Subject: ALL-ELECTRIC FEASIBILITY ANALYSIS
1125 O'BRIEN DRIVE
MENLO PARK, CA 94025

Dear David:

The following is an analysis for all-electric space conditioning for the lab building being proposed at 1125 O'Brien Drive, Menlo Park, CA.

This appeal is being made as an infeasibility exception under Section 100.0(e)2A appeal process per the Menlo Park reach code administrative guideline. There are a couple of reasons that we feel that the all-electric option, currently, is not a feasible design for this building.

Western Allied Mechanical Background with All-Electric:

Western Allied has been dedicated to providing energy efficient designs for decades. We understand and agree that moving toward carbon neutral buildings and net zero energy buildings is the future of construction.

We have completed and are currently completing several Net Zero buildings including: (Partial list)

- Lucille Packard Foundation in Los Altos – Net zero, all electric design utilizing chilled beam, radiant heating, air source heat pumps and energy recovery
- Fortinet – Ground up all-electric, chilled wall, radiant heating building in Santa Clara
- Millbrae Recreation Center – Ground up, all electric recreation center
- SLAC Science and User Support building - Net zero, all electric design utilizing chilled beam, radiant heating, air source heat pumps and energy recovery in Palo Alto.
- ARE Amenities Center – All Electric, net zero amenities building in South San Francisco
- Skyline College B12 – Ground up, 22,000 SF environmental science building with ground source heat pumps, dual duct VAV coupled with radiant in floor heating and cooling.

Please note that all these buildings are primarily office buildings and do not include life science laboratory space. The use of all electric design for office, residential, and other uses is fully feasible with the technologies that have been in place and vetted for years. With the recirculation function of office and the relatively light loads as compared to laboratory buildings coupled with the less "mission critical" issues of the HVAC systems, the use of all-electric design can and should be implemented as much as possible to reduce carbon emissions and increase energy performance of these type buildings.

By contrast, buildings including laboratory space must be designed with tight tolerance of space conditioning to maintain the viability of science functionality taking place within the laboratory setting. Further, laboratory spaces require 100% outside air circulation ("OSA"). The introduction of variable OSA condition requires tighter control from the mechanical equipment for laboratory environments. Unlike occupant comfort, which is the main design function of office and residential uses, compromise of space conditioning in laboratory settings can lead to failure of occupant science, either experimentation and/or production.

The following are the specifics of this proposed project.

<u>1125 O'Brien Project HVAC Summary:</u>

- Approximately 130,000 SF Office Lab, with approximately 80,000 SF of expected lab, but design requirement of up to full building lab use given that no tenant has been identified.
- 5-story building with limited roof area
- 486 tons of cooling (324 tons lab, 162 tons office)
- 6,000 MBH of heating required
- 70,000 CFM of 100% OSA and Exhaust for lab portion of the building

Electric cooling is considered feasible for 1125 O'Brien Drive and is included in the proposed project. Electric heating options are considered as follows:

Because of the size and configuration of the building, the heating capacity, and the lab usage, none of the currently available and reliable all-electric heating technologies are feasible for the following reasons:

- Variable Refrigerant Flow (VRF) - Although VRF systems can work for smaller labs with primarily recirculating air, for this lab building with large OSA loads, the VRF systems do not scale for a project of this size. We are working on an all-electric life science building for Tarlton Properties at the 1190 O'Brien Drive Incubator Labs. This 12,000 SF all electric VRF incubator lab for small life science startup companies is currently slated for completion scheduled for 2023. The 1190 O'Brien Drive project is not 100% OSA. All-electric VRF, such as that used for 1190 O'Brien Drive, would not be feasible for a laboratory space over 30,000 sf with 100% OSA.
- Single zone packaged heat pumps – Another viable option for smaller labs or single-story buildings, this design would not scale to heat a building of this size. Further, with the limited roof or site area and size of the building, there is not sufficient area for this type of system. Therefore, single zone packaged heat pump is not feasible for the 1125 O'Brien project.
- Electric resistance boilers – Electric resistance boilers cannot heat lab buildings, but do do not provide acceptable energy efficiency (Equivalent COP of ~ 0.95 for electric resistance vs. ~ 3.0

for ASHP) and thus must be eliminated as an option. Although the equivalent COP is similar to a natural gas boiler, it is not feasible for the all-electric option for a building this size as there are more efficient options for all electric heat that would use 1/3 less energy to create the same amount of heating into the building.

The all-electric lab design is a new and cutting-edge concept in the construction industry for large scale life science buildings. Although the technology is getting there, the reliability has not been adequately tested as it has been in other building types.

The only available option to consider for all electric design is an air source heat pump (ASHP) design with multiple units. There is also the potential for (1) heat recovery air source heat pumps that perform simultaneous heating and cooling, or (2) heat recovery, electric heating and cooling but these designs add little advantage for this specific project layout as the amount of equipment needed will not fit with adequate service clearances for this building. Further, the feasibility issues described below as applying to ASHP apply equally to heat recovery air source heat pumps and heat recovery, electric heating and cooling.

Therefore, for the purposes of this report, we have considered the only possible option for all-electric heating as an ASHP heating plant.

Feasibility Issue #1 – System Reliability

Life Science buildings, as opposed to other building uses, require a tight level of temperature control and system reliability. If we cannot maintain consistent building temperature in the lab areas, fluctuation could affect experimentation, production, and R&D and other aspects that are mission critical for lab facilities.

The traditional natural gas boiler approach has been proven over the decades to provide adequate temperature control and reliability. Specifically, we have hundreds of projects of the last 20 years that have utilized high efficiency condensing boiler plants and have found them to be very reliable. As we service our installations, we have direct feedback from technicians on boiler manufacturer performance and reliability and there are many certified technicians in the bay area to service these types of systems and provide emergency repairs. Replacement parts for natural gas boilers are also readily available as well as local technical support for rapid response to equipment service issues effecting “mission critical” life science applications.

One of the largest causes of concern with these systems is proven reliability. The industry simply does not have a track record of experience in running, maintaining, and servicing these types of systems. This is particularly of concern with a large load operation such as the 1125 project, which will be used by life science tenants that cannot have a climate system failure, even for brief periods, as such fluctuation could lead to catastrophic failure of occupant science. There is currently no data that supports reliable operation under either full load condition or during a power outage using back up power supply.

Another area of concern are the power requirements for emergency back up power. As a comparison on this building, the two natural gas boilers for this project would need single phase 208/3/60 power at

10 Amps each. The comparable (3) ASHP's would require 600 Amps of 460/3/60 power. There will not be enough ampacity to support these units on the proposed project generator; to support the ASHP needed for this size of project, an additional back-up generator of at least an additional 300Kw Genset. In addition to air quality, noise, and diesel usage associated with the additional generator power, this generator would need an additional 300 square foot footprint beyond what is currently proposed.
.

Another issue is the lack of major equipment manufacturers and local support. For the current all electric ASHP, it is a new application. Although the units are similar to air cooled chillers, the heat pump function requires additional technical support, parts, and service that are not readily available. Below is a list of manufacturers with our experience with each.

