Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
AIR QUALITY				
Initial Study Impact Air Quality b: The proposed project would result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard. (Potentially Significant)				
ConnectMenlo Mitigation Measure AQ-2a: Prior to issuance of building permits, development project applicants that are subject to CEQA and exceed the screening sizes in the Bay Area Air Quality Management District's (BAAQMD) CEQA Guidelines shall prepare and submit to the City of Menlo Park a technical assessment evaluating potential project operation-phase-related air quality impacts. The evaluation shall be prepared in conformance with the BAAQMD methodology in assessing air quality impacts. If operational-related criteria air pollutants are determined to have the potential to exceed the BAAQMD thresholds of significance, as identified in BAAQMD's CEQA Guidelines, the City of Menlo Park Community Development Department shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during operational activities.	Preparation of the operation-related air quality technical assessment. The assessment determined that the project would not exceed BAAQMD criteria, so additional mitigation measures are not required.	During the building permit and site development review process and prior to permit issuance. This has been completed.	Project sponsor	City of Menlo Park Community Development Department (CDD)

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
ConnectMenlo Mitigation Measure AQ-2b1: Prior to building permit issuance, the City shall require applicants for all development projects in the city to comply with the current Bay Area Air Quality Management District's (BAAQMD) basic control measures for reducing construction emissions of PM10 (Table 8-1, Basic Construction Mitigation Measures Recommended for All Proposed Projects, of the BAAQMD CEQA Guidelines. • All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day. • All haul trucks transporting soil, sand, or other loose material off-site shall be covered. • All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. • All vehicle speeds on unpaved roads shall be limited to 15 mph. • All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used. • Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations). Clear signage shall be provided for construction workers at all access points. • All construction equipment shall be maintained and properly tuned in accordance with manufacturer specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. • Post a publicly visible sign with the telephone number and person to contact at the City of Menlo Park regarding dust complaints. This person shall respond and take corrective action within 48 hours. The phone number for BAAQMD shall also be visible to ensure compliance with applicable regulations.	Demonstrate compliance with the current BAAQMD basic control measures for reducing construction emissions of PM10. Implement required measures.	During the building permit and site development review process and prior to permit issuance. During demolition and construction.	Project sponsor	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
ConnectMenlo Mitigation Measure AQ-2b2: Prior to issuance of building permits, development projects in the City that are subject to CEQA and exceed the screening sizes in BAAQMD's CEQA Guidelines shall prepare and submit to the City of Menlo Park a technical assessment evaluating potential project construction-related air quality impacts. The evaluation shall be prepared in conformance with the BAAQMD methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the BAAQMD thresholds of significance, as identified in the BAAQMD CEQA Guidelines, the City of Menlo Park shall require that applicants for new development projects incorporate mitigation measures to reduce air pollutant emissions during construction activities to below the thresholds (e.g., Table 8-2, Additional Construction Mitigation Measures Recommended for Projects with Construction Emissions above the Threshold of the BAAQMD CEQA Guidelines, or applicable construction mitigation measures subsequently approved by BAAQMD). These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans) submitted to the City and shall be verified by the City's Building Division and/or Planning Division.	Preparation of the construction-related air quality technical assessment. The assessment determined that the BAAQMD Additional Construction Mitigation Measures are not required.	During the building permit and site development review process and prior to permit issuance. This has been completed.	Project sponsor	CDD
Project Mitigation Measure AIR-1: During construction of the proposed project, the project contractor shall ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for the project construction at a minimum meets the California Air Resources Board Tier 2 emissions standards with Level 3 diesel particulate filters or equivalent.	Demonstrate compliance with CARB Tier 2 emissions standards for diesel powered equipment that is 50 horsepower or more.	During demolition and project construction.	Project sponsor	CDD
Initial Study Impact Air Quality c: Implementation of the proposed project would expose sensitive receptors to substantial pollutant concentrations. (Potentially Significant)				
ConnectMenlo Mitigation Measure AQ-2b1: Implement ConnectMenlo Mitigation Measure AQ-2b1.	See above.	See above.	See above.	See above.
Project Mitigation Measure AIR-1: Implement Project Mitigation Measure AIR-1.	See above.	See above.	See above.	See above.

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
BIOLOGICAL RESOURCES				
Initial Study Impact Biological Resources a: The proposed project could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. (Potentially Significant)				
ConnectMenlo Mitigation Measure BIO-1: Prior to individual project approval, the City shall require project applicants to prepare and submit project-specific baseline biological resources assessments on sites containing natural habitat with features such as mature and native trees or unused structures that could support special-status species and other sensitive biological resources, and common birds protected under Migratory Bird Treaty Act (MBTA). The baseline biological resources assessment shall be prepared by a qualified biologist. The biological resource assessment shall provide a determination on whether any sensitive biological resources are present on the property, including jurisdictional wetlands and waters, essential habitat for special-status species, and sensitive natural communities. If sensitive biological resources are determined to be present, appropriate measures, such as preconstruction surveys, establishing no-disturbance zones during construction, and applying bird-safe building design practices and materials, shall be developed by the qualified biologist to provide adequate avoidance or compensatory mitigation if avoidance is infeasible. Where jurisdictional waters or federally and/or State-listed special-status species would be affected, appropriate authorizations shall be obtained by the project applicant, and evidence of such authorization provided to the City prior to issuance of grading or other construction permits. An independent peer review of the adequacy of the biological resource assessment may be required as part of the CEQA review of the proposed project, if necessary, to confirm its adequacy.	Prepare a biological resource assessment. The assessment identified potential impacts and recommended Project Mitigation Measure BR-1.	Prior to project discretionary approval. This has been completed.	Qualified wildlife biologist retained by project sponsor	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
Project Mitigation Measure BR-1: In accordance with ConnectMenlo Mitigation Measure BIO-1, implement the following additional, project-specific measures recommended by the BRA: A. Roosting and Breeding Bats • If activities occur during the breeding season for bats (March 1 through August 31), young bats that cannot fly could be killed or injured during vegetation and building demolition. • Preconstruction surveys should be completed by a qualified bat biologist if the structure or trees are scheduled to be removed during the breeding season. At least two weeks prior to tree removal or demolition activities a qualified bat biologist with demonstrated bat survey experience shall conduct a focused survey for bats and potential roosting sites within trees and the building to be removed through visual surveys and emergence acoustic surveys. o If no roosting sites or bats are found the biologist shall submit a letter report confirming the absence and no further measures are required. o If roosting bats are found during the above survey and roosts will be affected, an avoidance and minimization plan shall be developed by the qualified bat biologist in consultation with CDFW. Avoidance measures may include no-disturbance buffer zones during construction, temporal avoidance during the maternity season, or other measures deemed necessary based on the survey results.	Complete all mitigation measures identified in the BRA.	Prior to and during construction.	Project sponsor; and qualified wildlife biologist retained by project sponsor.	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
B. Nesting Raptors and Migratory Birds • For project activities occurring during the nesting bird breeding season (February 1 through August 31) a preconstruction survey is required from a qualified biologist with demonstrated experience conducting surveys for nesting birds, including raptors. The survey shall be conducted for birds in all habitats within the project site, including all disturbance, staging and access areas and a 250-foot buffer. This survey should be conducted no more than fourteen days prior to the initiation of project activities during the breeding season. If there is a lapse in construction related activities for more than seven (7) days, a new survey should be conducted. o If an active nest is identified during preconstruction surveys, the qualified biologist shall establish species and site-specific no disturbance buffer zones for each nest using high-visibility fencing, flagging or other method deemed appropriate by the biologist. No construction activities shall be allowed to occur within the buffer zones. The size of the buffer shall be determined based on the species sensitivity to disturbance and the planned activities within the vicinity. The qualified biologist shall develop a schedule for monitoring and evaluating the status of the nest(s). The buffer shall remain in effect until the nest is no longer active as determined by the qualified biologist. o If determined necessary by the qualified biologist, consultation with the USFWS and/or CDFW may be required depending upon the species and the circumstances. The results of the preconstruction surveys and/or nest disturbance activities shall be provided in a memorandum detailing the survey results.				

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
C. Special Status Plants • Fourteen days prior to the initiation of project activities during the breeding season. If there is a lapse in construction related activities for more than seven (7) days, a new survey should be conducted. o Install bird perching deterrents along suitable perching sites to deter avian predators. Such deterrents may include bird spikes, netting, sound deterrents or perching deterrents approved by USFWS and CDFW. o Landscaping used on the rooftop garden should consist of species that do not exceed 30 feet in height and may include native or non-invasive ornamental species. Species with broad canopies are preferred. Trees that are planted on the rooftop garden should be located away from the edge of the roof. o Reduce large areas transparent or reflective glass. o Locate water features, trees and bird habitat away from building exteriors to reduce reflection. o Reduce or eliminate the visibility of landscaped areas behind glass. o Turn non-emergency lighting off at night, especially during the bird migration season (February to May and August to November). o Include window coverings that adequately block light transmission from rooms where interior lighting is used at night and installation motion sensors or controls to extinguish lights in unoccupied spaces. o Design or install lighting fixtures that minimize light pollution including light trespass, over-illumination, glare, light clutter, and skyglow while using bird-friendly colors for lighting when possible. San Francisco's Standards for Bird-Safe Buildings (City and County of San Francisco, 2011) provides a good overview of building design and lighting guidelines to minimize bird/building collision.				
Initial Study Impact Biological Resources b: The proposed project would have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service. (Potentially Significant)				
ConnectMenlo Mitigation Measure BIO-1: Implement ConnectMenlo Mitigation Measure BIO-1.	See above.	See above.	See above.	See above.
Project Mitigation Measure BR-1: Implement Project Mitigation Measure BR-1.	See above.	See above.	See above.	See above.

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
Initial Study Impact Biological Resources c: The proposed project would have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means. (Potentially Significant)				
ConnectMenlo Mitigation Measure BIO-1: Implement ConnectMenlo Mitigation Measure BIO-1.	See above.	See above.	See above.	See above.
Project Mitigation Measure BR-1: Implement Project Mitigation Measure BR-1.	See above.	See above.	See above.	See above.
Initial Study Impact Biological Resources d: The proposed project would interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. (Potentially Significant)				
ConnectMenlo Mitigation Measure BIO-1: Implement ConnectMenlo Mitigation Measure BIO-1.	See above.	See above.	See above.	See above.
Project Mitigation Measure BR-1: Implement Project Mitigation Measure BR-1.	See above.	See above.	See above.	See above.
Initial Study Impact Biological Resources e: The proposed project would conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. (Potentially Significant)				
Project Mitigation Measure BR-1: Implement Project Mitigation Measure BR-1.	See above.	See above.	See above.	See above.

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
CULTURAL RESOURCES				
Initial Study Impact Cultural Resources a: The proposed project would cause a substantial adverse change in the significance of a historic resource pursuant to § 15064.5. (Potentially Significant)				
ConnectMenlo Mitigation Measure CULT-2a: If a potentially significant subsurface cultural resource is encountered during ground disturbing activities on any parcel in the city, all construction activities within a 100-foot radius of the find shall cease until a qualified archeologist determines whether the resource requires further study. All developers in the study area shall include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. Any previously undiscovered resources found during construction activities shall be recorded on appropriate California Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of the California Environmental Quality Act (CEQA) criteria by a qualified archeologist. If the resource is determined significant under CEQA, the qualified archaeologist shall prepare and implement a research design and archaeological data recovery plan that will capture those categories of data for which the site is significant. The archaeologist shall also perform appropriate technical analyses; prepare a comprehensive report complete with methods, results, and recommendations; and provide for the permanent curation of the recovered resources. The report shall be submitted to the City of Menlo Park, Northwest Information Center (NWIC), and State Historic Preservation Office (SHPO), if required.	If any archaeological artifacts are discovered during demolition/construction, all ground disturbing activity within 100 feet shall be halted immediately. A qualified archaeologist shall inspect any archaeological artifacts found during construction and if determined to be a resource shall prepare a plan meeting the specified standards which shall be implemented by the project sponsor(s).	Ongoing during construction	Project sponsor; and qualified archaeologist retained by the project sponsor	CDD
Initial Study Impact Cultural Resources b: The proposed project would cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5. (Potentially Significant)				
ConnectMenlo Mitigation Measure CULT-2a: Implement ConnectMenlo Mitigation Measure CULT-2a.	See above.	See above.	See above.	See above.

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
Project Mitigation Measure CR-1: Mitigation Measure CR-1: Worker Environmental Training. Because of the potential for discovery of unknown buried cultural and paleontological resources, prior to the commencement of the first phase, the general contractor and those engaged in ground-disturbing activities shall be given environmental training regarding cultural and paleontological resource protection, resource identification and protection, and the laws and penalties governing such protection. This training may be administered by the project archaeologist and/or paleontologist as stand-alone training or included as part of the overall environmental awareness training required by the project. The training shall include, at minimum, the following: • The types of cultural resources and human remains, that are likely to be encountered. • The procedures to be taken in the event of an inadvertent cultural resource or human discovery. • The penalties for disturbing or destroying cultural resources and human remains. • The types of fossils that could occur at the project site. • The types of lithologies in which the fossils could be preserved. • The procedures that should be taken in the event of a fossil discovery. • The penalties for disturbing paleontological resources or human remains.	Provide worker environmental training.	Once prior to the start of issuance of grading permit As needed during duration of soil-disturbing or excavating activities and throughout ground-disturbing activities	Qualified archaeologist and/or paleontologist (retained by the Project Sponsor)	CDD
Project Mitigation Measure CR-2:: On-site Licensed Archaeologist. During the demolition and excavation phases, the applicant shall hire a licensed archaeologist to be on-site and monitoring work activities to immediately handle and assess any archaeological resources encountered, along with engagement with tribal leadership.	Hire a licensed archaeologist and keep them on site and available to assist with archaeologoical resource discovery and engagement with tribal leadership.	Retained prior to issuance of grading permit. On-site as needed during duration of demolition, and throughout ground-disturbing or excavating activities.	Project sponsor; and Qualified archaeologist and/or paleontologist (retained by the Project Sponsor)	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
Initial Study Impact Cultural Resources c: The proposed project would disturb any human remains, including those interred outside of formal cemeteries. (Potentially Significant)				
ConnectMenlo Mitigation Measure CULT-4: Procedures of conduct following the discovery of human remains have been mandated by Health and Safety Code Section 7050.5, Public Resources Code Section 5097.98 and the California Code of Regulations Section 15064.5(e) (CEQA). According to the provisions in CEQA, if human remains are encountered at the site, all work in the immediate vicinity of the discovery shall cease and necessary steps to ensure the integrity of the immediate area shall be taken. The San Mateo County Coroner shall be notified immediately. The Coroner shall then determine whether the remains are Native American. If the Coroner determines the remains are Native American, the Coroner shall notify the NAHC within 24 hours, who will, in turn, notify the person the NAHC identifies as the Most Likely Descendant (MLD) of any human remains. Further actions shall be determined, in part, by the desires of the MLD. The MLD has 48 hours to make recommendations regarding the disposition of the remains following notification from the NAHC of the discovery. If the MLD does not make recommendations within 48 hours, the owner shall, with appropriate dignity, reinter the remains in an area of the property secure from further disturbance. Alternatively, if the owner does not accept the MLD's recommendations, the owner or the descendent may request mediation by the NAHC.	Initiated after a find is made during construction.	During construction, and regularly scheduled site inspections that would be initiated after a find is made during construction.	San Mateo County Coroner and Project Sponsor	CDD
Project Mitigation Measure CR-1: Implement Project Mitigation Measure CR-1.	See above.	See above.	See above.	See above.

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
GEOLOGY AND SOILS				
Initial Study Impact Geology and Soils f: The proposed project would directly or indirectly destroy a unique paleontological resource or site or unique geological feature. (Potentially Significant)				
ConnectMenlo Mitigation Measure CULT-3: In the event that fossils or fossil bearing deposits are discovered during ground disturbing activities anywhere in the city, excavations within a 50-foot radius of the find shall be temporarily halted or diverted. Ground disturbance work shall cease until a City-approved qualified paleontologist determines whether the resource requires further study. The paleontologist shall document the discovery as needed (in accordance with Society of Vertebrate Paleontology standards [Society of Vertebrate Paleontology 1995]), evaluate the potential resource, and assess the significance of the find under the criteria set forth in CEQA Guidelines Section 15064.5. The paleontologist shall notify the appropriate agencies to determine procedures that would be followed before construction activities are allowed to resume at the location of the find. If avoidance is not feasible, the paleontologist shall prepare an excavation plan for mitigating the effect of construction activities on the discovery. The excavation plan shall be submitted to the City of Menlo Park for review and approval prior to implementation, and all construction activity shall adhere to the recommendations in the excavation plan.	If any fossils or fossil bearing deposits are discovered during demolition/construction, all ground disturbing activity within 50 feet shall be halted immediately. A qualified paleontologist shall inspect any paleontological artifacts found during construction and if determined to be a resource shall prepare an excavation plan meeting the specified standards which shall be implemented by the project sponsor(s). If a fossil is determined to be significant and avoidance is not feasible, the paleontologist will develop and implement an excavation and salvage plan in accordance with SVP standards.	Ongoing during construction	Project sponsor; and Qualified paleontologist retained by the project sponsor	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
GREENHOUSE GAS EMISSIONS				
Initial Study Impact Greenhouse Gas Emissions a: The proposed project woulf generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment. (Potentially Significant)				
ConnectMenlo Mitigation Measure AQ-2b1: Implement ConnectMenlo Mitigation Measure AQ-2b1.	See above.	See above.	See above.	See above.
HAZARDS AND HAZARDOUS MATERIALS				
Initial Study Impact Hazards and Hazardous Materials b: The proposed project would create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. (Potentially Significant)				
ConnectMenlo Mitigation Measure HAZ-4a: Construction at any site in the City with known contamination shall be conducted under a project-specific Environmental Site Management Plan (ESMP) that is prepared in consultation with the Regional Water Quality Control Board (RWQCB) or the Department of Toxic Substances Control (DTSC), as appropriate. The purpose of the ESMP is to protect construction workers, the general public, the environment, and future site occupants from subsurface hazardous materials previously identified at the site and to address the possibility of encountering unknown contamination or hazards in the subsurface. The ESMP shall summarize soil and groundwater analytical data collected on the project site during past investigations; identify management options for excavated soil and groundwater, if contaminated media are encountered during deep excavations; and identify monitoring, irrigation, or other wells requiring proper abandonment in compliance with local, State, and federal laws, policies, and regulations. The ESMP shall include measures for identifying, testing, and managing soil and groundwater suspected of or known to contain hazardous materials. The ESMP shall: 1) provide procedures for evaluating, handling, storing, testing, and disposing of soil and groundwater during project excavation and dewatering activities, respectively; 2) describe required worker health and safety provisions for all workers potentially exposed to hazardous materials in accordance with State and federal worker safety regulations; and 3) designate personnel responsible for implementation of the ESMP.	Prepare an Environmental Site Management Plan (ESMP). Implement measures identified by the ESMP.	Prior to site excavation. During demolition, excavation and construction.	Qualified consultant (retained by the Project Sponsor; and Project Sponsor)	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
ConnectMenlo Mitigation Measure HAZ-4b: For those sites throughout the city with potential residual contamination in soil, gas, or groundwater that are planned for redevelopment with an overlying occupied building, a vapor intrusion assessment shall be performed by a licensed environmental professional. If the results of the vapor intrusion assessment indicate the potential for significant vapor intrusion into an occupied building, project design shall include vapor controls or source removal, as appropriate, in accordance with regulatory agency requirements. Soil vapor mitigations or controls could include vapor barriers, passive venting, and/or active venting. The vapor intrusion assessment and associated vapor controls or source removal can be incorporated into the ESMP (Mitigation Measure HAZ-4a).	Prepare a vapor intrusion assessment.	Prior to site excavation.	Qualified consultant (retained by the Project Sponsor).	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
Project Mitigation Measure HM-1: Implement the following additional, project-specific measures, as recommended by the Phase I ESA and RMP: • Prior to issuance of a building permit, the applicant shall prepare a site-specific Health and Safety Plan (HASP), in accordance with California Occupational Safety and Health Administration (CAL-OSHA) Construction Safety Orders within Title 8 of the California Code of Regulations (CCR). The general contractor for the proposed project shall be responsible for notifying subcontractors and visitors of pertinent environmental conditions to ensure adequate protection for workers and visitors while on site, and subcontractors shall adopt the general contractor's HASP or prepare their own. • Prior to issuance of a building permit, the general contractor shall document and provide training for all workers involved with contact and/or management of contaminated soil or groundwater, in accordance with California Code of Regulations, Title 29, Part 1910.120 (Hazardous Waste Operations and Emergency Response [HAZWOPER] standards). • During excavation and construction, the applicant shall implement additional dust control measures when there is the potential for contaminated soil to affect the nearby community. It is anticipated that following placement of fill, hardscapes, and building pads, air monitoring will not be required, as there will not be exposed soil surfaces with concentrations exceeding residential and shallow soil exposure concentrations (if present).	Implement all additional mitigations per the Phase I ESA and RMP.	Prior to issuance of a building permit, prior to issuance of a demolition permit or prior to soil disturbance, and during excavation and construction.	Qualified consultant (retained by the Project Sponsor).	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
• Prior to issuance of a demolition permit or any other actions involving soil disturbance, the general contractor and subcontractors shall read the Risk Management Plan for the proposed project and sign the Agreement and Acknowledgement Statement to certify that they have read, understood, and agreed to abide by its provisions. • During demolition and throughout the construction process, the applicant shall notify the RWQCB, and other agencies, where applicable, of all site development activities in accordance with the following protocols: o The applicant shall notify the RWQCB within 24 hours of discovery of: . Releases, spills, or releases of hazardous substances or petroleum hydrocarbons to soil or water that are considered, based on best professional judgement and/or physical evidence (including but not limited to olfactory, visual, field instrument, and laboratory data), to be an immediate threat to human health and the environment; and/or . Discovery of unknown conditions (underground storage tanks. sumps, vaults, piping, etc.) or newly found contamination. In this latter case, the applicant shall notify Menlo Park Fire Protection District within 24 hours of discovery as well. o The applicant shall notify the RWQCB 72 hours prior to any ground disturbing activities in areas of known or suspected contamination. o All notification to the RWQCB and the Menlo Park Fire Protection District shall be via email and phone. • Prior to issuance of a building permit, the applicant shall confirm and update all agency contacts provided in the RMP accordingly, and provide an agency contact sheet to the general contractor, which shall be posted in an accessible and suitable location at the project site.				

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
• During the construction period, if necessary, the general contractor and/or environmental consultant shall document any groundwater removal or soil excavation and disposal in daily field reports, which shall be kept at the project site and be made available to the RWQCB upon request. Documentation will include at a minimum the following, as applicable: o Groundwater: Groundwater is at approximately five feet below ground surface. Based on the current construction design, it is not expected to be encountered in excavations during construction activities. However, building support piers shall be advanced through groundwater. If groundwater is encountered, documentation shall include the location, volume of groundwater that is removed, characterization, treatment, and destination (transported to temporary holding tanks, used as dust suppression, and/or disposed of off-Site); o Underground Structures: type, contents, characterization, and destination (abandoned in place or disposed of off-site) of any underground structures discovered during site development activities; o Impacted Soil: origin, volume, characterization, and destination of any contaminated soil removed from the project site; o Imported Soil: origin, volume, characterization, and destination (location used on-site) of imported fill if obtained from a non-commercial quarry; o Disposal Records: date, time, trucking company, drivers and vehicles used for the trip, equipment decontamination and tarping, waste/material type, volume, copies of bills-of-lading, and hazardous waste manifests; o Dust Complaint Logs: time, name and contact information, compliant description, earthwork activities associated with complaint, and measures taken to mitigate dust;				

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
o Analytical Reports: laboratory analytical reports of samples of soil, groundwater, dust, and soil vapor, if samples are collected. • Prior to any soil disturbance, the applicant shall confirm with the RWQCB whether the requirement to continue sampling groundwater from the remaining monitoring well MW-8 (located on site) is still necessary, and if this well could instead be destroyed in compliance with applicable regulations and procedures of the RWQCB. • Prior to any soil disturbance, the applicant shall evaluate the following additional soil details and demonstrate that no further measures are needed for soil disturbance: o The quality of soil gas and potential risks to indoor air at the subject properties. o The amount of lead in the soil due to lead-based paint.				
Initial Study Impact Hazards and Hazardous Materials d: The proposed project would be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment. (Potentially Significant)				
ConnectMenlo Mitigation Measure HAZ-4a: Implement ConnectMenlo Mitigation Measure HAZ-4a.	See above.	See above.	See above.	See above.
ConnectMenlo Mitigation Measure HAZ-4b: Implement ConnectMenlo Mitigation Measure HAZ-4b.	See above.	See above.	See above.	See above.

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
NOISE				
Initial Study Impact Noise a: The proposed project would result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. (Potentially Significant)				
ConnectMenlo Mitigation Measure NOI-1a: To meet the requirements of Title 24 and General Plan Program N1.A, project applicants shall perform acoustical studies prior to issuance of building permits for citywide development of new noise-sensitive uses. New residential dwellings, hotels, motels, dormitories, and school classrooms must meet an interior noise limit of 45 dBA CNEL or Ldn. Developments in areas exposed to more than 60 dBA CNEL must demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. Where exterior noise levels are projected to exceed 60 dBA CNEL or Ldn at the façade of a building, a report must be submitted with the building plans describing the noise control measures that have been incorporated into the design of the project to meet the 45 dBA noise limit. Project applicants for all new multi-family residential projects subject to the review and approval of the Community Development Department, prior to building permit issuance, must perform acoustical studies within the projected Ldn 60 dB noise contours, so that noise mitigation measures can be incorporated into project design and site planning, subject to the review and approval of the Community Development Department.	Interior noise exposure assessed by qualified acoustical engineer and results submitted to City showing conceptual window and wall assemblies necessary to meet City standards.	Prior to the issuance of construction permits.	Project sponsors(s) and contractor(s)	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
ConnectMenlo Mitigation Measure NOI-1c: Project applicants shall minimize the exposure of nearby properties to excessive noise levels from construction-related activity through CEQA review, conditions of approval and/or enforcement of the City's Noise Ordinance. Prior to issuance of demolition, grading, and/or building permits for development projects, a note shall be provided on development plans indicating that during on-going grading, demolition, and construction, the property owner/developer shall be responsible for requiring contractors to implement the following measures to limit construction- related noise: • Construction activity is limited to the daytime hours between 8:00 a.m. to 6:00 p.m. on Monday through Friday, as prescribed in the City's Municipal Code. • All internal combustion engines on construction equipment and trucks are fitted with properly maintained mufflers, air intake silencers, and/or engine shrouds that are no less effective than as originally equipped by the manufacturer. • Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses. • Stockpiling is located as far as feasible from nearby noise-sensitive receptors. • Limit unnecessary engine idling to the extent feasible. • Limit the use of public address systems. • Construction traffic shall be limited to the haul routes established by the City of Menlo Park.	Limit all construction activities to minimize noise.	Prior to the issuance of construction permits.	Project sponsors(s) and contractor(s)	CDD
Project Mitigation Measure NOI-1: The construction contractor shall ensure that a minimum 16-foot-high barrier, such as a plywood structure or flexible sound control curtain that has a density of 2 lb/ft2 or is sound rated with a minimum Sound Transmission Class (STC) rating of 28 or higher, shall be erected on the western project site boundary adjacent to the sensitive receptors to minimize the amount of noise during construction.	Construct a noise barrier on site.	Prior to any excavation or construction.	Project Sponsor	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
Project Mitigation Measure NOI-2: The following mitigation measure is required to reduce heating, ventilation, and air conditioning (HVAC) operational noise levels: • Once specifications of the rooftop HVAC equipment are determined, an analysis shall be prepared and submitted to the satisfaction of the City Planning Director to confirm that the operation of rooftop equipment would meet the City's nighttime 50 dBA equivalent continuous sound level (Leq) noise level standard. This can be achieved by the following design features: 1. Choosing rooftop mechanical equipment that has a reference noise level of 68 dBA Leq at 5 feet or less, or 2. Installation of silencers or enclosures capable of reducing noise levels by a minimum of 4 dBA.	Complete an analysis of the rooftop equipment and implement the design features outlined in this measure.	During construction.	Project Sponsor	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
Initial Study Impact Noise b: The proposed project would result in generation of excessive groundborne vibration or groundborne noise levels. (Potentially Significant)				
ConnectMenlo Mitigation Measure NOI-2a: To prevent architectural damage as a result of construction-generated vibration: • Prior to issuance of a building permit for any development project requiring pile driving or blasting, the project applicant/developer shall prepare a noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these activities. The maximum levels shall not exceed 0.2 inch/second, which is the level that can cause architectural damage for typical residential construction. If maximum levels would exceed these thresholds, alternative methods such static rollers, non-explosive blasting, and drilling piles as opposed to pile driving shall be used. To prevent vibration-induced annoyance as a result of construction-generated vibration: • Individual projects that involve vibration-intensive construction activities, such as blasting, pile drivers, jack hammers, and vibratory rollers, within 200 feet of sensitive receptors shall be evaluated for potential vibration impacts. A vibration study shall be conducted for individual projects where vibration-intensive impacts may occur. The study shall be prepared during the project's approval process and by an acoustical or vibration engineer holding a degree in engineering, physics, or allied discipline and who is able to demonstrate a minimum of two years of experience in preparing technical assessments in acoustics and/or groundborne vibrations. The study shall be submitted to and approved by the City prior to issuance of building permits.	A noise and vibration analysis shall be prepared to assess and mitigate potential noise and vibration impacts. A vibration study shall also be required for vibration-intensive activities occurring within 200 feet of sensitive receptors, to further evaluate vibration-related impacts. All vibration activities shall be required to not exceed specified vibration annoyance levels.	Prior to the issuance of construction permits	Project sponsors(s) and contractor(s)	CDD

Mitigation Monitoring and Reporting Program				
Mitigation Measure	**Action**	**Timing**	**Implementing Party**	**Monitoring Party**
Vibration impacts to nearby receptors shall not exceed the vibration annoyance levels (in RMS inches/second) as follows: • Workshop = 0.126 • Office = 0.063 • Residential Daytime (7AM–10PM) = 0.032 • Residential Nighttime (10PM to 7 AM) = 0.016 If construction-related vibration is determined to be perceptible at vibration-sensitive uses, additional requirements, such as use of less-vibration-intensive equipment or construction techniques, shall be implemented during construction (e.g., nonexplosive blasting methods, drilled piles as opposed to pile driving, preclusion for using vibratory rollers, use of small- or medium-sized bulldozers, etc.). Vibration reduction measures shall be identified as mitigation measures in the environmental document and/or incorporated into the site development plan as a component of the proposed project .				
TRIBAL CULTURAL RESOURCES				
Initial Study Impact Tribal Cultural Resources a: The proposed project would cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in the local register of historical resources as defined in Public Resources Code Section 5020.1(k), or ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subsection (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe. (Potentially Significant)

INTRODUCTION

This air quality and greenhouse gas (GHG) impact analysis for the proposed Hotel Moxy Project (project) in the City of Menlo Park (City), California has been prepared using methods and assumptions recommended by the Bay Area Air Quality Management District (BAAQMD) *California Environmental Quality Act (CEQA) Air Quality Guidelines* and the recently adopted BAAQMD *Justification Report: CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans* document.[1, 2] This report includes a description of existing regulatory framework, an assessment of project construction and operation-period air quality and GHG emissions, and an evaluation of the project's compliance with adopted plans related to the reduction of clean air and GHG emissions.

PROJECT LOCATION AND DESCRIPTION

The 0.76-acre project site is located at 3723 Haven Avenue in the City of Menlo Park, San Mateo County, California. The project site is shown in Figure 1, Project Location, and is currently developed with an existing office building and associated parking lot. The project site is located within a developed urban setting, surrounded by primarily commercial and industrial uses.

The proposed project would include the demolition of the existing office building and the construction of a 163-room hotel, totaling 58,014 square feet. The proposed project would provide 124 parking spaces largely contained in the first three floors of the new structure as podium parking, including 40 electric vehicle (EV) parking spaces. The building would contain three stories of podium parking, five stories of hotel rooms, a ground floor lobby space and coffee shop, which would be open to the public, and a fourth floor bar and restaurant area, which would include an outdoor rooftop garden and would also be publicly accessible (regardless of coffee shop and bar/lounge patronage) from 6:00 a.m. to 10:00 p.m. See Figure 2, Site Plan.

Based on the project's Transportation Impact Analysis[3], operation of the proposed project would generate 957 net new average daily trips. The proposed project would be built to Leadership in Energy and Environmental Design (LEED) Silver standards, would include solar panels, and would be 12 percent more energy efficient than the 2019 Title 24 standards. In addition, the proposed project would not increase the demand for natural gas as the City's reach codes would require the buildings to be all electric.[4] The proposed project would also include a 625 kilovolt-amp (670 horsepower [HP]) diesel backup generator.

Construction of the proposed project is anticipated to begin in January 2023 and end in January 2025. In addition, construction activities would include the demolition of the existing building and

surface parking lot on the project site and would include the net import of approximately 439 cubic yards of soil.

The proposed project's hotel room count is within the maximum amount of hotel room development potential identified in the City's General Plan Land Use and Circulation Elements Update (referred to herein as ConnectMenlo). ConnectMenlo identifies the potential for 400 new hotel rooms in the Bayfront Area, located in an area historically developed with industrial, warehousing, and office uses north of U.S. Highway 101 and south of State Route 84 (Bayfront Expressway), adjacent to the San Francisco Bay. This project, in combination with all other previously submitted hotel projects since ConnectMenlo was approved, is within the total net new hotel rooms studied under the ConnectMenlo Environmental Impact Report (EIR). As such, the analysis and mitigations in this report comply with ConnectMenlo EIR Mitigation Measures AQ-2a, AQ-2b1, AQ-2b2, and AQ-5.[1]

[1] ConnectMenlo EIR Mitigation Measure AQ-5 requires implementation of Mitigation Measures AQ-2a through AQ-3b to reduce criteria air pollutant emissions, as applicable. The ConnectMenlo EIR identified Mitigation Measure AQ-3a for projects that would generate 100 or more diesel truck trips or have 40 or more trucks with diesel-powered truck refrigeration units (TRUs) and Mitigation Measure AQ-3b to reduce health risk impacts to new residential and other sensitive land use projects. The proposed project would not generate 100 diesel truck trips or 40 diesel-powered TRUs and is not considered a sensitive land use; therefore, these mitigation measures would not apply. In addition, ConnectMenlo EIR Mitigation Measures GHG-1 and GHG-2 require that the City update the City of Menlo Park Climate Action Plan; therefore, this mitigation measure would not apply.

Existing Sensitive Land Uses in the Project Area

For the purposes of this analysis, sensitive receptors are areas of population that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include residences, schools, daycare centers, hospitals, parks, and similar uses that are sensitive to air quality. Impacts on sensitive receptors are of particular concern because they are the population most vulnerable to the effects of air pollution. The closest sensitive receptors to the project site would include the Elan Menlo Park Apartments located adjacent to the project's western boundary.

BACKGROUND

This section provides background information on air pollutants and their health effects. It also provides regulatory background information, including information from the California Air Resources Board's (CARB) Air Quality and Land Use Handbook[1] (CARB Handbook), a description of the general health risks of toxics, and the significance criteria for project evaluation.

AIR POLLUTANTS AND HEALTH EFFECTS

Both State and federal governments have established health-based ambient air quality standards (AAQS) for six criteria air pollutants:[2] carbon monoxide (CO), ozone (O_3), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), lead (Pb), and suspended particulate matter (PM). In addition, the State has set standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety. Long-term exposure to elevated levels of criteria pollutants may result in adverse health effects. However, emission thresholds established by an air district are used to manage total regional emissions within an air basin based on the basin's attainment status for criteria pollutants. These emission thresholds were established for individual projects that would contribute to regional emissions and pollutant concentrations and could adversely affect or delay the projected attainment target year for certain criteria pollutants.

Because of the conservative nature of the thresholds and the basin-wide context of individual project emissions, there is no known direct correlation between a single project and localized air quality-related health effects. One individual project that generates emissions exceeding a threshold does not necessarily result in adverse health effects for residents in the project vicinity. This condition is especially true when the criteria pollutants exceeding thresholds are those with regional effects, such as ozone precursors like nitrogen oxides (NO_x) and volatile organic compounds (VOC).

Occupants of facilities such as schools, daycare centers, parks and playgrounds, hospitals, and nursing and convalescent homes are considered to be more sensitive than the general public to air pollutants because these population groups have increased susceptibility to respiratory disease. Persons engaged in strenuous work or exercise also have increased sensitivity to poor air quality. Residential areas are considered more sensitive to air quality conditions, compared to commercial and industrial areas, because people generally spend longer periods of time at their residences, with greater associated exposure to ambient air quality conditions. Recreational uses are also considered sensitive compared to commercial and industrial uses due to greater exposure to ambient air quality conditions associated with exercise.

---

1 California Air Resources Board (CARB). 2005. *Air Quality and Land Use Handbook: A Community Health Perspective.* May.

2 Criteria pollutants are defined as those pollutants for which the federal and State governments have established ambient air quality standards, or criteria, for outdoor concentrations in order to protect public health.

Ozone

Rather than being directly emitted, ozone (smog) is formed by photochemical reactions between NO_x and VOC. Ozone is a pungent, colorless gas. Elevated ozone concentrations result in reduced lung function, particularly during vigorous physical activity. This health problem is particularly acute in sensitive receptors such as the sick, elderly, and young children. Ozone levels peak during the summer and early fall months.

Carbon Monoxide

CO is formed by the incomplete combustion of fossil fuels, almost entirely from automobiles. It is a colorless, odorless gas that can cause dizziness, fatigue, and impairments to central nervous system functions. CO passes through the lungs into the bloodstream, where it interferes with the transfer of oxygen to body tissues.

Particulate Matter

Particulate matter is the term used for a mixture of solid particles and liquid droplets found in the air. Coarse particles are those that are 10 microns or less in diameter, or PM_{10}. Fine, suspended particulate matter with an aerodynamic diameter of 2.5 microns or less, or $PM_{2.5}$, is not readily filtered out by the lungs. Nitrates, sulfates, dust, and combustion particulates are major components of PM_{10} and $PM_{2.5}$. These small particles can be directly emitted into the atmosphere as byproducts of fuel combustion; through abrasion, such as tire or brake lining wear; or through fugitive dust (wind or mechanical erosion of soil). They can also be formed in the atmosphere through chemical reactions. Particulates may transport carcinogens and other toxic compounds that adhere to the particle surfaces and can enter the human body through the lungs.

Nitrogen Dioxide

NO_2 is a reddish brown gas that is a byproduct of combustion processes. Automobiles and industrial operations are the main sources of NO_2. Aside from its contribution to ozone formation, NO_2 also contributes to other pollution problems, including a high concentration of fine particulate matter, poor visibility, and acid deposition. NO_2 may be visible as a coloring component on high pollution days, especially in conjunction with high ozone levels. NO_2 decreases lung function and may reduce resistance to infection.

Sulfur Dioxide

SO_2 is a colorless, irritating gas formed primarily from incomplete combustion of fuels containing sulfur. Industrial facilities also contribute to gaseous SO_2 levels in the region. SO_2 irritates the respiratory tract, can injure lung tissue when combined with fine particulate matter, and reduces visibility and the level of sunlight.

Lead

Leaded gasoline (phased out in the United States beginning in 1973), paint (on older houses and cars), smelters (metal refineries), and the manufacture of lead storage batteries have been the primary sources of lead released into the atmosphere. Lead has multiple adverse neurotoxic health effects, and children are at special risk. Some lead-containing chemicals cause cancer in animals.

Lead levels in the air have decreased substantially since leaded gasoline was eliminated. Ambient lead concentrations are only monitored on an as-warranted, site-specific basis in California. On October 15, 2008, the United States Environmental Protection Agency (USEPA) strengthened the national ambient air quality standard for lead by lowering it from 1.5 to 0.15 micrograms per cubic meter ($\mu g/m^3$). The USEPA revised the monitoring requirements for lead in December 2010. These requirements focus on airports and large urban areas, resulting in an increase in 76 monitors nationally.

Volatile Organic Compounds

VOCs (also known as reactive organic gases [ROGs] and reactive organic compounds [ROCs]) are formed from the combustion of fuels and the evaporation of organic solvents. VOCs are not defined as criteria pollutants, however, because VOCs accumulate in the atmosphere more quickly during the winter, when sunlight is limited and photochemical reactions are slower, they are a prime component of the photochemical smog reaction. There are no attainment designations for VOCs.

Toxic Air Contaminants

In addition to the criteria pollutants discussed above, toxic air contaminants (TACs) are another group of pollutants of concern. TACs are injurious in small quantities and are regulated by the USEPA and the CARB. Some examples of TACs include benzene, butadiene, formaldehyde, and hydrogen sulfide. The identification, regulation, and monitoring of TACs is relatively recent compared to that for criteria pollutants.

TACs do not have ambient air quality standards, but are regulated by the USEPA, CARB, and the BAAQMD. In 1998, the CARB identified particulate matter from diesel-fueled engines as a TAC. The CARB has completed a risk management process that identified potential cancer risks for a range of activities using diesel-fueled engines.[1] High-volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic (e.g., distribution centers and truck stops) were identified as posing the highest risk to adjacent receptors. Other facilities associated with increased risk include warehouse distribution centers, large retail or industrial facilities, high-volume transit centers, and schools with a high volume of bus traffic. Health risks from TACs are a function of both concentration and duration of exposure.

Unlike TACs emitted from industrial and other stationary sources noted above, most diesel particulate matter is emitted from mobile sources—primarily "off-road" sources such as construction and mining equipment, agricultural equipment, and truck-mounted refrigeration units, as well as "on-road" sources such as trucks and buses traveling on freeways and local roadways.

Although not specifically monitored, recent studies indicate that exposure to diesel particulate matter may contribute significantly to a cancer risk (a risk of approximately 500 to 700 in 1,000,000) that is greater than all other measured TACs combined.[2] The technology for reducing diesel particulate matter emissions from heavy-duty trucks is well established, and both State and federal

[1] CARB. 2000. Stationary Source Division and Mobile Source Control Division. *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles.* October.

[2] Ibid.

agencies are moving aggressively to regulate engines and emission control systems to reduce and remediate diesel emissions. The CARB anticipates that by 2020, average statewide diesel particulate matter concentrations will decrease by 85 percent from levels in 2000 with full implementation of the CARB's Diesel Risk Reduction Plan,[1] meaning that the statewide health risk from diesel particulate matter is expected to decrease from 540 cancer cases in 1,000,000 to 21.5 cancer cases in 1,000,000.

Table A summarizes the sources and health effects of air pollutants discussed in this section. Table B presents a summary of State and federal AAQS.

Table A: Sources and Health Effects of Air Pollutants

Pollutants	Sources	Primary Effects
Carbon Monoxide (CO)	● Incomplete combustion of fuels and other carbon-containing substances, such as motor exhaust ● Natural events, such as decomposition of organic matter	● Reduced tolerance for exercise ● Impairment of mental function ● Impairment of fetal development ● Death at high levels of exposure ● Aggravation of some heart diseases (angina)
Nitrogen Dioxide (NO_2)	● Motor vehicle exhaust ● High temperature stationary combustion ● Atmospheric reactions	● Aggravation of respiratory illness ● Reduced visibility ● Reduced plant growth ● Formation of acid rain
Ozone (O_3)	● Atmospheric reaction of organic gases with nitrogen oxides in sunlight	● Aggravation of respiratory and cardiovascular diseases ● Irritation of eyes ● Impairment of cardiopulmonary function ● Plant leaf injury
Lead (Pb)	● Contaminated soil	● Impairment of blood functions and nerve construction ● Behavioral and hearing problems in children
Suspended Particulate Matter ($PM_{2.5}$ and PM_{10})	● Stationary combustion of solid fuels ● Construction activities ● Industrial processes ● Atmospheric chemical reactions	● Reduced lung function ● Aggravation of the effects of gaseous pollutants ● Aggravation of respiratory and cardiorespiratory diseases ● Increased cough and chest discomfort ● Soiling ● Reduced visibility
Sulfur Dioxide (SO_2)	● Combustion of sulfur-containing fossil fuels ● Smelting of sulfur-bearing metal ores Industrial processes	● Aggravation of respiratory diseases (asthma, emphysema) ● Reduced lung function ● Irritation of eyes ● Reduced visibility ● Plant injury ● Deterioration of metals, textiles, leather, finishes, coatings, etc.

Table notes are provided on the following page.

[a] California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1- and 24-hour), nitrogen dioxide, and particulate matter (PM_{10}, $PM_{2.5}$, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[b] National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3 is equal to or less than one. For $PM_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact USEPA for further clarification and current national policies.

[c] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[d] Any equivalent measurement method which can be shown to the satisfaction of the CARB to give equivalent results at or near the level of the air quality standard may be used.

[e] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

[f] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[g] Reference method as described by the USEPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the USEPA.

[h] On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[i] On December 14, 2012, the national annual $PM_{2.5}$ primary standard was lowered from 15 µg/m^3 to 12.0 µg/m^3. The existing national 24- hour $PM_{2.5}$ standards (primary and secondary) were retained at 35 µg/m^3, as was the annual secondary standard of 15 µg/m^3. The existing 24-hour PM_{10} standards (primary and secondary) of 150 µg/m^3 also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

[j] To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

[k] On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.

[l] The CARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[m] The national standard for lead was revised on October 15, 2008, to a rolling 3-month average. The 1978 lead standard (1.5 µg/m^3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

[n] In 1989, the CARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

°C = degrees Celsius
µg/m^3 = micrograms per cubic meter
CARB = California Air Resources Board
mg/m^3 = milligrams per cubic meter
ppb = parts per billion
ppm = parts per million
USEPA = United States Environmental Protection Agency

GREENHOUSE GASES AND GLOBAL CLIMATE CHANGE

Global climate change is the observed increase in the average temperature of the Earth's atmosphere and oceans in recent decades. The Earth's average near-surface atmospheric temperature rose 0.6 ± 0.2° Celsius (°C) or 1.1 ± 0.4° Fahrenheit (°F) in the 20th century. The prevailing scientific opinion on climate change is that most of the warming observed over the last 50 years is attributable to human activities. The increased amounts of carbon dioxide (CO_2) and other GHGs are the primary causes of the human-induced component of warming. GHGs are released by the burning of fossil fuels, land clearing, agriculture, and other activities, and lead to an increase in the greenhouse effect.[1]

GHGs are present in the atmosphere naturally, are released by natural sources, or are formed from secondary reactions taking place in the atmosphere. The gases that are widely seen as the principal contributors to human-induced global climate change are:

- Carbon dioxide (CO_2)
- Methane (CH_4)
- Nitrous oxide (N_2O)
- Hydrofluorocarbons (HFCs)
- Perfluorocarbons (PFCs)
- Sulfur hexafluoride (SF_6)

Over the last 200 years, humans have caused substantial quantities of GHGs to be released into the atmosphere. These extra emissions are increasing GHG concentrations in the atmosphere, and enhancing the natural greenhouse effect, which is believed to be causing global warming. While manmade GHGs include naturally-occurring GHGs such as CO_2, methane, and N_2O, some gases, like HFCs, PFCs, and SF_6 are completely new to the atmosphere.

Certain gases, such as water vapor, are short-lived in the atmosphere. Others remain in the atmosphere for significant periods of time, contributing to climate change in the long term. Water vapor is excluded from the list of GHGs above because it is short-lived in the atmosphere and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation. For the purposes of this air quality analysis, the term "GHGs" will refer collectively to the six gases listed above only.

These gases vary considerably in terms of Global Warming Potential (GWP), which is a concept developed to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The global warming potential is based on several factors, including the relative effectiveness of a gas to absorb infrared radiation and length of time that the gas remains in the atmosphere

[1] The temperature on Earth is regulated by a system commonly known as the "greenhouse effect." Just as the glass in a greenhouse lets heat from sunlight in and reduces the heat escaping, greenhouse gases like carbon dioxide, methane, and nitrous oxide in the atmosphere keep the Earth at a relatively even temperature. Without the greenhouse effect, the Earth would be a frozen globe; thus, although an excess of greenhouse gas results in global warming, the naturally occurring greenhouse effect is necessary to keep our planet at a comfortable temperature.

("atmospheric lifetime"). The GWP of each gas is measured relative to carbon dioxide, the most abundant GHG; the definition of GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to the ratio of heat trapped by one unit mass of CO_2 over a specified time period. GHG emissions are typically measured in terms of pounds or tons of "CO_2 equivalents" (CO_2e). Table C shows the GWP for each type of GHG. For example, sulfur hexafluoride is 22,800 times more potent at contributing to global warming than carbon dioxide.

Table C: Global Warming Potential of Greenhouse Gases

Gas	Atmospheric Lifetime (Years)	Global Warming Potential (100-Year Time Horizon)
Carbon Dioxide	50-200	1
Methane	12	25
Nitrous Oxide	114	298
HFC-23	270	14,800
HFC-134a	14	1,430
HFC-152a	1.4	124
PFC: Tetrafluoromethane (CF_4)	50,000	7,390
PFC: Hexafluoromethane (C_2F_6)	10,000	12,200
Sulfur Hexafluoride (SF_6)	3,200	22,800

Source: *Climate Change 2007: The Physical Science Basis. Contribution of Working Group I to the Fourth Assessment Report of the IPCC* (Intergovernmental Panel on Climate Change, 2007).

The following discussion summarizes the characteristics of the six GHGs and black carbon.

Carbon Dioxide

In the atmosphere, carbon generally exists in its oxidized form, as CO_2. Natural sources of CO_2 include the respiration (breathing) of humans, animals and plants, volcanic out gassing, decomposition of organic matter and evaporation from the oceans. Human caused sources of CO_2 include the combustion of fossil fuels and wood, waste incineration, mineral production, and deforestation. Natural sources release approximately 150 billion tons of CO_2 each year, far outweighing the 7 billion tons of man-made emissions of CO_2 each year. Nevertheless, natural removal processes, such as photosynthesis by land- and ocean-dwelling plant species, cannot keep pace with this extra input of man-made CO_2, and consequently, the gas is building up in the atmosphere.

In 2019, total annual CO_2 accounted for approximately 83 percent of California's overall GHG emissions.[1] Transportation is the single largest source of CO_2 in California, which is primarily comprised of on-road travel. Electricity production, industrial and residential sources also make important contributions to CO_2 emissions in California.

Methane

Methane (CH_4) is produced when organic matter decomposes in environments lacking sufficient oxygen. Natural sources include wetlands, termites, and oceans. Decomposition occurring in landfills

[1] CARB. 2021. GHGs Descriptions & Sources in California. Website: ww2.arb.ca.gov/ghg-descriptions-sources (accessed May 2022).

accounts for the majority of human-generated CH_4 emissions in California and in the United States as a whole. Agricultural processes such as intestinal fermentation, manure management, and rice cultivation are also significant sources of CH_4 in California. Total annual emissions of CH_4 accounted for approximately 9 percent of GHG emissions in California.[1]

Nitrous Oxide

Nitrous oxide (N_2O) is produced naturally by a wide variety of biological sources, particularly microbial action in soils and water. Tropical soils and oceans account for the majority of natural source emissions. Nitrous oxide is a product of the reaction that occurs between nitrogen and oxygen during fuel combustion. Both mobile and stationary combustion emit N_2O, and the quantity emitted varies according to the type of fuel, technology, and pollution control device used, as well as maintenance and operating practices. Agricultural soil management and fossil fuel combustion are the primary sources of human-generated N_2O emissions in California. Nitrous oxide emissions accounted for approximately 3 percent of GHG emissions in California in 2019.[2]

Hydrofluorocarbons, Perfluorocarbons, and Sulfur Hexafluoride

HFCs are primarily used as substitutes for ozone-depleting substances regulated under the Montreal Protocol.[3] PFCs and SF_6 are emitted from various industrial processes, including aluminum smelting, semiconductor manufacturing, electric power transmission and distribution, and magnesium casting. There is no aluminum or magnesium production in California; however, the rapid growth in the semiconductor industry leads to greater use of PFCs. HFCs, PFCs, and SF_6 accounted for about 5 percent of GHG emissions in California in 2019.[4]

Black Carbon

Black carbon is the most strongly light-absorbing component of PM formed by burning fossil fuels such as coal, diesel, and biomass. Black carbon is emitted directly into the atmosphere in the form of $PM_{2.5}$ and is the most effective form of PM, by mass, at absorbing solar energy. Per unit of mass in the atmosphere, black carbon can absorb one million times more energy than CO_2.[5] Black carbon contributes to climate change both directly, such as absorbing sunlight, and indirectly, such as affecting cloud formation. However, because black carbon is short-lived in the atmosphere, it can be difficult to quantify its effect on global-warming.

Most U.S. emissions of black carbon come from mobile sources (52 percent), particularly from diesel fueled vehicles. The other major source of black carbon is open biomass burning, including wildfires,

5 United States Environmental Protection Agency (USEPA), 2015. Black Carbon, Basic Information. February 14, 2017. Website: 19january2017snapshot.epa.gov/www3/airquality/blackcarbon/basic.html (accessed May 2022).

although residential heating and industry also contribute. The CARB estimates that the annual black carbon emissions in California have decreased approximately 70 percent between 1990 and 2010 and are expected to continue to decline significantly due to controls on mobile diesel emissions.

Effects of Global Climate Change

Effects from global climate change may arise from temperature increases, climate-sensitive diseases, extreme weather events, and air quality. There may be direct temperature effects through increases in average temperature leading to more extreme heat waves and less extreme cold spells. Those living in warmer climates are likely to experience more stress and heat-related problems. Heat-related problems include heat rash and heat stroke. In addition, climate-sensitive diseases may increase, such as those spread by mosquitoes and other disease-carrying insects. Such diseases include malaria, dengue fever, yellow fever, and encephalitis. Extreme events such as flooding and hurricanes can displace people and agriculture. Global climate change may also contribute to air quality problems from increased frequency of smog and particulate air pollution.[1]

Additionally, according to the 2006 California Climate Action Team (CAT) Report,[2] the following applicable climate change effects, which are based on trends established by the United Nations Intergovernmental Panel on Climate Change (IPCC), can be expected in California over the course of the next century:

- The loss of sea ice and mountain snow pack, resulting in higher sea levels and higher sea surface evaporation rates with a corresponding increase in tropospheric water vapor due to the atmosphere's ability to hold more water vapor at higher temperatures.[3]

- Rise in global average sea level, primarily due to thermal expansion and melting of glaciers and ice caps in the Greenland and Antarctic ice sheets.[4]

- Changes in weather that include widespread changes in precipitation, ocean salinity, wind patterns, and more energetic aspects of extreme weather, including droughts, heavy precipitation, heat waves, extreme cold, and the intensity of tropical cyclones.[5]

- Decline of the Sierra snowpack, which accounts for approximately one-half of the surface water storage in California by 70 percent to as much as 90 percent over the next 100 years.[6]

---

6 CalEPA. 2006, op. cit.

- Increase in the number of days conducive to O_3 formation by 25–85 percent (depending on the future temperature scenario) in high O_3 areas by the end of the 21st century.[1]

- High potential for erosion of California's coastlines and seawater intrusion into the Delta and levee systems due to the rise in sea level.[2]

A summary of these potential effects is identified in Table D.

Table D: Potential Impacts of Global Warming and Expected Consequences for California

Potential Water Resource Impacts	Anticipated Consequences Statewide
Reduction of the State's average annual snowpack	● Specifically, the decline of the Sierra snowpack would lead to a loss in half of the surface water storage in California by 70% to 90% over the next 100 years ● Potential loss of 5 million acre-feet or more of average annual water storage in the State's snowpack ● Increased challenges for reservoir management and balancing the competing concerns of flood protection and water supply ● Higher surface evaporation rates with a corresponding increase in tropospheric water vapor
Rise in average sea level	● Potential economic impacts related to coastal tourism, commercial fisheries, coastal agriculture, and ports ● Increased risk of flooding, coastal erosion along the State's coastline, seawater intrusion into the Delta and levee systems
Changes in weather	● Changes in precipitation, ocean salinity, and wind patterns ● Increased likelihood for extreme weather events, including droughts, heavy precipitation, heat waves, extreme cold, and the intensity of tropical cyclones
Changes in the timing, intensity, location, amount, and variability of precipitation	● Potential increased storm intensity and increased potential for flooding ● Possible increased potential for droughts ● Long-term changes in vegetation and increased incidence of wildfires ● Changes in the intensity and timing of runoff ● Possible increased incidence of flooding and increased sedimentation ● Sea level rise and inundation of coastal marshes and estuaries ● Increased potential for salinity intrusion into coastal aquifers (groundwater) ● Increased potential for flooding near the mouths of rivers due to backwater effects
Increased water temperatures	● Increased environmental water demand for temperature control ● Possible increased problems with foreign invasive species in aquatic ecosystems ● Potential adverse changes in water quality, including the reduction of dissolved oxygen levels ● Possible critical effects on listed and endangered aquatic species
Changes in urban and agricultural water demand	● Changes in demand patterns and evapotranspiration
Increase in the number of days conducive to O_3 formation	● Increased temperatures ● Potential health effects, including adverse impacts to respiratory systems

REGULATORY SETTING

This section provides regulatory background information for air quality and GHGs.

