Absent.** Although western snowy plovers are known to nest in salt panne habitat within 0.5 mi to the northwest, north, and east of the study area in the NWR's Ravenswood complex (CNDDB 2021), no suitable nesting or foraging habitat is present in the study area. Determined to be absent. |

| Name | *Status | Habitat | Potential for Occurrence in the Study Area |
|---|---|---|---|
| California least tern (*Sternula antillarum browni*) | FE, SE, SP | Nests along the coast on bare or sparsely vegetated, flat substrates. In the South Bay, nests in salt pannes and on an old airport runway. Forages for fish in open waters. | **Absent**. Suitable nesting habitat for the California least tern is not present in the study area. Least terns have been recorded in the project vicinity during the post-breeding season, and have been known to forage in the Redwood City salt ponds, 2.5 mi west of the study area (CNDDB 2021). Least terns have also been known to forage infrequently along the shores of the Palo Alto Baylands Preserve, located 3 mi southeast of the study area. However, least terns are not expected to forage in the study area due to the lack of any open water habitats supporting fish. Determined to be absent. |
| Salt marsh harvest mouse (*Reithrodontomys raviventris*) | FE, SE, SP | Salt marsh habitat dominated by common pickleweed or alkali bulrush. | **Absent.** The species has been recorded in salt marsh habitat in the project vicinity, including on the NWR to the north and east of the site (CNDDB 2021), and suitable pickleweed/alkali bulrush-dominated salt marsh habitat is present within several hundred feet northeast of the study area. However, no suitable habitat is present in the study area itself. Determined to be absent. |
| **California Species of Special Concern** | | | |
| Western pond turtle (*Actinemys marmorata*) | CSSC | Permanent or nearly permanent water in a variety of habitats. | **Absent.** No suitable aquatic habitat is present in the study area. Determined to be absent. |
| Northern harrier (*Circus cyaneus*) | CSSC (nesting) | Nests in marshes and moist fields, forages over open areas. | **Absent.** Northern harriers nest and forage in the wetlands immediately north and northeast of the study area, but they are not expected to nest or forage in the study area due to a lack of suitable habitat. |
| Black skimmer (*Rynchops niger*) | CSSC (nesting) | Nests on sparsely vegetated beaches, isolated islands, and levees. | **Absent.** No suitable nesting or foraging habitat is present in or near the study area. Determined to be absent. |
| Burrowing owl (*Athene cunicularia*) | CSSC | Nests and roosts in open grasslands and ruderal habitats with suitable burrows, usually those made by California ground squirrels (*Spermophilus beecheyi*). | **Absent.** No nesting burrowing owls are known to occur in the surrounding project vicinity (CNDDB 2021), and no suitable burrowing owl roosting or nesting habitat (i.e., open grasslands with ground squirrel burrows) is present in the study area. The narrow strip of California annual grassland at the northern edge of the study area is too limited and too hemmed in by trees and development to provide good burrowing owl habitat. Thus, the species is not expected to occur in the study area. |

| Name | *Status | Habitat | Potential for Occurrence in the Study Area |
|---|---|---|---|
| Loggerhead shrike (*Lanius ludovicianus*) | CSSC (nesting) | Nests in tall shrubs and dense trees; forages in grasslands, marshes, and ruderal habitats. | **Absent.** No suitable breeding habitat is present in the study area, and the California annual grasslands in the study area are not sufficiently extensive to provide suitable foraging habitat. Determined to be absent. |
| San Francisco common yellowthroat (*Geothlypis trichas sinuosa*) | CSSC | Nests in herbaceous vegetation, usually in wetlands or moist floodplains. | **Absent as Breeder.** The San Francisco common yellowthroat breeds commonly in wetlands immediately north and northeast of the study area, but no suitable breeding habitat is present in the study area itself. Small numbers may occasionally forage along the northern edge of the study area. |
| Alameda song sparrow (*Melospiza melodia pusillula*) | CSSC | Nests in salt marsh, primarily in marsh gumplant and cordgrass along channels. | **Absent as Breeder.** Song sparrows breed commonly in wetlands immediately north and northeast of the study area, but no suitable breeding habitat is present in the study area itself. Small numbers may occasionally forage along the northern edge of the study area. |
| Salt marsh wandering shrew (*Sorex vagrans halicoetes*) | CSSC | Medium to high marsh 6 to 8 ft above sea level with abundant driftwood and common pickleweed. | **Absent.** Suitable pickleweed-dominated salt marsh habitat is present within several hundred feet northeast of the study area. However, no suitable habitat is present in the study area itself. Determined to be absent. |
| Pallid bat (*Antrozous pallidus*) | CSSC | Forages over many habitats; roosts in caves, rock outcrops, buildings, and hollow trees. | **Absent as Breeder.** Historically, pallid bats were likely present in a number of locations throughout the project region, but their populations have declined in recent decades. This species has been extirpated as a breeder from urban areas close to the Bay, as is the case in the study area. No suitable roosting habitat is present on the project site or in the study area and no known maternity colonies are present on or adjacent to the study area. There is a low probability that the species occurs in the project vicinity at all due to urbanization; however, individuals from more remote colonies could potentially forage over the study area on rare occasions. |
| American badger (*Taxidea taxus*) | CSSC | Burrows in grasslands and occasionally in infrequently disked agricultural areas. | **Absent.** Badgers are not known to occur in the project region due to the lack of extensive grasslands and agricultural areas with friable soils, needed for digging burrows. No suitable habitat is present on the project site or in the study area. Determined to be absent. |

| | | | |
|---|---|---|---|
| **California Fully Protected Species** | | | |
| White-tailed kite (*Elanus leucurus*) | SP | Nests in trees and forages in extensive grasslands or marshes. | **Absent.** No suitable breeding habitat is present in the study area, and the California annual grasslands in the study area are not sufficiently extensive to provide suitable foraging habitat. May nest north and northeast of the study area, but determined to be absent from the study area itself. |

**SPECIAL-STATUS SPECIES CODE DESIGNATIONS**

FE = Federally Listed Endangered
FT = Federally Listed Threatened
SE = State Listed Endangered
ST = State Listed Threatened
SC = Candidate for State Listing
CSSC = California Species of Special Concern
SP = State Fully Protected Species

## 5.3 Sensitive Natural Communities, Habitats, and Vegetation Alliances

Natural communities have been considered part of the Natural Heritage Conservation triad, along with plants and animals of conservation significance, since the state inception of the Natural Heritage Program in 1979. The CDFW determines the level of rarity and imperilment of vegetation types, and tracks sensitive communities in its Rarefind database (CNDDB 2021). Global rankings (G) of natural communities reflect the overall condition (rarity and endangerment) of a habitat throughout its range, whereas state (S) rankings are a reflection of the condition of a habitat within California. Natural communities are defined using NatureServe's standard heritage program methodology as follows (Faber-Langendoen et al. 2012):

G1/S1: Critically imperiled

G2/S2: Imperiled

G3/S3: Vulnerable.

G4/S4: Apparently secure

G5/S4: Secure

In addition to tracking sensitive natural communities, the CDFW also ranks vegetation alliances, defined by repeating patterns of plants across a landscape that reflect climate, soil, water, disturbance, and other environmental factors (Sawyer et al. 2009). If an alliance is marked G1-G3, all of the vegetation associations within it will also be of high priority (CDFW 2021). The CDFW provides the Vegetation Classification and Mapping Program's (VegCAMP) currently accepted list of vegetation alliances and associations (CDFW 2021).

Impacts on CDFW sensitive natural communities, vegetation alliances/associations, or any such community identified in local or regional plans, policies, and regulations, must be considered and evaluated under CEQA (Title 14, Division 6, Chapter 3, Appendix G of the California Code of Regulations). Furthermore, aquatic, wetland and riparian habitats are also protected under applicable federal, state, or local regulations, and are generally subject to regulation, protection, or consideration by the USACE, RWQCB, CDFW, and/or the USFWS.

### 5.3.1 CDFW Sensitive Habitats

A query of sensitive habitats in Rarefind (CNDDB 2021) identified three sensitive habitats as occurring within the nine USGS quadrangles containing or surrounding the study area: serpentine bunchgrass grassland (Rank G2/S2.2), valley oak woodland (G3/S2.1), and northern coastal salt marsh (Rank G3/S3.2). Serpentine bunchgrass occurs only on serpentine soils, which do not occur in the study area. Valley oak woodland is characterized by valley oak (*Quercus lobata*) as the dominant or co-dominant species in the tree canopy. While some valley oak individuals do occur in the study area, they are ornamental plantings along buildings and roadways, and thus do not constitute this sensitive habitat type. The last sensitive habitat type, northern coastal salt marsh, is described by Holland (1986) as occurring along sheltered inland margins of bays, often co-dominated by pickleweed (*Salicornia* spp.), cordgrass (*Spartina* spp.), and sometimes saltgrass (*Distichlis spicata*). None of these species was noted in the study area, thus this habitat type is also absent.

### 5.3.2 CDFW Sensitive Vegetation Alliances

CDFW Sensitive alliances are not present on the project site (CDFW 2021).

### 5.3.3 Sensitive Habitats (Waters of the U.S./State)

As described above our surveys did not identify any wetlands or other waters that would fall under the jurisdiction of the USACE (Waters of the U.S.), or under the jurisdiction of the RWQCB or CDFW (Waters of the State), on the project site itself. Outside the project boundary, but within the study area, an isolated forested wetland depression is located immediately north of the main project site. One linear area of herbaceous seasonal wetland is located immediately north of the Hamilton Avenue Parcels North and South. Another herbaceous seasonal wetland is located just outside the northeast corner of the project boundary. As discussed in Section 3.1.1 above, the USACE may claim these features as jurisdictional Waters of the U.S., and the RWQCB could consider these wetlands (and possibly an additional 0.13-acre area where the canopy of willows extends outside the 0.07-acre forested wetland footprint within which the willows are rooted) to be Waters of the State. It is our understanding that the project will avoid to the extent feasible placing fill in those wetlands, in which case no permits from the USACE or RWQCB would be needed for activities associated with wetlands even if these features are determined to be jurisdictional. However, if these features are determined to be jurisdictional and are impacted by the project, permits from the USACE and RWQCB would be required, and mitigation of impacts would be required as described in Mitigation Measures BIO-11 and 12 in Section 6.2.1.

These wetlands would be considered sensitive habitats for CEQA assessment purposes. These wetlands are not associated with a stream and would therefore not constitute sensitive riparian habitat claimed by CDFW.

A ditch located partially on-site and partially in the Hetch Hetchy easement area immediately south of the main project site, but within the study area, is dominated by upland (non-wetland) vegetation, receives relatively little runoff from surrounding areas, and drains to the City stormwater system, and is therefore not considered sensitive or expected to be jurisdictional (H. T. Harvey & Associates 2021b). Brackish marsh habitat well north and northeast of the site provides higher-quality habitat than any wetland or aquatic features within the study area, but it is located well outside of the study area.

## 5.4 Non-Native and Invasive Species

Several non-native, invasive plant species occur in the study area in the California annual grassland habitat. Of these, fennel has the potential to cause the more severe ecological impacts. In addition, black mustard and wild oats were observed in the study area and can have substantial and apparent ecological impacts if they spread into native, sensitive habitats (Cal-IPC 2021). However, all of these species are also present in abundance in and around the wetland/grassland habitats to the north and northeast of the study area. The remainder of the project vicinity is developed/landscaped, and invasive species would not result in adverse effects on developed and landscaped areas.

# Section 6. Impacts and Mitigation Measures

The State CEQA Guidelines provide direction for evaluating the impacts of projects on biological resources and determining which impacts will be significant. CEQA defines a "significant effect on the environment" as "a substantial adverse change in the physical conditions which exist in the area affected by the proposed project." Under State CEQA Guidelines Section 15065, a project's impacts on biological resources are deemed significant if the project would:

A. "substantially reduce the habitat of a fish or wildlife species"
B. "cause a fish or wildlife population to drop below self-sustaining levels"
C. "threaten to eliminate a plant or animal community"
D. "reduce the number or restrict the range of a rare or endangered plant or animal"

In addition to the Section 15065 criteria that trigger mandatory findings of significance, Appendix G of State CEQA Guidelines provides a checklist of other potential impacts to consider when analyzing the significance of project effects. The impacts listed in Appendix G may or may not be significant, depending on the level of the impact. For biological resources, these impacts include whether the project would:

A. "have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service"

B. "have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service"

C. "have a substantial adverse effect on state or federally protected wetlands" (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling hydrological interruption, or other means)

D. "interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites"

E. "conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance"

F. "conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan"

The impact assessment below is structured based on the six significance criteria (A-F) listed above.

## 6.1 Impacts on Special-Status Species: Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS (Less than Significant with Mitigation)

### 6.1.1 Impacts on Special-Status Species during Demolition and Construction (Less than Significant)

No special-status plants are present within the study area, and therefore, none will be impacted by demolition of existing structures, construction of the project, or any other project components. No special-status animals are expected to breed in the study area. However, as noted in Table 1, nonbreeding individuals of the San Francisco common yellowthroat, Alameda song sparrow, and pallid bat could possibly forage on the site on occasion. San Francisco common yellowthroats and Alameda song sparrows breeding in the off-site brackish marsh to the north and northeast of the site may disperse (particularly during the nonbreeding season) along the Dumbarton Rail Corridor to the dense vegetation along the northern edge of the site, where they may forage. Pallid bats are expected to occur on or near the site rarely, if at all, but dispersing individuals could occasionally forage on the site. Due to the absence of high-quality roosting sites for pallid bats, this species is not expected to roost on the project site.

During demolition and construction, the removal of vegetation, as well as noise and operation of heavy equipment, could disturb foraging yellowthroats and song sparrows, and disturbance of existing vegetation could result in loss or degradation of foraging habitat and declines in food resources for these bird species as well as the pallid bat. However, the project site does not provide high-quality habitat for any of these species, in its current state. These species would not be likely to occur on the site, or close enough to the project site to be disturbed by demolition or construction activities. Given the project site's relatively urban characteristics, the amount of habitat that may be degraded and the number of individuals of these species that would be disturbed by project activities are minimal.

Construction on offsite areas could include the placement of utilities lines under existing rights-of-way, construction of roundabout, and improvements to a Pacific Gas and Electric Company substation. All of these areas are developed and have no natural features that provide habitat for special-status species. Construction of offsite project components will not result in impacts to special-status species or other sensitive biological resources.

Therefore, project activities would not result in substantial impacts to these species' population and habitat, and such impacts would be less than significant.

### 6.1.2 Impacts on Wildlife from Artificial Lighting (Less than Significant with Mitigation)

The installation of lighting on buildings and around roads, paths, and parking lots may result in potential impacts on animal species. Many animals, both special-status and common species, are sensitive to light cues, which influence their physiology and shape their behaviors, particularly during the breeding season (Ringer 1972, de Molenaar et al. 2006). Artificial light has been used as a means of manipulating breeding behavior and productivity in captive birds for decades (de Molenaar et al. 2006), and has been shown to influence the territorial singing behavior of wild birds (Longcore and Rich 2004, Miller 2006, de Molenaar et al. 2006). While it is difficult to extrapolate results of experiments on captive birds to wild populations, it is known that photoperiod (the relative amount of light and dark in a 24-hour period) is an essential cue triggering physiological processes as diverse as growth, metabolism, development, breeding behavior, and molting (de Molenaar et al. 2006). This holds true for mammals and other taxa as well (Beier 2006), suggesting that increases in ambient light may interfere with these processes across a wide range of species, resulting in impacts on wildlife populations.

Artificial lighting may also indirectly affect animals by increasing the nocturnal activity of predators such as owls, hawks, and mammalian predators (Negro et al 2000, Longcore and Rich 2004, DeCandido and Allen 2006, Beier 2006). The presence of artificial light may influence habitat use by rodents (Beier 2006) and breeding birds (Rogers et al. 2006, de Molenaar et al. 2006) by causing avoidance of well-lit areas, resulting in a net loss of habitat availability and quality.

The *Willow Village Master Plan Bird-Safe Design Assessment*, provides a comprehensive analysis of lighting impacts for the Willow Village Master Plan based on the project's conceptual Conditional Development Permit (CDP) application. The report provides documentation of the lighting measures that will be incorporated into the project to ensure that (1) project impacts due to lighting are reduced to less-than-significant levels under CEQA, and (2) the project complies with City of Menlo Park lighting requirements. CEQA mitigation measures related to minimizing lighting impacts are identified below.

For all exterior lighting in the northern portion of the main project site (i.e., areas north of Main Street and Office Buildings 03 and 05 surrounding the hotel, Town Square retail pavilion, Office Building 04, event building, and North Garage):

- **Mitigation Measure BIO-1.** To the maximum extent feasible, up-lighting (i.e., lighting that projects upward above the fixture) shall be avoided in the project design. All lighting shall be fully shielded to block illumination from shining upward above the fixture.

  If up-lighting cannot be avoided in the project design, up-lights shall be shielded and/or directed such that no luminance projects above/beyond objects at which they are directed (e.g., trees and buildings) and such that the light would not shine directly into the eyes of a bird flying above the object. If the objects themselves can be used to shield the lights from the sky beyond, no substantial adverse effects on migrating birds are anticipated.

- **Mitigation Measure BIO-2.** All lighting shall be fully shielded to block illumination from shining outward towards San Francisco Bay habitats to the north. No light trespass shall be permitted more than 80 feet beyond the site's northern property line (i.e., beyond the JPB rail corridor).

- **Mitigation Measure BIO-3.** Exterior lighting shall be minimized (i.e., total outdoor lighting lumens shall be reduced by at least 30% or extinguished, consistent with recommendations from the International Dark-Sky Association [2011]) from 10:00 p.m. until sunrise, except as needed for safety and City code compliance.
- **Mitigation Measure BIO-4.** Temporary lighting that exceeds minimal site lighting requirements may be used for nighttime social events. This lighting shall be switched off no later than midnight. No exterior up-lighting (i.e., lighting that projects upward above the fixture, including spotlights) shall be used during events.

Due to the potential for lighting within the stair/elevator towers to result in bird collisions, the project will implement the following measure:

- **Mitigation Measure BIO-5.** Lights shall be shielded and directed so that lighting does not spill outwards from the elevator/stair towers into adjacent areas.

Due to the potential for interior lighting within the buildings within the atrium to spill outwards to the north and affect birds, the project shall implement the following mitigation measure for interior lights within the buildings within the atrium to minimize impacts due to lighting:

- **Mitigation Measure BIO-6.** Interior or exterior blinds shall be programmed to close on north-facing windows of interior buildings within the atrium from 10:00 p.m. to sunrise in order to block lighting from spilling outward from these windows.

If birds are able to distinguish illuminated interior vegetation, trees, and structures within the atrium at night, collisions with the building are expected to be appreciably higher as birds attempt to fly through glazing to reach these features (e.g., during descent from migration at dawn). The project shall implement Mitigation Measures BIO-1 and BIO-3 above as well as Mitigation Measure BIO-7 below to ensure that structures, trees, and vegetation in the atrium are not illuminated by up-lighting or accent lighting such that they are more conspicuous to birds from outside compared to ambient conditions (i.e., lighting levels from fixtures within the atrium that do not specifically illuminate these features). Structures, trees, and vegetation are considered 'more conspicuous' to birds when they would be more conspicuous when viewed by the human eye from outside the atrium at any elevation.

- **Mitigation Measure BIO-7.** Accent lighting within the atrium shall not be used to illuminate trees or vegetation. OR

  The applicant shall provide documentation to the satisfaction of a qualified biologist that the illumination of vegetation and/or structures within the atrium by accent lighting and/or up-lighting will not make these features more conspicuous to the human eye from any elevation outside the atrium compared to ambient conditions within the atrium. The biologist shall submit a report to the City following the completion of the lighting design documenting compliance with this requirement.

For Office Buildings 01, 02, 03, 05, and 06 and the residential/mixed-use buildings, the project shall implement Mitigation Measure BIO-1 above as well as the following mitigation measure to minimize impacts due to increased lighting:

- **Mitigation Measure BIO-8.** Exterior lighting shall be minimized (i.e., total outdoor lighting lumens shall be reduced by at least 30% or extinguished, consistent with recommendations from the International Dark-Sky Association [2011]) from midnight until sunrise, except as needed for safety and City code compliance.

### 6.1.3 Impacts on Wildlife from Feral Cat Predation (Less than Significant with Mitigation)

Mammalian predation of birds and small mammals is a natural process. However, when natural levels of predation are increased due to the presence of non-native species, the health of local animal populations, including populations of special-status species, can be adversely affected. Feral cats (*Felis catus*) have been implicated as a major predator on many native wildlife species, including birds and small mammals such as the salt marsh harvest mouse, which is known to occur in wetlands north and northeast of the study area (CNDDB 2021). Not only does predation by feral cats have a potential impact on animal populations, but feral cat feeding stations also attract other predators such as raccoons and skunks, increasing predation pressure on native species in these locations.

During the reconnaissance survey on November 13, 2017, multiple feral cats were observed on the main project site and in the surrounding study area. Implementation of the proposed project has the potential to result in an increase in the feral cat population, for example as a result of an influx of renters and their pets or the establishment of feral cat feeding stations by residents or workers. This impact would be potentially significant under CEQA due to the impact on native wildlife species (Criterion A). Implementation of Mitigation Measure BIO-9 will reduce potential impacts due to feral cats to a less-than-significant level.

**Mitigation Measure BIO-9. Feral Cat Management Program.** The developer shall implement a Feral Cat Management Program similar to the program developed in conjunction with the Peninsula Humane Society and the Society for the Prevention of Cruelty to Animals for Meta's East Campus in 2013. For one week, every three months (i.e., each quarter), three live trap cages designed to trap cats shall be placed around the perimeter of the main Project Site in locations where feral cats are likely to prey upon native wildlife species. Each trap cage shall be monitored and maintained on a daily basis during the week the traps have been set to determine whether a feral cat has been caught and whether the trap has inadvertently captured a non-target species. If a feral cat is caught, a representative from a pest control operator (or a similar service organization/company) shall be contacted and dispatched to transport the trapped cat to either the Humane Society of San Mateo County, a local cat shelter, a local cat rescue facility, or other local facility that accepts feral cats. If an animal other than a feral cat is caught in one of the traps, it shall be released immediately at the trap location.

## 6.2 Impacts on Sensitive Communities: Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service

### 6.2.1 Impacts on Riparian Habitat or Other Sensitive Natural Communities (Less than Significant with Mitigation)

No riparian habitats or other sensitive natural communities are present on the project site itself. A small, isolated segment of forested wetland is located in a drainage ditch along the northern edge of the study area, just outside the project boundary. A linear area of herbaceous seasonal wetland is present immediately north of the Hamilton Avenue Parcels North and South portion of the project site. Another herbaceous seasonal wetland is present just outside the northeast corner of the project boundary. These wetlands are small and isolated, being in depressional areas, rather than having a surface connection to more extensive wetlands. Due to their small, isolated nature and lack of high-quality habitat for wildlife, these are not high-quality habitat features. Nevertheless, forested wetlands are relatively scarce along the edge of the bay, and seasonal wetlands along the edge of the bay have declined due to development and fill. Therefore, we consider these wetlands to be sensitive habitat areas.