Current equipment available in the market for all electric heating plant:

a. Air Source Heat Pump (ASHP)
    i. Aermec
    ii. Geoclima
    iii. Multistack
    iv. Trane Ascend (New to market)

Equipment reliability:

ASHP Manufacturer's and Experience:

a. Multistack is an American made product and we can obtain parts for repairs with acceptable lead times to decrease down time, however the reliability of this product renders it infeasible for this project. In our experience with the product, we have utilized in a number of installations and have had major issues with equipment functional reliability. On projects like Skyline College and the Packard Foundation we had a variety of issues with commissioning this product and are still having reliability issues to this day. Although an office building is more forgiving as it primarily effects comfort in the space, with lab buildings we cannot deviate on temperatures as it effects the processes of the company and potentially their entire science. As a result of our reliability issues, we will not design around Multistack for life science applications. Due to its reliability issues, Multistack is infeasible for this project.

b. Aermec – These products are produced outside of the US and air source heat pumps are fabricated in Italy. This product's application to life science is a recent change, and therefore there is no data on long-term effectiveness. What we have found with this product are major shipping delays, quality control of the delivered product, and lack of qualified and available tech support. Obtaining replacement parts is also an issue. With life science, rapid response and repair is required to prevent science failure. Lack of enough local technical support is detrimental to servicing and maintaining life science buildings. Due to quality control issues, lack of qualified and available tech support and difficulty in obtaining replacement parts, Aermec is infeasible for this project.

c. Geoclima – Similar issues the Aermec as Geoclima is an offshoot company of Aermec, therefore Geoclima is infeasible for this project.

d. Trane Ascend – We are happy to see a major US manufacturer has a new product available for ASHP's. Trane has great local service representation, and we are hopeful that in the future, this product will provide the same reliability as other Trane products. These are new to the market, and we aren't aware of any lab facilities using this product in order to confirm current reliability. We are confident that replacement parts will be available and Trane will have adequate local technical support in the coming years, however reliable supply of replacement parts and adequate local support are not yet in place. Therefore, at the current time, Trane Ascend is infeasible because the equipment has not been adequately tested and proven reliable nor are repair and replacement contingencies currently adequate for critical space conditioning applications.

Although an all-electric heating plant design is possible, the new application to mission critical "life science" buildings, lack of local technical support and parts, and lack of major equipment manufacturer support make the application to this project less reliable than the natural gas boiler design, compromising the viability of the project. For that reason, and given the catastrophic consequences of failure of space conditioning to occupant operations, an all-electric plant is infeasible at this time.

We are confident that all electric design will become a viable and reliable system with time and more industry experience, however it is not proven to have acceptable reliability at this time. Therefore, the project will use all-electric cooling. Heating proposes natural gas boilers with a conduction and ventilation system that is designed to accommodate all-electric when it becomes feasible.

<u>Feasibility Issue #2 – Roof/Site Plan geographic constraints</u>

See attached Appendix A drawing: (All-Electric heating plant shown on bottom right side of the page)

The current natural gas boiler plant requires about 350 square feet of floor area on the roof in an enclosed boiler room.

For the all-electric design, we need to consider the following for the design:

1. Heat recovery on the lab exhaust system to decrease electric heating plant size from 6,000 MBH to 3,000-4,000 MBH
2. Three (3) 140-ton air source heat pumps to provide heating with (1) ASHP as N+1 for reliability
3. 2,000-gallon hot water storage tank. This is required on ASHP heating designs to reduce short cycling as ASHP's will trip regularly without proper system volume.
4. Hot water pump skid, expansion tank, air separator and other ancillary equipment

This all-electric design will require ~ 2,800 square feet of area, not including 300 additional square feet for the additional back up generator.

As can be seen from Appendix A drawing, there is not adequate mechanical area for the heating plant as it requires 8X the floor area of a natural gas boiler plant. Other area on the roof is designated for process equipment and project space (an outdoor roof deck). Therefore that project space would need

to be eliminated in order to accommodate heating equipment on the roof. We understand that private outdoor gathering space is considered essential to a viable life science occupancy in a post-COVID setting, so elimination of the roof deck would compromise project objectives given that site constraints eliminate the possibility of other private outdoor gathering location on the project site. Given that the reliability of available options renders them infeasible for this building, this additional compromise is an additional factor for infeasibility.

ASHP's can be installed on grade provided that adequate area is available directly adjacent to the building. However, the project site here is constrained by other site requirements such as open space, public open space, bioretention, fire access, circulation and minimum parking requirements. Therefore, 2,800 square feet for ASHP plus 300 square feet for additional generator space could not be accommodated while meeting city code for required site requirements.

With the current building and site configuration, the all-electric plant is not feasible for this site.

Feasibility Issue #3 – Case Study – Allogene 7400 Gateway Blvd, Newark

On September 23, 2022, Western Allied conferenced with TRC and CRB to review and compare the recently completed Allogene project at 7400 Gateway in Newark with 1125 O'Brien Project. Below is a table with some of the comparison between the two buildings.

Table 1 – Case study comparison Allogene 7400 Gateway & 1125 O'Brien

Item	Description	Allogene – 7400 Gateway	1125 O'Brien
1.	Total building square footage	138,000 SF (37,000 SF future)	131,825 SF
2.	Number of floors	1 story[1]	5-story
3.	Ratio of Lab/Office[2]	33% Lab, 67% Office	50% Lab/50% Office
4.	% Once thru air for lab area	50%	100%
5.	Where is air handling equipment installed?	Mezzanine	Roof
6.	Where is the heating/cooling plant installed?	Yard	Roof
7.	Available area for mechanical equipment[3]	20,000 SF	10,802 SF
8.	Equivalent heating and cooling capacity	720 Tons	986 Tons
9.	Solar Availability and back-up power	Full roof[4] and battery backup	Limited roof space/Generator backup

Notes:

1) Data given was essentially a single story for Allogene with 5,000 SF of 2nd floor office and 17,000 SF of mechanical mezzanine
2) Office includes other spaces like warehouse, shipping receiving, etc that do not have a lab function.
3) For Allogene, the equipment mezzanine is 17,000 SF and we estimated yard mechanical at 3,000 SF from Google Earth

The Allogene building and 1125 O'Brien project are similar in size, but vastly different in many aspects. 1125 O'Brien is a 5-story building with all mechanical airside and plant equipment mounted on the roof

with an allotted space of 10,802 SF. Allogene is a single story with yard space and a mezzanine allowing for ~ 20,000 SF for mechanical equipment.

Allogene is 33% lab, whereas 1125 O'Brien will be 50% lab. Additional lab increases load and equipment sizing. Allogene also has about 50% recirculation in the lab spaces whereas 1125 O'Brien has 0% recirculation. These factors contribute to ~ 37% more capacity required in the heating/cooling plant size.

As mentioned in Feasibility Issue #2, this comparison shows that due to 1125 O'Brien having lab and outside air usage increases the size of the plant. With the restrictions in available geography on both the roof and the site, it is not currently feasible to install an all-electric plant with the current building configuration and usage.

The final feasibility comparison is in regard to the use of solar array coupled with battery backup. Because of the Allogene building being single story at 138,000 Square feet with adequate service yard, they were able to incorporate a large solar array with battery back up in the yard. Although we do not have specifics on the capacity, it appears to be substantial enough to cover the power requirements during power outages. This would need to be confirmed with the EOR on the project.

Conversely, for the 1125 O'Brien project we would need ~1,500 kW worth of solar array and battery to achieve the back up power for heating system during an outage, requiring ~ 100,000 SF of solar panels and batteries. This is not achievable with the site and building restrictions and thus not feasible for the 1125 O'Brien Project.

Summary:

We are requesting an exemption for this project from this reach code. Due to system reliability and site geographic constraints, all-electric space conditioning is infeasible for the project at this time. The Project proposes all-electric cooling, natural gas boilers will provide space heating and conduction and ventilation equipment will be designed to accommodate future conversion to all-electric when feasible.

Should you have any questions, or if I can be of further assistance, please feel free to call.