AIR QUALITY REGULATORY SETTING

The USEPA and the CARB regulate direct emissions from motor vehicles. The BAAQMD is the regional agency primarily responsible for regulating air pollution emissions from stationary sources (e.g., factories) and indirect sources (e.g., traffic associated with new development), as well as monitoring ambient pollutant concentrations.

Federal Clean Air Act

The 1970 Federal Clean Air Act authorized the establishment of national health-based air quality standards and also set deadlines for their attainment. The Federal Clean Air Act Amendments of 1990 changed deadlines for attaining national standards as well as the remedial actions required of areas of the nation that exceed the standards. Under the Clean Air Act, State and local agencies in areas that exceed the national standards are required to develop State Implementation Plans to demonstrate how they will achieve the national standards by specified dates.

California Clean Air Act

In 1988, the California Clean Air Act (CCAA) required that all air districts in the State endeavor to achieve and maintain State ambient air quality standards for carbon monoxide, ozone, sulfur dioxide, and nitrogen dioxide by the earliest practical date. The California Clean Air Act provides districts with authority to regulate indirect sources and mandates that air quality districts focus particular attention on reducing emissions from transportation and area-wide emission sources. Each nonattainment district is required to adopt a plan to achieve a 5 percent annual reduction, averaged over consecutive 3-year periods, in district-wide emissions of each nonattainment pollutant or its precursors. A Clean Air Plan shows how a district would reduce emissions to achieve air quality standards. Generally, the State standards for these pollutants are more stringent than the national standards.

California Air Resources Board

The CARB is the State's "clean air agency." The CARB's goals are to attain and maintain healthy air quality, protect the public from exposure to toxic air contaminants, and oversee compliance with air pollution rules and regulations.

Assembly Bill 2588 Air Toxics "Hot Spots" Information and Assessment Act

Under Assembly Bill (AB) 2588, stationary sources of air pollutants are required to report the types and quantities of certain substances their facilities routinely released into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emission data, identify facilities having localized impacts, determine health risks, and notify nearby residents of significant risks.

The California Air Resources Board Handbook

The CARB has developed an Air Quality and Land Use Handbook[1] which is intended to serve as a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. According to the CARB Handbook, recent air pollution studies have shown an association between respiratory and other non-cancer health effects and proximity to high traffic roadways. Other studies have shown that diesel exhaust and other cancer-causing chemicals emitted from cars and trucks are responsible for much of the overall cancer risk from airborne toxics in California. The CARB Handbook recommends that county and city planning agencies strongly consider proximity to these sources when finding new locations for "sensitive" land uses such as homes, medical facilities, daycare centers, schools, and playgrounds.

Land use designations with air pollution sources of concern include freeways, rail yards, ports, refineries, distribution centers, chrome plating facilities, dry cleaners, and large gasoline service stations. Key recommendations in the CARB Handbook include taking steps to avoid siting new, sensitive land uses:

- Within 500 feet of a freeway, urban roads with 100,000 vehicles/day or rural roads with 50,000 vehicles/day;
- Within 1,000 feet of a major service and maintenance rail yard;
- Immediately downwind of ports (in the most heavily impacted zones) and petroleum refineries;
- Within 300 feet of any dry cleaning operation (for operations with two or more machines, provide 500 feet); and
- Within 300 feet of a large gas station (defined as a facility with a throughput of 3.6 million gallons per year or greater).

The CARB Handbook specifically states that its recommendations are advisory and acknowledges land use agencies have to balance other considerations, including housing and transportation needs, economic development priorities, and other quality of life issues.

The recommendations are generalized and do not consider site-specific meteorology, freeway truck percentages, or other factors that influence risk for a particular project site. The purpose of this guidance is to further examine project sites for actual health risk associated with the location of new sensitive land uses.

Regional Regulations

The BAAQMD seeks to attain and maintain air quality conditions in the San Francisco Bay Area Air Basin through a comprehensive program of planning, regulation, enforcement, technical innovation, and education. The clean air strategy includes the preparation of plans for the attainment of

[1] CARB. 2005. *Air Quality and Land Use Handbook: A Community Health Perspective.* April.

ambient air quality standards, adoption and enforcement of rules and regulations, and issuance of permits for stationary sources. The BAAQMD also inspects stationary sources and responds to citizen complaints, monitors ambient air quality and meteorological conditions, and implements programs and regulations required by law.

BAAQMD Clean Air Plan

The Clean Air Plan guides the region's air quality planning efforts to attain the State ambient air quality standards.[1] The BAAQMD 2017 Clean Air Plan, which was adopted on April 19, 2017, by the BAAQMD Board of Directors, is the current Clean Air Plan which contains district-wide control measures to reduce ozone precursor emissions (e.g., ROG and NO_x), particulate matter and GHG emissions.

The Bay Area 2017 Clean Air Plan:

- Describes the BAAQMD plan towards attaining all State and federal air quality standards and eliminating health risk disparities from exposure to air pollution among Bay Area communities;
- Defines a vision for transitioning the region to a post-carbon economy needed to achieve ambitious GHG reduction targets for 2030 and 2050;
- Provides a regional climate protection strategy that will put the Bay Area on a pathway to achieve GHG reduction targets; and
- Includes a wide range of control measures designed to decrease emissions of air pollutants that are most harmful to Bay Area residents, such as particulate matter, ozone, and toxic air contaminants; to reduce emissions of methane and other "Super-GHGs" that are potent climate pollutants in the near term; and to decrease emissions of carbon dioxide by reducing fossil fuel combustion.

BAAQMD CARE Program

The Community Air Risk Evaluation (CARE) program was initiated in 2004 to evaluate and reduce health risks associated with exposures to outdoor TACs in the Bay Area. The program examines TAC emissions from point sources, area sources, and on-road and off-road mobile sources with an emphasis on diesel exhaust, which is a major contributor to airborne health risk in California. The CARE program is an on-going program that encourages community involvement and input. The technical analysis portion of the CARE program is being implemented in three phases that include an assessment of the sources of TAC emissions, modeling and measurement programs to estimate concentrations of TACs, and an assessment of exposures and health risks. Throughout the program, information derived from the technical analyses will be used to focus emission reduction measures in areas with high TAC exposures and a high density of sensitive populations. Risk reduction

[1] BAAQMD. 2017. *Final 2017 Clean Air Plan*. April 19, 2017. Website: www.baaqmd.gov/~/media/files/planning-and-research/plans/2017-clean-air-plan/attachment-a_-proposed-final-cap-vol-1-pdf.pdf?la=en (accessed May 2021).

activities associated with the CARE program are focused on the most at-risk communities in the Bay Area.

For commercial and industrial sources, the BAAQMD regulates TACs using a risk-based approach. This approach uses a Health Risk Assessment (HRA) to determine what sources and pollutants to control as well as the degree of control. An HRA is an analysis in which human health exposure to toxic substances is estimated and considered together with information regarding the toxic potency of the substances, in order to provide a quantitative estimate of health risks.[1] As part of ongoing efforts to identify and assess potential health risks to the public, the BAAQMD has collected and compiled air toxics emissions data from industrial and commercial sources of air pollution throughout the Bay Area. The BAAQMD has identified seven impacted communities;[2] the City of Menlo Park has not been identified as an affected community.[3]

BAAQMD CEQA Air Quality Guidelines

The BAAQMD CEQA Air Quality Guidelines were prepared to assist in the evaluation of air quality impacts of projects and plans proposed within the Bay Area. The guidelines provide recommended procedures for evaluating potential air impacts during the environmental review process, consistent with CEQA requirements, and include recommended thresholds of significance, mitigation measures, and background air quality information. They also include recommended assessment methodologies for air toxics, odors, and GHG emissions.

In June 2010, the BAAQMD adopted its updated draft CEQA Air Quality Guidelines and finalized them in May 2011. These guidelines superseded previously adopted agency air quality guidelines of 1999 and were intended to advise lead agencies on how to evaluate potential air quality impacts.

In May 2017, the BAAQMD published an updated version of the CEQA Guidelines. The BAAQMD CEQA Guidelines include thresholds to evaluate project impacts in order to protectively evaluate the potential effects of the project on air quality. These protective thresholds are appropriate in the context of the size, scale, and location of the proposed project.

City of Menlo Park

The City of Menlo Park addresses air quality in the General Plan and in the ConnectMenlo EIR, as discussed below.

---

1 In general, a health risk assessment is required if the BAAQMD concludes that projected emissions of a specific air toxic compound from a proposed new or modified source suggests a potential public health risk. Such an assessment generally evaluates chronic, long-term effects, including the increased risk of cancer as a result of exposure to one or more TACs.

2 The seven impacted communities include Richmond/San Pablo; eastern San Francisco, including Treasure Island; San Jose; western Alameda County; Concord, Vallejo; and Pittsburg/Antioch.

3 BAAQMD. 2014. *Identifying Areas with Cumulative Impacts from Air Pollution in the San Francisco Bay Area Version 2*. March. Available online at: www.baaqmd.gov/~/media/Files/Planning% 20and%20 Research/CARE%20Program/Documents/ImpactCommunities_2_Methodology.ashx?la=en (accessed May 2021).

General Plan

The City of Menlo Park addresses air quality in the Open Space, Conservation, Noise and Safety Elements of the General Plan.[1] The Open Space, Conservation, Noise and Safety Elements set goals, policies, and implementing programs that work to ensure healthy air quality. The following policies are applicable to the proposed project.

- **Policy OSC5.1: Air and Water Quality Standards.** Continue to apply standards and policies established by the BAAQMD, San Mateo Countywide Water Pollution Prevention Program (SMCWPPP), and City of Menlo Park Climate Action Plan through the CEQA process and other means as applicable.

- **Policy OSC5.2: Development in Industrial Areas.** Evaluate development projects in industrial areas for impacts to air and water resources in relation to truck traffic, hazardous materials use and production-level manufacturing per CEQA and require measures to mitigate potential impacts to less-than-significant levels.

ConnectMenlo EIR

The proposed project's hotel room count is within the maximum amount of hotel room development potential identified in ConnectMenlo. The ConnectMenlo EIR identified the following mitigation measures that would apply to the proposed project and that would help to reduce and avoid potential impacts related to air quality:

- **Mitigation Measure AQ-2a:** Prior to issuance of a building permits, all development projects in the city that are subject to CEQA and exceed the screening sizes in the Bay Area Air Quality Management District (BAAQMD) CEQA Guidelines shall prepare and submit to the City's Planning Division a technical assessment evaluating potential project-related operational air quality impacts. The evaluation shall be prepared in conformance with the BAAQMD methodology for assessing air quality impacts. If operational-related criteria air pollutants are determined to have the potential to exceed the BAAQMD thresholds of significance, as identified in BAAQMD's CEQA Guidelines, the project applicant is required to incorporate mitigation measures into the development project to reduce air pollutant emissions during operation. The identified measures shall be incorporated into all appropriate construction documents, subject to the review and approval of the Planning Division prior to building permit issuance.

- **Mitigation Measure AQ-2b1:** Prior to building permit issuance, the City shall require applicants for all development projects in the city to comply with the current Bay Area Air Quality Management District's (BAAQMD) basic control measures for reducing construction emissions of PM_{10} (Table 8-1, Basic Construction Mitigation Measures Recommended for All Proposed Projects, of the BAAQMD CEQA Guidelines).

[1] Menlo Park, City of. 2013. *City of Menlo Park General Plan, Open Space Conservation, Noise and Safety Elements*. May 21.

- **Mitigation Measure AQ-2b2:** Prior to issuance of a building permit, development projects in the City that are subject to CEQA and exceed the screening sizes in the BAAQMD's CEQA Guidelines shall prepare and submit to the City of Menlo Park a technical assessment evaluating potential project construction-related air quality impacts. The evaluation shall be prepared in conformance with the BAAQMD methodology for assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the BAAQMD thresholds of significance, as identified in the BAAQMD CEQA Guidelines, the project applicant is required to incorporate mitigation measures to reduce air pollutant emissions during construction activities to below these thresholds (e.g., Table 8-2, Additional Construction Mitigation Measures Recommended for projects with Construction Emissions Above the Threshold of the BAAQMD CEQA Guidelines, or applicable construction mitigation measures subsequently approved by BAAQMD). These identified measures shall be incorporated into all appropriate construction documents (e.g., construction management plans), subject to the review and approval of the Planning Division prior to building permit issuance.

- **Mitigation Measure AQ-3a:** As part of the discretionary review process for development applications, applicants for all non-residential projects within the City that: 1) have the potential to generate 100 or more diesel truck trips per day or have 40 or more trucks with operating diesel-powered TRUs, and 2) are within 1,000 feet of a sensitive land use (e.g., residential, schools, hospitals, nursing homes), as measured from the property line of a proposed project to the property line of the nearest sensitive use, shall submit a health risk assessment (HRA) to the City's Planning Division. The HRA shall be prepared in accordance with policies and procedures of the State Office of Environmental Health Hazard Assessment and the Bay Area Air Quality Management District. If the HRA shows that the incremental cancer risk exceeds 10 in one million (10E-06), $PM_{2.5}$ concentrations exceed 0.3 $\mu g/m^3$, or the appropriate noncancer hazard index exceeds 1.0, the applicant will be required to identify and demonstrate that mitigation measures are capable of reducing potential cancer and noncancer risks to an acceptable level, including appropriate enforcement mechanisms. Mitigation measures may include but are not limited to:

    - Restricting idling on-site beyond Air Toxic Control Measures idling restrictions, as feasible.
    - Electrifying warehousing docks.
    - Requiring use of newer equipment and/or vehicles.
    - Restricting off-site truck travel through the creation of truck routes.

    Mitigation measures identified in the project-specific HRA shall be incorporated into the site development plan as a component of a proposed project, subject to the review and approval of the Community Development Department.

- **Mitigation Measure AQ-3b:** As part of the discretionary review process, applicants for all residential and other sensitive land use projects (e.g., hospitals, nursing homes, day care centers) anywhere in the City within 1,000 feet of a major sources of toxic air contaminants (TACs) (e.g., warehouses, industrial areas, freeways, and roadways with traffic volumes over

10,000 vehicle per day), as measured from the property line of the project to the property line of the source/edge of the nearest travel lane, shall submit a health risk assessment (HRA) to the City's Planning Division. The HRA shall be prepared in accordance with policies and procedures of the State Office of Environmental Health Hazard Assessment (OEHHA) and the Bay Area Air Quality Management District. The latest OEHHA guidelines shall be used for the analysis, including age sensitivity factors, breathing rates, and body weights appropriate for children ages 0 to 16 years. If the HRA shows that the incremental cancer risk exceeds ten in one million (10E-06), $PM_{2.5}$ concentrations exceed 0.3 µg/m^3, or the appropriate noncancer hazard index exceeds 1.0, the applicant will be required to identify and demonstrate that mitigation measures are capable of reducing potential cancer and non-cancer risks to an acceptable level (i.e., below ten in one million or a hazard index of 1.0), including appropriate enforcement mechanisms. Measures to reduce risk may include but are not limited to:

- Air intakes located away from high volume roadways and/or truck loading zones.
- Heating, ventilation, and air conditioning systems of the buildings provided with appropriately sized maximum efficiency rating value (MERV) filters.

Measures identified in the HRA shall be incorporated into the site development plan as a component of the proposed project subject to the review and approval of the Community Development Department. The air intake design and MERV filter requirements shall be noted and/or reflected on all building plans submitted to the City, subject to the review and approval of the Community Development Department.

- **Mitigation Measure AQ-5**: Implementation of Mitigation Measures AQ-2a through AQ3b.

GREENHOUSE GAS REGULATORY SETTING

This section describes regulations related to Global Climate Change at the federal, State, and local level.

Federal Regulations

The United States has historically had a voluntary approach to reducing GHG emissions. However, on April 2, 2007, the United States Supreme Court ruled that the USEPA has the authority to regulate CO_2 emissions under the federal Clean Air Act. While there currently are no adopted federal regulations for the control or reduction of GHG emissions, the USEPA commenced several actions in 2009 to implement a regulatory approach to global climate change.

This includes the 2009 USEPA final rule for mandatory reporting of GHGs from large GHG emission sources in the United States. Additionally, the USEPA Administrator signed an endangerment finding action in 2009 under the Clean Air Act, finding that six GHGs (CO_2, CH_4, N_2O, HFCs, PFCs, SF_6) constitute a threat to public health and welfare, and that the combined emissions from motor vehicles cause and contribute to global climate change, leading to national GHG emission standards.

In October 2012, the USEPA and the National Highway Traffic Safety Administration (NHTSA), on behalf of the U.S. Department of Transportation, issued final rules to further reduce GHG emissions

and improve corporate average fuel economy (CAFE) standards for light-duty vehicles for model years 2017 and beyond (77 *Federal Register* 62624). The NHTSA's CAFE standards have been enacted under the Energy Policy and Conservation Act since 1978. This national program requires automobile manufacturers to build a single light-duty national fleet that meets all requirements under both federal programs and the standards of California and other states. This program would increase fuel economy to the equivalent of 54.5 miles per gallon, limiting vehicle emissions to 163 grams of CO_2 per mile for the fleet of cars and light-duty trucks by model year 2025 (77 *Federal Register* 62630).

On March 21, 2020, the USEPA and NHTSA finalized the *Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021–2026 Passenger Cars and Light Trucks* (SAFE Vehicles Rule). The SAFE Vehicles Rule amends certain existing CAFE and tailpipe CO_2 emissions standards for passenger cars and light trucks and establish new standards, all covering model years 2021 through 2026. More specifically, NHTSA set new CAFE standards for model years 2022 through 2026 and amended its 2021 model year CAFE standards, and the USEPA amended its CO_2 emissions standards for model years 2021 and later. On May 12, 2021, the NHTSA published a notice of proposed rulemaking in the *Federal Register*, proposing to repeal key portions of the SAFE Vehicles Rule that would have reduced CAFE standards. The final rule repealing portions of the SAFE Vehicles Rule was published on December 29, 2021. The repeal will allow California to set its own GHG standards if it chooses, even if the emissions standards conflict with CAFE standards enacted by the U.S. Department of Transportation.

State Regulations

The CARB is the lead agency for implementing climate change regulations in the State. Since its formation, the CARB has worked with the public, the business sector, and local governments to find solutions to California's air pollution problems. Key efforts by the State are described below.

Assembly Bill 1493 (2002)

In a response to the transportation sector's significant contribution to California's CO_2 emissions, AB 1493 was enacted on July 22, 2002. AB 1493 requires the CARB to set GHG emission standards for passenger vehicles and light duty trucks (and other vehicles whose primary use is noncommercial personal transportation in the State) manufactured in 2009 and all subsequent model years. These standards (starting in model years 2009 to 2016) were approved by the CARB in 2004, but the needed waiver of CAA Preemption was not granted by the USEPA until June 30, 2009. The CARB responded by amending its original regulation, now referred to as Low Emission Vehicle III, to take effect for model years starting in 2017 to 2025. The Trump administration revoked California's waiver in 2019, but the Biden administration restored California's waiver in 2021

Executive Order S-3-05 (2005)

Governor Arnold Schwarzenegger signed Executive Order (EO) S-3-05 on June 1, 2005, which proclaimed that California is vulnerable to the impacts of climate change. To combat those concerns, the executive order established California's GHG emissions reduction targets, which established the following goals:

- GHG emissions should be reduced to 2000 levels by 2010;
- GHG emissions should be reduced to 1990 levels by 2020; and
- GHG emissions should be reduced to 80 percent below 1990 levels by 2050.

The Secretary of the California Environmental Protection Agency (CalEPA) is required to coordinate efforts of various State agencies in order to collectively and efficiently reduce GHGs. A biannual progress report must be submitted to the Governor and State Legislature disclosing the progress made toward greenhouse emission reduction targets. In addition, another biannual report must be submitted illustrating the impacts of global warming on California's water supply, public health, agriculture, the coastline, and forestry, and report possible mitigation and adaptation plans to address these impacts.

The Secretary of CalEPA leads this CAT made up of representatives from State agencies as well as numerous other boards and departments. The CAT members work to coordinate statewide efforts to implement global warming emission reduction programs and the State's Climate Adaptation Strategy. The CAT is also responsible for reporting on the progress made toward meeting the statewide GHG targets that were established in the executive order and further defined under AB 32, the "Global Warming Solutions Act of 2006." The first CAT Report to the Governor and the Legislature was released in March 2006, which it laid out 46 specific emission reduction strategies for reducing GHG emissions and reaching the targets established in the Executive Order. The most recent report was released in December 2020.

Assembly Bill 32 (2006), California Global Warming Solutions Act

California's major initiative for reducing GHG emissions is AB 32, passed by the State legislature on August 31, 2006. This effort aims at reducing GHG emissions to 1990 levels by 2020. The CARB has established the level of GHG emissions in 1990 at 427 million metric tons (MMT) of CO_2e. The emissions target of 427 MMT requires the reduction of 169 MMT from the State's projected business-as-usual 2020 emissions of 596 MMT. AB 32 requires the CARB to prepare a Scoping Plan that outlines the main State strategies for meeting the 2020 deadline and to reduce GHGs that contribute to global climate change. The Scoping Plan was approved by the CARB on December 11, 2008, and contains the main strategies California will implement to achieve the reduction of approximately 169 MMT CO_2e, or approximately 30 percent, from the State's projected 2020 emissions level of 596 MMT CO_2e under a business-as-usual scenario (this is a reduction of 42 MMT CO_2e, or almost 10 percent from 2002–2004 average emissions). The Scoping Plan also includes CARB-recommended GHG reductions for each emissions sector of the State's GHG inventory. The Scoping Plan calls for the largest reductions in GHG emissions to be achieved by implementing the following measures and standards:

- Improved emissions standards for light-duty vehicles (estimated reductions of 31.7 MMT CO_2e);
- The Low-Carbon Fuel Standard (15.0 MMT CO_2e);
- Energy efficiency measures in buildings and appliances and the widespread development of combined heat and power systems (26.3 MMT CO_2e); and

- A renewable portfolio standard for electricity production (21.3 MMT CO_2e).

The Scoping Plan identifies 18 emission reduction measures that address cap-and-trade programs, vehicle gas standards, energy efficiency, low carbon fuel standards, renewable energy, regional transportation-related GHG targets, vehicle efficiency measures, goods movement, solar roof programs, industrial emissions, high speed rail, green building strategies, recycling, sustainable forests, water, and air. The measures would result in a total reduction of 174 MMT CO_2e by 2020.

On August 24, 2011, the CARB unanimously approved both the new supplemental assessment and reapproved its Scoping Plan, which provides the overall roadmap and rule measures to carry out AB 32. The CARB also approved a more robust CEQA equivalent document supporting the supplemental analysis of the cap-and-trade program. The cap-and-trade took effect on January 1, 2012, with an enforceable compliance obligation that began January 1, 2013.

CARB has not yet determined what amount of GHG reductions it recommends from local government operations and local land use decisions; however, the Scoping Plan states that land use planning and urban growth decisions will play an important role in the State's GHG reductions because local governments have primary authority to plan, zone, approve, and permit how land is developed to accommodate population growth and the changing needs of their jurisdictions (meanwhile, CARB is also developing an additional protocol for community emissions). CARB further acknowledges that decisions on how land is used will have large impacts on the GHG emissions that will result from the transportation, housing, industry, forestry, water, agriculture, electricity, and natural gas emission sectors. The Scoping Plan states that the ultimate GHG reduction assignment to local government operations is to be determined. With regard to land use planning, the Scoping Plan expects an approximately 5.0 MMT CO_2e reduction due to implementation of Senate Bill 375 (SB 375).

In addition to reducing GHG emissions to 1990 levels by 2020, AB 32 directed the CARB and the CAT to identify a list of "discrete early action GHG reduction measures" that could be adopted and made enforceable by January 1, 2010. On January 18, 2007, Governor Schwarzenegger signed EO S-1-07, further solidifying California's dedication to reducing GHGs by setting a new Low Carbon Fuel Standard. The Executive Order sets a target to reduce the carbon intensity of California transportation fuels by at least 10 percent by 2020 and directs the CARB to consider the Low Carbon Fuel Standard as a discrete early action measure. In 2011, U.S. District Court Judge Lawrence O'Neil issued an injunction preventing implementation of the Low Carbon Fuel Standard, ruling that it is unconstitutional. In 2012, the Ninth Circuit Court of Appeal stayed the District Court's injunction, allowing implementation of the Low Carbon Fuel Standard. The Ninth Circuit decided to uphold the Low Carbon Fuel Standard.

In June 2007, the CARB approved a list of 37 early action measures, including three discrete early action measures (Low Carbon Fuel Standard, Restrictions on GWP Refrigerants, and Landfill CH_4 Capture).[1] Discrete early action measures are measures that were required to be adopted as regulations and made effective no later than January 1, 2010, the date established by Health and Safety

[1] CARB. 2007. *Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California Recommended for Board Consideration*. October.

Code Section 38560.5. The CARB adopted additional early action measures in October 2007 that tripled the number of discrete early action measures. These measures relate to truck efficiency, port electrification, reduction of PFCs from the semiconductor industry, reduction of propellants in consumer products, proper tire inflation, and SF_6 reductions from the non-electricity sector. The combination of early action measures is estimated to reduce statewide GHG emissions by nearly 16 MMT.[1]

In June 2007, the CARB approved a list of 37 early action measures, including three discrete early action measures (a Low Carbon Fuel Standard [LCFS], Restrictions on GWP Refrigerants, and Landfill CH_4 Capture).[2] Discrete early action measures are measures that were required to be adopted as regulations and made effective no later than January 1, 2010, the date established by Health and Safety Code Section 38560.5. The CARB adopted additional early action measures in October 2007 that tripled the number of discrete early action measures. These measures relate to truck efficiency, port electrification, reduction of PFCs from the semiconductor industry, reduction of propellants in consumer products, proper tire inflation, and SF_6 reductions from the non-electricity sector. The combination of early action measures is estimated to reduce statewide GHG emissions by nearly 16 MMT.[3]

The CARB approved the First Update to the Climate Change Scoping Plan on May 22, 2014. The First Update identifies opportunities to leverage existing and new funds to further drive GHG emission reductions through strategic planning and targeted low carbon investments. The First Update defines CARB climate change priorities until 2020, and also sets the groundwork to reach long-term goals set forth in EOs S-3-05 and B-16-2012. The Update highlights California's progress toward meeting the "near-term" 2020 GHG emission reduction goals as defined in the initial Scoping Plan. It also evaluates how to align the State's "longer-term" GHG reduction strategies with other State policy priorities for water, waste, natural resources, clean energy, transportation, and land use. CARB released a second update to the Scoping Plan, the 2017 Scoping Plan,[4] to reflect the 2030 target set by EO B-30-15 and codified by Senate Bill 32 (SB 32).

The Draft 2022 Scoping Plan Update[5] assesses progress toward the statutory 2030 target, while laying out a path to achieving carbon neutrality no later than 2045. The 2022 Scoping Plan Update focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State's long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities.

Senate Bill 97 (2007)

SB 97, signed by the Governor in August 2007 (Chapter 185, Statutes of 2007; Public Resources Code, Sections 21083.05 and 21097), acknowledges climate change is a prominent environmental issue that requires analysis under CEQA. This bill directed the Governor's Office of Planning and Research (OPR) to prepare, develop, and transmit to the California Resources Agency guidelines for mitigating GHG emissions or the effects of GHG emissions, as required by CEQA.

The California Natural Resources Agency adopted the amendments to the CEQA Guidelines in November 2018, which went into effect in December 2018. The amendments do not identify a threshold of significance for GHG emissions, nor do they prescribe assessment methodologies or specific mitigation measures. The amendments encourage lead agencies to consider many factors in performing a CEQA analysis, but preserve the discretion granted by CEQA to lead agencies in making their own determinations based on substantial evidence. The amendments also encourage public agencies to make use of programmatic mitigation plans and programs when they perform individual project analyses.

Senate Bill 375 (2008)

SB 375, the Sustainable Communities and Climate Protection Act, which establishes mechanisms for the development of regional targets for reducing passenger vehicle GHG emissions, was adopted by the State on September 30, 2008. On September 23, 2010, the CARB adopted the vehicular GHG emissions reduction targets that had been developed in consultation with the Metropolitan Planning Organization (MPOs); the targets require a 6 to 15 percent reduction by 2020 and between 13 to 19 percent reduction by 2035 for each MPO. SB 375 recognizes the importance of achieving significant GHG reductions by working with cities and counties to change land use patterns and improve transportation alternatives. Through the SB 375 process, MPOs such as the ABAG will work with local jurisdictions in the development of Sustainable Communities Strategy (SCS) designed to integrate development patterns and the transportation network in a way that reduces GHG emissions while meeting housing needs and other regional planning objectives. Pursuant to SB 375, the San Francisco Bay Area reduction targets for per capita vehicular emissions are 10 percent by 2020 and 19 percent by 2035 as shown in Table E.

Table E: Senate Bill 375 Regional Greenhouse Gas Emissions Reduction Targets

Metropolitan Planning Organization	By 2020 (percent)	By 2035 (percent)
San Francisco Bay Area	10	19
San Diego	15	19
Sacramento	7	19
Central Valley/San Joaquin	6-13	13-16
Los Angeles/Southern California	8	19

Source: California Air Resources Board (2018).

Executive Order B-30-15 (2015)

Governor Jerry Brown signed EO B-30-15 on April 29, 2015, which added the immediate target of:

- GHG emissions should be reduced to 40 percent below 1990 levels by 2030.

All State agencies with jurisdiction over sources of GHG emissions were directed to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 targets. CARB was directed to update the AB 32 Scoping Plan to reflect the 2030 target, and therefore, is moving forward with the update process. The mid-term target is critical to help frame the suite of policy measures, regulations, planning efforts, and investments in clean technologies and infrastructure needed to continue reducing emissions.

Senate Bill 350 (2015) Clean Energy and Pollution Reduction Act

Senate Bill (SB) 350, signed by Governor Jerry Brown on October 7, 2015, updates and enhances AB 32 by introducing the following set of objectives in clean energy, clean air, and pollution reduction for 2030:

- Raise California's renewable portfolio standard from 33 percent to 50 percent; and
- Increasing energy efficiency in buildings by 50 percent by the year 2030.

The 50 percent renewable energy standard will be implemented by the California Public Utilities Commission (CPUC) for the private utilities and by the California Energy Commission (CEC) for municipal utilities. Each utility must submit a procurement plan showing it will purchase clean energy to displace other non-renewable resources. The 50 percent increase in energy efficiency in buildings must be achieved through the use of existing energy efficiency retrofit funding and regulatory tools already available to state energy agencies under existing law. The addition made by this legislation requires state energy agencies to plan for, and implement those programs in a manner that achieves the energy efficiency target.

Senate Bill 32, California Global Warming Solutions Act of 2016, and Assembly Bill 197

In summer 2016 the Legislature passed, and the Governor signed, SB 32, and AB 197. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emissions reductions target of at least 40 percent below 1990 levels by 2030 contained in Governor Brown's April 2015 EO B-30-15. SB 32 builds on AB 32 and keeps us on the path toward achieving the State's 2050 objective of reducing emissions to 80 percent below 1990 levels, consistent with an IPCC analysis of the emissions trajectory that would stabilize atmospheric GHG concentrations at 450 parts per million CO_2e and reduce the likelihood of catastrophic impacts from climate change.

The companion bill to SB 32, AB 197, provides additional direction to CARB related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 meant to provide easier public access to air emissions data that are collected by CARB was posted in December 2016.

Senate Bill 100

On September 10, 2018, Governor Brown signed SB 100, which raises California's Renewables Portfolio Standard (RPS) requirements to 60 percent by 2030, with interim targets, and 100 percent by 2045. The bill also establishes a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers

and 100 percent of electricity procured to serve all state agencies by December 31, 2045. Under the bill, the state cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Executive Order B-55-18

EO B-55-18, signed September 10, 2018, sets a goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." EO B-55-18 directs CARB to work with relevant state agencies to ensure future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal. The goal of carbon neutrality by 2045 is in addition to other statewide goals, meaning not only should emissions be reduced to 80 percent below 1990 levels by 2050, but that, by no later than 2045, the remaining emissions be offset by equivalent net removals of CO_2e from the atmosphere, including through sequestration in forests, soils, and other natural landscapes.

Title 24, Building Standards Code and CALGreen Code

In November 2008, the California Building Standards Commission established the California Green Building Standards (CALGreen Code) Code, which sets performance standards for residential and nonresidential development to reduce environmental impacts and encourage sustainable construction practices. The CALGreen Code addresses energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality. The CALGreen Code is updated every 3 years and was most recently updated in 2019 to include new mandatory measures for residential as well as non-residential uses; the new measures took effect on January 1, 2020. The next set of standards will be adopted in 2022 and apply to projects seeking building permits on or after January 1, 2023.

California Building Efficiency Standards (Title 24, Part 6)

The California Building Standards Code, or Title 24 of the California Code of Regulations (CCR) contains the regulations that govern the construction of buildings in California. Within the Building Standards Code, two parts pertain to the incorporation of both energy efficient and green building elements into land use development. Part 6 is California's Energy Efficiency Standards for Residential and Non-Residential Buildings. These standards were first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption and are updated on an approximately 3-year cycle to allow consideration and possible incorporation of new energy efficient technologies and methods. All buildings for which an application for a building permit is submitted on or after January 1, 2020, must follow the 2019 standards. The next set of standards is anticipated for release in 2022. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions.

Cap and Trade

The development of a cap-and-trade program was included as a key reduction measure of the CARB AB 32 Climate Change Scoping Plan. The cap-and-trade program will help put California on the path to meet its goal of reducing GHG emissions to 1990 levels by 2020 and ultimately achieving an 80 percent reduction from 1990 levels by 2050. The cap-and-trade emissions trading program developed by the CARB took effect on January 1, 2012, with enforceable compliance obligations

beginning January 1, 2013. The cap-and-trade program aims to regulate GHG emissions from the largest producers in the State by setting a statewide firm limit, or cap, on allowable annual GHG emissions. The cap was set in 2013 at approximately 2 percent below the emissions forecast for 2020. In 2014, the cap declined approximately 2 percent. Beginning in 2015 and continuing through 2020, the cap has been declining approximately 3 percent annually. The CARB administered the first auction on November 14, 2012, with many of the qualified bidders representing corporations or organizations that produce large amounts of GHG emissions, including energy companies, agriculture and food industries, steel mills, cement companies, and universities. On January 1, 2015, compliance obligation began for distributors of transportation fuels, natural gas, and other fuels. The cap-and-trade program was initially slated to sunset in 2020 but the passage of SB 398 in 2017 extended the program through 2030.

Executive Order N-79-20

EO N-79-20, which was signed by the Governor on September 23, 2020, sets the following goals for the State: 100 percent of in-state sales of new passenger cars and trucks shall be zero-emission by 2035; 100 percent of medium- and heavy-duty vehicles in the State shall be zero-emission by 2045 for all operations where feasible and by 2035 for drayage trucks; and 100 percent of off-road vehicles and equipment in the State shall be zero-emission by 2035, where feasible.

Low Carbon Fuel Standard

In January 2007, EO S-01-07 established a Low Carbon Fuel Standard (LCFS). This executive order calls for a statewide goal to be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020, and that an LCFS for transportation fuels be established for California. The LCFS applies to all refiners, blenders, producers, or importers ("Providers") of transportation fuels in California, including fuels used by off-road construction equipment. In June 2007, CARB adopted the LCFS under AB 32 pursuant to Health and Safety Code Section 38560.5, and, in April 2009, CARB approved the new rules and carbon intensity reference values with new regulatory requirements taking effect in January 2011. The standards require providers of transportation fuels to report on the mix of fuels they provide and demonstrate they meet the LCFS intensity standards annually. This is accomplished by ensuring that the number of "credits" earned by providing fuels with a lower carbon intensity than the established baseline (or obtained from another party) is equal to or greater than the "deficits" earned from selling higher intensity fuels. In response to certain court rulings, CARB re-adopted the LCFS regulation in September 2015, and the LCFS went into effect on January 1, 2016. In 2018, CARB approved amendments to the regulation to readjust carbon intensity benchmarks to meet California's 2030 GHG reductions targets under SB 32. These amendments include opportunities to promote zero emission vehicle (ZEV) adoption, carbon capture and sequestration, and advanced technologies for decarbonization of the transportation sector.

Advanced Clean Cars Program

In January 2012, CARB approved the Advanced Clean Cars program, which combines the control of GHG emissions and criteria air pollutants, as well as requirements for greater numbers of ZEVs, into a single package of regulatory standards for vehicle model years 2017 through 2025. The new regulations strengthen the GHG standard for 2017 models and beyond. This will be achieved

through existing technologies, the use of stronger and lighter materials, and more efficient drivetrains and engines. The program's ZEVs regulation requires battery, fuel cell, and/or plug-in hybrid electric vehicles to account for up to 15 percent of California's new vehicle sales by 2025. The program also includes a clean fuels outlet regulation designed to support the commercialization of zero-emission hydrogen fuel cell vehicles planned by vehicle manufacturers by 2015 by requiring increased numbers of hydrogen fueling stations throughout the State. The number of stations will grow as vehicle manufacturers sell more fuel cell vehicles. By 2025, when the rules will be fully implemented, the statewide fleet of new cars and light trucks will emit 40 percent fewer GHGs and 75 percent fewer smog-forming emissions than 2012 model year vehicles.

Executive Order B-48-18

In January 2018, Governor Brown signed EO B-48-18 requiring all State entities to work with the private sector to have at least 5 million ZEVs on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 electric vehicle charging stations by 2025. It specifies that 10,000 of the electric vehicle charging stations should be direct current fast chargers. This order also requires all State entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. The Governor's Office of Business and Economic Development is required to publish a Plug-in Charging Station Design Guidebook and update the 2015 Hydrogen Station Permitting Guidebook to aid in these efforts. All State entities are required to participate in updating the 2016 Zero-Emissions Vehicle Action Plan to help expand private investment in ZEV infrastructure with a focus on serving low-income and disadvantaged communities. Additionally, all State entities are to support and recommend policies and actions to expand ZEV infrastructure at residential land uses, through the LCFS Program, and recommend how to ensure affordability and accessibility for all drivers.

Regional Regulations

Regional regulations that are applicable to GHG emissions generated by the proposed project are implemented by the Metropolitan Transportation Commission (MTC), Association of Bay Area Governments (ABAG), and BAAQMD, as discussed below.

Plan Bay Area 2050

Plan Bay Area 2050 is a State-mandated, integrated long-range transportation and land use plan. As required by SB 375, all metropolitan regions in California must complete a Sustainable Communities Strategy (SCS) as part of a Regional Transportation Plan (RTP). In the Bay Area, MTC and ABAG are jointly responsible for developing and adopting an SCS that integrates transportation, land use and housing to meet GHG reduction targets set by the CARB. Plan Bay Area 2050 connects the elements of housing, the economy, transportation, and the environment through 35 strategies that will make the Bay Area more equitable for all residents and more resilient in the face of unexpected challenges. In the short-term, the plan's Implementation Plan identifies more than 80 specific actions for MTC, ABAG, and partner organizations to take over the next five years to make headway on each of the 35 strategies.

Bay Area Air Quality Management District

The BAAQMD is the regional government agency that regulates sources of air pollution within the nine Bay Area counties. The BAAQMD regulates GHG emissions through the following plans, programs, and guidelines.

BAAQMD Justification Report: CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans. In April 2022, the BAAQMD adopted the *Justification Report: CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans*[1] document, which incorporates updated GHG significance thresholds. The BAAQMD recommends these thresholds of significance for use in determining whether a proposed project will have a significant impact related to climate change. These thresholds evaluate a project based on its effect on California's efforts to meet the State's long-term climate goals. Applying this approach, the BAAQMD identifies and provides supporting documentation, outlining the requirements for new land use development projects necessary to achieve California's long-term climate goal of carbon neutrality by 2045. Based on their analysis, the BAAQMD found that new land use development projects need to incorporate design elements to do its "fair share" to implement the goal of carbon neutrality by 2045. If a project is designed and built to incorporate the identified design elements, then it will contribute its portion of what is necessary to achieve California's long-term climate goals—its "fair share"—and an agency reviewing the project under CEQA can conclude that the project will not make a cumulatively considerable contribution to global climate change. The document concludes that if a project does not incorporate these design elements, then it should be found to make a significant climate impact because it will hinder California's efforts to address climate change.

City of Menlo Park

The City of Menlo Park addresses global climate change and GHG emissions in the General Plan, ConnectMenlo EIR, and Climate Action Plan, as discussed below.

City of Menlo Park General Plan

The City of Menlo Park addresses GHG emissions in the Open Space, Conservation, Noise and Safety Elements of the General Plan.[2] The Open Space, Conservation, Noise and Safety Elements set goals, policies, and implementing programs that work to promote sustainability and climate action planning. The following policies are applicable to the proposed project.

- **Policy OSC4.1: Sustainable Approach to Land Use Planning to Reduce Resource Consumption.** Encourage, to the extent feasible, 1) a balance and match between jobs and housing, 2) higher density residential and mixed-use development to be located adjacent to commercial centers and transit corridors, and 3) retail and office areas to be located within walking and biking distance of transit or existing and proposed residential developments.

[1] BAAQMD. 2022, op. cit.
[2] Menlo Park, City of. 2013. *City of Menlo Park General Plan. Open Space Conservation, Noise and Safety Elements*. May 21.

- **Policy OSC4.2: Sustainable Building.** Promote and/or establish environmentally sustainable building practices or standards in new development that would conserve water and energy, prevent stormwater pollution, reduce landfilled waste, and reduce fossil fuel consumption from transportation and energy activities.

- **Policy OSC4.3: Renewable Energy.** Promote the installation of renewable energy technology, such as, on residences and businesses through education, social marketing methods, establishing standards and/or providing incentives.

- **Policy OSC4.4: Vehicles Using Alternative Fuel**. Explore the potential for installing infrastructure for vehicles that use alternative fuel, such as electric plug-in recharging stations.

- **Policy OSC4.5: Energy Standards in Residential and Commercial Construction.** Encourage projects to achieve a high level of energy conservation exceeding standards set forth in the California Energy Code for Residential and Commercial development.

- **Policy OSC4.6: Waste Reduction Target.** Strive to meet the California State Integrated Waste Management Board per person target of waste generation per person per day through their source reduction, reuse, and recycling programs.

- **Policy OSC4.7: Waste Management Collaboration.** Continue to support and participate in efforts such as the South Bayside Waste Management Authority, which provides waste reduction, recycling, and solid waste programs and solutions.

- **Policy OSC4.8: Waste Diversion.** Develop and implement a zero waste policy, or implement standards, incentives, or other programs that would lead the community towards a zero waste goal.

- **Policy OSC4.10: Energy Upgrade California.** Consider actively marketing and providing additional incentives for residents and businesses to participate in local, State, and/or Federal renewable or energy conservation programs.

ConnectMenlo EIR

The proposed project's hotel room count is within the maximum amount of hotel room development potential identified in ConnectMenlo. The ConnectMenlo EIR identified the following mitigation measures that would apply to the proposed project and that would help to reduce and avoid potential impacts related to GHG emissions:

- **Mitigation Measure GHG-1:** Prior to January 1, 2020, the City of Menlo Park shall update the Climate Action Plan (CAP) to address the GHG reduction goals of Executive Order B-30-15 and Executive Order S03-05 for GHG sectors that the City has direct or indirect jurisdictional control over. The City shall identify a GHG emissions reduction target for year 2030 and 2040 that is consistent with the GHG reduction goals identified in Executive Order B-30-15 and Executive Order S-03-05. The CAP shall be updated to include measures to ensure that the City is on a trajectory that aligns with the state's 2030 GHG emissions reduction target.

- **Mitigation Measure GHG-2:** Implementation of Mitigation Measure GHG-1.

Climate Action Plan

The City's Climate Action Plan (CAP) was first adopted in May 2009 and is updated from time to time, most recently in 2020 and amended April 2021, and identifies local emissions reduction strategies designed to help meet AB 32 targets. CEQA authorizes reliance on a previously approved CAP that was prepared per Section 15183.5 of the *State CEQA Guidelines*. This section of the guidelines establishes opportunities for CEQA tiering; the City's CAP does not meet these tiering requirements because the CAP does not include specific thresholds of significance for determining the significance of GHG emissions, nor has the CAP been adopted in a public process following environmental review. Consequently, because the City's CAP does not satisfy the tiering requirements of CEQA established in Section 15183.5 of the CEQA Guidelines, it is not used to determine the significance of project-related GHG emissions, as described below. However, for informational purposes, this qualitative analysis compares the project against measures found in the City's CAP.

The CAP recommends various community and municipal strategies for near-term and mid-term considerations. The emissions reduction strategies are generally focused on community actions, since more than 99 percent of the emissions are from community sources.

The City updates its community-wide GHG inventory and CAP annually. In 2011, the City completed the first update to the City's CAP Strategy, known as the 2011 CAP Assessment Report. As part of the 2013 update, the City Council adopted a target of reducing community-wide GHG emissions by 27 percent below 2005 levels by 2020.

The most recent status update to the City's CAP was conducted in April 2021.[1] The 2021 CAP includes updated emissions inventories through year 2017 and adopts a climate goal of zero carbon by 2030. The CAP aims for a 90 percent reduction in CO_2e emissions from 2005 levels by 2030.

[1] Menlo Park, City of. 2021, *2030 Climate Action Plan*. June.

SETTING

ATTAINMENT STATUS

The CARB is required to designate areas of the state as attainment, nonattainment, or unclassified for all State standards. An *attainment* designation for an area signifies that pollutant concentrations did not violate the standard for that pollutant in that area. A *nonattainment* designation indicates that a pollutant concentration violated the standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. An *unclassified* designation signifies that data do not support either an attainment or nonattainment status. The CCAA divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

The USEPA designates areas for O_3, CO, and NO_2 as either does not meet the primary standards, or cannot be classified, or better than national standards. For SO_2, areas are designated as does not meet the primary standards, does not meet the secondary standards, cannot be classified, or better than national standards.

Table F provides a summary of the attainment status for the Basin with respect to the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS).

REGIONAL CLIMATE AND AIR QUALITY

Menlo Park is located in the southern part of the San Francisco Bay Area Air Basin, a large shallow air basin ringed by hills that taper into a number of sheltered valleys around the perimeter. Two primary atmospheric outlets exist. One is through the strait known as the Golden Gate, a direct outlet to the Pacific Ocean. The second extends to the northeast, along the west delta region of the Sacramento and San Joaquin Rivers.

The City is within the jurisdiction of the BAAQMD, which regulates air quality in the Bay Area. Air quality conditions in the Bay Area have improved significantly since the BAAQMD was created in 1955. Ambient concentrations of air pollutants and the number of days during which the region exceeds air quality standards have fallen dramatically. Neither State nor national ambient air quality standards of the following chemicals have been violated in recent decades: nitrogen dioxide, sulfur dioxide, sulfates, lead, hydrogen sulfide, and vinyl chloride. Those exceedances of air quality standards that do occur primarily happen during meteorological conditions conducive to high pollution levels, such as cold, windless nights or hot, sunny summer afternoons.

Ozone levels, measured by peak concentrations and the number of days over the State 1-hour standard, have declined substantially as a result of aggressive programs by the BAAQMD and other regional, State, and federal agencies. The reduction of peak concentrations represents progress in improving public health; however, the Bay Area still exceeds the State standard for 1-hour ozone as well as the State and federal 8-hour standards. Levels of PM_{10} have exceeded State standards two of the last three years, and the area is considered a nonattainment area for this pollutant relative to the State standards. The Bay Area is an unclassified area for the federal PM_{10} standard.

Table F: San Francisco Bay Area Basin Attainment Status

	Averaging Time	California Standards [a]		National Standards [b]	
		Concentration	Attainment Status	Concentration [c]	Attainment Status
Ozone (O_3)	8-Hour	0.070 ppm (137µg/m^3)	Nonattainment [l]	0.070 ppm	Nonattainment [d]
	1-Hour	0.09 ppm (180 µg/m^3)	Nonattainment	Not Applicable	[e]
Carbon Monoxide (CO)	8-Hour	9.0 ppm (10 mg/m^3)	Attainment	9 ppm (10 mg/m^3)	Attainment [f]
	1-Hour	20 ppm (23 mg/m^3)	Attainment	35 ppm (40 mg/m^3)	Attainment
Nitrogen Dioxide (NO_2)	1-Hour	0.18 ppm (339 µg/m^3)	Attainment	0.100 ppm [k]	[k]
	Annual Arithmetic Mean	0.030 ppm (57 µg/m^3)	Not Applicable	0.053 ppm (100 µg/m^3)	Attainment
Sulfur Dioxide (SO_2) [l]	24-Hour	0.04 ppm (105 µg/m^3)	Attainment	0.14 ppm (365 µg/m^3)	[l]
	1-Hour	0.25 ppm (655 µg/m^3)	Attainment	0.075 ppm (196 µg/m^3)	[l]
	Annual Arithmetic Mean	Not Applicable	Not Applicable	0.030 ppm (80 µg/m^3)	[l]
Particulate Matter (PM_{10})	Annual Arithmetic Mean	20 µg/m^3	Nonattainment [g]	Not Applicable	Not Applicable
	24-Hour	50 µg/m^3	Nonattainment	150 µg/m^3	Unclassified
Fine Particulate Matter ($PM_{2.5}$)	Annual Arithmetic Mean	12 µg/m^3	Nonattainment [g]	15 µg/m^3 [0]	Unclassified/ Attainment
	24-Hour	Not Applicable	Not Applicable	35 µg/m^3 [j]	Nonattainment
Sulfates	24-Hour	25 µg/m^3	Attainment	Not Applicable	Not Applicable
Lead (Pb) [m]	30-Day Average	1.5 µg/m^3	Not Applicable	Not Applicable	Attainment
	Calendar Quarter	Not Applicable	Not Applicable	1.5 µg/m^3	Attainment
	Rolling 3-Month Average [n]	Not Applicable	Not Applicable	0.15 µg/m^3	[n]
Hydrogen Sulfide	1-Hour	0.010 ppm (26 µg/m^3)	Unclassified	Not Applicable	Not Applicable
Vinyl Chloride (chloroethene)	24-Hour	0.010 ppm (26 µg/m^3)	No Information Available	Not Applicable	Not Applicable
Visibility Reducing Particles	8-Hour (10:00 to 18:00 PST)	[h]	Unclassified	Not Applicable	Not Applicable

Source: Bay Area Air Quality Management District Bay Area Attainment Status (BAAQMD 2017).
Table notes continued on the following page

[a] California standards for ozone, carbon monoxide (except Lake Tahoe), sulfur dioxide (1-hour and 24-hour), nitrogen dioxide, suspended particulate matter - PM_{10}, and visibility reducing particles are values that are not to be exceeded. The standards for sulfates, Lake Tahoe carbon monoxide, lead, hydrogen sulfide, and vinyl chloride are not to be equaled or exceeded. If the standard is for a 1-hour, 8-hour or 24-hour average (i.e., all standards except for lead and the PM_{10} annual standard), then some measurements may be excluded. In particular, measurements are excluded that CARB determines would occur less than once per year on the average. The Lake Tahoe CO standard is 6.0 ppm, a level one-half the national standard and two-thirds the State standard.

[b] National standards shown are the "primary standards" designed to protect public health. National standards other than for ozone, particulates and those based on annual averages are not to be exceeded more than once a year. The 1-hour ozone standard is attained if, during the most recent three-year period, the average number of days per year with maximum hourly concentrations above the standard is equal to or less than one. The 8-hour ozone standard is attained when the three-year average of the 4th highest daily concentrations is 0.070 ppm (70 ppb) or less. The 24-hour PM_{10} standard is attained when the three-year average of the 99th percentile of monitored concentrations is less than 150 µg/m^3. The 24-hour $PM_{2.5}$ standard is attained when the three-year average of 98th percentiles is less than 35 µg/m^3.
Except for the national particulate standards, annual standards are met if the annual average falls below the standard at every site. The national annual particulate standard for PM_{10} is met if the three-year average falls below the standard at every site. The annual $PM_{2.5}$ standard is met if the three-year average of annual averages spatially-averaged across officially designed clusters of sites falls below the standard.

[c] National air quality standards are set by USEPA at levels determined to be protective of public health with an adequate margin of safety.

[d] On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm. An area will meet the standard if the fourth-highest maximum daily 8-hour ozone concentration per year, averaged over three years, is equal to or less than 0.070 ppm. USEPA will make recommendations on attainment designations by October 1, 2016, and issue final designations October 1, 2017. Nonattainment areas will have until 2020 to late 2037 to meet the health standard, with attainment dates varying based on the ozone level in the area.

[e] The national 1-hour ozone standard was revoked by USEPA on June 15, 2005.

[f] In April 1998, the Bay Area was redesignated to attainment for the national 8-hour carbon monoxide standard.

[g] In June 2002, CARB established new annual standards for $PM_{2.5}$ and PM_{10}.

[h] Statewide VRP Standard (except Lake Tahoe Air Basin): Particles in sufficient amount to produce an extinction coefficient of 0.23 per kilometer when the relative humidity is less than 70 percent. This standard is intended to limit the frequency and severity of visibility impairment due to regional haze and is equivalent to a 10-mile nominal visual range.

[i] The 8-hour CA ozone standard was approved by the Air Resources Board on April 28, 2005, and became effective on May 17, 2006.

[j] On January 9, 2013, USEPA issued a final rule to determine that the Bay Area attains the 24-hour $PM_{2.5}$ national standard. This USEPA rule suspends key SIP requirements as long as monitoring data continue to show that the Bay Area attains the standard. Despite this USEPA action, the Bay Area will continue to be designated as “non-attainment” for the national 24-hour $PM_{2.5}$ standard until such time as the Air District submits a “redesignation request” and a “maintenance plan” to USEPA and USEPA approves the proposed redesignation.

[k] To attain this standard, the three-year average of the 98th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 0.100 ppm (effective January 22, 2010). The USEPA expects to make a designation for the Bay Area by the end of 2017.

[l] On June 2, 2010, the USEPA established a new 1-hour SO_2 standard, effective August 23, 2010, which is based on the three-year average of the annual 99th percentile of 1-hour daily maximum concentrations. The existing 0.030-ppm annual and 0.14-ppm 24-hour SO_2 NAAQS however must continue to be used until one year following USEPA initial designations of the new 1-hour SO_2 NAAQS. USEPA expects to make designation for the Bay Area by the end of 2017.

[m] CARB has identified lead and vinyl chloride as ‘toxic air contaminants’ with no threshold level of exposure below which there are no adverse health effects determined.

[n] National lead standard, rolling 3-month average: final rule signed October 15, 2008. Final designations effective December 31, 2011.

[o] In December 2012, USEPA strengthened the annual $PM_{2.5}$ NAAQS from 15.0 to 12.0 µg/m^3. In December 2014, USEPA issued final area designations for the 2012 primary annual $PM_{2.5}$ NAAQS. Areas designated “unclassifiable/attainment” must continue to take steps to prevent their air quality from deteriorating to unhealthy levels. The effective date of this standard is April 15, 2015.

µg/m^3 = micrograms per cubic meter
CARB = California Air Resources Board
mg/m^3 = milligrams per cubic meter
NAAQS = National Ambient Air Quality Standards
ppm = parts per million
USEPA = United States Environmental Protection Agency

No exceedances of the State or federal CO standards have been recorded at any of the region’s monitoring stations since 1991. The Bay Area is currently considered a maintenance area for State and federal CO standards.

LOCAL CLIMATE AND AIR QUALITY

Air quality is a function of both local climate and local sources of air pollution. Air quality is the balance of the natural dispersal capacity of the atmosphere and emissions of air pollutants from human uses of the environment. Two meteorological factors affect air quality in Menlo Park: wind and temperature. Winds affect the direction of transport of any air pollution emissions and wind also controls the volume of air into which pollution is mixed in a given period of time. While winds govern horizontal mixing processes, temperature inversions determine the vertical mixing depth of air pollutants.