Although these wetlands are outside of the project's property boundary, it is possible that these features may be impacted, either temporarily or permanently, during project grading. Elevation of the site and construction of a bicycle/pedestrian path along the northern edge of the main project site will require import of fill into that area, and although a retaining wall may be constructed to support the trail, some clearing of vegetation within, and fill of, these wetlands (or portions of these wetlands) may occur. As a result, it is possible that up to the entire 0.07-acre isolated forested wetland (as well as an additional 0.13-acre area where the canopy of willows extends outside the 0.07-acre forested wetland footprint within which the willows are rooted) and 0.07-acre herbaceous seasonal wetlands may be lost due to fill. Even if these wetlands are not permanently impacted, temporary impacts to wetlands may occur due to construction access, potentially resulting in degradation of wetland vegetation or hydrology. Owing to the scarcity of forested wetlands along the edge of the bay and the decline in seasonal wetlands in the region, this impact would be significant (Criterion B). Implementation of Mitigation Measures BIO-10, 11, and 12 will reduce this impact to a less-than-significant level. Indirect impacts on these wetlands will be avoided and minimized as described under *Impacts on Wetlands and Water Quality* below.

**Mitigation Measure BIO-10. Avoidance and Minimization.** To the extent feasible, construction activities should avoid or minimize the removal of wetland vegetation or the placement of fill in the wetlands immediately north and northeast of the project site. If all direct impacts to wetlands (i.e., vegetation removal and fill) are avoided, Mitigation Measures BIO-11 and BIO-12 do not need to be implemented, but if any wetland vegetation needs to be removed from the wetlands, or any fill needs to be placed in the wetlands, Measure BIO-11 (and Measure BIO-12, if permanent impacts will occur) will be implemented.

**Mitigation Measure BIO-11. In-Situ Restoration of Temporary Impacts.** If impacts to the wetlands immediately north and northeast of the project site are temporary, resulting in vegetation removal or temporary fill, but no permanent fill of the wetland is necessary, then the wetland area will be restored by the Project Sponsor following construction. The herbaceous seasonal wetlands are likely to become recolonized easily without the need for seeding and planting, as long as their existing hydrology and topography are restored following temporary impacts. Depending on the level of impact, there is potential for the arroyo willow clumps in the isolated forested wetland to regrow from cut stumps. In such a case, the in-situ restoration would involve simply protecting the area with exclusion fencing following construction to allow for re-growth of vegetation. For temporary impacts that may have removed willow root masses, but where in-situ restoration is still an option, a more detailed restoration plan will need to be developed. The mitigation should, at a minimum, achieve no net loss of wetland acreage (i.e., jurisdictional wetlands lost to fill will be replaced by creation or restoration of wetland habitat, of the same type that was impacted [either forested or herbaceous seasonal] at a minimum 1:1 ratio, on an acreage basis, or as otherwise required by any state or federal permitting agencies) or ecological functions and values through the restoration and enhancement of the impacted wetland that are equal to or greater than the baseline conditions for the existing wetlands. An in-situ restoration approach could involve salvage of wetland plant material prior to construction (e.g., willow cuttings or salvage of willow clumps, in the case of the isolated forested wetland) and then replanting those clumps if the seasonal timing of the construction were appropriate. USACE and/or RWQCB approvals may be required to authorize temporary impacts to these features.

**Mitigation Measure BIO-12. Compensatory Mitigation.** If any permanent fill of the isolated forested wetland or the herbaceous seasonal wetlands will occur, the project proponent will provide new wetland habitat of the same type that was impacted (either forested or herbaceous seasonal) to offset this impact, either through the creation enhancement, or restoration of wetlands in an appropriate location or via the purchase of mitigation credits in a USACE or RWQCB-approved wetland mitigation bank. The purchase of such credits shall serve as full mitigation for impacts to these wetland features. If project-specific creation, enhancement, or restoration of wetland habitat is implemented, habitat will be restored or created at a minimum ratio of 2:1 (compensation : impact) on an acreage basis, or as otherwise required by any state of federal permitting agencies. This ratio is not higher due to the relatively low quality of the wetlands in the study area relative to more extensive, less fragmented wetlands elsewhere in the region, but it is not lower due to the temporal loss of wetland functions and values that would result from the lag between impacts to the wetlands and maturation of the mitigation habitat. USACE and/or RWQCB approvals may be required to authorize permanent impacts to this feature.

To the extent compensatory mitigation is not provided by purchasing mitigation credits from a USACE- or RWQCB-approved wetland mitigation back, then, if feasible, compensation will be provided by creating, enhancing, or restoring wetland habitat so as to achieve the 2:1 ratio somewhere in San Mateo County, or as otherwise required by any state or federal permitting agencies. A qualified biologist shall develop a "Wetland Mitigation and Monitoring Plan" describing the mitigation, which will contain the following components (or as otherwise modified by regulatory agency permitting conditions):

- Summary of habitat impacts and proposed mitigation ratios
- Goal of the restoration to achieve no net loss of habitat functions and values
- Location of mitigation site(s) and description of existing site conditions
- Mitigation design:
    - Existing and proposed site hydrology
    - Grading plan if appropriate, including bank stabilization or other site stabilization features
    - Soil amendments and other site preparation elements as appropriate
    - Planting plan
    - Irrigation and maintenance plan
    - Remedial measures and adaptive management
- Monitoring plan (including final and performance criteria, monitoring methods, data analysis, reporting requirements, and monitoring schedule). Success criteria will include quantifiable measurements of wetland vegetation type (e.g., dominance by natives) and extent appropriate for the restoration location, and provision of ecological functions and values equal to or exceeding those in the wetland habitat affected. At a minimum, success criteria will include following:
    - At Year 5 post-mitigation, at least 75 percent of the mitigation site will be dominated by native hydrophytic vegetation.

The Wetland Mitigation and Monitoring Plan must be approved by the City of Menlo Park prior to the wetland impacts, and implementation of the Plan must begin within one year after the discharge of fill into these wetland features.

Alternately, off-site mitigation could be provided via the purchase of mitigation credits at an agency-approved mitigation bank, as noted above.

### 6.2.2 Impacts Caused by Non-Native and Invasive Species (Less than Significant)

Several non-native, invasive plant species occur in the California annual grassland habitat located along the northern edge of the study area. Invasive species can spread quickly and can be difficult to eradicate. Many non-native, invasive plant species produce seeds that germinate readily following disturbance. Further, disturbed areas are highly susceptible to colonization by non-native, invasive species that occur locally, or whose propagules are transported by personnel, vehicles, and other equipment.

Development undertaken because of the proposed project would result in a large portion of the site being subject to soil disturbance due to replacement of the existing outdated industrial complex with a new, mixed-used campus. Activities such as trampling, equipment staging, and vegetation removal are all factors that would also contribute to disturbance. Areas of disturbance could serve as the source for promoting the spread of non-native species, which could degrade the ecological values of wetlands that occur immediately adjacent to the project site, and adversely affect native plants and wildlife that occur there. Local propagule sources of one highly invasive weed, fennel, and other moderately invasive weeds such as wild oats and black mustard were observed on and surrounding the northern portion of the study area during the November 2017 and April 2019 surveys. Although no invasive weeds were observed on the project site itself, it is possible that some off-site grading in areas along the northern edge of the site will be necessary. Such grading may mobilize weeds within the immediate vicinity of the grading. However, given the minimal amount of disturbance in this off-site area, and the fact that surrounding areas are already developed, we do not expect this disturbance to result in an increased source population for the spread of non-native, invasive species into sensitive habitat areas.

Further, the project would comply with the City of Menlo Park Municipal Code, Chapter 12.44.090(a)(1)(G), which discourages the use of invasive or noxious plant species for landscaping. Thus, project activities would not result in the introduction of invasive species onto the project site or facilitate the spread of invasive plants into sensitive habitats (e.g., wetlands) surrounding the project site. In addition, the invasive species observed in the study area are already present in or around wetland habitats to the north and northeast, and the remainder of the surrounding area is developed/landscaped and thus not susceptible to habitat degradation by the spread of invasive plants. Therefore, the project would result in no impact due to the spread of non-native, invasive species.

## 6.3 Impacts on Wetlands: Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling hydrological interruption, or other means.

### 6.3.1 Impacts on Wetlands and Water Quality (Less than Significant with Mitigation)

No wetlands occur on the project site, but an isolated forested wetland and herbaceous seasonal wetlands are located to the north of the project site and to the northeast of the project site within the study area , and further, brackish wetlands occur to the north and northeast of the study area boundary. The isolated forested wetland, herbaceous seasonal wetlands, and brackish marsh may be subject to the regulatory jurisdiction of the USACE and RWQCB. Wetlands serve a variety of important functions, such as sediment stabilization, sediment/toxicant retention, nutrient removal/transformation, and terrestrial wildlife species habitat. Even though the acreage of these wetlands in the study area is small, wetlands are relatively scarce regionally, and even small wetland areas have disproportionate contributions to water quality, groundwater recharge, watershed function, and wildlife habitat in the region. In particular, forested wetlands are scarce along the edges of San Francisco Bay.

As discussed under *Impacts on Riparian Habitat or Other Sensitive Natural Communities* above, while the project proposes to avoid these features to the extent feasible, it is possible that the 0.07-acre isolated forested wetland (as well as an additional 0.13-acre area where the canopy of willows extends outside the 0.07-acre forested wetland footprint within which the willows are rooted) and 0.07-acre seasonal wetlands along the northern edge of the site may be impacted, either temporarily or permanently, during project grading. Owing to the scarcity of wetlands along the edge of the bay, this direct impact would be significant (Criterion C). Implementation of Mitigation Measures BIO-10, 11, and 12 will reduce impacts from the direct loss or modification of wetlands to a less-than-significant level. The brackish wetlands are located approximately 220 ft from the nearest proposed building and are separated from the main project site by an approximately 25 – 40 ft tall self-storage business. The project would not cause any direct impacts on these brackish wetlands.

Redevelopment has the potential to cause indirect impacts on nearby wetlands or water quality within those wetlands based on site runoff patterns. Currently during the 100-year storm, approximately 16% of the main project site's runoff flows overland to the brackish wetlands located northeast of the study area, with the rest flowing west to the Willow Road storm drain (Sherwood Design Engineers 2017). The project is expected to increase the area of overland flow that drains to the northeast corner of the main project site during the 100-year storm event somewhat, but would detain water on-site to not exceed existing peak flow rates. Such infrequent storm events are not expected to shape the species composition or habitat quality of wetlands to the north and northeast, as those habitats are governed by much more regular/frequent physical and ecological processes. As a result, an increase in runoff from the main project site during 100-year storm events would not have substantial impacts on wetlands to the north and northeast of the study area. The proposed project's storm drainage system would be designed to convey the 10-year storm event and lesser events from the entire main project site to the existing Willow Road storm drain main. During such 10-year and lesser events, no runoff would flow overland to the brackish wetlands located north and northeast of the study area. Therefore, due to the infrequency with which overland flows would enter off-site wetlands, the potential impact on wetland community composition or quality due to an influx of freshwater during large storm events is considered less than significant. Additionally, because the peak flow rate will not be increased to the marsh in large storm events over the existing condition, no significant erosion or sedimentation impacts would occur to the brackish marsh during site discharges to the area in large storm events.

In addition, the project would install stormwater infrastructure to collect site run-off and direct it into the City's storm drain system, rather than into the isolated forested wetland or herbaceous seasonal wetlands adjacent to the project boundary. This would prevent post-construction changes in run-off, including run-off carrying sediment or oil and grease, that could degrade water quality from entering the feature. Construction projects in California causing land disturbances that are equal to 1 acre or greater must comply with State requirements to control the discharge of stormwater pollutants under the NPDES *General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities* (Construction General Permit; Water Board Order No. 2009-0009-DWQ). Prior to the start of construction/demolition, a Notice of Intent must be filed with the State Water Board describing the project. A Storm Water Pollution Prevention Plan (SWPPP) must be developed and maintained during the project and it must include the use of Best Management Practices (BMPs) to protect water quality until the site is stabilized. Standard permit conditions under the Construction General Permit require that the applicant utilize various measures including: on-site sediment control best management practices, damp street sweeping, temporary cover of disturbed land surfaces to control erosion during construction, and utilization of stabilized construction entrances or wash racks, among other elements.

Finally, in many Bay Area counties, including San Mateo County, projects must also comply with the *California Regional Water Quality Control Board, San Francisco Bay Region, Municipal Regional Stormwater NPDES Permit* (MRP) (Water Board Order No. R2-2015-0049). This MRP requires that all projects implement BMPs and incorporate Low Impact Development practices into the design to prevent stormwater runoff pollution, promote infiltration, and hold/slow down the volume of water coming from a site after construction has been completed. In order to meet these permit and policy requirements, projects must incorporate the use of green roofs, impervious surfaces, tree planters, grassy swales, bioretention and/or detention basins, among other factors. These same features will be used to treat any stormwater that flows to the off-site brackish marsh during large storm events.

Reductions in ambient light levels in wetland habitat can lead to a decrease in the amount of aquatic vegetation present, which results in a reduction in primary production, as well as the amount of cover and herbaceous food available in the wetland habitat. The proposed project would result in an increase in the maximum height of buildings on the project site from approximately 34 ft currently to 110 ft. Thus, the project has the potential to affect vegetation near taller buildings due to changes in ambient lighting (i.e., shading). However, the increased height of the proposed buildings is not expected to result in a substantial change in the ambient light reaching nearby wetlands. The isolated forested wetlands immediately north of the project boundary are currently bordered to the south by an area of tall trees that already provide some shade, and under the proposed project, regardless of the height of buildings that are constructed nearby, these wetlands would still have exposure to the eastern sky, unimpeded by new buildings. Thus, shading of this wetland under the proposed project is not expected to increase substantially over current levels.

The herbaceous seasonal wetland immediately outside the northeast corner of the project site is in an open area, with no substantive shading from trees or buildings. The herbaceous seasonal wetland immediately north of the Hamilton Avenue Parcels North and South portion of the project site is currently bordered to the south by shrubs and small trees that provide minimal shade, as well as two approximately 20-foot tall buildings located approximately 15–25 feet from the wetland that also shade portions of the wetlands. Shading of both herbaceous seasonal wetlands by new buildings would reduce the amount of light received by wetland plants, potentially affecting the health and growth of these plants, and we would expect some degradation of the wetland habitat over time as a result. However, these wetlands would still have exposure to the eastern sky, unimpeded by new buildings, so they would not be completely shaded. Because these herbaceous seasonal wetlands in the study area would continue to receive adequate lighting, impacts to their functions and values would not rise to a level of significance under CEQA.

The brackish marsh to the north of the study area is located approximately 220 ft from the nearest proposed building and is separated from the main project site by an approximately 25 – 40 ft tall self-storage business. Thus, shading of the marsh by the existing storage units currently have an effect on aquatic vegetation, and the net increase in shading from the proposed project would be insignificant given the project site's distance from the marsh. Shade from the proposed buildings would only reach the marsh for short periods of the day when the sun is low in the sky and ambient light is dimmer and providing less photosynthetic input. Further, because of the open nature of the proposed development, with extensive open space, the project would not result in one large, continuous shadow but would allow light to penetrate through the campus. Therefore, shading impacts on wetlands from the proposed buildings would be less than significant.

Compliance with state requirements to control the discharge of stormwater pollutants during construction under the NPDES Construction General Permit and the RWQCB required SWPPP, and post-construction measures and design features required by the MRP would reduce the project's potential impact on water quality to a less-than-significant level.

## 6.4 Impacts on Wildlife Movement: Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites (Less than Significant)

### 6.4.1 Impacts on Wildlife Movement and Native Wildlife Nursery Sites (Less than Significant)

For many species, a typical urban landscape is a mosaic of suitable and unsuitable habitat types. Environmental corridors are segments of land that provide a link between these different habitats while also providing cover. Development that fragments natural habitats (i.e., breaks them into smaller, disjunct pieces) can have a twofold impact on wildlife: first, as habitat patches become smaller they are unable to support as many individuals (patch size), and second, the area between habitat patches may be unsuitable for wildlife species to traverse (connectivity).

All proposed project activities are located within an already developed footprint that is surrounded by existing development. Therefore, the project would not result in fragmentation of natural habitats. Further, the proposed project includes extensive open space. Thus, any common, urban adapted species that currently move through the project site would continue to be able to do so following project construction, and the project would not interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors.

Construction disturbance during the avian breeding season (February 1 through August 31, for most species) could result in the incidental loss of eggs or nestlings, either directly through the destruction or disturbance of active nests or indirectly by causing the abandonment of nests. Due to the absence of sensitive habitats from the project site, the habitats on the project site support only regionally common, urban-adapted breeding birds and support only a very small proportion of these species' regional populations. In addition, many birds are expected to continue to nest and forage on the project site after project construction is completed. These birds are habituated to disturbance related to the existing technology park, and the project incorporates trees, shrubs, and forbs into the landscape design, which will provide some food and structural resources for the common, urban-adapted birds of the area, as well as for migrants that may use the area during spring and fall migration. Therefore, project impacts on nesting and foraging birds that use the site, due to habitat impacts or disturbance of nesting birds, would not rise to the CEQA standard of having a substantial adverse effect, and these impacts would not constitute a significant impact on these species or their habitats under CEQA. However, all native bird species are protected from direct take by federal and state statutes (see Sections 3.1.5 and 3.2.4). Therefore, Mitigation Measures BIO-13, 14, 15, and 16 shall be implemented to ensure that project activities comply with the MBTA and California Fish and Game Code:

**Mitigation Measure BIO-13. Avoidance.** To the extent feasible, construction activities should be scheduled to avoid the nesting season. If construction activities are scheduled to take place outside the nesting season, all impacts on nesting birds protected under the MBTA and California Fish and Game Code will be avoided. The nesting season for most birds in San Mateo County extends from February 1 through August 31.

**Mitigation Measure BIO-14. Preconstruction/Pre-disturbance Surveys.** If it is not possible to schedule construction activities between September 1 and January 31 then preconstruction surveys for nesting birds should be conducted by a qualified ornithologist to ensure that no nests of migratory birds will be disturbed during project implementation. We recommend that these surveys be conducted no more than seven days prior to the initiation of construction activities for each construction phase. During this survey, the ornithologist will inspect all trees and other potential nesting habitats (e.g., trees, shrubs, California annual grasslands, buildings) in and immediately adjacent to the impact areas for migratory bird nests.

**Mitigation Measure BIO-15. Buffers.** If an active nest is found within trees or other potential nesting habitats that would be disturbed by these activities, the ornithologist will determine the extent of a construction-free buffer zone to be established around the nest (typically 300 ft for raptors and 100 ft for other species), to ensure that no nests of species protected by the MBTA and California Fish and Game Code will be disturbed during Project implementation.

**Mitigation Measure BIO-16. Inhibition of Nesting.** If construction activities will not be initiated until after the start of the nesting season, all potential nesting substrates (e.g., bushes, trees, grasses, and other vegetation) that are scheduled to be removed by the project may be removed prior to the start of the nesting season (e.g., prior to February 1). This will preclude the initiation of nests in this vegetation, and prevent the potential delay of the project due to the presence of active nests in these substrates.

## 6.5 Impacts due to Conflicts with Local Policies: Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (Less than Significant)

### 6.5.1 Impacts Related to Compliance with Municipal Code Chapter 13.24, Heritage Trees (Less than Significant)

Per City of Menlo Park Municipal Code Chapter 13.24, Heritage Trees, permits from the City's Director of Public Works or his or her designee and payment of a fee are required for the removal of any trees which meets the definition of heritage tree, as defined in Section 3.3.1 above. A total of 983 trees are currently present on the project site as a whole, including 805 on the main project site, 17 at 1305 O'Brien Drive, 6 at 1330 O'Brien Drive, 14 in the O'Brien Drive right-of-way, and 141 trees present on the Hamilton Avenue Parcels North and South; a total of 327 of these qualify as heritage trees. Of the 983 trees on the site, 865 (including 295 heritage trees) are expected to be removed during project construction activities (SBCA Tree Consulting 2017, Peninsula Innovation Partners 2020, 2022a-e). The removal or pruning of trees protected by the City of Menlo Park municipal code is considered potentially significant under CEQA (Criterion I). However, the project would comply with the City's heritage tree ordinance Sections 16.43.140(6) (with respect to the O District) and 16.45.130(6) (with respect to the RMU District), including obtaining a permit from the City to remove protected trees and paying any applicable fee. The project proposes to provide replacement trees for all heritage trees removed by the project, and a greater value of trees will be planted than removed (approximately 1,780 new trees will be planted). Therefore, impacts related to conflict with local policies or ordinances protecting heritage trees would be less than significant.

### 6.5.2 Impacts Related to Compliance with Municipal Code Chapters 16.43.140(6) and 16.45.130(6), Bird Safe Design (Less than Significant with Mitigation)

Development of the proposed project would result in the replacement of existing multi-story buildings with new multi-story buildings on the main project site, and the new buildings will incorporate glazing into their facades. Glass windows and building facades can result in injury or mortality of birds due to collisions with these surfaces. Because birds do not perceive glass as an obstruction the way humans do, they may collide with glass when the sky or vegetation is reflected in glass (e.g., they see the glass as sky or vegetated areas); when transparent windows allow birds to perceive an unobstructed flight route through the glass (such as at corners); and when the combination of transparent glass and interior vegetation (such as in planted atria) results in attempts by birds to fly through glass to reach that vegetation.

The majority of avian collisions with buildings occur within the first 60 ft of the ground (City of San Francisco 2011), where birds spend the majority of their time engaged in foraging, territorial defense, nesting, and roosting activities, and where vegetation is most likely to be reflected in glazed surfaces. However, very tall buildings (e.g., buildings 500 ft or more high) may pose a threat to birds that are migrating through the area, particularly to nocturnal migrants that may not see the buildings or that may be attracted to lights on the buildings.

Currently, terrestrial land uses and habitat conditions in and adjacent to the project site consist primarily of developed and landscaped uses such as buildings, parking lots, and roads. Vegetation in these areas is limited in extent, and consists primarily of non-native landscaped trees and shrubs. Although a number of bird species will use such vegetation, they typically do so in low numbers. Non-native vegetation supports fewer of the resources required by native birds than native vegetation, and the structural simplicity of the vegetation (without well-developed ground cover, understory, and canopy layers) further limits resources available to birds. In addition, although numerous waterbirds are known to congregate at the Don Edwards San Francisco Bay NWR to the north and east of the project site, because the area surrounding the project site to the west and south is heavily urbanized and contains no habitats of high value to estuarine birds using the NWR, we do not expect large numbers of waterbirds to be flying over the project site at altitudes low enough for bird-strike mortality to occur. The bird species with the greatest potential to collide with any buildings would consist primarily of the common, urban-adapted passerine species that currently use the project site, as these are the species that would spend the most time in the vicinity of the new buildings.

Zoning regulations set forth in Municipal Code Chapter 16.43.140 (6) require projects such as the Willow Village project to implement the following bird-safe design measures to reduce collision risk:

- No more than 10% of facade surface area shall have non-bird-friendly glazing.
- Bird-friendly glazing includes, but is not limited to opaque glass, covering of clear glass surface with patterns, paned glass with fenestration patterns, and external screens over non-reflective glass.
- Placement of buildings shall avoid the potential funneling of flight paths towards a building facade.
- Glass skyways or walkways, freestanding glass walls, and transparent building corners shall not be allowed.
- Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with green roofs.
- Use of rodenticides shall not be allowed.

However, these regulations allow that a project may receive a waiver from one or more of the items listed above, excluding the prohibition on use of rodenticides, subject to the submittal of a project-specific evaluation from a qualified biologist and review and approval by the planning commission (Ord. 1024 § 3 (part), 2016). To provide such a project-specific evaluation for the Willow Village project, H. T. Harvey & Associates (2021a) prepared the *Willow Village Master Plan Bird-Safe Design Assessment*, which comprehensively analyzes bird collision risk for the Willow Village Master Plan based on the project's conceptual Conditional Development Permit (CDP) application. The report provides documentation of the bird-safe design measures and mitigation measures that will be incorporated into the project to ensure that project impacts due to bird collisions with buildings are reduced to less-than-significant levels under CEQA.