Sincerely,

Zachary Russi, P.E., LEED AP
President

Step 1: Incremental construction costs	($1,897,940)
Step 2: Incremental operational time dependent valuation (TDV) costs/benefits	($7,334)
Step 3: Cost effectiveness calculations	($1,905,274)

To demonstrate the cost effectiveness exception, add the incremental construction cost of the electric system (per Step 1) to the on-going TDV impact of the baseline system to the proposed system (per Step 2). This will determine the Net Present Value (NPV) of the electric system. For example, if the incremental cost of the electric system is determined to be $1,000 more than the gas system in Step 1 (and thus a negative number), then the NPV of the electric system would be -$1,000 + $890 = -$110 NPV. If the NPV is positive, then the electric system is cost-effective. If the NPV is negative, the electric system is not cost-effective.

NPV is negative/not cost-effective

Appendix B

- Cost Effectiveness Methodology
- Mechanical Costs
- Electric Costs
- TDV NVP Analysis

Step 1: Incremental construction costs	**Responsible Party**	**Responsible Party Response/Answer**	**Cost**
Define the proposed gas space heating system for the exempt system. Specify the relevant state code-minimum baseline for a gas system, as well as mission-specific functions or capabilities of equipment and the need for the capabilities.	WAM	See attached WAM Letter dated 8/5/22	Below
Define the equivalent electric space heating system that would otherwise be installed. Briefly describe why the electric system is appropriate alternative to the proposed gas system (for example, an electric-resistance space heater may be the only appliance that	WAM	See attached WAM Letter dated 8/5/22	Below
Identify the incremental costs cost components listed under materials and installation labor below. Only include design components that must be changed when switching between the State and Menlo Park code-minimum electric baseline and proposed gas system. For each cost point, provide the source of the data (i.e., the vendors or cost estimator) with narrative justification for why these costs are not outliers. Two separate cost data points are preferred.	WAM, TRIBAY & BLACH	See below.	NA
Examples of incremental cost components to be considered for applicability to the building space heating system are listed below. Design labor and specifications development should not be included:	NA	NA	NA
Materials			
Equipment: Include appliances as well as relevant piping, ducting, fittings, sealing, insulation, etc.	WAM	See attached WAM Letter dated 8/5/22	$ 5,920,000
Controls: Both the sensors/points as well as any upgrades necessary for the controller	WAM	Inc Above	inc
Gas and electrical infrastructure connected to the site, such as gas main piping or laterals or on-site secondary transformers.	TRIBAY, KDS, BLACH	No Significant Impact. Negligible cost changes.	
Structural (e.g., upgrades for heavier equipment).	BLACH	Add (14) C8 x 11.5 Steel Members & adjust other members	$ 10,000
Electrical (wiring, panel, utility service, etc…). Gas system installation must include costs for electric ready retrofits and pre-wiring.	TRIBAY	See Tribay Letter dated 8/31/22	$ 166,000
Plumbing (meter, distribution, etc…)	KDS	No Significant Impact. Negligible cost changes.	
Maintenance costs	TARLTON		
Mark up for overhead and profit.	BLACH	Insurance= 2.6% and Fee 3.9%	$ 396,240
Installation labor			
Trade – Identify trade(s) necessary	ALL	inc above	
Time – Number of hours per trade	ALL	not applicable to this calculation	
Rate – ($/hour) typical	ALL	not applicable to this calculation	
Type – Categories of labor included as applicable: proper installation, testing/commissioning, maintenance (including when incurred), and replacement (including when incurred)	ALL	Installation, Testing/Commissioning	
Total			**$ 6,492,240**
Subtract the costs of the baseline electric system from the proposed gas system to determine the incremental construction costs of the electric system. A negative value suggests that the electric system is more costly compared to the gas system. In other words, if the electric system cost is higher than the gas system, then the incremental cost of the proposed gas system is negative. If the all-electric system costs less than the gas system, then the incremental cost is positive.	BLACH	$ (1,897,940)	

Step 2: Incremental operational time dependent valuation (TDV) costs/benefits		See attached excel calculations from NRG Engineering	
Develop building energy simulations of both the baseline electric and proposed (gas) systems to attain annual 2019 Compliance Results for Space Heating Performance (Annual TDV Energy Use, kBtu/ft2-yr). This is the annual TDV energy used per-square-foot for space heating.		233477	SF
Lastly, subtract the NPV of TDV electric value from the gas value. This represents the TDV benefit (or cost) of the electric system. In the example above, the TDV difference is $8900 - $8010 = +$890.		See attached excel calculations from NRG Engineering	
$0.089/kBtu represents 15-year net present value per kBtu in nonresidential buildings, per 2019 Time Dependent Valuation of Energy for Developing Building Efficiency Standards, February 2017, Table 13 TDV Conversion Factors, NPV $/kBtu. Available at: https://efiling.energy.ca.gov/getdocument.aspx?tn=216062		$ (7,334)	
Step 3: Cost effectiveness calculations[1]			
To demonstrate the cost effectiveness exception, add the incremental construction cost of the electric system (per Step 1) to the on-going TDV impact of the baseline system to the proposed system (per Step 2). This will determine the Net Present Value (NPV) of the electric system.		**$ (1,905,274)**	
If the NPV is positive, then the electric system is cost-effective. If the NPV is negative, the electric system is not cost-effective.			

[1] *Per instruction, the cost-effectiveness calculation uses the current 2019 code which is the code anticipated for the project. For informational purposes, a calculation was run using the 2022 code and the cost effectiveness conclusion remained in the negative showing an all-electric system is not cost-effective.*

Subject: 1125 O'Brien – HVAC All-Electric Option at Menlo Park, CA

Dear Brian:

Western Allied Mechanical is pleased to present the alternate All Electric Option budget for the subject project. Here a summary of the high-level difference between the two design approaches:

Description	**Pros**	**Cons**
Base Design: (1) 162-ton Office AC units (2) 162-ton Semi - Custom Lab AC units with evaporative cooling (2) Gas-Fired Boiler with pumps	• Cost Effective	
Alt All Electric Design: (2) 150-ton AC units with Peak Plus (3) 70-ton Air Sourced Heat Pumps (1) CHW Storage Tank (1) HHW Storage Tank (1) Heat Recovery Unit	• All-Electric and no gas	• More upfront Cost • May have structural impact

Based on our Budget Cost Study, it will be **at least 29% Cost Increase just on HVAC Systems** compared to the base design.

Design Approach	**Construction Budget**
Base Design	$4,594,300
All-Electric Option Design	$ 5,920,000
Delta	**$1,325,700 or 29%**

Should you have any questions, or if I can be of further assistance, please feel free to call.

Sincerely,

Yindy Felkins, P.E., LEED AP, DBIA

NOISE MEASUREMENT SITE INFORMATION SHEET

Jones & Stokes

PROJECT NAME: Menlo Park Projects

PROJECT #:

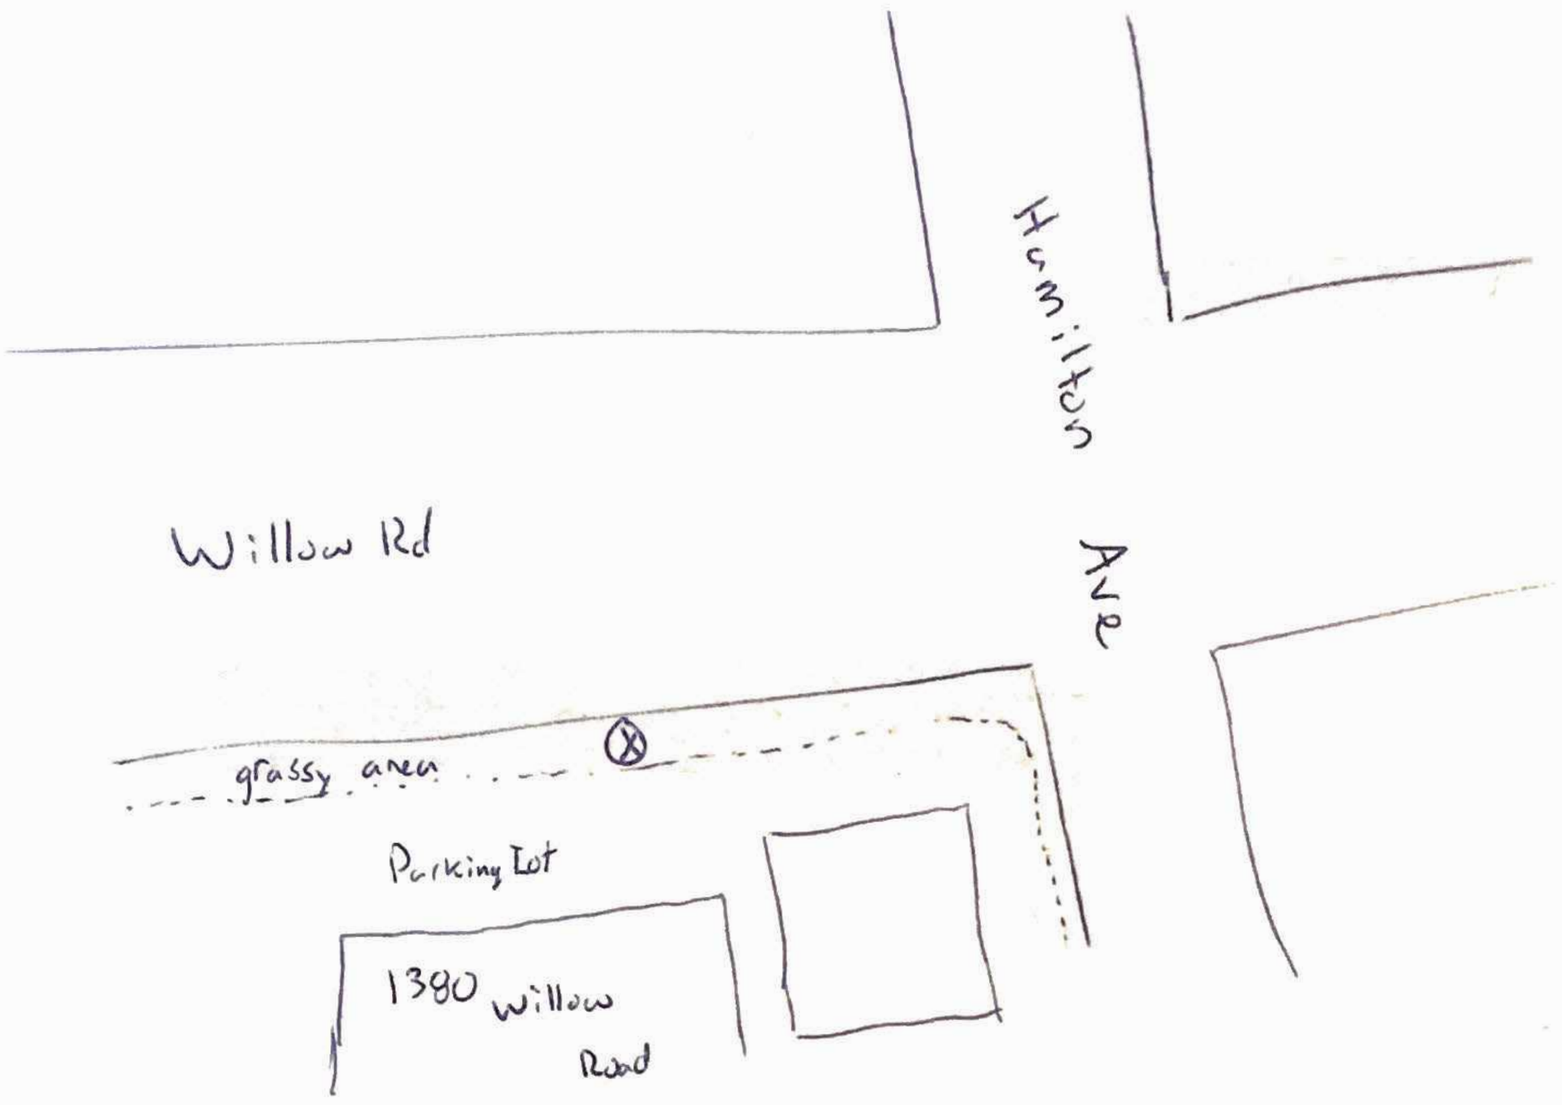
SITE NUMBER: ST-1

DATE/TIME: 2021 07 27

LOCATION/ADDRESS: 1380 Willow Road

ENGINEERS: Matsui / Schumaker

SITE SKETCH: Show microphone location, nearby residences/buildings, potential reflective surfaces, project roadways, local roadways, driveways, ground type, trees. Indicate reference distances between objects, arrows showing wind direction, North, and camera locations/directions. Describe the line-of-sight and topography/elevation changes relative to noise sources.



WEATHER DATA: (temperature, wind speed/direction, sky conditions, relative humidity)

79°F	2.6 mph	Blue skies mostly clear	57%

EQUIPMENT DATA: (sound level meter, microphone, preamp, calibrator, factory cal. date)

LXT

ESTIMATED CONSTRUCTION DATE OF RESIDENCES: (Pre-1978, or new construction)

POSTED SPEED: COMMENTS:

TRAFFIC COUNTS:

Roadway/Direction	Autos	Medium	Heavy	Speed	Start Time	Duration

NOISE MEASUREMENT LOG SHEET (20)

Jones & Stokes

PROJECT NAME: Menlo Park Projects
PROJECT #:
SITE NUMBER: ST-1
DATE/TIME: 2021 07 27 13:32
LOCATION/ADDRESS: 1380 willow Rd
ENGINEERS: Matsui / Schumaker

#	Minute Starting	Measured Leq (dBA)	O or X	Autos	Medium Trucks	Heavy Trucks	Other Noise Sources/Comments (include SLM equipment, Calibration Data)
1	13:32						
2	13:33						helicopter fly by.
3	13:34						drilling noises from across willow Rd
4	13:35						
5	13:36						
6	13:37						office door shuts heavily
7	13:38						
8	13:39						Small plane fly by
9	13:40						
10	13:41						group talking as walking by
11	13:42						
12	13:43						Small plane fly by
13	13:44						
14	13:45						
15	13:46						
16							decent amount of traffic throughout
17							LXT_Data.012
18							
19							
20							

Leq	65.2
Lmax	78.4
Lmin	54.3
L10	67.7
L33	65.2
L50	63.8
L90	58.4

Overall Leq (Include "O" minutes, Exclude "X" minutes) = _____ **dBA**

Subset Leq (Exclude "O" and "X" minutes) = _____ **dBA**

"O" = other characteristic sources that contributed to the Leq

"X" = exclude from Leq calculation; a non-typical source contaminated the measurement