Menlo Park is located in San Mateo County, which lies in the middle of the San Francisco Peninsula, south of San Francisco County, and north of Santa Clara and Santa Cruz Counties. San Mateo County is bounded by the Pacific Ocean to the west and San Francisco Bay to the east. Cool, foggy weather is prevalent along the western coast of the peninsula, particularly during the summer. Summertime average daily temperatures are moderate along the west coast and warm in the County's east side. In the winter, average daily temperatures across the County range from mild to moderate. Winds are mild, with the highest wind speeds focused along the western coast. Rainfall averages about 20 to 25 inches per year at lower elevations and up to 36 inches in the Santa Cruz Mountains.[1]

Ozone and fine particle pollution, or $PM_{2.5}$, are the major regional air pollutants of concern in the Bay Area. Ozone is primarily a problem in the summer, and fine particle pollution in the winter.[2]

In San Mateo County, ozone almost never exceeds health standards, and $PM_{2.5}$ exceeds the national standard only on about one day each year. San Mateo County frequently receives fresh marine air from the Pacific Ocean, which passes over the coastal hills. In winter, $PM_{2.5}$ may be transported into San Mateo County from other parts of the Bay Area, adding to wood smoke, which may lead to elevated concentrations, but these are rarely high enough to exceed health standards.[3]

AIR QUALITY MONITORING RESULTS

Air quality monitoring stations are located throughout the nation and are maintained by the local air pollution control district and State air quality regulating agencies. The BAAQMD, together with the CARB, maintains ambient air quality monitoring stations in the Basin. The air quality monitoring station closest to the project site is the 897 Barron Avenue monitoring station in Redwood City, which monitors criteria air pollutant data.[4] The air quality trends from this station are used to represent the ambient air quality in the project area. Ambient air quality in the project area from 2019 to 2021 is shown in Table G. The pollutants monitored were CO, O_3, $PM_{2.5}$, and NO_2. Air quality trends for PM_{10} and SO_2 are not monitored in San Mateo County; therefore, the air quality trends for PM_{10} and SO_2 are from the 156B Jackson Street monitoring station in San Jose.

4 CARB gathers ambient air quality data for the State of California and ensures the quality of these data. CARB provides ambient air quality monitoring sites throughout California's counties and air basins.

Table G: Ambient Air Quality at the 897 Barron Avenue, Redwood City Monitoring Station

Pollutant	Standard	2019	2020	2021
Carbon Monoxide (CO)				
Maximum 1-hour concentration (ppm)		2.0	2.1	1.6
Number of days exceeded:	State: > 20 ppm	0	0	0
	Federal: > 35 ppm	0	0	0
Maximum 8-hour concentration (ppm)		1.1	1.5	0.9
Number of days exceeded:	State: > 9 ppm	0	0	0
	Federal: > 9 ppm	0	0	0
Ozone (O_3)				
Maximum 1-hour concentration (ppm)		0.083	0.098	0.085
Number of days exceeded:	State: > 0.09 ppm	0	1	0
Maximum 8-hour concentration (ppm)		0.077	0.078	0.064
Number of days exceeded:	State: > 0.07 ppm	2	1	0
	Federal: > 0.07 ppm	2	1	0
Coarse Particulates (PM_{10})[1]				
Maximum 24-hour concentration (µg/m^3)		77.1	137.1	45.1
Number of days exceeded:	State: > 50 µg/m^3	4	10	0
	Federal: > 150 µg/m^3	0	0	0
Annual arithmetic average concentration (µg/m^3)		19.1	ND	20.1
Exceeded for the year:	State: > 20 µg/m^3	No	ND	Yes
	Federal: > 50 µg/m^3	No	ND	No
Fine Particulates ($PM_{2.5}$)				
Maximum 24-hour concentration (µg/m^3)		29.5	124.1	30.1
Number of days exceeded:	Federal: > 35 µg/m^3	0	9	0
Annual arithmetic average concentration (µg/m^3)		7.0	9.8	6.0
Exceeded for the year:	State: > 12 µg/m^3	No	No	No
	Federal: > 15 µg/m^3	No	No	No
Nitrogen Dioxide (NO_2)				
Maximum 1-hour concentration (ppm)		0.055	0.046	0.041
Number of days exceeded:	State: > 250 ppb	0	0	0
Annual arithmetic average concentration (ppm)		0.009	0.008	0.007
Exceeded for the year:	Federal: > 53 ppb	No	No	No
Sulfur Dioxide (SO_2)[1]				
Maximum 1-hour concentration (ppm)		0.0145	0.0029	0.0018
Number of days exceeded:	State: > 0.25 ppm	0	0	0
Maximum 24-hour concentration (ppm)		0.0015	0.0008	0.0007
Number of days exceeded:	State: > 0.04 ppm	0	0	0
	Federal: > 0.14 ppm	0	0	0
Annual arithmetic average concentration (ppm)		0.0001	0.0002	0.0002
Exceeded for the year:	Federal: > 0.030 ppm	No	No	No

Sources: CARB (2022) and USEPA (2022).

[1] Data taken at the 156B Jackson Street air quality monitoring station in San Jose.

µg/m^3 = micrograms per cubic meter
CARB = California Air Resources Board
ND = No data. There were insufficient (or no) data to determine the value.
ppb = parts per billion
ppm = parts per million
USEPA = United States Environmental Protection Agency

Pollutant monitoring results indicate that air quality in the San Mateo County area has generally been good. As indicated in the monitoring results, 1-hour ozone concentrations exceeded the State standard once in 2020 and the 8-hour ozone concentrations exceeded the State and federal standards twice in 2019 and once in 2020. In addition, the State PM_{10} standard was exceeded four times in 2019 and 10 times in 2020. The federal $PM_{2.5}$ standard was not exceeded between 2019 and 2021. The federal $PM_{2.5}$ standard exceeded nine times in 2020. The CO, NO_2, and SO_2 standards were not exceeded in this area during the three-year period.

GREENHOUSE GAS EMISSIONS INVENTORY

An emissions inventory that identifies and quantifies the primary human-generated sources and sinks of GHGs is a well-recognized and useful tool for addressing climate change. This section summarizes the latest information on global, United States, and California GHG emissions inventories.

Global Emissions

Worldwide emissions of GHGs in 2018 totaled 25.6 billion metric tons of CO_2e. Global estimates are based on country inventories developed as part of the programs of the United Nations Framework Convention on Climate Change.[1]

United States Emissions

In 2019, the year for which the most recent data are available, the United States emitted about 6,558 million metric tons of CO_2e (MMT CO_2e). Overall, emissions in 2019 decreased by 1.7 percent since 2018 and were 13 percent 2005 levels. This decrease was driven largely by a decrease in emissions from fossil fuel combustion resulting from a decrease in total energy use in 2019 compared to 2018 and a continued shift from coal to natural gas and renewables in the electric power sector. Of the six major sectors – residential, commercial, agricultural, industry, transportation, and electricity generation – transportation accounted for the highest amount of GHG emissions in 2019 (approximately 29 percent), with electricity generation second at 25 percent and emissions from industry third at 23 percent.[2]

State of California Emissions

The State emitted approximately 418.2 MMT CO_2e emissions in 2019, 7.2 MMT CO_2e lower than 2018 levels and almost 13 MMT CO_2e below the 2020 GHG Limit of 431 MMT CO_2e.[3] The CARB estimates that transportation was the source of approximately 40 percent of the State's GHG

2 USEPA. 2021. Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-2019. Website: https://www.epa.gov/ghgemissions/inventory-us-greenhouse-gas-emissions-and-sinks-1990-2019 (accessed May 2022).

3 CARB. 2021. *California Greenhouse Gas Emissions for 2000 to 2019, Trends of Emissions and Other Indicators Report*. Website: https://ww3.arb.ca.gov/cc/inventory/pubs/reports/2000_2019/ghg_inventory_trends_00-19.pdf (accessed May 2022).

emissions in 2019, followed by industrial sources at approximately 21 percent and electricity generation at 14 percent. The remaining sources of GHG emissions were agriculture at 8 percent, residential activities at 7 percent, commercial activities at 4 percent, high GWP at 5 percent, and waste at 2 percent.[1]

San Francisco Bay Area Emissions

The BAAQMD established a climate protection program in 2005 to acknowledge the link between climate change and air quality. The BAAQMD regularly prepares inventories of criteria and toxic air pollutants to support planning, regulatory and other programs. The most recent emissions inventory estimates GHG emissions produced by the Bay Area in 2011.[2] The inventory, which was published January 2015, updates the BAAQMD's previous GHG emission inventory for base year 2007.

In 2011, 86.6 MMT CO_2e of GHGs were emitted in the Bay Area. Fossil fuel consumption in the transportation sector was the single largest source of the Bay Area's GHG emissions in 2011. The transportation sector (including on-road motor vehicles, locomotives, ships and boats, and aircraft) contributed 39.7 percent of GHG emissions and the industrial and commercial sectors (excluding electricity and agriculture) contributed 35.7 percent of GHG emissions in the Bay Area. Energy production activities such as electricity generation and co-generation were the third largest contributor with approximately 14 percent of the total GHG emissions. Off-road equipment such as construction, industrial, commercial, and lawn and garden equipment contributed 1.5 percent of GHG emissions.

City of Menlo Park Emissions

The City of Menlo Park's Climate Action Plan identifies the City's communitywide GHG emissions by source for the years 2005 and 2017.[3] As shown in Table H below, in 2005, the community emitted 349,284 metric tons (MT) of CO_2e most of which was the result of vehicles (40 percent), emissions from electricity (25 percent), natural gas (29 percent), and waste (6 percent). In addition, the aim of the City's Climate Action Plan is to reduce community-wide emissions by another 71 percent for a total reduction of 90 percent from 2005 emissions, leaving just 34,933 tons of CO_2e per year by 2030, as shown in Table H below.

MT CO_2e = metric tons of carbon dioxide equivalent

METHODOLOGY

The methodology used to estimate air quality and GHG impacts is described below.

CONSTRUCTION EMISSIONS

Construction activities can generate a substantial amount of air pollution. Construction activities are considered temporary; however, short-term impacts can contribute to exceedances of air quality standards. Construction activities include demolition, site preparation, earthmoving, and general construction. The emissions generated from these common construction activities include fugitive dust from soil disturbance, fuel combustion from mobile heavy-duty diesel- and gasoline-powered equipment, portable auxiliary equipment, and worker commute trips. The California Emissions Estimator Model (CalEEMod) Version 2020.4.0 computer program was used to calculate emissions from on-site construction equipment and emissions from worker and vehicle trips to the site.

The proposed project would include demolition of the existing building and surface parking lot on the project site, which was included in CalEEMod. In addition, a total of approximately 439 cubic yards of soils would be imported to the project site, which was included in CalEEMod. Construction of the proposed project is anticipated to begin in January 2023 and end January 2025. Construction phasing, equipment, and worker and vendor trips in CalEEMod are based on information provided by the project sponsor. This analysis also assumes the use of Tier 2 construction equipment. CalEEMod output sheets are included in Appendix A.

OPERATIONAL EMISSIONS

This air quality analysis includes estimating emissions associated with long-term operation of the project. Indirect emissions of criteria pollutants with regional impacts would be emitted by project-generated vehicle trips. In addition, localized air quality impacts (i.e., higher CO concentrations or "hot-spots") near intersections or roadway segments in the project vicinity would also potentially occur due to project-generated vehicle trips.

Consistent with BAAQMD's guidance for estimating emissions, the CalEEMod computer program was used to calculate the long-term operational emissions associated with the project. The analysis was conducted using land use codes *Hotel* and *Enclosed Parking Structure.*[1] Based on the project's Transportation Impact Analysis[2], the proposed project would generate 957 net new average daily trips, which was included in CalEEMod. In addition, the proposed project would not increase the demand for natural gas as the City's reach codes would require the buildings to be all electric, which was included in CalEEMod. The proposed project would also include a 670 HP diesel generator, which was also included in CalEEMod. The proposed project would be built to LEED Silver standards, would include solar panels, and would be 12 percent more energy efficient than the 2019 Title 24 standards, which was also included in CalEEMod. Where project-specific data were not available,

1 The CalEEMod analysis evaluated 125 parking spaces based on a previous site plan. The latest site plan indicates the proposed project would provide 124 parking spaces. This slight refinement was reviewed by LSA and it was determined that this refinement would negligibly affect the air quality and GHG analysis.

2 Hexagon Transportation Consultants, Inc. 2021, op. cit.

default assumptions (e.g., energy usage, water usage, and solid waste generation) from CalEEMod were used to estimate project emissions. CalEEMod output sheets are included in Appendix A.

CONSTRUCTION HEALTH RISK ASSESSMENT

A construction health risk assessment (HRA), which evaluates construction-period health risk to off-site receptors, was performed for the proposed project. To estimate the potential cancer risk associated with construction of the proposed project from equipment exhaust (including diesel particulate matter), a dispersion model was used to translate an emission rate from the source location to a concentration at the receptor location of interest (i.e., a nearby residence and worksites). Dispersion modeling varies from a simpler, more conservative screening-level analysis to a more complex and refined detailed analysis. This refined assessment was conducted using the CARB exposure methodology with the air dispersion modeling performed using the USEPA dispersion model AERMOD. The model provides a detailed estimate of exhaust concentrations based on site and source geometry, source emissions strength, distance from the source to the receptor, and meteorological data.

OPERATIONAL HEALTH RISK ASSESSMENT

To determine the potential health risk to people living near the proposed project associated with the exhaust of the 670 HP diesel-powered emergency backup generator, an operational HRA was conducted for the proposed project. The generator would be tested on the first Monday of every month (i.e., once a month) at 9:00 a.m. and the testing would last 30 minutes. However, to be conservative and to account for any use of the generator, this analysis assumed the generator would run 50 hours per year. This analysis also assumes that the stack would exhaust from the rooftop. This HRA has been conducted using the USEPA AERMOD air dispersion model to determine how the TACs would move through the atmosphere after release from sources both on site and on surrounding roadways and CARB's HARP2 model to translate the pollutant concentrations from AERMOD into individual health risks at any sensitive receptor locations surrounding the project site.

GREENHOUSE GAS ANALYSIS

GHG emissions associated with the project would occur over the short-term from construction activities, consisting primarily of emissions from equipment exhaust. There would also be long-term GHG emissions associated with project-related area sources, energy consumption, water conveyance and treatment, and waste generation.

THRESHOLDS OF SIGNIFICANCE

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse air quality impact if project-generated pollutant emissions would:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project is nonattainment under an applicable federal or state ambient air quality standard;
- Expose sensitive receptors to substantial pollutant concentrations; or
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

According to the BAAQMD CEQA Guidelines, to meet air quality standards for criteria air pollutant and air precursor impacts, the proposed project must not:

- Contribute to CO concentrations exceeding the State ambient air quality standards;
- Generate average daily construction emissions of ROG, NO_x or $PM_{2.5}$ (exhaust) greater than 54 pounds per day or PM_{10} [particulate matter 10 microns or less in diameter] exhaust emissions greater than 82 pounds per day; or
- Generate operational emissions of ROG, NO_x or $PM_{2.5}$ of greater than 10 tons per year or 54 pounds per day or PM_{10} emissions greater than 15 tons per year or 82 pounds per day.

The *State CEQA Guidelines* indicate that a project would normally have a significant adverse GHG emissions impact if the project would:

- Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with an applicable plan, policy or regulation adopted for the purpose of reduction the emissions of greenhouse gases.

According to the BAAQMD's April 2022 *Justification Report: CEQA Thresholds for Evaluating the Significance of Climate Impacts From Land Use Projects and Plans*, a project would have a less than significant impact related to GHG emissions if it would:

A. Include, at a minimum, the following project design elements:

    1. Buildings

        a. The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).

b. The project will not result in any wasteful, inefficient, or unnecessary electrical usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.

2. Transportation

a. Achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target, reflecting the recommendations provided in the Governor's Office of Planning and Research's Technical Advisory on Evaluating Transportation Impacts in CEQA:

1. Residential projects: 15 percent below the existing VMT per capita

2. Office projects: 15 percent below the existing VMT per employee

3. Retail projects: no net increase in existing VMT

b. Achieve compliance with off-street electric vehicle requirements in the most recently adopted version of CALGreen Tier 2.

B. Or be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).

IMPACTS ANALYSIS

This section identifies the air quality and GHG emissions impacts associated with implementation of the proposed project. The results of the impact analyses are then compared to applicable thresholds of significance.

AIR QUALITY

Consistency with Applicable Air Quality Plans

The applicable air quality plan is the BAAQMD 2017 Clean Air Plan, which defines control strategies to reduce emissions and ambient concentrations of air pollutants; safeguard public health by reducing exposure to air pollutants that pose the greatest heath risk, with an emphasis on protecting the communities most heavily affected by air pollution; and reduce GHG emissions to protect the climate. Consistency with the Clean Air Plan can be determined if the project: (1) supports the goals of the Clean Air Plan, (2) includes applicable control measures from the Clean Air Plan, and (3) would not disrupt or hinder implementation of any control measures from the Clean Air Plan.

Clean Air Plan Goals

The primary goals of the Bay Area Clean Air Plan are to attain air quality standards, reduce population exposure and protect public health in the Bay Area, and reduce GHG emissions and protect the climate.

The BAAQMD has established significance thresholds for project construction and operational impacts at a level at which the cumulative impact of exceeding these thresholds would have an adverse impact on the region's attainment of air quality standards. The health and hazards thresholds were established to help protect public health. As discussed below, construction and operation of the proposed project would not result in the generation of criteria air pollutants that would exceed BAAQMD thresholds of significance. Therefore, the proposed project would not conflict with the Clean Air Plan goals.

Clean Air Plan Control Measures

The control strategies of the Clean Air Plan include measures in the following categories: Stationary Source Measures, Transportation Measures, Energy Measures, Building Measures, Agriculture Measures, Natural and Working Lands Measures, Waste Management Measures, Water Measures, and Super-GHG Pollutants Measures. The proposed project's compliance with each of these control measures is discussed below.

Stationary Source Control Measures. The Stationary Source Control Measures, which are designed to reduce emissions from stationary sources such as metal melting facilities, cement kilns, refineries, and glass furnaces, are incorporated into rules adopted by the BAAQMD and then enforced by the BAAQMD Permit and Inspection programs. Since the proposed project would not include any of these stationary sources, the Stationary Source Control Measures of the Clean Air Plan are not applicable to the proposed project.

Transportation Control Measures. The BAAQMD identifies Transportation Control Measures as part of the Clean Air Plan to decrease emissions of criteria pollutants, toxic air contaminants (TACs), and GHGs by reducing demand for motor vehicle travel, promoting efficient vehicles and transit service, decarbonizing transportation fuels, and electrifying motor vehicles and equipment. The proposed project would develop a new hotel that would locate visitors and employees near existing residential, office, commercial, and light manufacturing uses, reducing the demand for travel by single occupancy vehicles. As discussed in the project's Transportation Impact Analysis[1], since proposed hotel would be located within very close proximity to a major employment area in the Bayfront Area, hotel patrons would travel shorter distances to their business destinations; therefore, the proposed project would result in a net decrease in vehicle miles traveled (VMT). As such, the proposed project would help to reduce the demand for travel by single occupancy vehicles and promote BAAQMD initiatives to reduce vehicle trips and VMT. Therefore, the proposed project would not conflict with the identified Transportation and Mobile Source Control Measures of the Clean Air Plan.

Energy Control Measures. The Clean Air Plan also includes Energy Control Measures, which are designed to reduce emissions of criteria air pollutants, TACs, and GHGs by decreasing the amount of electricity consumed in the Bay Area and decreasing the carbon intensity of the electricity used by switching to less GHG-intensive fuel sources for electricity generation. Since these measures apply to electrical utility providers and local government agencies (and not individual projects), the energy control measures of the Clean Air Plan are not applicable to the proposed project.

Building Control Measures. The BAAQMD has authority to regulate emissions from certain sources in buildings such as boilers and water heaters but has limited authority to regulate buildings themselves. Therefore, the strategies in the control measures for this sector focus on working with local governments that do have authority over local building codes, to facilitate adoption of best GHG control practices and policies. The proposed project would be built to LEED Silver standards, would include solar panels, and would be 12 percent more energy efficient than the 2019 Title 24 standards of the California Code of Regulations, established by the CEC, regarding energy conservation and green building standards. Therefore, the proposed project would not conflict with any of the Building Control Measures.

Agriculture Control Measures. The Agriculture Control Measures are designed to primarily reduce emissions of methane. Since the project does not include any agricultural activities, the Agriculture Control Measures of the Clean Air Plan are not applicable to the proposed project.

Natural and Working Lands Control Measures. The Natural and Working Lands Control Measures focus on increasing carbon sequestration on rangelands and wetlands and encouraging local governments to adopt ordinances that promote urban tree plantings. Since the proposed project does not include the disturbance of any rangelands or wetlands, the Natural and Working Lands Control Measures of the Clean Air Plan are not applicable to the proposed project.

Waste Management Control Measures. The Waste Management Control Measures focus on reducing or capturing methane emissions from landfills and composting facilities, diverting organic

[1] Hexagon Transportation Consultants, Inc., op. cit.

materials away from landfills, and increasing waste diversion rates through efforts to reduce, reuse, and recycle. The proposed project would comply with local requirements for waste management (e.g., recycling and composting services). Therefore, the proposed project would be consistent with the Waste Management Control Measures of the Clean Air Plan.

Water Control Measures. The Water Control Measures focus on reducing emissions of criteria pollutants, TACs, and GHGs by encouraging water conservation, limiting GHG emissions from publicly owned treatment works (POTW), and promoting the use of biogas recovery systems. Since these measures apply to POTWs and local government agencies (and not individual projects), the Water Control Measures are not applicable to the proposed project.

Super GHG Control Measures. The Super-GHG Control Measures are designed to facilitate the adoption of best GHG control practices and policies through the BAAQMD and local government agencies. Since these measures do not apply to individual projects, the Super-GHG Control Measures are not applicable to the proposed project.

Clean Air Plan Implementation

As discussed above, the proposed project would generally implement the applicable measures outlined in the Clean Air Plan, including Transportation Control Measures. Therefore, the Project would not disrupt or hinder implementation of a control measure from the Clean Air Plan.

Criteria Pollutant Analysis

The BAAQMD is currently designated as a nonattainment area for State and national O_3 standards and national particulate matter ambient air quality standards. The BAAQMD's nonattainment status is attributed to the region's development history. Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size to, by itself, result in nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant.

In developing thresholds of significance for air pollutants, the BAAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. If a project exceeds the identified significance thresholds, its emissions would be cumulatively considerable, resulting in significant adverse air quality impacts to the region's existing air quality conditions. Therefore, additional analysis to assess cumulative impacts is unnecessary. The following analysis assesses the potential project-level construction- and operation-related air quality impacts.

Construction Emissions

The proposed project would be below the BAAQMD's screening level criteria of 554 hotel rooms for construction emissions; however, since construction of the proposed project would require demolition, the proposed project would not meet the screening criteria according to the current

BAAQMD CEQA Guidelines. Therefore, per ConnectMenlo EIR Mitigation Measure AQ-2b2, project-specific construction emissions are evaluated below.

During construction, short-term degradation of air quality may occur due to the release of particulate emissions generated by demolition, grading, paving, building, and other activities. Emissions from construction equipment are also anticipated and would include CO, NO_x, ROG, directly emitted particulate matter ($PM_{2.5}$ and PM_{10}), and TACs such as diesel exhaust particulate matter.

Project construction activities would include demolition, site preparation, grading, building, paving, and architectural coating (painting). Construction-related effects on air quality from the proposed project would be greatest during the site preparation phase due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. Sources of fugitive dust would include disturbed soils at the construction site. Unless properly controlled, vehicles leaving the site would deposit dirt and mud on local streets, which could be an additional source of airborne dust after it dries. PM_{10} emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM_{10} emissions would depend on soil moisture, silt content of soil, wind speed, and the amount of operating equipment. Larger dust particles would settle near the source, while fine particles would be dispersed over greater distances from the construction site.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. The BAAQMD has established standard measures for reducing fugitive dust emissions (PM_{10}). With the implementation of these Basic Construction Mitigation Measures, fugitive dust emissions from construction activities would not result in adverse air quality impacts.

In addition to dust-related PM_{10} emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, SO_2, NO_x, ROG, and some soot particulate ($PM_{2.5}$ and PM_{10}) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles idle in traffic. These emissions would be temporary in nature and limited to the immediate area surrounding the construction site.

As discussed above, CalEEMod was used to calculate emissions from on-site construction equipment and emissions from worker and vehicle trips to the site. Construction-related emissions are presented in Table I, below.

Table I: Project Construction Emissions (in Pounds Per Day)

Project Construction	ROG	NO_X	Exhaust PM_{10}	Fugitive Dust PM_{10}	Exhaust $PM_{2.5}$	Fugitive Dust $PM_{2.5}$
Average Daily Emissions	4.0	23.7	0.8	2.0	0.8	0.5
BAAQMD Thresholds	54.0	54.0	82.0	BMP	54.0	BMP
Exceeds Threshold?	**No**	**No**	**No**	**No**	**No**	**No**

Source: Compiled by LSA (August 2022).
BAAQMD = Bay Area Air Quality Management District
BMP = best management practices
NO_X = nitrogen oxides
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter
PM_{10} = particulate matter less than 10 microns in diameter
ROG = reactive organic gases

As shown in Table I, construction emissions associated with the project would not exceed the BAAQMD's thresholds for ROG, NO_x, CO, exhaust PM_{10}, and exhaust $PM_{2.5}$ emissions. In order to reduce construction $PM_{2.5}$ and PM_{10} fugitive dust impacts to a less-than-significant level, the BAAQMD requires the implementation of BAAQMD Best Management Practices (BMPs, Basic Construction Mitigation Measures). The ConnectMenlo EIR identified Mitigation Measure AQ-2b1, which would require implementation of the BMPs, which would reduce construction-related air quality impacts of PM_{10} and $PM_{2.5}$ fugitive dust emissions. As identified above, ConnectMenlo EIR Mitigation Measure AQ-2b2 further requires implementation of BAAQMD-approved mitigation measures if it is determined during project-specific evaluation that individual development projects would generate construction exhaust emissions in excess of the BAAQMD significance thresholds. As the proposed project would not exceed BAAQMD thresholds, implementation of the additional construction measures (e.g., Table 8-3, Additional Construction Measures Recommended for Projects with Construction Emissions Above the Threshold of the current BAAQMD CEQA Guidelines) as identified in ConnectMenlo EIR Mitigation Measure AQ-2b2 would not be required.

Mitigation Measure AIR-1

Consistent with ConnectMenlo EIR Mitigation Measure AQ-2b1, the proposed project would be required to comply with Bay Area Air Quality Management District (BAAQMD) basic control measures for reducing construction emissions of PM_{10} (Table 8-2, Basic Construction Mitigation Measures Recommended for All Proposed Projects, of the BAAQMD CEQA Guidelines), as follows:

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of the California Code of

Regulations). Clear signage shall be provided for construction workers at all access points.

- All construction equipment shall be maintained and properly tuned in accordance with manufacturer specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.

- Post a publicly visible sign with the telephone number and person to contact at the City of Menlo Park regarding dust complaints. This person shall respond and take corrective action within 48 hours. The phone number for BAAQMD shall also be visible to ensure compliance with applicable regulations.

With implementation of the BAAQMD's Basic Construction Mitigation Measures Recommended for All Proposed Projects as outlined in Mitigation Measure AIR-1, and consistent with ConnectMenlo EIR Mitigation Measure AQ-2b1, construction of the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or State AAQS.

Operational Air Quality Impacts

Long-term air pollutant emission impacts that would result from the proposed project are those associated with mobile sources (e.g., vehicle trips), energy sources (e.g., electricity), area sources (e.g., architectural coatings and the use of landscape maintenance equipment), and stationary sources (e.g., emergency generators).

PM_{10} emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Entrainment of PM_{10} occurs when vehicle tires pulverize small rocks and pavement, and the vehicle wakes generate airborne dust. The contribution of tire and brake wear is small compared to the other PM emissions processes. Gasoline-powered engines have small rates of particulate matter emissions compared with diesel-powered vehicles.

Energy source emissions result from activities in buildings for which electricity is used. The quantity of emissions is the product of usage intensity (i.e., the amount of electricity) and the emission factor of the fuel source. Major sources of energy demand include building mechanical systems, such as heating and air conditioning, lighting, and plug-in electronics, such as refrigerators or computers. Greater building or appliance efficiency reduces the amount of energy for a given activity and thus lowers the resultant emissions. The emission factor is determined by the fuel source, with cleaner energy sources, like renewable energy, producing fewer emissions than conventional sources.

Typically, area source emissions consist of direct sources of air emissions located at the project site, including architectural coatings and the use of landscape maintenance equipment. Area source

emissions associated with the project would include emissions from the use of landscaping equipment and the use of consumer products.

Long-term operational emissions associated with the proposed project were calculated using CalEEMod. Model results are shown in Table J. CalEEMod output sheets are included in Appendix A.

Table J: Project Operational Emissions

	ROG	NO_x	PM_{10}	$PM_{2.5}$
Pounds Per Day				
Area Source Emissions	1.6	<0.1	<0.1	<0.1
Energy Source Emissions	0.0	0.0	0.0	0.0
Mobile Source Emissions	1.6	1.6	3.7	1.0
Stationary Source Emissions	<0.1	<0.1	<0.1	<0.1
Total Emissions	**3.2**	**1.6**	**3.7**	**1.0**
BAAQMD Thresholds	54.0	54.0	82.0	54.0
Exceed Threshold?	**No**	**No**	**No**	**No**
Tons Per Year				
Area Source Emissions	0.3	<0.1	<0.1	<0.1
Energy Source Emissions	0.0	0.0	0.0	0.0
Mobile Source Emissions	0.3	0.3	0.7	0.2
Stationary Source Emissions	<0.1	<0.1	<0.1	<0.1
Total Emissions	**0.6**	**0.3**	**0.7**	**0.2**
BAAQMD Thresholds	10.0	10.0	15.0	10.0
Exceed Threshold?	**No**	**No**	**No**	**No**

Source: Compiled by LSA (August 2022).
BAAQMD = Bay Area Air Quality Management District
NO_x = nitrogen oxides
PM_{10} = particulate matter less than 10 microns in diameter
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter
ROG = reactive organic gases

The results shown in Table J indicate the project would not exceed the significance criteria for daily or annual ROG, NO_x, PM_{10}, and $PM_{2.5}$ emissions; therefore, the proposed project would not have a significant effect on regional air quality, and mitigation measures, including implementation of ConnectMenlo EIR Mitigation Measure AQ-2a, would not be required. Operation of the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in nonattainment under an applicable federal or State AAQS.

Long-Term Microscale (CO Hot Spot) Analysis

Emissions and ambient concentrations of CO have decreased dramatically in the Bay Area with the introduction of the catalytic converter in 1975. No exceedances of the State or federal CO standards have been recorded at Bay Area monitoring stations since 1991. BAAQMD CEQA Guidelines include recommended methodologies for quantifying concentrations of localized CO levels for proposed development projects. A screening level analysis using guidance from the BAAQMD CEQA Guidelines was performed to determine the impacts of the project. The screening methodology provides a conservative indication of whether the implementation of a proposed project would result in significant CO emissions. According to the BAAQMD CEQA Guidelines, a proposed project would result in a

less-than-significant impact to localized CO concentrations if the following screening criteria are met:

- The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, and the regional transportation plan and local congestion management agency plans.
- Project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour.
- The project would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, or below-grade roadway).

Implementation of the proposed project would not conflict with the San Mateo County Transportation Authority's congestion management program for designated roads or highways, a regional transportation plan, or other agency plans. The proposed project would generate approximately 46 net new AM and 62 net new PM peak hour trips; therefore, the project's contribution to peak hour traffic volumes at intersections in the vicinity of the project site would be well below 44,000 vehicles per hour. Therefore, the proposed project would not result in localized CO concentrations that exceed State or federal standards.

Health Risk on Nearby Sensitive Receptors

Sensitive receptors are defined as residential uses, schools, daycare centers, nursing homes, and medical centers. Individuals particularly vulnerable to diesel particulate matter are children, whose lung tissue is still developing, and the elderly, who may have serious health problems that can be aggravated by exposure to diesel particulate matter. Exposure from diesel exhaust associated with construction activity contributes to both cancer and chronic non-cancer health risks. The closest receptors to the project site are multifamily residential uses immediately west of the project site boundary.

The following section describes the potential impacts on sensitive receptors from construction and operation of the proposed project. The HRA analysis and results are presented below; data outputs are included in Appendix B.

Construction Health Risk Assessment

A construction HRA, which evaluates construction-period health risk to off-site receptors, was performed for the proposed project. Table K, below, identifies the results of the analysis assuming the use of Tier 2 construction equipment (current CARB standards), at the maximally exposed individual (MEI), which is the nearest sensitive receptor. Model snap shots of the sources are shown in Appendix B.

Table K: Unmitigated Health Risks from Project Construction to Off-Site Receptors

	Carcinogenic Inhalation Health Risk in 1 Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index	Annual $PM_{2.5}$ Concentration ($\mu g/m^3$)
Maximally Exposed Individual	54.2	0.036	0.000	0.38
Threshold	**10.0**	**1.0**	**1**	**0.3**
Exceeds Threshold?	**Yes**	**No**	**No**	**Yes**

Source: Compiled by LSA (August 2022).
$\mu g/m^3$ = micrograms per cubic meter
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter

As shown in Table K, the risk associated with project construction at the MEI would be 54.2 in 1 million, which would exceed the BAAQMD cancer risk of 10 in 1 million. The total chronic hazard index would be 0.036, which is below the threshold of 1.0. In addition, the total acute hazard index would be nominal (0.0), which would also not exceed the threshold of 1.0. The results of the analysis indicate that the total $PM_{2.5}$ concentration would be 0.38 micrograms per cubic meter ($\mu g/m^3$), which would also exceed the BAAQMD significance threshold of 0.3 $\mu g/m^3$. Therefore, since the maximum cancer risk for the sensitive receptor MEI would exceed the BAAQMD threshold, implementation of Mitigation Measure AIR-2 would be required to reduce substantial pollutant concentrations during project construction.

Mitigation Measure AIR-2 During construction of the proposed project, the project contractor shall ensure all off-road diesel-powered construction equipment of 50 horsepower or more used for the project construction at a minimum meets the California Air Resources Board Tier 2 emissions standards with Level 3 diesel particulate filters or equivalent.

As shown in Table L, the mitigated cancer risk at the receptor MEI would be 9.8 in one million, which would not exceed the BAAQMD cancer risk of 10 in one million. In addition, the mitigated $PM_{2.5}$ concentration would be 0.07 $\mu g/m^3$, which would also not exceed the BAAQMD significance threshold of 0.3 $\mu g/m^3$. Therefore, with implementation of Mitigation Measure AIR-2, construction of the proposed project would not exceed BAAQMD thresholds and would not expose nearby sensitive receptors to substantial pollutant concentrations.

Table M identifies the results of the analysis with implementation of Mitigation Measure AIR-2, as detailed above.

Table L: Mitigated Health Risks from Project Construction to Off-Site Receptors

	Carcinogenic Inhalation Health Risk in 1 Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index	Annual $PM_{2.5}$ Concentration ($\mu g/m^3$)
Maximally Exposed Individual	9.8	0.007	0.000	0.07
Threshold	**10.0**	**1.0**	**1**	**0.3**
Exceeds Threshold?	**No**	**No**	**No**	**No**

Source: Compiled by LSA (August 2022).
$\mu g/m^3$ = micrograms per cubic meter
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter

Operational Health Risk Assessment

To determine the potential health risk to people living near the proposed project associated with the exhaust of the diesel-powered emergency backup generator, an operational HRA was conducted for the proposed project. The carcinogenic and chronic health risks from the proposed project are shown in Table M. The HRA model snapshots and outputs are included in Appendix B.

Table M: Unmitigated Health Risks from Project Operation to Off-Site Receptors

	Carcinogenic Inhalation Health Risk in 1 Million	Chronic Inhalation Hazard Index	Acute Inhalation Hazard Index	Annual $PM_{2.5}$ Concentration ($\mu g/m^3$)
Maximally Exposed Individual	0.2	0.000	0.000	0.05
Threshold	**10.0**	**1.0**	**1**	**0.3**
Exceeds Threshold?	**No**	**No**	**No**	**No**

Source: Compiled by LSA (August 2022).
$\mu g/m^3$ = micrograms per cubic meter
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter

As shown in Table M, the risk associated with project operation at the MEI would be 0.2 in 1 million, which would not exceed the BAAQMD cancer risk of 10 in 1 million. The total chronic hazard index and the total acute hazard index would be nominal (0.0), which would not exceed the threshold of 1.0. In addition, the total $PM_{2.5}$ concentration would be 0.05 $\mu g/m^3$, which would also not exceed the BAAQMD significance threshold of 0.3 $\mu g/m^3$. Therefore, operation of the proposed project would not exceed BAAQMD thresholds and would not expose nearby sensitive receptors to substantial pollutant concentrations.

Therefore, sensitive receptors are not expected to be exposed to substantial pollutant concentrations during project construction or operation.

Odors

During construction, the various diesel-powered vehicles and equipment in use on site would create localized odors. These odors would be temporary and are not likely to be noticeable for extended periods of time beyond the project site. Additionally, the proposed uses that would be developed within the project site are not expected to produce any offensive odors that would result in frequent odor complaints. The proposed project would not include sensitive receptors; therefore, odor impacts on the project do not require further evaluation.

GREENHOUSE GAS EMISSIONS

Generate Greenhouse Gas Emissions

As discussed above, a project would have a less than significant impact related to GHG emissions if it would include the project design elements related to natural gas, energy, VMT, and electric vehicles or if it would be consistent with a local GHG reduction strategy that meets the criteria under *State CEQA Guidelines* Section 15183.5(b). The City's CAP does not meet these requirements. Therefore,

this section evaluates the proposed project's consistency with the BAAQMD's project design elements.

Natural Gas Usage. As required by the BAAQMD, the project must not include natural gas appliances or natural gas plumbing. As discussed in the Project Description, the proposed project would not increase the demand for natural gas as the City's reach codes would require the buildings to be all electric. Since the proposed project would not include natural gas, the proposed project would be consistent with this design element.

Energy Usage. The project must not result in any wasteful, inefficient, or unnecessary energy usage as determined by the analysis required under Section 21100(b)(3) and Section 15126.2(b) of the *State CEQA Guidelines*. Energy use consumed by the proposed project would be associated with electricity consumption associated with the project. Energy consumption was estimated for the project using default energy intensities by land use type in the CalEEMod output, which is included in Appendix A.

Based on CalEEMod, the estimated potential increased electricity demand associated with the proposed project is 696,998 kilowatt-hours (kWh) per year. Total electricity consumption in San Mateo County in 2020 was 4,167 gigawatt-hours (GWh) or 4,167,506,557 kWh.[1] Therefore, operation of the proposed project would increase the annual electricity consumption in San Mateo County by 0.02 percent.

The proposed project would be built to LEED Silver standards, would include solar panels, and would be 12 percent more energy efficient than the 2019 Title 24 standards. As such, the proposed project would include energy-saving building features. As such, based on this analysis, as required under Section 21100(b)(3) and Section 15126.2(b) of the *State CEQA Guidelines*, the proposed project would not result in the wasteful, inefficient, or unnecessary consumption of fuel or energy and would incorporate renewable energy or energy efficiency measures into building design, equipment use, and transportation. As such, the proposed project would be consistent with this design element.

Vehicle Miles Traveled. To meet the BAAQMD's VMT threshold, the project must achieve a reduction in project-generated VMT below the regional average consistent with the current version of the California Climate Change Scoping Plan or meet a locally adopted SB 743 VMT target, reflecting the recommendations provided in the Governor's Office of Planning and Research's (OPR) 2018 *Technical Advisory on Evaluating Transportation Impacts in CEQA*. As discussed in the project's Transportation Impact Analysis[2], the Transportation Impact Analysis Guidelines (TIA Guidelines) were updated in July 2020 to include guidelines on evaluating VMT. For hotel uses, a project is considered to have a significant impact on VMT if the project results in a net increase in total City VMT.

1 California Energy Commission (CEC). 2022. Electricity Consumption by County and Entity. Websites: http://www.ecdms.energy.ca.gov/elecbycounty.aspx, and http://www.ecdms.energy.ca.gov/elecbyutil.aspx (accessed August 2022).

2 Hexagon Transportation Consultants, Inc. 2021, op. cit.

Based on the VMT analysis prepared for the proposed project, under existing conditions, the total daily VMT would be approximately 7,126,189 VMT and the existing conditions with the proposed project would be approximately 7,092,216 VMT. As such, the proposed project would result in a net reduction of VMT and, therefore, the proposed project would result in a less-than-significant impact related to VMT. As such, the proposed project would be consistent with this design element.

Electric Vehicle Requirements. This criterion requires that the project achieve compliance with off-street electric vehicle requirements in the most recently adopted version of the California Green Building Standards Code (CALGreen Code) Tier 2 measures. The current CALGreen Code Tier 2 requires that a minimum of 10 percent of the parking spaces provide electric vehicle charging. As identified in the Project Description, the proposed project would provide 40 electric vehicle parking spaces out of the total 124 spaces. As such, the proposed project would be consistent with this criterion.

As discussed above, the proposed project would be consistent with the BAAQMD's project design elements related to natural gas, energy, VMT, and electric vehicles. Therefore, the proposed project would be consistent with the BAAQMD's GHG emission thresholds. As such, the proposed project would not result in the generation of GHG emissions that would have a significant impact on the environment.

Consistency with Greenhouse Gas Reduction Plans

As discussed above, the City's CAP was first adopted in May 2009 and is updated from time to time, most recently in 2021 and identifies local emissions reduction strategies designed to help meet AB 32 targets. The CAP recommends various community and municipal strategies for near-term and mid-term considerations. The emissions reduction strategies are generally focused on community actions, since more than 99 percent of the emissions are from community sources.

The City updates its community-wide GHG inventory and CAP annually. In 2011, the City completed the first update to the City's CAP Strategy, known as the 2011 CAP Assessment Report. As part of the 2013 update, the City Council adopted a target of reducing community-wide GHG emissions by 27 percent below 2005 levels by 2020.

The most recent status update to the City's CAP was conducted in April 2021.[1] The 2021 CAP includes updated emissions inventories through year 2017 and adopts a climate goal of zero carbon by 2030. The CAP aims for a 90 percent reduction in CO_2e emissions from 2005 levels by 2030.

Table N includes an evaluation of the proposed project's consistency with the CAP's GHG reduction strategies.

[1] Menlo Park, City of. 2021, op. cit.

Table N: Project Consistency with CAP Strategies

Strategy	Project Consistency
Explore policy/program options to convert 95 percent of existing buildings to all-electric by 2030.	***Consistent.*** The proposed project would not increase the demand for natural gas as the City's reach codes would require the building to be all electric.
Support setting regional goals for increasing EVs and decreasing gasoline sales.	***Consistent.*** As identified in the Project Description, the proposed project would provide 40 electric vehicle parking spaces out of the total 124 spaces.
Expand access to EV charging for multifamily and commercial properties.	***Consistent.*** As identified in the Project Description, the proposed project would provide 40 electric vehicle parking spaces out of the total 124 spaces.
Reduce vehicle miles traveled (VMT) by 25 percent or an amount recommended by the Complete Streets Commission.	***Consistent.*** The proposed project would not reduce VMT by 25 percent; however, as discussed above, based on the City's TIA Guidelines, for hotel uses, a project is considered to have a significant impact on VMT if the project results in a net increase in total City VMT. Based on the VMT analysis prepared for the proposed project, under existing conditions, the total daily VMT would be approximately 7,126,189 VMT and the existing conditions with the proposed project would be approximately 7,092,216 VMT. As such, the proposed project would result in a net reduction of VMT and, therefore, the proposed project would result in a less-than-significant impact related to VMT. In addition, the proposed hotel would be located within very close proximity to a major employment area in the Bayfront Area, hotel patrons would travel shorter distances to their business destinations, reducing the demand for travel by single occupancy vehicles.
Eliminate the use of fossil fuels from municipal operations.	***Not Applicable.*** This action is not directly applicable to the proposed project.
Develop a climate adaptation plan to protect the community from sea level rise and flooding.	***Not Applicable.*** This action is not directly applicable to the proposed project.

Sources: City of Menlo Park (2020); LSA (August 2022).
CAP = Climate Action Plan
EV = electric vehicle
TIA = Transportation Impact Analysis

As described above, the proposed project would generally be consistent with the City of Menlo Park CAP and Plan Bay. Therefore, the proposed project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the GHG emissions.

In addition, the following discussion evaluates the proposed project according to the goals of AB 32, the AB 32 Scoping Plan, EO B-30-15, SB 32, and AB 197.

AB 32 is aimed at reducing GHG emissions to 1990 levels by 2020. AB 32 requires the CARB to prepare a Scoping Plan that outlines the main State strategies for meeting the 2020 deadline and to reduce GHGs that contribute to global climate change. The AB 32 Scoping Plan has a range of GHG reduction actions, which include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms such as a cap-and-trade system, and an AB 32 implementation fee to fund the program.

EO B-30-15 added the immediate target of reducing GHG emissions to 40 percent below 1990 levels by 2030. CARB released a second update to the Scoping Plan, the 2017 Scoping Plan,[1] to reflect the 2030 target set by EO B-30-15 and codified by SB 32. SB 32 affirms the importance of addressing climate change by codifying into statute the GHG emissions reductions target of at least 40 percent below 1990 levels by 2030 contained in EO B-30-15. SB 32 builds on AB 32 and keeps us on the path toward achieving the State's 2050 objective of reducing emissions to 80 percent below 1990 levels. The companion bill to SB 32, AB 197, provides additional direction to the CARB related to the adoption of strategies to reduce GHG emissions. Additional direction in AB 197 intended to provide easier public access to air emissions data that are collected by CARB was posted in December 2016.

As identified above, the AB 32 Scoping Plan contains GHG reduction measures that work towards reducing GHG emissions, consistent with the targets set by AB 32, EO B-30-15 and codified by SB 32 and AB 197. The measures applicable to the proposed project include energy efficiency measures, water conservation and efficiency measures, and transportation and motor vehicle measures, as discussed below.

Energy efficient measures are intended to maximize energy efficiency building and appliance standards, pursue additional efficiency efforts, including new technologies and new policy and implementation mechanisms, and pursue comparable investment in energy efficiency from all retail providers of electricity in California. In addition, these measures are designed to expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings. The proposed project would be built to LEED Silver standards, would include solar panels, and would be 12 percent more energy efficient than the 2019 Title 24 standards, regarding energy conservation and green building standards. In addition, as discussed above, the proposed project would replace older buildings that were built with less efficient standard codes, improving the overall efficiency of the project site. Therefore, the proposed project would comply with applicable energy measures.

Water conservation and efficiency measures are intended to continue efficiency programs and use cleaner energy sources to move and treat water. Increasing the efficiency of water transport and reducing water use would reduce GHG emissions. As noted above, the project would be built to LEED Silver standards and would be 12 percent more energy efficient than the 2019 Title 24 standards, which include a variety of different measures, including reduction of wastewater and water use. In addition, the proposed project would be required to comply with the California Model Water Efficient Landscape Ordinance. Therefore, the proposed project would not conflict with any of the water conservation and efficiency measures.

The goal of transportation and motor vehicle measures is to develop regional GHG emissions reduction targets for passenger vehicles. Specific regional emission targets for transportation emissions would not directly apply to the proposed project. The second phase of Pavley standards will reduce GHG emissions from new cars by 34 percent from 2016 levels by. Vehicles traveling to the project site would comply with the Pavley II (LEV III) Advanced Clean Cars Program. Therefore,

[1] CARB. 2017. *California's 2017 Climate Change Scoping Plan*. November.

the proposed project would not conflict with the identified transportation and motor vehicle measures.

Therefore, the proposed project would comply with existing State regulations adopted to achieve the overall GHG emissions reduction goals identified in AB 32 and would be consistent with applicable plans and programs designed to reduce GHG emissions. Therefore, the proposed project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs.

CONCLUSIONS

Based on the analysis presented above, with implementation of Mitigation Measure AIR-1 construction of the proposed project would not result in the generation of criteria air pollutants that would exceed BAAQMD thresholds of significance. Operational emissions associated with the proposed project would also not exceed BAAQMD established significance thresholds. With implementation of Mitigation Measure AIR-2, the proposed project is not expected to produce significant emissions that would affect nearby sensitive receptors. The proposed project would also not result in objectionable odors affecting a substantial number of people. In addition, the project would not result in substantial GHG emissions. The project would not conflict with the State's GHG emissions reductions objectives embodied in AB 32, EO B-30-15, SB 32, and AB 197. Therefore, the proposed project's incremental contribution to cumulative GHG emissions would not be cumulatively considerable.

Hotel Moxy Project

San Mateo County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking Structure	125.00	Space	0.26	51,868.00	0
Hotel	163.00	Room	0.50	58,014.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	70
Climate Zone	5			**Operational Year**	2025
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total project site is 0.76 acres

Construction Phase - Construction schedule provided by client

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

Trips and VMT - Based on schedule provided by client

Demolition - demolition of existing office space

Grading - proposed project would require 522 CY of soil fill and 83 CY of cut during rough grading

Vehicle Trips - Based on a net trip generation of 957 ADT

Energy Use - No natural gas

Construction Off-road Equipment Mitigation - use of construction equipment tier 2

Area Mitigation - Project would not use natural gas

Energy Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps - Proposed project would include a diesel emergency generator

Hotel Moxy Project - San Mateo County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

Trips and VMT - Based on schedule provided by client

Demolition - demolition of existing office space

Grading - proposed project would require 522 CY of soil fill and 83 CY of cut during rough grading

Vehicle Trips - Based on a net trip generation of 957 ADT

Energy Use - No natural gas

Construction Off-road Equipment Mitigation - use of construction equipment tier 2

Area Mitigation - Project would not use natural gas

Energy Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps - Proposed project would include a diesel emergency generator

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Off-road Equipment - Construction equipment provided by client

Off-road Equipment - Construction equipment provided by client

Trips and VMT - Based on schedule provided by client

Demolition - demolition of existing office space

Grading - proposed project would require 522 CY of soil fill and 83 CY of cut during rough grading

Vehicle Trips - Based on a net trip generation of 957 ADT

Energy Use - No natural gas

Construction Off-road Equipment Mitigation - use of construction equipment tier 2 level 3 DPF

Area Mitigation - Project would not use natural gas

Energy Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps - Proposed project would include a diesel emergency generator

1 Introduction

The following baseline biological resources assessment (BRA) provides a baseline inventory of site conditions and biological resources that have the potential to be present within and/or immediately adjacent to the Moxy Hotel Project (Project). This baseline BRA is required for compliance with the Biological Resources requirements of the ConnectMenlo program level Environmental Impact Report (EIR) due to the proximity of the project to Atherton Channel, the adjacency of the project to Don Edwards San Francisco Bay National Wildlife Refuge (Refuge) and the proposed removal of trees and/or structures that provide suitable nesting bird habitat. This assessment includes a desktop analysis using aerial imagery and other available mapped features, literature/database review, and a site visit to characterize existing onsite conditions.

2 Project Overview

2.1 Project Location

The Project Site consists of one parcel with a total lot area of approximately 33,192 square feet (0.762 acres) located at 3723 New Haven Ave, Menlo Park, CA. The Project Site currently contains a one-story office building, approximately 13,700 square feet in size. The existing building would be demolished as part of the redevelopment of the site. The project site is located to the west of the intersection of Marsh Road/Bayfront Expressway (State Route 84) and Haven Avenue, specifically near a bend in the road where Haven Avenue transitions from an east-west to a north-south orientation. East of the intersection, Haven Avenue intersects with Bayfront Expressway.

The Project Site is bounded by Haven Avenue to the east, and other properties in the other directions. The parcels to the west of the project site include multi-family dwelling units, one parcel to the south (3715 Haven Avenue) contains professional offices, and parcels to the north include warehousing uses and an animal kennel. On the east side of Haven Avenue is Atherton Channel which drains into the Bayfront Canal and currently discharges into Flood Slough through a five-gate tide control structure and eventually connects to San Francisco Bay (Figure 1 and 2).

The assessment of the biological resources and potential for special status species to occur involved evaluating habitats and habitat features on the Project Site in the field and evaluation of adjacent land from public roads and/or aerial imagery within a five-mile buffer of the project site, defined as the assessment area.

2.2 Project Description

The proposed Project includes demolishing the existing onsite office building and construct a new eight-story, 167-room hotel with three levels of podium parking and five floors of hotel rooms. There would also be a ground floor coffee shop that would be open to the public and a fourth floor bar and lounge area, which would include an outdoor rooftop garden. The building would have a parallelogram-shaped footprint with a landscaped courtyard along the front of the building, facing onto Haven Avenue. The front and left sides of the building would be eight stories in height, with the exception of some building breaks along both of these sides, while the rear and right side (generally the southwest corner of the building) would step down

to four stories to provide a podium open area and the aforementioned outdoor rooftop garden. The proposed hotel would have a maximum height of 94 feet, eight inches. The Project will be accessed from Haven Avenue via a driveway near the southern portion of the site.

3 Methods

The analysis presented in this report is based on a review of existing information regarding biological resource conditions known to occur on the Project Site and within the region, and a field reconnaissance visit conducted to evaluate conditions within the Project Site.

3.1 Literature Review and Database Queries

Existing biological resource conditions within and adjacent to the Project Site were investigated prior to conducting the field survey. A query of federally listed wildlife species for the Project was obtained from the US Fish and Wildlife Service's Sacramento Endangered Species Office IPac website. The list generated is provided in Attachment C. Additional information about the locations of known occurrences of sensitive species in the vicinity of the Project Site was compiled from the California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDB) within 5 miles of the Project and by searching within the six U.S. Geological Survey 7.5-minute quadrangles that surround the Project Site (Attachment D, Figure 3, Table 3). The California Rare Plant Inventory was searched for special status plant species within the six U.S. Geological Survey 7.5-minute quadrangles that surround the Project (Attachment E, Figure 4, Table 3). In addition, the ConnectMenlo program level EIR biological resources assessment (Placeworks 2016) and other relevant regional documents were consulted.

3.2 Field Survey

A visual reconnaissance survey of the Project Site was conducted by biologist Leslie Koenig on April 19, 2021. During the field survey, the biologists walked the entire Project Site and Atherton Channel from the north corner of Haven Avenue to Haven Court to evaluate biological resource conditions at and surrounding the site.

3.3 Species Considered for Analysis

The potential for plant and wildlife species to occur within the Project Site was classified generally as high, moderate, low, or absent (none) using the guidelines described below. Table 2 includes descriptions of the special status plant and wildlife species that were identified through research and database queries along with their potential to occur on the Project Site. Some species may have a range of potential resulting in a categorization of two of the classifications. If used, the specific reason for the classification range is explained in the "potential to occur" species accounts.

High: The potential for a species to occur was considered high when the Project Site was located within the range of the species, recorded observations were identified within normal movement distance of the project, and suitable habitat is present.

Moderate: The potential for a species to occur was considered moderate when the Project Site was located within the range of the species, recorded observations were identified nearby but outside normal movement distance of the Project Site, and habitat within assessment area was suitable. Alternatively, the potential

was classified as moderate when recorded observations were identified within normal movement distance of the Project Site but habitat present was limited to that of low or marginal quality.

Low: The potential for a species to occur was considered low when the Project Site was within the range of the species, and habitat was limited to that of low or of marginal quality. Alternatively, the potential was classified as low when the Project Site was located at the edge of the range of a species and recorded observations were extremely rare, but habitat within the assessment area was suitable.

Absent (None): The potential for a species to occur was considered absent when the species was included within the database searches as having the potential to occur but habitat for the species is not present.

4 Existing Environmental Setting

The Project Site is located within the Bayfront Canal watershed in the City of Menlo Park's Bayfront Area at the San Francisco Bay margin. The Project Site is within the Palo Alto U.S. Geological Survey 7.5-minute quadrangle map. The Project Site is a currently a flat, developed lot with a paved parking lot, an existing office building with associated ornamental landscaping along the margins and is surrounded by residential and commercial development. The site is at an elevation of 10 feet (3.05 meters).

4.1 Jurisdictional Aquatic Resources

There are no jurisdictional aquatic resources within the Project Site, however, the Project is located near the Atherton Channel which drains to the Bayfront Canal which connects to the wetlands of Flood Slough and San Francisco Bay. There is no current hydrologic connection to the managed ponds of the Don Edwards National Wildlife Refuge, however, once the Bayfront Canal and Atherton Channel Flood Management and Restoration Project is complete the Bayfront Canal will be connected by underground drainage connections during peak flood flows. The connection will direct a portion of these peak flood flows into managed ponds that are part of the Ravenswood Pond Complex Portion of the South Bay Salt Pond Restoration Project within the Don Edwards National Wildlife Refuge.

Atherton Channel is an engineered channel that carries storm flow from the developed lands that surround it. The channel is comprised of weedy, non native herbaceous vegetation (fennel, harding grass, perennial pepper weed, vetch, vinca, wild oats and radish) on the slopes. Trees along the top of bank include willow, coast live oak, palm, weeping willow and other plants. Cattails were present in the channel bottom and margins with less than 6" of water present in the channel. There are two box culverts at Haven Court to the south and Haven Avenue to the north that carry storm flows with evidence of high flows depositing debris piles in the upper channel slopes.