Based on the *Willow Village Master Plan Bird-Safe Design Assessment*, the project shall comply with the following for purposes of addressing the potential for avian collision risk associated with the project:

1. The "beneficial project features" identified in Appendix A of the *Willow Village Master Plan Bird-Safe Design Assessment* (H. T. Harvey & Associates 2021a). These are features of the proposed buildings' architecture that would reduce the frequency of avian collisions by making the buildings' facades appear conspicuous to birds.
2. City Bird-Safe Design Requirements
    a. The City Bird-Safe Design Requirements identified in Mitigation Measure BIO-1 of the *ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update Environmental Impact Report* (ConnectMenlo EIR), certified by the City of Menlo Park in 2016 and codified in Sections 16.43.140(6) and 16.45.130(6) of the City's Municipal Code

(collectively referred to as the "City Bird-Safe Design Requirements"), as described in Sections 5.2.2.1, 5.3.2.1, 5.4.2.1, 5.5.2.1, and 6.2.2 of the Bird-Safe Design Assessment.

b. Subject to City approval of waivers to certain City Bird-Safe Design Requirements, the Alternative Measures Proposed, as described in Sections 5.2.2.2, 5.3.2.2, 5.4.2.2, 5.5.2.2, and 6.2.2 of the Bird-Safe Design Assessment. These Alternative Measures are derived from the City of Menlo Park's requirements but are tailored specifically to the Willow Village Master Plan to achieve a reduction in collision risk commensurate with the City Bird-Safe Design Requirements.

3. The "lighting design principles," as described in Section 6.2.1 of the Bird-Safe Design Assessment.
4. Additional mitigation measures, including BIO-1 through BIO-8 described above for impacts on wildlife from artificial lighting, and BIO-17 through BIO-21 described below for the atrium.

As described in the *Willow Village Master Plan Bird-Safe Design Assessment*, an assessment of the conceptual design of most of the proposed structures in the Master Plan area (i.e., the hotel, residential/mixed-use buildings, office campus buildings, and event building and nearby buildings) determined that impacts from bird collisions with these buildings would be less than significant under CEQA with incorporation of beneficial project features, compliance with City Bird-Safe Design Requirements, implementation of Alternative Measures as described above, and implementation of Mitigation Measures BIO-1 through BIO-8 described above for impacts on wildlife from artificial lighting. As such, no additional mitigation measures (i.e., related to the buildings' facades) for impacts related to avian collisions are proposed for those buildings.

However, due to the unique design of the atrium, incorporation of beneficial project features, compliance with City Bird-Safe Design Requirements, and implementation of Alternative Measures may not reduce collision impacts with this structure sufficiently to avoid a significant impact under CEQA. Therefore, additional CEQA mitigation measures are necessary to reduce impacts. With the implementation of the following mitigation measures, which go above and beyond the City's bird-safe design requirements, impacts due to bird collisions with the atrium will be reduced to less-than-significant levels under CEQA, in our professional opinion.

- **Mitigation Measure BIO-17.** The project shall treat 100% of glazing on the 'dome-shaped' portions of the atrium's façades (i.e., all areas of the north façade, and all areas of the south façade above the elevated park) with a bird-safe glazing treatment to reduce the frequency of collisions. This glazing shall have a Threat Factor[4] of 15 or lower.

  Because a Threat Factor is a nonlinear index, its value is not equivalent to the percent reduction in collisions that a glazing product provides. However, products with lower threat factors result in fewer bird collisions.

[4] A material's Threat Factor is assigned by the American Bird Conservancy, and refers to the level of danger posed to birds based on birds' ability to perceive the material as an obstruction, as tested using a "tunnel" protocol (a standardized test that uses wild birds to determine the relative effectiveness of various products at deterring bird collisions). The higher the Threat Factor, the greater the risk that collisions will occur. An opaque material will have a Threat Factor of 0, and a completely transparent material will have a Threat Factor of 100. Threat Factors for many commercially available façade materials can be found at https://abcbirds.org/wp-content/uploads/2021/01/Master-spreadsheet-1-25-2021.xlsx.

Because the City's bird-safe design requirements (and requirements of other municipalities in the Bay Area) do not specify the effectiveness of required bird-safe glazing, Mitigation Measure BIO-17 goes above and beyond what would ordinarily be acceptable to the City, as well as what is considered the industry standard for the Bay Area.

- **Mitigation Measure BIO-18.** The project shall treat 100% of glazing on the atrium's east and west facades with a bird-safe glazing treatment to reduce the frequency of collisions. This glazing shall have a Threat Factor of 15 or lower.

- **Mitigation Measure BIO-19.** Interior trees and woody shrubs will be set back from the atrium's east, west, and non-sloped (i.e., vertical/perpendicular to the ground) portions of the south facades by at least 50 feet to reduce the potential for collisions with these facades due to the visibility of interior trees. This 50-foot distance is greater than the distance used in the project design for the north and sloped portions of the south facades (e.g., 20-25 feet for the north façade) due to the vertical nature of the east, west, and non-sloped portions of the south facades, as opposed to the articulated nature of the north and sloped portions of the south facades (which is expected to reduce the visibility of internal vegetation to some extent), as well as the direct line-of-sight views between interior and exterior vegetation through the east, west, and non-sloped portions of the south facades compared to the north façade (where internal vegetation is elevated above exterior vegetation). Interior trees and shrubs that are not visible through the east, west, and south facades may be planted closer than 50 feet to glass facades.

- **Mitigation Measure BIO-20.** Because the glass production process can result in substantial variations in the effectiveness of bird-safe glazing, a qualified biologist will review physical samples of all glazing to be used on the atrium to confirm that the bird-safe frit will be visible to birds in various lighting conditions, and is expected to be effective.

- **Mitigation Measure BIO-21.** The project shall monitor bird collisions around the atrium for a minimum of two years following completion of construction of the atrium to identify if there are any collision "hotspots" (i.e., areas where collisions occur repeatedly).

  A monitoring plan for the atrium shall be developed by a qualified biologist that includes focused surveys for bird collisions in late April–May (spring migration), September–October (fall migration), and mid-November–mid-January (winter) to maximize the possibility that the surveys will detect any bird collisions that might occur. Surveys of the atrium will be conducted daily for three weeks during each of these periods (i.e., 21 consecutive days during each season, for a total of 63 surveys per year). In addition, for the two-year monitoring period, surveys of the atrium will be conducted the day following all nighttime events held in the atrium during which temporary lighting exceeds typical levels (i.e., levels specified in the International Dark-Sky Association's defined lighting zone LZ-2 from dusk until 10:00 p.m., or 30% below these levels from 10:00 p.m. to midnight, as described in Section 6.5 below). The applicant can assign responsibility for tracking events and notifying the biologist when a survey is needed to a designated individual who is involved in the planning and scheduling of atrium events. The timing of the 63 seasonal surveys (e.g., morning or afternoon) will vary on different days to the extent feasible; surveys conducted specifically to follow nighttime events will be conducted in the early morning.

At a frequency of no less than every six months, a qualified biologist will review the bird collision data for the atrium in consultation with the City to determine whether any potential hotspots are present (i.e., if collisions have occurred repeatedly in the same locations). A "potential hotspot" is defined as a cluster of three or more collisions that occur within one of the three-week monitoring periods described above at a given "location" on the atrium. The "location" shall be identified by the qualified biologist as makes sense for the observed collision pattern and may consist of a single pane of glass, an area of glass adjacent to a landscape tree or light fixture, the 8,990 square-foot vertical façade beneath the elevated park, the façade adjacent to vegetation on the elevated park, the atrium's east façade, the atrium's west façade, or another defined area where the collision pattern is observed. "Location" shall be defined based on observations of (1) collision patterns and (2) architectural, lighting, and/or landscape features contributing to the collisions, and not arbitrarily (e.g., by assigning random grids).

If any potential hotspots are found, the qualified biologist will provide an opinion regarding whether the potential hotspot will impact bird populations over the long-term to the point that additional measures (e.g., adjustments to lighting or the placement of vegetation) are needed to reduce the frequency of bird strikes at the hotspot location in order to reduce impacts to a less-than-significant level under CEQA (i.e., whether it constitutes an actual "hotspot"). This will be determined based on the number and species of birds that collide with the atrium over the monitoring period. In addition, a "hotspot" is automatically defined if a cluster of five or more collisions are identified at a given "location" on the atrium within one of the three-week monitoring periods described above. If a hotpot is identified, additional measures will be implemented at the potential hotspot location at the atrium; these may include one or more of the following options in the area of the hotspot depending on the cause of the collisions:

- The addition of a visible bird-safe frit pattern, netting, exterior screens, art, printed sheets, interior shades, grilles, shutters, exterior shades, or other features to untreated glazing (i.e., on the façade below the elevated park) to help birds recognize the façade as a solid structure.
- Installing interior or exterior blinds in the buildings within the atrium to prevent light from spilling outward though glazed facades at night.
- Reducing lighting by dimming fixtures, redirecting fixtures, turning lights off, and/or adjusting programmed timing of dimming/shutoff.
- Replacing certain light fixtures with new fixtures to provide increased shielding or redirect lighting.
- Adjusting or reducing lighting during events.
- Adjusting the timing of events to reduce the frequency of events during certain times of year (e.g., spring and/or fall migration) when relatively high numbers of collisions occur.
- Adjusting landscape vegetation by removing, trimming, or relocating trees or other plants (e.g., moving them farther from glass), or blocking birds' views of vegetation through glazing (e.g., using a screen or other opaque feature).

If modifications to the atrium are implemented to reduce collisions at a hotspot, one year of subsequent focused monitoring of the hotspot location will be performed to confirm that the modifications effectively reduce bird collisions to a less-than-significant level under CEQA. This monitoring may or may not extend beyond the two-year monitoring period described above, depending on the timing of the hotspot detection.

It is our understanding that the project proposes to use a frit consisting of ¼-inch white dots spaced in a 2x2-inch grid (i.e., similar in specifications to the Solyx SX-BSFD Frost Dot Bird Safety Film product rated with a Threat Factor of 15 by the American Bird Conservancy) for all treated façade areas on the atrium. We further understand that the atrium's glazing will have a dark gray thermal frit treatment (e.g., dark dots incorporated into the glass) in addition to the lighter-toned frit pattern that composes the bird-safe treatment. The extent of thermal frit will vary from the lower portions of the atrium to the upper portions of the atrium, with the upper portions incorporating more extensive (i.e., greater percent cover) thermal frit. Based on our review of preliminary physical glass samples supporting potential combinations of thermal frit and bird-safe frit, provided by the project team, it is our opinion that the combination of the bird-safe frit treatment with the thermal frit would produce very low Threat Factors. We are unaware of any glazing products that incorporate thermal frit patterns and have been assigned a Threat Factor by the American Bird Conservancy; however, the U.S. Green Building Council allows Threat Factors to be determined via any of the following options: (1) using a glass product that has been tested and rated by the American Bird Conservancy; (2) using a glass product with the same characteristics as a product that has been tested and rated by the American Bird Conservancy; or (3) using a glass product that has not been tested and rated, and asking the American Bird Conservancy to provide their opinion regarding an appropriate Threat Factor. We reached out to Dr. Christine Sheppard at the American Bird Conservancy to request her concurrence that the presence of the solar frit would not reduce the effectiveness of the bird-safe frit (and may even increase the effectiveness of the bird-safe frit). Dr. Sheppard responded in an email dated April 9, 2021 agreeing that the solar frit should make the lighter bird-safe frit dots more visible, and the proposed bird-safe treatment would have a Threat Factor of 15 as long as the bird-safe frit dots are ¼-inch in diameter (Sheppard 2021). Thus, the proposed bird-safe glazing treatment is appropriate for the atrium facades and goes above and beyond the City's minimum requirements, as well as the local standard for the San Francisco Bay Area.

The project will also implement Mitigation Measures BIO-1 through BIO-8 to minimize the contribution of project lighting on bird collision risk.

Prior to City approval of each Architectural Control Plan ("ACP") for the project, a qualified biologist shall review the final ACP to confirm that the above features, requirements, alternative measures, and mitigation measures, or other alternative features, requirements, alternative measures, and mitigation measures proposed by the applicant and reasonably acceptable to the qualified biologist, are incorporated into the final design, such that project impacts due to bird collisions would be less than significant under CEQA as indicated in the Bird-Safe Design Assessment.

### 6.5.3 Impacts Related to Compliance with General Plan Policy OSC1.3, Sensitive Habitats (Less than Significant with Mitigation)

General Plan Policy OSC1.3, Sensitive Habitats, requires new development on or near sensitive habitats to (1) provide a baseline assessment prepared by qualified biologists and specify requirements relative to the baseline assessments, (2) consult with appropriate regulatory and resource agencies, (3) incorporate appropriate avoidance and minimization measures, and (4) obtain necessary permits/authorizations. Further, Mitigation Measure BIO-1 of the ConnectMenlo EIR (PlaceWorks 2016) specifies that the required biological resources assessment must address a number of specific requirements. The following summarizes the project's compliance with the requirements of General Plan Policy OSC1.3 and ConnectMenlo Mitigation Measure BIO-1.

- The baseline biological resources report is required to provide a determination on whether any sensitive biological resources, including jurisdictional wetlands and waters, essential habitat for special-status species, and sensitive natural communities, are present on the site or on any adjacent undeveloped lands that could be affected by the project and lands of the NWR. In compliance with this requirement, Section 4.2 of this report describes the biotic habitat types present in the study area. Sections 5.1 and 5.2 discuss the potential for these habitats to support special-status plants and animals and analyze the potential for special-status species to occur on the study area or close enough to be impacted by proposed project activities; Section 6.1 analyzes potential impacts to special-status species. No plant or animal species listed as threatened or endangered by the USFWS or CDFW are expected to occur within the study area. Further, no species designated as a species of special concern is expected to breed in the study area.

  Section 5.3 addresses the presence of sensitive habitats in the project vicinity, and Sections 6.2 and 6.3 analyze the potential for the project to result in impacts on such habitats. No habitats under the jurisdiction of the USFWS, CDFW, USACE, or RWQCB were determined to be present on the project site, but 0.07 acre of isolated forested wetland (and an additional 0.13-acre area where the canopy of willows extends outside the 0.07-acre forested wetland footprint within which the willows are rooted) and 0.07 acre of herbaceous seasonal wetlands are present immediately north and northeast of the site, and could potentially be impacted by construction. Implementation of Mitigation Measures BIO-10, 11, and 12 as described in Section 6.2.1 would reduce impacts on sensitive/jurisdictional habitats to less-than-significant levels.

- The baseline biological resources report is required to incorporate guidance from relevant regional conservation plans related to determining the potential presence or absence of sensitive biological resources. As described above, Sections 5.1 and 5.2 analyze the potential for special-status plant or animal species to occur on the project site. This analysis incorporates information from the NWR Comprehensive Conservation Plan and Environmental Assessment (U.S. Fish and Wildlife Service 2012), which includes a discussion of all the special-status species potentially occurring on the NWR.

- The baseline biological resources report is required to include an evaluation of the potential effects of the project on sensitive biological resources. The potential for the proposed project to result in significant impacts on sensitive biological resources is analyzed in Section 6 of this report. This analysis takes into consideration the habitat types present in the study area (Section 4.2), the potential for special-status species to be present in the study area (Sections 5.1 and 5.2), and the proximity of the project site to sensitive habitats (Section 5.3). Based on the analysis, it is determined that the project would not result in significant impacts on special-status plant or animal species. The project could potentially result in impacts on sensitive habitats under the jurisdiction of the USACE and RWQCB, in the form of the small areas of isolated forested wetland (0.07 acre plus an additional 0.13-acre area where the canopy of willows extends outside the 0.07-acre forested wetland footprint within which the willows are rooted) and herbaceous seasonal wetlands (0.07 acre) present immediately north and northeast of the site. Implementation of Mitigation Measures BIO-10, 11, and 12 as described in Section 6.2.1 would reduce impacts on sensitive/jurisdictional habitats to less-than-significant levels.

- The baseline biological resources report is required to include avoidance, minimization, and mitigation measures for adverse impacts. Based on the *Willow Village Master Plan Bird-Safe Design Assessment*, Mitigation Measures BIO-1 through BIO-8, described in Section 6.1.2, were identified to reduce impacts of project lighting on wildlife and help to mitigate bird collision risk with project buildings, and Mitigation Measures BIO-17 through BIO-21, described in Section 6.5.2, will reduce impacts from bird collisions with the proposed atrium. Mitigation Measure BIO-9, described in Section 6.1.3, will reduce potential impacts of feral cats on native animals. Mitigation Measures BIO-10, 11, and 12, as described in Section 6.2.1, will reduce impacts on sensitive/jurisdictional habitats. Mitigation Measures BIO-13, 14, 15, and 16, described in Section 6.4.1, will avoid project conflicts with the MBTA and California Fish and Game Code related to nesting birds. Collectively all these mitigation measures will reduce Master Plan impacts on biological resources to less-than-significant levels.

- Per Mitigation Measure BIO-1 of the ConnectMenlo EIR, if sensitive biological resources are determined to be present on the project site or may be present on any adjacent parcel containing natural habitat, coordination with the appropriate regulatory and resource agencies must occur. The project could potentially result in impacts on sensitive habitats under the jurisdiction of the USACE and RWQCB, if these habitats are jurisdictional, in the form of the small areas of isolated forested wetland (0.07 acre plus an additional 0.13-acre area where the canopy of willows extends outside the 0.07-acre forested wetland footprint within which the willows are rooted) and herbaceous seasonal wetlands (0.07 acre) present immediately north and northeast of the site. As discussed in Mitigation Measure 2 of this biological resources report, the project will avoid and minimize impacts to these features to the extent feasible. If all direct impacts can be avoided, so that no clearing of wetland vegetation or fill of these wetlands will occur, no regulatory permitting related to these features would be necessary even if these habitats are jurisdictional. However, if these habitats are jurisdictional and will be impacted by vegetation clearing or fill, the applicant will obtain the necessary 404/401 permits from the USACE and RWQCB.

The project would not result in impacts on plant or animal species listed as threatened or endangered by the USFWS or CDFW, and therefore, no coordination with regulatory agencies regarding impacts on special-status species is warranted. Resource agencies would be provided the opportunity to comment on the proposed project as part of the CEQA process for the project.

- Per Mitigation Measure BIO-1, where jurisdictional waters or federally or State listed special-status species would be affected by the project, appropriate authorizations shall be obtained by the project applicant. As described above, the applicant will obtain any necessary 404/401 permits from the USACE and RWQCB if the off-site isolated forested wetland and/or herbaceous seasonal wetlands are determined to be jurisdictional and will be impacted by vegetation clearing or fill. The project would not result in impacts on plant or animal species listed as threatened or endangered by the USFWS or CDFW. The project would comply with the City's heritage tree ordinance, including obtaining a permit from the City to remove protected trees and paying any applicable fee, as described in Section 6.5.1.

Thus, provided that this project incorporates the mitigation measures described in this biological resources report, the project will not conflict with General Plan Policy OSC1.3. This biological resources report represents compliance with ConnectMenlo EIR Mitigation Measure BIO-1 by providing all the information required by that mitigation measure for a biological resources assessment.

## 6.6 Impact due to Conflicts with an Adopted Habitat Conservation Plan: Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan (No Impact)

### 6.6.1 Impacts due to Conflicts with an Adopted Habitat Conservation Plan (No Impact)

The project site is not located within an area covered by an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Therefore, the project would not conflict with any such documents.

## 6.7 Cumulative Impacts

Cumulative impacts arise due to the linking of impacts from past, current, and reasonably foreseeable future projects in the region. Future development activities in the City of Menlo Park will result in impacts on the same habitat types and species that will be affected by the proposed project. The proposed project, in combination with other projects in the area and other activities that impact the species that are affected by this project, could contribute to cumulative effects on special-status species. Other projects in the area include office/retail/commercial development, mixed use, and residential projects that could adversely affect these species, as well as restoration projects (e.g., the South Bay Salt Pond Restoration Project Phase 2, SAFER Bay

Project) that will benefit these species. The South Bay Salt Pond Restoration Project has active restoration sites approximately 750 feet north of the Hamilton Avenue Parcel North component of the project.

The cumulative impact on biological resources resulting from the project in combination with other projects in the project area and larger region would be dependent on the relative magnitude of adverse effects of these projects on biological resources compared to the relative benefit of impact avoidance and minimization efforts prescribed by planning documents, CEQA mitigation measures, and permit requirements for each project; compensatory mitigation and proactive conservation measures associated with each project. In the absence of such avoidance, minimization, compensatory mitigation, and conservation measures, cumulatively significant impacts on biological resources would occur.

However, the project would comply with applicable law regarding protection of biological resources, including among others federal and state law related to jurisdictional waters, federal and state law related to migratory birds, and local regulations regarding bird safety. In addition, the Menlo Park General Plan contains conservation measures that would benefit biological resources, as well as measures to avoid, minimize, and mitigate impacts on these resources. Further, the project would implement mitigation measures (Measures BIO-1-21) to mitigate impacts on sensitive and regulated habitats, and to minimize impacts on nesting and migratory birds, as described above. Thus, the project will make a less than cumulatively considerable contribution to cumulative impacts on biological resources.