NOISE MEASUREMENT SITE INFORMATION SHEET

Jones & Stokes

PROJECT NAME: Menlo Park

SITE NUMBER: ST-2

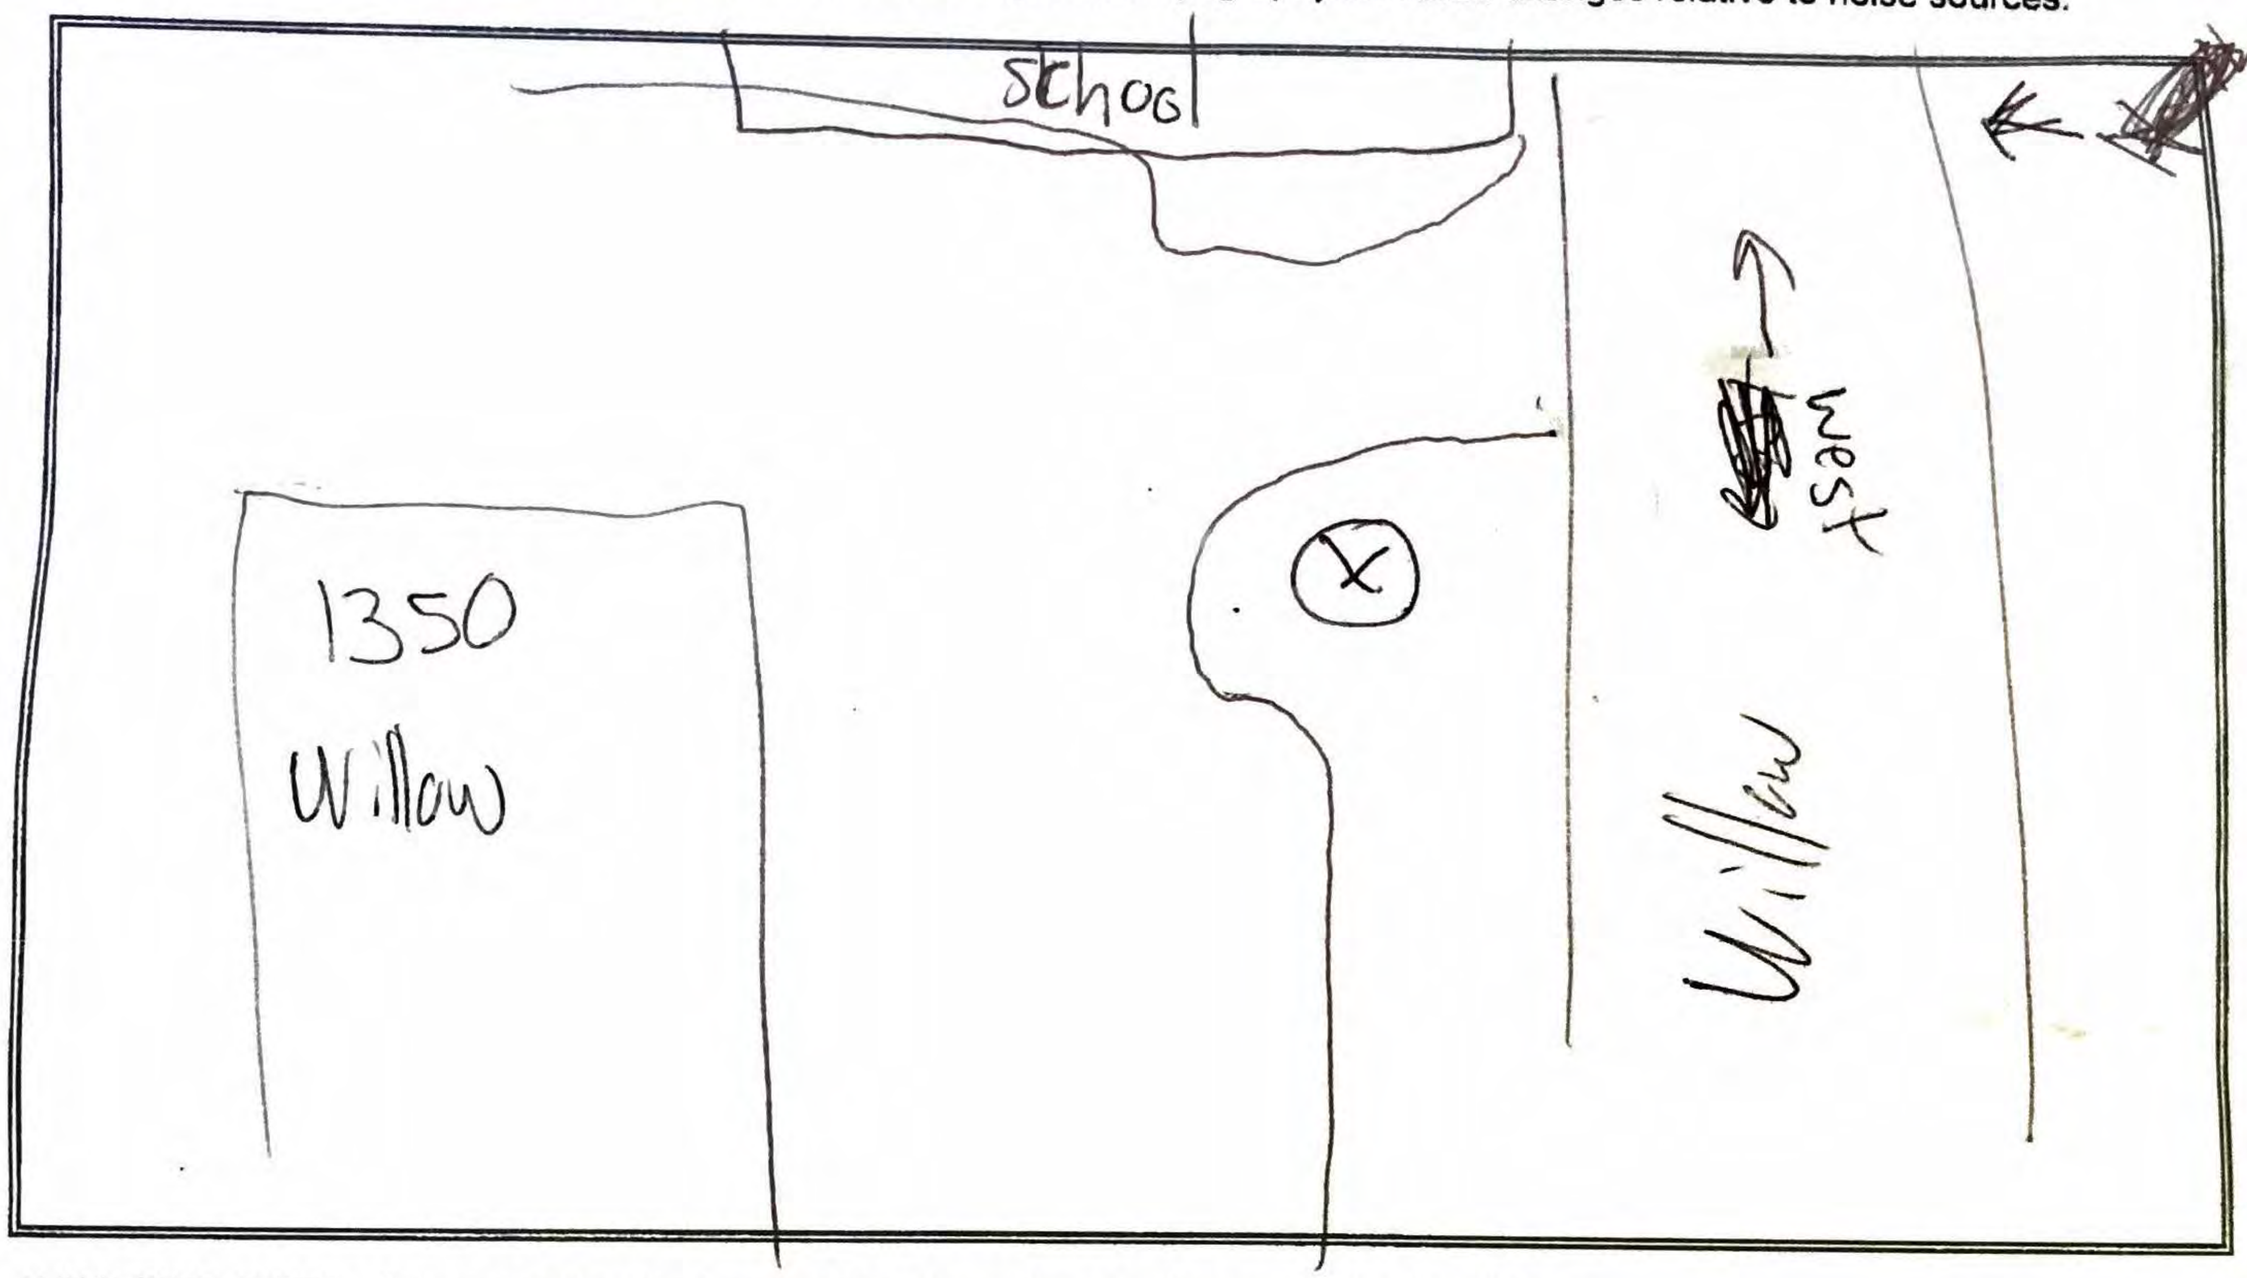
LOCATION/ADDRESS: 1350 Willow, SW corner