A list of these aquatic resources and their distance from the Project Site are included in Table 1. below. These are sensitive biological resource areas that inform the potential indirect impacts of the site but are not directly impacted by Project activities.

Table 1. Aquatic Resources Near the Moxy Hotel Project Site

Aquatic Resource	National Wetland Inventory Type	Approx. Distance to Project Site
Atherton Channel	Riverine	50 feet (0.01 miles)
Bayfront Canal Confluence	Riverine	220 feet (0.04 miles)
Flood Slough	Estuarine and Marine Wetland	500 feet (0.10 miles)
Ravenswood Pond Complex	Lake	1,060 feet (0.2 miles)

4.2 Vegetation

The site is a commercially developed lot with landscaped vegetation including mature trees. There are eight on-site trees and one off-site tree that will be relocated and/or removed as part of the Project activities.

Table 2. Tree Inventory

Tag No.	Common Name	Scientific Name	Diameter (inches)
On Site Trees to be Relocated			
253	Little Leaf Linden	Tilia tomentosa	2”
254	Little Leaf Linden	Tilia tomentosa	3”
On Site Trees to be Removed			
252	Olive	Olea sp.	14”
255	Ash	Fraxinus sp.	17”
256	Ash	Fraxinus sp.	15”
257	Sycamore	Platanus sp.	14”
257A	Monterey Pine[1]	Pinus radiata	8”
261			10”
Off Site Trees to be Removed			
260	Maple	Acer sp.	9”

[1] The Monterey pine was in poor health (potentially dead) at the April 19, 2021 site visit.

4.3 General Wildlife Species Observed

Wildlife species observed during the site visit within the Project Site and the adjacent Atherton Channel include Canada goose (*Branta canadensis*), house finch (*Haemorhous mexicanus*), northern mockingbird (*Mimus polyglottos*), American crow (*Sturnella neglecta*), mourning dove (*Zenaida macroura*) and black phoebe (*Sayornis nigricans*).

5 Sensitive Biological Resources

The following discussion describes the sensitive biological resources that have the potential to be present within and adjacent to the Project Site based on the literature review and site reconnaissance results. Sensitive biological resources include habitats and/or individual species that have special recognition by federal, state or local conservation agencies. For purposes of this analysis, special-status species are defined as animals that are protected under the California and Federal Endangered Species Acts (CESA and FESA) or other regulations, and species that are considered rare by the scientific community. Special-status species include:

- Animals listed or proposed for listing as threatened or endangered under the CESA (Fish and Game Code §2050 et seq.; 14 CCR §670.1et seq.) or the FESA (50 CFR 17.11);
- Animals that are candidates for possible future listing as threatened or endangered under the FESA (50 CFR 17; FR Vol. 64, No. 205, pages 57533-57547, October 25, 1999); and under the CESA (California Fish and Game Code §2068);
- Animals that meet the definition of endangered, rare, or threatened under the California Environmental Quality Act (CEQA) (14 CCR §15380) that may include species not found on either State or Federal Endangered Species lists;
- Animals that are designated as "species of special concern" by CDFW (2016);
- Animal species that are designated as “fully protected” under California (Fish and Game Code 3511, 4700, 5050, and 5515).
- Bat Species that are designated on the Western Bat Working Group’s (WBWG) Regional Bat Species Priority Matrix as: “Red or High.” These species are considered to be “imperiled or are at high risk of imperilment.”
- Plants that are listed by CNPS Rare Plant Program as rank 1A – plants presumed extirpated in California and either rare or extinct elsewhere, 1B – plants rare, threatened or endangered in California or elsewhere, 2A – plants presumed extirpated in California but common elsewhere, 2B – plants rare, threatened or endangered in California by common elsewhere, 3 – plants about which more is needed and 4 – plants of limited distribution.

5.1 Special Status Wildlife

A total of 40 special status wildlife species were identified through the literature review and database queries as having the potential to occur (Attachment C, D, E and Figure 3 and 4). Species guilds determined to have moderate potential to be present within the Project Site and are discussed below. The complete list of plant and wildlife species evaluated are included in Table 2.

5.1.1 Roosting and Breeding Bats

The Project Site includes trees that will be relocated and removed that provide potential roosting habitat for roosting bats. The building, while occupied, could also serve as potential roost habitat. The aquatic resources of the adjacent Atherton Channel serve as potential foraging habitat and the box culverts within the channel serve as potential roost sites.

5.1.2 Nesting Raptors and Migratory Birds

The Project Site includes trees that will be relocated and removed that provide potential foraging and nesting habitat for migratory bird species. Trees within the Atherton Channel could also support nesting migratory birds and raptors. Focused discussions on each bird species with the potential to occur is included in Table 2.

5.2 Special Status Plants

A total of 60 special status plant species were identified to have the potential to occur in the region on database searches. The Project Site is completely developed, and no special status plant species have the potential to occur within the impact areas.

6 Impacts and Mitigation Measures

The Project Site is a developed lot with some existing vegetation (trees and landscaping) and an existing building. The demolition of the building and the removal of existing trees and vegetation serve as the primary direct impacts associated with the Project.

The Atherton Channel, Bayfront Canal, Flood Slough and Don Edwards National Wildlife Refuge adjacent to the Project Site provide suitable habitat for sensitive species for which indirect impacts could occur. No direct or indirect impacts to these aquatic resources or potentially jurisdictional waters will occur.

6.1 Roosting and Breeding Bats

Roosting and breeding bats have a low to moderate likelihood of occurrence on the Project Site and in adjacent habitats within Atherton Channel. Within the Project Site bats could utilize the foliage of trees that are to be relocated and/or removed and cracks and crevices on the existing building that is scheduled to be demolished. In Atherton Channel the foliage and the box culverts serve as potential roost sites.

Demolition of the building may cause direct mortality if roosting bats that are using the structure. Removal of trees that contain active bat roosts could result in the loss of individual bats, bat colonies or their habitat. Although adult bats may be able to escape during tree removal and building demolition, if activities occur during the breeding season for bats (March 1 through August 31), young bats that cannot fly could be killed or injured during vegetation and building demolition.

To prevent direct mortality to bats, preconstruction surveys should be completed by a qualified bat biologist if the structure or trees are scheduled to be removed during the breeding season. At least two weeks prior to tree removal or demolition activities a qualified bat biologist with demonstrated bat survey experience shall conduct a focused survey for bats and potential roosting sites within trees and the building to be removed through visual surveys and emergence acoustic surveys. If no roosting sites or bats are found the biologist shall submit a letter report confirming the absence and no further measures are required.

If roosting bats are found during the above survey and roosts will be affected, an avoidance and minimization plan shall be developed by the qualified bat biologist in consultation with CDFW. The avoidance measures may include no-disturbance buffer zones during construction, temporal avoidance during the maternity season or other measures deemed necessary based on the specifics of the survey results.

6.2 Nesting Raptors and Migratory Birds

Project activities including tree and shrub removal, building demolition and grading operations to clear the site could result in the direct mortality of adult or young birds, the destruction of active nests and/or disturbance to nesting adults causing nest abandonment and/or loss of reproductive effort if project activities occur during the nesting bird breeding season from February 1 to August 31. Native bird species are protected by both state California Fish and Game Code Section s3503 and 3513 and the Federal Migratory Bird Treaty Act laws.

To avoid and minimize impacts to nesting raptors and migratory birds, project activities that occur during the nesting bird breeding season from February 1 through August 31 require a qualified biologist with demonstrated experience conducting surveys for nesting birds including raptors to conduct preconstruction surveys. The survey shall be conducted for birds in all habitats within the Project Site, including all disturbance, staging and access areas and a 250-foot buffer. This survey should be conducted no more than 14 days prior to the initiation of project activities during the breeding season. If there is a lapse in construction related activities for more than seven (7) days a new survey should be conducted.

If an active nest is identified during preconstruction surveys, the qualified biologist shall establish species- and site-specific no disturbance buffer zones for each nest using high-visibility fencing, flagging or other method deemed appropriate by the biologist. No construction activities shall be allowed to occur within the buffer zones. The size of the buffer shall be determined based on the species sensitivity to disturbance and the planned activities within the vicinity. The qualified biologist shall develop a schedule for monitoring and evaluating the status of the nest(s). The buffer shall remain in effect until the nest is no longer active as determined by the qualified biologist. If determined necessary by the qualified biologist, consultation with the USFWS and/or CDFW may be required depending upon the species and the circumstances. The results of the preconstruction surveys and/or nest disturbance activities shall be provided in a memorandum detailing the survey results.

6.3 Special Status Wildlife and Bird Impacts on Building Design and Lighting

The development of the hotel could result in indirect impacts on special status species that inhabit the nearby sensitive wetland, saltwater and brackish water habitats in Flood Slough and Don Edwards National Wildlife Refuge. The hotels height at a maximum of 94 feet and the fourth floor bar and lounge area outdoor rooftop garden could provide perch sites from which raptors and other avian predators could prey on special-status species including the western snowy plover, California Ridgway's rail, and salt-marsh harvest mouse that are present in the Refuge. Additionally, the installation of the hotel may result in impacts associated with the height of the building and outdoor garden, installation of lighting, reflective surfaces and landscaping.

To mitigate these potential indirect impacts on the adjacent sensitive habitats along the Bayfront and the nearby Refuge, bird safe standards are recommended to minimize hazards to special status species and birds.

1. Install bird perching deterrents along suitable perching sites to deter avian predators. Such deterrents may include bird spikes, netting, sound deterrents or perching deterrents approved by USFWS and CDFW.

2. Landscaping used on the rooftop garden should consist of species that do not exceed 30 feet in height and may include native or non-invasive ornamental species. Species with broad canopies are preferred. Trees that are planted on the rooftop garden should be located away from the edge of the roof.
3. Reduce large areas transparent or reflective glass.
4. Locate water features, trees and bird habitat away from building exteriors to reduce reflection.
5. Reduce or eliminate the visibility of landscaped areas behind glass.
6. Turn non-emergency lighting off at night, especially during the bird migration season (February to May and August to November).
7. Include window coverings that adequately block light transmission from rooms where interior lighting is used at night and installation motion sensors or controls to extinguish lights in unoccupied spaces.
8. Design or install lighting fixtures that minimize light pollution including light trespass, over-illumination, glare, light clutter, and skyglow while using bird-friendly colors for lighting when possible. San Francisco's Standards for Bird-Safe Buildings (City and County of San Francisco, 2011) provides a good overview of building design and lighting guidelines to minimize bird/building collision.

Table 3. List of Species with Potential to Occur.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Amphibians							
Ambystoma californiense	California tiger salamander	FT	ST	-	-	Ponds and vernal pools in grasslands and oak woodlands. Needs underground refuges, especially ground squirrel burrows.	**None.** Suitable habitat is not present at the Project Site.
Aneides niger	Santa Cruz black salamander	-	-	SSC	-	Restricted to mesic forests in the fog belt of the outer Coast Ranges. Occurs in moist streamside microhabitats, often in shallow standing water or seeps under stones and debris along stream edges.	**None.** Suitable habitat is not present at the Project Site.
Dicamptodon ensatus	California giant salamander	-	-	SSC	-	Mesic coastal forests and chaparral. Breeds in cold permanent and semi-permanent streams.	**None.** Suitable habitat is not present at the Project Site.
Rana boylii	Foothill yellow-legged frog (West/Central Coast population)	-	SE	-	-	Rocky streams and rivers with rocky substrate and open, sunny banks in forests, chaparral and woodlands.	**None.** Suitable habitat is not present at the Project Site.
Rana draytonii	California red-legged frog	FT	-	SSC	-	Sill or slow-moving water for breeding, stream channels and riparian zones with vegetative cover and moisture during summer months. May disperse across a variety of habitat types under wet conditions.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Reptiles							
Chelonia mydas	Green sea turtle	FT	-	-	-	Feeding occurs in shallow, low energy waters with abundant submerged vegetation, and also in convergence zones in the open ocean. Nesting occurs on beaches, usually on islands but also on the mainland.	**None.** Suitable habitat is not present at the Project Site.
Emys marmorata	Western pond turtle	-	-	SSC	-	Ponds, rivers, marshes, streams, and irrigation ditches, usually with aquatic vegetation. Basking sites and suitable upland cover for egg laying.	**Low.** Potentially **s**uitable aquatic habitat is present in Atherton Channel although limited by marginal upland habitat due to development on both sides of the steep channel.
Thamnophis sirtalis tetrataenia	San Francisco garter snake	FE	SE	-	-	Densely vegetated ponds near open hillsides, aquatic habitats with shallow water edges are essential. South or west facing slopes with suitable sites for basking, rodent burrows or thick mats of grass for shelter and hibernacula.	**None.** Suitable habitat is not present at the Project Site.
Fish							
Hypomesus transpacificus	Delta smelt	FT	SE	-	-	Sacramento-San Joaquin Delta. Seasonally in Suisun Bay, Carquinez Strait & San Pablo Bay. Seldom found at salinities > 10 ppt. Most often at salinities < 2ppt.	**None.** Suitable habitat is not present at the Project Site and is outside of the range of the species.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Spirinchus thaleichthys	longfin smelt	FC	ST	SSC		Pelagic estuarine fish found in the San Francisco Bay Delta	**None.** Suitable habitat is not present at the Project Site.
Birds							
Agelaius tricolor	tricolored blackbird	-	ST	-	-	Emergent wetlands, grasslands, and agricultural fields. Breeds near fresh water, preferably in emergent wetlands in cattails or tules, but also in thickets of willow, wild rose, blackberry, or tall herbaceous species.	**None.** Suitable habitat is not present at the Project Site.
Asio flammeus	short-eared owl (nesting)	-	-	SSC	-	Occurs within a wide variety of open habitats. Nests on dry ground in open areas with dense herbaceous cover.	**None.** Suitable habitat is not present at the Project Site.
Athene cunicularia	Burrowing owl	-	-	SSC	-	Open arid and semiarid habitats with short emergent vegetation, including grasslands, deserts, agricultural fields, ruderal areas and open landscaped areas.	**None.** They are known to nest in Bedwell Park but not anticipated to be present in the Project Site due to lack of suitable habitat.
Brachyramphus marmoratus	Marbled murrelet	FE	SE	-	-	Forages in the ocean, nests inland up to 15 miles from the coast. Primarily nests in old-growth and mature coniferous forests or in younger forests with structural elements similar to old growth. Winters at sea.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Charadrius nivosus nivosus	Western snowy plover	FT	-	SSC	-	Sandy beaches, large alkali lake shorelines, salt pond levees and dunes. Require sandy, gravelly or friable soils for nesting.	**None.** Suitable habitat is not present at the Project Site. May occur at salt marshes along the Bay and Refuge.
Circus cyaneus	Northern harrier (nesting)	-	-	SSC	-	Sloughs, wet meadows, marshlands, swamps, prairies, plains, grasslands, and shrub lands, large forest openings, open, low woody or herbaceous vegetation for nesting and hunting, nest on ground.	**None.** Suitable habitat is not present at the Project Site. Known to occur on the nearby Refuge.
Coccyzus americanus occidentalis	western yellow-billed cuckoo	FT	SE	-	-	Riparian forest nester, along the broad, lower flood-bottoms of larger river systems. Nests in riparian jungles of willow, often mixed with cottonwoods, with lower story of blackberry, nettles, or wild grape.	**None.** Suitable habitat is not present at the Project Site.
Coturnicops noveboracensis	yellow rail	-	-	SSC	-	Shallow marshes, and wet meadows; in winter, drier fresh-water and brackish marshes, as well as dense, deep grass, and rice fields.	**None.** Suitable habitat is not present at the Project Site. May occur at salt marshes along the Bay and Refuge.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Elanus leucurus	White-tailed kite	-	-	FP	-	Open grasslands, meadows, or marshes for foraging close to isolated, dense-topped trees for nesting and perching.	**Low.** The Monterey pine tree slated for removal is large enough to support nesting, however it is in poor health and nesting is not anticipated within urban setting. May forage in nearby managed ponds on the Refuge, records occur on nearby Bair Island to the north.
Falco peregrinus anatum	American Peregrine Falcon	FD	SD	FP	-	Frequently nests near water on ledges of rocky cliffs or buildings, also found along rivers and coastlines or in cities.	**None.** Suitable habitat is not present at the Project Site. May forage in nearby managed ponds on the Refuge.
Geothlypis trichas sinuosa	Saltmarsh common yellowthroat	-	-	SSC	-	Resident of the San Francisco Bay region, in fresh and saltwater marshes. Requires thick, continuous cover down to water surface for foraging; tall grasses, tule patches, willows for nesting.	**None.** Suitable habitat is not present at the Project Site. May occur at salt marshes along the Bay and Refuge.
Haliaeetus leucocephalus	bald eagle	-	SE	FP	-	Ocean shore, lake margins, and rivers for both nesting and wintering. Nests in large, old-growth, or dominant live tree with open branches, especially ponderosa pine. Roosts communally in winter.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Laterallus jamaicensis coturniculus	California black rail	-	ST	FP	-	Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering larger bays.	**None.** Suitable habitat is not present at the Project Site. May occur at salt marshes along the Bay and Refuge.
Melospiza melodia pusillula	Alameda song sparrow	-	-	SSC	-	Resident of salt marshes bordering south arm of San Francisco Bay. Inhabits Salicornia marshes; nests low in Grindelia bushes (high enough to escape high tides).	**None.** Suitable habitat is not present at the Project Site. May occur at salt marshes along the Bay and Refuge.
Rallus obsoletus obsoletus	California Ridgway's rail	FE	SE	FP	-	Salt-water and brackish marshes traversed by tidal sloughs in the vicinity of San Francisco Bay.	**None.** Suitable habitat is not present at the Project Site. May occur at salt marshes along the Bay and Refuge.
Riparia riparia	bank swallow	-	ST	-	-	Colonial nester; nests primarily in riparian and other lowland habitats west of the desert. Requires vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, ocean to dig nesting hole.	**None.** Suitable habitat is not present at the Project Site.
Rynchops niger	black skimmer	-	-	SSC	-	Nests on gravel bars, low islets, and sandy beaches, in unvegetated sites. Nesting colonies usually less than 200 pairs.	**None.** Suitable habitat is not present at the Project Site. May forage in nearby managed ponds on the Refuge.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Sternula antillarum browni	California least tern	FE	SE	FP	-	Abandoned salt ponds and along estuarine shores in San Francisco Bay. Feeds primarily in shallow estuaries or lagoons where small fish are abundant. Nests on barren to sparsely vegetated site near water, usually on sandy or gravelly substrate.	**None.** Suitable habitat is not present at the Project Site. May forage in nearby managed ponds on the Refuge.
Invertebrates							
Bombus crotchii	Crotch's bumblebee	-	SCE	-	-	Grassland and scrub habitats with wildflower foraging habitat; occurs at relatively warm and dry sites, including the inner Coast Range of California and margins of the Mojave Desert	**None.** Suitable habitat is not present at the Project Site.
Bombus occidentalis occidentalis	western bumble bee, southern subspecies	-	SCE	-	-	Wet/moist meadows with abundant floral resources, roadside areas, and other areas containing forage species preferred by bumble bees.	**None.** Suitable habitat is not present at the Project Site.
Callophrys mossii bayensis	San Bruno elfin butterfly	FE	-	-	-	Occurs in coastal grassy mountainous areas near San Francisco Bay. Located on steep north facing slopes above 500' elevation that contain populations of host plant; Sedum spathulifolium. Uses a variety of nectar plants occurring in upper elevation grasslands and scrub.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Danaus plexippus	monarch - California overwintering population	CE	-	-	-	Requires milkweed for larval host plant, and late-blooming plants for adult nectar during migration. Overwinters in dense groves of trees, usually eucalyptus, pine, and cypress.	**None.** Suitable habitat is not present at the Project Site.
Euphydryas editha bayensis	Bay checkerspot butterfly	FT	-	-	-	Restricted to native grasslands on outcrops of serpentine soil in the vicinity of San Francisco Bay. *Plantago erecta* is the primary host plant; *Orthocarpus densiflorus* & *O. purpurscens* are the secondary host plants.	**None.** Suitable habitat is not present at the Project Site.
Speyeria zerene myrtleae	Myrtle's silverspot butterfly	FE	-	-	-	Restricted to the foggy, coastal dunes/hills of the Point Reyes peninsula; extirpated from coastal San Mateo County. Larval foodplant thought to be *Viola adunca*.	**None.** Suitable habitat is not present at the Project Site.
Mammals							
Antrozous pallidus	Pallid bat	-	-	SSC	-	Regionally found in low elevation arid or semi-arid areas near water. Their day roost is often in a warm horizontal opening (e.g. rock cracks, attics); the night roost is often in the open, near foliage; and the hibernation roost is often in buildings, caves, or cracks in rocks.	**Low to moderate.** Potential for bats to be using the trees and/or building for roosting.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Corynorhinus townsendii	Townsend's big-eared bat	-	-	SSC	-	Found in pine forests and arid desert scrub, almost always near hibernation caves and mines, or near roosting areas. Prefer large open areas for roosting.	**None.** Suitable habitat is not present at the Project Site.
Neotoma fuscipes annectens	San Francisco dusky-footed woodrat	-	-	SSC	-	Oak and conifer woodlands, scrub communities, riparian habitats.	**None.** Suitable habitat is not present at the Project Site.
Reithrodontomys raviventris	Salt-marsh harvest mouse	FE	SE	FP	-	Salt and brackish marshes of San Francisco; San Pablo; and Suisun Bay. Pickleweed is primary habitat. Requires upland areas for flood escape.	**None.** Suitable habitat is not present at the Project Site.
Sorex vagrans halicoetes	salt-marsh wandering shrew	-	-	SSC	-	Salt marshes of the south arm of San Francisco Bay. Medium high marsh 6-8 ft above sea level where abundant driftwood is scattered among Salicornia.	**None.** Suitable habitat is not present at the Project Site.
Taxidea taxus	American badger	-	-	SSC	-	Open areas, plains and prairies, farmland and woodland edges. Constructs deep burrows for the pursuit of prey and for sleeping.	**None.** Suitable habitat is not present at the Project Site.
Plants							
Acanthomintha duttonii	San Mateo thorn-mint	FE	SCE	-	1B.1	Chaparral, valley and foothill grassland, serpentinite. Elevation 50 to 300 m. April to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Allium peninsulare var. franciscanum	Franciscan onion	-	-	-	1B.2	Cismontane woodland, valley and foothill grassland. Clay, volcanic,	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
						often serpentinite. Elevation 52 to 305 m. May to June bloom period.	
Amsinckia lunaris	bent-flowered fiddleneck	-	-	-	1B.2	Coastal bluff scrub, Cismontane woodland, Valley and foothill grassland. Elevation 3 to 500 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Androsace elongata ssp. acuta	California androsace	-	-	-	4.2	Chaparral, Cismontane woodland, Coastal scrub, Meadows and seeps, Pinyon and juniper woodland, Valley and foothill grassland. Elevation 150 to 1305 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Arctostaphylos andersonii	Anderson's manzanita	-	-	-	1B.2	Broadleafed upland forest, Chaparral, North Coast coniferous forest. Elevation 60 to 760 m. November to May bloom period.	**None.** Suitable habitat is not present at the Project Site.
Arctostaphylos montaraensis	Montara manzanita	-	-	-	1B.2	Chaparral (maritime), Coastal scrub. Elevation 80 to 500 m. January to March bloom period.	**None.** Suitable habitat is not present at the Project Site.
Arctostaphylos regismontana	Kings Mountain manzanita	-	-	-	1B.2	Broadleafed upland forest, chaparral, north coast coniferous forest. Granitic or sandstone outcrops. Elevation 305 to 730 m. December to April bloom period.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Astragalus pycnostachyus var. pycnostachyus	coastal marsh milk-vetch	-	-	-	1B.2	Coastal dunes (mesic), Coastal scrub, Marshes and swamps (coastal salt, streamsides). Elevation 0 to 30 m. April to October bloom period.	**None.** Suitable habitat is not present at the Project Site.
Astragalus tener var. tener	alkali milk-vetch	-	-	-	1B.2	Alkaline Playas, Valley and foothill grassland (adobe clay), Vernal pools. Elevation 1 to 60 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Calandrinia breweri	Brewer's calandrinia	-	-	-	4.2	Chaparral, coastal scrub. Sandy or loamy soils. Disturbed sites, burns. Elevation 10 to 1200 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Calochortus umbellatus	Oakland star-tulip	-	-	-	4.2	Broadleafed upland forest, Chaparral, Cismontane woodland, Lower montane coniferous forest, Valley and foothill grassland Often on serpentine. Elevation 100 to 700 m. March to May bloom period.	**None.** Suitable habitat is not present at the Project Site.
Castilleja ambigua var. ambigua	johnny-nip	-	-	-	4.2	Coastal bluff scrub, coastal scrub, coastal prairie, marshes and swamps, valley and foothill grassland, vernal pool margins. Elevation 0 to 435 m. March to August bloom period	**None.** Suitable habitat is not present at the Project Site.
Centromadia parryi ssp. congdonii	Congdon's tarplant	-	-	-	1B.1	Valley and foothill grassland (alkaline). Elevation 0 to 230 m. May to October bloom period.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Chloropyron maritimum ssp. palustre	Point Reyes bird's-beak	-	-	-	1B.2	Marshes and swamps (coastal salt). Elevation 0 to 10 m. June to October bloom period.	**None.** Suitable habitat is not present at the Project Site.
Chorizanthe cuspidata var. cuspidata	San Francisco Bay spineflower	-	-	-	1B.2	Coastal bluff scrub, Coastal dunes, Coastal prairie, Coastal scrub, sandy soil. Elevation 3 to 215 m. April to July bloom period.	**None.** Suitable habitat is not present at the Project Site.
Cirsium fontinale var. fontinale	Crystal Springs fountain thistle	FE	SE	-	1B.1	Chaparral (openings), Cismontane woodland, Meadows and seeps, Valley and foothill grassland, serpentine seeps. Elevation 45 to 175 m. May to October bloom period.	**None.** Suitable habitat is not present at the Project Site.
Cirsium praeteriens	lost thistle	-	-	-	1A	Little information exists on this plant; it was collected from the Palo Alto area at the turn of the 20th Century. Elevation 0 to 100 m. June to July bloom period.	**None.** Suitable habitat is not present at the Project Site.
Clarkia concinna ssp. automixa	Santa Clara red ribbons	-	-	-	4.3	Chaparral, Cismontane woodland. Elevation 90 to 1500 m. May to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Collinsia corymbosa	round-headed Chinese-houses	-	-	-	1B.2	Coastal dunes. Elevation 0 to 20 m. April to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Collinsia multicolor	San Francisco collinsia	-	-	-	1B.2	Closed-cone coniferous forest, coastal scrub, sometimes on serpentine. Elevation 30 to 250 m. March to May bloom period.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Cypripedium fasciculatum	clustered lady's-slipper	-	-	-	4.2	Lower montane coniferous forest, North Coast coniferous forest usually serpentinite seeps and streambanks. Elevation 100 to 2435 m. March to April bloom period.	**None.** Suitable habitat is not present at the Project Site.
Dirca occidentalis	western leatherwood	-	-	-	1B.2	Broadleafed upland forest, Closed-cone coniferous forest, Chaparral, Cismontane woodland, North Coast coniferous forest, Riparian forest, Riparian woodland, mesic. Elevation 25 to 425 m. January to March bloom period.	**None.** Suitable habitat is not present at the Project Site.
Elymus californicus	California bottle-brush grass	-	-	-	4.3	Broadleafed upland forest, Cismontane woodland, North Coast coniferous forest, Riparian woodland. Elevation 15 to 470 m. March to August bloom period.	**None.** Suitable habitat is not present at the Project Site.
Eriophyllum latilobum	San Mateo woolly sunflower	FE	SCE	-	1B.1	Cismontane woodland (often serpentinite, on roadcuts), Coastal scrub, Lower montane coniferous forest. Elevation 45 to 330 m. May to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Eryngium aristulatum var. hooveri	Hoover's button-celery	-	-	-	1B.1	Vernal pools, Elevation 3 to 45 m. Bloom June to August.	**None.** Suitable habitat is not present at the Project Site.
Eryngium jepsonii	Jepson's coyote thistle	-	-	-	1B.2	Vernal pools, valley and foothill grassland. Clay. Elevation 3 to 300 m. April to August bloom period.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Erysimum franciscanum	San Francisco wallflower	-	-	-	4.2	Chaparral, Coastal dunes, Coastal scrub, Valley and foothill grassland, often serpentinite. Elevation 0 to 550 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Extriplex joaquinana	San Joaquin spearscale	-	-	-	1B.2	Chenopod scrub, alkali meadow, playas, valley and foothill grassland. Elevation 1 to 835 m. April to October bloom period.	**None.** Suitable habitat is not present at the Project Site.
Fritillaria biflora var. ineziana	Hillsborough chocolate lily	-	-	-	1B.1	Cismontane woodland, valley and foothill grassland, serpetinite. Elevation 150m. March to April bloom period.	**None.** Suitable habitat is not present at the Project Site.
Fritillaria liliacea	fragrant fritillary	-	-	-	1B.2	Cismontane woodland, Coastal prairie, Coastal scrub, Valley and foothill grassland. Often serpetinite. Elevation 3 to 410 m. February to April bloom period.	**None.** Suitable habitat is not present at the Project Site.
Hesperevax sparsiflora var. brevifolia	short-leaved evax	-	-	-	1B.2	Coastal bluff scrub, coastal dunes, coastal prairie. Elevation 0 to 215 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Hesperolinon congestum	Marin western flax	FT	SCT	-	1B.1	Chaparral, valley and foothill grassland. In serpentine barrens and in serpentine grassland and chaparral. 60-370 m. April to July bloom period.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Lasthenia conjugens	Contra Costa goldfields	FE	-	-	1B.1	Cismontane woodland, Playas (alkaline), Valley and foothill grassland, Vernal pools, mesic. Elevation 0 to 470 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Leptosiphon ambiguus	serpentine leptosiphon	-	-	-	4.2	Cismontane woodland, Coastal scrub, Valley and foothill grassland, usually serpentine soils. Elevation 120 to 1130 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Lessingia arachnoidea	Crystal Springs lessingia	-	-	-	1B.2	Cismontane woodland, Coastal scrub, Valley and foothill grassland, serpentine soils, sometimes on roadsides. Elevation 60 to 200 m. July to October bloom period.	**None.** Suitable habitat is not present at the Project Site.
Lessingia hololeuca	woolly-headed lessingia	-	-	-	3	Broadleafed upland forest, Coastal scrub, Lower montane coniferous forest, Valley and foothill grassland, clay and serpentine soils. Elevation 15 to 355 m. June to October bloom period.	**None.** Suitable habitat is not present at the Project Site.
Lilium maritimum	coast lily	-	-	-	1B.1	Broadleafed upland forest, Coastal scrub, Lower montane coniferous forest, Valley and foothill grassland, sometimes roadside. Elevation 5 to 475 m. May to August bloom period.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Lupinus arboreus var. eximius	San Mateo tree lupine	-	-	-	3.2	Coastal scrub, chaparral. Elevation 90 to 550 m. April to July bloom period.	**None.** Suitable habitat is not present at the Project Site.
Malacothamnus arcuatus	arcuate bush-mallow	-	-	-	1B.2	Chaparral, cismontane woodland. Elevation 15 to 355 m. April to September bloom period.	**None.** Suitable habitat is not present at the Project Site.
Malacothamnus davidsonii	Davidson's bush-mallow	-	-	-	1B.2	Chaparral, Cismontane woodland, Coastal scrub, Riparian woodland. Elevation 185 to 1140 m. June to January bloom period.	**None.** Suitable habitat is not present at the Project Site.
Micropus amphibolus	Mt. Diablo cottonweed	-	-	-	3.2	Broadleafed upland forest, Chaparral, Cismontane woodland, Valley and foothill grassland, rocky slopes. Elevation 45 to 825 m. March to May bloom period.	**None.** Suitable habitat is not present at the Project Site.
Monolopia gracilens	woodland woolythreads	-	-	-	1B.2	Broadleafed upland forest (openings), Chaparral (openings), Cismontane woodland, North Coast coniferous forest (openings), Valley and foothill grassland, serpentine soils. Elevation 100 to 1200 m. March to July bloom period.	**None.** Suitable habitat is not present at the Project Site.
Navarretia myersii ssp. myersii	pincushion navarretia	-	-	-	1B.1	Vernal pools, often acidic. Elevation 20 to 330 m. April to May bloom period.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Navarretia paradoxiclara	Patterson's navarretia	-	-	-	1B.3	Meadows and seeps. Serpentinite, openings, vernally mesic, often drainages. Elevation 150 to 435 m. May to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Pedicularis dudleyi	Dudley's lousewort	-	SCR	-	1B.2	Chaparral (maritime), Cismontane woodland, North Coast coniferous forest, Valley and foothill grassland. Elevation 60 to 900 m. April to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Pentachaeta bellidiflora	white-rayed pentachaeta	FE	SCE	-	1B.1	Cismontane woodland, Valley and foothill grassland (often serpentinite). Elevation 35 to 620 m. March to May bloom period.	**None.** Suitable habitat is not present at the Project Site.
Plagiobothrys chorisianus var. chorisianus	Choris' popcornflower	-	-	-	1B.2	Chaparral, Coastal prairie, Coastal scrub. Elevation 3 to 160 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Plagiobothrys glaber	hairless popcornflower	-	-	-	1A	Meadows and seeps (alkaline), Marshes and swamps (coastal salt). Elevation 15 to 180 m. March to May bloom period	**None.** Suitable habitat is not present at the Project Site.
Polemonium carneum	Oregon polemonium	-	-	-	2B.2	Coastal prairie, Coastal scrub, Lower montane coniferous forest. Elevation 0 to 1830 m. April to September bloom period.	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Ranunculus lobbii	Lobb's aquatic buttercup	-	-	-	4.2	Cismontane woodland, North Coast coniferous forest, Valley and foothill grassland, Vernal pools, mesic. Elevation 15 to 470 m. February to May bloom period.	**None.** Suitable habitat is not present at the Project Site.
Senecio aphanactis	chaparral ragwort	-	-	-	2B.2	Chaparral, Cismontane woodland, Coastal scrub, sometimes alkaline. Elevation 15 to 800 m. January to April bloom period.	**None.** Suitable habitat is not present at the Project Site.
Silene verecunda ssp. verecunda	San Francisco campion	-	-	-	1B.2	Coastal bluff scrub, Chaparral, Coastal prairie, Coastal scrub, Valley and foothill grassland. Elevation 30 to 645 m. March to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Spergularia macrotheca var. longistyla	long-styled sand-spurrey	-	-	-	1B.2	Meadows and seeps, Marshes and swamps. Elevation 0 to 255 m. February to May bloom period.	**None.** Suitable habitat is not present at the Project Site.
Stuckenia filiformis ssp. alpina	slender-leaved pondweed	-	-	-	2B.2	Marshes and swamps (assorted shallow freshwater). Elevation 300 to 2150. May to July bloom period.	**None.** Suitable habitat is not present at the Project Site.
Suaeda californica	California seablite	FE	-	-	1B.1	Marshes and swamps (coastal salt). Elevation 0 to 15 m. July to October bloom period.	**None.** Suitable habitat is not present at the Project Site.
Trifolium amoenum	two-fork clover	FE	-	-	1B.1	Coastal bluff scrub, Valley and foothill grassland (sometimes serpentinite). Elevation 5 to 415 m. April to June bloom period	**None.** Suitable habitat is not present at the Project Site.

Scientific Name	Common Name	Listing status*				Habitat	Potential to Occur at the Project Site.
		FESA	CESA	CDFW	CNPS		
Trifolium hydrophilum	saline clover	-	-	-	1B.2	Marshes and swamps, Valley and foothill grassland (mesic, alkaline), Vernal pools. Elevation 0 to 300 m. April to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Triphysaria floribunda	San Francisco owl's-clover	-	-	-	1B.2	Coastal prairie, Coastal scrub, Valley and foothill grassland. Elevation 10 to 160 m. April to June bloom period.	**None.** Suitable habitat is not present at the Project Site.
Tropidocarpum capparideum	caper-fruited tropidocarpum	-	-	-	1B.1	Valley and foothill grassland (alkaline hills). Elevation 1 to 455 m. March to April bloom period.	**None.** Suitable habitat is not present at the Project Site.
Usnea longissima	Methuselah's beard lichen	-	-	-	4.2	Broadleafed upland forest, North Coast coniferous forest	**None.** Suitable habitat is not present at the Project Site.

*Status:

Federal Endangered Species Act (FESA) Designations: (FD) Federally Delisted, (FE) Federally Endangered, (FT) Federally Threatened, (FPE) Federally Proposed for listing as Endangered, (FPT) Federally Proposed for listing as Threatened, (FPD) Federally proposed for delisting, (FC) Federal candidate species

California Endangered Species Act (CESA) Designations: (SD) State Delisted, (SE) State Endangered, (ST) State Threatened, (SCE) Candidate Endangered, (SCT) Candidate Threatened, (SR) State Rare, (SCR) State Candidate Rare

California Department of Fish and Wildlife (CDFW) Designations:(SSC) Species of Special Concern, (FP) Fully Protected Species

California Native Plant Society (CNPS) Rare Plant Rank: (1A) Presumed extinct in California; (1B) Rare, threatened, or endangered in California and elsewhere; (2) Rare, threatened, or endangered in California, but more common elsewhere; (3) More information is needed; (4) Limited distribution, watch list

Threat Rank: 0.1 Seriously threatened in California (more than 80% of occurrences threatened / high degree and immediacy of threat); 0.2 Fairly threatened in California (20 to 80% occurrences threatened/moderate degree and immediacy of threat); 0.3 Not very threatened in California (less than 20% of occurrences threatened / low degree and immediacy of threat or no current threats known)

**Species list developed from CNDDB Records, IPaC species list, CNPS Rare Plant Inventory, adjacent project CEQA documents and ConnectMenlo EIR. All sources accessed in 2021.

LAYOUT NOTES

1. CONTRACTOR SHALL VERIFY ALL UTILITIES, GRADES, EXISTING CONDITIONS AND DIMENSIONS IN THE FIELD PRIOR TO COMMENCING WORK. ALL DISCREPANCIES OR QUESTIONS SHALL BE BROUGHT TO THE ATTENTION OF THE LANDSCAPE ARCHITECT FOR RESOLUTION.
2. ALL WRITTEN DIMENSIONS SUPERCEDE ALL SCALED DISTANCES AND DIMENSIONS. DIMENSIONS SHOWN ARE FROM THE FACE OF THE BUILDING, WALL, BACK OF CURB, EDGE OF WALK, PROPERTY LINE, OR CENTERLINE OF COLUMN UNLESS OTHERWISE NOTED ON THE DRAWINGS.
3. ALL DIMENSIONS AT BUILDING ARE TO FACE OF BUILDING. ALL DIMENSIONS AT ROADWAY ARE TO FACE OF CURB.
4. ALL ANGLES ARE 45 DEGREE, 90 DEGREE, OR 135 DEGREE UNLESS OTHERWISE NOTED.
5. ALL CURVES AND ALL TRANSITIONS BETWEEN CURVES AND STRAIGHT EDGES SHALL BE SMOOTH.
6. ALL RETURN RADII AND CURB DATA ARE TO FACE OF CURB.
7. WHENEVER BOTTOM OF WALL (BW) ELEVATION IS GIVEN, IT IS FINISH PAVEMENT OR GRADE ELEVATION AT FACE OF WALL.
8. SCORE LINES IN SIDEWALKS SHALL BE SPACED TO EQUAL THE WIDTH OF THE WALKWAY, UNLESS OTHERWISE SHOWN. EXPANSION JOINTS IN SIDEWALKS SHALL BE 20' ON CENTER MAXIMUM.
9. EXPANSION JOINTS IN CONCRETE WALLS SHALL BE AT 40' O.C. MAXIMUM.
10. BUILDING LAYOUT AND LOCATION, SIDEWALK, CURB AND GUTTER, GRADING AND DRAINAGE IS BASED ON DRAWINGS PREPARED BY THE ARCHITECT AND THE CIVIL ENGINEER.
11. STATIONING HEREON IS ALONG CONSTRUCTION CENTERLINE UNLESS OTHERWISE SHOWN OR INDICATED.
12. ANY EXTRA CONSTRUCTION STAKING NECESSITATED SOLELY BY THE CONTRACTOR'S NEGLIGENCE WILL BE CHARGED TO THE CONTRACTOR ON A TIME AND EXPENSES BASIS AND PAID FOR BY THE CONTRACTOR.
13. SEE IRRIGATION DRAWINGS FOR GENERAL SYSTEM REQUIREMENTS AND FOR LOCATION OF IRRIGATION MAINLINE PIPING. SLEEVES TO ACCOMMODATE IRRIGATION PIPING, SIZED AS NEEDED, SHALL BE IN PLACE UNDER AND THROUGH SLABS AND WALLS, PRIOR TO POURING.
14. PROVIDE CONTINUOUS HEADERS AT THE EDGES OF ALL AC PAVING, SHRUB AREAS, LAWN AREAS, DECOMPOSED GRANITE WHERE IT IS NOT CONSTRAINED BY A CONCRETE PAVING OR MOW BAND.
15. ALL CONCRETE PAVEMENTS SHALL BE DOWELED INTO CURBS, SIDEWALKS, AND BUILDING FOUNDATIONS.
16. REFER TO GEOTECHNICAL REPORT FOR ADDITIONAL INFORMATION, SECTIONS, REINFORCEMENT, AND PREPARATION. IN CASE OF DISCREPANCY THE GEOTECHNICAL REPORT SHALL GOVERN.
17. ALL TYPICAL DETAILS SHALL APPLY UNLESS NOTED OTHERWISE.
18. ANY AND ALL WORK WITHIN CITY RIGHT OF WAY SHALL CONFORM TO ALL CITY STANDARD DETAILS AND SPECIFICATIONS.
19. CONCRETE FOOTINGS INSTALLED FOR ALL SITE FURNISHINGS, SPORTS EQUIPMENT, ETC.. IN DECORATIVE PAVEMENT, ASPHALT PAVING, DECOMPOSED GRANITE, CONCRETE PAVING, AND PLANTERS SHALL BE HELD BELOW GRADE.
20. ALL EXISTING ITEMS TO REMAIN SHALL BE PROTECTED AS REQUIRED. ANY DAMAGED ITEMS SHALL BE FULLY REPAIRED OR REPLACED AT THE CONTRACTOR'S EXPENSE TO THE FULL SATISFACTION OF THE OWNER.
21. CONTRACTOR SHALL BE RESPONSIBLE FOR ANY COORDINATION WITH SUBCONTRACTORS AS REQUIRED TO ACCOMPLISH OPERATIONS.
22. ALL QUANTITIES AND PAY ITEMS ARE AND WILL BE BASED ON HORIZONTAL MEASUREMENTS.
23. ALL PATTERNS, LINE TYPES, AND SYMBOLS SHOWN WITHIN THE PLAN SET REFERENCE THE LAYOUT LEGEND AND ARE PART OF THE SCOPE OF WORK. CALLOUTS ARE SHOWN FOR CLARIFICATION OF WORK, BUT DO NOT INDICATE EVERY AND ALL INSTANCES OF SUCH WORK. THE CONTRACTOR SHALL REQUEST CLARIFICATION TO ANY ITEMS (INCLUDING BUT NOT LIMITED TO PAVING, WALLS, FINISHES, COLORS, FENCING, FOUNTAINS, POTS, AND SITE FURNITURE) NOT CLEARLY IDENTIFIED TO BE PART OF THE SCOPE OF WORK PRIOR TO BID.
24. THE CONTRACT DRAWINGS MUST BE ACCOMPANIED BY CONTRACT SPECIFICATIONS. THE CONTRACTOR MUST CONTACT THE LANDSCAPE ARCHITECT AT 925–736–8176 FOR SPECIFICATIONS IF NOT RECEIVED.
25. THE CONTRACTOR IS RESPONSIBLE FOR ALL WORK AND MATERIALS OF THE CONTRACT DOCUMENTS INCLUDING ALL WORK AND MATERIALS PROVIDED BY SUBCONTRACTORS. ALL QUALIFICATIONS OF THE CONTRACT DOCUMENTS INCLUDING ALL SPECIFIC EXCLUSIONS OF ANY WORK, DETAILS, MATERIALS, AND INCIDENTALS SHALL BE CONFIRMED AND ACCEPTED IN WRITING BY THE CONTRACTOR AND OWNER UPON FINALIZATION OF BIDS AND CONTRACT. THE LANDSCAPE ARCHITECT SHALL BE NOTIFIED OF ALL QUALIFICATIONS AND NOTIFICATIONS.

PLANTING NOTES

GENERAL

1. ALL WORK SHALL BE PERFORMED BY PERSONS FAMILIAR WITH PLANTING WORK AND UNDER THE SUPERVISION OF A QUALIFIED PLANTING FOREMAN.

2. ALL QUANTITIES AND PLANT COUNTS ARE FOR THE CONVENIENCE OF THE CONTRACTOR. IN CASE OF DISCREPANCIES, THE PLAN SHALL GOVERN.

3. THE LANDSCAPE ARCHITECT RESERVES THE RIGHT TO MAKE SUBSTITUTIONS, ADDITIONS, AND DELETIONS IN THE PLANTING SCHEME AS THEY FEEL NECESSARY WHILE WORK IS IN PROGRESS, UPON APPROVAL BY THE OWNER. SUCH CHANGES ARE TO BE ACCOMPANIED BY EQUITABLE ADJUSTMENTS IN THE CONTRACT PRICE, WHEN NECESSARY.

4. PLANT MATERIAL LOCATIONS SHOWN ARE DIAGRAMMATIC AND MAY BE SUBJECT TO CHANGE IN THE FIELD BY THE LANDSCAPE ARCHITECT. PLANT LOCATIONS ARE TO BE ADJUSTED IN THE FIELD AS NECESSARY TO SCREEN UTILITIES, BUT SHALL NOT BLOCK WINDOWS, BLOCK SIGNS NOR IMPEDE ACCESS.

5. THE DESIGN INTENT OF THE PLANTING PLAN IS TO ESTABLISH AN ATTRACTIVE MATURE LANDSCAPE APPEARANCE. FUTURE PLANT GROWTH WILL NECESSITATE TRIMMING, SHAPING, AND IN SOME CASE REMOVAL OF TREES AND SHRUBS AS AN ON-GOING MAINTENANCE PROCEDURE.

6. ALL PLANTING AREA MUST BE IRRIGATED WITH AUTOMATIC IRRIGATION SYSTEM. IRRIGATION SYSTEM SHALL BE FULLY AUTOMATED AND OPERATIONAL WITH FULL COVERAGE PRIOR TO PLANTING.

7. CONTRACTOR TO REVIEW ALL EXISTING, PROPOSED, & AS BUILT UTILITY PLANS PRIOR TO CONSTRUCTION. CONTRACTOR TO TAKE PRECAUTIONS IN EXCAVATION OF ALL TREE PLANTING PITS. CONTRACTOR TO NOTIFY LANDSCAPE ARCHITECT OF ANY CONFLICTS FOUND DURING CONSTRUCTION.

8. CONTRACTOR MUST REVIEW ALL PLANS PRIOR TO THE BEGINNING OF CONSTRUCTION AND MAINTAIN THE FOLLOWING CLEARANCES FOR ALL TREE PLANTINGS. CONTRACTOR TO TAKE PRECAUTION IN ALL EXCAVATION ACTIVITY. NOTIFY LANDSCAPE ARCHITECT OF ANY CONFLICTS PRIOR TO INSTALLATION.
   - FIRE HYDRANTS AND PIVS: 5' MINIMUM
   - LIGHT POLES: 10' MINIMUM
   - UTILITIES: 5' MINIMUM
   - BUILDING ROOF EDGE: 5' MINIMUM

9. CONTRACTOR TO PROVIDE AND ARRANGE FOR PLANT MATERIAL THRU CONTRACT GROW, PLANT BROKERS, OR DIRECT PURCHASE AS REQUIRED FOR THE FULL IMPLEMENTATION OF THE PROJECTS PLANTING PLAN. CONTRACTOR MUST SUBMIT WITHIN 30 DAYS AFTER AWARD OF A BID A DETAILED NURSERY LIST OF SECURED PLANT MATERIAL, CONTRACT GROW PLANT MATERIAL, AND ANY SUBSTITUTION REQUESTS. CONTRACTOR SHALL ARRANGE AND SECURE ALL PLANT MATERIAL WITHIN 30 DAYS OF BID. UPON DELIVERY, PLANT MATERIAL THAT DOES NOT MEET NURSERY STANDARDS, IS ROOTBOUND, OF POOR QUALITY & HEALTH, SUBSTANDARD SIZE, AND / OR IS NOT APPROVED BY THE LANDSCAPE ARCHITECT SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE. MATERIAL WHICH IS NOT SECURED AND IS UNAVAILABLE IN THE SIZE SPECIFIED SHALL BE UP-SIZED, IF AVAILABLE. ALL REPLACEMENT MATERIAL, SUBSTITUTIONS OR UP-SIZED PLANT MATERIAL MUST BE PROVIDED AS REQUIRED FOR THE FULL IMPLEMENTATION OF THE PLANTING PLAN AT NO ADDITIONAL COST TO THE CONTRACT AND OWNER.

10. PROCUREMENT OF PLANT MATERIAL SHALL NOT BE LIMITED TO NORTHERN CALIFORNIA. CONTRACTOR SHALL BE RESPONSIBLE FOR ALL TRUCKING, INSPECTIONS, AND INCIDENTALS FOR PROVIDING PLANT MATERIAL FROM SOURCES OUT OF STATE AS REQUIRED BY THE PROJECT PLANTING PLAN.

EXISTING PLANT MATERIAL

1. ALL EXISTING PLANT MATERIAL, TREES, OR LAWN TO REMAIN MUST BE PROTECTED AND MAINTAINED IN PLACE BY THE CONTRACTOR.

2. ANY DAMAGED MATERIAL MUST BE FULLY REPLACED TO MATCH EXISTING BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE CONTRACT AND OWNER.

3. CONTRACTOR MUST MAINTAIN ANY EXISTING IRRIGATION SYSTEMS OR PROVIDE TEMPORARY IRRIGATION SYSTEMS AS REQUIRED TO ALL EXISTING PLANTING AREAS TO REMAIN.

SOILS

1. THE CONTRACTOR MAY PROTECT AND STOCKPILE EXISTING SITE SOILS WHICH MAY BE REUSED FOR PLANTING PURPOSES. EXISTING SOILS SHALL BE TESTED PRIOR TO STOCKPILE FOR SOILS SUITABILITY PER THE REQUIREMENTS BELOW.

3. ALL ORGANIC COMPOST SHALL HAVE AN AGRICULTURAL SUITABILITIES TEST FOR COMPATIBILITY TO EXISTING SITE SOILS. TEST RESULTS SHALL BE DATED WITHIN THE LAST 3 MONTHS OF THE SUBMITTAL.

4. ALL EXISTING SITE SOILS SHALL HAVE AN AGRICULTURAL SUITABILITIES TEST BY AN APPROVED SOILS TESTING LAB (WAYPOINT ANALYTICAL OR APPROVED EQUAL) AND ANALYSIS FOR RECOMMENDATIONS ON ORGANIC COMPOST, AMENDMENTS, GRO POWER FERTILIZER AND ANY INCIDENTALS. RECOMMENDATIONS CONTAINED IN THE SOILS ANALYSIS RESULTS ARE TO BE IMPLEMENTED BEFORE PLANTING OCCURS. CONTRACTOR SHALL PROVIDE UP TO 4 COMBINED TESTS AT LOCATIONS SELECTED BY THE LANDSCAPE ARCHITECT. SOIL SAMPLES TO BE TAKEN AND COMBINED FROM A DEPTH OF 6" AND 24". PROVIDE ADDITIONAL TESTING (ONE 6" AND ONE 24" DEPTH TEST PER 25,000 SF FOR AREAS WHICH WERE LIME TREATED). THE ORGANIC COMPOST TEST RESULTS LISTED ABOVE SHALL BE SUBMITTED TO THE SOILS LAB FOR ACCURATE RECOMMENDATIONS OF THE SOIL AMENDMENT REQUIREMENTS. TEST RESULTS SHALL BE TAKEN AFTER ALL GRADING OPERATIONS ARE COMPLETE.

5. ALL LIME TREATED SOILS IN AREAS TO RECEIVE PLANTING SHALL BE FULLY REMOVED AND REPLACED WITH CLEAN APPROVED IMPORT TOP SOIL AT NO COST TO THE OWNER. AN ADDITIONAL 8 SOILS TESTS MAY BE REQUESTED BY THE LANDSCAPE ARCHITECT. ALL TESTING SHALL BE PAID FOR BY THE CONTRACTOR.

6. ALL SOILS IMPORTED ONTO THE SITE FOR ANY PURPOSE SUCH AS GRADING, NON EXPANSIVE FILL, FILL, OR FOR ANY GENERAL PURPOSE MUST BE TESTED FOR PLANT SUITABILITY PRIOR TO PLACEMENT. ALL IMPORT SOILS SHALL BE NON-DETRIMENTAL TO PLANT MATERIAL AND SOILS ANALYSIS SUBMITTED TO THE LANDSCAPE ARCHITECT FOR REVIEW AND APPROVAL. PROVIDE 1 TEST PER 500 CY OF MATERIAL.

7. ALL IMPORT SOILS SHALL BE FREE OF DELETERIOUS MATERIALS, AGGREGATES, AND ROCK. IMPORT SOIL SHALL BE LOAM/ CLAY LOAM WITH A PH BETWEEN 6 AND 7.5. SEE SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS

8. FOR BID PURPOSES AMEND ALL SOIL WITH 6 YARDS OMRI COMPOST, 50LBS GYPSUM, 20LBS SOIL SULFUR AND 160LBS OF GRO-POWER PLUS 5-3-1 W/ M PER 1000SF. CONTRACTOR TO SUBMIT ALL DELIVERY TICKETS FOR COMPOST AND FERTILIZERS FOR VERIFICATION.

9. SOIL IS TO BE AMENDED, AT THE RATE INDICATED BY THE SOIL ANALYSIS, TO BRING THE SOIL ORGANIC MATTER CONTENT TO A MINIMUM OF 3.5% BY DRY WEIGHT, AND A MINIMUM OF 2" OF QUALITY RECYCLED COMPOST, ON ALL PLANTING AREAS.

10. ALL PLANTERS IN AREAS WHICH HAVE BEEN COMPACTED, SUCH AS CONSTRUCTION STAGING AREAS AND IN PARKING LOTS, SHALL BE CROSS RIPPED TO THE FOLLOWING DEPTHS: PLANTERS LESS THAN THREE (3) FEET WIDE SHALL HAVE COMPACTION RELIEVED TO A MINIMUM DEPTH OF TWENTY-FOUR (24) INCHES BELOW SUBGRADE. PLANTERS THREE TO TEN (3-10) FEET WIDE MUST HAVE COMPACTION RELIEVED TO A MINIMUM DEPTH OF 18" BELOW SUBGRADE, PLANTERS MORE THAN 10' WIDE SHALL HAVE COMPACTION RELIEVED TO A MINIMUM DEPTH OF 12" BELOW SUBGRADE. AREAS SHALL BE PROTECTED AFTER DECOMPACTION.

11. CONTRACTOR SHALL PERFORM A PERCOLATION TEST AT THE BEGINNING OF CONSTRUCTION AT 1 LOCATION PER ACRE (MAX OF 4) TO DETERMINE THE DRAINAGE CAPACITY OF THE EXISTING SITE SOIL FOR TREE HEALTH. NOTIFY THE LANDSCAPE ARCHITECT IF DRAINAGE IS LESS THAN 2" PER HOUR.

PLANTING NOTES (CONT)

TREES

1. ALL TREES SHALL BE STANDARDS UNLESS SPECIFICALLY NOTED.

2. ALL TREES ARE TO BE STAKED AS SHOWN ON THE TREE STAKING/GUYING DIAGRAMS. BRANCHING HEIGHT OF TREES SHALL BE A 6'-0" MINIMUM ABOVE FINISH GRADE. ALL TREES IN A FORMAL GROUP PLANTING MUST BE MATCHING IN SIZE AND SHAPE. ALL STREET TREES TO BE INSTALLED IN ACCORDANCE WITH THE STANDARDS AND SPECIFICATIONS OF THE OWNER. LANDSCAPE ARCHITECT SHALL BE CONSULTED REGARDING ORIENTATION OF TREES PRIOR TO PLANTING AND/OR BACKFILLING.