# Appendix A.  Plants Observed

| Family | Scientific Name | Common Name |
|---|---|---|
| Aceraceae | *Acer palmatum* | Japanese maple |
| Aceraceae | *Acer rubrum* | red maple |
| Anacardiaceae | *Pistacia chinensis* | Chinese pistache |
| Anacardiaceae | *Schinus molle* | Peruvian pepper |
| Anacardiaceae | *Toxicodendron diversilobum* | poison oak |
| Apiaceae | *Foeniculum vulgare* | fennel |
| Araliaceae | *Hedera helix* | English ivy |
| Arecaceae | *Pheonix canariensis* | Canary Island palm |
| Asteraceae | *Baccharis pilularis* | coyote brush |
| Asteraceae | *Helminthotheca echioides* | bristly ox-tongue |
| Betulaceae | *Alnus cordata* | Italian alder |
| Bignoniaceae | *Jacaranda mimosifolia* | jacaranda |
| Brassicaeae | *Brassica nigra* | black mustard |
| Brassicaeae | *Raphanus sativus* | cultivated radish |
| Casuarinaceae | *Casuarina cunninghamiana* | casuarina |
| Cupresaceae | *Sequoia sempervirens* | coast redwood |
| Cupressaceae | *Cupressus sempervirens* | Italian cypress |
| Cyperaceae | *Cyperus eragrostis* | tall flatsedge |
| Fabaceae | *Acacia melanoxylon* | blackwood acacia |
| Fagaceae | *Quercus agrifolia* | coast live oak |
| Fagaceae | *Quercus lobata* | valley oak |
| Fagaceae | *Quercus rubra* | red oak |
| Ginkgoaceae | *Ginkgo biloba* | maidenhair |
| Lamiaceae | *Rosmarinus officinalis* | rosemary |
| Lythraceae | *Lagerstroemia spp.* | crepe myrtle |
| Magnoliaceae | *Magnolia soulangeana* | saucer magnolia |
| Malvaceae | *Malva nicaeensis* | bull mallow |
| Moraceae | *Ficus carica* | fig |
| Myrtaceae | *Eucalyptus camaldulensis* | red river gum |
| Myrtaceae | *Eucalyptus globulus* | Tasmanian blue gum |
| Myrtaceae | *Eucalyptus polyanthemos* | silver dollar gum |
| Myrtaceae | *Lophostemon confertus* | Brisbane box |
| Oleaceae | *Fraxinus oxycarpa 'Raywood'* | raywood ash |
| Oleaceae | *Fraxinus pennslyvanica* | Pennsylvania ash |
| Oleaceae | *Fraxinus uhdie* | shamel ash |
| Oleaceae | *Olea europaea* | olive |
| Papaveraceae | *Eschscholzia californica* | California poppy |
| Pinaceae | *Cedrus atlantica* | atlas cedar |
| Pinaceae | *Cedrus deodara* | deodar cedar |
| Pinaceae | *Pinus canariensis* | Canary Island pine |

| | | |
|---|---|---|
| Pinaceae | *Pinus halepensis* | aleppo pine |
| Pinaceae | *Pinus pinea* | Italian stone pine |
| Pinaceae | *Pinus radiata* | Monterey pine |
| Platanaceae | *Planatus xhispanica* | London plane |
| Poaceae | *Avena* sp. | Wild oats |
| Poaceae | *Bromus diandrus* | ripgut brome |
| Poaceae | *Phragmites australis* | common reed |
| Poaceae | *Stipa miliaceae* var. *miliacea* | smilo grass |
| Podocarpaceae | *Afrocarpus gracilior* | African fern pine |
| Polygonaceae | *Rumex crispus* | curly dock |
| Rhamnaceae | *Rhamnus alaternus* | Italian buckthorn |
| Rosaceae | *Prunus cerasifera 'Krauter Vesuvis'* | purple leaf plum |
| Rosaceae | *Prunus serrulata* | cherry |
| Rosaceae | *Pyrus calleryana* | flowering pear |
| Rosaceae | *Pyrus kawakamii* | evergreen pear |
| Salicaceae | *Salix babylonica* | weeping willow |
| Salicaceae | *Salix* sp. | willow |

# Appendix B. Special-Status Plants Considered for Potential Occurrence

| Common Name | Scientific Name | Suitable Habitat Absent | Edaphic Conditions Absent | Outside Elevation Range | Extirpated from Project Vicinity |
|---|---|---|---|---|---|
| alkali milk-vetch | Astragalus tener var. tener | x | x | | |
| Anderson's manzanita | Arctostaphylos andersonii | x | | x | |
| arcuate bush-mallow | Malacothamnus arcuatus | x | | x | |
| bay buckwheat | Eriogonum umbellatum var. bahiiforme | x | x | x | |
| Ben Lomond buckwheat | Eriogonum nudum var. decurrens | x | | x | |
| bent-flowered fiddleneck | Amsinckia lunaris | x | | | |
| Brewer's calandrinia | Calandrinia breweri | x | | x | |
| Brewer's clarkia | Clarkia breweri | x | x | x | |
| bristly leptosiphon | Leptosiphon acicularis | x | | x | |
| California androsace | Androsace elongata ssp. acuta | x | | x | |
| California seablite | Suaeda californica | x | | | |
| caper-fruited tropidocarpum | Tropidocarpum capparideum | x | x | | |
| chaparral ragwort | Senecio aphanactis | x | | x | |
| Choris' popcornflower | Plagiobothrys chorisianus var. chorisianus | x | | | |
| clay buckwheat | Eriogonum argillosum | x | x | x | |
| clustered lady's-slipper | Cypripedium fasciculatum | x | x | x | |
| coast iris | Iris longipetala | x | | | |
| coast lily | Lilium maritimum | x | | | |
| coastal marsh milk-vetch | Astragalus pycnostachyus var. pycnostachyus | x | | | |
| Congdon's tarplant | Centromadia parryi ssp. congdonii | | | | |
| Contra Costa goldfields | Lasthenia conjugens | x | x | | |
| cotula navarretia | Navarretia cotulifolia | x | x | | |
| Crystal Springs fountain thistle | Cirsium fontinale var. fontinale | x | x | x | |
| Crystal Springs lessingia | Lessingia arachnoidea | x | x | x | |
| Davidson's bush-mallow | Malacothamnus davidsonii | x | | x | |
| Delta woolly-marbles | Psilocarphus brevissimus var. multiflorus | x | | x | |
| Dudley's lousewort | Pedicularis dudleyi | x | | x | |
| dusky-fruited malacothrix | Malacothrix phaeocarpa | x | | x | |
| elongate copper moss | Mielichhoferia elongata | x | x | | |
| fragrant fritillary | Fritillaria liliacea | x | X | | |
| Franciscan onion | Allium peninsulare var. franciscanum | x | | x | |
| Gairdner's yampah | Perideridia gairdneri ssp. gairdneri | x | | | |
| hairless popcornflower | Plagiobothrys glaber | | | x | x |

| Common Name | Scientific Name | Suitable Habitat Absent | Edaphic Conditions Absent | Outside Elevation Range | Extirpated from Project Vicinity |
|---|---|---|---|---|---|
| Hickman's popcornflower | Plagiobothrys chorisianus var. hickmanii | x | | x | |
| Hillsborough chocolate lily | Fritillaria biflora var. ineziana | x | x | x | |
| Hoover's button-celery | Eryngium aristulatum var. hooveri | x | | | |
| Howell's onion | Allium howellii var. howellii | x | | x | |
| Jepson's coyote-thistle | Eryngium jepsonii | x | | | |
| Jepson's woolly sunflower | Eriophyllum jepsonii | x | | x | |
| Kings Mountain manzanita | Arctostaphylos regismontana | x | x | x | |
| large-flowered leptosiphon | Leptosiphon grandiflorus | x | | | |
| legenere | Legenere limosa | x | | | |
| Loma Prieta hoita | Hoita strobilina | x | x | x | |
| long-styled sand-spurrey | Spergularia macrotheca var. longistyla | x | | | |
| lost thistle | Cirsium praeteriens | | | | x |
| maple-leaved checkerbloom | Sidalcea malachroides | x | | | |
| Marin western flax | Hesperolinon congestum | x | x | | |
| Methuselah's beard lichen | Usnea longissima | x | | x | |
| Mexican mosquito fern | Azolla microphylla | x | | x | |
| Michael's rein orchid | Piperia michaelii | x | | | |
| minute pocket moss | Fissidens pauperculus | x | | x | |
| Montara manzanita | Arctostaphylos montaraensis | x | | x | |
| Mt. Diablo cottonweed | Micropus amphibolus | x | | x | |
| narrow-petaled rein orchid | Piperia leptopetala | x | | x | |
| Oakland star-tulip | Calochortus umbellatus | x | x | x | |
| Oregon polemonium | Polemonium carneum | x | | | |
| Patterson's navarretia | Navarretia paradoxiclara | x | x | x | |
| phlox-leaf serpentine bedstraw | Galium andrewsii ssp. gatense | x | x | x | |
| pincushion navarretia | Navarretia myersii ssp. myersii | x | | x | |
| Point Reyes salty bird's-beak | Chloropyron maritimum ssp. palustre | x | | | |
| round-headed Chinese-houses | Collinsia corymbosa | x | | | |
| round-leaved filaree | California macrophylla | x | | x | |
| saline clover | Trifolium hydrophilum | x | | | |
| San Antonio Hills monardella | Monardella antonina ssp. antonina | x | | x | |
| San Francisco Bay spineflower | Chorizanthe cuspidata var. cuspidata | x | | | |
| San Francisco campion | Silene verecunda ssp. verecunda | x | | x | |
| San Francisco collinsia | Collinsia multicolor | x | | x | |
| San Francisco owl's-clover | Triphysaria floribunda | x | | x | |
| San Francisco wallflower | Erysimum franciscanum | x | | | |
| San Joaquin spearscale | Extriplex joaquinana | x | | | |
| San Mateo thorn-mint | Acanthomintha duttonii | x | x | x | |

| Common Name | Scientific Name | Suitable Habitat Absent | Edaphic Conditions Absent | Outside Elevation Range | Extirpated from Project Vicinity |
|---|---|---|---|---|---|
| San Mateo woolly sunflower | *Eriophyllum latilobum* | x | | x | |
| Santa Clara red ribbons | *Clarkia concinna* ssp. *automixa* | x | | x | |
| Santa Clara thorn-mint | *Acanthomintha lanceolata* | x | | x | |
| Satan's goldenbush | *Isocoma menziesii* var. *diabolica* | x | | x | |
| serpentine leptosiphon | *Leptosiphon ambiguus* | x | | x | |
| short-leaved evax | *Hesperevax sparsiflora* var. *brevifolia* | x | | | |
| slender-leaved pondweed | *Stuckenia filiformis* ssp. *alpina* | x | | x | |
| South Coast Range morning-glory | *Calystegia collina* ssp. *venusta* | x | x | x | |
| spring lessingia | *Lessingia tenuis* | x | | x | |
| stinkbells | *Fritillaria agrestis* | x | | x | |
| sylvan microseris | *Microseris sylvatica* | x | x | x | |
| Tracy's eriastrum | *Eriastrum tracyi* | x | | x | |
| two-fork clover | *Trifolium amoenum* | x | | | |
| western leatherwood | *Dirca occidentalis* | x | | x | |
| white-flowered rein orchid | *Piperia candida* | x | | x | |
| white-rayed pentachaeta | *Pentachaeta bellidiflora* | x | x | x | |
| woodland woollythreads | *Monolopia gracilens* | x | x | | |
| woolly-headed lessingia | *Lessingia hololeuca* | x | | x | |

Date: Amendment 11, July 26, 2022

To: Eric Harrison
Senior Vice President
Signature Development Group

Subject: Tree Survey and Valuation of Heritage Trees

Location: Willow Campus

## Introduction

The original survey was conducted in July of 2017. At that time, all trees within the designated area of the Facebook Willow Campus were tagged and surveyed. SBCA Tree Consulting was asked to update survey to remeasure and provide valuation for all Heritage Trees, include trees suitable for preservation, and to include amount of Heritage and non-Heritage City Street trees. Amendment 10 includes the offsite trees.

Estimated value of all 284 Heritage Trees is **$3,448,500.**

Any tree protected by the City's Municipal Code to be retained will require replacement according to its appraised value if it is damaged beyond repair as a result of construction.

The Arborist Report and tree removal and preservation recommendations are based on a review of the most recent plan set: 18-021_WP_Willow_Heritage Tree Removal, 20210430.

## City of Menlo Park Ordinance

Definitions of Heritage Tree:
https://www.codepublishing.com/CA/MenloPark/#!/MenloPark13/MenloPark1324.html#13.24.020

(5) "Heritage tree" shall mean:

(A) All trees other than oaks which have a trunk with a circumference of 47.1 inches (diameter of fifteen (15) inches) or more, measured fifty-four (54) inches above natural grade.

(B) An oak tree (Quercus) which is native to California and has a trunk with a circumference of 31.4 inches (diameter of ten (10) inches) or more, measured at fifty-four (54) inches above natural grade.

(C) A tree or group of trees of historical significance, special character or community benefit, specifically designated by resolution of the city council.

For purposes of subsections (5)(A) and (B) of this section, trees with more than one (1) trunk shall be measured at the diameter below the main union of all multi-trunk trees unless the union occurs below grade, in which case each stem shall be measured as a stand-alone tree. A multi-trunk tree under twelve (12) feet in height shall not be considered a heritage tree. (Ord. 1060 § 2 (part), 2019).

13.24.050 Permits and decision making criteria for removal:
https://www.menlopark.org/DocumentCenter/View/25577/Heritage-tree-ordinance-administrative-guidelines?bidId=

Development: The following documentation may be required to support criterion 5: • Schematic diagrams that demonstrate the feasibility/livability of alternative design(s) that preserve the tree, including utilizing zoning ordinance variances that would preserve the tree; • Documentation on the additional incremental construction cost attributable to an alternative that preserves the tree (i.e. construction cost of alternative design minus cost of original design) in relation to the appraised value of tree(s) and based on the most recent addition to the Guide for Plant Appraisal. The following guidance will be used to determine feasibility: • If the incremental cost of the tree preservation alternative is more than 140% of the appraised value of the tree, the cost will be presumed to be financially infeasible. • If the incremental cost of the tree preservation alternative is less than 110% of the appraised value of the tree, the cost will be presumed to be financially feasible. • If the incremental cost of the tree preservation alternative is between 110% and 140% of the appraised value of the tree, public works director or their designee will consider a range of factors, including the value of the improvements, the value of the tree, the location of the tree, the viability of replacement mitigation and other site conditions. • In calculating the incremental cost of the tree preservation alternative, only construction costs will be evaluated. No design fees or other soft costs will be considered

## Survey Procedure

Trees Tagged – Each tree was tagged with a metal number tag corresponding with the numbers used in the Excel data sheets in *Appendix 1*. Trees located offsite were provided an 'a' after the tag number to differentiate between trees on the Willow Campus with the same number tag.

Data Recorded – Arborists recorded data on tree species, diameter (DBH[1]), tree height, health and structural conditions, Heritage Tree Status, and suitability for retention. Site constraints were noted for valuation purposes. Trees recommended for potential transplant have been noted. Notes were recorded to provide commentary on general conditions.

## Summary

- **Total Trees**: 805 Trees
    - Heritage street tree: 87 Trees
    - Heritage tree: 197 Trees
    - Non-heritage street tree: 54 Trees

[1] **DBH** is tree diameter measured at 54 inches above soil grade.

- **Trees to be Removed**
    - Heritage street tree: 87 Trees
    - Heritage tree: 189 Trees
    - Non-heritage street tree: 54 Trees
    - Non-heritage tree: 451 Trees

- **Trees to Remain**
    - Heritage street tree: n/a
    - Heritage tree: 8 Trees
    - Non-heritage street tree: n/a
    - Non-heritage tree: 16 Trees

- **High Value Trees**
    - Valley Oak – One large 28" DBH *Quercus lobata* exists in the middle north area and appears to be in excellent health and structural condition. The tree is inundated with ivy which requires removal. It is recommended that efforts to retain this tree in the modified site be exercised.
    - Italian Stone Pine – The *Pinus pinea* that line Hamilton Ave are very nice, mature specimen trees.
    - London Plane – A few of the mature *Platanus x hispanica* located on site are very nice specimens. These include: #267-270, #438 and #587. Anthracnose infections were observed to be higher this year.
    - Brisbane Box – Two mature *Lophostemon confertus* are worth mentioning due to their pleasing structures, health, and size: #327 and #578.
    - Deodar Cedar – The mature *Cedrus deodara* lining Willow Ave seem to be thriving on site and provide valuable screening from the road.

- **Species diversity**
    - Most Numerous Species – The most numerous species was the Canary Island *Pine (Pinus canariensis)*, with 124 specimens identified. Eighty (80) trees qualify as "Heritage". Almost all these pines line the north and eastern perimeter of the property. Most all display good health and structural conditions and provide valuable screening to the property. Adjacent property owner on the eastern perimeter stubbed back branches on their side.

    - Second Most Numerous Species – The Crepe Myrtle *(Lagerstroemia spp.)* with 92 specimens identified, was the second most numerous species. Almost all trees located adjacent to buildings have been headed and are of little value. Nine trees display good structures and are suitable for relocation.

- **Problematic Trees** – Although some of the Raywood Ash *(Fraxinus oxycarpa* 'Raywood'*)* appear to be in fair condition, most are inflicted with Ash Blight (*Botryosphaeria stevensii*) and are displaying dieback and declining in health. Tree #286 is almost dead with bark falling off; the tree is at risk for failure and should be removed.

- **Suitable for Relocation –** Thirty-two (32) trees were found to be suitable for relocation. Factors that contributed to suitability include condition, species, size and proximity to adjacent infrastructure. These trees include:
  - 3 Atlas Cedar *(Cedrus atlantica)*
  - 12 Japanese Maple *(Acer palmatum)*
  - 9 Crepe Myrtle
  - 2 Chinese Pistache *(Pistacia chinensis)*
  - 3 Coast Redwood *(Sequoia sempervirens)*

Please refer to Arborist Memo, Willow Village Tree Relocation, 4-23-2021: *"It is our professional opinion that storing these non-Heritage trees for the duration of the project would be problematic. The estimated level of root damage to occur during excavation, the high level of care needed while in containers, and the likelihood of survival for a potential 2-3 year holding period is low."*

**Table 1** – The table below provides a breakdown of numbers of each tree species surveyed.

| | Species | Common Name | Total Amount | Heritage Tree Amount | Potential Transplant | Overall Retention Suitability | Comments |
|---|---|---|---|---|---|---|---|
| **1** | *Acacia melanoxylon* | Blackwood Acacia | 5 | 1 | | Poor | Located in the middle north area |
| **2** | *Acer palmatum* | Japanese Maple | 13 | 0 | 12 | Fair | Cultivars include 'Bloodgood' and 'Dissectum Atropurpureum'; 12 are suitable for transplant |
| **3** | *Acer rubrum* | Red Maple | 1 | 0 | | Good | Newly planted |
| **4** | *Afrocarpus gracilior* | African Fern Pine | 2 | 0 | | Poor | |
| **5** | *Alnus cordata* | Italian Alder | 2 | 2 | | Fair-Poor | Along Willow Ave; Bleeding lesions on trunk; Root damage from sidewalk installation |
| **6** | *Casuarina cunninghamiana* | Casuarina | 15 | 12 | | Good-Poor | Located in the middle north area; Some nice specimens |

| | Species | Common Name | Total Amount | Heritage Tree Amount | Potential Transplant | Overall Retention Suitability | Comments |
|---|---|---|---|---|---|---|---|
| **7** | *Cedrus atlantica* | Atlas Cedar | 4 | | 3 | Good | Newly planted along Willow |
| **8** | *Cedrus deodara* | Deodar Cedar | 13 | 13 | | Good | Species performing well; Large specimen trees |
| **9** | *Cupressus sempervirens* | Italian Cypress | 8 | 0 | | Good | Nice specimens; Located against one side of a building |
| **10** | *Eucalyptus camaldulensis* | Red River Gum | 2 | 1 | | Fair-Poor | One large specimen likely with internal decay |
| **11** | *Eucalyptus globulus* | Tasmanian Blue Gum | 3 | 3 | | Good-Poor | One nice specimen; One specimen in northern perimeter fence |
| **12** | *Eucalyptus polyanthemos* | Silver Dollar Gum | 6 | 6 | | Fair-Poor | All SFPUC trees stump sprouts and growing in property fence |
| **13** | *Ficus carica* | Fig | 3 | 0 | | Fair | Located in the middle north area, all multis with stems emminating below grade |
| **14** | *Fraxinus oxycarpa 'Raywood'* | Raywood Ash | 43 | 32 | | Fair to Poor | Some doing well for the species; Most are experiencing fungal Ash Dieback |
| **15** | *Fraxinus uhdei* | Shamel Ash | 23 | 18 | | Fair to Poor | Poor pruning |
| **16** | *Ginkgo biloba* | Maidenhair | 1 | 0 | | Fair | Newly planted |
| **17** | *Hesperocyparis macrocarpa* | Monterey Cypress | 1 | 1 | | Good | Lower branching |
| **18** | *Jacaranda mimosifolia* | Jacaranda | 2 | 0 | | Fair | Newly planted, One has dysfunctional root system |
| **19** | *Juglas hindsii* | Black Walnut | 4 | 1 | | Poor | Volunteers in SFPUC land |

| | Species | Common Name | Total Amount | Heritage Tree Amount | Potential Transplant | Overall Retention Suitability | Comments |
|---|---|---|---|---|---|---|---|
| **20** | *Lagerstroemia spp.* | Crepe Myrtle | 92 | 0 | 9 | Fair-Good | Some nice specimens, 9 have transplant potential, Most have been headed |
| **21** | *Lophostemon confertus* | Brisbane Box | 62 | 11 | | Fair to Good | Some nice specimens |
| **22** | *Magnolia soulangeana* | Saucer Magnolia | 2 | 0 | | Good, Poor | Nice specimens but form is not appropriate for transplant |
| **23** | *Olea europaea* | Olive | 14 | 9 | | Poor | All located in the middle north area |
| **24** | *Phoenix canariensis* | Canary Island Palm | 3 | 3 | | Fair | Located in the middle north area |
| **25** | *Pinus canariensis* | Canary Island Pine | 124 | 80 | | Good | Planted at the south and east perimeters, Some trees require end weight reduction to reduce potential of limb breakage; Many trees along east perimeter have branches stubbed back on adjacent property side |
| **26** | *Pinus halepensis* | Aleppo Pine | 2 | 2 | | Fair | Large trees, Poor pruning; One tree is dead |
| **27** | *Pinus pinea* | Italian Stone Pine | 22 | 22 | | Good | Located along Hamilton Ave, Mature valuable specimens, May have suffered large branch removals, #534 is at risk for branch failure. |
| **28** | *Pinus radiata* | Monterey Pine | 7 | 7 | | Fair to Poor | No recommended for retention due to common pathogen attacks |

| | Species | Common Name | Total Amount | Heritage Tree Amount | Potential Transplant | Overall Retention Suitability | Comments |
|---|---|---|---|---|---|---|---|
| **29** | *Pistacia chinensis* | Chinese Pistache | 104 | 0 | 2 | Fair to Good | Two specimens worthy of transplant |
| **30** | *Platanus x hispanica* | London Plane | 67 | 29 | | Fair to Good | Some very nice specimens, Anthracnose not a significant issue this year |
| **31** | *Prunus cerasifera 'Krauter Vesuvius'* | Purple Leaf Plum | 49 | 5 | | Poor | Poor structures |
| **32** | *Prunus serrulata* | Cherry | 8 | 3 | | Good to Poor | Located along Willow Ave, 3 are in good condition |
| **33** | *Pyrus calleryana* | Flowering Pear | 27 | 2 | | Poor | Some nice specimens, but overall Poor retention suitability due to structure and species |
| **34** | *Pyrus kawakamii* | Evergreen Pear | 11 | 0 | | Fair-Poor | Dieback |
| **35** | *Quercus agrifolia* | Coast Live Oak | 10 | 4 | | Good, Poor | Located in the middle north area on campus; 8 volunteers in SFPUC land |
| **36** | *Quercus lobata* | Valley oak | 1 | 1 | | Good | Excellent specimen, Enveloped in ivy in the middle north area |
| **37** | *Quercus rubra* | Red Oak | 12 | 1 | 2 | Fair to Poor | Looking better than last year |
| **38** | *Rhamnus alaternus* | Italian Buckthorn | 1 | 1 | | Poor | Located in the middle north area, Many shrubby buckthorns located in the middle north area |
| **39** | *Salix babylonica* | Weeping Willow | 1 | 1 | | Poor | Recently retrenched |

| **41** | *Sequoia sempervirens* | Coast Redwood | 14 | 5 | 4 | Good | #480, 481 and 482 were relocated to the south side of 980 Hamilton |
| | | **Totals:** | **805** | **284** | **32** | | |

## Tree Valuation, Source and Methodology

This tree valuation report was prepared according to the standards for tree valuation presented in the 10th Edition of GUIDE FOR PLANT APPRAISAL, published by the International Society of Arboriculture, 2019.

Information regarding tree species is from the publication: SPECIES CLASSIFICATION AND GROUP ASSIGNMENTS, published by the International Society of Arboriculture.

Tree valuation is determined by using the FUNCTIONAL REPLACEMENT METHOD, *Trunk Formula* Technique as the tree is larger than the standard 24" box size utilized in tree valuation.

**Reproduction Method using Trunk Formula Technique for Determining Tree Value**

The current price for a 24-inch box tree is $200 (Council of Tree & Landscape Appraisers). Value is affected by tree species, tree condition and the location in which the tree is growing. The terms below are used is the valuation in the table below.