PROJECT #:

DATE/TIME: 7/20/21

ENGINEERS: C. Matsui

SITE SKETCH: Show microphone location, nearby residences/buildings, potential reflective surfaces, project roadways, local roadways, driveways, ground type, trees. Indicate reference distances between objects, arrows showing wind direction, North, and camera locations/directions. Describe the line-of-sight and topography/elevation changes relative to noise sources.



WEATHER DATA: (temperature, wind speed/direction, sky conditions, relative humidity)

75° F, 1.9mph, mostly sunny, 67-68%

EQUIPMENT DATA: (sound level meter, microphone, preamp, calibrator, factory cal. date)

LxT

ESTIMATED CONSTRUCTION DATE OF RESIDENCES: (Pre-1978, or new construction)

POSTED SPEED: 40 mph (Willow Rd)

COMMENTS:

TRAFFIC COUNTS:

Vibrasure Rooftop Equipment Noise Analysis

[this page left blank intentionally]

VIBRASURE

Memorandum

To: Elke MacGregor, emacgregor@des-ae.com
From: Tyler Rynberg, tyler@vibrasure.com
Date: 14 May 2021, *revised 13 June 2021*
Subject: 1125 O'Brien – Rooftop Equipment Noise Analysis

Elke: we are pleased to submit this summary of our noise analysis for rooftop equipment on the 1125 O'Brien project.

Background

As part of a new commercial building project at 1125 O'Brien Drive, Menlo Park, CA, several pieces of mechanical equipment will be located on the roof. The City of Menlo Park has requested documentation that the new equipment is in compliance with the City's Municipal Code.

The new equipment would generally be located behind a roof screen; boilers, pumps, and a fan coil unit will be located in enclosed penthouse areas.

City of Menlo Park Municipal Code

Chapter 16.08 General Regulations of the Municipal Code establishes maximum noise levels permitted for rooftop mechanical equipment in Paragraph 16.08.095:

> *"…all sounds emitted by such equipment shall not exceed 50 decibels at a distance of 50 feet from such equipment."*

Chapter 8.06 Noise of the Municipal Code does not explicitly address noise sources from commercial or industrial properties. However, Section 8.06.030 does provide noise limits from residential properties as follows:

- Daytime hours (7am to 10pm) – 60 dBA
- Nighttime hours (10pm to 7am) – 50 dBA

Chapter 8.06 also provides the following definition of a noise disturbance:

> *"…means any source of sound which exceeds the noise limitations permitted in Section 8.06.030. For purposes of this section sources of sound shall include…blowers, air conditioners…mechanical equipment…"*

Noise Analysis

$$L_p = L_W - |10 \cdot \log\left(\frac{Q}{4\pi \cdot r^2}\right)|$$

The submittals for the equipment include overall dBA and/or octave band sound power levels. When necessary, these octave band levels were summed together and A-weighted to create an overall A-weighted sound power level.

The A-weighted sound pressure (dBA) for a point source at an arbitrary distance can be calculated from the A-weighted sound power using the following equation:

Equation (1): LpA = LwA – 20 x log(distance/reference distance) – 0.5 dB

Using (1), we calculated the A-weighted sound pressure at a distance of 50 feet for all the equipment. In addition to distance losses, the equipment are located behind a 16.5' tall roof screen. The resulting noise levels are summarized in Table 1 below:

Table 1 – Noise Calculations at 50' from Equipment

Equipment	Noise Level w/Distance Attenuation and Barrier Losses[1]
AC-1 through AC-3	46 dBA
AC-1 through AC-3 Condenser Units	50 dBA
EF-1 through EF-3	37 dBA
EF-4	31 dBA
Condensing Unit CU-1	12 dBA

[1] this noise level includes both distance attenuation and barrier losses from the roof screen

As seen in Table 1, the noise emissions from all equipment meet the maximum permitted sound level of 50 dBA per 16.08.095.

In addition, the building at 1125 O'Brien Drive will be located in the center of a commercial development, with no sensitive receptors in close proximity. The nearest buildings, at 1075 O'Brien Drive, 1185 O'Brien Drive, and 1180 O'Brien Drive, are also commercial receptors, and are approximately 45 to 155 feet away from the edge of the roof; the nearest sensitive receptors in the general vicinity include a building at 1215 O'Brien Drive housing a school (~180 feet away) and single-family residences to the south along Alberni St (~350 feet away).

As the AC-1 through AC-3 condenser units are the loudest piece of equipment, we have also calculated the condenser unit noise levels at these adjacent receptors. Note that the edge of the building itself also blocks the acoustic line-of-sight from the equipment to these adjacent receptors and serves as a noise barrier, in addition to the 16.5' tall screening wall; the resulting noise levels are shown below in Table 2:

Table 2 – Noise Calculations at Adjacent Receptors from Condensing Units

Location	Distance (ft)[1]	Noise Level w/Distance Attenuation and Barrier Losses[2]
1075 O'Brien (commercial)	240	32 dBA
1180 O'Brien (commercial)	106	37 dBA
1185 O'Brien (commercial)	68	40 dBA
1215 O'Brien (school)	180	34 dBA
Residences on Alberni St	394	29 dBA

[1] this is the distance from the closest location of an AC-1/AC-2/AC-3 condenser unit to the receptor property line
[2] this noise level includes both distance attenuation and barrier losses from the 16.5' tall roof screen/roof edge

Conclusions

The calculated noise levels for the proposed rooftop equipment at a distance of 50 feet meet the noise limit established in Paragraph 16.08.095 of the City of Menlo Park Municipal Code. In addition, when accounting for distance attenuation and the barrier losses from the roof screen and edge of the roof, the noise levels from all equipment are below 40 dBA at all adjacent receptors, and are only 29 dBA at the closest residential area. While Paragraph 8.06 only addresses residential land uses and does not explicitly apply to the receptors at 1075, 1180, and 1185 O'Brien Drive, the noise levels generated at these nearby receptors are all significantly below the nighttime limit of 50 dBA permitted by residential land uses. In addition, the calculated level of 34 dBA at the school and 29 dBA at the residential area is far below the 50 dBA nighttime limit.

It is our finding that the proposed rooftop equipment would not create a noise disturbance per the City of Menlo Park Municipal Code and would be expected to be generally inaudible above the ambient noise at the nearest sensitive receptors.