3. PLANT TREES 3'-0" MINIMUM FROM FACE OF CURB AT PARKING, AND FROM EDGES OF PAVING. ALL TREES WITHIN 5' OF PAVING AREAS AND BUILDINGS MUST HAVE ROOT BARRIERS INSTALLED. SEE ROOT BARRIER DETAIL. DEEP ROOT BARRIER MODEL NO. UB.24.2. (415) 344-1464. INSTALL PER MANUFACTURER'S SPECIFICATIONS. WHERE WATER BARRIERS AND ROOT BARRIERS ARE REQUIRED, USE CENTURY PRODUCTS DUAL PURPOSE WATER/ ROOT BARRIER CR-PE24-20, (714)632-7083, S.C.D. FOR LOCATIONS OF WATER BARRIER.

4. PROVIDE 4" BERM AROUND TREE FOR WATER BASIN. SEE TREE STAKING DETAIL. BERM TO BE REMOVED IN LAWN AREA AFTER INITIAL MAINTENANCE PERIOD. MULCH TREE WELL WITH 3" LAYER OF RECYCLED CHIPPED MULCH. KEEP MULCH AWAY FROM TREE TRUNK. HOLD LAWN AND HYDROSEED 2' CLEAR FROM TRUNKS, TYP.

5. TREES MUST HAVE AN UNCUT LEADER THAT HAS A UNIFORM TAPER FROM BASE TO TIP. TREES MUST MEET AT LEAST NORMAL CALIPER AND HEIGHT FOR CONTAINER SIZE. OVERGROWN OR ROOT BOUND TREES ARE NOT ACCEPTABLE.

6. FOR ALL TREES IN STORMWATER INFILTRATION ZONES HOLD FG OF ROOTBALL 4" ABOVE FG OF FLOWLINE. ADJUST ADJACENT GRADE OF SOIL TO BLEND UNIFORMLY AROUND ROOTBALL AND ALLOW UNIMPEDED FLOW OF WATER.

SHRUBS, GROUNDCOVERS AND VINES

1. GROUNDCOVER MUST BE PLANTED AS SHOWN ON THE PLAN, INCLUDING UNDER SHRUBS AND IN TREE WATERING BASINS.

2. SHRUBS AND PERENNIALS MUST HAVE ADEQUATE SETBACK FROM THE ADJACENT SIDEWALK AND EDGES OF PARKING LOT CURBS. NOTIFY LANDSCAPE ARCHITECT PRIOR TO INSTALLATION IF PLANT MATERIAL MAY PROTRUDE INTO THE PATH OF TRAVEL.

3. THE CONTRACTOR IS TO SECURE ALL VINES TO TRELLISES WITH APPROVED FASTENERS, ALLOWING FOR TWO (2) YEARS GROWTH. SUBMIT SAMPLE TO LANDSCAPE ARCHITECT.

ACCESSORIES

1. ALL PLANTING NOT BOUNDED BY CONCRETE OR A HARDSCAPE EDGE SHALL BE COMPLETELY SURROUNDED BY HEADERS. ALL ASPHALT AND DECOMPOSED GRANITE AREAS TO BE COMPLETELY SURROUNDED BY HEADERS OR ADJACENT CONCRETE WORK.

2. ALL PLANTING AREAS MUST BE TOP-DRESSED WITH 3" LAYER OF RECYCLED CHIPPED MULCH. COLOR: BROWN. SUBMIT SAMPLE TO LANDSCAPE ARCHITECT FOR APPROVAL PRIOR TO ORDERING.

3. ALL MULCH WITHIN STORMWATER PLANTING AREAS MUST BE 3" OF WASHED PEA GRAVEL. SUBMIT SAMPLE FOR REVIEW AND APPROVAL.

4. ALL STORMWATER CURB CUTS MUST BE REINFORCED WITH A MINIMUM 12" WIDE x18" LONG x 6" DEEP BAND OF COBBLE. COBBLE SHALL BE 40% 4"-6" AND 60% 2"-3" NOIYO COBBLE. PROVIDE 24" WIDE BY 6" DEPTH OF COBBLE AROUND ALL CATCH BASINS LOCATED IN DRAINAGE AREAS. SUBMIT SAMPLE FOR REVIEW AND APPROVAL

5. ALL RAINWATER LEADERS DISCHARGING INTO LANDSCAPE AREAS MUST HAVE SPLASH BLOCKS. MODEL: CDI 16X24". COLOR: TO MATCH PAVING. (800) 279-2278.

6. ALL SLOPES GREATER THAN 2.5:1 MUST BE COVERED WITH EROSION CONTROL NETTING PER THE MANUFACTURER'S SPECIFICATIONS. OVERLAP ALL EDGES A MINIMUM OF 12" AND SECURE AS REQUIRED WITH METAL STAPLES. EROSION CONTROL NETTING TO BE WESTERN EXCELSIOR, EXCEL CS-3 OR APPROVED EQUAL. AVAILABLE FROM REED & GRAHAM 888-381-0800.

7. THE LANDSCAPE CONTRACTOR SHALL AS A PART OF THIS BID PROVIDE FOR A PLANTING ALLOWANCE FOR THE AMOUNT OF $3,000.00 (THREE THOUSAND DOLLARS), TO BE USED FOR SUPPLYING AND INSTALLING ADDITIONAL PLANT MATERIAL AS DIRECTED BY THE LANDSCAPE ARCHITECT AND APPROVED BY THE OWNER IN WRITING. THE UNUSED PORTION OF THE ALLOWANCE SHALL BE RETURNED TO THE OWNER AT THE BEGINNING OF THE MAINTENANCE PERIOD.

8. SEE SPECIFICATIONS FOR ALL FERTILIZER REQUIREMENTS

SUBMITTALS

1. CONTRACTOR MUST SUBMIT ALL TESTS, PRODUCTS, ACCESSORIES, INCIDENTALS, CUT SHEETS OF ALL ITEMS SPECIFIED FOR REVIEW AND APPROVAL PRIOR TO INSTALLATION.

2. ALL PLANT MATERIAL MUST BE REVIEWED AND APPROVED BY THE LANDSCAPE ARCHITECT PRIOR TO DELIVERY. CONTRACTOR SHALL SUBMIT PHOTOS OF ALL SHRUBS, GROUND COVERS, VINES, AND TREES FOR PRELIMINARY REVIEW AND APPROVAL.

3. ALL SUBMITTALS AND PLANT MATERIAL NOT REVIEWED AND APPROVED IN WRITING BY THE LANDSCAPE ARCHITECT MAY BE SUBJECT TO FULL REMOVAL AND REPLACEMENT WITH APPROVED SOILS, FERTILIZERS, AND PLANT MATERIAL AT NO ADDITIONAL COST TO THE CONTRACT OR OWNER.

4. SUBMITTALS AND SITE MOCKUPS OF ALL WORK SHALL BE REQUIRED PRIOR TO FINAL PLACEMENT INCLUDING BUT NOT LIMITED TO ALL WALLS, PAVEMENTS, COLORS, FINISHES, METAL WORK, FENCING, AND PAINTING FOR REVIEW AND APPROVAL BY THE LANDSCAPE ARCHITECT. SEE SPECIFICATIONS.

MUNICIPAL REQUIREMENTS

1. ALL PLANT MATERIAL TO BE INSPECTED & APPROVED BY CITY REPRESENTATIVE AND LANDSCAPE ARCHITECT PRIOR TO INSTALLATION.

2. CONTACT THE PROJECT LANDSCAPE ARCHITECT FOR FINAL INSPECTION OF LANDSCAPE AND IRRIGATION. PRIOR TO RELEASE OF BUILDING FOR OCCUPANCY, THE PROJECT LANDSCAPE ARCHITECT WILL SUBMIT A LETTER TO THE CITY CERTIFYING THE PLANTING AND IRRIGATION HAS BEEN INSTALLED IN CONFORMANCE WITH THE APPROVED PLANTING AND IRRIGATION PLANS, SUBJECT TO THE REVIEW AND APPROVAL OF THE CITY LANDSCAPE ARCHITECT. SECURITIES IN LIEU OF INSTALLATION WILL NOT BE ACCEPTED.

3. DURING THE INSTALLATION OF LANDSCAPING AND INSTALLATION AND PRIOR TO THE ISSUANCE OF A BUILDING OCCUPANCY PERMIT, THE LANDSCAPE ARCHITECT MUST INSPECT AND MONITOR THE INSTALLATION OF MATERIALS TO VERIFY CONFORMANCE TO THESE PLANS. ONCE APPROVED, THE LANDSCAPE ARCHITECT SHALL PROVIDE A WRITTEN LETTER TO DEPARTMENT OF PLANNING AND DEVELOPMENT STATING COMPLIANCE WITH THE APPROVED PLANS.

TREE PROTECTION NOTES:

1. PRIOR TO INITIATING ANY CONSTRUCTION ACTIVITY IN THE AREA, INCLUDING GRADING, TEMPORARY PROTECTIVE FENCING SHALL BE INSTALLED AT EACH SITE TREE. FENCING SHALL BE LOCATED AT OR BEYOND THE CANOPY DRIP LINE SO THAT 100% OF THE DRIP LINE WILL BE PROTECTED BY FENCING. TO REDUCE SOIL COMPACTION FROM EQUIPMENT.

2. THE CONTRACTOR IS REQUIRED TO WATER, FERTILIZE AND ATTEND TO OTHER MAINTENANCE NEEDS OF EXISTING TREES AS NEEDED PER ARBORIST'S RECOMMENDATIONS TO MAINTAIN HEALTHY GROWTH THROUGHOUT THE CONSTRUCTION PERIOD. SIX FEET DIAMETER, MINIMUM, BY SIX INCH TALL EARTH BERMS SHALL BE CONSTRUCTED AT THE BASE OF EACH TREE TO FUNCTION AS TEMPORARY WATERING BASINS DURING THE CONSTRUCTION PERIOD. TREES SHALL BE WATERED ACCORDING TO WEATHER AND TREE REQUIREMENTS. APPROVED MULCH OF 1-2 INCH SIZED WOOD CHIPS SHALL BE PLACED AT A DEPTH OF 4 INCHES WHERE NO EXCAVATION IS TO OCCUR IN THE VICINITY OF THE TREES TO BE PROTECTED.

3. THE TREE PROTECTION FENCE SHALL BE 6' HIGH SNOW FENCE WITH IMMOVABLE POSTS. THE FENCING SHALL FORM A CONTINUOUS BARRIER WITHOUT ENTRY POINTS AROUND EACH TREE. ANY ENCROACHMENT INTO THE DRIP LINE FOR FENCING OR CONSTRUCTION PURPOSES SHALL NOT BE PERMITTED.

4. LOW HANGING LIMBS OF SAVED TREES SHALL BE PRUNED PRIOR TO GRADING, OR ANY EQUIPMENT MOBILIZATION ON SITE. THE PURPOSE OF THIS REQUIREMENT IS TO AVOID TEARING LIMBS BY HEAVY EQUIPMENT. ALL LIMBS TO BE PRUNED SHALL BE SUPERVISED BY THE ARBORIST OF RECORD FOR THE JO.

5. THIS FENCING SHALL SERVE AS A BARRIER TO PREVENT DRIP LINE ENCROACHMENT OF ANY TYPE OF CONSTRUCTION ACTIVITIES AND EQUIPMENT. NO OILS,. GAS, CHEMICALS, LIQUID WASTE, SOLID WASTE CONSTRUCTION MACHINERY OR CONSTRUCTION MATERIALS SHALL BE STORED OR ALLOWED TO STAND FOR ANY PERIOD OF TIME WITHIN THE DRIP LINE OF THE TREE. FURTHER, NO ONE SHALL ENTER THE FENCE PERIMETER FOR ANY REASON EXCEPT FOR THE PURPOSE OF MONITORING THE HEALTH OF THE TREE. ACCIDENTAL DAMAGE TO BARK, ROOT CROWN, OR LIMBS MAY INCREASE POTENTIAL FOR FUTURE DECLINE.

6. CONTRACTORS AND SUBCONTRACTORS SHALL DIRECT ALL EQUIPMENT AND PERSONNEL TO REMAIN OUTSIDE THE FENCED AREA AND AT ALL TIMES UNTIL PROJECT IS COMPLETE, AND SHALL INSTRUCT EMPLOYEES AS TO THE PURPOSE AND IMPORTANCE OF FENCING.

7. A 'TREE PROTECTION ZONE' SIGN SHALL BE POSTED AT EACH TREE INDICATING THE PURPOSE OF THE FENCING.

8. THE ARBORIST OF RECORD FOR THE JOB OR THE CITY ARBORIST SHALL BE RESPONSIBLE FOR INSPECTION AND APPROVAL OF THE FENCING PRIOR TO ANY GRADING OPERATIONS.

9. FENCING MUST REMAIN IN PLACE AND SHALL NOT BE REMOVED UNTIL ALL CONSTRUCTION ACTIVITIES ARE COMPLETED. THIS SHALL INCLUDE GRADING AND COMPACTION ACTIVITIES, INSTALLATION OF UNDERGROUND, ALL CONSTRUCTION ACTIVITIES AND ANY OTHER CONSTRUCTION OR ACTIVITY WHICH IS SCHEDULED PRIOR OR LANDSCAPE INSTALLATION.

10. ROOTS OF SINGLE STANDING TREES OFTEN EXTEND UP TO THREE TIMES THE DISTANCE OF THE ACTUAL DRIP LINE AND FUNCTION PRIMARILY IN THEY UPTAKE OF NUTRIENTS AND WATER. THE DRIP LINE IS ARBITRARILY ESTABLISHED AS THE MINIMUM ROOT AREA GENERALLY REQUIRED TO PRESERVE TREE HEALTH. AS MUCH AREA AROUND THE CIRCUMFERENCE OF THE TREE SHOULD HAVE MINIMUM INTRUSION TO FURTHER INSURE TREE SURVIVAL AND HEALTH.

11. UNAUTHORIZED TREE REMOVAL IS SUBJECT TO IN-KIND REPLACEMENT EQUAL TO THE VALUE OF THE MATURE RESOURCE LOST, AS DETERMINED BY THE CITY.

12. NO MECHANICAL TRENCHING SHALL OCCUR WITHIN THE TREE PROTECTION ZONE. ANY EXCAVATION IF REQUIRED SHALL BE BY HAND, AIR SPADE OR BY VACUUM. CUTTING OF ANY ROOTS OVER 3" DIA SHALL BE REVIEWED BY AN ARBORIST.

13. SEE TREE PRESERVATION SPECIFICATIONS FOR ADDITIONAL INFORMATION.

14. THE CONTRACTOR SHALL CONTRACT WITH AN ARBORIST AS REQUIRED TO ENSURE PROPER TREE HEALTH IF A PROJECT ARBORIST OR CITY ARBORIST HAS NOT BEEN CONTRACTED.

PLANTING LIST

TREES

BOTANICAL NAME	COMMON NAME	SIZE	SPACING	WATER USAGE
Arbustus x 'Marina'	Strawberry Tree	24" Box	AS SHOWN	LOW

Salvia leucantha 'Santa Barbara'	Mexican Sage	5 Gal	6' O.C.	LOW
Teucrium fruticans 'Compacta'	Blue Germander	1 Gal	5' O.C.	LOW

WATER CONSERVATION STATEMENT

1. THE PLANT LIST IS PRELIMINARY IN NATURE. SPECIES SHALL BE ADDED AND SUBTRACTED TO FULFILL THE DESIGN AND HORTICULTURAL REQUIREMENTS AS NECESSARY.

2. THE IRRIGATION SYSTEM SHALL BE DESIGNED WITH WATER CONSERVATION IN MIND WHILE ACHIEVING THE GOAL OF EFFECTIVELY AND EFFICIENTLY PROVIDING THE LANDSCAPE WITH WATER BY MEANS OF SPRAY IRRIGATION TO THE SHRUBS/GROUNDCOVER AREAS AND BUBBLERS TO THE TREES.

3. THE SPRAY SYSTEM SHALL BE TORO SPRAY HEADS WITH PRESSURE COMPENSATING NOZZLES IN A HEAD TO HEAD LAYOUT TO ACHIEVE AN EVEN LEVEL OF PRECIPITATION THROUGHOUT THE IRRIGATION SYSTEM.

4. A STATE-OF-THE-ART IRRIGATION CONTROLLER SHALL BE SPECIFIED FOR THIS PROJECT TO CONTROL THE WATER ALLOCATED TO EACH VALVE GROUPED PER INDIVIDUAL HYDROZONE (BASED ON PLANT TYPE AND EXPOSURE).

TREE PROTECTION SPECIFICATIONS – CITY OF MENLO PARK

1. A 6" LAYER OF COARSE MULCH OR WOODCHIPS IS TO BE PLACED BENEATH THE DRIPLINE OF THE PROTECTED TREES. MULCH IS TO BE KEPT 12" FROM THE TRUNK.

2. A PROTECTIVE BARRIER OF 6' CHAIN LINK FENCING SHALL BE INSTALLED AROUND THE DRIPLINE OF PROTECTED TREE(S). THE FENCING CAN BE MOVED WITHIN THE DRIPLINE IF AUTHORIZED BY THE PROJECT ARBORIST OR CITY ARBORIST BUT NOT CLOSER THAN 2' FROM THE TRUNK OF ANY TREE. FENCE POSTS SHALL BE 1.5" IN DIAMETER AND ARE TO BE DRIVEN 2' INTO THE GROUND. THE DISTANCE BETWEEN POSTS SHALL NOT BE MORE THAN 10'. THIS ENCLOSED AREA IS THE TREE PROTECTION ZONE (TPZ).

3. MOVABLE BARRIERS OF CHAIN LINK FENCING SECURED TO CEMENT BLOCKS CAN BE SUBSTITUTED FOR "FIXED" FENCING IF THE PROJECT ARBORIST AND CITY ARBORIST AGREE THAT THE FENCING WILL HAVE TO BE MOVED TO ACCOMMODATE CERTAIN PHASES OF CONSTRUCTION. THE BUILDER MAY NOT MOVE THE FENCE WITHOUT AUTHORIZATION FORM THE PROJECT ARBORIST OR CITY ARBORIST.

4. WHERE THE CITY ARBORIST OR PROJECT ARBORIST HAS DETERMINED THAT TREE PROTECTION FENCING WILL INTERFERE WITH THE SAFETY OF WORK CREWS, TREE WRAP MAY BE USED AS AN ALTERNATIVE FORM OF TREE PROTECTION. WOODEN SLATS AT LEAST ONE INCH THICK ARE TO BE BOUND SECURELY, EDGE TO EDGE, AROUND THE TRUNK. A SINGLE LAYER OR MORE OF ORANGE PLASTIC CONSTRUCTION FENCING IS TO BE WRAPPED AND SECURED AROUND THE OUTSIDE OF THE WOODEN SLATS. MAJOR SCAFFOLD LIMBS MAY REQUIRE PROTECTION AS DETERMINED BY THE CITY ARBORIST OR PROJECT ARBORIST. STRAW WADDLE MAY ALSO BE USED AS A TRUNK WRAP BY COILING THE WADDLE AROUND THE TRUNK UP TO A MINIMUM HEIGHT OF SIX FEET FROM GRADE. A SINGLE LAYER OR MORE OF ORANGE PLASTIC CONSTRUCTION FENCING IS TO BE WRAPPED AND SECURED AROUND THE STRAW WADDLE.

5. AVOID THE FOLLOWING CONDITIONS.
   DO NOT:
   - A. ALLOW RUN OFF OF SPILLAGE OF DAMAGING MATERIALS INTO THE AREA BELOW ANY TREE CANOPY.
   - B. STORE MATERIALS, STOCKPILE SOIL, OR PARK OR DRIVE VEHICLES WITHIN THE TPZ.
   - C. CUT, BREAK, SKIN, OR BRUISE ROOTS, BRANCHES, OR TRUNKS WITHOUT FIRST OBTAINING AUTHORIZATION FROM THE CITY ARBORIST.
   - D. ALLOW FIRES UNDER AND ADJACENT TO TREES.
   - E. DISCHARGE EXHAUST INTO FOLIAGE.
   - F. SECURE CABLE, CHAIN, OR ROPE TO TREES OR SHRUBS.
   - G. TRENCH, DIG, OR OTHERWISE EXCAVATE WITHIN THE DRIPLINE OR TPZ OF THE TREE(S) WITHOUT FIRST OBTAINING AUTHORIZATION FROM THE CITY ARBORIST.
   - H. APPLY SOIL STERILANTS UNDER PAVEMENT NEAR EXISTING TREES.

6. ONLY EXCAVATION BY HAND OR COMPRESSED AIR SHALL BE ALLOWED WITHIN THE DRIPLINE OF TREES. MACHINE TRENCHING SHALL NOT BE ALLOWED.

7. AVOID INJURY TO TREE ROOTS. WHEN A DITCHING MACHINE, WHICH IS BEING USED OUTSIDE OF THE DRIPLINE OF TREES, ENCOUNTERS ROOTS SMALLER THAN 2", THE WALL OF THE TRENCH ADJACENT TO THE TREES SHALL BE HAND TRIMMED, MAKING CLEAR, CLEAN CUTS THROUGH THE ROOTS. ALL DAMAGED, TORN AND CUT ROOTS SHALL BE GIVEN A CLEAN CUT TO REMOVE RAGGED EDGES, WHICH PROMOTE DECAY. TRENCHES SHALL BE FILLED WITHIN 24 HOURS, BUT WHERE THIS IS NOT POSSIBLE, THE SIDE OF THE TRENCH ADJACENT TO THE TREES SHALL BE KEPT SHADED WITH FOUR LAYERS OF DAMPENED, UNTREATED BURLAP, WETTED AS FREQUENTLY AS NECESSARY TO KEEP THE BURLAP WET. ROOTS 2" OR LARGER, WHEN ENCOUNTERED, SHALL BE REPORTED IMMEDIATELY TO THE PROJECT ARBORIST, WHO WILL DECIDE WHETHER THE CONTRACTOR MAY CUT THE ROOT AS MENTIONED ABOVE OR SHALL EXCAVATE BY HAND OR WITH COMPRESSED AIR UNDER THE ROOT. ROOT IS TO BE PROTECTED WITH DAMPENED BURLAP.

8. ROUTE PIPES OUTSIDE OF THE AREA THAT IS 10 TIMES THE DIAMETER OF A PROTECTED TREE TO AVOID CONFLICT WITH ROOTS.

9. WHERE IT IS NOT POSSIBLE TO REROUTE PIPES OR TRENCHES, THE CONTRACTOR SHALL BORE BENEATH THE DRIPLINE OF THE TREE. THE BORING SHALL TAKE PLACE NOT LESS THAN 3' BELOW THE SURFACE OF THE SOIL IN ORDER TO AVOID ENCOUNTERING "FEEDER" ROOTS.

10. TREES THAT HAVE BEEN IDENTIFIED IN THE ARBORIST'S REPORT AS BEING IN POOR HEALTH AND/OR POSING A HEALTH OR SAFETY RISK, MAY BE REMOVED OR PRUNED BY MORE THAN ONE–THIRD, SUBJECT TO APPROVAL OF THE REQUIRED PERMIT BY THE PLANNING DIVISION. PRUNING OF EXISTING LIMBS AND ROOTS SHALL ONLY OCCUR UNDER THE DIRECTION OF A CERTIFIED ARBORIST.

11. ANY DAMAGE DUE TO CONSTRUCTION ACTIVITIES SHALL BE REPORTED TO THE PROJECT ARBORIST OR CITY ARBORIST WITHIN SIX HOURS SO THAT REMEDIAL ACTION CAN BE TAKEN.

12. AN ISA CERTIFIED ARBORIST OR ASCA REGISTERED CONSULTING ARBORIST SHALL BE RETAINED AS THE PROJECT ARBORIST TO MONITOR THE TREE PROTECTION SPECIFICATIONS. THE PROJECT ARBORIST SHALL BE RESPONSIBLE FOR THE PRESERVATION OF THE DESIGNATED TREES. SHOULD THE BUILDER FAIL TO FOLLOW THE TREE PROTECTION SPECIFICATIONS, IT SHALL BE THE RESPONSIBILITY OF THE PROJECT ARBORIST TO REPORT THE MATTER TO THE CITY ARBORIST AS AN ISSUE OF NON–COMPLIANCE.

13. VIOLATION OF ANY OF THE ABOVE PROVISIONS MAY RESULT IN SANCTIONS OR OTHER DISCIPLINARY ACTION.

MONTHLY INSPECTIONS

1. IT IS REQUIRED THAT THE SITE ARBORIST PROVIDE PERIODIC INSPECTIONS DURING CONSTRUCTION. FOUR–WEEK INTERVALS WOULD BE SUFFICIENT TO ACCESS AND MONITOR THE EFFECTIVENESS OF THE TREE PROTECTION PLAN AND TO PROVIDE RECOMMENDATIONS FOR ANY ADDITIONAL CARE OR TREATMENT.

Photo 6. Atherton Channel downstream of Haven Avenue box culverts. Confluence with Bayfront Canal see in the far distance.

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Location

San Mateo County, California

Local office

Sacramento Fish And Wildlife Office

(916) 414-6600
(916) 414-6713

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

NOT FOR CONSULTATION

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

NAME	STATUS

Salt Marsh Harvest Mouse Reithrodontomys raviventris — Endangered
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/613

Birds

NAME	STATUS

California Clapper Rail Rallus longirostris obsoletus — Endangered
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/4240

California Least Tern Sterna antillarum browni — Endangered
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/8104

Marbled Murrelet Brachyramphus marmoratus — Threatened
There is **final** critical habitat for this species. The location of the critical habitat is not available.
https://ecos.fws.gov/ecp/species/4467

Western Snowy Plover Charadrius nivosus nivosus — Threatened
There is **final** critical habitat for this species. The location of the critical habitat is not available.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NOT FOR CONSULTATION

NAME	BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA SOMETIME WITHIN THE TIMEFRAME SPECIFIED, WHICH IS A VERY LIBERAL ESTIMATE OF THE DATES INSIDE WHICH THE BIRD BREEDS ACROSS ITS ENTIRE RANGE. "BREEDS ELSEWHERE" INDICATES THAT THE BIRD DOES NOT LIKELY BREED IN YOUR PROJECT AREA.)
Allen's Hummingbird *Selasphorus sasin* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9637	Breeds Feb 1 to Jul 15
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Jan 1 to Aug 31
Black Rail *Laterallus jamaicensis* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/7717	Breeds Mar 1 to Sep 15

Black Skimmer Rynchops niger — Breeds May 20 to Sep 15
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/5234

Burrowing Owl Athene cunicularia — Breeds Mar 15 to Aug 31
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9737

Clark's Grebe Aechmophorus clarkii — Breeds Jan 1 to Dec 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Common Yellowthroat Geothlypis trichas sinuosa — Breeds May 20 to Jul 31
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/2084

Golden Eagle Aquila chrysaetos — Breeds Jan 1 to Aug 31
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1680

Lawrence's Goldfinch Carduelis lawrencei — Breeds Mar 20 to Sep 20
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9464

Long-billed Curlew Numenius americanus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/5511

Marbled Godwit Limosa fedoa — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9481

Nuttall's Woodpecker Picoides nuttallii — Breeds Apr 1 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9410

NOT FOR CONSULTATION

Oak Titmouse Baeolophus inornatus — Breeds Mar 15 to Jul 15
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9656

Rufous Hummingbird selasphorus rufus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8002

Short-billed Dowitcher Limnodromus griseus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9480

Song Sparrow Melospiza melodia — Breeds Feb 20 to Sep 5
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Spotted Towhee Pipilo maculatus clementae — Breeds Apr 15 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/4243

Tricolored Blackbird Agelaius tricolor — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3910

Whimbrel Numenius phaeopus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9483

Willet Tringa semipalmata — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Wrentit Chamaea fasciata — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ

"Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season ( )
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

■ probability of presence ■ breeding season | survey effort — no data

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

NOT FOR CONSULTATION

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

NOT FOR CONSULTATION

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

THERE ARE NO KNOWN WETLANDS AT THIS LOCATION.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters.

NOT FOR CONSULTATION

Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Scientific Name	Common Name	Family	Lifeform	Blooming Period	CA Rare Plant Rank	State Rank	Global Rank
Acanthomintha duttonii	San Mateo thorn-mint	Lamiaceae	annual herb	Apr-Jun	1B.1	S1	G1
Allium peninsulare var. franciscanum	Franciscan onion	Alliaceae	perennial bulbiferous herb	(Apr)May-Jun	1B.2	S2	G5T2
Amsinckia lunaris	bent-flowered fiddleneck	Boraginaceae	annual herb	Mar-Jun	1B.2	S3	G3
Androsace elongata ssp. acuta	California androsace	Primulaceae	annual herb	Mar-Jun	4.2	S3S4	G5? T3T4
Arctostaphylos andersonii	Anderson's manzanita	Ericaceae	perennial evergreen shrub	Nov-May	1B.2	S2	G2
Arctostaphylos montaraensis	Montara manzanita	Ericaceae	perennial evergreen shrub	Jan-Mar	1B.2	S1	G1
Arctostaphylos regismontana	Kings Mountain manzanita	Ericaceae	perennial evergreen shrub	Dec-Apr	1B.2	S2	G2
Astragalus pycnostachyus var. pycnostachyus	coastal marsh milk-vetch	Fabaceae	perennial herb	(Apr)Jun-Oct	1B.2	S2	G2T2
Astragalus tener var. tener	alkali milk-vetch	Fabaceae	annual herb	Mar-Jun	1B.2	S1	G2T1
Calandrinia breweri	Brewer's calandrinia	Montiaceae	annual herb	(Jan)Mar-Jun	4.2	S4	G4
Calochortus umbellatus	Oakland star-tulip	Liliaceae	perennial bulbiferous herb	Mar-May	4.2	S3?	G3?
Castilleja ambigua var. ambigua	johnny-nip	Orobanchaceae	annual herb (hemiparasitic)	Mar-Aug	4.2	S3S4	G4T4
Centromadia parryi ssp. congdonii	Congdon's tarplant	Asteraceae	annual herb	May-Oct(Nov)	1B.1	S1S2	G3T1T2
Chloropyron maritimum ssp. palustre	Point Reyes bird's-beak	Orobanchaceae	annual herb (hemiparasitic)	Jun-Oct	1B.2	S2	G4?T2
Chorizanthe cuspidata var. cuspidata	San Francisco Bay spineflower	Polygonaceae	annual herb	Apr-Jul(Aug)	1B.2	S1	G2T1

Cirsium fontinale var. fontinale	Crystal Springs fountain thistle	Asteraceae	perennial herb	(Apr)May-Oct	1B.1	S1	G2T1
Cirsium praeteriens	lost thistle	Asteraceae	perennial herb	Jun-Jul	1A	SX	GX
Clarkia concinna ssp. automixa	Santa Clara red ribbons	Onagraceae	annual herb	(Apr)May-Jun(Jul)	4.3	S3	G5?T3
Collinsia corymbosa	round-headed Chinese-houses	Plantaginaceae	annual herb	Apr-Jun	1B.2	S1	G1
Collinsia multicolor	San Francisco collinsia	Plantaginaceae	annual herb	(Feb)Mar-May	1B.2	S2	G2
Cypripedium fasciculatum	clustered lady's-slipper	Orchidaceae	perennial rhizomatous herb	Mar-Aug	4.2	S4	G4
Dirca occidentalis	western leatherwood	Thymelaeaceae	perennial deciduous shrub	Jan-Mar(Apr)	1B.2	S2	G2
Elymus californicus	California bottle-brush grass	Poaceae	perennial herb	May-Aug(Nov)	4.3	S4	G4
Eriophyllum latilobum	San Mateo woolly sunflower	Asteraceae	perennial herb	May-Jun	1B.1	S1	G1
Eryngium aristulatum var. hooveri	Hoover's button-celery	Apiaceae	annual / perennial herb	(Jun)Jul(Aug)	1B.1	S1	G5T1
Eryngium jepsonii	Jepson's coyote thistle	Apiaceae	perennial herb	Apr-Aug	1B.2	S2?	G2?
Erysimum franciscanum	San Francisco wallflower	Brassicaceae	perennial herb	Mar-Jun	4.2	S3	G3
Extriplex joaquinana	San Joaquin spearscale	Chenopodiaceae	annual herb	Apr-Oct	1B.2	S2	G2
Fritillaria biflora var. ineziana	Hillsborough chocolate lily	Liliaceae	perennial bulbiferous herb	Mar-Apr	1B.1	S1	G3G4T1
Fritillaria liliacea	fragrant fritillary	Liliaceae	perennial bulbiferous herb	Feb-Apr	1B.2	S2	G2
Hesperevax sparsiflora var. brevifolia	short-leaved evax	Asteraceae	annual herb	Mar-Jun	1B.2	S2	G4T3
Hesperolinon congestum	Marin western flax	Linaceae	annual herb	Apr-Jul	1B.1	S1	G1
Lasthenia conjugens	Contra Costa goldfields	Asteraceae	annual herb	Mar-Jun	1B.1	S1	G1
Leptosiphon ambiguus	serpentine leptosiphon	Polemoniaceae	annual herb	Mar-Jun	4.2	S4	G4
Lessingia arachnoidea	Crystal Springs lessingia	Asteraceae	annual herb	Jul-Oct	1B.2	S2	G2
Lessingia hololeuca	woolly-headed lessingia	Asteraceae	annual herb	Jun-Oct	3	S2S3	G3?
Lilium maritimum	coast lily	Liliaceae	perennial bulbiferous herb	May-Aug	1B.1	S2	G2
Lupinus arboreus var. eximius	San Mateo tree lupine	Fabaceae	perennial evergreen shrub	Apr-Jul	3.2	S2	G2Q
Malacothamnus arcuatus	arcuate bush-mallow	Malvaceae	perennial evergreen shrub	Apr-Sep	1B.2	S2	G2Q
Malacothamnus davidsonii	Davidson's bush-mallow	Malvaceae	perennial deciduous shrub	Jun-Jan	1B.2	S2	G2
Micropus amphibolus	Mt. Diablo cottonweed	Asteraceae	annual herb	Mar-May	3.2	S3S4	G3G4

1. INTRODUCTION

This Risk Management Plan (RMP) has been prepared by AWR Environmental on behalf of the FPG Development Group (Developer) and Integris Millennium Joint Ventures, LLC (Owner) in support of earthwork redevelopment construction activities associated with the proposed Hotel development at 3723 Haven Ave, Menlo Park, CA (Figure 1). 3723 Haven Ave comprises San Mateo County Assessor Parcel Numbers (APN) 55-17-35. The Regional Water Quality Control Board – San Francisco Region 2 (Water Board) is the lead regulatory oversight agency for the environmental matters related to 3723 Haven Ave.

The Water Board directed the preparation of this RMP in a letter correspondence dated November 18, 2019 and July 27, 2020. The purpose of this RMP is to (1) specify procedures to be implemented during redevelopment construction activities for handling contaminated soil and ground water that is potentially encountered, and (2) describe the additional documentation that must be provided to the Water Board for approval prior to commencing construction.

3723 Haven Ave is the northern most property of the former Siltec site (Water Board Case No. 41S0105) that encompasses the current addresses of 3705, 3715 and 3723 Haven Avenue, Menlo Park. As described below, a Risk Management Plan was issued for the all three properties associated with the Siltec operations (3705-3723 Haven Ave) in 1999 (1999 RMP; Appendix A). This RMP, however, is specific to 3723 Haven Ave.

1.1 BACKGROUND

A release of chlorinated volatile organic compounds (CVOCs) was identified on the parcel with the current address of 3715 Haven Ave in a 1994 investigation (Geomatrix, 1995). In August 1999, a covenant and environmental restriction (deed restriction) (Appendix A) was recorded, which specified prohibitions on certain site uses and outlined certain monitoring responsibilities of the new owners. A risk management plan (RMP) accompanied the deed restriction to allow for property use with residual concentrations remaining in the soil and ground water. The deed restriction included practices specified in the RMP for all three parcels (3705-3723 Haven Ave). Both the RMP and deed restriction and both were recorded in the Official records of San Mateo County on August 9, 1999.

In November and December of 1999 and again in January 2001, excavation of contaminated soil was performed at what is currently the 3715 Haven Ave property, and two parcels adjacent to 3715 Haven Ave (3645 and 3665 Haven Ave). A request for no further action was prepared for the 3705-3723 Haven Ave properties in an environmental conditions report submitted in December of 2013 (EKI, 2013). In June of 2014, a no further action letter was prepared by the Water Board for the 3705-3723 Haven Ave facility based on the assessment tool for low threat closure of chlorinated solvent sites (RWQCB, 2009).

However, ground water data collected in 2018 and 2019 in accordance with the 1999 RMP indicated the VOC plume was not stable (AWR, 2018, 2019a). Based the data, the case was

reopened "due to changed site conditions and planned redevelopment" by the Water Board in June of 2019. A regulatory directive was issued to Sumco and Integris pursuant to water code Section 13267, requiring additional environmental site investigation.

AWR, on behalf of Integris, performed two separate site investigations in 2019 (AWR, 2019a, 2019b) to characterize soil vapor and ground water conditions at the 3723 Haven Ave property and to evaluate the lateral and vertical extent of VOCs and threat to indoor air from soil vapor. The data and records indicate that the source area for the CVOC release is the central parcel of the former Siltec facility (3715 Haven Avenue), which is adjacent to 3723 Haven Ave in the upgradient direction. This parcel (3715 Haven Ave) has been redeveloped since remediation occurred and is not part of the 3723 Haven Ave property that is proposed for redevelopment.

The Water Board issued a correspondence in November of 2018, which required a Risk Management Plan (RMP) to be prepared by the owner of the 3723 Haven Ave property (Integris Millennium Joint Venture, LLC). The requested RMP for 3723 Haven Ave is provided herein.

Additional detail regarding the nature and extent of contamination can be reviewed on the State Water Boards Geotracker database under two separate cases. Data and reports for the former Siltec facility are filed under SILTEC (SL18322742); data for recent work conducted as part of redevelopment of the 3723 Haven Ave Site is filed under 3723 Haven Avenue Development (T10000012491).

1.2 Site Description

The 3723 Haven Avenue is located in Menlo Park, California (Figure 1, 2). The surrounding area has historically been commercial/industrial land use, which appears to be transitioning to more residential land use. A large apartment complex was constructed in 2017 on the adjacent property to the west of the 3723 Haven Ave (3645-3665 Haven Ave). The proposed land use for 3723 haven Ave is a multistory hotel as described below.

Currently the building located at 3723 Haven Ave is divided into multiple office/warehouse type spaces, which are used by multiple tenants. The remaining area of the property is used for parking with some landscaping in the front of the building along Haven Ave. There is currently one entrance facing Haven Avenue on the 3723 Haven parcel with an L-shaped paved parking/driving area along the south and west sides of 3723 Haven Ave (Figure 2). The single-story building at 3723 Haven was constructed between 1968 and 1974 and has a multiple tenant office area in the east, and a raised ceiling warehouse style area that is occupied by two separate tenants in the west. Landscaping and hardscaping near the building and Haven Avenue is also present at 3723 Haven Ave.

1.3 Proposed Use of the Property

It is our understanding that the property is proposed for redevelopment as a nine-story hotel with the lower four levels used for parking, one level as a lobby and entrance floor, and the upper four levels with hotel rooms for occupancy. The current building will be demolished as part of the redevelopment for the hotel.

1.4 Operational History

From 1970 through 1989, Siltec Corporation used the three parcels (3705-3723 Haven Ave) for manufacturing polished silicon wafers, conducting various industrial activities in the three on-site buildings. CVOCs were used on site during this period. Based on the historical phone directories, BSG Associates occupied the property in 1992, the nature of this business in unknown. Four separate company phone numbers were listed for the property in 2000. From 2005 to 2014 the number of company phone numbers associated with the property ranges from 9 to 28. The types of businesses listed for the property are highly varied. Further details for the occupancy history are provided in the Phase I ESA (AWR, 2018). The only documented releases in the historical records are associated with the former Siltec facility at 3715 Haven Ave.

1.5 RMP Purpose & Objectives

This RMP is designed to provide FPG Development Group and the construction contractor with guidance to perform earthwork related activities during redevelopment construction activities, including the handling and management of contaminated soil and ground water. In addition, this RMP identifies additional documentation to be provided to the Water Board prior to construction.

The objectives of this RMP are to provide detailed information regarding known environmental conditions at 3723 Haven Ave and establish a decision-making structure to assist the construction team in the identification and management of contaminated media, when and if they are encountered, as follows:

- Communicate information to Site construction workers about Site environmental conditions;
- Present protocols for appropriate community protection;
- Present guidelines for health and safety precautions for on-Site workers who may access soil or ground water that could contain residual chemicals of concern;
- Present notification and reporting requirements;
- Present protocols for management of known contaminated soil or extracted ground water generated during Site redevelopment activities; and

- Present contingency procedures if localized areas of unanticipated chemically affected soil or other subsurface features of environmental concern are encountered during earthwork or excavation activities.

2. CURRENT ENVIRONMENTAL CONDITIONS

2.1 SOURCE AREA

There were no contaminant sources or remedial actions that occurred at 3723 Haven Ave. As described in the Summary of Environmental Conditions report (EKI, 2013) "sumps in the floor of Building 2 [3715 Haven Ave] of the manufacturing facility were identified as having likely provided a conduit for movement of VOCs into the fine-grained sediments of the shallow subsurface." Currently a parking lot exists in the area where the source area was located and remedial excavation occurred. As shown in Figure 3, the source areas and the remedial excavation were located on the 3715 Haven Ave property, with some excavation extending into the adjacent properties located at 3645-3665 Haven Ave.

2.2 DISTRIBUTION OF CVOCS IN GROUND WATER

Concentrations of TCE are plotted with isoconcentration contours in Figures 4 and 5. The highest TCE concentrations were observed in GP-1A, GP2B, and MW-8 at the southern end of the property, which are the closest down gradient sample locations to the former release at 3715 Haven Ave. Two of these sample locations (GP-1A and MW-8) are screened in the shallow A Zone water bearing zone. The GP-2 location, in the southwest portion of 3723 Haven Ave, shows concentrations in the B Zone ground water are 2 orders of magnitude higher that the A zone sample.

Based on the data, A Zone CVOC concentrations appear highest in the south-central portion of the property and likely extend beneath the current building. B Zone ground water concentrations appear to be highest towards the southwestern portion of 3723 Haven Ave and are bound in the down gradient direction by non-detect concentrations observed at GP5B and GP-4B.

The deepest ground water sample (32-36 feet bgs) collected at 3723 Haven Ave is GP-5C collected on the western border of 3723 Haven Ave. CVOC concentrations were non-detect in this sample. Based on the data, it appears that the CVOC concentrations have not extended into the C Zone beneath 3723 Haven Ave.

2.3 SOIL VAPOR

Figure 6 shows the distribution of TCE and vinyl chloride in soil vapor at 3723 Haven Ave. As shown on Table 2, several compounds were detected in one or both samples. All concentrations were below current commercial/industrial ESLs with the exception of benzene in SV-5.

Benzene exceeded the residential ESL of 3.2 ug/m3 in sample SV-5, measured at 12 ug/m3. There are no known benzene sources at 3723 Haven Ave. Furthermore, benzene is not detected in ground water beneath 3723 Haven Ave. Therefore, benzene concentrations in soil gas appear to be associated with an off-site release or a regional condition. There were no CVOC concentrations detected above ESL screening criteria.

3. RESPONSIBILITY FOR RMP IMPLEMENTATION

Representatives for the Developer will oversee implementation of the RMP at 3723 Haven Ave. A copy of this RMP will be maintained at 3723 Haven Ave at all times. The Developer and General Contractor(s) will make all third-party subcontractors working at 3723 Haven Ave aware of the requirements of the RMP, and provide an electronic copy and hard-copy to all subcontractors that are performing activities covered by this RMP and who may encounter suspect subsurface conditions during execution of their work.

The project Environmental Consultant will be present to assist the Developer and contractors with the implementation of this RMP when ground-disturbing activities are being conducted in areas where contamination is known or suspected or when unknown conditions are encountered.

3.1 ACTIVITIES COVERED BY THE RMP

The following activities constitute the work covered under this RMP.

- **Transiting Across and Exiting 3723 Haven Ave** – vehicular travel within 3723 Haven Ave and exiting 3723 Haven Ave.
- **Subsurface Construction or Repair** – any activity occurring beneath the grade level of existing or future ground surface;
- **Utility Line Work** – any subterranean inspection, excavation, or repair of electrical, telephone, water, sanitary sewer or storm drains occurring within or outside of existing vaults (conducted prior to excavation)
- **Site Grading and Soil Stockpiling -**any handling or movement of surface soil or above grade soil stockpiles; and
- **Other** – other subgrade activities not expressly listed above (e.g., deep landscaping work, sub-slab work, etc.)

3.2 CONSTRUCTION TEAM CONTACT INFORMATION

Prior to the initiation of construction activities that are covered under this RMP, the Developer will confirm the Developer's project representative, General Contractor and project Environmental Consultant. Contact information for each entity will accompany this RMP, once

the team is assembled. Regular and 24-hour emergency contact information for these individuals will be confirmed and updated as necessary. A project contact sheet will be provided to the General Contractor and posted in an accessible and suitable location at 3723 Haven Ave.

3.3 Worker Health and Safety

In addition to following the RMP, each Contractor and subcontractor is responsible for the safety of its employee and site visitors including but not limited to adherence to a Site-specific Health and Safety Plan (HASP) and use of property-trained personnel:

- **Preparation of HASP:** A HASP will be prepared for the project in accordance with California Occupational Safety and Health Administration (CAL-OSHA) Construction Safety Orders within Title 8 of the California Code of Regulations (CCR). The General Contractor is responsible for notifying subcontractors and visitors of pertinent environmental conditions to ensure adequate protection for workers and visitors while on Site. Subcontractors may either adopt the General Contractor's HASP or prepare their own HASP. In the event that unanticipated conditions occur at 3723 Haven Ave, the HASP will be modified accordingly.

- **Use of Properly-Trained Personnel**: Each contractor engaged in contact and management of contaminated soil or ground water will use properly trained personnel in accordance CCR, Title 29, Part 1910.120 Hazardous Waste Operations and Emergency Response (HAZWOPER) standards.

3.4 Community Protection During Site Redevelopment

Land use in the vicinity of 3723 Haven Ave is mixed commercial and residential. During the development of 3723 Haven Ave, the Developer and contractors will implement measures to control potential risks to the surrounding community from fugitive dust emissions. These activities will be implemented when there is the potential for contaminated soil to affect the nearby community. It is anticipated that following placement of fill, hardscapes, and building pads, air monitoring will not be required as there will not be exposed soil surfaces with concentrations exceeding residential and shallow soil exposure concentrations (if present).

3.5 Agreement and Acknowledgement Statement

Prior to commencement of any Site activities that disturb the ground surface, the General Contractor and subcontractors of the Developer will read this plan and sign the Agreement and Acknowledgement Statement (Appendix A) to certify that they have read, understood and agreed to abide by its provisions.

4. AGENCY NOTIFICATION & REPORTING REQUIREMENTS

The Developer will notify the Water Board and other agencies as applicable during Site development activities in accordance with the protocols described below.

4.1 WATER BOARD NOTIFICATION

The Developer will notify the Water Board during Site redevelopment activities in accordance with the protocols below.

4.1.1 Twenty-four (24) Hour Notification

The Water Board will be notified within 24 hours after any of the following potentially hazardous conditions are encountered:

- Releases spills or releases of hazardous substances or petroleum hydrocarbons to soil or water that are considered, based on best professional judgement and/or physical evidence (including but not limited to olfactory, visual, field instrument, and lab data), to be an immediate threat to human health and the environment; and/or
- Discovery of unknown conditions (underground storage tanks, sumps, vaults, piping, etc.) or newly found contamination.

In the event of the discovery of USTs, vaults, hoists, & pipelines, and Menlo Park Fire Department must also be notified within 24 hours of the discovery.

4.1.2 Seventy-two (72) Hour Notification

The Water Board will be notified 72 hours in advance of ground disturbing activities in areas of known or suspected contamination.

4.1.3 Water Board Contact and Menlo Park Fire Department Information

The primary points of contact for the Water Board and CUPA are provided below. All agency notifications must be made by phone and email. A Water Board contact sheet will be provided to the General Contractor and posted in an accessible and suitable location at 3723 Haven Ave.

Person / Agency	Contact Information
Nicole Fry Water Board Case Worker	510-622-2460 nicole.fry@waterboards.ca.gov
Menlo Park Fire Department	650-688-8400

4.2 Other Agency Notification

In addition to the Water Board and Menlo Park Fire Department notification requirements discussed above, other agency notifications may be required. Contact information for other agency notifications that may be required is provided below. Prior to the initiation of construction activities that are covered under this RMP, the Developer will confirm the contact information listed below. An agency contact sheet will be provided to the General Contractor and posted in an accessible and suitable location at 3723 Haven Ave.

Conditions Posing an Immediate Threat For life-threatening or serous hazardous materials incidents, the following number will be contacted immediately upon discovery.	
Local police, fire and rescue services	911
Releases to Water For spills or releases of hazardous substances or petroleum hydrocarbons to surface water, the following agencies will be contacted immediately upon discovery.	
National Spill Response Center	(800) 424-8802
United States Coast Guard – San Francisco (if spill might reach navigable waters)	(415) 399-3547
California Office of Emergency Services	(800) 852-7550; (916) 845-8911
San Mateo County Department of Environmental Health	(650) 372-6200
Local Emergency Response Agency	911
VOC-Impacted Soil If VOC-impacted soil is discovered during Site grading activities, the following agency will be notified	
BAAQMD	415-749-4900
Dust Complaints For dust complaints during ground disturbing activities, the following agencies will be notified.	
City of Menlo Park Building Department	650-330-6704
BAAQMD	415-749-4900

4.3 Record Keeping & Reporting Requirements

If required during construction, any ground water removal or soil excavation and disposal activities will be documented in daily field reports by the Contractor and/or Environmental Consultant and will be kept at 3723 Haven Ave and made available to Water Board upon request. Documentation will include at a minimum the following, as applicable:

- Ground water
    - Ground water is at approximately 5 feet below ground surface. Based on the current construction design, it is not expected to be encountered in excavations during construction activities. However building support piers

will be advanced through ground water.

  - If ground water is encountered, documentation will include the location, volume of ground water that is removed, characterization, treatment, and destination (transported to temporary holding tanks, used as dust suppression, and/or disposed of off-Site);

- Underground Structures
  - type, contents, characterization, and destination (abandoned in place or disposed of off-Site) of any underground structures discovered during site development activities;

- Impacted Soil
  - origin, volume, characterization, and destination of any contaminated soil removed from 3723 Haven Ave;

- Imported Soil
  - origin, volume, characterization, and destination (location used on-Site) of imported fill if obtained from a non-commercial quarry;

- Disposal Records
  - date, time, trucking company, driver and vehicles used for the trip, equipment decontamination and tarping, waste/material type, volume, copies of bills-of-lading, and hazardous waste manifests; and

- Dust Complaint Logs
  - time, name and contact information, compliant description, earthwork activities associated with complaint, and measures taken to mitigate dust;

- Analytical Reports
  - laboratory analytical reports of samples of soil, ground water, dust, and soil vapor, if samples are collected.

Following completion of the work covered by this RMP, the Environmental Consultant will prepare a report for submittal to Water Board that documents compliance with this RMP including soil and/or ground water sampling, removal and management of unknown structures, chemical analysis and proper disposal of contaminated materials and soil import. The report will include at a minimum the information described above.

4.4 Additional Documentation

In addition to the information provided herein, the Water Board's July 27, 2020 letter requires the RMP to:

- "Specify the drilling methods and pier design for the structural foundation and provide a justification explaining why groundwater contamination will not migrate to the deeper groundwater bearing zones during construction"
    - However, because the structural design for the hotel has not yet been developed, this information will be provided to the Water Board under separate cover at least 3 months prior to commencing construction.

- "Specify the vapor intrusion mitigation measures that will be implemented during redevelopment"
    - However, because the structural design for the hotel has not yet been developed, this information will be provided to the Water Board under separate cover at least 3 months prior to commencing construction, which will include:
        - design criteria and drawing(s) of any proposed mitigation systems;
        - type and location of monitoring points;
        - operation, maintenance, and monitoring plan;
        - contingency plans, including contingency trigger criteria, for situations where mitigation measures are or become ineffective, considering long- and short-term exposure risks
        - record of construction report
        - annual inspection and performance monitoring report.

- Submit a "Groundwater Treatment Plan" to addresses residual CVOCs by assessing the utility of monitored natural attenuation, describing pathways and risk to human health and water resources, proposing cleanup goals, and evaluating the feasibility of remediation alternatives.
    - However, because the source of the residual CVOCs is located on the 3715 Haven Ave, the Water Board should redirect this requirement to the party responsible for 3715 Haven Ave.

5. Environmental Site Conditions

A brief summary of known environmental conditions in soil and ground water is provided below. Additional detail is available in the environmental reports uploaded to the State Water Board's Geotracker database. The following conclusions are based on the environmental data and historical records:

- Elevated chlorinated volatile organic compounds (CVOCs) have been detected in soil and ground water beneath 3723 Haven Ave that could potentially pose a health risk to on-site receptors if encountered during construction activities.

- The data support that no release occurred at 3723 Haven Ave, and that contamination has migrated in ground water from the adjacent property (3715 Haven Ave) to beneath the 3723 Haven Ave Site.

- Based on the records and environmental data, the original release of CVOCs occurred on 3715 Haven Ave the adjacent property to the south. A soil excavation occurred that removed contaminated soil in this area to approximately 7 feet, however, residual contamination likely remains at depth. This residual contamination from the release at 3715 Haven Ave is likely what is impacting ground water beneath the 3723 Haven Ave Property. The highest levels of contamination on the 3723 Haven Ave site are located in the southwest corner of the property, closest to where the release occurred.

- Because there is no documented release at the 3723 Haven Ave site, the unsaturated vadose zone soils should be free of contamination. The water table at 3723 Haven Ave is approximately five feet below grade, so the upper five feet of soil at 3723 Haven Ave should be free of contamination.

5.1 Discovery of Unknown Conditions

It is possible that the redevelopment activities may encounter currently unknown areas of contamination, and/or unknown potential threats of contamination, such as USTs, vaults, hoists, sumps, maintenance pits, pipelines, etc. the Water Board will be notified if any of these unknown conditions are encountered.

6. PRE-FIELD ACTIVITIES

The pre-field activities include planning the construction aspects of the earthwork activities and implementing certain administrative and organizational tasks prior to commencing of earthwork activities.

6.1 Site Security and Access

During development activities, 3723 Haven Ave will be secured to provide protection and safety to on-Site personnel and equipment. A chain link fence currently surrounds the entire perimeter of 3723 Haven Ave and will be maintained throughout the period of construction. During non-working hours, the fencing will be fully closed and locked. During development activities, access will be restricted to authorized personnel only.

6.2 Traffic Control

Caution will be exercised during entering and exiting of the work area to ensure safe and uninterrupted traffic flow. Entrance into and departure from 3723 Haven Ave by trucks will be facilitated by a flagman, or comparable contractor personnel, in compliance with the Traffic Control Plan approved by the City of Menlo Park.

6.3 PERMITS

All necessary permits for removal activities, transportation, and/or air quality will be obtained prior work at 3723 Haven Ave. The permits will be kept on-Site and made available for inspection during working hours. The procedures proposed for development activities will comply with federal, State and local rules and regulations, regardless of whether permit documents are required.

6.4 NOTIFICATIONS AND UTILITY CLEARANCE

FPG Development Group or their agent will notify Water Board of any soil excavation activities deeper than five feet below existing grade at least 72 hours prior to commencing work. The proposed excavation areas will be marked in white paint prior to contacting Underground Service Alert (USA) at least 48 hours prior to excavating, as required by law. Pier installations that do not bring soil to the surface, such as auger cast piles, are not considered excavations.

7. SOIL MANAGEMENT

Redevelopment activities will likely consist of (1) importing fill, grading, filling, and soil excavation for utilities, foundations, and potentially other subsurface features such as elevator shafts, and (2) construction of a new buildings, parking areas, and landscaped areas. Any excess soil generated during grading will be temporarily stockpiled on-Site and either placed in areas requiring fill or transported off-Site for landfill disposal or beneficial reuse, depending on the environmental quality of the soil as characterized from the soil samples.

Currently, the project is in the design phase and the amount of import/export material is unknown. Soil management activities at 3723 Haven Ave will be reviewed with the contractor prior to groundbreaking, once the takeoff quantities have been calculated. Protocols for testing and disposing of outlined below.

7.1 IMPACTED SOIL

At present, CVOC contaminated soil is present beneath 3723 Haven Ave starting at approximately five feet and extending to approximately 25 feet bgs. However, it is possible that areas of 3723 Haven Ave may require soil excavation and removal during grading activities. While the need for and design of such an action is currently unknown, it will likely require the following basic steps (which will be revised, if warranted):

7.1.1 Remove Impacted Soil (if required)

If contaminated soil is to be removed, excavation will be conducted in the following general sequence:

- Use dust control measures to minimize the amount of dust to non-visible levels

- Develop staging areas, access paths for equipment, work zones, and decontamination areas for use during handling of contaminated soil to reduce the potential of tracking waste off-Site;

- Stockpile soil for characterization or direct load onto trucks for appropriate off-Site disposal.