- **Species** – Species qualities are determined through the publication Species Classification And Group Assignment published by the WESTERN CHAPTER INTERNATIONAL SOCIETY OF ARBORICULTURE. Tree species classification is used to determine the relative size of a replacement tree of a commonly attainable size.
    - **Species Group** – The group rating reflects the rate of growth for the tree species. The group rating determines the *basic price per square inch* of the trunk area for the different species.
- **DBH** - Diameter at Breast Height, measured at 4.5 feet above the average soil grade. Tree valuation is based upon DBH measurements. For multi-stemmed trees, this is based on calculations from the sum of the cross-sectional areas of all stems measured at 4.5 above grade. That figure is then matched with a DBH of a single stemmed tree with the same cross-sectional area.
- **Trunk Area** – The surface area of the cross-sectional area of the tree trunk measured at 4.5 feet above the soil grade (DBH).
- **Tree Condition** – Assessed base upon tree Health, Structure & Form.

| Rating | Rating | Amount | Rating | Rating | Amount |
|---|---|---|---|---|---|
| G | G | 0.9 | F | F/P | 0.6 |
| G | F/G | 0.85 | F | P | 0.5 |
| G | F | 0.8 | P | F/G | 0.55 |
| G | F/P | 0.7 | P | F/P | 0.4 |
| G | P | 0.6 | P | P | 0.2 |
| F | F/G | 0.75 | F/G | F/G | 0.8 |

| Rating | Rating | Amount | Rating | Rating | Amount |
|---|---|---|---|---|---|
| F | F | 0.7 | F/G | F/P | 0.65 |
| F | F/P | 0.6 | F/P | F/P | 0.45 |

- **Functional Limitations** – Factors within the controllable area that adversely impact the tree. Site Constraints - 1 is hardscape, structure, or wire limitations on one side; 2 is limitations on 2 sides; 3 is limitations on three or all sides.
- **External Limitations** – Adverse impacts beyond control of tree owner is the presence of the adjacent structure that limits the spread of the tree and will require pruning to accommodate. 1 is hardscape, structure, wire, or pruning limitations on one side; 2 is limitations on 2 sides; 3 is limitations on three or all sides.
- **Replacement Tree Diameter** – The diameter of the largest commonly available tree of the same species.
- **Cross-sectional area of Replacement tree** - Based upon diameter of replacement tree for 24” box size.
- **Replacement Tree Cost** – Standard cost for purchase is $200 for 24-inch size box tree. Cost does not include replanting.
- **Unit Tree Cost** – This is the cost of the tree divided by the cross-sectional area.
- **Basic Reproduction Cost** – The cross-sectional area of the tree being valued times the Unit Tree Cost.
- **Species Price per Square Inch**. – Determined from Species Group rating.
- **Depreciated reproduction cost** – Factor in Tree Condition, Functional Limitations & External Limitations.
- **Additional Costs** – Covers tree removal and cleanup prior to replanting.
- **Tree Value** – Total assessed value of the trees are rounded to the nearest $100.

Total value for all 284 Heritage Trees was determined to be $3,448,500

**End Report**

Appendices are as follows:

- *Appendix 1 – Tree Survey Data, Species Breakdowns, Heritage Trees, Street Trees, Non-Heritage Street Trees, Dead or Removed Trees*
- *Appendix 2 – Tree Valuation Data*
- *Appendix 3 – Facebook Tree Protection Specifications*

Date: Amended 5-17-22

Project: Willow Village

Address: 1350-1390 Willow Rd., 923-1098 Hamilton Ave, 1010-1280 Hamilton Ct.

Project #: PLN2021-TBD

Owner: Facebook

Contact: Eric Harrison
Senior Vice President
Signature Development Group

Subject: Heritage Tree Removals

Description of site – 59-acre campus of single-story offices and industrial spaces located at corner of Willow Road and the Dumbarton rail line.

Description of development project – The Willow Village project proposes to replace more than one million square feet of existing industrial, office, and warehouse space in the Menlo Science and Technology Park with a new mixed-use village that would include up to 1,729 residential units, up to 200,000 sf of retail uses, up to a 193 room hotel and accessory uses (including restaurant and bar uses), and up to an 1,250,000 sf office campus with up to 350,000 sf of office amenity space uses for campus workers and visitors and approximately 150,000 square feet of open space within a sun-shaded, rain protected cover. In addition, other site improvements would include grading to elevate the property above the Federal Emergency Management Agency (FEMA) base flood elevation and compliance with the City's sea-level rise requirements, creating buildable pads, construction of new infrastructure and circulation improvements, construction of park and open space improvements including bicycle and pedestrian improvements.

The new housing and community-serving retail uses is proposed within the southwestern portion of the site, creating a Residential/Shopping District. This district would consist of up to 1,729 multi-family units, comprised of market rate and below market rate residential units, within multiple buildings along with approximately 100,000 sf of ground floor retail uses in the district. The retail uses may include a grocery store, fitness, cinema, live theatre, bowling alley, and other retail and dining uses along with public spaces of various scales. The Town Square District, in the northwestern portion of the Project Site, would form the center of the proposed neighborhood. A mix of uses would be organized around a Town Square surrounded by a hotel adjacent residential lobbies, public sidewalks, and bicycle lanes. In addition, the Town Square would feature three buildings with approximately 50,000 sf of food and retail uses. The

Office Campus District component of the Proposed Project would be in the northeastern and central portions of the Project Site, adjacent to the Dumbarton Rail Corridor and the life science buildings east of the Project Site. This district would accommodate office and office amenity space, accessory space, two parking structures, and publicly accessible retail space along Main Street.

Impacted to trees – All trees on site are proposed for removal due to a 5' grade elevation change.

Reasons for removal – "Criterion 5: Development. The heritage trees interfere with proposed development, repair, alteration or improvement of a site and there is no financially feasible and reasonable design alternative that would permit preservation of the heritage tree while achieving the applicant's reasonable development objectives or reasonable economic enjoyment of the property using the methodology established in the administrative guidelines."

Valuation – Appraised value of each protected tree related to development using the Trunk Formula Technique as described in the most current edition of the "Guide for Plant Appraisal," by the Council of Tree and Landscape Appraisers. Total value of 284 Heritage Trees is **$3,448,500.**

Subject: Non-Heritage Street Trees

Location: Willow Campus

## Summary

Arborist identified 54 non-Heritage City Street trees located on the Willow Campus.

Table 1. Table below provides information on 54 non-Heritage City Street Trees.

| Tree Number | Tag # | Scientific name | DBH | Height | Health | Structure | Street Tree | Suitability for retention | Notes |
|---|---|---|---|---|---|---|---|---|---|
| 1 | **163** | *Platanus x hispanica* | 6 | 30 | Poor | Poor | 1 | Poor | Half tree gone, anthracnose |
| 2 | **164** | *Platanus x hispanica* | 8 | 40 | Fair | Fair | 1 | Fair to poor | Anthracnose, codominant |
| 3 | **170** | *Platanus x hispanica* | 10.5 | 40 | Good | Good | 1 | Good | |
| 4 | **176** | *no tree* | | | | | 1 | | |
| 5 | **177** | *Pyrus calleryana* | 12.5 | 25 | Fair | Poor | 1 | Poor | Included bark x 4 |
| 6 | **184** | *Pyrus calleryana* | 12.5 | 45 | Fair | Poor | 1 | Fair to poor | Fire blight, included bark |
| 7 | **186** | *Platanus x hispanica* | 10 | 40 | Fair | Fair to good | 1 | Good | Lean, anthracnose |

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| 8 | **188** | *Platanus x hispanica* | 11 | 45 | Good | Poor | 1 | Fair | Large pruning cuts, included bark |
| 9 | **194** | *Pyrus calleryana* | 14.5 | 40 | Fair to good | Poor | 1 | Fair | Some fire blight |
| 10 | **195** | *Platanus x hispanica* | 12 | 40 | Fair | Good | 1 | Fair | In canopy of euc |
| 11 | **197** | *Pyrus calleryana* | 12 | 40 | Fair to good | Poor | 1 | Fair to poor | Fire blight, included bark, large pruning cut |
| 12 | **198** | *Pyrus calleryana* | 11.5 | 40 | Fair to good | Poor | 1 | Fair to poor | Fire blight, included bark, large pruning cut |
| 13 | **200** | *Platanus x hispanica* | 12.5 | 50 | Good | Good | 1 | Good | |

|---|---|
| Date: | May 17, 2022 |
| To: | Eric Harrison<br>Senior Vice President<br>Signature Development Group |
| Subject: | This memo is to address the feasibility of relocating 32 trees listed as Suitable for Relocation in SBCA Tree Arborist Report, *Willow Campus Tree Survey and Valuation of Heritage Trees,* Amendment 10, 5-17-22. |

## Summary

We identified 32 trees suitable for relocation in our Willow Campus Tree Survey Amendment #10 report dated 5-17-22. None of the trees qualified as Heritage Trees based on the City of Menlo Park Tree Ordinance. These trees were installed with the original parking lot construction of the existing buildings.

Willow Campus improvement activities include demolition, grading, installation of utilities, street improvements, and construction of multiple buildings. It is our professional opinion that storing these non-Heritage trees for the duration of the project would be problematic. The estimated level of root damage to occur during excavation, the high level of care needed while in containers, and the likelihood of survival for a potential 2-3 year holding period is low.

Therefore, we recommend that the future is best served by putting resources into the procurement of vigorous nursery grown, disease-free replacement specimens with healthy and non-compromised root systems. In addition, the new tree species selection would be tailored to an appropriate plant palette of the completed overall Masterplan. We are recommending all the previously identified relocation trees (32 count) be removed with site construction.

To: Eric Harrison
Senior Vice President
Signature Development Group

Subject: Heritage Tree Removal Permits, Arborist Report, and Project Plans Evaluation- Willow Village Master Plant Project- City Arborist Review

Location: Willow Campus

Assignment: Arborist was asked to review City comments and provide response.

**City Arborist Evaluation of the Revised Arborist Report and Project Plans**

City Comment: "Specify the tree numbers for the 32 non-heritage trees evaluated as suitable for relocation and identify them in the tree inventory. Regarding the suitability of relocating these 32 trees listed as Suitable for Relocation in SBCA Tree Arborist Report, please confirm whether it is possible to immediately transplant these trees to a location on-site away from proposed work."

- Trees have been added to tree inventory, *Appendix 1, Willow Campus Survey Data, Amended 7-30-21*
- Please refer to Arborist Memo, Willow Village Tree Relocation, 4-23-2021: *"It is our professional opinion that storing these non-Heritage trees for the duration of the project would be problematic. The estimated level of root damage to occur during excavation, the high level of care needed while in containers, and the likelihood of survival for a potential 2-3 year holding period is low."*

City Comment: "Submit HTR permit applications for removal of all Street Trees currently located within City ROW (permit fee waived)"

- Submitted 7-16-21

City Comment: "Some of the appraisal costs appear to be off. For instance, tree #153 (a 14" purple leaf plum) was appraised at $19,700. Please provide the methodology used to determine such factors as the

Replacement Tree Area and Unit Costs of the largest commercially available nursery tree based on Group number".

- Our valuation utilized *Guide for Plant Appraisal, 10th Edition, Revised By Council of Tree and Landscape Appraisers.* Methodology is contained in *Arborist Report, Willow Village Tree Survey, Amendment 7, July 30, 2021.* We amended Replacement Tree Cost from $512 to $200 by taking out the planting cost.

City Comment: "Please clarify how multi-stemmed trees (such as #153, 154, and 156) were measured for this tree inventory. When the trunk splits at 4.5' above the ground or less, the trunk diameters are to be measured below the main union. This diameter is used to determine whether a tree is a Heritage Tree."

- For the purpose of determining City Heritage Tree status for multi-stemmed trees, diameter measurements are taken below the main union unless the union occurs below grade. For the purpose of tree valuation, DBH measurements were taken. Both measurements are contained in *Appendix 1, Willow Campus Survey Data, Amended 7-30-21*

City Comment: "Some non-native trees with diameters less than 15" in trunk diameter are listed as Heritage Trees. These include #156, 536, 157, 529, 153, 284, 285, and 768. Please address."

- Multi stemmed trees were determined as Heritage as per City Ordinance
- Trees 14.5" were rounded to 15"
- *Phoenix canariensis* were included as Heritage due to 25" diameter size.

| Tree # | DBH | Diameter measured below the main union | Sum of cross-sectional area |
|---|---|---|---|
| 156 | 4.5, 5.5, 5.5, 5, 2 | 16 @ base | 10.5 |
| 536 | 7, 6.5, 5.5 | 15 @ base | 11 |
| 157 | 7.5, 7, 6 | 19 @ base | 12 |
| 529 | 5, 6.5, 9.5 | 15 @ 3' | 12 |
| 153 | 7, 8.5, 6, 7 | 15 @ 2' | 14 |
| 284 | 14.5 | Rounded to 15 | |
| 285 | 9, 11 | 16.5 @ base | 14.5 |
| 768 | 25 | *Phoenix canariensis* were included as Heritage due to 25" trunk size | |

City Comment: "Please list any development-related plans reviewed and date of plans. The Arborist Report and tree removal and preservation recommendations should be based on a review of the most recent plan set."

- Stated in *Arborist Report, Willow Village Tree Survey, Amendment 7, July 30, 2021:* The Arborist Report and tree removal and preservation recommendations are based on a review of the most recent plan set: 18-021_WP_Willow_Heritage Tree Removal, 20210430

City Comment: "Please include a statement that any tree protected by the City's Municipal Code to be retained will require replacement according to its appraised value if it is damaged beyond repair as a result of construction."

- Included in *Arborist Report, Willow Village Tree Survey, Amendment 7, July 30, 2021.*

City Comment: "Please include Facebook's Tree Preservation Specifications in the Arborist Report so these guidelines may be reviewed. Please ensure these specifications include the recommendation that the Project Arborist review tree protection measures and monitor impactful work near Heritage Trees to be preserved. Any time development-related work is recommended to be supervised by a Project Arborist, the Project Arborist shall provide a follow-up letter documenting the mitigation has been completed to specification."

- Facebook Tree Protection Specifications included as *Appendix 3 to Arborist Report, Willow Village Tree Survey, Amendment 7, July 30, 2021.*

City Comment: "The appendix tree valuation and tree survey data only include information for Heritage Trees to be removed. Please confirm whether any Heritage Trees will be preserved as a part of this project and include their information in the tables as well."

- Eight Heritage Trees will be preserved. These include: #s 5, 10, 15-19, and 23.

City Comment: "If any Heritage Trees are to be preserved, please define the tree protection zone (TPZ) for these trees with dimensions for tree protection fencing or a map indicating where fencing is to be placed."

- RPZs for trees designated for preservation contained in *Appendix 1, Willow Campus Survey Data, Amended 7-30-21*

**City Arborist Review of Project Plans**

City Comment: "Please include on-site, street tree, and off-site tree designations in the Tree Inventory Table. Please include reason(s) for tree removal in the Tree Inventory table, i.e., located where grading is planned."

- Submitted 7-16-21

City Arborist Comment: "Please include the tree preservation guidelines, including trunk protection specifications and tree protection fencing specifications as a sheet in the plan set."

- Facebook Tree Protection Specifications included as *Appendix 3 to Arborist Report, Willow Village Tree Survey, Amendment 7, July 30, 2021.*

City Arborist Comment: "For any Heritage Trees to be preserved, please include accurate trunk locations and canopy spread, numbered tree symbols, and tree protection fencing shown on demolition and site plans as a bold, dashed line and denote 6' tall chain link fencing."

- RPZ for Heritage Trees to be preserved has been included in *Appendix 1, Willow Campus Survey Data, Amended 7-30-21.* RPZ is determined by tree DBH, not canopy spread.

**End**

## MPK FACEBOOK TREE PRESERVATION SPECIFICATION

# MPK Facebook Tree Preservation Specifications

## Purpose

These guidelines provide for the care and maintenance of the tree(s) before, during and after construction activities. Tree condition is assessed during the design phase to determine suitability for retention. Healthy trees (measured in high starch reserves) are more likely to survive adverse impacts. It is recommended that costs of preservation do not exceed tree value.

The goal of tree protection and preservation is to provide for a successful transition to a modified site. To be most effective, health mitigation measures must begin before the time of disturbance.

Project construction documents shall provide clear and concise tree protection requirements. Documents shall also provide procedures to be used for all activities occurring within the designated tree protection area.

Project Arborist will review tree protection measures and monitor impactful work near Heritage Trees to be preserved. Any time development-related work is recommended to be supervised by a Project Arborist, the Project Arborist shall provide a follow-up letter documenting the mitigation has been completed to specification.

## Definitions

City Heritage Trees – Menlo Park's Tree Ordinance designates tree removal permits for trees having attained Heritage size:

1. Any tree having a trunk with a circumference of 47.1 inches (diameter of 15 inches) or more measured at 54 inches above natural grade.
2. Any oak tree native to California, with a circumference of 31.4 inches (diameter of 10 inches) or more measured at 54 inches above natural grade.
3. Any tree with more than one trunk measured at the point where the trunks divide, with a circumference of 47.1 inches (diameter of 15 inches) or more, with the exception of trees that are under twelve (12) feet in height, which are exempt from the ordinance.1

Protected tree – Any tree that has been designated to be retained and is located within the scope of a construction project.

Project arborist – A certified arborist appointed to oversee tree protection. Project arborist shall have the authority to halt all construction activities if tree protection guidelines are not being adhered to.

DBH –Diameter at Breast Height: Tree diameter measured at 54 inches above average soil grade.

Root Protection Zone (RPZ) – A radial distance from the base of the tree designated by project arborist. Sometimes equal the crown spread but is generally a distance of one-foot from the base of the tree for every one-inch in tree (DBH). No heavy machinery is allowed within the RPZ.

Soil compaction – Soil compaction is excessive when planting soil is compacted (generally) over 80% ASTM from a standard Proctor compaction test. Soil compaction must be avoided and mitigated when identified within the designated RPZ.

Mechanical damage – Damage to tree trunk, branches, or roots that causes loss of bark and cambial damage.

Crown pruning – Shortening or removal of branches in accordance with guidelines presented in ANSI A300 PRUNING STANDARDS. All pruning must be approved of and conducted by qualified personnel.

Root pruning – Pruning of tree roots must be approved of and conducted by project arborist.

Water Jet/Air Spade – Soil aeration tools used to mitigate soil compaction using water and air, respectively.

Rootable Soil – Rootable soil is a soil medium that is compacted less than 80% ASTM, has oxygen levels between 6-16% and has sufficient available moisture and nutrients with no toxic substances.

## Design

Whenever early design contemplates the retention of an existing tree in the modified environment, deference to the needs of the tree must be provided. This entails an understanding of the current conditions and the level of encroachment that will occur. Arborist involvement during the initial design period is important to understanding if the tree is worthy of saving and if the tree can be saved. Trees designated to be retained require both minimization of root loss and an overall improvement in the quality of the soil conditions.

The first logical step in tree preservation is to conduct a process called Site Analysis, which involves investigation of both physical soil properties and laboratory analysis. The purpose is to identify conditions that may limit the ability of the plant material to thrive. Once the site limitations have been identified, mitigation treatments can be prescribed.

## Site analysis and early tree health mitigation

Prior tree survey and site analysis will designate trees to be retained and all procedures and treatments to be used to assure the trees survive the site modifications.

Soil profile examination – The soil profile examination determines soil texture and moisture levels. Soil compaction is also assessed. This information is vital to understanding the level of soil protection and mitigation that will be necessary.

Laboratory analysis – Analysis of soil and plant tissue samples can help guide the use of soil amendments and fertilization.

Root investigation – Preliminary excavation to determine the size, depth, and amount of roots present in the impacted area. This information may initiate design modifications.

Mitigation of limitations identified – Limitations identified during site analysis are best mitigated as soon as possible to improve overall tree health. Possible limitations to be mitigated include soil compaction, nutritional deficiencies, and soil moisture. Most basic mitigation entails: irrigation, mulching, water jet and air spade procedures. Soil amendments other than good quality mulch must be based upon laboratory soil analysis.

## Pre-construction activities

These activities should be undertaken prior to initiation of construction activity.

Mulching – Use of good quality organic mulch (fresh wood chips are best) on soil surface helps to reduce soil compaction and retain soil moisture. Recommended material is wood chips generated from tree trimming. Fresh redwood, incense cedar and walnut chips are not acceptable, nor is palm generated mulch. Mulch shall be from tree parts taken from a minimum of 2 meters above ground. Mulch shall not contain soil particles.

Crown pruning –Pruning must comply with ANSI A300 Pruning Standards. Pruning prior to construction should include: Necessary Clearance Pruning, Deadwood Removal and Safety Pruning.

Construction documents to show protected trees and tree protection requirements – Project plans to show tree protection fencing layout, areas of encroachment, and list procedures for working around protected trees.

Designation of tree Root Protection Zone (RPZ)–The tree Root Protection Zone designates an area surrounding a tree or grouping of trees that is to be fenced off from all access. The RPZ is commonly defined as a distance of one (1) foot radial distance from the base of the tree for every one (1) inch in tree diameter (DBH). A tree with a 10-inch diameter would have a RPZ equal to 10 feet out from the tree. Project arborist can modify the RPZ distance based upon physical evidence of root presence or absence.

Tree Root Protection Zone fencing – Fencing is to be chain-link type metal fencing with metal posts driven two-feet into the soil. Signs shall be attached to tree protection fencing every 20' which read "TREE PROTECTION ZONE: DO NOT ENTER".

Procedures and treatments for work activities that must occur inside of the designated RPZ – All such activities and relocation of fencing must be overseen by project arborist. Special trunk, scaffold and soil protection measures are required. When encroachment is anticipated prior to the beginning of construction activities, the protections must be in place prior to beginning work activities.

Arborist review and approval of tree protection measures – Project arborist to review tree protection guidelines and modify as deemed necessary.

Tree protections installation and inspected – Project arborist must certify that all tree protection measures have been properly installed.

Pre-construction meeting – Project arborist shall meet with supervisor and work crew to review requirements of the tree protection. All personnel working on site must be provided an orientation to the tree preservation requirements. There will be no excuses for transgressions.

**No construction activities may begin until this meeting has been conducted.**

Project arborist can direct that all work activities stop if tree protection guidelines are not being followed. All work activities cease until such time as the problem has been corrected.

## Work activities that encroach into the designated RPZ

Arborist supervision – All activities occurring within the designated RPZ must be under direct supervision of project arborist. Encroachment is not permitted until all additional protections are in place and have been approved.

Required method of excavation within critical root zone – When trenching is required, carefully **hand** excavation or the use of the Air Spade or hydraulic water excavation are acceptable methods. Project arborist must approve and supervise all such activity. No heavy equipment is allowed.

Wherever possible, route utilities outside of the designated RPZ. Tunneling is the preferred method for utilities passing through the RPZ.

Soil protection –The effects of foot traffic can be mitigated using six (6) inches of wood chip mulch and ¾ inch plywood placed on top.

Soil protections for equipment operating within the designated RPZ requires 12 inches of mulch with either metal trenching plates or 1 1/8-inch plywood placed on top.

Trunk and scaffold protection – Whenever construction activity must occur inside the tree protection zone, the base of the tree and the **first eight-feet and exposed scaffold limbs** must be armored. Protection is generally provided by wrapping the trunk with straw waddles covered with orange plastic construction fencing. Exposed scaffold limbs are best protected by strapping 2x4 boards to the part exposed to potential injury and wrapping with orange plastic fencing material.

Root protection – All exposed roots must be covered with 2 layers of damp burlap secured with jute staples. Burlap shall always remain damp and can remain in place when backfilled.

Necessary root pruning – Late fall season is the best time for root pruning and spring can be the most harmful. All necessary root pruning and shaving is conducted by project arborist after the roots have been exposed without damage.

## Post construction mitigation

Arborist Designation of Health Mitigation Activities – Project arborist will designate tree health mitigation activities based upon the level of root loss and adverse impacts that have occurred.

Monitoring Tree Health – Trees that have been adversely impacted by construction activities are noted for regular visual inspection. Project arborist will direct further mitigation. Insects and fungal pathogens are a sign of poor tree health (low energy reserves) and indicate the need for health mitigation.

Monitoring of Soil Moisture –Moisture should be monitored using a soil probe. Project arborist will designate supplemental irrigation. When root loss occurs, supplemental irrigation may be required for several years.