VIBRASURE

Memorandum

To: Elke MacGregor, emacgregor@des-ae.com
From: Tyler Rynberg, tyler@vibrasure.com
Date: 18 June 2021, *revised 9 July 2021*
Subject: 1125 O'Brien – Rooftop Deck Noise Analysis

Elke: we are pleased to submit this summary of our noise analysis for the exposed rooftop deck on the 1125 O'Brien project. This memorandum is additional to the rooftop equipment noise memorandum and analysis, dated 14 May 2021 (revised 18 June 2021).

Background

As part of a new commercial building project at 1125 O'Brien Drive, Menlo Park, CA, an exposed deck will be located on the roof. This deck will be open for general use, such as individuals or small groups taking lunch or a break outdoors, as well as for larger corporate events. We understand the following assumptions regarding the use for corporate events:

- Most events will include presentations, with some light background music
- The presentations will be oriented toward the south
- Events are expected to last 2 to 3 hours and be complete by approximately 7pm
- Roughly 6 events per year are expected
- The deck is designed to accommodate 270 people; our analysis is based on a Code allowance of 299 people

The City of Menlo Park has requested documentation that use of the rooftop deck will be in compliance with the City's Municipal Code.

City of Menlo Park Municipal Code

Chapter 8.06 Noise of the Municipal Code does not explicitly address noise sources from commercial or industrial properties. However, Section 8.06.030 does provide noise limits from residential properties as follows:

- Daytime hours (7am to 10pm) – 60 dBA
- Nighttime hours (10pm to 7am) – 50 dBA

However, Chapter 8.06.040(e) explicitly exempts "occasional social gatherings" from the Code limits if they take place between 11am and 11:30pm, provided the noise level measured from any adjacent residential property does not exceed 65 dBA.

Noise Analysis

Given that these corporate events are only expected to occur roughly 6 times per year, to end by 7pm, and to last only a few hours, these should be considered "occasional social gatherings" per the Municipal Code. Therefore, these events would be exempt from the Municipal Code noise limits if the noise levels from the events are below 65 dBA at the closest residential property.

The building at 1125 O'Brien Drive will be located in the center of a commercial development, with no sensitive receptors in close proximity. The nearest sensitive receptors in the general vicinity include a building/playground at 1215 O'Brien Drive housing the Wund3rSCHOOL school (~330 feet away) and single-family residences to the south along Alberni St (~365 feet away). Please refer to Figure 1 at the end of this document.

Noise levels from a crowd of people can be conservatively estimated using the equation below:

Equation (1): LwA_{EQ} = 15 x log(number of people in the crowd) + 64

Using a maximum crowd size of 299 people, an event on the rooftop deck could generate a sound power level of 101 dBA. The A-weighted sound pressure (dBA) for a point source at an arbitrary distance can be calculated from the A-weighted sound power using the following equation:

Equation (2): LpA = LwA – 20 x log(distance/reference distance) – 0.5 dB

Using (2), we calculated the A-weighted sound pressure at 1215 O'Brien Drive and to the residences along Alberni St. Note that the edge of the building itself at least partially blocks the acoustic line-of-sight from the crowd to these adjacent receptors and serves as a noise barrier; in addition, there will be a 16.5' tall screening wall completely blocking off the deck from the north side of the building, providing significant shielding at 1215 O'Brien Drive. The resulting noise levels are shown below in Table 1:

Table 1 – Noise Calculations at Adjacent Receptors from the Event Crowd

Location	Distance (ft)[1]	Noise Level w/Distance Attenuation and Barrier Losses
1215 O'Brien (school/playground)	330	28 dBA[2]
Residences on Alberni St	365	49 dBA[3]

[1] this is the distance from the closest location of the crowd to the receptor property line
[2] this noise level includes both distance attenuation and barrier losses from the 16.5' tall roof screen/roof edge
[3] this noise level includes both distance attenuation and barrier losses from the roof edge

We understand that the Wund3rSCHOOL playground is open until 4:30pm, so there should little to no overlap between events on the deck and use of the playground. Since the Wund3rSCHOOL is a private school, it is not subject to school district regulations (we are also unaware of any school district regulations governing playground noise). The City of Menlo Park does not establish background noise limits for playgrounds; in many jurisdictions, schools are treated equivalently to residential areas. Exterior playgrounds are considered to be in the "Normally Acceptable" category of the State of California's Noise Compatibility Guidelines up to 60 dBA.

As the calculated level of 28 dBA at the playground is far below any of the above standards, is likely at least 15 dBA below the existing ambient noise levels at the playground, and there will be little to no overlap between events and playground use, the rooftop deck events should result in no impact at this receptor.

Conclusions

The calculated noise levels for the events are below the residential daytime limit of 60 dBA, as well as the nighttime limit of 50 dBA, and meet the 65 dBA noise limit established in 8.06.030(e) of the City of Menlo Park Municipal Code. As noted above, the calculated noise level of 28 dBA at the 1215 O'Brien Drive playground is also far below these limits.

It is our finding that the proposed events at the rooftop deck meet the exemption requirements of 8.06.040(e) and would not create a noise disturbance per the City of Menlo Park Municipal Code. Further, based on the calculated noise levels, events extending past 7pm or occurring more frequently, would still be compliance with the City of Menlo Park Municipal Code.

Please feel free to call or write with any questions or comments; our contact information is below.

1.0 EXECUTIVE SUMMARY

This Housing Needs Assessment (HNA) provides an analysis of the housing needs associated with the proposed 1125 O'Brien Drive Project (Project) in the City of Menlo Park (City). The HNA provides an estimate of increased demand for housing from the proposed Project and evaluates the potential that the proposed Project could contribute to displacement of existing residents within the City of East Palo Alto (East Palo Alto) and the Belle Haven neighborhood of Menlo Park (Belle Haven), two proximate communities identified as having risk factors for displacement. The HNA is part of a range of analyses provided to decision makers and the community to inform and assist in the decision-making and entitlement process for the proposed Project. Preparation of this HNA is required under the terms of a 2017 Settlement Agreement between the cities of Menlo Park and East Palo Alto, but is not required by the California Environmental Quality Act (CEQA)[1].

The proposed Project would include a new 131,825 gross square foot (gsf) building for life science research and development (R&D) with a small café on the ground floor, replacing four existing office, R&D, and warehouse buildings with a combined 59,866 gsf, for a net increase of 71,959 gsf. The proposed Project would add an estimated 185 employees to the Project site. A summary of the proposed Project is provided in Table 1-1, below.

Table 1-1. Project Summary

	Building Area (GSF)	Estimated Employment
Proposed Building (1125 O'Brien)	131,825	328
Less: Existing Buildings (to be demolished)	(59,866)	(143)
Net Increase	71,959	185

Jobs / Housing Analysis / Demand for Housing

New jobs associated with the proposed Project would result in new worker households who would need housing somewhere within commuting distance to Menlo Park. Using the average number of workers per worker household[2] in San Mateo County ("County"), which is 1.91, the number of new worker households associated with the proposed Project is estimated at 97, which represents a need for 97 additional housing units.

[1] In 2016, the City updated its General Plan, specifically the land use and circulation elements, commonly referred to as ConnectMenlo. The City completed and certified a program level EIR for ConnectMenlo, which determined that there would be a less than significant impact on population and housing, except cumulative impacts projected to be reduced to less than significant following an update of ABAG regional forecasts. Pursuant to the terms of the 2017 City of East Palo Alto v. City of Menlo Park Settlement Agreement, which settled the lawsuit regarding the ConnectMenlo EIR, preparation of this HNA is required.

[2] Households that have at least one member of the workforce are considered worker households.