- Characterize the sidewall and bottom limits of the excavation to ensure that the contamination has been adequately removed.

- Characterize stockpiled soil by collecting samples using a pre-cleaned hand trowel and transferred into laboratory-supplied glass containers. One 4-point composite sample will be collected for every 200 cubic yards of material generated per disposal/accepting facility requirements.

- Following soil sample collection, the containers will be labeled for identification and immediately placed in a chilled, thermally insulated cooler containing bagged ice or blue ice. The cooler containing the samples will then be delivered under chain-of-custody protocol to a state-certified laboratory.

- Once characterized, the soil will be loaded into trucks and hauled for disposal at the appropriate landfill.

7.2 Contingency Measures for Previously Unidentified Suspect Soils

The following contingency measures will be implemented if previously unidentified suspected chemically affected soil is identified during site excavation. All contingency measures will be conducted by HAZWOPER-trained environmental professionals in accordance with the HASP.

Additionally, as a precaution, the Environmental Consultant will be present during excavation and grading activities in areas of historic underground storage tanks, subsurface anomaly detections, and soil contamination in case unknown contamination or subsurface structures are encountered.

7.2.1 Identification of Suspected Contaminated Soil

The Contractor will be instructed to report indicators of suspected contaminated soil, in particular, petroleum hydrocarbons. The three primary physical indicators of petroleum-related contamination in soil include staining, sheen, and petroleum-like odor, as described below:

- **Staining:** Generally, soil that is impacted with petroleum hydrocarbons exhibits gray, black or green staining, although other contaminants and natural conditions may also cause staining.

- **Sheen:** Sheen is another indication of petroleum contamination. Soil exhibiting sheen may appear shiny and reflective. Sheens from heavily impacted soil may appear iridescent with rainbow-like colors.

- **Odor:** Soil impacted with petroleum products, volatile organics, and other types of contamination may release vapors when exposed to the atmosphere. These vapors can be interpreted as an odor. Odor can be subjective, and inhalation of vapors from impacted soil is harmful to human health. Therefore, odor is considered an inadvertent field indicator and should not be used for continuous screening of soil.

If soil exhibiting evidence of suspected contamination is encountered during redevelopment, the Contractor will cease excavation activities in the area and will notify the Environmental Consultant within 24 hours. The Environmental Consultant will then assess the situation as described below.

7.2.2 Preliminary Assessment

Preliminary assessment of the previously unidentified suspect soil will include first confirming that access control measures installed by the Contractor are adequate to provide necessary protection to on-Site workers and the public during the evaluation phase. Confirmation will consist of visual assessment of the installed barriers as well as monitoring of the air outside and within the control area.

Air sampling will be conducted around the perimeter of the secured area using a combination photoionization detector (PID) meter to measure volatile organic compounds (VOCs) in the breathing zone and a lower explosive limit (LEL)/oxygen (O_2) meter to measure concentrations of combustible gases and available oxygen. If the air monitoring suggests that the control measures are improperly positioned to provide necessary protection to on-Site workers, the barriers will be relocated as necessary.

7.2.3 Field Observations Suggest Suspect Conditions Are *De Minimis*

The Environmental Consultant will conduct a preliminary assessment to determine if the previously unidentified suspect soil is considered a potentially significant risk to human health or the environment. If field observations suggest that the suspect conditions are considered *de minimis* (per ASTM D1527-13) and: (1) do not present a threat to human health or the environment; or (2) would generally not be subject of an enforcement action if brought to the attention of appropriate governmental agencies; then the Environmental Consultant will terminate the contingency plan process and release the suspect areas to the General Contractor.

7.2.4 Field Observations Suggest Suspect Conditions Are Not *De Minimis*

If the Environmental Consultant concludes that the suspect conditions might not be *de minimis*, then the Environmental Consultant will notify the Water Board on behalf of the

Developer within 24-hours and will immediately commence to evaluate the nature and extent of the potentially chemically-affected soil in accordance with the protocols below.

- **In-Situ Soil Samples.** An in-situ soil sample will be collected from the same location and depth as the previously unidentified suspect soil and 1-foot below this depth. Additional samples will also be collected at the same depths at a minimum of four step-out locations in an attempt to delineate the lateral extent of the suspected contamination. The four step-out locations will be located approximately 5 feet to the north, south, east, and west of the suspect sample location. Each sample will be collected using 5035-complaint terracores for analysis of VOCs by EPA Method 8260 and observed for evidence of odors and staining and screened for VOCs using a PID. If any of the in-situ soil samples show evidence of odors and staining or VOCs are detected above 10 parts per million by volume (ppmv) then environmental sample(s) will be retained for analyses.

Stockpiled Soil Samples. If previously unidentified suspect soil is stockpiled on-Site, samples will be obtained using a pre-cleaned hand trowel and transferred into laboratory-supplied glass containers. One 4-point composite sample will be collected for every 200 cubic yards of material generated per disposal/accepting facility requirements.

Laboratory Analysis. Following soil sample collection, the containers will be labeled for identification and immediately placed in a chilled, thermally insulated cooler containing bagged ice or blue ice. The cooler containing the samples will then be delivered under chain-of-custody protocol to a state-certified laboratory. Discrete and composite samples will be submitted for analysis using methods relevant to the type of suspected contaminant. After the preliminary evaluation is complete, the Environmental Consultant will provide the Developer, General Contractor, and Water Board with the conclusions regarding potential risks of the suspected contaminant(s) to human health and the environment as well as recommendations for proper removal and disposal of the affected soil. All soil removal work will be approved by the Water Board prior to implementation. If VOC-affected soil is encountered, notification will also be provided to BAAQMD as required in the guidelines and notification requirements set by Regulation 8, Rule 40 of the BAAQMD Rules and Regulations for aeration of contaminated soil.

7.2.5 Import of Fill Material

Redevelopment may require importing soil and rock fill material to attain the design grades. If the imported material is obtained from a non-commercial quarry, then the provenance, quality, and quantity of the imported soil will be characterized as directed by the Water Board. If the imported soil is obtained from a commercial quarry, then the quarry will be identified, and the quantity of imported materials will be documented. All imported fill material shall be managed in compliance with all applicable laws, regulations and agency requirements and shall be clean in accordance with the provisions in the 2001 DTSC Clean Imported Fill Material guidance or its successor.

8. CONTINGENCY MEASURES FOR DISCOVERY OF UNKNOWN UNDERGROUND STRUCTURES

If unknown underground structures including tanks, vaults, sumps, containment structures, separators, or similar infrastructure designed to store liquids are encountered during Site grading activities, the Water Board and Menlo Park Fire Department will be notified within 24-hours and consulted on appropriate next steps. Similarly, if pipes suspected of containing or conducting anything other than water, electrical, storm water, sanitary sewage, or natural gas are encountered, then the Water Board and Menlo Park Fire Department will be notified.

The removal or burying of any of these structures without prior acknowledgement and approval form Water Board will not be performed. Discovered structures will be assessed as follows:

- The structure will be inspected to assess whether it contains any indication of chemical residuals or free-phase liquids other than water. This assessment will be conducted by the Environmental Consultant and will be based on visual evidence and the results of vapor monitoring using a PID. Under no circumstances will any personnel enter an unknown subsurface structure at any time. If chemicals are not indicated within the structure by the above-referenced means and with Water Board approval the structure may be removed or abandoned in place in a safe manner by the contractor;

- If liquids or solids are present within the structure, measures will be taken to contain the liquids to avoid spills to the subsurface. Samples will be collected and submitted to a California-certified laboratory for analysis. Liquids or solids may be temporarily drummed, or liquids may be collected by vacuum truck, while analysis is pending. Based on analytical results, the liquids or solids will be disposed of under the direction of the Environmental Consultant in accordance with all applicable environmental laws and disposal requirements;

- If contaminated liquid or solids are present in the structure, the structure will be inspected for physical integrity following removal of the contaminated media. The Environmental Consultant will document the results of this inspection, including an estimation of the volume and former use of the structure.

- If, based on the opinion of the Environmental Consultant and Water Board it is assessed that the structure is intact, that subsurface releases of the chemicals to the underlying soils likely did not occur, and no free-phase liquids or chemical residues remain inside, removal of the structure may not be required for environmental reasons.

- Otherwise, with Water board approval, the structure will be excavated and disposed of at the direction of the Environmental Professional. Once the structure is removed, soils adjacent to and beneath the structure will be assessed for contamination through visual observation and organic vapor analysis and the results documented. If soils are

determined to be "contaminated" with VOCs in the context of BAAQMD Rule 8-40, the appropriate response will be determined in consultation with Water Board.

Water Board may require further response actions based on the discovery of hazardous materials that pose an unreasonable risk to human health and safety or the environment.

9. GROUND WATER MANAGEMENT

The depth to ground water at 3723 Haven Ave is typically encountered at 5 feet or more below ground surface. Based on the current design, significant construction dewatering is not anticipated. However, if construction dewatering of ground water becomes necessary, then the water will be pumped to a tank and a discharged under permit to the sanitary sewer system, or removed by a vacuum truck deployed to haul the water offsite for disposal. Samples of the proposed discharge water will be analyzed prior to discharge. If necessary, based on the sample data, ground water treatment will be conducted prior to discharge.

10. WASTE MANAGEMENT

10.1 SOIL CHARACTERIZATION PRIOR TO OFF-SITE DISPOSAL

Some soil may need to be placed in temporary on-site stockpiles because: (1) the landfill requires further characterization prior to accepting the soil; (2) short-term storage is necessary until haul trucks are available to transport the soil off-site for disposal; or (3) the need for processing or sorting prior to landfilling. Stockpiled soil will be characterized as required by the receiving facility (landfill). Stockpiled soil may also be segregated into different types of wastes based the analytical results and subject to the approval of the landfill and Water Board.

10.2 MANAGEMENT OF CONTAMINATED SOIL STOCKPILES

Contaminated soil that is placed in temporary stockpiles will be well maintained at all times to prevent runon/runoff and fugitive dust emissions. All stockpiled soil will be placed on impermeable plastic sheeting (minimum 6-mil-thick) with a berm around the perimeter of the stockpile. The plastic sheeting and berm will prevent the runoff of soil and potential contaminants to surrounding areas. The berm will be constructed with hay bales, dimensional lumber, wattles, or other equivalent methods. The bottom plastic sheeting will be lapped over the berm materials, and the soil stockpile will be covered with plastic sheeting to prevent erosion or leaching of contaminants to underlying soil and prevent exposure to precipitation and wind. Plastic sheeting that covers the soil stockpile will be secured using sandbags or equivalent. Following removal, the soil stockpile area will be restored to a pre-stockpile condition. Residual plastic or debris will also be disposed of following stockpile removal.

10.3 Decontamination Procedures

In order to prevent residual contamination from leaving 3723 Haven Ave by construction equipment and personnel during excavation activities, the following decontamination procedures will be followed:

- To minimize the spread of contaminated soil, equipment will be cleaned prior to movement out of active work zones. The equipment wheels/tires will be cleaned over plastic sheeting by means of shovels and stiff-bristled brooms or brushes until they are fully cleaned.

- Minimize track-out by installing rumble pads, or similar control devices at the existing paved roadway being used during construction.

10.4 Off-Site Disposal of Contaminated Soil (if required)

If required, following acceptance of the excavated contaminated soil at an appropriate-licensed disposal facility, the soil will be loaded into licensed haul trucks. Prior to loading excavated materials into trucks, plastic sheeting will be placed on the ground such that any spilled material will be prevented from contacting the ground surface. The soil will be wetted, as necessary, to reduce the potential for dust generation during loading activities. During loading, dust and odor emissions will be monitored and mitigated as necessary. Upon completion of loading, spilled soil will be placed into the truck or returned to the stockpile and the plastic sheeting will be reused or disposed.

The truck driver will be handed a waste manifest provided by the landfill and the trucks will haul the soil to an appropriately licensed landfill. Manifests will be collected upon completion of the job from the landfill and provided in the construction completion report.

As each truck is filled, an inspection will be made to verify that the waste soil is securely covered, to the extent practicable, and that the tires of the trucks are free of accumulated soil prior to leaving 3723 Haven Ave. During transportation, the hauling trucks will be equipped and required to fully cover all soil and debris, such as with a heavy tarpaulin.

A detailed log of the loads hauled from 3723 Haven Ave will be maintained. The log will include, at a minimum, the date and the time trucks were loaded and off-loaded, the destination, size (volume or weight) of the load, description of contents, name and signature of the hauler, and name and signature of the contractor's representative. The waste will be off-loaded for treatment or disposal in a manner consistent with current Federal, State, and local regulations. Shipments of hazardous waste will be tracked with the appropriate hazardous waste manifests.

10.4.1 Transportation Plan

All transportation activities will be performed in strict compliance with all regulations and ordinances. Hauling contractor(s) used to transport non-hazardous or hazardous waste will be fully licensed and permitted by the State of California. For hazardous waste haulers, the selected transportation company will be certified by the State of California as a hazardous waste hauler, and appropriately permitted to haul contaminated waste material. All Department of Transportation (DOT) and California Highway Patrol (CHP) safety regulations will be strictly followed by both hazardous and non-hazardous waste haulers.

Transportation routes will be developed to minimize transporting the affected soil through residential areas. The affected soil will be transported via surface streets to the closest suitable freeway,

10.5 Spill Response Plan

In the event of a spill, the Contractor will be responsible and prepared to respond in a safe and efficient manner, specific to the particular spill situation. Standards will be set, and consistent procedures will be used for handling of spills, whether they are on-Site spills or spills occurring during transportation. Haulers will have an Emergency Spill Contingency Plan (ESCP) to ensure that all drivers and dispatchers know their responsibilities in the unlikely event that an accidental spill occurs while transporting contaminated material off-Site. The drivers and dispatchers will be required to know the procedures for emergency spill response. The ESCP will meet or exceed all Federal, State, and County regulations currently in effect. The provisions of the ESCP will be strictly adhered to, in order to ensure continued protection of the public safety and the environment.

11. Dust and Odor Emissions

During excavation activities, depending on soil and weather conditions, there is potential to generate airborne dust and fugitive emissions. Standard dust and fugitive emissions control measures will be followed during the ground disturbing activities to comply with OSHA and BAAQMD rules and accomplish the following goals:

- Minimize the potential for health impacts to workers;
- Minimize the potential for health impacts to facility neighbors;
- Prevent violations of ambient air quality standards;
- Minimize nuisance dust complaints from facility neighbors; and
- Minimize the migration of contaminants adhered to fugitive dust particles outside 3723 Haven Ave.

11.1 General Construction Mitigation Measures

The following basic construction mitigation measures will be implemented in accordance with recommendations for all proposed projects in the BAAQMD California Environmental Quality Act Air Quality Guidelines (BAAQMD, 2017):

- All haul trucks transporting soil, sand, or other loose material off-site will be covered;
- All visible mud or dirt track-out onto adjacent public roads will be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited;
- All vehicle speeds on unpaved roads will be limited to 15 miles per hour (mph);
- All roadways, driveways, and sidewalks to be paved will be completed as soon as possible. Building pads will be laid as soon as possible after grading unless seeding or soil binders are used;
- Idling times will be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure CCR Title 13, Section 2485). Clear signage will be provided for construction workers at all access points;
- All construction equipment will be maintained and properly tuned in accordance with manufacturer's specifications. All equipment will be checked by a certified mechanic and determined to be running in proper condition prior to operation; and

11.2 Dust Control Measures

Measures will be performed to minimize the generation of dust. The goal is to not generate visible dust. Typically, dust control is accomplished by keeping the areas where soil is being worked damp and keeping vehicle speeds under 15 mph. Dust control measures will at a minimum comply with those established by OSHA and the BAAQMD for construction-related activities. Dust control measures will be based on "Best Management Practices" and will be used throughout all phases of construction.

If dust is excessive, then operations will cease and adjustments to the dust control measures will be developed and implemented until compliance with the requirements is met. Other measures may include on or more of the following:

- Minimize visible dust by keeping the soil damp prior to disturbance.
- Active areas adjacent to residences to be kept damp at all times.
- Apply water or (non-toxic) soil stabilizers to unpaved access roads, parking areas, and staging areas.

- Sweep (with water sweepers) paved access roads, parking areas, and staging areas.
- Cover or otherwise stabilize exposed soil stockpiles.
- Suspend construction activities that cause visible dust plumes and odors to extend beyond the limits of 3723 Haven Ave.

11.3 Odor and Vapor Suppression Measures

By controlling the dust as described above, the emission of odor and vapors should also be reduced to levels that likely will not pose a risk to the health of the public and Site workers. The water spray used to control dust will also significantly reduce the emissions of any potential volatiles that may be present in the soil. The selective loading and transportation of impacted soils could minimize the use of soil stockpiling, further reducing potential emissions of volatiles. Any active stockpile of contaminated soil or exposed excavation left overnight at 3723 Haven Ave will be properly covered with plastic so emissions of volatiles will be minimized.

If odor is excessive and vapor emissions are detected, some or all of the following mitigation procedures may be implemented:

- Use of chemical suppressants mixed with water and applied using various applications such as spray or mist;
- Use of plastic sheeting to cover the sidewalls of the trench during non-active excavation activities will minimize the migration of VOCs and odors;
- Alternative work sequencing, such that excavation of soil with potential odor during mid- day or afternoon (during hot weather) is avoided;
- Any highly odorous soil could be segregated and placed inside a roll-off bin equipped with a lid. This will minimize the amount of highly odorous soil during loading; and
- Balancing the excavation with transportation so that the need for large stockpiles is reduced.

Other emissions include exhaust from construction equipment. The equipment proposed for 3723 Haven Ave redevelopment will be maintained properly so that exhaust emissions will be within acceptable standards. Trucks will be instructed by 3723 Haven Ave foreman to idle no longer than 15 minutes.

12. STORM WATER MANAGEMENT

Once the pre-construction ground surface is stripped from 3723 Haven Ave, the exposed soil will become susceptible to erosion by wind and water. Therefore, erosion control measures and dust control measures will in place before construction begins, in accordance with the

Storm Water Pollution Prevention Plan requirements from the Regional Water Quality Control Board.

Other environmental controls may be required in the event that anticipated conditions at 3723 Haven Ave change. In the event that grading activities occur during the rainy season, then water management procedures will be implemented in addition to probable modifications of other plans, such as the HASP.

Storm water best management practices (BMPs) will be followed in accordance with the contractors Storm Water Pollution Prevention Plan (SWPPP) to be prepared for 3723 Haven Ave. The BMPs for 3723 Haven Ave development activities should include: use of fiber rolls; inlet protection; stabilized construction entrance; landscape and paving; street cleaning and catch basin cleaning.

13. DESIGN CONSIDERATIONS FOR NEW CONSTRUCTION

Based on the environmental site conditions summarized above and detailed in 3723 Haven Ave investigation reports available on the Geotracker database, environmental risks at 3723 Haven Ave requiring mitigation measures are as follows:

- Potential vapor intrusion to indoor air,
- Potential mobilization of CVOCs in ground water to deeper water bearing zones due to the construction of foundation elements,

These mitigation measures will be detailed in the documents described in Section 4.4.

13.1 PROTECTION OF MONITOR WELLS

Currently, there is one monitor well (MW-8) present on 3723 Haven Ave that is being monitored as part of the long-term monitoring program. The construction company will either protect and preserve the monitor well, or abandon and reinstall a well with similar construction details. Any abandonment and reconstruction activities will be subject to the terms and conditions of a well permit to be obtained by San Mateo County Environmental Health Department SMCEHD). The Environmental Consultant will be tasked with supervising any well abandonment or construction activities. If the above referenced monitoring program is terminated by the Water Board, the well will be abandoned in accordance with SMCEHD permit and a well destruction report will be submitted.

The following Reports and documents will be submitted to the Water Board prior to Construction:

COVENANT AND ENVIRONMENTAL RESTRICTION ON PROPERTY

3695-3723 Haven Avenue
Menlo Park, California

This Covenant and Environmental Restriction on Property (this "Covenant") is made as of the 9th day of Aug., 1999 by Integris/Millenium Joint Venture LLC ("Covenantor") who is the Owner of record of that certain property situated at 3695-3723 Haven Avenue, in the City of Menlo Park, County of San Mateo, State of California, which is more particularly described in Exhibit A attached hereto and incorporated herein by this reference (such portion hereinafter referred to as the "Burdened Property"), for the benefit of the California Regional Water Quality Control Board for the San Francisco Bay Region (the "Board"), with reference to the following facts:

A. The Burdened Property and groundwater underlying the property contain hazardous materials.

B. Contamination of the Burdened Property. It is believed that certain industrial operations caused soil and groundwater at the Burdened Property to be contaminated with halogenated volatile organic compounds, including trichloroethene and vinyl chloride, which constitute hazardous materials as that term is defined in Health & Safety Code section 25260. To mitigate potential exposure to such chemicals, soil excavation, in-situ chemical oxidation, if feasible, and institutional controls, including this Covenant, are to be implemented.

C. Exposure Pathways. The contaminants addressed in this Covenant are present in soil and groundwater on the Burdened Property. Without the mitigation measures described above, exposure to these contaminants could take place via direct contact, resulting in dermal exposure, inhalation, or ingestion by humans. The risk of public exposure to the contaminants has been and will be substantially lessened by the remediation and controls described herein.

D. Adjacent Land Uses and Population Potentially Affected. The Burdened Property is currently vacant but has been used for industrial and commercial uses, and is adjacent to industrial and commercial land uses.

3229 V01

E. Full and voluntary disclosure to the Board of the presence of hazardous materials on the Burdened Property has been made and extensive sampling of the Burdened Property has been conducted.

F. Covenantor desires and intends that in order to benefit the Board, and to protect the present and future public health and safety, the Burdened Property shall be used in such a manner as to avoid potential harm to persons or property that may result from hazardous materials that may have been deposited on portions of the Burdened Property.

ARTICLE I

GENERAL PROVISIONS

1.1 Provisions to Run with the Land. This Covenant sets forth protective provisions, covenants, conditions and restrictions (collectively referred to as "Restrictions") upon and subject to which the Burdened Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. The restrictions set forth in Article III are reasonably necessary to protect present and future human health and safety or the environment as a result of the presence on the land of hazardous materials. Each and all of the Restrictions shall run with the land, and pass with each and every portion of the Burdened Property, and shall apply to, insure to the benefit of, and bind the respective successors in interest thereof, for the benefit of the Board and all Owners and Occupants. Each and all of the Restrictions are imposed upon the entire Burdened Property unless expressly stated in the Risk Management Plan, see below, as applicable to a specific portion of the Burdened Property. Each and all of the Restrictions run with the land pursuant to section 1471 of the Civil Code. Each and all of the Restrictions are enforceable by the Board.

1.2 Concurrence of Owners and Lessees Presumed. All purchasers, lessees, or possessors of any portion of the Burdened Property shall be deemed by their purchase, leasing, or possession of such Burdened Property, to be in accord with the foregoing and to agree for and among themselves, their heirs, successors, and assignees, and the agents, employees, and lessees of such owners, heirs, successors, and assignees, that the Restrictions as herein established must be adhered to for the benefit of the Board and the Owners and Occupants of the Burdened Property and that the interest of the Owners and Occupants of the Burdened Property shall be subject to the Restrictions contained herein.

1.3 Apportionment of Burden Among Multiple Owners. Where ownership of the Burdened Property is held by multiple persons, holding by several titles, the burdens imposed by this Covenant shall be apportioned between them proportionate to the value of the property held by each owner, if such value can be ascertained, and if not, then according to their respective interests in point of quantity. (Cal. Civ. Code § 1467.)

1.4 Incorporation into Deeds and Leases. Covenantor desires and covenants that the Restrictions set out herein shall be incorporated in and attached to each and all deeds and leases of any portion of the Burdened Property. Recordation of this Covenant shall be deemed binding on all successors, assigns, and lessees, regardless of whether a copy of this Covenant and Agreement has been attached to or incorporated into any given deed or lease.

1.5 Purpose. It is the purpose of this instrument to convey to the Board real property rights, which will run with the land, to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

ARTICLE II

DEFINITIONS

2.1 Board. "Board" shall mean the California Regional Water Quality Control Board for the San Francisco Bay Region and shall include its successor agencies, if any.

2.2 Improvements. "Improvements" shall mean all buildings, roads, driveways, regradings, and paved parking areas, constructed or placed upon any portion of the Burdened Property.

2.3 Occupants. "Occupants" shall mean Owners and those persons entitled by ownership, leasehold, or other legal relationship to the exclusive right to occupy any portion of the Burdened Property.

2.4 Owner or Owners. "Owner" or "Owners" shall mean the Covenantor and/or its successors in interest, who hold title to all or any portion of the Burdened Property.

2.5 Risk Management Plan. "Risk Management Plan" (also referred to herein as "RMP") shall mean that certain Plan concerning the Burdened Property, prepared by Erler & Kalinowski, Inc. and dated March 12, 1999, and any and all subsequent addenda thereto, on file with the California Regional Water Quality Control Board, San Francisco Bay Region; the San Mateo County Division of Environmental Health and the City of Menlo Park Building Department. Covenantor shall cause the RMP to be filed with the aforementioned three agencies. Owner, at the time of any addenda to the RMP, shall cause the addenda to be filed with the aforementioned three agencies. The RMP is attached hereto and incorporated herein by this reference as Exhibit B.

ARTICLE III

DEVELOPMENT, USE AND CONVEYANCE OF THE BURDENED PROPERTY

3.1 Restrictions on Development and Use. Covenantor promises to restrict the use of the Burdened Property as follows:

a. Development of the Burdened Property shall be restricted to industrial, commercial or office space;

b. No residence for human habitation shall be permitted on the Burdened Property;

c. No hospitals shall be permitted on the Burdened Property;

1999-135815
03/08/1999 03:24P
OR Page 3 of 183

d. No schools for persons under 21 years of age shall be permitted on the Burdened Property;

e. No day care centers for children or day care centers for Senior Citizens shall be permitted on the Burdened Property;

f. No Owners or Occupants of the Burdened Property or any portion thereof shall conduct any excavation work on the Burdened Property, except in strict compliance with the RMP or unless expressly permitted in writing by the Board. Any contaminated soils brought to the surface by grading, excavation, trenching, or backfilling shall be managed by Covenantor or his agent in accordance with all applicable provisions of local, state and federal law;

g. All uses and development of the Burdened Property shall be consistent with the Risk Management Plan or any applicable Board Order, each of which is hereby incorporated by reference including future amendments thereto. All uses and development shall preserve the integrity of any cap, any remedial measures taken or remedial equipment installed, and any groundwater monitoring system installed on the Burdened Property pursuant to the requirements of the Board, unless otherwise expressly permitted in writing by the Board;

h. No Owners or Occupants of the Property or any portion thereof shall drill, bore, otherwise construct, or use a well for the purpose of extracting water for any use, including but not limited to, domestic, potable, or industrial uses, unless expressly permitted in writing by the Board;

i. The Owner shall notify the Board of each of the following: (1) The type, cause, location and date of any disturbance to any cap, any remedial measures taken or remedial equipment installed, and of the groundwater monitoring system installed on the Burdened Property pursuant to the requirements of the Board, which could affect the ability of such cap or remedial measures, remedial equipment, or monitoring system to perform their respective functions and (2) the type and date of repair of such disturbance. Notification to the Board shall be made by registered mail within ten (10) working days of both the discovery of such disturbance and the completion of repairs;

j. The Covenantor agrees that the Board, and/or any persons acting pursuant to Board orders, shall have reasonable access to the Burdened Property for the purposes of inspection, surveillance, maintenance, or monitoring, as provided for in Division 7 of the Water Code,

k. No Owner or Occupant of the Burdened Property shall act in any manner that will aggravate or contribute to the existing environmental conditions of the Burdened Property. All use and development of the Burdened Property shall preserve the integrity of any capped areas;

3.2 Enforcement. Failure of an Owner or Occupant to comply with any of the restrictions, as set forth in paragraph 3.1, shall be grounds for the Board, by reason of this Covenant, to have the authority to require that the Owner modify or remove any Improvements constructed in violation of that paragraph. Violation of the Covenant shall be grounds for the Board to file civil actions against the Owner as provided by law.

1998-1358 1 B
05/07/1998 03:34P
OR Page 4 of 153

3.3 Notice in Agreements. After the date of Recordation hereof, all Owners and Occupants shall execute a written instrument which shall accompany all purchase agreements or leases relating to the property. Any such instrument shall contain the following statement:

> This statement is not a declaration that a hazard exists. The land described herein contains hazardous materials in soils and in the groundwater under the property, and is subject to a deed restriction dated as of July _____, 1999, and recorded on July _____, 1999, in the Official Records of San Mateo County, California, as Document No. _____, which Covenant and Restriction imposes certain covenants, conditions, and restrictions on usage of the property described herein.

ARTICLE IV

VARIANCE AND TERMINATION

4.1 Variance. Any Owner or, with the Owner's consent, any Occupant of the Burdened Property or any portion thereof may apply to the Board for a written variance from the provisions of this Covenant.

4.2 Termination. Any Owner or, with the Owner's consent, any Occupant of the Burdened Property or a portion thereof may apply to the Board for a termination of the Restrictions as they apply to all or any portion of the Burdened Property.

4.3 Term. Unless terminated in accordance with paragraph 4.2 above, by law or otherwise, this Covenant shall continue in effect in perpetuity.

ARTICLE V

MISCELLANEOUS

5.1 No Dedication Intended. Nothing set forth herein shall be construed to be a gift or dedication, or offer of a gift or dedication of the Burdened Property or any portion thereof to the general public.

5.2 Notices. Whenever any person gives or serves any notice, demand, or other communication with respect to this Covenant, each such notice, demand, or other communication shall be in writing and shall be deemed effective (1) when delivered, if personally delivered to the person being served or official of a government agency being served, or (2) three (3) business days after deposit in the mail if mailed by United States mail, postage paid certified, return receipt requested:

5.3 Partial Invalidity. If any portion of the Restrictions or terms set forth herein is determined to be invalid for any reason, the remaining portion shall remain in full force and effect as if such portion had not been included.

5.4 Article Headings. Headings at the beginning of each numbered article of this Covenant are solely for the convenience of the parties and are not a part of the Covenant.

5.5 Recordation. This instrument shall be executed by the Covenantor and by the Executive Officer of the Board. This instrument shall be recorded by the Covenantor in the County of San Mateo within ten (10) days of the date of execution.

5.6 References. All references to Code sections include successor provisions

5.7 Construction. Any general rule of construction to the contrary notwithstanding, this instrument shall be liberally construed in favor of the Covenant to effect the purpose of this instrument and the policy and purpose of the Water Code. If any provision of this instrument is found to be ambiguous, an interpretation consistent with the purpose of this instrument that would render the provision invalid shall be favored over any interpretation that would render it invalid.

5.8 Effective Date. This Covenant, its terms and conditions, and the burdens imposed and the benefits derived therefrom, shall become effective upon Recordation of this Covenant.

IN WITNESS WHEREOF, the parties execute this Covenant as of the date set forth above.

A. Human Health Risk Assessment (Appendix A from Feasibility Study/Remedial Action Plan, dated 12 March 1999)

1. INTRODUCTION

This Risk Management Plan is intended to address residual concentrations of chemicals of concern in environmental media at the 3695-3673 Haven Avenue property located in Menlo Park, California (the "Site"; Figure 1). The term Site, as used in this Risk Management Plan, refers to the entire property at the address 3695 -3723 Haven Avenue, Menlo Park, California and any parcels or subdivided parcels that may result from sale of portions of the current property to other owners. Mitsubishi Silicon America ("MSA"), the present owner, has made the property available for sale in whole or in part. Because current zoning of the Site is industrial, the Risk Management Plan contemplates redevelopment of the Site for a variety of industrial/commercial purposes.

The Risk Management Plan provides a decision framework to manage residual chemicals [(i.e., halogenated volatile organic compounds ("VOCs")] in soil and groundwater at the Site in a manner that is: (1) satisfactory to the RWQCB, as lead agency, and other involved regulatory agencies with oversight authority, as required, (2) protective of human health and the environment, and (3) consistent with planned land uses. This Risk Management Plan contains the following:

- description of the Site background, including a brief history of Site usage, discussion of environmental investigations and remedial actions performed at the Site, and a summary of identified remaining environmental conditions;
- summary of the risk assessment that was conducted to evaluate potential human health impacts at the Site;
- short-term risk management plan to be implemented during construction at the Site, which includes worker health and safety planning requirements and construction impact mitigation measures; and,
- non-construction risk management plan for mitigation of potential long-term risks to human health and the environment, which includes a provision to ensure long-term compliance with this Risk Management Plan.

1.1 Representations

This Risk Management Plan is based on a current understanding of environmental conditions at the Site as well as current environmental policies, laws, and regulations. If environmental conditions are found to differ from those described herein or in the environmental reports referenced in Section 2.3.1, or if environmental policies, laws, and regulations change, then the Risk Management Plan may have to be modified to accommodate those differing conditions. No representation is made by any present or future owner or developer of the Site or their consultants, agents, and contractors as to the

applicability of this Risk Management Plan with respect to future environmental policies, laws, and regulations.

1.2 Owner Responsibilities

All owners, developers, and any other entities with responsibility for Site activities shall have a continuing obligation to:

- determine the adequacy of this Risk Management Plan in light of the conditions actually encountered and the intended land use;
- comply with policies, laws, and regulations applicable at the time; and,
- establish a notification procedure and protocols for future sub-surface activity to ensure long-term compliance with the Risk Management Plan.

2. SITE BACKGROUND

This section describes the Site background, including the previous Site uses and the geology and hydrology at the Site.

2.1 Site Setting

The Site is located in an industrial section of east Menlo Park, adjacent to San Francisco Bay (Figures 1 and 2). Directly to the east of the Site is a channelized creek that runs to the Bay via Flood and Westpoint Sloughs. A public storage facility, salt evaporators, and Bayfront Park (the former Menlo Park landfill) are located north of the Site. West of the Site is a yard that contains used equipment and materials, and to the south, across Haven Avenue, are two-story buildings that are occupied by light industrial and commercial tenants. Figure 2 is an aerial photograph taken during early October 1998 of the Site and vicinity, prior to demolition of "Building 2".

2.2 Site History

The Site, as defined in Chapter 1, refers to the entire property at the address 3695 -3723 Haven Avenue, Menlo Park, California. Currently, the MSA Property is occupied by two vacant buildings ("Building 1" and "Building 3" in Figure 2) and covered by asphalt or concrete pavement with narrow planted areas along Haven Avenue.

Based on a review of historical aerial photographs performed by EKI, the MSA Property was formerly bare land with a few scattered buildings and cars prior to its development in 1969. In the 1969 aerial photograph, the MSA Property was developed with three buildings, two of which are standing as of this writing.

Based on a review of file information from the San Mateo County Department of Health Services and files provided by MSA, uses of the MSA Property have included:

- the fabrication and manufacturing of magnetic materials and electronic devices;
- manufacturing and fabrication of electronic components;
- manufacturing of polished silicon wafers;
- distribution of electronic equipment;
- warehousing and installation of automobile wheels and automotive accessories; and,
- a musical recording studio.

One of the prior tenants of the MSA Property was Siltec Corporation, a corporate predecessor to MSA. From 1970 through 1989, Siltec Corporation used the MSA

Property as manufacturing facility for polished silicon wafers, and as office space. Other more recent tenants of the MSA Property have included KOB Auto Inc., Nor Cal Tire and Wheel, Multiplex Studios, Huettig & Schromm Landscape Contractors, and BSG Associates, Inc.

During October 1998, the middle of the three buildings originally built at the Site during 1969 was demolished. The purpose of demolishing this building (Building 2) was to allow excavation of Site soils with elevated concentrations of halogenated VOCs.

2.3 Summary of Site Investigations and Remedial Actions

This section summarizes:

- the reports submitted to the RWQCB regarding investigative work, risk assessments, treatability studies, and work plans describing future work to be performed at the Site;
- the subsurface geology at the Site;
- the local hydrology;
- the chemicals detected in both soil and groundwater at the Site; and,
- the remedial actions performed or planned for the Site.

2.3.1 Documents Summary

The following documents describe the results of previous investigations and remedial, treatability, and risk assessments performed at the Site:

- *Feasibility Study and Remedial Action Plan, 3695 - 3723 Haven Avenue, Menlo Park, California*, Erler & Kalinwoski, Inc., 10 March 1999 (EKI 1999a)
- *In Situ Chemical Oxidation Bench-Scale Treatability Test Results, 3695-3723 Haven Avenue, Menlo Park, Californi*- Erler & Kalinowski, Inc., 8 January 1999 (EKI 1999b)
- *Revised Risk Calculations and Cleanup Goals for Source Area Soil Excavation, 3695-3723 Haven Avenue, Menlo Park, California*, Erler & Kalinowski, Inc., 12 February 1999 (EKI 1999c)
- *Results of Sampling and Analysis, 3645 and 3665 Haven Avenue, Menlo Park, California*, Erler & Kalinowski, Inc., 30 June 1998 (EKI 1998a)
- *Results of Sampling and Analysis, Vicinity of 3695-3723 Haven Avenue, Menlo Park, California*, Erler & Kalinowski, Inc., 28 October 1998 (EKI 1998b)

Directly underlying the A-zone are sediments that are generally coarser grained, consisting of sand and gravel. For the purposes of this report, these sediments that occur between approximately 15 and 38 feet bgs are referred to as the "B-zone".

2.3.3 Hydrology

During the on-Site and off-Site investigations, selected groundwater samples from borings and monitoring wells were measured for density, total dissolved solids, and chloride. The purpose of collecting such data for groundwater was to allow generalized mapping of the various water bodies that are present along the bay margin: fresh water, salt water associated with the Bay, and brines associated with the evaporation ponds. The available data indicate that brines have apparently leaked from salt evaporation ponds and have intruded primarily into the B-zone. Landward incursion of brines is pronounced beneath the Site as well as at the adjacent Fedex Facility to the east. It appears that the presence of brines in the subsurface has served as a barrier, limiting off-Site migration of chemicals of concern (see Section 2.3.4).

During drilling at the Site, groundwater has been encountered in the subsurface at depths of approximately 8 to 11 feet bgs in fine-grained sediments of the A-zone (EKI 1997a). During October 1998, the piezometric surface for the A-zone occurred at elevations of approximately 0.8 to 1.2 feet relative to the National Geodetic Vertical Datum 1929 (EKI 1999a). The groundwater gradient was to the southeast with a magnitude of approximately 0.003 ft/ft (EKI 1999a). During October 1998, the piezometric surface for the B-zone, corrected for variable density, occurred at elevations of 1.3 to 1.9 feet, relative to the National Geodetic Vertical Datum 1929. The groundwater gradient for the B-zone was generally to the north with a magnitude of approximately 0.003 ft/ft (EKI 1997a). These data indicate that there is a relative upward groundwater gradient at the Site. It should be noted that the local groundwater gradient is strongly affected by density variations. Thus, changes in operation of the nearby salt evaporation ponds could result in changed groundwater gradients.

2.3.4 Chemicals of Concern Detected in Soil and Groundwater

The primary chemicals of concern ("COCs") at the Site, based on prevalence in soil and groundwater at the Site and the results from the risk assessment, are halogenated VOCs. The VOCs that contribute most to the estimated risks at the Site are trichloroethene ("TCE") and vinyl chloride ("VC"). Tables 1 and 2 list all the VOCs that have been detected in soil or groundwater samples collected from the Site. The VOCs that have been detected in more than ten groundwater samples collected at the Site include, in order of decreasing frequency of detection:

- TCE;
- cis-1,2-dichloroethene ("cis-1,2-DCE");
- chloroform;
- 1,1,2-trichloro-1,2,2-trifluoro ethane ("CFC-113");
- carbon tetrachloride; and
- VC.

TCE and CFC-113 are believed to have been used historically at the Site. Further, the cis-1,2-DCE and VC found at the Site are presumed to be daughter products of naturally occurring reductive dechlorination of TCE in the soil and groundwater.

TCE is present in groundwater samples collected from the Site in the vicinity of former Building 2 at concentrations that suggest the presence of separate-phase dense non-aqueous phase liquid ("DNAPL"). The presence of separate-phase DNAPL can result in the long-term persistence of VOCs in groundwater. Furthermore, DNAPL liquids can, in some instances, migrate to deeper depths if remedial activities or other subgrade activities penetrate confining media or alter the hydrologic conditions.

Carbon tetrachloride has been detected at significantly higher concentrations in groundwater samples collected from the adjacent property to the west. The source of carbon tetrachloride is unknown but appears to be up-gradient of the Site. The chloroform found in groundwater samples collected on-Site may be a product of the naturally occurring degradation of the carbon tetrachloride.

1998-1358
03/30/1999 03:24p
56 Page: 23 of 153

2.3.5 Soil Remedial Actions

As discussed in the FS/RAP, source area soil near the northwestern corner of the former Building 2 will be excavated to a depth of approximately 6 feet during 1999. The extent of planned excavation is shown on Figure 3 (EKI 1998c). The remedial excavation will remove soil known to contain concentrations of COCs above the risk-based action levels listed in Table 3. Results of the remedial excavation will be documented in the Remedial Action Completion Report anticipated to be submitted to the RWQCB as described in Section 2.5.1.

After source area soil is excavated, clean backfill will be placed in the excavation. A high-density polyethylene ("HDPE") liner will be installed as a vapor barrier in the backfill at approximately 4 feet bgs. The vapor barrier will reduce the potential for the clean backfill to be contaminated by VOC vapors emanating from the underlying groundwater. The vapor barrier will also reduce the potential for migration of VOC vapors from groundwater into any buildings that may be constructed in that location in the future, thereby further reducing the potential future risks at the Site.

As discussed below, future owners of the property will be required to protect the integrity of the vapor barrier by not penetrating through the barrier during construction or maintenance activity at the Site unless (a) damage to the barrier can be effectively repaired, or (b) the underlying groundwater no longer contains VOCs above risk-based action levels.

2.3.6 Groundwater Remedial Actions

As discussed in the FS/RAP, a pilot test is planned to evaluate the efficacy of ICO by injecting potassium permanganate ("Oxidant") into saturated zone soils and groundwater

near the northwestern corner of the former Building 2 (EKI 1998d). The oxidant is intended to oxidize halogenated VOCs in soil and groundwater to less toxic daughter products. If the pilot test is successful, full-scale ICO treatment will be performed as described in the FS/RAP.

2.4 Remaining Environmental Conditions

This Section describes the available information regarding the residual concentrations of VOCs in soil, groundwater, and soil gas beneath concrete slabs. For the purposes of this document, it is assumed that soil excavation activities, including removal of the concrete slab and installation of a vapor barrier, as proposed in EKI (1998e) will have been executed.

2.4.1 Residual Concentrations of Halogenated VOCs in Soil

Figure 3 shows the locations of soil borings drilled in and around the source area at the northwestern corner of the former Building 2 as well as the proposed extent of the remedial soil excavation. Table 1 summarizes the data for soil samples collected from the area outside the remedial excavation area and represents the available data regarding residual concentrations of VOCs in Site soils post-excavation. The concentrations of TCE and VC in post-excavation Site soils are shown on Figures 4 and 5, respectively.

For the purposes of this Risk Management Plan, it has been assumed that there may exist on the Site areas of contamination undetected by previous investigations. Therefore, risk management for all future activities involving disturbance of soil at the Site will be performed under the assumption that VOCs may be present in soil, as discussed further in Chapter 4.

2.4.2 Residual Concentrations of Halogenated VOCs in Groundwater

Figures 6, 7, and 8 show the extents of TCE, VC, and carbon tetrachloride, respectively, in groundwater at the Site. Table 2 summarizes data for groundwater samples collected from the Site.

Elevated concentrations of VOCs have been detected in groundwater in the vicinity of the northern portion of former Building 2. The area of groundwater containing VOCs in excess of the risk-based action levels for groundwater is shown on Figure 9. For the purposes of this Risk Management Plan, this area is defined as the Groundwater Risk Area.

2.4.3 Possible Presence of Chlorinated VOCs Under Concrete Slabs

The VOCs detected in soil gas during the remedial investigation include trichloroethene, cis-1,2-dichloroethene, CFC-113, chloroform, and benzene (EKI 1997a). Trichloroethene, cis-1,2-dichloroethene, and CFC-113 are the three chemicals detected at highest concentrations (EKI 1997a). Elevated concentrations of these chemicals were

detected in soil gas from the vicinity of the northwestern corner of the former Building 2, both inside and outside of the former building.

It should be noted that some of the soil gas samples from locations within the former building were collected within the gravel base beneath the building slab. It is possible that the concentrations of chemicals detected in these samples reflect some relatively increased lateral migration because of the permeable gravel base. It is possible that, in the future, without proper engineering controls, VOCs could migrate from groundwater into permeable subgrade material beneath new structures. Chapter 5 discusses the use of engineering controls to prevent this type of VOC migration.

1998-135815
02/09/1998 03:28P
CR Page: 25 of 193

3. SUMMARY OF HUMAN HEALTH RISK ASSESSMENT

A human health risk assessment was undertaken to:

- Evaluate potential impacts to human health by chemicals of concern ("COCs") present in soil and groundwater at the Site; and
- Develop risk-based action levels for soil and groundwater at the Site.

The risk assessment is included in Attachment A.

Note that baseline risks at the Site were calculated previously for development of risk-based action levels for soil excavation using data collected prior to April 1998 (EKI 1998c; EKI 1999b). However, some additional groundwater data were collected for the Site after April 1998. Therefore, the data set used herein and in Appendix A to calculate the baseline risk at the Site has been updated to include the soil and groundwater data for the Site available as of February 1999. Also, the proposed risk-based action levels have now been developed to consider VOCs in both soil and groundwater, and one of the physical assumptions (soil saturated porosity) for the Site has been modified.

The risk assessment was conducted assuming hypothetical exposure scenarios for future occupants of the Site. Occupants were subdivided into several receptor populations based on their expected locations and activities. Each group was assumed to be subjected to different concentrations of chemicals for different amounts of time. All assumptions used in the risk assessment are quantified in the text and tables included in Attachment A.

Baseline risks were calculated for the following three hypothetical receptor populations at the Haven Avenue Site:

- Future commercial/industrial building occupants, who will work indoors on-Site over a long period of time ("Indoor Workers");
- Workers involved in the construction of new buildings or subsurface utilities on-Site, who will occupy the Site for much more limited periods ("Construction Workers"); and,
- Future maintenance personnel such as groundskeepers, who will labor primarily outdoors over a long period of time ("Maintenance Workers").

3.1 Risk Calculations

As discussed in the risk assessment (Attachment A), summation of Hazard Indices over all pathways and chemicals gives the non-carcinogenic effects Hazard Index for each hypothetical receptor population. A total Hazard Index less than or equal to one indicates

that the population will not be exposed to the chemical beyond a dosage considered safe for non-carcinogenic adverse health affects.

Summation of the estimated incremental carcinogenic risk from all carcinogenic chemicals over all pathways valid for a particular receptor population gives an estimated overall incremental excess carcinogenic risk ("Cancer Risk") for the hypothetical receptor population (Appendix A). The National Oil and Hazardous Substances Pollution Contingency Plan (40 CFR §300) mandates an acceptable range of Cancer Risk between 10^{-4} (1 in 10,000) and 10^{-6} (1 in 1,000,000). California law requires notification of on-Site workers if the Cancer Risk is estimated to exceed 10^{-5} (1 in 100,000) (California Code of Regulations ("CCR") Title 22, Section 12703). The targeted maximum Cancer Risk of 10^{-5}, used in the risk assessment for the Site, satisfies both sets of regulations.

1998-1351
08/06/1998 03:37p
88 Page 27 of 154

3.2 Estimated Baseline Risks

The estimated baseline risks for the three hypothetical future populations at the Site are summarized below based on the results of the risk assessment in Attachment A. Several references are made below to tables in Attachment A (e.g., "Table A-19").

Estimated baseline Hazard Indices and Cancer Risk for Indoor Workers are listed in Table A-19. Non-carcinogenic hazard for this population is calculated to have a Hazard Index equal to 0.08, less than the maximum target value of 1. The estimated Cancer Risk is 1.9×10^{-5}, above the maximum target level of 10^{-5}. The most significant chemical/pathway combination for Indoor Workers, in terms of the estimated Cancer Risk, is inhalation of TCE and VC evaporating from groundwater.

Estimated baseline Hazard Indices and Cancer Risks for Maintenance Workers through all pathways are listed in Table A-20. Non-carcinogenic hazard for this population is calculated to be 0.03, less than the maximum target level of 1. The estimated Cancer Risk is 4.5×10^{-6}, below the maximum target level of 1.0×10^{-5}. The most significant chemical/pathway combination for the Maintenance Worker receptor population is inhalation of VC evaporating from soil.

Estimated baseline risk and Hazard Indices and Cancer Risk for all Construction Worker exposure pathways are listed in Table A-21. The estimated Cancer Risk is 1.0×10^{-7}, less than the target level of 10^{-5}. Non-carcinogenic hazard for this population is calculated to be 0.01, less than the target level of 1. The most significant chemical/pathway combination, both in terms of Cancer Risk and non-carcinogenic health hazard for the Construction Worker receptor population is inhalation of VC evaporating from soil.

3.3 Calculation of Risk-Based Action Levels for Soil and Groundwater

Using the baseline risks calculated for the hypothetical receptor populations at the Site, risk-based action levels for soil and groundwater have been calculated, as discussed below. Risk-based action levels have been calculated considering potential exposures to the future hypothetical receptor populations, i.e., Maintenance Workers, Construction Workers, and Indoor Workers.

Risk-based action levels (cleanup goals) for soil and groundwater were calculated to apportion post-remediation risk such that Cancer Risk to the Indoor Worker, Construction Worker, and Maintenance Worker populations are each at or below 10^{-5}, and Hazard Indices are at or below 1.0. The method used for apportioning risk was to allocate most of the risk to the more hazardous chemicals and those more commonly found at the Site. This approach minimizes the volume of material to be remediated, while keeping future hypothetical populations' exposure to hazardous chemicals below the target maximum risk levels.

Tables 3 and 4 (and Tables A-22 and A-23 in Attachment A) list the calculated risk-based action levels for soil and groundwater, respectively. For soil, the risk-based action levels for TCE and VC are 3.2 mg/kg and 0.075 mg/kg, respectively. For groundwater, the risk-based action levels for TCE and VC are 8,000 ug/L and 500 ug/L, respectively, and carbon tetrachloride and chloroform have action levels of 2,600 ug/L and 2,000 ug/L, respectively.

Tables A-24, A-25, and A-26 show the estimated Hazard Indices and Cancer Risks for the receptor populations, i.e., Indoor Workers, Maintenance Workers and Construction Workers, assuming VOCs are present in soil and groundwater at the risk-based action level concentrations. For each population, the estimated total Hazard Index is less than 1 and the estimated cumulative Cancer Risk is less than or equal to 10^{-5}. Therefore, the risk-based action levels result in an acceptable level of risk for the future potentially exposed populations.

Future collection and analysis of soil or groundwater samples from the Site could potentially indicate the presence of chemical concentrations different from the current dataset. In this case, risk-based action levels for the Site may be recalculated to reflect the improved understanding of the distribution and concentrations of chemicals in Site soil or groundwater.

4. RISK MANAGEMENT DURING CONSTRUCTION

Risk management during construction activities at the Site involves precautions that will be taken by the property owner to mitigate risks to human health and the environment from possible exposure to chemicals of concern during various activities that involve disturbing soil at the Site. As discussed in Section 2.4.1, it is assumed for the purposes of this Risk Management Plan that residual VOCs may be present in soils located anywhere on-Site. Therefore, construction-related risk management procedures should be evaluated and implemented by the property owner, its contractors, agents, and consultants any time work will be performed that involves disturbing soil at the Site.

1999-1358 15
06/08/1999 03:24p
Page: 28 of 184

When establishing the procedures and precautions to be implemented, the evaluation should include, but not necessarily be limited to, the following:

- Establishing a notification procedure and protocols for future sub-surface activity to ensure long-term compliance with this Risk Management Plan;
- Establishment of health and safety training, worker protection procedures, and worker notification procedures for workers who may be exposed to VOC-containing soil or groundwater during any subsurface works;
- Use of construction methods that ensure that conduits to deeper groundwater zones are not created; and,
- Establishment of soil and groundwater management procedures to:
  - (1) appropriately manage soil and groundwater encountered during construction;
  - (2) characterize soil and groundwater that have indicators of VOC contamination;
  - (3) manage potential VOC vapors that could emanate from excavated soils or groundwater;
  - (4) properly store and dispose of soil and groundwater; and
  - (5) control or prevent storm water from contacting stored soils.

4.1 Site-Specific Health And Safety Worker Planning Requirements

Considering that VOCs may remain in soil, groundwater, and soil gas at the Site following completion of the remedial actions, preparation and implementation of health and safety plans ("HSPs") will be required for activities at the Site during which workers may encounter VOCs in soil, groundwater, or soil gas during subgrade work. Separate HSPs may be prepared for different types of work, i.e., depending on the nature of the work and the estimated potential for exposure to VOCs based on the available data. It will be the responsibility of the property owner to evaluate work activities at the Site and identify those activities that require preparation of a HSP, subject to the constraints described below.

It will be assumed for the preparation of HSPs that VOCs may be present in soil throughout the Site. Therefore, subgrade work activities requiring a HSP include, but are not limited to, (a) excavation and grading during demolition or construction activity, (b) subgrade utility installation or repair, (c) entrance into subgrade confined spaces, such as utility vaults or manholes, and (d) landscaping work that disturbs native soil, including but not limited to activities such as tree and shrub planting, sprinkler installation, and soil relocation.

A HSP is not required by this RMP for activities where no more than the upper 12 inches of soil will be disturbed if the work is in an area where clean fill soil has been imported during 1999 or later (e.g., new topsoil in landscaped areas, backfill installed in the source area soil excavation). For those activities, however, a HSP should still be prepared if required by applicable laws or regulations or if determined appropriate by the responsible party.

A HSP is not required by this RMP for workers who will perform activities at the Site without disturbing soil (e.g., carpenters, painters, carpet installers). When constructed, buildings and cover materials such as roads and walk-ways will prevent exposure to VOC-containing soil. It remains the responsibility of the property owner to determine if a health and safety plan is required for compliance with other federal, state, and local requirements.

4.2 Site-Specific Health And Safety Plans

Each HSP prepared pursuant to the requirements of this RMP will be required to address potential worker exposures to VOCs that could result from the work if VOCs are encountered in soil, groundwater, or soil gas during the work. To the extent required by applicable law, each HSP will be prepared in accordance with Federal and California Occupational Safety and Health Administration ("OSHA") standards for hazardous waste operations (29 CFR 1910.120 and 8 CCR 5192), or applicable regulations promulgated in the future. The HSP should also include but not be limited to a description of health and safety training requirements for the affected workers, a description of the level of personal protective equipment to be used, if any, air quality monitoring plans if necessary, and any other applicable precautions to reduce potential exposure to VOCs to acceptable levels.

4.3 Construction Impact Mitigation Measures

This section outlines measures that should be considered to mitigate potential impacts to human health and the environment during construction at the Site. The need to implement any active measures should be identified in a Construction Impact Mitigation Plan to be prepared by the property owner or its agent. Identified mitigation measures should be implemented during construction. At a minimum, measures to be considered for implementation should include:

- Management of soil;

- Management of groundwater (e.g., during excavation dewatering);
- Preventing creation of migration pathways for contamination to deeper aquifer zones;
- Protection of the vapor barrier installed by MSA in the source area soil excavation backfill (see Section 2.3.5); and
- Protection of groundwater monitoring wells at the Site.

1995—13818

58 Page: 31 of 183

4.3.1 Soil Management Plan

The Construction Impact Mitigation Plan should include a section that establishes procedures for safely managing excavated soil. The soil management plan should consider, at a minimum, the following:

- Methods for the safe excavation and on-Site storage of removed soil;
- Methods for screening excavated soil for the presence of VOCs, as discussed in Section 4.3.1.1;
- Methods for preventing exposure to VOC vapors that may emanate from excavated soil;
- Methods for controlling storm water runoff such that contact with excavated soils is eliminated; and
- Procedures for characterizing and properly disposing excavated soil.

4.3.1.1 Soil Screening Methodology During Construction

During future excavation of soil, an appropriate field instrument should be used during the excavation to help determine if VOCs are present in the soil. VOC screening measurements should be taken periodically as soil is excavated at the Site. A soil screening plan also should be developed as part of the Site-specific health and safety plan generally described in Section 4.2. The soil screening plan should describe procedures for screening soil for the presence of VOCs and action levels for terminating work activities or upgrading worker personal protective equipment. Elevated VOC screening readings may be an indication of VOC contamination in soil.