Mitigation of Soil Compaction – The level and depth of soil compaction must be assessed and mitigated, as necessary. Tools that are most suitable for mitigation of compacted soil are the water jet or air spade.

Landscaping – All landscaping planning must take precautions when planting within the designated RPZ. All plant materials should be selected for compatibility with the favored moisture regime (hydrazone) of the tree species and soil texture.

Continued Mulching – Mulch is extremely beneficial in creating a healthy root environment. A regular program of mulch application is recommended to help retain soil moisture, provide a source of nutrients, help with control weed control and reduce soil compaction.

Fertilization –Trees should be fertilized only when the nutritional limitations have been identified through laboratory analysis of soil or plant tissue. Excessive nitrogen fertilization is known to draw sucking insects (aphid, scale, etc.) to the plants and provide nutrition to fungal pathogens in the soil.

Pest Management Program – Healthy trees do not generally have serious pest problems. Stressed trees are attractive hosts to pathogens, which can contribute to further decline. Pest management is prescribed when monitoring indicates a need.

## Below pavement treatments adjacent to existing trees or newly planted trees

Damage to pavement near trees can be reduced and long-term health and vigor in the tree can be improved through treatments that promote good soil gas exchange and allow for deeper root development.

1. Excavation Techniques – In the situation where tree roots are already present, excavation occurs by hand, air spade or hydraulic evacuation methods. Crushed rock can be placed around exposed roots. *See graphic: Under Pavement Treatments in Areas with Existing Tree Roots*

2. Tunneling under Roots – Utilities that must pass through the designated tree protection area are best installed by tunneling below the tree roots.

3. Use of Clean Crushed Rock Below Pavement – This treatment is easiest to implement during original landscape installation. The treatment excavates the area below pavement to 6” to 12” deeper and place a clean crushed rock. Compaction can occur only from the surface of the rock after it is a minimum 6” deep. The rock is then covered with tensile and or filter fabric.

Aggregate base can be placed on the fabric and compaction can occur again prior to installing the pavement.

4. Use of 'Gap Graded' or 'Structural' Soil – Structural soil scan be purchased ready for installation or made from site soil and imported clean crushed rock.

5. Radial Trenching – In situations where trees are in areas with limited soil volumes and there are available rootable soil volumes adjacent, roots can be directed to rootable soil with radial trenching. Trenches are backfilled with structural soil. A layer of clean crushed rock is always placed on top of structural soil to reduce future hardscape displacement.

## Treatment of contractor transgressions

Enforcement of Tree Protection – Without a method to assure that the tree protection guidelines are properly followed, it is often the case that the protections are not adhered to. Transgressions occur both large and small as contractors make mistakes or attempt to cut corners to speed up their work. To be effective, the cost for contractor non-compliance must be greater than the savings to the contractor.

Penalties for Non-Compliance of Tree Protection Guidelines – It is recommended that contractors be required to place a bond to the value of the protected vegetation and potential soil mitigation. The bond is released when contractor compliance has been verified by project arborist. Should transgressions occur, the bond remains in place until such time at the situation has been fully mitigated.

---

Date: Amendment 6 July 31, 2022

To: Eric Harrison
Senior Vice President
Signature Development Group

Subject: Hamilton Parcels Tree Survey and Valuation

Scope: Trees are located on three parcels west of Willow Road, identified by Signature Development Group. Three trees behind the Starbucks were not accessible.

## Introduction

Estimated value of the 18 Heritage Trees proposed for removal is $126,500.

Any tree protected by the City's Municipal Code to be retained will require replacement according to its appraised value if it is damaged beyond repair as a result of construction.

## City of Menlo Park Ordinance

Definitions of Heritage Tree: https://www.menlopark.org/DocumentCenter/View/25577/Heritage-tree-ordinance-administrative-guidelines---draft

Section 13.24.080(4)(B) identifies special provisions for an oak tree which is native to California. The city arborist has determined the following species of oak trees are native to California:

• Coast live oak *(Quercus agrifolia)* • Scrub oak *(Quercus berberidifolia)* • Canyon live oak *(Quercus chrysolepis)* • Blue oak *(Quercus douglasii)* • Leather oak *(Quercus dumosa)* • Englemann oak *(Quercus englmannii)* • Oregon white oak *(Quercus garryanna)* • Black oak *(Quercus kellogii)* • Valley oak *(Quercus lobata)* • Shreve oak *(Quercus parvula var. shrevei)* • Oracle oak *(Quercus x morehus)* • Island oak *(Quercus tomentella)* • Interior live oak *(Quercus wislizenii)*

Multi-trunk trees, also known as multi-stemmed trees, with a union above the existing grade is measured by the following steps: 1. Measure the diameter of each trunk at 4.5 feet in height above the ground 2. Add the diameter measure measurement of each trunk and use the sum to determine trunk diameter.

In reference to Section 13.24.090, the monetary value of a replacement tree correlates with the size of the heritage tree trunk diameter (measured from 54 inches above grade). For every heritage tree proposed for removal, it must be replaced by the following replacement tree requirement:

- An oak heritage tree with a trunk diameter of 10 to 15 inches has a minimum replacement tree requirement of one (1) #5 container. The monetary value is $100.

- Any heritage tree with a trunk diameter of greater than 15 inches to 20 inches has a minimum replacement tree requirement of one (1) #15 container. The monetary value is $200.
- Any heritage tree with a trunk diameter of greater than 20 inches to 30 inches has a minimum replacement tree requirement of one (1) 24-inch tree box. The monetary value is $400. 6 PW rev 20200626
- Any heritage tree with a trunk diameter of greater than 30 inches to 40 inches has a minimum replacement tree requirement of one (1) 36-inch tree box. The monetary value is $1,200.
- Any heritage tree with a trunk diameter of greater than 40 inches to 50 inches has a minimum replacement tree requirement of one (1) 48-inch tree box. The monetary value is $5,000.
- Any heritage tree with a trunk diameter of greater than 50 inches has a minimum replacement tree requirement of one (1) 60-inch tree box. The monetary value is $7,000. Applicants shall submit written statements or landscape plans to describe how they will fulfil the replacement tree requirements. The submissions shall include: (a) the replacement tree species, (b) the container size, (c) the planting location, and (d) an in-lieu fee payment, if applicable

## Survey Procedure

Trees Tagged – Each tree was tagged with a metal number tag corresponding with the numbers used in the Excel data sheets in *Appendix 1*.

Data Recorded – Arborists recorded data on tree species, diameter (DBH[1]), tree height, health and structural conditions, Heritage Tree Status, and suitability for retention, and suitability for relocation. Notes were recorded to provide commentary on general conditions.

Scope – Tag #132 does not exist.

## Summary

**North Parcel**

- **Total Trees**: 82 Trees
  - Heritage street tree: n/a
  - Heritage tree: n/a
  - Non-heritage street tree: 25 Trees

- **Trees to be Removed**
  - Heritage street tree: n/a
  - Heritage tree: n/a
  - Non-heritage street tree: 19 Trees
  - Non-heritage tree: 9 Trees

[1] **DBH** is tree diameter measured at 54 inches above soil grade.

- **Trees to Remain**
  - Heritage street tree: n/a
  - Heritage tree: 7 Trees
  - Non-heritage street tree: 6 Trees
  - Non-heritage tree: 41 Trees

**South Parcel**

- **Total Trees**: 59 Trees
  - Heritage street tree: n/a
  - Heritage tree: 11 Trees
  - Non-heritage street tree: 10 Trees

- **Trees to be Removed**
  - Heritage street tree: n/a
  - Heritage tree: 3 Trees
  - Non-heritage street tree: 5 Trees
  - Non-heritage tree: 25 Trees

- **Trees to Remain**
  - Heritage street tree: n/a
  - Heritage tree: 8 Trees
  - Non-heritage street tree: 5 Trees
  - Non-heritage tree: 13 Trees

- **High Value Trees**
  - Coast Redwood – The two stands of redwoods located near the Jack in the Box and west of the Chevron Station are in very good condition. The stand south of the Chevron requires mitigation to address drought stress concerns.
  - Coast Live Oak – Two large (> 20" DBH) *Quercus agrifolia* are in Parcel 2. Tree #48 was noted with significant structural concerns (included bark) and requires pruning to mitigate failure potential. Tree #29 is a nice specimen.

- **Species Diversity** – Ten different tree species were identified.
  - Most Numerous Species – The most numerous species is the Chinese Pistache *(Pistacia chinensis)*, with 39 specimens identified. Sixteen (16) are City Street Trees.
  - Second Most Numerous Species – The Red Maple *(Acer rubrum)* is the second most numerous species, with 19 specimens identified. Most are doing well and exhibit good health and structure. Three additional trees were noted behind the Starbucks but were inaccessible due to fencing.

**Table 1** – The table below provides a breakdown of numbers of each tree species surveyed.

| | Species | Common Name | Total Amount | Heritage Tree Amount | Overall Retention Suitability | Overall Relocation Suitability | Comments |
|---|---|---|---|---|---|---|---|
| **1** | *Acer rubrum* | Red Maple | 19 | 0 | G | F | Overall trees are in Good condition in health and structure. #61 and #116 are in poor condition; |
| **2** | *Betula nigra* | River Birch | 4 | 0 | G | F | No issues |
| **3** | *Betula pendula* | European Birch | 13 | 0 | F-G | F | All located at the Chevron parcel |
| **4** | *Fraxinus oxycarpa 'Raywood'* | Raywood Ash | 9 | 0 | P | P | Ash dieback and poor structures |
| **5** | *Pistacia chinensis* | Chinese Pistache | 39 | 0 | G | F | 23 are street trees; Ones noted as failure to thrive were likley root bound at time of planting |
| **6** | *Platanus x hispanica* | London Plane | 16 | 0 | G | F-P | Most along Willow Rd in front of the Chevron and Starbucks; eight (#63, 64 126-131) are street trees |
| **7** | *Prunus cerasifera* | Purple Plum | 13 | 0 | P | P | Received poor pruning; Poor structures; #62 is a street tree |
| **8** | *Pyrus calleryana* | Flowering Pear | 5 | 0 | F | P | Poor structures; Fireblight |
| **9** | *Quercus agrifolia* | Coast Live Oak | 7 | 5 | G | P | #29 and 48 are large trees; #48 requires pruning mitigation to address poor branching attachments and failure potential |
| **10** | *Sequoia sempervirens* | Coast Redwood | 16 | 13 | G | P | Stands #19-22 and #95-102 are in good condition; #108-111 may require mulch and supplemental irrigation to mitigate signs of drought stress |
| | | | **141** | **18** | | | |

# Tree Valuation, Source and Methodology

This tree valuation report was prepared according to the standards for tree valuation presented in the 10th Edition of GUIDE FOR PLANT APPRAISAL, published by the International Society of Arboriculture, 2019.

Information regarding tree species is from the publication: SPECIES CLASSIFICATION AND GROUP ASSIGNMENTS, published by the International Society of Arboriculture.

Tree valuation is determined by using the FUNCTIONAL REPLACEMENT METHOD, *Trunk Formula* Technique as the tree is larger than the standard 24” box size utilized in tree valuation.

**Reproduction Method using Trunk Formula Technique for Determining Tree Value**

The current price for a 24-inch box tree, installed in the landscape, is $516 (Council of Tree & Landscape Appraisers). Value is affected by tree species, tree condition and the location in which the tree is growing. The terms below are used is the valuation in the table below.

- **Species** – Species qualities are determined through the publication Species Classification And Group Assignment published by the WESTERN CHAPTER INTERNATIONAL SOCIETY OF ARBORICULTURE. Tree species classification is used to determine the relative size of a replacement tree of a commonly attainable size.
    - **Species Group** – The group rating reflects the rate of growth for the tree species. The group rating determines the *basic price per square inch* of the trunk area for the different species.

- **DBH** - Diameter at Breast Height, measured at 4.5 feet above the average soil grade. Tree valuation is based upon DBH measurements. For multi-stemmed trees, this is based on calculations from the sum of the cross-sectional areas of all stems measured at 4.5 above grade. That figure is then matched with a DBH of a single stemmed tree with the same cross-sectional area.
- **Trunk Area** – The surface area of the cross-sectional area of the tree trunk measured at 4.5 feet above the soil grade (DBH).
- **Tree Condition** – Assessed base upon tree Health, Structure & Form.

| Rating | Rating | Amount |
|---|---|---|
| G | G | 0.9 |
| G | F/G | 0.85 |
| G | F | 0.8 |
| G | F/P | 0.7 |
| G | P | 0.6 |
| F | F/G | 0.75 |
| F | F | 0.7 |
| F | F/P | 0.6 |
| F | P | 0.5 |
| P | F/G | 0.55 |
| P | F/P | 0.4 |
| P | P | 0.2 |
| F/G | F/G | 0.8 |
| F/G | F/P | 0.65 |
| F/P | F/P | 0.45 |

- **Functional Limitations** – Factors within the controllable area that adversely impact the tree. All trees were given variable scores based on proximity to hardscape.
- **External Limitations** – Adverse impacts beyond control of tree owner is the presence of the adjacent structure that limits the spread of the tree and will require pruning to accommodate.
- **Replacement Tree Diameter** – The diameter of the largest commonly available tree of the same species.
- **Cross-sectional area of Replacement tree** - Based upon diameter of replacement tree for 24" box size.
- **Replacement Tree Cost** – Standard cost for purchase of replacement tree. Normal is $200 for 24-inch size box tree.
- **Unit Tree Cost** – This is the cost of the tree divided by the cross-sectional area.
- **Basic Reproduction Cost** – The cross-sectional area of the tree being valued times the Unit Tree Cost.
- **Species Price per Square Inch**. – Determined from Species Group rating.
- **Depreciated reproduction cost** – Factor in Tree Condition, Functional Limitations & External Limitations.
- **Additional Costs** – Covers tree removal and cleanup prior to replanting.
- **Tree Value** – Total assessed value of the trees is to the nearest $100.

Date: Amended July 26, 2022

To: Eric Harrison
Senior Vice President
Signature Development Group

Subject: **1305 O'Brien Drive Tree Survey**

Scope: Arborist surveyed trees within the scope provided by Signature Development Group

## Introduction

Estimated value of the 13 Heritage Trees is $197,400.

Any tree protected by the City's Municipal Code to be retained will require replacement according to its appraised value if it is damaged beyond repair as a result of construction.

## City of Menlo Park Ordinance

"Heritage tree" shall mean:

(A) All trees other than oaks which have a trunk with a circumference of 47.1 inches (diameter of fifteen (15) inches) or more, measured fifty-four (54) inches above natural grade.

(B) An oak tree (Quercus) which is native to California and has a trunk with a circumference of 31.4 inches (diameter of ten (10) inches) or more, measured at fifty-four (54) inches above natural grade.

(C) A tree or group of trees of historical significance, special character or community benefit, specifically designated by resolution of the city council.

For purposes of subsections (5)(A) and (B) of this section, trees with more than one (1) trunk shall be measured at the diameter below the main union of all multi-trunk trees unless the union occurs below grade, in which case each stem shall be measured as a stand-alone tree. A multi-trunk tree under twelve (12) feet in height shall not be considered a heritage tree. (Ord. 1060 § 2 (part), 2019).

## Survey Procedure

Trees Tagged – All 17 trees were tagged with a metal number tag corresponding with the numbers used in the Excel data sheets in *Appendix 1*. Numbering begins with #212 and then skips to #214-229.

Data Recorded – Arborists recorded data on tree species, diameter (DBH[1]), tree height, health and structural conditions, Heritage Tree Status, and suitability for retention, and suitability for relocation. Notes were recorded to provide commentary on general conditions.

## Summary

- **Total Trees**: 17 Trees
  - Heritage street tree: n/a
  - Heritage tree: 13 Trees
  - Non-heritage street tree: n/a

- **Trees to be Removed**
  - Heritage street tree: n/a
  - Heritage tree: 7 Trees
  - Non-heritage street tree: n/a
  - Non-heritage tree: 2 Trees

- **Trees to Remain**
  - Heritage street tree: n/a
  - Heritage tree: 6 Trees
  - Non-heritage street tree: n/a
  - Non-heritage tree: 2 Trees

**Table 1** – The table below provides a breakdown of numbers of each tree species surveyed.

| | Species | Total Amount | Heritage Tree Amount | Street Tree Amount | Overall Retention Suitability | Overall Relocation Suitability | Comments |
|---|---|---|---|---|---|---|---|
| **1** | *Acacia melanoxylon* | 1 | 0 | 0 | 0 | P | Volunteer suckers, growing in fence |
| **2** | *Pinus canariensis* | 5 | 5 | 0 | G | P | Large, beautiful specimens |
| **3** | *Pinus halepensis* | 1 | 1 | 0 | G | G | Large, beautiful specimens, Both display leans |
| **4** | *Platanus hispanica* | 4 | 1 | 0 | F | P | Minimal soil volume |
| **5** | *Pyrus calleryana* | 6 | 6 | 0 | P | P | Poor structures; Fire blight; Trees in parking lot were headed |
| | | **17** | **13** | **0** | | | |

[1] **DBH** is tree diameter measured at 54 inches above soil grade.

# Tree Valuation, Source and Methodology

This tree valuation report was prepared according to the standards for tree valuation presented in the 10th Edition of GUIDE FOR PLANT APPRAISAL, published by the International Society of Arboriculture, 2019.

Information regarding tree species is from the publication: SPECIES CLASSIFICATION AND GROUP ASSIGNMENTS, published by the International Society of Arboriculture.

Tree valuation is determined by using the FUNCTIONAL REPLACEMENT METHOD, *Trunk Formula* Technique as the tree is larger than the standard 24" box size utilized in tree valuation.

### Reproduction Method using Trunk Formula Technique for Determining Tree Value

The current price for a 24-inch box tree is $200. Value is affected by tree species, tree condition and the location in which the tree is growing. The terms below are used is the valuation in the table below.

- **Species** – Species qualities are determined through the publication Species Classification And Group Assignment published by the WESTERN CHAPTER INTERNATIONAL SOCIETY OF ARBORICULTURE. Tree species classification is used to determine the relative size based upon rate for growth of a replacement tree of a commonly attainable size.
  - **Species Group** – The group rating reflects the rate of growth for the tree species. The group rating determines the *basic price per square inch* of the trunk area for the different species.

- **DBH** - Diameter at Breast Height, measured at 4.5 feet above the average soil grade. Tree valuation is based upon DBH measurements. For multi-stemmed trees, this is based on calculations from the sum of the cross-sectional areas of all stems measured at 4.5 above grade. That figure is then matched with a DBH of a single stemmed tree with the same cross-sectional area.
- **Trunk Area** – The surface area of the cross-sectional area of the tree trunk measured at 4.5 feet above the soil grade (DBH).
- **Tree Condition** – Assessed base upon tree Health, Structure & Form.

| Rating | Rating | Amount | Rating | Rating | Amount |
|---|---|---|---|---|---|
| G | G | 0.9 | F | F/P | 0.6 |
| G | F/G | 0.85 | F | P | 0.5 |
| G | F | 0.8 | P | F/G | 0.55 |
| G | F/P | 0.7 | P | F/P | 0.4 |
| G | P | 0.6 | P | P | 0.2 |
| F | F/G | 0.75 | F/G | F/G | 0.8 |
| F | F | 0.7 | F/G | F/P | 0.65 |
| F | F/P | 0.6 | F/P | F/P | 0.45 |

- **Functional Limitations** – Factors within the controllable area that adversely impact the tree. All trees were given variable scores based on proximity to hardscape.
- **External Limitations** – Adverse impacts beyond control of tree owner is the presence of the adjacent structure that limits the spread of the tree and will require pruning to accommodate.
- **Replacement Tree Diameter** – The diameter of the largest commonly available tree of the same species.
- **Cross-sectional area of Replacement tree** - Based upon diameter of replacement tree for 24" box size.
- **Replacement Tree Cost** – Standard cost for purchase of replacement tree. Normal is $200 for 24-inch size box tree.
- **Unit Tree Cost** – This is the cost of the tree divided by the cross-sectional area.

- **Basic Reproduction Cost** – The cross-sectional area of the tree being valued times the Unit Tree Cost.
- **Species Price per Square Inch**. – Determined from Species Group rating.
- **Depreciated reproduction cost** – Factor in Tree Condition, Functional Limitations & External Limitations.
- **Additional Costs** – Covers tree removal and cleanup prior to replanting.
- **Tree Value** – Total assessed values of the trees are to the nearest $100.

Table 2. Table below provides methodology for tree appraisal.

| Tree No. | Species | DBH | Trunk Area (TA) | Condition | Functional Limitations | External Limitations | Replacement Tree Diameter | Replacement Tree Area | Replacement Tree Cost | Unit Cost (I/H) | Basic Reproduction Cost (D/J) | Depreciated Reproduction Cost (K*E*F*G) | Additional Costs | Tree Value to nearest $100 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 214 | *Pyrus calleryana* | 25 | 490.9 | 0.6 | 0.8 | 1 | 1.69 | 2.24 | 200 | 89.29 | 43,828 | $21,038 | 0 | 21,000 |

Date: Amended July 26, 2022

To: Eric Harrison
Senior Vice President
Signature Development Group

Subject: **1330 O'Brien Drive Tree Survey**

Scope: Arborist surveyed trees within the scope provided by Signature Development Group

## Introduction

Estimated value of the four Heritage is $53,600.

Any tree protected by the City's Municipal Code to be retained will require replacement according to its appraised value if it is damaged beyond repair as a result of construction.

## City of Menlo Park Ordinance

"Heritage tree" shall mean:

(A) All trees other than oaks which have a trunk with a circumference of 47.1 inches (diameter of fifteen (15) inches) or more, measured fifty-four (54) inches above natural grade.

(B) An oak tree (Quercus) which is native to California and has a trunk with a circumference of 31.4 inches (diameter of ten (10) inches) or more, measured at fifty-four (54) inches above natural grade.

(C) A tree or group of trees of historical significance, special character or community benefit, specifically designated by resolution of the city council.

For purposes of subsections (5)(A) and (B) of this section, trees with more than one (1) trunk shall be measured at the diameter below the main union of all multi-trunk trees unless the union occurs below grade, in which case each stem shall be measured as a stand-alone tree. A multi-trunk tree under twelve (12) feet in height shall not be considered a heritage tree. (Ord. 1060 § 2 (part), 2019).

## Survey Procedure

Trees Tagged – Six (6) trees were tagged and identified within this designated area. Each tree was tagged with a metal number tag corresponding with the numbers used in the Excel data sheets in *Appendix 1*. Numbering begins with #233 and ends with #238.

Data Recorded – Arborists recorded data on tree species, diameter (DBH[1]), tree height, health and structural conditions, Heritage Tree Status, and suitability for retention, and suitability for relocation. Notes were recorded to provide commentary on general conditions.

## Summary

- **Total Trees**: 6 Trees
  - Heritage street tree: n/a
  - Heritage tree: 4 Trees
  - Non-heritage street tree: n/a

- **Trees to be Removed**
  - Heritage street tree: n/a
  - Heritage tree: 3 Trees
  - Non-heritage street tree: n/a
  - Non-heritage tree: 2 Trees

- **Trees to Remain**
  - Heritage street tree: n/a
  - Heritage tree: 1 Tree
  - Non-heritage street tree: n/a
  - Non-heritage tree: n/a

**Table 1** – The table below provides a breakdown of numbers of each tree species surveyed.

| | Species | Common Name | Total Amount | Heritage Tree Amount | Overall Retention Suitability | Overall Relocation Suitability | Comments |
|---|---|---|---|---|---|---|---|
| **1** | *Geijera parviflora* | Australian willow | 4 | 2 | P | P | Poor structures |
| **2** | *Pinus canariensis* | Canary Island Pine | 2 | 2 | G | P | Large, beautiful specimens |
| | | | **6** | **4** | | | |

## Tree Valuation, Source and Methodology

This tree valuation report was prepared according to the standards for tree valuation presented in the 10th Edition of GUIDE FOR PLANT APPRAISAL, published by the International Society of Arboriculture, 2019.