4.3.1.2 Management of Soil with Indications of VOC Contamination

Contingency protocols should be included in the Construction Impact Management Plan for management of soils should VOC screening indicate the presence of VOC contamination. These contingency protocols should include methods for safely stockpiling soil until the actual concentrations of VOCs in soil are identified and, based

on regulations governing management of excavated soil, an appropriate management method is determined. Excavated soil should be stored in a manner so as to limit access to and contact by unauthorized personnel and to minimize contact with storm water.

4.3.2 Groundwater Management Plan

If construction at the Site is performed such that groundwater will be removed, a groundwater management plan should be included in the Construction Impact Mitigation Plan. The groundwater management plan should, at a minimum, consider implementing methods in accordance with applicable regulations to perform the following:

- safely remove and store groundwater during construction;
- limit exposure to VOC vapors that may emanate from groundwater; and
- characterize and properly dispose of stored groundwater.

4.3.3 Use Of Construction Methods that Minimize the Potential for Creating Vertical Conduits

As discussed in Section 2.6.2, residual concentrations of VOCs currently exist in shallow groundwater at concentrations that suggest the presence of separate-phase DNAPL. The top of this shallow groundwater zone is typically encountered at a depth of approximately 6 to 8 feet bgs (EKI 1997a). DNAPLs can, in some instances, migrate to deeper depths if conduits are created in confining media or hydrologic conditions are altered.

If in the future chemical concentrations in groundwater suggest the presence of DNAPL, construction activities should be conducted such that the potential for DNAPL migration is limited. For example, penetrations through the bottom of the B-zone at the Site into deeper aquifers could potentially provide a conduit for the migration of groundwater containing elevated concentrations of VOCs to deeper aquifers that are currently not impacted. A specific example of a penetration to a deeper aquifer is the installation of pilings for the foundation of new construction.

Penetrations to below the B-zone will not be allowed in areas where VOCs are present in groundwater above California Maximum Contaminant Levels ("MCLs") for drinking water, unless (a) sufficient precautions are taken to prevent migration of impacted groundwater to deeper groundwater zones, and (b) RWQCB concurs that the design is adequate to prevent impacts to deeper groundwater.

4.3.4 Protection of Vapor Barrier

A vapor barrier will be installed at approximately 4 feet bgs in the backfill for the source area soil excavation. The barrier is designed to prevent possible migration of VOC vapors from underlying groundwater into the clean backfill. The barrier would also reduce the rate at which VOCs from groundwater could migrate into any overlying

structures. Owners of the property are required to protect the integrity of the vapor barrier by not penetrating through the barrier during construction or maintenance activity at the Site unless (a) damage to the barrier can be effectively repaired, or (b) the underlying groundwater no longer contains VOCs above risk-based action levels.

4.3.5 Protection of Monitoring Wells

It is anticipated that selected existing groundwater monitoring wells at the Site will be required for future groundwater monitoring. Existing monitoring wells at the Site include monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5B, MW-6B, and MW-7B. Of these, monitoring wells MW-2, MW-5B, MW-6B, and MW-7B are planned for a future groundwater monitoring program. In addition two additional on-Site wells, MW-8 and MW-9 are planned for installation and monitoring. Existing and proposed on-Site monitoring wells are shown on Figure 10.

As long as groundwater monitoring is required by the RWQCB or other regulatory agency, construction procedures should be implemented to prevent accidental damage to the required groundwater monitoring wells. With the approval of the RWQCB, groundwater monitoring wells may be abandoned and replaced with new groundwater monitoring wells at a different locations.

CR Page: 33 of 153

5. DESIGN CONSIDERATIONS FOR NEW CONSTRUCTION

Based on the results of the human health risk assessment (Chapter 3), the highest identified risk to indoor workers at the Site is exposure to VOCs migrating into enclosed spaces. No buildings currently exist over the Groundwater Risk Area, discussed in Section 2.4.2. Unless it is demonstrated that VOC concentrations in groundwater are less than risk-based action levels, any new buildings should be designed so that migration of VOCs into new buildings is limited. Materials and methods (e.g., liners, sub-slab aeration, low permeability concrete, crack sealants) are available to restrict vapor intrusion through building floors. At the time of building design, a professional engineer experienced in this type of work should be consulted to design appropriate barriers to prevent the potential migration of VOCs into new buildings.

1999-1-3515
03/09/1999 05:24P
DR Page 34 of 183

6. NON-CONSTRUCTION RISK MANAGEMENT

This risk management plan also addresses precautions that should be implemented to mitigate long-term risks to human health and the environment related to exposure to COCs during periods of normal, non-construction activity. Any construction that will disturb the soil, building foundations, or pavement should be completed in a manner that is consistent with Chapters 4 and 5 and applicable environmental policies, laws, and regulations.

Components of the risk management plan for non-construction activities are as follows:

- Ensuring that future land uses are consistent with the commercial/industrial uses assumed under this Risk Management Plan;
- Monitoring groundwater at the perimeter of the Groundwater Risk Area to monitor for possible future expansion of the Groundwater Risk Area, unless VOC concentrations in groundwater samples collected in all on-Site wells are less than risk-based action levels;
- Prohibiting the use of groundwater at the Site, unless VOC concentrations in groundwater are less than MCLs;
- Establishing a notification procedure and protocols for future sub-surface activity to ensure long-term compliance with this Risk Management Plan; and
- Inspecting the Site as necessary to verify that risk management controls are being implemented and that they are effective in limiting potential exposure to VOCs at the Site.

6.1 Property Manager and Tenant Notification

The property owner shall provide notification of the known environmental conditions at the Site and of the requirements of this RMP to (a) the property manager, and (b) tenants and other entities leasing or otherwise exercising control over space at the Site.

6.2 Maintaining Commercial/Industrial Land Use

The Site is restricted to commercial/industrial use, except that uses for day-care or primary education are explicitly not allowed. If other uses are proposed, the owner may make a proposal to the RWQCB or other appropriate agency, supported by analysis, that the provisions of this RMP should be changed.

6.3 Monitoring of Existing Buildings

As discussed in Section 2.4.2, groundwater with VOC concentrations above the risk-based action levels has not been detected outside the Groundwater Risk Area shown on Figure 7. However, over time, it is possible that the groundwater flow regime at the Site

Notes:

(a) Sample depth range in feet below ground surface (ft bgs).

(b) A hyphen (-) indicates that the sample was not analyzed for the chemical.

(c) Shaded rows indicate samples collected from soil to be removed as part of the remedial soil excavation.

EXECUTIVE SUMMARY

This human health risk assessment was performed to:

- Evaluate potential impacts to human health by chemicals of concern ("COCs") present in soil and groundwater at the commercial/industrial property located at 3695-3723 Haven Avenue, Menlo Park, California (the "Site"); and,
- Develop risk-based action levels for soil and groundwater at the Site.

An analysis of risk was conducted assuming hypothetical exposure scenarios for potential future occupants of the Site. Occupants were subdivided into three hypothetical receptor populations based on their expected locations and activities. Each hypothetical population is described herein with a unique set of environmental and physiological assumptions, and was thus assumed to be exposed to different concentrations of chemicals for different amounts of time. All assumptions used in the risk assessment are quantified in the attached tables.

Baseline risks were calculated for the following three hypothetical receptor populations at the Site:

- Future commercial/industrial building occupants, who will work indoors on-Site over a long period of time ("Indoor Workers");
- Future maintenance personnel such as groundskeepers, who will labor primarily outdoors over a long period of time ("Maintenance Workers").
- Workers involved in the construction of new buildings or subsurface utilities on-Site, who will occupy the Site for much more limited periods ("Construction Workers"); and

A summary table of calculated baseline risks to each of the hypothetical future populations is shown below (Table A-I). These values represent the estimated total (a) Hazard Index for non-carcinogenic adverse health affects, and (b) incremental excess carcinogenic risk ("Cancer Risk"), to the hypothetical populations due to current Site conditions. In general, potential exposure pathways considered in the calculation of these baseline risks include exposure through incidental ingestion of soil, dermal contact with soil, inhalation of vapors from soil, and inhalation of vapors from groundwater.

One of the assumptions regarding the future Indoor Worker receptor population is that, unlike future Maintenance and Construction Workers, its members never work directly with soil. Thus, incidental ingestion and dermal contact with contaminated soil are not considered exposure pathways for this population. Inhalation of volatile organic

compounds evaporating from soil and groundwater were considered as complete pathways for all hypothetical populations.

Hypothetical Population	Baseline Hazard Index	Baseline Cancer Risk
Future Indoor Workers	0.08	1.9×10^{-5}
Future Maintenance Workers	0.03	4.5×10^{-6}
Construction Workers	0.01	1.0×10^{-7}

Table A-I. Summary of Baseline Risks to Hypothetical Future Site Populations.

A more complete summary of estimated Hazard Index and Cancer Risk for the above populations may be found in Tables A-19, A-20, and A-21. Risk calculations are further documented in Tables A-9 through A-18.

Risk Calculations

Table A-19 is a summary of estimated baseline risks for Indoor Workers. The most significant chemical/pathway combination for Indoor Workers, in terms of Cancer Risk, is inhalation of TCE evaporating from groundwater. The non-carcinogenic Hazard Index for this population is dominated by inhalation of vinyl chloride, trichloroethene ("TCE"), and *cis*-1,2-dichloroethene ("*cis*-1,2-DCE") from groundwater.

Baseline estimated Hazard Indices and Cancer Risk for Maintenance Workers through all pathways are listed in Table A-20. The most significant chemical/pathway combination for the Maintenance Worker receptor population is inhalation of vinyl chloride volatilizing from soil.

Baseline estimated Hazard Indices and Cancer Risk for all Construction Worker exposure pathways are listed in Table A-21. The most significant chemical/pathway combination, both in terms of Cancer Risk and the non-carcinogenic Hazard Index for the Construction Worker receptor population is inhalation of vinyl chloride volatilizing from soil.

Calculation of Risk-Based Action Levels

Using the baseline risks calculated for the hypothetical receptor populations at the Site, risk-based action levels for soil and groundwater have been calculated, as discussed below.

Risk-based action levels for soil and groundwater were calculated to apportion post-remediation risk such that overall Cancer Risk to the Indoor Worker, Maintenance Worker, and Construction Worker are each at or below 1.0×10^{-5}, and overall Hazard Index is at or below 1.0.

Table A-II is a listing of the risk-based action levels for those chemicals found in Site soil at concentrations exceeding the risk-based action levels. These include vinyl chloride and TCE. A more complete listing of risk-based action levels in soil for all chemicals of concern is provided in Table A-22.

1999-13516
08/09/1999 03:24P
28 Page: 79 of 153

VOLATILE ORGANIC COMPOUND	RISK-BASED ACTION LEVEL IN SOIL (ug/kg)
vinyl chloride	75
trichloroethene	3,200

Table A-II. Risk-Based Action Levels for VOCs in Soil

Table A-III is a summary of risk-based action levels for chemicals with maximum concentrations found in Site groundwater exceeding the risk-based action levels, i.e. TCE and vinyl chloride. Table A-23 is a more detailed enumeration of the calculated groundwater risk-based action levels.

VOLATILE ORGANIC COMPOUND	RISK-BASED ACTION LEVEL IN GROUNDWATER (ug/L)
vinyl chloride	500
trichloroethene	8,000

Table A-III. Risk-Based Action Levels for VOCs in Groundwater.

The method used for apportioning risk was to allocate most of the "available" risk to the more hazardous chemicals and those more commonly found at the Site. This approach minimizes the volume of soil and groundwater potentially requiring remediation, while keeping future hypothetical populations' estimated risks below target levels. Concentrations of vinyl chloride and TCE have been encountered in soil and groundwater samples from the Site in exceedence of their risk-based action levels. Other chemicals of concern have been discovered at concentrations consistently below the action levels.

Tables A-24, A-25, and A-26 are summaries of Hazard Index and Cancer Risk to each of the three hypothetical future worker populations at the calculated risk-based action levels

for soil and groundwater. Cumulative Hazard Indices and Cancer Risks are equal to or below 1.0 and 1.0×10^{-5}, respectively, in each case. Therefore, the risk-based action levels for soil and groundwater presented in Tables A-II and A-III result in an acceptable level of risk for future potentially exposed populations.

Future installation of monitoring wells (or other on-Site environmental work) may involve the collection of soil or groundwater samples for chemical analysis. Such analyses could potentially indicate the presence of chemical concentrations different from the current dataset. In this case, risk-based action levels for the Site may be recalculated to reflect the improved understanding of the distribution and concentrations of chemicals in Site soil or groundwater.

1. INTRODUCTION

This appendix presents a human health risk assessment that was performed to:

- evaluate potential impacts to human health by chemicals of concern ("COCs") present in soil and groundwater at the commercial/industrial property located at 3705-3723 Haven Avenue, Menlo Park, California (the "Site"), and
- develop risk-based action levels for soil and groundwater at the Site.

Note that baseline risks at the Site were calculated previously for development of risk-based action levels for soil excavation using data collected prior to April 1998 (EKI 1998c; EKI 1999b). The methods and assumptions used in the risk calculations described herein are consistent with the previous risk calculations, with the following exceptions. The previous risk assessment used the most conservative measured values of vadose and capillary zone saturated porosities for Site soil. The calculated risks presented herein have instead assumed Site-average values for each parameter. Some additional groundwater data were collected for the Site after April 1998. Therefore, the data set used herein to calculate the baseline risk at the Site has been updated to include all the soil and groundwater data for the Site available as of February 1999. Also, the proposed risk-based action levels have now been developed to consider VOCs in both soil and groundwater.

The risk assessment was conducted assuming hypothetical exposure scenarios for future occupants of the Site. Occupants are subdivided into several receptor populations based on their expected locations and activities. Each group was assumed to be subjected to different concentrations of chemicals for different amounts of time. All assumptions used in the risk assessment are quantified in the attached tables.

This report is divided into three major sections. The first discusses criteria used to define each of the future occupant populations, outlines the chemicals present at the Site and their representative concentrations, and explains the toxicity criteria used in calculations. The second section presents and discusses the calculation of risk-based cleanup goals at the Site, and the third section discusses conservative assumptions used and uncertainty involved in the calculations.

This risk assessment was performed using guidelines published by the U.S. Environmental Protection Agency ("USEPA"), the California Environmental Protection Agency ("Cal-EPA"), and the American Society for Testing and Materials ("ASTM"), in the following documents:

- USEPA. December 1989, *Risk Assessment Guidance for Superfund. Volume 1. Human Health Evaluation Manual.*

- Cal-EPA, July 1992, *Supplemental Guidance for Human Health Multimedia Risk Assessments of Hazardous Waste Sites and Permitted Facilities.*

- ASTM, September 1995, *Standard Guide for Risk-Based Corrective Action Applied at Petroleum Release Sites ("RBCA").*

Although all three documents are used for guidance in the risk assessment calculations, RBCA was the source of transport models used to calculate indoor and outdoor air exposure point concentrations for the assessment.

Chemicals of concern at the Site include halogenated volatile organic compounds ("VOCs"), acetone, and the aromatics benzene and toluene. Ordered by frequency of detection, the most common contaminants in soil and groundwater are trichloroethene ("TCE"), *cis*-1,2-dichloroethene ("cis-1,2-DCE"), and 1,1,2-trichloro-1,2,2-trifluoroethane ("CFC-113"). In groundwater, chloroform is also a common constituent. Based on the current set of samples, more chemicals appear to be present at detectable levels in groundwater than in soil.

2. ASSESSMENT OF BASELINE HUMAN HEALTH RISKS

The objective of a risk assessment for a particular location is to calculate the potential for adverse health effects, caused by chemicals present at the Site, to hypothetical current and future populations that may use the Site. The Site is currently unoccupied. Therefore, risk calculations in this report concern only hypothetical future populations. This section presents a discussion of the following topics:

- Potentially exposed receptor populations and relevant exposure pathways,
- Chemicals of concern present in soil and groundwater,
- Toxicity criteria for the chemicals of concern used in risk calculations,
- Assumptions used to calculate representative and exposure-point contaminant concentrations, and
- Results of the risk calculations.

2.1 Identification of Potentially Exposed Receptor Populations and Relevant Exposure Pathways

The Site is a commercial/industrial property, previously used for the manufacture of polished silicon wafers. It is located in a low-elevation, industrial/commercial area, approximately one hundred feet south of the salt evaporation ponds at the margin of San Francisco Bay. Two buildings are located on the Site; both are currently vacant. Populations at risk of potential exposure to chemicals of concern at the Site are therefore limited to hypothetical future populations of workers, which for the purpose of this study are grouped into three categories:

- Future commercial/industrial building occupants, who will work indoors on-Site over a long period of time ("Indoor Workers");
- Future maintenance personnel such as groundskeepers, who will labor primarily outdoors over a long period of time ("Maintenance Workers"); and
- Workers involved in the construction of new buildings or subsurface utilities on-Site, who will occupy the Site for much more limited periods ("Construction Workers").

Based on current land use and zoning, no residential, health-care, or educational facilities are expected to be built on-Site. Thus, all potentially exposed receptor populations in the risk assessment are assumed to be adults. Each potentially exposed future population at the Site has a set of possible exposure mechanisms, or pathways, through which it may come in contact with various chemicals of concern. These exposure pathways are dependent upon the type of activity or tasks expected from the population.

Oral ingestion of groundwater is a potential exposure pathway that was considered and rejected. Analytical results for samples of groundwater from the Site range from 8,600 mg/L to 154,200 mg/L total dissolved solids ("TDS") [EKI, 1999a], which classifies the water as brackish to saline [Drever, 1988]. The groundwater beneath the Site cannot be considered a potential source of drinking water because these values exceed the California state TDS guideline of 3,000 mg/L for drinking water sources (CRWQCB, 1995).

Dermal contact with groundwater was also rejected. Historic depth to groundwater at the Site is six to eight feet below ground surface ("bgs") [EKI, 1997a]. Expected depth of excavation for future construction utility installation or repair is estimated to be less than six to eight feet, so direct dermal exposure to groundwater is not treated as a valid exposure pathway for any of the hypothetical future Site receptor populations.

For the purpose of calculating baseline risk, parameters assumed in this study for each of the receptor populations are the following:

- INDOOR WORKERS
  - Exposure Pathways:
    - Inhalation of volatiles from groundwater
    - Inhalation of volatiles from soil
  - Exposure Parameters:
    - Frequency: 250 working days per year, none doing excavation work; all days spent working indoors
    - Duration: 25 years
- MAINTENANCE WORKERS
  - Exposure Pathways:
    - Inhalation of volatiles from soil
    - Inhalation of volatiles from groundwater
    - Dermal contact with soil
    - Incidental ingestion of soil
  - Exposure Parameters:
    - Frequency: 250 working days per year; 5 days of excavation work, 245 days of non-excavation work; all working days spent outside
    - Duration: 25 years

- CONSTRUCTION WORKERS

- Exposure Pathways:
  - Inhalation of volatiles from soil
  - Inhalation of volatiles from groundwater
  - Dermal contact with soil
  - Incidental ingestion of soil

- Exposure Parameters:
  - Frequency: 250 working days per year, 87 spent doing excavation work
  - Duration: 4 months

Unlike the Indoor Worker population, Maintenance and Construction Workers are assumed to have contact with Site soil in the course of their jobs during excavation work. Thus, dermal contact and incidental ingestion pathways are considered for these populations. Although the hypothetical Maintenance and Construction Worker populations share the same potential exposure pathways, the two groups differ in exposure duration. Maintenance Workers, being permanent employees, are assumed to undergo exposure through activities at the Site for 25 years [USEPA, 1991]. Construction Workers are assumed to have a much shorter per-individual exposure of one year, a span of time assumed to encompass the earthwork stage of a construction project. An additional difference between the two outdoor receptor populations is the assumption that Maintenance Workers engage in excavation-type activities for an average of 5 days per year of 250 days, whereas Construction Workers perform excavation 87 days (four months) of their work year. This is significant in that excavation work is modeled with a higher soil ingestion rate than non-excavation activity.

The Site is almost completely covered by asphalt or concrete. Due to this cover, mobilization of chemicals through inhalation of particulate matter from surficial soils is not considered as a viable exposure pathway. The assumption was made that the Site will retain a similar type of cover, such as asphalt, concrete, or clean landscaping fill, in the future. Volatilization of chemicals from surficial soils to ambient air is similarly precluded, as almost none of the soil at the Site exists at the surface. For modeling purposes, all contaminated soil is treated as subsurface soil.

Mobilization and diffusion of vapor-phase chemicals (volatilized from soil or groundwater) from the subsurface to the surface is driven by a concentration gradient between the subsurface source of the vapors and the local atmosphere. Many chemicals at the Site are present in both soil and groundwater, and are conservatively assumed, in the baseline risk calculations, to volatilize and diffuse from both soil and groundwater into the atmosphere.

08 Page 76 of 153

1992a; Cal-EPA, 1992]. The conservative assumption is made whereby analyses that did not detect a particular chemical of concern are treated as though the chemical had been detected at a concentration of one half the detection limit [USEPA, 1989]. Representative concentrations for all chemicals of concern at the Site are shown in Table A-3.

2.3 Toxicity Criteria

Accumulated data from various laboratory toxicity studies have been compiled and interpreted by a number of Federal and State agencies, among them the U.S. Environmental Protection Agency and the California Environmental Protection Agency. Results from human and, more commonly, animal trials are summarized into reference doses ("RfDs") for non-carcinogenic chemicals and risk slope factors ("SFs") for carcinogens. Toxicity values used in this risk assessment are taken from a hierarchy of several sources. If the needed value was not available in the preferred source, the next most reviewed source was consulted, and so on.

Non-carcinogen RfDs are preferentially obtained from the U.S. EPA Integrated Risk Information System ("IRIS") [USEPA, 1996], an on-line database of peer-reviewed toxicity information. The next most desirable RfD sources, in order of preference, are the U.S. EPA Health Effects Summary Tables ("HEAST") [USEPA, 1997], the U.S. EPA National Center for Environmental Assessment ("NCEA") Risk Assessment Issue Papers, and the Cal-EPA Office of Environmental Health Hazard Assessment Technical Support Document for the Determination of Non-Cancer Chronic Reference Exposure Levels ("OEHHA") [Cal-EPA, 1997].

Carcinogen SFs are preferentially culled from the Cal-EPA Memorandum Concerning Cancer Potency Factors: Update [Cal-EPA, 1996]. Values unavailable in that document are obtained from one of the above references for RfDs, in the same order of preference.

2.3.1 Non-Carcinogenic Toxicity Criteria

Toxicity of non-carcinogenic chemicals is expressed through reference doses, or RfDs, in units of milligrams per kilogram of body weight per day (mg/kg-day). The RfD for a particular chemical of concern is the hypothetical dose which will cause no adverse effects in human populations. An oral or ingestion reference dose ("RfDo") for a chemical is calculated from a different set of experiments than is an inhalation reference dose ("RfDi"). When one quantity or the other is unavailable, a "route-to-route extrapolation," or substitution, is sometimes used in the above data sources to estimate the missing value. As most toxicity studies are performed on laboratory animals, direct quantitative data for human toxicity of a particular chemical are uncommon. Published RfDs therefore generally contain safety factors of one or two orders of magnitude, to account for cross-species uncertainty, uncertainty from experimental procedures, and other effects. RfDs may be interpreted as representing the maximum "safe" dosage of a non-carcinogenic chemical. A low RfD indicates a low threshold dose, and therefore a

more toxic chemical; a high RfD denotes a substance with less toxicity. Reference doses for each chemical of concern at the Site are listed in Table A-4, together with a summary of demonstrated health effects and sources of the toxicological data.

2.3.2 Carcinogenic Toxicity Criteria

Toxicity for carcinogens is expressed as a risk slope factor, or "SF". Units of an SF are inverse exposure units, or $(mg/kg\text{-}day)^{-1}$. When multiplied by a dose, the inverse dosage units cancel, resulting in a dimensionless value that represents the risk associated with that dose. Slope factors are therefore the "plausible upper-bound estimates of the probability of a carcinogenic response per unit of chemical intake over a lifetime" [USEPA, 1989]. As opposed to RfDs, chemicals with low SFs are less carcinogenic than those with high SFs. Slope factors for chemicals of concern at the Site are summarized in Table A-5, along with carcinogenic effects and SF data sources for each chemical.

2.4 Calculation of Exposure Point Concentrations and Chronic Daily Intakes

Based on the calculated representative concentrations for the chemicals of concern at the Site, estimates can be calculated for the concentration each potentially exposed receptor population might experience through a particular set of exposure pathways. Called exposure point concentrations ("EPCs"), these values, along with parameters describing the potentially exposed populations, allow determination of a Chronic Daily Intake ("CDI") for each chemical, population, and pathway. CDIs are expressed as dosages, in units of milligram of chemical per kilogram of body weight per day (mg/kg-day). Carcinogenic CDIs are calculated differently from non-carcinogenic CDIs. Averaging time is assumed to be 25 years for non-carcinogens but a full lifetime of 70 years for carcinogens. Assumed values for all parameters, along with the sources of the assumptions, are summarized in Table A-6.

2.4.1 Ingestion and Dermal Contact Exposure Pathways

For the cases of soil ingestion and dermal contact, exposure point concentrations are identical to representative concentrations. CDIs for the two potential future receptor populations assumed to have the greatest likelihood of contact with Site soil, Maintenance Workers and Construction Workers, are calculated according to equations [1] and [2]:

Ingestion:

$$CDI_i = \frac{C_s \times IR_s \times EF \times ED \times 10^{-6}\,\frac{kg}{mg}}{BW \times AT} \qquad [1]$$

where

CDI_i = Chronic daily intake through ingestion (mg/kg-day)

C_s = Representative Concentration = Concentration in soil (mg/kg)

IR_s = Ingestion rate of soil (mg/day)
EF = Exposure frequency (days/year)
ED = Exposure duration (years)
BW = Body weight (kg)
AT = Averaging time (days)

Dermal Contact:

$$CDI_{dc} = \frac{C_s \times SA_s \times ABS \times AF \times EF \times ED \times 10^{-6} \frac{kg}{mg}}{BW \times AT} \quad [2]$$

where
CDI_{dc} = Chronic daily intake through dermal contact (mg/kg-day)
C_s = Representative Concentration = Concentration in soil (mg/kg)
SA_s = Surface area of skin exposed to soil contact (cm^2/event)
ABS = Soil-dermal absorption fraction (unitless)
AF = Soil adherence factor (mg/cm^2)
EF = Exposure frequency (days/year)
ED = Exposure duration (years)
BW = Body weight (kg)
AT = Averaging time (days)

The Maintenance and Construction Worker scenarios differ with regard to incidental ingestion of soil. A Maintenance Worker is assumed to excavate soil for a total of 5 days during a work year of 250 days. In contrast, a Construction Worker is assumed to engage in excavation labor for four months (approximately 87 days) throughout the 250-day work year. Soil ingestion is assumed to occur at a rate of 480 mg/day during excavation activity and 50 mg/day during routine maintenance activities [USEPA, 1991; Cal-EPA, 1992]. See Table A-6 for more details of human exposure assumptions.

2.4.2 Inhalation Exposure Pathways

Chemicals of concern can volatilize from the subsurface into the air, posing a potential hazard to on-Site workers breathing in the vicinity. Different algorithms are used to calculate Exposure Point Concentrations ("EPCs") for indoor and outdoor air. When chemicals evaporate from soil and groundwater, the rate of transfer, based on each chemical's volatility, must first be determined before air EPCs can be calculated. Volatilization is modeled as a linear transfer function of the chemical's concentration in soil or groundwater [ASTM, 1995]. Expressed as a volatilization factor ("VF"), the transfer function is based, in part, on a chemical's Henry's Law constant, diffusion coefficients in air and water, and organic carbon partition coefficient. Exposure point concentrations in air due to volatilization of chemicals present in soil and groundwater are calculated for all future worker receptor populations through equations [3] and [4]:

$$C_a = VFx \times RC \times AgF \quad [3]$$

for excavation work, and

$$C_a = VFx \times RC \quad [4]$$

for non-excavation work, where

C_a = Concentration in air, or EPC (mg/m³)
RC = Representative concentration of the chemical (mg/kg or mg/L)
AgF = Agitation factor to model enhanced evaporation from excavation (unitless)

and the general term VFx refers to one of the following pathway and chemical-specific Volatilization Factors ("VFs"):

VFs_{amb} = Soil-to-outdoor air (ambient) pathway (kg soil/m³ air):

$$VFs_{amb} = \frac{H \times \rho_S \times 10^3 \frac{cm^3 kg}{m^3 g}}{\left[\theta_{WS} + (k_{OC} \times f_{OC} \times \rho_S) + (H \times \theta_{AS})\right] \times \left(1 + \frac{U_{AIR} \times \delta_{AIR} \times L_S}{D_S^{eff} \times W}\right)} \quad [5]$$

VFw_{amb} = Groundwater-to-outdoor air (ambient) pathway (L H_2O/m³ air):

$$VFw_{amb} = \frac{H \times 10^3 \frac{L}{m^3}}{\left(1 + \frac{U_{AIR} \times \delta_{AIR} \times L_{GW}}{D_{WS}^{eff} \times W}\right)} \quad [6]$$

VFs_{enp} = Soil-to-indoor air (enclosed space) pathway (kg soil/m³ air):

$$VFs_{enp} = \frac{\left[\theta_{WS} + (k_{OC} \times f_{OC} \times \rho_S) + (H \times \theta_{AS})\right] \times \left[\frac{H \times \rho_S}{\frac{D_S^{eff}}{L_S \times ER \times L_B}}\right] \times 10^3 \frac{cm^3 kg}{m^3 g}}{1 + \left[\frac{D_S^{eff}}{L_S \times ER \times L_B}\right] + \left[\frac{D_S^{eff} \times L_{CRACK}}{L_S \times D_{CRACK}^{eff} \times \eta}\right]} \quad [7]$$

VFw_{enp}= Groundwater-to-indoor air (enclosed space) pathway (L H_2O/m^3 air):

$$VFw_{enp} = \frac{H \times \left[\frac{D^{eff}_{WS}}{L_{GW} \times ER \times L_B}\right] \times 10^3 \frac{L}{m^3}}{1 + \left[\frac{D^{eff}_{WS}}{L_{GW} \times ER \times L_B}\right] + \left[\frac{D^{eff}_{WS} \times L_{CRACK}}{L_{GW} \times D^{eff}_{CRACK} \times \eta}\right]} \quad [8]$$

VFs are based, in part, upon effective diffusion coefficients for each chemical, calculated as follows:

D^{eff}_S = Effective diffusion coefficient in soil based on vapor concentration (cm^2 / s):

$$D^{eff}_S = \left[D^{air} \times \frac{(\theta_{AS})^{3.3}}{(\theta_T)^2}\right] + \left[D^{water} \times \frac{(\theta_{WS})^{3.3}}{H \times (\theta_T)^2}\right] \quad [9]$$

D^{eff}_{CAP} = Effective diffusion coefficient through capillary fringe (cm^2 / s):

$$D^{eff}_{CAP} = \left[D^{air} \times \frac{(\theta_{ACAP})^{3.3}}{(\theta_T)^2}\right] + \left[D^{water} \times \frac{(\theta_{WCAP})^{3.3}}{H \times (\theta_T)^2}\right] \quad [10]$$

D^{eff}_{WS} = Effective diffusion coefficient between groundwater and surface (cm^2 / s):

$$D^{eff}_{WS} = \frac{(h_{CAP} + h_V)}{\left[\frac{h_{CAP}}{D^{eff}_{CAP}} + \frac{h_V}{D^{eff}_S}\right]} \quad [11]$$

D^{eff}_{CRACK} = Effective diffusion coefficient through floor or wall cracks (cm^2 / s)

$$D^{eff}_{CRACK} = \left[D^{air} \times \frac{(\theta_{ACRACK})^{3.3}}{(\theta_T)^2}\right] + \left[D^{water} \times \frac{(\theta_{WCRACK})^{3.3}}{H \times (\theta_T)^2}\right] \quad [12]$$

Where:

D^{air} = Diffusion coefficient of the chemical in air (cm^2 / s)

D^{water} = Diffusion coefficient of the chemical in water (cm^2 / s)

ER = Enclosed-space air exchange rate (L / sec)
f_{OC} = Fraction of organic carbon in soil (g C / g soil)
H = Henry's Law constant (cm³ H_2O / cm³ air)
h_{cap} = Thickness of capillary fringe (cm)
h_v = Thickness of vadose zone (cm)
k_{OC} = Organic carbon-water sorption coefficient (cm³ H_2O / g C)
L_B = Enclosed-space volume / infiltration area ratio (cm)
L_{CRACK} = Enclosed-space floor or wall thickness (cm)
L_{GW} = Depth to groundwater, i.e. $h_{cap} + h_v$ (cm)
L_S = Depth to subsurface soil sources (cm)
U_{AIR} = Wind speed above ground surface in ambient mixing zone (cm / sec)
W = Width of source area parallel to wind or groundwater flow direction (cm)
δ_{AIR} = Ambient air mixing zone height (cm)
δ_{GW} = Groundwater mixing zone thickness (cm)
η = Areal fraction of cracks in floor or wall (cm² cracks / cm² total area)
θ_{ACAP} = Volumetric air content in capillary fringe soil (cm³ air / cm³ soil)
θ_{ACRACK} = Volumetric air content in floor or wall cracks (cm³ air / cm³ crack vol.)
θ_{AS} = Volumetric air content in vadose zone soil (cm³ air / cm³ soil)
θ_T = Total soil porosity (cm³ / cm³ soil)
θ_{WCAP} = Volumetric water content in capillary fringe soil (cm³ water / cm³ soil)
θ_{WCRACK} = Volumetric water content in floor or wall cracks (cm³ water / cm³ crack vol.)
θ_{WS} = Volumetric water content in vadose zone soil (cm³ water / cm³ soil)
ρ_S = Soil bulk density (g soil / cm³ soil)

Volatilization Factors are calculated according to the method described in the ASTM RBCA guidance [ASTM, 1995]. Air diffusion coefficients ("D_{air}") for chemicals of concern at the Site are estimated using the FSG method [Lyman, et al., 1990; USEPA, 1988]. Water diffusion coefficients ("D_{water}") are calculated through the method of Hayduk and Laudie [Lyman, et al., 1990]. Ambient-air VFs are used for calculations regarding Construction and Maintenance Workers, while enclosed-space air VFs are used for Indoor Worker EPC calculations. Specific physical parameter assumptions used in the above VF equations can be found in Table A-7; the quantities are Site-specific and noted as such where available, and otherwise are default values from the ASTM RBCA guidance [ASTM, 1995]. Table A-8 lists the resulting VFs and other data for each chemical of concern and volatilization pathway.

Construction Workers are modeled herein as performing excavation for their four month on-Site tenure of 87 working days (USEPA, 1991; Cal-EPA, 1992), consequently equation [3] is applied throughout. Maintenance Workers, however, are assumed to only labor five days per year in excavation tasks; AgF is only factored in through the use of equation [3] for those five days annually. The rest of the time, Maintenance Worker air EPCs are calculated using equation [4]. Indoor Workers are assumed to never perform excavation tasks, thus air EPCs are calculated with equation [4].

Chronic Daily Intakes in air due to volatilization of chemicals present in soil are calculated for all future worker receptor populations through equation [13]:

$$CDI_{air} = \frac{C_a \times IR_a \times EF \times ED}{BW \times AT} \qquad [13]$$

where

CDI_{air} = Chronic daily intake through inhalation (mg/kg-day)
C_a = Concentration in air, or EPC (mg/m^3)
IR_a = Inhalation rate of air (m^3/day)
EF = Exposure frequency (days/year)
ED = Exposure duration (years)
BW = Body weight (kg)
AT = Averaging time (days)

Chronic daily intakes of chemicals of concern for each valid population/pathway combination are summarized in Table A-9 through Table A-18.

2.5 Baseline Risk Characterization

For the purpose of risk assessment at the Site, effects from chemicals of concern are split into two broad categories, Cancer Risk and non-carcinogenic Hazard Index. Each of these types of risk is calculated differently, although many contaminants at the Site have both effects, and are assigned both classifications. The separation is driven by the toxicity data for the two chemical effect categories. Non-carcinogens are assigned a Reference Dose ("RfD") in mg/kg-day, and carcinogens are assigned a Slope Factor ("SF"), having inverse dosage units of (mg/kg-day)$^{-1}$. This section outlines assumptions used to calculate quantitative, Site-specific estimates of potential health hazards from non-carcinogens and of incremental lifetime Cancer Risk from carcinogens occurring at the Site.

Note that baseline risks are calculated assuming receptor populations are unprotected from exposure to hazardous chemicals (i.e. no engineering controls or personal protection equipment used).

As discussed in Section 1.3, non-carcinogenic RfDs are generally based on the highest no-adverse-effects chronic dosages from several studies. The hazard of a chemical of concern through a particular exposure pathway is calculated as the Chronic Daily Intake ("CDI") divided by the RfD for that pathway. This quantity is called the Hazard Index ("HI"). It is unique to the site, chemical, exposure pathway, and receptor population:

$$HI_a = \frac{CDI_a}{RfD_a} \qquad [14]$$

where

HI_n = Hazard Index for the n^{th} combination of population, exposure pathway, and chemical of concern (dimensionless)

CDI_n = Chronic Daily Intake for the n^{th} combination of population, exposure pathway, and chemical of concern (mg/kg-day)

RfD_n = Reference Dose for the n^{th} combination of exposure pathway and chemical of concern (mg/kg-day)

For an explanation of CDI calculation for each population / pathway combination, please see footnotes to Tables A-9 through A-18, as appropriate.

Summation of Hazard Indices over all pathways and chemicals gives the Hazard Index for each population, which is targeted to remain at or below a value of one. A total HI less than or equal to one indicates that the population will not be exposed to the chemical beyond a dosage considered safe.

Carcinogenic chemicals are assigned, based on experimental evidence and mathematical modeling, a published Slope Factor for each exposure pathway. When multiplied by the CDI for that pathway, a unitless quantity results which represents the incremental risk of developing cancer from exposure to that chemical, through that exposure pathway, over a lifetime of 70 years [USEPA, 1989].

$$CR_n = CDI_n \times SF_n \qquad [15]$$

where

CR_n = Estimated incremental excess Cancer Risk for the n^{th} combination of population, exposure pathway, and chemical of concern (dimensionless)

CDI_n = Chronic Daily Intake for the n^{th} combination of population, exposure pathway, and chemical of concern (mg/kg-day)

SF_n = Slope Factor for the n^{th} combination of exposure pathway and chemical of concern $(mg/kg\text{-}day)^{-1}$

As with the non-cancer Hazard Index, summation of risk from all chemicals over all pathways valid for a particular receptor population gives an overall Cancer Risk for the population at the Site. This value is targeted to remain at or below 10^{-5}. The National Oil and Hazardous Substances Pollution Contingency Plan (40 CFR §300) mandates an acceptable range of maximum incremental carcinogenic risk between 10^{-4} and 10^{-6}. California law requires notification of on-Site workers if Cancer Risk is estimated to exceed 10^{-5} (California Code of Regulations ("CCR") Title 22, Section 12703). The targeted maximum carcinogenic risk of 10^{-5} satisfies both sets of regulations.

All potentially exposed populations are assumed to be unprotected in the baseline risk calculations.

2.5.1 Future Indoor Workers

One of the assumptions regarding the future Indoor Worker receptor population is that its members never work with soil, thus, incidental ingestion and dermal contact with contaminated soil are not considered exposure pathways for this population. Inhalation of volatile organic compounds evaporating from soil, however, is valid and is presented in Table A-9. The same data for inhalation of VOCs from groundwater is shown in Table A-10.

A summary of baseline hazard and risk for Indoor Workers may be found in Table A-19. The most significant chemical/pathway combination for Indoor Workers, in terms of Cancer Risk, is inhalation of TCE evaporating from groundwater. The non-carcinogenic Hazard Index for this population is dominated by inhalation of vinyl chloride, TCE, and cis-1,2-DCE from groundwater.

2.5.2 Future Maintenance Workers

Baseline risk characterization data for Maintenance Workers is compiled in several tables. Table A-11 summarizes the soil ingestion exposure pathway, and Table A-12 displays similar data for the soil dermal contact exposure pathway. Table A-13 displays Hazard Index and Cancer Risk for the inhalation pathway through volatilization of organic compounds from soil. The same calculations for inhalation of VOCs from groundwater are shown in Table A-14.

Hazard and risk for Maintenance Workers through all pathways is summarized in Table A-20. The most significant chemical/pathway combination for the Maintenance Worker receptor population is inhalation of vinyl chloride volatilizing from soil. Note that under existing Site conditions, potential risks experienced by the hypothetical Maintenance Worker population are within acceptable limits.

2.5.3 Construction Workers

Baseline Hazard Indices and Cancer Risks for each chemical of concern at the Site are organized in the same way as for Maintenance Workers. Table A-15 lists the soil ingestion exposure pathway, and Table A-16 lists similar data for the soil dermal contact pathway. Table A-17 lists Hazard Index and Cancer Risk for the inhalation pathway of volatile organic compounds evaporating from soil; groundwater VOC volatilization is detailed in Table A-18. A summary of baseline Cancer Risks and Hazard Indices for all Construction Worker exposure pathways is listed in Table A-21. The most significant chemical/pathway combination, both in terms of potential carcinogenic risk and non-carcinogenic health hazard for the Construction Worker receptor population, is inhalation of vinyl chloride volatilizing from soil. Dermal contact with vinyl chloride is also a significant pathway in terms of generation of carcinogenic risk for Construction Workers. Note that under current conditions, potential risks experienced by the hypothetical Construction Worker population are less than the acceptable maximum values.

3. CALCULATION OF RISK-BASED ACTION LEVELS FOR SOIL AND GROUNDWATER

Using the baseline risks calculated for the hypothetical receptor populations at the Site, risk-based action levels for soil and groundwater have been calculated, as discussed below. Risk-based action levels have been calculated considering potential exposures to future hypothetical receptor populations, i.e., Indoor Workers, Maintenance Workers, and Construction Workers.

Risk-based action levels for soil and groundwater were calculated to apportion post-remediation risk such that overall Cancer Risk to all hypothetical worker populations is at or below 1.0×10^{-5}, and overall Hazard Index is at or below 1.0. The method used for apportioning risk was to allocate most of the risk to the more hazardous chemicals and those more commonly found at the Site. This approach minimizes the volume of soil and groundwater potentially requiring remediation, while keeping future hypothetical populations' estimated risks below target levels.

Table A-22 lists risk-based action levels for soil, and Table A-23 lists risk-based action levels for groundwater. Current representative concentrations of chemicals within soil and groundwater are also shown on Tables A-22 and A-23 for comparison. TCE and vinyl chloride have been detected in Site soil and groundwater at concentrations greater than their respective risk-based action levels.

Estimates of future estimated Hazard Indices and Cancer Risks for each of the hypothetical populations are listed in Tables A-24, A-25, and A-26. These risks represent estimates of what would result from cleanup of both soil and groundwater at the Site to the respective risk-based action levels. Estimated cumulative Hazard Indices and Cancer Risks for each hypothetical population are equal to or below 1.0 and 1.0×10^{-5}, respectively. Therefore, the risk-based action levels for soil and groundwater listed in Tables A-22 and A-23 would result in an acceptable level of risk for future potentially exposed populations.

If, in the future, chemicals are measured in soil or groundwater samples that differ significantly from the current dataset, risk-based action levels may be recalculated to more accurately reflect the distribution and concentrations of the chemicals.

4. CONSERVATIVE ASSUMPTIONS IN THE RISK ASSESSMENT

The estimated baseline risks and the risk-based action levels presented in the attached tables are upper-bound, health conservative estimates of baseline risks and risk-based action levels for reasonable maximum exposure scenarios. Actual risks may be lower. This section discusses the conservative nature of some of the assumptions in the risk assessment.

Major conservative assumptions include:

- the method used to calculate representative concentrations for chemicals in soil and groundwater;
- the use of all chemicals detected on-Site for risk calculation, even if the frequency of detection was very low;
- the use of conservative exposure frequency assumptions (in days of exposure per year) for hypothetical future worker populations;
- "double counting" of certain calculated risks caused by summing the risks due to volatilization of VOCs from soil and from groundwater; and
- apportionment of risk to each chemical of concern in both soil and groundwater, even when the chemical was actually detected in only one medium.

4.1 Calculation of Representative Concentrations

Representative concentrations of chemicals used to calculate baseline risks are assumed to be the lesser of the maximum detected concentration or the 95% upper confidence limit of the mean concentration ("95% UCL"), based on a lognormal model. When calculating the 95% UCL, samples without detectable concentrations were conservatively assumed to contain chemicals at concentrations equal to half the detection limit for the analyses. Potentially exposed populations may actually be exposed to a lesser concentration than either the maximum or the 95% UCL, as the distribution of chemicals at the Site is not homogeneous.

4.2 Frequency of Detection

Chemicals detected in Site soil and groundwater are dominated by TCE and cis-1,2-DCE. As a conservative approach, however, all detected chemical species were used in calculation of baseline risks, regardless of each chemical's frequency of detection. Table A-3 shows frequencies of detection for all chemicals detected on-Site.

Given the overall conservative nature of the risk assessment, actual non-carcinogenic and carcinogenic risks to potentially exposed populations are likely to be significantly lower than reported herein. The calculated health risk-based action levels are founded on the same conservative assumptions as the baseline risk calculations. Consequently, chemicals present in soil and groundwater at their human health risk-based action level concentrations should not pose an adverse risk to occupants at the Site.

Notes:

(a) Sample depth range in feet below ground surface (ft bgs).

(b) A hyphen (-) indicates that the sample was not analyzed for the chemical.

(c) The 95% upper confidence limit of the mean concentration was calculated assuming a log-normal data distribution. One-half the detection limit value was used for samples in which the analyte concentration was reported as below the detection limit.

(d) The representative concentration was selected as the lesser of either the 95% upper confidence limit or the maximum detected concentration.

Table A-2
Summary of Chemical Analytical Data for Groundwater Samples
3695-3723 Haven Avenue Property, Menlo Park, California

Sample	Sample Collection Depth (ft bgs)[a]	Sample Collection Date	EPA Analysis Method	Concentration in Groundwater (ug/L)															
				Acetone	Benzene	Carbon Tetrachloride	Chloroform	1,1-Dichloroethane	1,2-Dichloroethane	1,1-Dichloroethene	cis-1,2-Dichloroethene	trans-1,2-Dichloroethene	Methylene Chloride	Tetrachloroethene	Toluene	1,1,1-Trichloroethane	Trichloroethene	1,1,2-Trichloro-1,2,2-Trifluoroethane	Vinyl Chloride
Summary of Concentrations (ug/L)																			
Number of Samples Analyzed				32	35	102	102	102	34	102	102	102	102	102	33	102	102	32	102
Number of Analyte Detections				6	2	22	43	4	2	10	51	2	1	1	1	8	71	14	12
Frequency of Detection (%)				19%	6%	22%	42%	4%	6%	10%	50%	2%	1%	1%	3%	8%	70%	44%	12%
Minimum Concentration				11	4.7	6.1	0.5	1.9	5	0.9	0.62	1.6	32	46	6.6	0.73	0.57	5.9	1.1
Maximum Concentration				37	460	2300	1000	140	5	270	25000	1.6	32	46	6.6	27	260000	12000	1400
95% Upper Confidence Limit[c]				88	23	2014	3308	262	31941	288	52099	259	2621	284	14	247	3130151	2221	651
Representative Concentration (ug/L)[d]				37	23	2,000	1,000	140	5.0	270	25,000	2.0	32	46	7.0	27	260,000	2,200	650

Notes:

(a) Depth of groundwater interval sampled in feet below ground surface ("ft bgs").

(b) A hyphen (-) indicates that no analysis was performed for the chemical.

(c) The 95% upper confidence limit of the mean concentration was calculated assuming a log-normal data distribution. One-half the detection limit value was used for samples in which the analyte concentration was reported as below the detection limit.

(d) The representative concentration was selected as the lesser of either the 95% upper confidence limit concentration or the maximum detected concentration.

Table A-3
Representative Concentrations of Chemicals in Soil and Groundwater
3695-3723 Haven Avenue Property, Menlo Park, California

Chemical	Soil		Groundwater	
	Frequency of Detection	Representative Concentration[a] (mg/kg)	Frequency of Detection	Representative Concentration[a] (ug/L)
Acetone	-[b]	-	19%	37
Benzene	-	-	6%	23
Carbon Tetrachloride	1%	0.021	22%	2000
Chloroform	2%	0.016	42%	1000
1,2-Dichlorobenzene	1%	0.066	-	-
1,1-Dichloroethane	1%	0.065	4%	140
1,2-Dichloroethane	-	-	6%	5.0
1,1-Dichloroethene	-	-	10%	270
cis-1,2-Dichloroethene	60%	4.0	50%	25000
trans-1,2-Dichloroethene	1%	0.063	2%	2
Methylene Chloride	-	-	1%	32
Tetrachloroethene	1%	0.063	1%	46
Toluene	-	-	3%	7
1,1,1-Trichloroethane	-	-	8%	27
Trichloroethene	62%	1.8	70%	260000
1,1,2-Trichloro-1,2,2-Trifluoroethane	33%	0.57	44%	2200
Vinyl Chloride	4%	0.14	12%	650

Notes:

(a) Representative Concentrations ("RCs") were calculated as the lesser of the maximum concentration or the 95% Upper Confidence Limit of the mean concentration ("UCL95"), assuming a lognormal distribution.

(b) A hyphen (-) means the chemical was not detected.

Table A-4
Oral and Inhalation Non-Carcinogenic Toxicity Information for Chemicals of Concern
3695-3723 Haven Avenue Property, Menlo Park, California

Compound	Oral Reference Dose (mg/kg-day)	Inhalation Reference Dose (mg/kg-day)	Non-Carcinogenic Effects	Source[a]
Acetone	0.1	0.1[b]	Liver toxicity in mice, liver and kidney weight gain in rats.	IRIS
Benzene	0.003	0.0017	Neoplasia in rats and mice.	NCEA
Carbon Tetrachloride	0.0007	0.011	Liver lesions in rats.	IRIS (o), OEHHA (i)
Chloroform	0.01	0.086	Liver cyst formation in dogs.	IRIS (o), OEHHA (i)
1,2-Dichlorobenzene	0.09	0.057	Liver necrosis and lymphocyte depletion in rats and mice.	IRIS (o), HEAST (i)
1,1-Dichloroethane	0.1	0.14	Under review	HEAST
1,2-Dichloroethane	-[c]	-	-	-
1,1-Dichloroethene	0.009	0.0057	Hepatic lesions in rats, alimentary system effects.	IRIS (o), HEAST (i)
cis-1,2-Dichloroethene	0.01	0.01[b]	Decreased hematocrit and hemoglobin in rats.	HEAST
trans-1,2-Dichloroethene	0.02	0.02[b]	Changes in serum chemistry, decreased thymus gland weight in rats.	IRIS
Methylene Chloride	0.06	0.086	Liver toxicity in rats.	IRIS (o), OEHHA (i)
Tetrachloroethene	0.01	0.011	Liver toxicity in mice, liver and kidney weight gain in rats.	IRIS (o), OEHHA (i)
Toluene	0.2	0.11	Neurotoxicity in humans when inhaled; change in liver, kidney weights in rats.	IRIS (o), OEHHA & IRIS (i)
1,1,1-Trichloroethane	0.035	0.29	Central nervous system depression, psychomotor effects in humans.	NCEA
Trichloroethene	0.17[d]	0.17	Under review.	OEHHA
1,1,2-Trichloro-1,2,2-Trifluoroethane	30	26	Psychomotor impairment in occupationally exposed humans.	IRIS (o), OEHHA (i)
Vinyl Chloride	0.0014[d]	0.0014	Under review.	OEHHA

Table A-4
Oral and Inhalation Non-Carcinogenic Toxicity Information for Chemicals of Concern
3695-3723 Haven Avenue Property, Menlo Park, California

Notes:

(a) Reference doses ("RfDs") were obtained from the California EPA Office of Environmental Health Hazard Assessment, 1997 Technical Support Document for the Determination of Noncancer Chronic Reference Exposure Levels ("OEHHA"); the U.S. Environmental Protection Agency Integrated Risk Information System ("IRIS"); the U.S. EPA 1997 Health Effects Assessment Summary Tables ("HEAST"); or the U.S. EPA National Center for Environmental Assessment Risk Assessment Issue Papers ("NCEA"); in order of precedence. Notation: (o) = oral reference dose, (i) = inhalation reference dose.

(b) An inhalation RfD is not defined in the listed sources, so the corresponding oral RfD (i.e. route-to-route extrapolation) is shown.

(c) A hyphen (-) indicates that no data for the indicated parameter was available from the listed sources.

(d) An oral RfD is not defined in the listed sources, so the corresponding inhalation RfD (i.e. route-to-route extrapolation) is shown.

Table A-5
Oral and Inhalation Carcinogenic Toxicity Information for Chemicals of Concern
3695-3723 Haven Avenue Property, Menlo Park, California

Compound	Weight of Evidence Classification[a]	Oral Slope Factor $(mg/kg\text{-}d)^{-1}$	Inhalation Slope Factor $(mg/kg\text{-}d)^{-1}$	Carcinogenic Effects	Source[b]
Acetone	D	-[c]	-	-	IRIS
Benzene	A	0.1	0.1	Non-lymphocytic leukemia from occupational exposure of humans.	Memo
Carbon Tetrachloride	B2	0.15	0.15	Liver cell carcinomas in rats, mice, hampsters.	Memo
Chloroform	B2	0.031	0.019	Several tumor types formed in rats and mice.	Memo
1,2-Dichlorobenzene	D	-	-	-	IRIS
1,1-Dichloroethane	C	0.0057	0.0057	Mammary gland carcinomas, liver cell carcinomas, benign uterine polyps in female rats and mice.	Memo
1,2-Dichloroethane	B2	0.07	0.07	Several tumor types in rats. Lung papillomas in mice.	Memo
1,1-Dichloroethene	C	-	-	-[d]	IRIS
cis-1,2-Dichloroethene	D	-	-	-	IRIS
trans-1,2-Dichloroethene	-	-	-	-	-
Methylene Chloride	B2	0.014	0.0035	Liver cell and lung neoplasms in mice. Salivary gland sarcomas, benign mammary tumors in rats.	Memo
Tetrachloroethene	B2	0.051	0.021	-	Memo
Toluene	D	-	-	-	IRIS
1,1,1-Trichloroethane	D	-	-	-	IRIS
Trichloroethene	B2	0.015	0.01	-	Memo
1,1,2-Trichloro-1,2,2-Trifluoroethane	-	-	-	-	-
Vinyl Chloride	A	0.27	0.27	Liver, lung tumors in rats.	Memo

Table A-5
Oral and Inhalation Carcinogenic Toxicity Information for Chemicals of Concern
3695-3723 Haven Avenue Property, Menlo Park, California

Notes:

(a) U.S. EPA weight-of-evidence classification is as follows:

A = Human Carcinogen

B1 or B2 = Probable Human Carcinogen; B1 indicates that limited human data are available; B2 indicates that there is sufficient evidence in animals and inadequate or no evidence in humans.

C = Possible Human Carcinogen

D = Not Classifiable as to Human Carcinogenicity

E = Evidence of Non-Carcinogenicity for Humans

Weight-of-evidence information obtained from the U.S. Environmental Protection Agency Integrated Risk Information System database ("IRIS"); the July 1997 U.S. EPA Health Effects Assessment Summary Tables ("HEAST"); or the U.S. EPA National Center for Environmental Assessment Risk Assessment Issue Papers ("NCEA"), in order of precedence.

(b) Slope factors were obtained from the California Environmental Protection Agency, 1996 Memorandum of Cancer Potency Factors Update ("Memo", see below); the U.S. EPA IRIS database; the 1997 U.S. EPA HEAST; or the U.S. EPA NCEA, in order of precedence.

(c) A hyphen (-) indicates that no data for the indicated field was available in the listed sources.

(d) 1,1-Dichloroethene is not recognized as a human carcinogen by the State of California (source: California EPA, 1996, *California Cancer Potency Factors*, California Environmental Protection Agency, Office of Environmental Health Hazard Assessment, Sacramento, California, 1 April 1996).

Table A-6
Human Exposure Assumptions
3695-3723 Haven Avenue Property, Menlo Park, California

Parameter	Variable	Value	Reference [a]
Air Inhalation Rate (m^3/day)	IRa		
All Adult Workers		20	USEPA (1991), Cal-EPA (1992)
Averaging Time (days)	AT		
Non-Carcinogens			
Maintenance Worker (25 yrs)		9125	USEPA (1991), Cal-EPA (1992)
Construction Worker (1 yr)		365	USEPA (1991), Cal-EPA (1992)
Indoor Worker (25 yrs)		9125	USEPA (1991), Cal-EPA (1992)
Carcinogens			
All Workers (70 yrs)		25550	USEPA (1991), Cal-EPA (1992)
Body Weight (kg)	BW		
All Adult Workers		70	USEPA (1991), Cal-EPA (1992)
Exposure Duration (years)	ED		
Maintenance Worker		25	USEPA (1991), Cal-EPA (1992)
Construction Worker		1	Best Professional Judgement
Indoor Worker		25	USEPA (1991), Cal-EPA (1992)
Exposure Frequency (days/year or events/year)	EF		
Maintenance Worker - excavation		5	Best Professional Judgement
Maintenance Worker - nonexcavation		245	Best Professional Judgement
Construction Worker		87	USEPA (1991), Cal-EPA (1992)
Indoor Worker		250	USEPA (1991), Cal-EPA (1992)
Skin Surface Area (cm^2/event)	SAs		
All Adult Workers		3160	Based on U.S. EPA (1989a)
Soil Adherence Factor (mg/cm^2)	AF		
All Outdoor Workers - Excavation		0.5	ASTM (1995)
All Outdoor Workers - Nonexcavation		0.5	ASTM (1995)
Soil Agitation Factor for Volatilization During Excavation (dimensionless)	AgF	1	U.S. EPA (1989b)
Soil Ingestion Rate (mg/day)	IRs		
Maintenance Worker - excavation		480	USEPA (1991)
Maintenance Worker - nonexcavation		50	USEPA (1991), Cal-EPA (1992)
Construction Worker		480	USEPA (1991)
Soil-Dermal Absorbtion Fraction (dimensionless)	ABS		Cal-EPA (1994)
VOCs		0.1

Table A-7
Site Physical Parameter Assumptions
3695-3723 Haven Avenue Property, Menlo Park, California

Symbol	Value	Variable	Source
h_{cap}	15	Thickness of capillary fringe (cm)	EKI, 1997b [a]
h_v	175	Thickness of vadose zone (cm)	EKI, 1997b
θ_{as}	0.083	Volumetric air content in vadose zone soil (cm^3 air / cm^3 soil)	EKI, 1997b
θ_{ws}	0.331	Volumetric water content in vadose zone soil (cm^3 water / cm^3 soil)	EKI, 1997b
θ_{acap}	0.018	Volumetric air content in capillary fringe soil (cm^3 air / cm^3 soil)	EKI, 1997b
θ_{wcap}	0.396	Volumetric water content in capillary fringe soil (cm^3 water / cm^3 soil)	EKI, 1997b
θ_{acrack}	0.083	Volumetric air content in foundation or wall cracks (cm^3 air / cm^3 crack vol.)	ASTM, 1995 [b]
θ_{wcrack}	0.331	Volumetric water content in foundation or wall cracks (cm^3 water / cm^3 crack vol.)	ASTM, 1995
θ_T	0.414	Total soil porosity (cm^3 / cm^3 soil)	EKI, 1997b
η	0.001	Areal fraction of cracks in foundation or wall (cm^2 cracks / cm^2 total area)	Daugherty, 1992 [c]
ρ_s	1.57	Soil bulk density (g soil / cm^3 soil)	EKI, 1997b
Θ_m	0.225	Soil moisture content by mass (kg water / kg dry soil)	EKI, 1997b
L_B	244	Enclosed-space volume / infiltration area ratio (cm)	EKI [d]
L_{crack}	11	Enclosed-space foundation or wall thickness (cm)	EKI, 1997b
L_{gw}	190	Depth to groundwater, i.e. $h_{cap} + h_v$ (cm)	EKI, 1997b
L_s	30	Depth to subsurface soil sources (cm)	EKI, 1997b
ER	0.00023	Enclosed-space air exchange rate (L / sec)	ASTM, 1995
U_{air}	410	Wind speed above ground surface in ambient mixing zone (cm / sec)	WRRC, 1998 [e]
δ_{air}	200	Ambient air mixing zone height (cm)	ASTM, 1995
W	5100	Width of source area parallel to wind or groundwater flow direction (cm)	EKI, 1997a
foc	0.0061	Fraction of organic carbon in soil (g C / g soil)	EKI, 1997b

Notes:

(a) Parameter values were derived or estimated from physical properties measured onsite and documented in one of the following:

EKI, 1997a, *Remedial Investigation Report, 3695-3723 Haven Avenue and Vicinity, Menlo Park, California.* Erler & Kalinowski, Inc., 21 April 1997.

EKI, 1997b, *Results of Additional Investigations and Testing, 3695-3723 Haven Avenue and Vicinity, Menlo Park, California.* Erler & Kalinowski, Inc., 30 December 1997.

DR Page 112 of 163

Table A-7
Site Physical Parameter Assumptions
3695-3723 Haven Avenue Property, Menlo Park, California

(b) Parameter values were defaults taken from the ASTM RBCA guide:

ASTM, 1995, *Standard Guide for Risk-Based Corrective Action Applied at Petroleum Release Sites*. American Society for Testing and Materials, Designation E 1739-95, 10 September 1995.

Volumetric air and water content of foundation and wall cracks assumed to be identical to air and water content of vadose zone soil, as in RBCA.

(c) Taken from:

Daugherty, S.J., 1992, *Regulatory Approaches to Hydrocarbon Contamination from Underground Storage Tanks*. in Kostecki, P.T, and E.J. Calabrese, eds., Hydrocarbon Contaminated Soils and Groundwater: Analysis, Fate, Environmental and Public Health Effects, Remediation. Vol. 1. Lewis Publishers.

(d) Best professional judgement by EKI personnel.

(e) Western Regional Climate Center data for Moffett Field, Mountain View, CA.

Notes:

(a) Solubility values from Montgomery, J.H. and L.M. Welkom, 1991, *Groundwater Chemicals Desk Reference*. Lewis Pub. Co., Chelsea, Mich.

(b) Saturation soil concentration ("Csat") calculated through the equation:

$C_{sat} = (S \times \Theta m / \rho_s) \times (Koc \times foc \times \rho_s + \theta_{ws} + H' \times \theta_{as})$

(Parameters and values used in the above equation are shown in Table A-7 and Table A-8.)

(c) Definition of terms (for an explanation of calculations, see section 2.4 of the text):

- S = Solubility
- C_{sat} = Saturation concentration
- C_{max} = Maximum analysed concentration in soil samples
- H' = Dimensionless Henry's Law constant
- D_{air} = Diffusivity in air
- D_{water} = Diffusivity in water
- K_{oc} = Organic carbon partition coefficient
- VFw_{esp} = Volatilization factor for the groundwater to enclosed space air pathway
- VFs_{esp} = Volatilization factor for the soil to enclosed space air pathway
- VFw_{amb} = Volatilization factor for the groundwater to ambient air pathway
- VFs_{amb} = Volatilization factor for the soil to ambient air pathway

Total Estimated Risk due to Inhalation of COCs Volatilized from Soil to Indoor Air:								0.02	2.35E-06

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations ("RCs").

(b) Volatilization factor from soil to enclosed-space air ("VFesp") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") [ASTM, 1995]. Parameters used in the RBCA model are listed in Tables 7 and 8.

(c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{Ca * IRa * EF * ED}{BW * AT}$$

Table A-9

Characterization of Human Health Risks due to Inhalation of COCs Volatilized from Subsurface Soil for Future Indoor Workers

3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(inhalation)}$ = Chronic Daily Intake (mg/kg-day)
Ca = Exposure Point Air Concentration (mg/m^3) = VFssp * RC
IRa = Air Inhalation Rate (m^3/day)
EF = Exposure Frequency (days/year)
ED = Exposure Duration (years)
BW = Body Weight (kg)
AT = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the CDI_i/RfD_i. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as $CDI_i \times SF_i$. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Inhalation of COCs Volatilized from Groundwater to Outdoor Air:								0.06	1.7E-05

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations ("RCs").

(b) Volatilization factor from groundwater to enclosed-space air ("VFwesp") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") [ASTM, 1995]. Parameters used in the RBCA model are listed in Tables 7 and 8.

(c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{Ca * IRa * EF * ED}{BW * AT}$$

Table A-10

Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Groundwater for Future Indoor Workers

3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(inhalation)}$ = Chronic Daily Intake (mg/kg-day)

Ca = Exposure Point Air Concentration (mg/m^3) * VFwamb * RC

IRa = Air Inhalation Rate (m^3/day)

EF = Exposure Frequency (days/year)

ED = Exposure Duration (years)

BW = Body Weight (kg)

AT = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the CDI_i/RfD_i. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as $CDI_i \times SF_i$. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Ingestion of Soil Containing COCs:						3.1E-04	1.5E-08

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations.

(b) Chronic daily intakes (CDIs) were estimated using methods recommended by U.S. EPA or Cal-EPA, as follows:
(Note that different soil ingestion rates were assumed for excavation and non-excavation work. See Table A-6 for details.)

$$CDI_{(ingestion)} = \frac{Cs * IRs * EF * ED * 10^{-6}\ kg/mg}{BW * AT}$$

where:

$CDI_{(ingestion)}$ = Chronic daily intake (mg/kg-day)

Cs = Concentration in soil (mg/kg)

IRs = Ingestion Rate of soil (mg/day)

Table A-11
Characterization of Baseline Human Health Risks due to Ingestion of COCs in Soil for Future Maintenance Workers
3695-3723 Haven Avenue Property, Menlo Park, California

EP = Exposure Frequency (days/year)
ED = Exposure Duration (years)
BW = Body Weight (kg)
AT = Averaging Time (days)
and assuming Cs = RCsoj]

(c) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(d) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(e) Non-carcinogenic hazard index (HI) for a compound "i" is defined as the CDI_i/RfD_i. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(f) Estimated lifetime incremental cancer risk for compound "i" is defined as $CDI_i \times SF_i$. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Inhalation of COCs Volatilized from Soil to Outdoor Air:								0.03	3.0E-06

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations ("RCs").

(b) Volatilization factor from soil to ambient air ("VFsamb") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") (ASTM, 1995). Parameters used in the RBCA model are listed in Tables 7 and 8.

(c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{Cp * IRa * EF * ED}{BW * AT}$$

Table A-13

Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Subsurface Soil for Future Maintenance Workers

3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(inhalation)}$ = Chronic Daily Intake (mg/kg-day)

Ca = Exposure Point Air Concentration (mg/m^3) = VFsamb * RC for non-excavation work and Ca = VFsamb * RC * AgF for excavation work, where AgF = Agitation Factor = 18.

IRa = Air Inhalation Rate (m^3/day)

EF = Exposure Frequency (days/year)

ED = Exposure Duration (years)

BW = Body Weight (kg)

AT = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the CDI_i/RfD_i. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as $CDI_i \times SF_i$. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

1,1,1-Trichloroethane	27	7.3E-06	2.0E-07	3.9E-08	-	0.29	-	1.3E-07	-
Trichloroethene	260000	5.8E-06	1.5E-03	2.9E-04	1.0E-04	0.17	0.01	1.7E-03	1.0E-06
1,1,2-Trichloro-1,2,2 Trifluoroethane	2200	3.8E-05	8.4E-05	1.6E-05	-	26	-	6.3E-07	-
Vinyl Chloride	650	1.2E-05	8.0E-06	1.6E-06	5.6E-07	0.0014	0.27	1.1E-03	1.5E-07
Total Estimated Risk due to Inhalation of COCs Volatilized from Groundwater to Outdoor Air:								0.005	1.4E-06

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations ("RCs").

(b) Volatilization factor from groundwater to ambient air ("VFwamb") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") [ASTM, 1995]. Parameters used in the RBCA model are listed in Tables 7 and 8.

(c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{Ca * IRa * EF * ED}{BW * AT}$$

Table A-14

Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Groundwater for Future Maintenance Workers

3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(inhalation)}$ = Chronic Daily Intake (mg/kg-day)

Ca = Exposure Point Air Concentration (mg/m^3) = VFwamb * RC

IRa = Air Inhalation Rate (m^3/day)

EF = Exposure Frequency (days/year)

ED = Exposure Duration (years)

BW = Body Weight (kg)

AT = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "j" is defined as the CDI_j/RfD_j. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "j" is defined as $CDI_j \times SF_j$. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Ingestion of Soil Containing COCs:						0.0009	1.7E-09

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations.

(b) Chronic daily intakes (CDIs) were estimated using methods recommended by U.S. EPA or Cal-EPA, as follows:
(Note that different soil ingestion rates were assumed for excavation and non-excavation work. See Table A-6 for details.)

$$CDI_{(ingestion)} = \frac{Cs * IRs * EF * ED * 10^{-6}\ kg/mg}{BW * AT}$$

where:

$CDI_{(ingestion)}$ = Chronic daily intake (mg/kg-day)
Cs = Concentration in soil (mg/kg)
IRs = Ingestion Rate of soil (mg/day)

Table A-15
Characterization of Baseline Human Health Risks due to Ingestion of COCs in Soil for Construction Workers
3695-3723 Haven Avenue Property, Menlo Park, California

EF = Exposure Frequency (days/year)
ED = Exposure Duration (years)
BW = Body Weight (kg)
AT = Averaging Time (days)
and assuming Cs = RCsoil

(c) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(d) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(e) Non-carcinogenic hazard index (HI) for a compound "i" is defined as the CDI_i/RfD_i. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(f) Estimated lifetime incremental cancer risk for compound "i" is defined as $CDI_i \times SF_i$. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Dermal Contact with Soil Containing COCs:						8.4E-04	3.9E-08

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations.

(b) Chronic daily intakes (CDIs) were estimated using methods recommended by U.S. EPA or Cal-EPA, as follows:

$$CDI_{(\text{dermal contact})} = \frac{Cs * SAs * ABS * AF * EF * ED * 10^{-6}\ kg/mg}{BW * AT}$$

Table A-16
Characterization of Baseline Human Health Risks due to Dermal Contact with COCs in Soil for Construction Workers
3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(dermal\ contact)}$ = Chronic daily intake (mg/kg-day)
Cs = Concentration in soil (mg/kg)
SAs = Surface Area of Skin exposed to soil contact (cm^2/event)
AF = Soil Adherence Factor (mg/cm^2)
ABS = Soil-Dermal Absorbtion Fraction (dimensionless)
EF = Exposure Frequency (events/year)
ED = Exposure Duration (years)
BW = Body Weight (kg)
AT = Averaging Time (days)
and assuming Cs = RCsoil

(c) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(d) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(e) Non-carcinogenic hazard index (HI) for a compound "i" is defined as the CDI_i/RfD_i. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(f) Estimated lifetime incremental cancer risk for compound "i" is defined as $CDI_i \times SF_i$. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Inhalation of COCs Volatilized from Soil to Outdoor Air:								**0.0**	**4.2E-08**

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations ("RCs").

(b) Volatilization factor from soil to ambient air ("VFsamb") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") [ASTM, 1995]. Parameters used in the RBCA model are listed in Tables 7 and 8.

(c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{Ca * IRa * EF * ED}{BW * AT}$$

Table A-17
Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Subsurface Soil for Construction Workers
3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(inhalation)}$ = Chronic Daily Intake (mg/kg-day)

Cs = Exposure Point Air Concentration (mg/m^3) = VFsamb * RC for non-excavation work and Cs = VFsamb * RC * AgF for excavation work, where AgF = Agitation Factor = 1.

IRa = Air Inhalation Rate (m^3/day)

EF = Exposure Frequency (days/year)

ED = Exposure Duration (years)

BW = Body Weight (kg)

AT = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the CDI_i/RfD_i. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as $CDI_i \times SF_i$. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Menlo Park, CA

Soil Management Plan Agreement

All project personnel and subcontractors are required to sign the following agreement prior to conducting work at the site.

1. I have read and fully understand the plan and my individual responsibilities.

2. I agree to abide by the provisions of the plan.

Subject: Response to City of Menlo Park April 9, 2021 Email Request
Proposed Development Project
3723 Haven Ave, Menlo Park CA

AWR prepared this letter on behalf of FPG Development Group and the proposed development at 3723 Haven Ave, Menlo Park CA . This letter responds to the City of Menlo Park's April 9, 2021 email, which requests clarification regarding the reports describing environmental conditions 3723 Haven Avenue in relation to the proposed development.

Environmental Conditions

AWR previously sent the City the *Environmental Sampling Report* (AWR, April 2019). An updated report titled *Site Investigation Report* (AWR, August 2019) is attached. The *Site Investigation Reports* states that its purpose was "to investigate and evaluate the lateral and vertical extent of chlorinated volatile organic compounds (CVOCs) in ground water and soil vapor at 3723 Haven Ave., Menlo Park, CA (Site)." The report also recommends actions to mitigate risks posed by environmental conditions to the proposed development. The findings documented in the *Site Investigation Report* remain valid today.

Please know that the Regional Water Quality Control Board (Water Board) is currently in receipt of a Risk Management Plan (RMP) for the development proposed at 3723 Haven Avenue. Based on the environmental conditions, the RMP describes mitigation measures to be performed during construction. Our communications with the Water Board indicate that the RMP will be approved.

Since August 2019, others have performed and documented environmental investigations in the immediate area. The most recent environmental reports can be found on the State Water Board's Geotracker database.

Phase II Report is Not Needed

Phase II ESAs typically evaluate if known or suspected contamination identified in a preceding Phase I ESA are present or absent at a property. However, many years of environmental investigations already have been performed at and adjacent to 3723 Haven Avenue pursuant to the Water Board's directives and Siltec's prior operations. Therefore, a formal Phase II was deemed

unnecessary. Instead, the *Site Investigation Report* was conducted to inform the design of environmental mitigation measures for the proposed development, as described in the RMP.

Phase I ESA

A Phase I ESA (attached) was prepared in 2018 and is attached.

If you have any questions regarding the environmental matters related to this property, please contact me at 925-786-5230 or tfulmer@awrcorp.net, or the Regional Water Quality Control Board's case manager for the site Nicole Fry, 510-622-5047 Nicole.Fry@Waterboards.ca.gov .

Regards,

AWR ENVIRONMENTAL

Tyson Fulmer, PG
Senior Project Manager

Phase I Environmental Site Assessment, 3705 and 3723 Haven Avenue, Menlo Park, CA, AWR, 2018

Phase I Environmental Site Assessment

3705 and 3723 Haven Avenue
Menlo Park, California

March 21, 2018

Prepared by:
AWR Environmental
1046 W Taylor Street, Suite 209
San Jose, CA 95126

Executive Summary

Consultant: AWR Environmental

Subject Property: 3705 and 3723 Haven Avenue, Menlo Park, California

Client: Huettig & Schromm, Inc

Location: The Subject Property is located at 3705 and 3723 Haven Avenue in Menlo Park, California. The site is two detached parcels referenced as Assessor's Parcel Number (APN) 055-170-240 and 055-170-350. A parcel currently with the address of 3515 Haven Avenue is located between the two subject site parcels and is not included as part of this Phase I ESA.

Current Use: The two parcels each have a single story building that is divided into multiple tenant spaces. The building at 3723 Haven was initially constructed between 1968 and 1974 and has a multiple tenant office area in the front and the rear is a raised ceiling warehouse style area that is occupied by two separate tenants. The building at 3705 Haven was initially constructed between 1963 and 1968 and is currently multiple tenant office space. Paved parking/driving areas and landscaping and hardscaping near the buildings and property perimeter is also present on both parcels.

Current Owner: The current property owner of both parcels is Integris/Millenium Joint Venture LLC.

Vicinity Characteristics: The surrounding area was traditionally industrial but is becoming mixed use with a large apartment complex recently constructed on the larger parcel located behind both of the subject site parcels.

Purpose: This Phase I Environmental Site Assessment (ESA) was performed to (1) identify any recognized environmental conditions (RECs), (2) identify any vapor encroachment conditions (VECs), and (3) permit a user to satisfy one of the requirements to qualify for the innocent landowner defense under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability protection (42 U.S.C. §9601). All components of this ESA were performed or overseen by Environmental Professionals as defined in the All Appropriate Inquiries (AAI) Standard and the American Society for Testing and Materials (ASTM) E 1527-13.

Conclusions:

Our assessment revealed the following for the site:

Recognized Environmental Conditions (REC): none

Historical Recognized Environmental Conditions (HREC): none

Controlled Recognized Environmental Conditions (CREC):
The release from the Siltec Corporation is a controlled recognized environmental condition (CREC) because it has been granted a no further action determination letter but environmental impacts were known to be present at the site at the time of closure and the environmental restrictions and requirements in the deed restriction apply. These known residual conditions have the potential to pose ongoing risks to the quality of soil vapor, soil, ground water, and indoor air at 3705 and 3723 Haven Avenue.

From 1970 through 1989, Siltec Corporation used the site for manufacturing polished silicon wafers, conducting various industrial activities on the site and adjoining properties. Chlorinated volatile organic compounds (VOCs) were used on site during this period and in 1994 VOCs were detected in local soil and groundwater.

The site and adjoining parcels were reported and investigated under the name Siltec at 3702-3723-Haven Avenue. This release address is listed in other records as 3695-3723 Haven Avenue and 3705-3723 Haven Avenue.

Vapor Encroachment Condition - It was identified during the screening process that a Vapor Encroachment Condition (VEC) has a potential to be present or cannot be ruled out at the subject property due to residual concentrations of chlorinated solvents used and released at and adjacent to both parcels.

In 1999, a deed restriction specifying prohibitions on certain site uses for all three parcels in the original Siltec property, and outlining certain monitoring responsibilities of the property owners, including practices specified in the Risk Management Plan (RMP). The RMP was incorporated into the deed restriction and both were recorded in the Official records of San Mateo County for all three Siltec properties (including the two parcels that are the subject site) on August 9, 1999.

The RWQCB No Further Action (NFA) letter dated June 16, 2014 addresses the site as 3695-3723 Haven Ave. However, the GeoTracker file lists 3705-3723 Haven

Based on the 1960s-1970s construction dates, asbestos containing materials and lead based paint may have been used in the buildings. This is not a REC as defined in the ASTM standard practice. Any renovation or demolition should comply with applicable sampling and abatement requirements.

Recommendations:

The previous release appears to have been resolved to the satisfaction of the overseeing agency and no additional investigation or remediation is needed. We do, however, recommend the following:

Confirm with the Regional Water Board the requirement to continue sampling ground water from the remaining monitoring well MW-8 and if this well can now be destroyed.

Evaluate the quality of soil gas and potential risks to indoor air at the subject properties.

Based on the 1960s-1970s construction dates, asbestos containing materials and lead based paint may have been used in the buildings. This is not a REC as defined in the ASTM standard practice. Any renovation or

demolition should comply with applicable sampling and abatement requirements. Evaluation of lead in soil due to lead based paint may be prudent.

Evaluate the quality of ground water at the subject properties to assess the adequacy of the prior remediation and any persistent residual impacts from on-site and off-site conditions.

1. INTRODUCTION

On behalf of Huettig & Schromm, Inc (hereinafter referred to as the "Client"), Applied Water Resources Corporation (AWR), performed a Phase I Environmental Site Assessment (ESA) of the property located at 3705 and 3723 Haven Ave, Menlo Park, California (hereinafter referred to as the "subject property").

1.1 PURPOSE

This Phase I Environmental Site Assessment (ESA) was performed to (1) identify any recognized environmental conditions (RECs), (2) identify any vapor encroachment conditions (VECs), and (3) permit a user to satisfy one of the requirements to qualify for the innocent landowner defense under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability protection (42 U.S.C. §9601). All components of this ESA were performed or overseen by Environmental Professionals as defined in the All Appropriate Inquiries (AAI) Standard and the American Society for Testing and Materials (ASTM) E 1527-13.

1.2 DETAILED SCOPE OF SERVICES

The following tasks were performed in accordance with the Scope of Services.

- Visual site inspection of the subject property to investigate for recognized environmental conditions. AWR is not responsible for inspecting areas covered by parked vehicles, overgrown vegetation, and other obstacles preventing access.
- A historical review of the use and improvements of the subject property through a review of aerial photographs, historical topographic maps, city directories, fire insurance maps, title reports, and/or building department records.
- A review of available geologic and hydrogeologic literature concerning the property and surrounding area.
- Interviews of persons familiar with the history of the subject property, including key site managers, owners, tenants, past tenants, and/or previous owners.
- Review of appropriate federal, state, and local regulatory agencies to reveal known hazardous wastes sites or significant leaks or spills of hazardous materials that May have occurred at the subject property and immediate vicinity.
- Interviews with applicable local agencies familiar with the areas in the vicinity of the subject property such as local fire departments, health departments, Regional Water Quality Control Board, and/or other local government agencies.

1.3 Significant Assumptions

No significant assumptions were made during this Phase I ESA.

1.4 Limitations and Expectations of Agreement

AWR has performed the services for this project in accordance with our proposal, and within the current standards of the American Society for Testing and Materials (ASTM 1527-13) for Phase I Environmental Site Assessments and the standards for All Appropriate Inquiries (AAI) approved by the Federal Environmental Protection Agency. Except for the representations set forth in this Phase I ESA, no other representations, guarantees, or warrantees are either expressed or implied. A record search was limited to reasonably ascertainable information that could be obtained within 20 calendar days.

The review was limited to a search for RECs at the subject property. The term REC means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property including vapor encroachment conditions. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimus* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The term vapor encroachment condition (VEC) means the presence or likely presence of chemical of concern vapors in the subsurface of the subject property caused by the release of vapors from contaminated soil or ground water either on or near the subject property as identified by Tier 1 or Tier 2 procedures.

There is no investigation that is thorough enough to preclude the presence of hazardous materials that presently, or in the future, may be considered hazardous at the site. Because regulatory evaluation criteria are constantly changing, concentrations of contaminants presently considered low may, in the future, fall under more stringent regulatory standards that require remediation.

The Site Reconnaissance was limited to visual observation of surface conditions at the subject property. Interviews with public agency personnel were conducted. Reasonably ascertainable information was reviewed. This approach reflects current ASTM standards and AAI regulations.

Where there is a conflict between the environmental database and AWR's actual knowledge with regard to the distance and direction from the subject property of sites listed on the database, information obtained by AWR from the site reconnaissance was used. Whenever feasible, AWR notes such conflict within the text of the report.

This ESA addresses recognized environmental conditions at the subject property. However, certain conditions, such as those listed below may not be revealed:

1) naturally occurring toxic materials in subsurface soils, rocks, or water, or toxicity of onsite flora;
2) toxicity of substances common in current habitable environments, such as stored household products, building materials, and consumables;
3) biological pathogens;

4) contaminant plume below the depths sampled or from remote source;
5) contaminants or contaminant concentrations that do not violate present regulatory standards, but may violate future standards; and
6) unknown site contamination, such as illegal dumping and/or accidental spillage which may occur following the site visit by AWR.

Opinions and judgments expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions. This document and the information contained herein have been prepared solely for the Client and any reliance on this report by third parties not authorized by the Client shall be at such party's sole risk.

Conducting an AAI Phase I ESA alone does not provide a landowner with protection against CERCLA liability. Landowners who want to qualify as bona fide prospective purchasers or contiguous property owner must comply with all of the statutory requirements identified in CERCLA Section 107(r) and 107(q).

1.5 Special Terms and Conditions

No special terms or conditions were agreed upon for conducting this Phase I ESA.

1.6 User Reliance

As specified in ASTM E 1527-13, Sections 7.5.2 and 7.5.2.1, AWR is not required to independently verify the information provided by the User (Client), obtained from interviews, previous environmental reports, and/or reviewed documents during records review.

2. SITE DESCRIPTION

2.1 Site Location

The Subject Property is located at 3705 and 3723 Haven Avenue in Menlo Park, California. The site is two detached parcels referenced as Assessor's Parcel Number (APN) 055-170-240 and 055-170-350. A parcel currently with the address of 3515 Haven Avenue is located between the two subject site parcels and is not included as part of this Phase I ESA. Maps showing the site location are included in Appendix A.

2.2 Site and Vicinity General Characteristics

The surrounding area was traditionally industrial but is becoming mixed use with a large apartment complex recently constructed on the larger parcel located behind both of the subject site parcels.

2.3 Current and Proposed Use of the Property

The two parcels each have a single story building that is divided into multiple tenant spaces. The building at 3723 Haven was initially constructed between 1968 and 1974 and has a multiple tenant office area in the front and the rear is a raised ceiling warehouse style area that is occupied by two separate tenants. The building at 3705 Haven was initially constructed between 1963 and 1968 and is currently multiple tenant office space. Paved parking/driving areas and landscaping and hardscaping near the buildings and property perimeter is also present on both parcels.

It is our understanding the property may be sold. The prospective buyer indicated there are no immediate plans to change the site uses although the potential for future redevelopment is being evaluated as part of the property transfer due diligence.

2.4 Description of Structures, Road, and Other Improvements

The two parcels each have a single story building that is divided into multiple tenant spaces. The building at 3723 Haven was initially constructed between 1968 and 1974 and has a multiple tenant office area in the front and the rear is a raised ceiling warehouse style area that is occupied by two separate tenants. The building at 3705 Haven was initially constructed between 1963 and 1968 and is currently multiple tenant office space. Paved parking/driving areas and landscaping and hardscaping near the buildings and property perimeter is also present on both parcels.

Both site parcels are accessed from Haven Avenue. There is one entrance off of Haven Avenue on the 3723 Haven parcel and there are two entrances connected in an L-shaped parking and driveway area on the 3705 Haven parcel.

3. USER PROVIDED INFORMATION

3.1 Title Records

An Environmental Liens Search was performed by EDR as a part of this Phase I ESA. No additional title information was provided by the user.

3.2 Environmental Liens or Activity and Use Limitations

The Environmental Professional is required to search for Activity and Use Limitations (AULs) if such records are available in *"publicly available lists or registries."* Typical AULs include land use restrictions (LURs), institutional controls (ICs), and Engineering Controls (ECs). Typical ICs include: 1) governmental controls such as zoning; 2) proprietary controls such as covenants or easements; 3) enforcement documents such as orders or consent decrees; and 4) information devices such as land record or deed notices. Typical ECs include: 1) passive measures such as vapor barriers and setbacks; 2) active measures such as remediation systems; and 3)

monitoring of passive and/or active measures. According to 40 CFR Part 312.26 (b) (7), ICs are to be investigated on the subject property and according to 40 CFR Part 312.26 (b) (6) and (c) (2) (ii), ECs are to be reviewed to a 0.5 mile radius of the subject property. ASTM 1527-13 recommends that ECs be reviewed only for the subject property.

There is a deed restriction with use limitations on both the subject site parcels. A copy of the deed restriction is included in Appendix J.

3.3 Specialized Knowledge

AWR has done previous work on nearby properties and is familiar with some of the regional and site specific environmental issues but AWR has done no previous work on the subject parcels and has no other specialized knowledge associated with the subject property.

3.4 Commonly Known or Reasonably Ascertainable Information

As noted elsewhere within the report, the site and adjacent property are a known release property and information on the past site use, investigation, and remediation is commonly known.

3.5 Valuation Reduction for Environmental Issues

AWR was not provided with purchase price information.

3.6 Owner, Property Manager, and Occupant Information

The current property owner of both parcels is Integris/Millenium Joint Venture LLC. The property manager is Mr. Howard Gruber.

Both buildings are occupied by multiple tenants as office executive suites with shared common restroom and breakroom areas.

At the time of the assessment, signage indicated the following in 3705 Haven:

100 Soccer Shots
101 Beau Monde Image
102 Dentu-Temps
103 William A. Jonson
104 Kind Homecare, Inc.
105 Svetlana Kreimer, LMFT
106 Accounting Services
107 Aukum Management

108 Daniel L. Sheehan, Attorney
109 Palo Alto Media Company
110 Wanda Smith-Schonk, Wellness Practitioner
111 Crosspond Law
113 TAF Associates
115 Michelle Joy, MA MFT
115 Stacy Lee, MA MFT
117 Arias Electronic
118 Noreen Suczek, LMT
119 Anychime
123 Bay Cities Driving School
124 Castanea Labs, Inc
126 Cadena Advisory
131 Nano Wave Institute
124 Alex Abella Properties
137 Banish Law LLP

At the time of the assessment, signage indicated the following occupants of 3723 Haven:

102 iO Lifescience, LLC
104 Academ
105 Elizabeth Kiss
109 Ibukku
110 Indo Restaurant (office)
111 California Driver Academy
112 League of Women Voters SSMC
114 Key Ideas
115 FV Management
117 Scale DB
119 Stephanie Massage
120 Trantor Foundation 3 Continuum Global
130 Cambria Corporation
133 Future Today, Inc.

In addition, signage on the outside of the building indicated a non-profit identified as Computers for Everyone which was not identified on the internal signage. There were some empty offices in each of the buildings.

3.7 Reason for Performing the Phase I ESA

AWR has performed this Phase I ESA to evaluate current site conditions in preparation of a proposed property transfer.

3.8 PREVIOUS REPORTS

There were previous environmental investigation reports prepared for the site. These reports were obtained from the San Mateo County Environmental Health Department and the San Francisco Bay Regional Water Quality Control Board and are discussed in more detail in Section 4.1.1. Copies of portions of these reports are included in Appendix K.

4. RECORDS REVIEW

The government environmental agency databases AWR reviewed are listed on pages 4 through 18 of the Map Findings Summary of the database obtained from Environmental Data Resources, Inc. (EDR), included as Appendix C. Please refer to the EDR report in Appendix C for additional information on the searched databases including the full names of the databases, the regulatory agency overseeing the databases, a summary of the types of facilities listed on each database, and the dates the information was obtained from the regulatory agencies. Where locations and distances reported by EDR were observed to be incorrect, AWR amended the information to provide a more accurate assessment.

AWR also requested information from the San Francisco Bay Regional Water Quality Control Board, the San Mateo County Environmental Health Department, and the California Department of Toxic Substance Control Envirostor database. Information from these sources for the subject site is included in Section 4.1.1.

4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

4.1.1 Subject Property

The site addresses were listed on several of the searched databases.

- Siltec was listed as 3705-3723 Haven Avenue (an address range which includes the site parcels) on the FINDS, CA SPILLS 90, and CA SLIC database. The EDR report lists this site as **Completed-Case Closed** with soil and non-drinking water impacts of trichloroethylene (TCE), vinyl chloride, other chlorinated hydrocarbons, and volatile organic compounds. AWR obtained additional information on this site and also an overlapping investigation for Siltec site at 3695-3723 Haven Avenue which was closed by the RWQCB in June 2014. This information is discussed in more detail under the SF Bay RWQCB listing below.

- Thysen Management Co as identified at 3705 Haven Avenue was listed in the CA LUST, CA San Mateo BI, CA HIST CORTESE, FINDS, and CA RGA LUST databases. The listings list it as Completed-Case Closed in 1999 for a solvents release

- B S G Associates was listed at 3705 Haven Avenue on the CA HAZNET databases. According to the information in the EDR report, this listing was for a shipment from the site to an offsite recycler of 0.01 tons of other organic solids in 1995. Inclusion on this list is not indicative of a spill or release.

AWR also reviewed information from the San Francisco Bay Regional Water Quality Control Board, the San Mateo County Environmental Health Department, and the California Department of Toxic Substance Control Envirostor database.

San Francisco Bay Regional Water Quality Control Board (RWQCB) Geotracker

AWR reviewed information at the SF Bay RWQCB Geotracker website. AWR obtained additional information on release investigations for Siltec. One is listed as Siltec at 3705-3723 Haven Avenue and the other has information on a site listed as former Siltec property 3695-3723 Haven Avenue which has been issued a no further action determination.

A copy of the no further action letter, closure package, and final summary report is included as Appendix K of this report.

The records reviewed include the following summary of the release investigation, findings, and status:

From 1970 through 1989, Siltec Corporation used the site for manufacturing polished silicon wafers, conducting various industrial activities in the three on-site buildings. Chlorinated volatile organic compounds (VOCs) were used on site during this period and in 1994 VOCs were detected in local soil and groundwater.

In 1999, after extensive investigation of soil and groundwater and pilot-testing of in-situ remediation at the site, the middle of the three original buildings (Building 2 – 3717 Haven located in the central parcel that is not part of the subject site) was demolished to allow excavation and offsite disposal of soil containing chlorinated VOCs and other chemicals of concern. After excavation, some concentrations of VOCs remained in subsurface soil within the saturated zone. A risk management plan (RMP was prepared for the residual concentrations in the soil and groundwater.

In 1999, a deed restriction was finalized and recorded with San Mateo County specifying prohibitions on certain site uses, and outlining certain monitoring responsibilities of the new owners, including practices specified in the RMP. The RMP was incorporated into the deed restriction and both were recorded in the Official records of San Mateo County on August 9, 1999.

The areas of highest impacts were on the central parcel which is not part of the current subject site. After the deed restriction was recorded, the release continued to be remediated and monitored and subsequently a no further action letter was issued for the Siltec Release.

The following summary is directly from the no further action letter:

> *The listed release is comprised of three commercial buildings and was formerly used for semiconductor manufacturing which resulted in adverse impact of subsurface soil and groundwater by volatile organic compounds (VOCs), principally Trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2- DCE). Due to the close proximity to former salt ponds, groundwater in the area has extremely elevated salinity and is not suitable for municipal supply. Extensive investigations of on-site and off-site soil and groundwater have been conducted from 1994 through 2012. Risk-based cleanup goals were developed as part of the 1999 Feasibility Study/Remedial Action Plan (FS/RAP) prepared by EKI. Remedial options were evaluated, including a pilot study of in-situ chemical oxidation using*

potassium permanganate injection. Ultimately, in-situ treatment did not achieve targeted reductions in VOC concentrations, and Site remediation was accomplished in 1999 through excavation and removal of impacted soil that exceeded risk-based cleanup goal. In accordance with the FS/RAP, approximately 2,860 cubic yards of VOC-impacted soil were excavated from the Site and the adjacent 3645 and 3665 Haven Avenue properties to the northwest. The excavation was backfilled with a multilayered mixture of materials intended to inhibit movement of VOC vapors from groundwater into the clean fill. As part of the excavation effort, the building in the middle (Building No. 2 at 3715 Haven Avenue) was demolished and a new two story building was constructed south of the former Building 2 footprint, outside of the high groundwater risk area. A paved parking lot currently occupies this soil remediation area. SUMCO and its predecessors have conducted groundwater monitoring for 13 years since Site source excavation, using on-site and off-site downgradient wells. Based on the available data, VOCs in groundwater have migrated off-site to the east and northeast, but the concentrations of chemicals of concern in groundwater have stabilized or declined over this time period through natural attenuation process. Shallow soil vapor sampling conducted by SUMCO's predecessors in 1999 near the commercial building on the adjacent downgradient property to the east (3750 Haven Avenue) did not detect chemicals of concern originated from the Site above laboratory reporting limits. Currently, Building 2 (3715 Haven Avenue) is owned by Deerfield Realty, and Buildings 1 (3695- 3705 Haven Avenue) and 3 (3721-3723 Haven Avenue) are owned by Integris Millennium Joint Venture LLC (Integris). A Risk Management Plan (RMP) was prepared and incorporated into a 1999 Covenant (a.k.a. Deed Restriction) between the Site owner and the Regional Water Board. In addition to specific measures to protect human health risk from residual contamination in the groundwater, the RMP also requires the performance of groundwater monitoring in certain on-site wells, and evaluation of changing Site and regulatory conditions, by the Site owner. SUMCO sampled the two on-site shallow (A-zone) wells MW-8 and MW-9 from 1999 through 2004, during which time the concentrations remained below site-specific risk-based screening levels. After 2004, Regional Water Board approved SUMCO's proposal to discontinue monitoring of these wells and they have not been sampled by the current owner since 2004. Based on the 2004 groundwater data, 95 and 3,300 µg/l *of TCE remain in the sample collected from MW-8 and MW-9, respectively, which are lower than the site specific screening levels.*

Based on our review, we conclude that the Site meets the Water Board's criteria for a low-threat chlorinated solvent site. Remedial actions implemented to date have effectively removed the source and resulted in stabilized and improving groundwater condition. Further remedial actions will have marginal effect and it is anticipated that groundwater quality will further improve over time due to natural attenuation processes. There is an isolated pocket of elevated TCE concentrations in groundwater near MW-9 based on 2004 sampling result, which is above the existing Regional Water Board's Environmental Screening Levels (ESLs) for commercial land use. However, MW-9 is located outside of existing building footprint areas and the detected TCE concentrations were SUMCO Phoenix Corp. - 3 - below the site-specific risk-based screening levels. Based on groundwater data since 2004 from other monitoring wells at the Site, it is reasonable to expect that current TCE concentrations at MW- 9 have also decreased significantly from its 2004 level.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, I

> *conclude that no further action is necessary at the subject Site. Any risk associated with residual contamination can be adequately managed by the RMP and the deed restrictions. However, in the event the current or future land owner(s) proposes a more sensitive land use at the Site, we will require the use of up-to date groundwater information, especially near the MW-9 area, to evaluate* the risk before any revision of the deed restrictions can be granted.

The MW-8 area discussed in the no further action letter is on the 3723 parcel that is part of the current subject site. The monitoring well was observed at the site during the site reconnaissance conducted as part of the Phase I ESA. Well MW-9 discussed in the letter was near the center of the central 3715 Haven parcel and is not on the current subject site.

San Mateo County Environmental Health Department

AWR reviewed all files available at the San Mateo County Environmental Health Department for the subject site. Both hazardous material and groundwater protection program files were available for the site. The San Mateo County Environmental Health Department provided copies of some of the reports and related correspondence for the former Siltec site discussed above but no additional information beyond that previously discussed for this site.

Other than Siltec, we found no records of known releases or even hazardous material use by other site occupants on either of the subject site parcels.

California Department of Toxic Substance Control (DTSC) Envirostor

AWR reviewed information at the DTSC Envirostor website. None of the listings appeared to correspond to the site.

The MW-8 area discussed in the no further action letter is on the 3723 parcel that is part of the subject site. The monitoring well was observed at the site during the site reconnaissance conducted as part of the Phase I ESA. Well MW-9 was near the center of the central 3715 Haven parcel and is not on the current subject site.

The RWQCB No Further Action (NFA) letter dated June 16, 2014 addresses the site as 3695-3723 Haven Ave. However, the GeoTracker file lists 3705-3723 Haven

4.1.2 Offsite Listings

Based upon a review of groundwater monitoring data collected at the subject property and nearby properties, groundwater beneath the subject property was calculated to flow toward the east to northeast and was initially encountered at depths ranging from 4.11 to 9 feet below ground surface (bgs). Based on this inferred groundwater flow direction, offsite listings that are adjacent to or west to southwest of the subject site have the greatest potential to impact the subject site.

There are many listings for 3717 and 3715 Haven Avenue which correspond to the parcel located between the two subject site parcels and also part of the former Siltec property. These listings appear to correspond to issues investigated and addressed with the Siltec release investigation and these listings do not appear to pose any additional concerns to the subject site parcels beyond those previously discussed with regards to the former Siltec release. Given the extensive groundwater investigation conducted at the site and the nature of the other listings in the vicinity of the site, there is no indication that either of the subject site parcels has been impacted by offsite releases other than those associated with the larger Siltec release previously described in this report.

Based on the distance, direction, and/or nature of the remaining listings in conjunction with the previous extensive investigation on our site which would have likely discovered impacts from an offsite source, in our opinion, none of the other listings are likely to significantly impact the subject site.

4.1.3 Other Sites of Potential Environmental Concern

AWR did not identify any other sites of environmental concern. AWR reviewed the sites in the EDR Database that were unable to be mapped. None of the listings appeared to correspond to the site or adjacent properties. None of the unmapped listings appear likely to have the potential to impact the site.

4.2 Agency File Reviews

AWR reviewed information on this site from the San Mateo County Environmental Health Department, and searched for information on the site and nearby properties at the California Department of Toxic Substance Control (DTSC) Envirostor database, and the California Geotracker Database, and US EPA. Information from these sources were included in Section 4.1.

4.3 Physical Setting Sources(s)

The EDR Report in Appendix C indicates that the underlying hard rock geology consists of Cenozoic Quaternary stratified sequence. Surface soils in the vicinity of the site are classified by the United States Department of Agriculture (USDA) Soil Conservation Service (SCS) as Urban Land.

Based upon a review of groundwater monitoring data collected at the subject property and nearby properties, groundwater beneath the subject property was calculated to flow toward the east to northeast and was initially encountered at depths ranging from 4.11 to 9 feet below ground surface (bgs).

According to the 2012 USGS Palo Alto, California Quadrangle Map, the site elevation is approximately 9 feet above mean sea level with a slight regional topographic slope downward to the north-northeast.

4.4 HISTORICAL USE INFORMATION ON THE PROPERTY AND ADJOINING PARCELS

AWR reconstructed a brief history of the subject property through a review of historical Topographic Maps; the EDR City Abstract; available records, permits and other documents available at San Mateo County; and historical aerial photographs provided by EDR. A summary of historical sources can be found in Section 12.0 of this Report with pertinent documents available in Appendices.

1939-1950	Based on aerial photographs and topographic maps, the site and adjacent properties appear to be farmed land. Haven Avenue does not appear to be present in the site vicinity
1958-1963	An aerial photograph shows a road at the approximate location of Haven Avenue adjacent to the site. The site parcels as well as the parcel between the two site parcels appear to be graded land. The property adjacent to the site to the west appears to be being developed with material storage.
1968	Aerial photographs show a building at 3705 Haven similar to the current site configuration.
1974-2014	Aerial photographs show buildings at 3705 and 3723 Haven similar to the current site configuration.
1999-2001	The parcel between the two parcels appears to have the former building demolished and a new building constructed at the site. There was no obvious change to the buildings on the subject site parcels.
2015	The large parcel located west of the site is redeveloped as a large multiple building apartment complex.

5. SITE RECONNAISSANCE

Ms. Janelle Amendola of AWR conducted a site reconnaissance visits at the subject site on March 7, 2018. Ms. Amendola was accompanied by the property manager, Mr. Howard Gruber, as well as Barry Coggins from Huettig & Schromm, Inc (the client) during the site visit.

The goal of the site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the subject property. The subject property is visually observed and any structures located on the property are observed to the extent not obstructed by bodies of water, adjacent buildings, and/or other obstructions.

5.1 Methodology and Limiting Conditions

AWR conducted a site reconnaissance as part of the preparation of this Phase I ESA. AWR observed the entire parcel including the interior and exterior of the subject site.

The exterior site reconnaissance was performed by walking open areas of the property in a grid fashion. Special attention was given to observe surfaces adjacent to the structures and sidewalks, surfaces in storage areas, and potential conduits to the subsurface such as drains and sumps. The interior site reconnaissance was performed by systematically observing each room and open space of the property. Additional attention was given to doors, utility rooms, storage areas, areas where hazardous materials were used or stored, and any other accessible areas.

5.2 General Site Setting

The site is located in a primarily light industrial area in Menlo Park with a newer apartment complex constructed on the parcel west of both the subject site parcels.

5.3 Site Observations

5.3.1 Site Exterior

The majority of the both site parcels is occupied by the building and asphalt parking and drive areas with landscaping near the building, and around the property perimeter. The parcel at 3705 Haven Avenue is at a bend in Haven Avenue and can be accessed from Haven Avenue on both the side and rear of the building with the parking and driveway area forming an L-shaped thoroughfare around the building. The parcel at 3723 Haven Avenue also has an L-shaped paved parking and driveway area around the building but it can only be accessed from one entrance off of Haven at the side of the building with a dead end at the other property boundary.

One monitoring well was observed in the driveway area of the parcel at 3723 Haven Avenue. Based on the location of the well, this appears to be MW-8 installed for the former Siltec investigation and remediation and discussed elsewhere throughout this report. No other monitoring or other wells were observed on the subject site.

Other than dumpster enclosures, no outdoor storage or storage areas was observed on either of the site parcels.

Minimal staining typical of parking lot use was observed in several of the parking stalls. No significant staining, odors, sumps, stressed vegetation, sheens, tanks, evidence of former tanks, or other potential environmental concerns were noted in the site exterior on either of the site parcels.

No aboveground tanks, evidence of underground tanks, drums, or other large chemical storage vessels were observed at the site or site parcel or in the exterior area of any of the adjoining parcels.

5.3.2 Site Interior

Both buildings are executive offices with numerous tenants leasing one or more individual offices and sharing common restrooms, breakrooms, and reception areas. The building at 3723 Haven Avenue is single story but has two larger tenant spaces using a divided warehouse type area with taller ceilings. The remainder of the building at 3723 and all of 3715 is single story office with dropped ceiling and typical office finishes.

One tenant in 3723, Computers for Everyone, uses very small quantities of WD-40, isopropyl alcohol, and other similar materials for cleaning and repairing computers. All of the containers were retail size and labeled and all were less than ¼-gallon is size.

Other than routine janitorial and housekeeping supplies, no other hazardous materials were observed at the site.

No sumps, wells, staining, odors, stressed vegetation, sheens or other potential visual evidence of environmental impacts was observed in either of the site interiors.

5.3.3 Adjacent Properties

The property is in a mixed use area. West of both site parcels is a newer multiple story, multiple building residential complex. North of 3723 Haven is a dog boarding business. Between the two parcels (north of 3705 and south of 3723) is a multiple story, multiple tenant commercial office building and bank with associated parking and landscaping areas. South of 3705 Haven Avenue, is Haven Avenue, beyond which is a multiple tenant light industrial building. East of the site, across Haven Avenue, is a Federal Express shipping center.

5.4 Non-Scope Considerations

The following potential business environmental risk items were included as part of this report based on site observations and readily available information.

5.4.1 Suspect Asbestos Containing Building Materials and Lead-Based Paint

Based on the 1960s-1970s construction dates, asbestos containing materials and lead based paint may have been used in the buildings. This is not a REC as defined in the ASTM standard practice. Any renovation or demolition should comply with applicable sampling and abatement requirements.

6. INTERVIEWS

6.1 INTERVIEW WITH OWNER REPRESENTATIVE

AWR was accompanied during the site visit by Mr. Howard Gruber, the property manager and owner representative. AS noted below, Mr. Gruber provided information on current and former occupants.

6.2 INTERVIEW WITH SITE MANAGER

AWR was accompanied during the site visit by Mr. Howard Gruber, the property manager and owner representative. Mr. Gruber provided information on current and former occupants. The former occupants were similar to the existing occupants and used the site as offices for a variety of professional services. MR. Gruber indicated none have used or stored significant quantities of hazardous materials or conducted manufacturing at the site during the time he has been involved with the site. Mr. Gruber was unaware if the monitoring well at the site had been sampled during the time he has been involved with the site.

6.3 INTERVIEWS WITH OCCUPANTS

AWR obtained information on the site operations from the occupants during the site reconnaissance. Based on the nature of the business at the site, formal interviews were not conducted.

6.4 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

AWR reviewed information from the San Mateo County Environmental Health Department, the San Francisco Bay Regional Quality Control Board, and the California Department of Toxic Substance Control. Information from these requests is presented elsewhere throughout this report.

6.5 INTERVIEWS WITH OTHERS

AWR did not conduct any other interviews for this ESA.

7. FINDINGS

From 1970 through 1989, Siltec Corporation used the site for manufacturing polished silicon wafers, conducting various industrial activities on the site and adjoining properties. Chlorinated volatile organic

compounds (VOCs) were used on site during this period and in 1994 VOCs were detected in local soil and groundwater.

The site and adjoining parcels were reported and investigated under the name Siltec at 3702-3723-Haven Avenue. This release address is listed in other records as 3695-3723 Haven Avenue and 3705-3723 Haven Avenue.

In 1999, after extensive investigation of soil and groundwater and pilot-testing of in-situ remediation at the original Siltec parcels, the middle of the three original buildings (Building 2 – 3717 Haven located on the central parcel that is not part of the current site) was demolished to allow excavation and offsite disposal of soil containing chlorinated VOCs and other chemicals of concern. After excavation, some concentrations of VOCs remained in subsurface soil within the saturated zone. A risk management plan (RMP) was prepared for the residual concentrations in the soil and groundwater.

In 1999, a deed restriction specifying prohibitions on certain site uses for all three parcels in the original Siltec property, and outlining certain monitoring responsibilities of the property owners, including practices specified in the Risk Management Plan (RMP). The RMP was incorporated into the deed restriction and both were recorded in the Official records of San Mateo County for all three Siltec properties (including the two parcels that are the subject site) on August 9, 1999.

Remediation continued on the central Siltec parcel (currently 3715 Haven and not part of the subject site). The release has since been issued a no further action determination, but that letter specifies that the limitations of the deed restriction remain active for the subject site.

The MW-8 area discussed in the no further action letter is on the 3723 parcel that is part of the subject site. The monitoring well was observed at the site during the site reconnaissance conducted as part of the Phase I ESA. Well MW-9 was near the center of the central 3715 Haven parcel and is not on the current subject site.

The RWQCB No Further Action (NFA) letter dated June 16, 2014 addresses the site as 3695-3723 Haven Ave. However, the GeoTracker file lists 3705-3723 Haven

Based on the 1960s-1970s construction dates, asbestos containing materials and lead based paint may have been used in the buildings.

A Tier 1 and Tier II screening was performed to assess whether any vapor encroachment conditions (VECs) are present on the subject property. A VEC has a potential to be present or cannot be ruled out at the subject property due to the residual concentrations of chlorinated solvents used and released at and adjacent to both parcels.

7.1 Data Gaps

AWR was not able to review a Chain of Title Report for the subject property. It is AWR's opinion that the lack of this information does not pose a significant data gap because as an environmental lien search was performed that revealed a deed restriction with use limitations on both the subject site parcels.

7.2 CONTINUING OBLIGATIONS

Continuing obligations start on the date that a landowner acquires title to a property. The landowner must: 1) comply with land use restrictions and institutional controls; 2) take "reasonable" steps with respect to hazardous substances releases; 3) provide full cooperation, assistance and access to persons that are authorized to conduct response actions or natural resource restoration; 4) comply with information requests and administrative subpoenas; and 5) provide all legally required notices. Continuing obligations must be satisfied to maintain liability protection under CERCLA for innocent landowners, bona fide prospective purchasers, and contiguous property owners.

As noted elsewhere within this report, there is a deed restriction for the site. The limitations and requirements of that deed restriction remain in place and must be adhered to.

8. OPINION

8.1 OPINION OF FINDINGS

The Siltec release is a controlled recognized environmental condition (CREC) since it has been granted a no further action determination letter but environmental impacts were known to be present at the site at the time of closure and the environmental restrictions and requirements in the deed restriction apply. Consequently, these residual impacts are interpreted to pose ongoing risks to the quality of soil vapor, soil, ground water, and indoor air 3705 and 3723 Haven Avenue.

In addition, because these residual chemicals are volatile solvents, they have the potential pose a risk to indoor air. Consequently, a vapor encroachment condition has a potential to be present or cannot be ruled out at either parcel.

Based on the 1960s-1970s construction dates, asbestos containing materials and lead based paint may have been used in the buildings. This is not a REC as defined in the ASTM standard practice. Any renovation or demolition should comply with applicable sampling and abatement requirements.

8.2 RECOMMENDATIONS

The previous release appears to have been resolved to the satisfaction of the overseeing agency and no additional investigation or remediation is needed. We do, however, recommend the following:

- Confirm with the Regional Water Board the requirement to continue sampling ground water from the remaining monitoring well MW-8 and if this well can now be destroyed.
- Evaluate the quality of soil gas and potential risks to indoor air at the subject properties.

- Based on the 1960s-1970s construction dates, asbestos containing materials and lead based paint may have been used in the buildings. This is not a REC as defined in the ASTM standard practice. Any renovation or demolition should comply with applicable sampling and abatement requirements. Evaluation of lead in soil due to lead based paint may be prudent.

- Evaluate the quality of ground water at the subject properties to assess the adequacy of the prior remediation and any persistent residual impacts from on-site and off-site conditions.

9. CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of 3705 and 3723 Haven Avenue, Menlo Park, San Mateo County, California, the subject property. Any exceptions to, or deletions from, this practice are described in Section 5.1 of this Report.

Our assessment revealed the following for the site:

Recognized Environmental Conditions (REC): none

Historical Recognized Environmental Conditions (HREC): none

Controlled Recognized Environmental Conditions (CREC):
The release from the Siltec Corporation is a controlled recognized environmental condition (CREC) because it has been granted a no further action determination letter but environmental impacts were known to be present at the site at the time of closure and the environmental restrictions and requirements in the deed restriction apply. These known residual conditions have the potential to pose ongoing risks to the quality of soil vapor, soil, ground water, and indoor air 3705 and 3723 Haven Avenue.

Vapor Encroachment Condition - It was identified during the screening process that a Vapor Encroachment Condition (VEC) has a potential to be present or cannot be ruled out at the subject property due to residual concentrations of chlorinated solvents used and released at and adjacent to both parcels.

Based on the 1960s-1970s construction dates, asbestos containing materials and lead based paint may have been used in the buildings. This is not a REC as defined in the ASTM standard practice. Any renovation or demolition should comply with applicable sampling and abatement requirements.

10. DEVIATIONS

AWR did not evaluate the purchase price versus property value as AWR is not qualified to evaluate this issue.

11. ADDITIONAL SERVICES

No additional services were provided for this site in conjunction with this Phase I ESA.