Information regarding tree species is from the publication: SPECIES CLASSIFICATION AND GROUP ASSIGNMENTS, published by the International Society of Arboriculture.

Tree valuation is determined by using the FUNCTIONAL REPLACEMENT METHOD, *Trunk Formula* Technique as the tree is larger than the standard 24" box size utilized in tree valuation.

[1] **DBH** is tree diameter measured at 54 inches above soil grade.

## Reproduction Method using Trunk Formula Technique for Determining Tree Value

The current price for a 24-inch box tree is $200. Value is affected by tree species, tree condition and the location in which the tree is growing. The terms below are used is the valuation in the table below.

- **Species** – Species qualities are determined through the publication Species Classification And Group Assignment published by the WESTERN CHAPTER INTERNATIONAL SOCIETY OF ARBORICULTURE. Tree species classification is used to determine the relative size based upon rate for growth of a replacement tree of a commonly attainable size.
  - **Species Group** – The group rating reflects the rate of growth for the tree species. The group rating determines the *basic price per square inch* of the trunk area for the different species.

- **DBH** - Diameter at Breast Height, measured at 4.5 feet above the average soil grade. Tree valuation is based upon DBH measurements. For multi-stemmed trees, this is based on calculations from the sum of the cross-sectional areas of all stems measured at 4.5 above grade. That figure is then matched with a DBH of a single stemmed tree with the same cross-sectional area.
- **Trunk Area** – The surface area of the cross-sectional area of the tree trunk measured at 4.5 feet above the soil grade (DBH).
- **Tree Condition** – Assessed base upon tree Health, Structure & Form.

| Rating | Rating | Amount | Rating | Rating | Amount |
|---|---|---|---|---|---|
| G | G | 0.9 | F | F/P | 0.6 |
| G | F/G | 0.85 | F | P | 0.5 |
| G | F | 0.8 | P | F/G | 0.55 |
| G | F/P | 0.7 | P | F/P | 0.4 |
| G | P | 0.6 | P | P | 0.2 |
| F | F/G | 0.75 | F/G | F/G | 0.8 |
| F | F | 0.7 | F/G | F/P | 0.65 |
| F | F/P | 0.6 | F/P | F/P | 0.45 |

- **Functional Limitations** – Factors within the controllable area that adversely impact the tree. All trees were given variable scores based on proximity to hardscape. Tree #236 is impacted by large pine growing overhead.
- **External Limitations** – Adverse impacts beyond control of tree owner is the presence of the adjacent structure that limits the spread of the tree and will require pruning to accommodate.
- **Replacement Tree Diameter** – The diameter of the largest commonly available tree of the same species.
- **Cross-sectional area of Replacement tree** - Based upon diameter of replacement tree for 24" box size.
- **Replacement Tree Cost** – Standard cost for purchase of replacement tree. Normal is $200 for 24-inch size box tree.
- **Unit Tree Cost** – This is the cost of the tree divided by the cross-sectional area.
- **Basic Reproduction Cost** – The cross-sectional area of the tree being valued times the Unit Tree Cost.
- **Species Price per Square Inch**. – Determined from Species Group rating.
- **Depreciated reproduction cost** – Factor in Tree Condition, Functional Limitations & External Limitations.
- **Additional Costs** – Covers tree removal and cleanup prior to replanting.
- **Tree Value** – Total assessed values of the trees are to the nearest $100.

Table 2. Table below provides methodology for tree appraisal.

| Tree No. | Species | DBH | Trunk Area (TA) | Condition | Functional Limitations | External Limitations | Replacement Tree Diameter | Replacement Tree Area | Replacement Tree Cost | Unit Cost (I/H) | Basic Reproduction Cost (D/J) | Depreciated Reproduction Cost (K*E*F*G) | Additional Costs | Tree Value to nearest $100 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 233 | *Geijera parviflora* | 18 | 254.4696 | 0.6 | 0.8 | 1 | 1.69 | 2.24 | 200 | 89.2857143 | 22,721 | $ 10,906 | 0 | 10,900 |
| 235 | *Pinus halepensis* | 33.5 | 881.41515 | 0.8 | 0.8 | 1 | 2.2 | 3.8 | 200 | 52.6315789 | 46,390 | $ 29,690 | 0 | 29,700 |
| 236 | *Pinus canariensis* | 15 | 176.715 | 0.9 | 0.7 | 1 | 2.2 | 3.8 | 200 | 52.6315789 | 9,301 | $ 5,859 | 0 | 5,900 |
| 238 | *Geijera parviflora* | 15.5 | 188.69235 | 0.6 | 0.7 | 1 | 1.69 | 2.24 | 200 | 89.2857143 | 16,848 | $ 7,076 | 0 | 7,100 |
| | | | | | | | | | | | | | | $ 53,600 |

Date: Amendment 2 July 31, 2022

To: Eric Harrison
Senior Vice President
Signature Development Group

Subject: **CITY ROW, O'Brien Drive Tree Survey**

Scope: Arborist surveyed trees within the scope provided by Signature Development Group

## Introduction

Estimated value of the eight Heritage Trees was determined to be $122,000.

Any tree protected by the City's Municipal Code to be retained will require replacement according to its appraised value if it is damaged beyond repair as a result of construction.

## City of Menlo Park Ordinance

"Heritage tree" shall mean:

(A) All trees other than oaks which have a trunk with a circumference of 47.1 inches (diameter of fifteen (15) inches) or more, measured fifty-four (54) inches above natural grade.

(B) An oak tree (Quercus) which is native to California and has a trunk with a circumference of 31.4 inches (diameter of ten (10) inches) or more, measured at fifty-four (54) inches above natural grade.

(C) A tree or group of trees of historical significance, special character or community benefit, specifically designated by resolution of the city council.

For purposes of subsections (5)(A) and (B) of this section, trees with more than one (1) trunk shall be measured at the diameter below the main union of all multi-trunk trees unless the union occurs below grade, in which case each stem shall be measured as a stand-alone tree. A multi-trunk tree under twelve (12) feet in height shall not be considered a heritage tree. (Ord. 1060 § 2 (part), 2019).

## Survey Procedure

Trees Tagged – All 14 trees were tagged with a metal number tag corresponding with the numbers used in the Excel data sheets in *Appendix 1*. Numbering begins with #146-155 and #200-203.

Data Recorded – Arborists recorded data on tree species, diameter (DBH[1]), tree height, health and structural conditions, Heritage Tree Status, Street Tree status, and suitability for retention, and suitability for relocation. Notes were recorded to provide commentary on general conditions.

# Summary

- **Total Trees**: 14 Trees
    - Heritage street tree: 8 Trees
    - Heritage tree: n/a
    - Non-heritage street tree: 5 Trees

- **Trees to be Removed**
    - Heritage street tree: 6 Trees
    - Heritage tree: n/a
    - Non-heritage street tree: 3 Trees
    - Non-heritage tree: n/a

- **Trees to Remain**
    - Heritage street tree: 2 Tree
    - Heritage tree: n/a
    - Non-heritage street tree: 2 Trees
    - Non-heritage tree: 1

**Table 1** – The table below provides a breakdown of numbers of each tree species surveyed.

| | Species | Total Amount | Heritage Tree Amount | Street Tree Amount | Overall Retention Suitability | Overall Relocation Suitability | Comments |
|---|---|---|---|---|---|---|---|
| **1** | *Araucaria heterophylla* | 1 | 0 | 0 | F | P | High voltage power lines above; Codominant with included bark |
| **2** | *Eucalyptus camaldulensis* | 3 | 1 | 3 | G, F, P | P | Many are growing under the high voltage wires and pruned for clearance; Good health |
| **3** | *Fraxinus uhdei* | 6 | 4 | 6 | P | P | Seven headed for line clearance; Good health |
| **4** | *Prunus cerasifera* | 1 | 0 | 1 | F-P | P | Dieback, pruning wounds, lean |
| **5** | *Salix spp* | 1 | 1 | 1 | P | P | Volunteer with bunch of suckers |

[1] **DBH** is tree diameter measured at 54 inches above soil grade.

| | Species | Total Amount | Heritage Tree Amount | Street Tree Amount | Overall Retention Suitability | Overall Relocation Suitability | Comments |
|---|---|---|---|---|---|---|---|
| **6** | *Sequoia sempervirens* | 2 | 2 | 2 | G | P | Nice trees; Appear a little off color and drought stressed |
| | | **14** | **8** | **13** | | | |

## Tree Valuation, Source and Methodology

This tree valuation report was prepared according to the standards for tree valuation presented in the 10th Edition of GUIDE FOR PLANT APPRAISAL, published by the International Society of Arboriculture, 2019.

Information regarding tree species is from the publication: SPECIES CLASSIFICATION AND GROUP ASSIGNMENTS, published by the International Society of Arboriculture.

Tree valuation is determined by using the FUNCTIONAL REPLACEMENT METHOD, *Trunk Formula* Technique as the tree is larger than the standard 24" box size utilized in tree valuation.

### Reproduction Method using Trunk Formula Technique for Determining Tree Value

The current price for a 24-inch box tree is $200. Value is affected by tree species, tree condition and the location in which the tree is growing. The terms below are used is the valuation in the table below.

- **Species** – Species qualities are determined through the publication Species Classification And Group Assignment published by the WESTERN CHAPTER INTERNATIONAL SOCIETY OF ARBORICULTURE. Tree species classification is used to determine the relative size based upon rate for growth of a replacement tree of a commonly attainable size.
    - **Species Group** – The group rating reflects the rate of growth for the tree species. The group rating determines the *basic price per square inch* of the trunk area for the different species.

- **DBH** - Diameter at Breast Height, measured at 4.5 feet above the average soil grade. Tree valuation is based upon DBH measurements. For multi-stemmed trees, this is based on calculations from the sum of the cross-sectional areas of all stems measured at 4.5 above grade. That figure is then matched with a DBH of a single stemmed tree with the same cross-sectional area.
- **Trunk Area** – The surface area of the cross-sectional area of the tree trunk measured at 4.5 feet above the soil grade (DBH).
- **Tree Condition** – Assessed base upon tree Health, Structure & Form.

| Rating | Rating | Amount | Rating | Rating | Amount |
|---|---|---|---|---|---|
| G | G | 0.9 | F | F/P | 0.6 |
| G | F/G | 0.85 | F | P | 0.5 |
| G | F | 0.8 | P | F/G | 0.55 |
| G | F/P | 0.7 | P | F/P | 0.4 |
| G | P | 0.6 | P | P | 0.2 |
| F | F/G | 0.75 | F/G | F/G | 0.8 |
| F | F | 0.7 | F/G | F/P | 0.65 |
| F | F/P | 0.6 | F/P | F/P | 0.45 |

- **Functional Limitations** – Factors within the controllable area that adversely impact the tree. All trees were given variable scores based on proximity to hardscape.
- **External Limitations** – Adverse impacts beyond control of tree owner is the presence of the adjacent structure that limits the spread of the tree and will require pruning to accommodate. Trees #143 and 144 were reduced in value based on high voltage power lines.
- **Replacement Tree Diameter** – The diameter of the largest commonly available tree of the same species.
- **Cross-sectional area of Replacement tree** - Based upon diameter of replacement tree for 24" box size.
- **Replacement Tree Cost** – Standard cost for purchase of replacement tree. Normal is $200 for 24-inch size box tree.
- **Unit Tree Cost** – This is the cost of the tree divided by the cross-sectional area.
- **Basic Reproduction Cost** – The cross-sectional area of the tree being valued times the Unit Tree Cost.
- **Species Price per Square Inch**. – Determined from Species Group rating.
- **Depreciated reproduction cost** – Factor in Tree Condition, Functional Limitations & External Limitations.
- **Additional Costs** – Covers tree removal and cleanup prior to replanting.
- **Tree Value** – Total assessed values of the trees are to the nearest $100.

Table 2. Table below provides methodology for tree appraisal.

| Tree No. | Species | DBH | Trunk Area (TA) | Condition | Functional Limitations | External Limitations | Replacement Tree Diameter | Replacement Tree Area | Replacement Tree Cost | Unit Cost (I/H) | Basic Reproduction Cost (D/J) | Depreciated Reproduction Cost (K*E*F*G) | Tree Value to nearest $100 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 146 | *Eucalyptus camaldulensis* | 23.5 | 433.73715 | 0.8 | 0.8 | 1 | 1.69 | 2.24 | 200 | 89.2857143 | 38,727 | $ 24,785 | 24,800 |

# 1. INTRODUCTION

Ramboll US Consulting Inc. conducted an air quality and greenhouse gas (GHG) assessment for the construction and operation of the proposed mixed-use development at Willow Village in Menlo Park, California (referred to hereafter as the "Proposed Project" or "Project") for Peninsula Innovation Partners, LLC. The scope and methods used in this assessment are consistent with recommended analyses for projects requiring review under California Environmental Quality Act (CEQA). The CEQA analysis in this report addresses criteria air pollutants (CAP) and CAP precursors, GHGs, toxic air contaminants (TACs) and local air quality and health impacts associated with the Project construction and operation at off-site sensitive receptors. For informational purposes, this report also includes analysis of the health impacts associated with Project construction and operation at on-site sensitive receptors. The analysis in this report will be independently reviewed by the City of Menlo Park, California (referred to as the "City") and peer reviewed by ICF, the City's environmental consultant for possible incorporation into the Environmental Impact Report (EIR) for the Project.

This emissions and Health Risk Assessment (HRA) methodology document describes the scope and methodology for evaluation of air quality, GHG, and health impacts from Project construction and operational emissions, and cumulative impacts at on-site and adjacent off-site sensitive receptors. This document also describes the thresholds of significance that were used, which were consistent with the 2017 Bay Area Air Quality Management District (BAAQMD) CEQA Air Quality Guidelines where appropriate.

## 1.1 Project Description

### 1.1.1 Existing Conditions

The main Project site is a 59-acre plot adjacent to Willow Road between the Dumbarton Corridor and O'Brien Avenue. The Project site also includes three parcels west of Willow Road on both sides of Hamilton Avenue, referred to as the Hamilton Avenue Parcels North and South. The main Project site includes 20 existing office, commercial, industrial and warehouse buildings totalling approximately 1,000,000 square feet, along with associated parking. One emergency diesel generator is currently on-site. The area in the general vicinity of the Project consists primarily of residential, mixed-use, commercial, industrial, and educational/institutional uses. The educational/institutional buildings of Mid-Peninsula High School's campus are adjacent to the Project site to the southwest. To the west is a residential neighborhood. South of the main Project site are mixed-use commercial, industrial, and residential buildings. Though there are commercial operations in the general vicinity of the Project site, there is a lack of amenities in the site vicinity such as grocery stores, pharmacies, and public gathering spaces. **Figure 1** shows the location and boundary of the Proposed Project in Menlo Park and **Figure 2** shows sensitive receptor locations.

### 1.1.2 Proposed Project

The Proposed Project on the main Project Site would be a mixed-use development that would include up to 1,730 residential units, up to 200,000 square feet of retail uses, a 193-room hotel, up to 1,600,000 square feet of space for office and accessory uses consisting of up to 1.25 million square feet of office uses and the balance (350,000 square feet of office use is maximized) of accessory uses, a publicly accessible park, a dog park, a town square, and associated parking spaces.[1] The proposed land use summary is shown in **Table 1**. The main Project Site would consist of three planning districts: The Town Square District, the Residential/Shopping District, and the Campus District. The Town Square District would allow space for a range of activities and events from recreation to seasonal markets. The Residential/Shopping District would provide multifamily rental residences and parking, retail, grocery, and park space. The Campus District is planned to consist of office space organized around a pedestrian promenade as well as accessory space and public-serving retail amenities. The Project also would include the re-alignment of Hamilton Avenue, relocation of the existing services station and addition of retail area on the Hamilton Avenue Parcels North and South. The Project Applicant has committed to powering all buildings entirely by electricity. Natural gas may be used for commercial culinary uses only, as allowed under Menlo Park building code.

Project construction would include demolition of all existing structures (including existing buildings, parking spaces, and other features on the main Project Site) and removal of the generator on-site. It is assumed that the earliest-constructed residential buildings would be occupied during the construction activities associated with the subsequent construction activities and, even though not required by CEQA, future residents are considered as on-site receptors for purposes of this air quality analysis.

The Project would also include off-site improvements. To serve the Project's requested electrical demand, four 12 kilovolt feeders need to be installed from Ravenswood Substation. This includes work at the substation itself, which is northeast of the Project site along Bayfront Expressway, and installing the underground feeders from the substation to the Project. The Project would also include intersection improvements in the form of signal changes, lane stripping, and sidewalk improvements.

Land uses for the existing conditions to be demolished and the Proposed Project are shown in **Table 1**.

## 1.2 Objective and Methodology

The purpose of the air quality and GHG analysis is to assess potential criteria air pollutant and GHG emissions, as well as health risks and hazards that would result from the construction and operation of the Proposed Project consistent with guidelines and methodologies from air quality regulatory agencies, specifically, the BAAQMD, the California Air Resources Board (ARB), the California Office of Environmental Health Hazard Assessment (OEHHA), and the US Environmental Protection Agency (USEPA). The analysis in this report followed the BAAQMD 2017 CEQA Guidelines where appropriate. In addition to the evaluation of an individual project, the CEQA Guidelines recommend an analysis of cumulative impacts when the project's incremental effect is cumulatively considerable. (14 Cal. Code Regs., § 15130, subd. (a).) For an air quality HRA, the cumulative analysis is performed when a project is in an area that includes other air emissions sources within a "zone of influence" of 1,000 feet surrounding the project. This report evaluates the risks and hazards associated with Project construction and operational activities on on-site receptors,

[1] Only actively programmed open space, such as parks, were evaluated in this analysis. The remainder of the open space would not generate new emissions outside emissions covered in other land uses.

off-site receptors and the cumulative impact to both on-site and off-site sensitive receptors from Project construction and surrounding sources.

### 1.2.1 Resources

Ramboll directly or indirectly relied on emissions estimation guidance from government sponsored organizations, government-commissioned studies of energy use patterns, Project-specific studies, and emissions estimation software as described below. In cases noted below, third-party studies were also relied upon to support analyses and assumptions made outside of the approach described above. Where Project-specific data estimates were available, they were used preferentially instead of model defaults. The methodology used to calculate this emissions inventory is described in detail in the following sections, including citations to information used in this inventory.

#### 1.2.1.1 CalEEMod

Ramboll primarily utilized the methodology from the California Emissions Estimator Model (CalEEMod) version 2020.4.0 to assist in quantifying the criteria pollutant emissions in the inventories presented in this report for the Project. CalEEMod is a statewide program designed to calculate both criteria and GHG emissions from development projects in California. This model was developed under the auspices of the South Coast Air Quality Management District (SCAQMD) and received input from other California air districts. It is currently supported by numerous lead agencies for use in quantifying the emissions associated with development projects undergoing environmental review. CalEEMod utilizes widely accepted models for emission estimates combined with appropriate default data that can be used if site-specific information is not available.

CalEEMod provides a platform to calculate annual operational criteria pollutant emissions from a land use development project. Specifically, the model aids the user in estimating operational emissions associated with a fully built out land use development. This includes emissions from on-road mobile vehicle traffic associated with the land uses, emissions from landscaping equipment and other off-road mobile sources, emissions from natural gas usage in the buildings, emissions associated with electricity usage in the buildings and electricity usage associated with water usage. This also includes emissions associated with solid waste disposal.

CalEEMod uses sources such as the USEPA AP-42 emission factors,[2] ARB's approved on-road and off-road equipment emission models such as the EMission FACtor model (EMFAC) and In-Use Off-Road Equipment model (OFFROAD), and studies commissioned by California agencies such as the California Energy Commission and CalRecycle. OFFROAD is an emission factor model used to calculate emission rates from off-road mobile sources (e.g., construction equipment, agricultural equipment) (CARB 2011a). The off-road diesel equipment emission factors used by CalEEMod are based on the ARB OFFROAD2011 program. ARB has released an updated OFFROAD version, OFFROAD2017, that includes updates to population information and emission factors. OFFROAD2017 was used in this analysis. EMFAC is an emission factor model used to calculate emissions rates from on-road

[2] The USEPA maintains a compilation of Air Pollutant Emission Factors and process information for several air pollution source categories. The data is based on source test data, material balance studies, and engineering estimates. Available at: https://www.epa.gov/air-emissions-factors-and-quantification/ap-42-compilation-air-emissions-factors. Accessed: October 2021.

vehicles (e.g. passenger vehicles) (CARB 2011b). The emission factors used by CalEEMod for on-road vehicles are based on the ARB EMFAC2017 program. ARB recently released EMFAC2021, an update to EMFAC2017, that includes various changes, notably the incorporation of USEPA and ARB regulations and standards (e.g., Advanced Clean Trucks and the Heavy Duty Omnibus). EMFAC2021 was incorporated into this analysis.

In addition, CalEEMod contains default values and existing regulatory methodologies to use in each specific local air district or county. Appropriate state-wide default values can be utilized if regional default values are not defined. Ramboll used default factors for San Mateo County for the emissions inventory, unless otherwise noted in the methodology descriptions below.

## 1.3 Thresholds for Evaluation

### 1.3.1 Criteria Pollutants and Precursors

Project construction and operation emissions of CAPs and precursors were evaluated and compared with the BAAQMD's 2017 CEQA Guidelines thresholds of significance. Project operational emissions at full buildout were compared to the annual and daily operational thresholds of 54 pounds (lbs) per day and 10 tons per year (tpy)of Reactive Organic Gases (ROG), oxides of nitrogen ($NO_X$), and $PM_{2.5}$ and 82 lbs per day and 15 tpy of fine particulate matter less than 10 micrometers in aerodynamic diameter ($PM_{10}$). Project construction emissions were compared to the average daily construction thresholds of 54 lbs per day of ROG, $NO_X$, and $PM_{2.5}$ and 82 lbs per day of $PM_{10}$. BAAQMD thresholds of significance for construction-related $PM_{10}$ and $PM_{2.5}$ mass emissions apply to exhaust emissions only and do not include fugitive dust emissions, which are addressed through BAAQMD's Best Management Practices (BMPs). Because construction would overlap with operations of other components of the Project, emissions during construction were combined with the operational emissions that are expected to occur during that calendar year and then compared to operational thresholds.

As noted above, the BAAQMD threshold for fugitive dust emissions during construction is compliance with its BMPs.

CEQA also requires evaluation of whether the Project would conflict with or obstruct implementation of the applicable air quality plan. Analysis of the Project's consistency with the applicable air quality plan is shown in Appendix A.

### 1.3.2 Greenhouse Gases

BAAQMD's 2017 CEQA Guidelines do not recommend a threshold for GHG emissions from construction. BAAQMD recommends quantifying and disclosing construction GHG emissions. Emissions from Project construction are estimated and disclosed.

BAAQMD's 2017 CEQA Guidelines include a recommendation for a GHG emissions threshold for operations for the year 2020. Since the project will be built out after 2020, this operational threshold is not appropriate for use. Due to lack of a recommended threshold from BAAQMD, the Project is evaluated against a two-tiered threshold that is based on guidance from expert agencies, including CARB and the Office of Planning and Research (OPR).

Building emissions, such as energy use, water use, area sources, and solid waste, are evaluated against a net zero threshold because a project that does not alter the existing environment has no impact on the environment.

GHG impacts from vehicles are evaluated using the City's VMT threshold. This threshold provides information on whether the project is consistent with applicable plans and goals to reduce GHG emissions by reducing VMT, including Plan Bay Area. In addition, using the same VMT threshold for both transportation and mobile-source GHG impacts ensures consistency throughout the EIR.

CEQA also requires evaluation of a project's consistency with an applicable plan, policy or regulation adopted for the purpose of reducing environmental impacts, including plans adopted to reduce the emissions of GHGs. The analysis of the Project's consistency with applicable plans to reduce GHG emissions is shown in Appendix B.

### 1.3.3 Health Risks and Hazards

The HRA evaluates the estimated cancer risk, non-cancer chronic and acute hazard index (HI), and fine particulate matter less than 2.5 micrometers in aerodynamic diameter ($PM_{2.5}$) concentration associated with construction and operation of the Project. The cumulative analysis estimates the total excess lifetime cancer risks, non-cancer HI, and $PM_{2.5}$ concentrations that are attributable to off-site rail, mobile, and stationary sources within the 1,000-foot "zone of influence" in addition to effects from the construction and operation of the Project.

The HRA evaluates potential sensitive receptor locations including "people—children, adults, and seniors—occupying or residing in:

- Residential dwellings, including apartments, houses, condominiums;
- Schools;
- Daycare centers;
- Parks;
- Hospitals; and
- Senior-care facilities." (BAAQMD 2012a)

To meet these objectives, this HRA was conducted consistent with the following guidance:

- Air Toxics Hot Spots Program Risk Assessment Guidelines (Office of Environmental Health Hazard Assessment [OEHHA] 2015a);
- May 2017 BAAQMD CEQA Guidelines (BAAQMD 2017);
- BAAQMD Recommended Methods for Screening and Modeling Local Risks and Hazards (BAAQMD 2012a); and
- BAAQMD Health Risk Assessment Modeling Protocol (BAAQMD 2020c).

The results of the construction and operational health risk analyses are compared with the BAAQMD 2017 CEQA significance thresholds for single sources separately. Then the impacts from construction and operations combined, during the time that construction and operations would overlap, are compared to the single source thresholds. Finally, the maximum scenario for the combined construction and operational impacts are combined with the impacts of off-site sources of toxic air contaminants TACs and compared against the BAAQMD 2017 CEQA cumulative thresholds. The thresholds are:

Single Source Impacts:

- An excess lifetime cancer risk level of more than 10 in one million;
- Non-cancer chronic and acute HIs greater than 1.0; and
- An incremental increase in the annual average $PM_{2.5}$ of greater than 0.3 micrograms per cubic meter (μg/m$^3$).

Cumulative Impacts:

- An excess lifetime cancer risk level of more than 100 in one million;
- A chronic non-cancer HI greater than 10.0; and
- An incremental increase in the annual average $PM_{2.5}$ concentration of greater than 0.8 μg/m$^3$.

As discussed in detail in **Section 3**, health impacts from the Project are based on emissions of TACs from diesel and gasoline combustion. Diesel particulate matter (DPM) does not have an acute non-cancer toxicity value, so an acute HI from diesel exhaust is not estimated. BAAQMD does not estimate acute HI from roadways in its Roadway Screening Analysis Calculator (BAAQMD 2015) since impacts from all roadways were well below thresholds.[3] Therefore, acute HI from Project traffic also was not estimated.

We understand the City received guidance from BAAQMD that $PM_{2.5}$ from fugitive dust from earth movement activity during construction should be included in the comparison to the $PM_{2.5}$ concentration threshold, which contradicts previous guidance Ramboll received from BAAQMD. To be conservative, fugitive dust is included in this analysis. Additionally, resuspended road dust from Project traffic is included in this analysis.

### 1.3.4 Odor

To evaluate odor impacts, the ConnectMenlo EIR identifies a three-pronged approach "[r]eview of projects using BAAQMD's odor screening distances during future CEQA review, implementation of the [General Plan Policies], and compliance with BAAQMD Regulation 7 would ensure that odor impacts are minimized and are *less than significant*." (City of Menlo Park 2016)

The Project was evaluated against this three-prong approach in **Section 3**.

## 1.4 Document Organization

This scope of work is divided into seven sections as follows:

**Section 1.0 – Introduction:** describes the purpose and scope of the air quality analysis, the objectives and methodology used, and outlines the document organization.

**Section 2.0 – Criteria Air Pollutant and Greenhouse Gas Emission Estimates:** describes the methods used to estimate CAP, TAC, and GHG emissions from the Project, and includes the Project CAP and GHG emissions results and comparison to the applicable thresholds of significance.

[3] A previous version of BAAQMD's tools for estimating health impacts from roadways stated that the maximum acute and chronic HI from all traffic on roadways was well below 0.1, so screening values were not provided by BAAQMD. In the current version of its tools, acute and chronic HI are not provided.

**Section 3.0 – Estimated Air Concentrations:** discusses the air dispersion modeling, the selection of the dispersion models, the data used in the dispersion models (*e.g.*, terrain, meteorology, source characterization), and identifies receptor locations evaluated in the HRA.

**Section 4.0 – Carbon Monoxide Analysis:** discusses evaluation of potential carbon monoxide impacts.

**Section 5.0 – Odor Analysis:** discusses potential odor sources and the evaluation of the Project against the three-pronged approach proposed in the ConnectMenlo EIR.

**Section 6.0 – Health Risk Assessment :** provides an overview of the methodology for conducting the HRA, and includes the Project HRA results and comparison to the BAAQMD threshold of significance.

**Section 7.0 – Cumulative Analysis:** summarizes the approach used in the HRA cumulative analysis. The analysis of criteria air pollutants and GHG emissions is inherently cumulative.

**Section 8.0 – References:** includes a listing of all references cited in this report.

# 2. CRITERIA AIR POLLUTANT, TOXIC AIR CONTAMINANT, AND GREENHOUSE GAS EMISSION ESTIMATES

Project and net incremental (Project minus Existing) CAP, TAC, and GHG emissions from Proposed Project construction and operational sources were estimated. Methodologies used to calculate CAP, TAC, and GHG emissions are summarized below.

## 2.1 Existing Conditions Calculation Methodology

All CAP, TAC and GHG emissions for existing operations on the Project site were calculated for year 2019 as data from 2020 and 2021 would not be representative of normal operations due to reduced activity resulting from the COVID-19 pandemic. Emissions estimates include activity in existing buildings slated for demolition, use of emergency generators, and traffic associated with these buildings. Existing land uses at the Project site include offices, warehouses, and parking lots, as well as retail at the Hamilton Avenue Parcels North and South. Emissions from existing offices, warehouses, and parking lots slated for demolition were estimated using CalEEMod with default data assumptions and data provided by the Project Applicant. The carbon intensity factor was adjusted for 2019 as described in **Section 2.3.4.1**. Existing retail, located at the Hamilton Parcels North and South, were not included in the existing emissions calculation, which is conservative because any retail that is replaced would likely be more efficient and less emissions intensive than the existing uses due to stricter building codes. Existing emergency generator information was provided by the Project Applicant. Existing operational traffic information was provided by the Transportation Engineer.[4]

## 2.2 Calculation Methodologies for Construction Emissions

A detailed construction equipment list was provided by the Project Applicant, which includes the type, quantity, construction schedule and hours of operation anticipated for each piece of equipment for each year of construction.[5] This data was used to estimate construction emissions using calculation methodologies consistent with CalEEMod2020.4.0. It was assumed that all construction off-road equipment is diesel powered except for those specified as electric powered by the Project Applicant. All diesel-fueled off-road equipment emissions of $PM_{10}$ were assumed to be DPM, which is a TAC.

The Proposed Project construction is assumed to start after project entitlements and last roughly five years.[6] A mix of construction equipment would operate over the course of any given day. **Table 2** shows a summary of the expected construction schedule provided by the Project Applicant. Construction of the Project includes construction on-site and at the off-

---

[4] The Transportation Engineer, Hexagon, provided daily Project VMT and trip rates on October 5, 2021.

[5] This schedule and equipment list is subject to change as Project details evolve. A conservative construction start date and schedule was analyzed to identify maximum impacts of Project construction.

[6] Construction is conservatively assumed to start December 15, 2021. The analysis uses a start date that is earlier than possible to be sure that the impact analysis is conservative. Emissions and impacts would decrease the later the actual construction start date is due to the incorporation of cleaner equipment into the construction fleet with time.

site improvements.[7] Construction emissions were calculated for off-road equipment, on-road vehicles, and off-gassing activities.

As discussed in **Section 1.3.1**, BAAQMD thresholds for fugitive dust are compliance with its Best Management Practices. However, as discussed in **Section 1.3.3**, emissions from fugitive dust are included in the estimation of $PM_{2.5}$ concentration.

### 2.2.1 Construction Phasing

The analysis described here does not rely on the default construction phasing schedule from CalEEMod, as a detailed schedule was provided by the Project Applicant. **Table 2**, provided by the Project Applicant, summarizes the expected construction schedule.

This analysis assumes that construction of buildings will overlap, that the complete build out would occur in roughly five years and that the buildings constructed would be occupied and fully operational as soon as construction of each building is completed. This is conservative because occupancy and operation of each building would likely ramp up over time, rather than immediately upon completion of construction. The analysis also assumes that operational emissions from completed buildings would overlap with construction emissions from buildings that are still being constructed.

The construction program would commence after existing uses have vacated from the Willow Village site.[8,9] The preliminary construction schedule assumes that construction would begin after project entitlements and would last for roughly five years, as indicated in **Table 2**. Construction diesel equipment would be expected to operate between the hours of 7 AM to 6 PM, consistent with the Menlo Park noise ordinance,[10] with construction with heavy duty equipment exceeding 60 decibels (dBA) occurring Monday through Friday from 8 AM to 6 PM. However, equipment would not be expected to run its engine during this entire period. The equipment list for the construction of the Campus and Town Square Districts is shown in **Table 3**. The equipment list for the construction of the Residential/Shopping District is shown in **Table 4**.

Initial construction activities affecting the full site area include demolition of the existing buildings and parking lots, followed by grading and utilities.

### 2.2.2 Emissions from Diesel Construction Off-road Equipment

Emissions calculations associated with off-road construction equipment were based on the construction schedule and the type, size, fuel type, tier level, hours of operation and

---

[7] Off-site improvements considered are construction at the Ravenswood Substation, underground installation of the feeder lines, and intersection improvements that include diesel equipment operation.

[8] The existing dialysis center may remain open for several months after demolition commences. If this were to occur, changes to the analysis would be negligible. The dialysis center would not be considered a sensitive receptor based on BAAQMD guidance, so the impacts of construction on the dialysis center do not need to be analyzed. The existing operational emissions associated with the dialysis center remaining and the shifting of emissions from the demolition of the dialysis center would not change conclusions as these would be minor changes.

[9] The analysis only considers net new retail in the Hamilton Avenue Parcels North and South, so does not consider the existing retail in this area to be vacated.

[10] Construction activity is assumed to start at 7 AM to conservatively consider more morning hours in the dispersion analysis, but no equipment will be operated that would violate the Menlo Park noise ordinance, which has low noise level thresholds for construction equipment prior to 8 AM.

utilization factor for each piece of equipment submitted by the Project Applicant. A Project-specific construction equipment list is presented in **Table 3** and **Table 4**.[11] For diesel-powered off-road construction equipment, methodologies consistent with CalEEMod are used to estimate emissions. Where Project-specific equipment information was not available, CalEEMod default horsepower were used. Load factors for each piece of equipment were based on the default load factor from CalEEMod.

The CalEEMod methodology for off-road construction equipment emissions relied on the ARB In-Use Off-Road Equipment model (OFFROAD2011) as well as specific emission factors by engine tier. However, ARB released a new version of its off-road emissions estimator model, OFFROAD2017, which was used to estimate emissions from the Project. Emission factors from OFFROAD2017 that are used in this analysis are shown in **Table 5**.

Emissions are calculated outside of CalEEMod using the same methodologies and emissions factors as CalEEMod. Emissions were calculated using the following formula, which is consistent with CalEEMod.

$$E_C = \sum (EF_C * HP * LF * Hr * Red * C)$$

Where:

$E_C$: off-road equipment exhaust emissions in pounds (lbs.)

$EF_C$: emission factor (g/bhp-hr) (CalEEMod defaults)

HP: equipment horsepower (CalEEMod defaults or Project-specific)

LF: equipment load factor (CalEEMod defaults)

Hr: equipment operating hours

Red: reduction from Diesel Particulate Filter (DPF), as applicable

C: unit conversion factor

Unmitigated emissions were based on fleetwide average emission factors from OFFROAD2017, as shown in **Table 5**. For mitigated emissions, emission factors from CalEEMod associated with Tier 4 final engines are used for 95 percent of the equipment operation before residents move on-site in Year 5 and 98 percent of the equipment after residents move on-site in Year 5. The other 5 percent and 2 percent of equipment (before and after on-site residents, respectively) are assumed to have Tier 2 engines. Mitigated emission factors are based on the weighted average of 95 percent and 98 percent (before and after on-site residents, respectively) Tier 4 final emission factors and 5 percent and 2 percent (before and after on-site residents, respectively) Tier 2 emission factors, since all equipment may not be available as Tier 4 final. This equates to equipment with Tier 2 engines or better operating for up to 618,028 horsepower-hours before residents occupy the on-site buildings and up to 34,716 horsepower-hours after residents occupy the on-site buildings.

---

[11] Emissions are not estimated for intersection improvements without diesel equipment use. Emissions are assumed to be minor since the activity duration is short and trucks would not be idling at the intersection for long periods of time. Travel to the site is assumed to be included in the worker trip counts.

### 2.2.3 Emissions from Electric Construction Equipment

GHG emissions from the use of electrical off-road equipment were estimated based on type and usage of each equipment. The Project Applicant provided the equipment that will be electrically powered. Yearly electricity consumption by construction equipment was estimated to calculate emissions by multiplying the carbon dioxide equivalents ($CO_2e$) intensity factor with the electricity consumption for each year. Emissions from electric construction equipment are shown in **Table 6**.

### 2.2.4 On-road Construction Trips

Construction trip rates were provided by the Project Applicant for each general area. Construction trips by area are shown in **Table 7a**. Trip lengths are shown in **Table 7b**. For demolition and grading hauling trip generation rates, total haul truck trip counts were provided by Project Applicant.

Emission factors from EMFAC2021,[12] the ARB Emission Factors model for on-road emissions, were used for emissions of CAPs and GHGs. The emission factors used for on-road construction trips of the Proposed Project cover the anticipated years of construction. EMFAC2021 incorporates the Pavley Clean Car Standards and the Advanced Clean Cars (ACC) program.

Running exhaust, running loss, tire wear, and brake wear emission factors were estimated with a gram/mile factor. These emissions were calculated as shown below:

$$E_M = \sum (EF_M * VMT)$$

Where:

VMT or Vehicle Miles Traveled: Trip Length*Trip Number

$EF_M$: emission factor (g/mile) from EMFAC2021

Emissions from vehicle idling exhaust, starting exhaust, and evaporative emissions were estimated with a gram/trip emission factor. Idling emission factors were only estimated for heavy duty trucks as idling emissions occur during extended idling events while the truck is operating but not traveling any significant distance (e.g., during loading and unloading). In EMFAC2021, an extended idling event is defined as "a continuous segment of vehicle activity that meets three criteria: all instantaneous vehicle speeds being lower than 5 mph, the total distance of less than 1 mile, and the total duration of more than 5 minutes" (CARB, 2021). EMFAC takes account of idling emissions from light duty vehicles and other vehicle types in running emissions estimates. These emissions were estimated as shown below:

$$E_T = \sum (EF_T * Trip\ Number)$$

Where:

$EF_T$ = emissions factor (g/trip) from EMFAC2021.

[12] ARB has published off-model adjustment factors to account for the "Safer Affordable Fuel-Efficient Vehicles Rule Part One: One National Program" (SAFE 1) adopted by the USEPA and the National Highway Traffic Safety Administration (NHTSA). These adjustment factors will not be incorporated into this analysis as this regulation is currently under litigation and the USEPA and NHTSA have proposed rulemakings to repeal SAFE 1.

Trip Number = trips provided by Project Applicant

Idling time is modeled to be consistent with California Airborne Toxics Control Measure (ATCM) to limit diesel-fueled commercial motor vehicle idling (California ARB 2016).

Road dust emissions are calculated using ARB methodology. The on-road entrained dust emission factor derivation is shown in **Table 8**.

### 2.2.5 Fugitive Dust

Fugitive dust contributes to $PM_{10}$ and $PM_{2.5}$ emissions and is generated by the various activities occurring at the Project site. The following subsections describe the methodology used to calculate fugitive dust emissions from Project activities.

Fugitive dust emissions are not included in the comparison to thresholds for mass emissions as these thresholds for construction are for exhaust only. However, to be conservative, fugitive dust emissions are included in the estimation of $PM_{2.5}$ concentration based on recent guidance provide to the City by the BAAQMD.

#### 2.2.5.1 Demolition

Fugitive dust emissions from mechanical dismemberment and debris loading during demolition were estimated using CalEEMod methodology and assumptions. The emission factor is calculated on a per-ton of building waste weight. Building waste weight was estimated based on the volume of building waste from demolition provided by the Project Applicant. Mitigated emissions assume a 55% reduction due to watering two times a day. Dust emissions from demolition are presented in **Table 9a.**

#### 2.2.5.2 Grading

Fugitive dust emissions from grading equipment (i.e., graders and scrapers) occur during the grading and utility phases. Grading emissions were estimated using CalEEMod methodology and assumptions. The emission factor for grading is calculated on a per-VMT basis. Equipment VMT was calculated using the maximum area disturbed per day, based on Project-specific data and CalEEMod default assumptions. Mitigated emissions assume a 55% reduction due to watering two times a day. Grading emissions are presented in **Table 9b.**

#### 2.2.5.3 Material Loading

Fugitive dust from material loading activities includes the unloading of materials construction and loading of soil onto the haul trucks during the grading and utilities excavation phases. Material loading fugitive dust emissions were estimated using CalEEMod methodology and assumptions. The emission factor for material loading is calculated on a per-ton basis. Material loaded in cubic yards is based on Project-specific data. Mitigated emissions assume a 55% reduction due to watering two times a day. Emissions from material loading are presented in **Table 9c.**

### 2.2.6 Watering for Dust Control

GHG emissions associated with the electricity consumed during watering for construction dust control were calculated based on the total water consumption, electricity used for watering, and the electricity carbon intensity for water supply, distribution and treatment over the construction period using CalEEMod equivalent methodologies. Total water consumption is from the Project Applicant. The electricity intensity used is Pacific Gas and

Electric's (PG&E) GHG emission factor.[13] Emissions from construction water use are presented in **Table 10**.

CAP and GHG emissions from water trucks operation were calculated using EMFAC2021 emission factors with other on-road construction trips as described in **Section 2.2.4**.

### 2.2.7 Architectural Coatings and Paving Off-Gas Emissions

Emissions from architectural coating and paving off-gas emissions were estimated using methodologies consistent with CalEEMod.

Paving emissions were based on the square footage of roadway and parking lots that need to be paved. This square footage was provided by the Project Applicant. The parking lot and the estimated square footage of roadways were summed together to determine the overall paved surface area assumed for the Project. This was used to calculate asphalt off-gassing emissions from the Project using default CalEEMod methodologies and factors, as shown in **Table 11**.

Architectural coating emissions were based on the square footage of different land uses as well as CalEEMod defaults regarding the amount of coated areas for the various land uses, as shown in **Table 12**. Unmitigated emissions from architectural coating during Project construction assumed compliance with BAAQMD paint volatile organic compound (VOC) regulations, while mitigated emissions assume that Project indoor painting during construction will utilize super-compliant coatings, which are paints that have been reformulated to exceed the SCAQMD's Rule 1113 (Architectural Coatings) requirements.

### 2.2.8 Construction CAP and GHG Emissions Summary

A summary of maximum annual average daily construction CAP emissions is shown in **Summary Table A**, below. More detail on unmitigated construction CAP emissions from the Project are summarized in **Table 13** and mitigated construction CAP emissions from the Project are summarized in **Table 14**. CAP emissions are reported in units of annual average daily emissions for each year of construction. For construction that will occur throughout the full year, annual emissions were averaged over 365 days of construction each year to give average daily emissions in lbs per day to get an average emission rate to compare against thresholds. [14] Construction will not occur throughout the full year during the first and last years of construction. In these scenarios, the annual construction emissions for the first and last years were averaged over the number of days construction will occur in the respective year. Mitigated emissions assume 95 percent of construction equipment before residents move on-site and 98 percent of construction equipment after residents move on-site has Tier 4 Final engines. The remaining equipment could have Tier 2 engines or better. Mitigated emissions also assume indoor painting during construction will utilize super-compliant coatings, which are paints that have been reformulated to exceed the SCAQMD's Rule 1113 (Architectural Coatings) requirements.

---

[13] The Project would receive its power from Peninsula Clean Energy. However, the electricity to pump water from its source to the Project is not under control of the Project, so the carbon intensity of electricity from PG&E powered electricity will be used.

[14] Activity is expected on most Saturdays. Even if 6 days per week (312 days per year) were used to average emissions, conclusions would not change.

Total GHG emissions for construction are summarized in **Table 15**. GHG emissions are reported in total metric tons of carbon dioxide equivalents.

**Summary Table A. Summary of Maximum Annual Average Daily Construction CAP Emissions and Annual Construction GHG Emissions**

| | ROG | NOx | $PM_{10}$ | $PM_{2.5}$ | $CO_2e$ |
|---|---|---|---|---|---|
| | lb/day | | | | MT/year |
| BAAQMD Threshold of Significance | 54 | 54 | 82 | 54 | N/A |
| Unmitigated Emissions | 63 | 124 | 5.8 | 5.4 | 23,050 |
| *Exceed Threshold?* | *Yes* | *Yes* | *No* | *No* | *N/A* |
| Mitigated Emissions | 28 | 47 | 0.78 | 0.77 | 23,050 |
| *Exceed Threshold?* | *No* | *No* | *No* | *No* | *N/A* |

## 2.3 Calculation Methodologies for Operational Emissions

The net (Project minus Baseline) CAP, GHG and TAC operational emissions were evaluated. Sources of operational emissions from the existing site improvements (Baseline) and Project include operation of the buildings (area, energy, water, waste), emergency diesel generators, and on-road vehicles. The Baseline condition has one emergency diesel generator, and the Project would have thirteen emergency diesel generators.

Operational emissions that are concurrent with construction activities are presented by year in order to determine the combined construction and operational emissions for each year of construction, as discussed further in **Section 2.4**. Partial buildout emissions for both operational and mobile sources were scaled using the portion of each building area that becomes operational for each year of construction, as shown in **Table 16**.

Project and Baseline operational emissions were estimated using CalEEMod equivalent methodologies, as discussed below.

### 2.3.1 On-road Mobile Sources

Vehicles on the roadway emit CAPs, GHGs[15] and TACs in their exhaust and through evaporation, tire and brake wear, and fugitive dust from roadways. Mobile emissions were calculated using Project-specific trip generation and VMT by vehicle type and emission factors from EMFAC2021 for San Mateo County. To estimate annual emissions, trips and

---

[15] GHG emissions from mobile sources are estimated for informational purposes. GHG impacts are evaluated based on VMT, as discussed in Section 1.3.2.

VMT were multiplied by the relevant emission factor of pollutants. More details on this calculation are provided below. The fleet mix and trip generation for the Project, and the Campus District in particular, are unique to the Project due to the Project's unique Transportation Demand Management (TDM) program, trip cap, and vehicle fleets. Therefore, using generalized approaches in CalEEMod would not appropriately estimate emissions for the Project. Project specific information was used to develop emissions calculations using EMFAC2021 directly.

#### 2.3.1.1 Vehicle Trips and VMT