Table 1-2. Increase in Employees and Households	
Net Increase in Employees	185
Net Increase in Employee Households (at 1.91 workers per household)	97

Keyser Marston Associates (KMA) estimated how many of the 97 additional housing units would be needed at each of six housing affordability or income levels, using a combination of data sources including U.S. Bureau of Labor Statistics occupation and wage data and U.S. Census data.

The following six affordability or income tiers are addressed, each expressed in relation to local Area Median Income (AMI):

- Extremely Low Income – households up to 30% of AMI;
- Very Low Income – households over 30% up to 50% of AMI;
- Low Income – households over 50% up to 80% of AMI;
- Moderate Income – households over 80% up to 120% of AMI;
- Above Moderate Income – households over 120% up to 150% of AMI; and
- Over 150% of AMI – households above 150% of AMI.

According to the California Department of Housing and Community Development (HCD), the AMI for a family of four in San Mateo County, is $149,600 as of 2021. Section 3 provides income limits applicable to each of the identified income categories. The affordability categories from 0% through 120% AMI reflect those addressed by statewide housing programs such as the Regional Housing Needs Allocation (RHNA) process. In addition, the Above Moderate Income tier is included in the analysis for consistency with HNAs prepared for prior projects in Menlo Park and to provide decision makers with information regarding a broad spectrum of housing affordability levels. Above Moderate Income households also face affordable housing challenges in Menlo Park as well as in the broader Bay Area. In fact, due to the high cost of housing, housing affordability challenges also extend to households earning over 150% of AMI[3], particularly in the for-sale housing market. The Over 150% of AMI category captures households with incomes that exceed 150% of AMI and includes all households not included within one of the other income categories.

The analysis uses national data on worker occupations by industry paired with local compensation data applicable to San Mateo County. Worker occupations are specific to the

[3] An income of approximately 221% of AMI, is estimated to be needed to afford the median priced home in Menlo Park. The median priced home in Menlo Park is $2.35 million based on home sales from December 2019 through December 2020 from real estate data service provider CoreLogic. Estimates assume a down payment of 30% based on the median down payment for home purchases with a mortgage in Menlo Park estimated from CoreLogic data during this period, 35% of income spent on housing, and a mortgage interest rate of 3.1% based on the average 30-year fixed mortgage rate from January through December 2020 from Freddie Mac Primary Mortgage Market Survey.

industry codes for life sciences research and development[4] as well as building services such as maintenance and janitorial. For the existing office / R&D / warehouse space to be removed, worker occupations estimated to be representative are based on industry codes for research and development, warehouse, and HVAC contractors. Table 1-3 presents the estimated net increase in employee households at each housing affordability level who would require housing within commuting distance of Menlo Park.

Table 1-3. Estimated Net Additional Housing Needs Within Commuting Distance

	Total	Percent
Extremely Low Income	0	0.0%
Very Low Income	2	2.1%
Low Income	12	12.4%
Moderate Income	15	15.5%
Subtotal: 0% to 120% AMI	29	29.9%
Above Moderate Income	23	23.7%
Subtotal: 0% to 150% AMI	52	53.6%
Over 150% AMI	45	46.4%
Total Employee Households	**97**	100.0%

Source: Table 3-9

Of the 97 net additional employee households, an estimated 2.1% fall into the Very Low Income tier (30% to 50% AMI), 12.4% into the Low Income tier (50% to 80% AMI) and 15.5% into the Moderate Income tier (80% to 120% AMI). Combined, 29 units of need are projected for households with incomes from 0% to 120% of AMI. For employee households earning over 120% of median, an estimated 23 units of need are estimated in the Above Moderate Income category (120% to 150% AMI), representing approximately 23.7% of the total, and 45 units of need are estimated in the Over 150% AMI tier. The Over 150% AMI Income tier is estimated to represent the largest share of housing need at 46.4% of the total.

Because the AMI for a family of four is $149,600, families of four earning 120% of AMI would earn $179,500 per year. Therefore, four-person households earning $179,500 per year or less are included in one of the Extremely Low, Very Low, Low, or Moderate-Income categories based on the most recent income criteria available from the California Department of Housing and Community Development (HCD)[5]. Based on compensation data included in Appendix A, an estimated 30% of added housing demand is for households with incomes from 0% to 120% of AMI while 70% is for households with income that exceeds 120% of AMI. Estimates reflect the generally higher compensation levels characteristic of employees working in research and

[4] North American Industrial Classification System (NAICS) industry codes used in the analysis are: NAICS code 541710: Research and Development in the Physical, Engineering, and Life Sciences; NAICS code 561700: Services to Buildings and Dwellings; NAICS code 561600: Investigation and Security Services; NAICS code 493100: Warehousing and Storage; and NAICS code 238220: Plumbing, Heating, and Air-Conditioning Contractors.
[5] See Table 3-1 for more information about the income criteria used in the analysis.

development. In addition, jobs within the existing warehouse building at 1 Casey Court to be removed are estimated to be at lower compensation levels than jobs added by the proposed Project, contributing to an estimated net increase in housing demand that is weighted toward the Over 150% of AMI category.

Menlo Park Share of Total Housing Need

According to the U.S. Census 2015-2019 American Community Survey (ACS), 5.9% of those who currently work in the City of Menlo Park also live in the City of Menlo Park. This has declined since the 2000 Census which showed that 7.2% of those who work in Menlo Park live in the City. This share is low compared to most other cities in the Bay Area,[6] attributable to a range of factors such as affordability constraints that already limit workers' ability to find housing within the City and the large number of jobs in Menlo Park relative to the size of the housing stock. Another contributing factor is the location and boundary configuration of the City making many other jurisdictions within a short commute distance.

The Project site is located within the existing Menlo Park Labs campus that is occupied by other R&D tenants. The share of current Menlo Park Labs workers who live in Menlo Park is estimated at 3.8%[7], significantly below the overall average of 5.9% of Menlo Park workers that both live and work in the City per the U.S. Census. This variance in commute patterns between Menlo Park Labs workers and other Menlo Park workers probably reflects its location accessible to the Dumbarton Bridge and U.S. Highway 101 with shuttle services to San Francisco, Caltrain and BART, which make it more accessible to the regional labor pool and more conducive to commuting. Further, many factors influence how people select where to live, including, but not limited to, weather, family, community and cultural factors, housing affordability, quality of schools, access to employment and unit type.

To estimate Menlo Park's share of the total housing need from the proposed Project, the analysis considers three scenarios, a lower estimate, a higher estimate, and a goal-based estimate of the percent of workers likely to seek and find housing within the City:

1. ***Lower Estimate of Commute Share at 3.8%*** *(data specific to Menlo Park Labs):* The lower estimate reflects commute patterns for three existing tenants at the Menlo Park Labs campus provided in connection with preparation of a prior HNA for the 1350 Adams Court Project. Using this approach, approximately 3.8% of workers at the proposed Project are estimated to reside within the City of Menlo Park.

2. ***Higher Estimate of Commute Share at 5.9%*** *(based on City-wide average):* The higher estimate is based on U.S. Census data, which indicates that the existing City-wide average share of Menlo Park's workforce that lives in the City is approximately 5.9%.

[6] See Appendix A Table 8 for comparable information for other cities.
[7] Estimate is based on data for three existing tenants within the Menlo Park Labs campus provided in connection with preparation of the HNA for the 1350 Adams Court Project, also within the Menlo Park Labs campus.

The rationale for including the higher estimate is that the City-wide average may be more representative depending on the tenant(s) that occupy the building. There may also be a potential for a higher share of Project workers to live locally given the planned development of additional housing options in the vicinity.

3. ***Goal-Based Commute Share Estimate at 20%*** *(based on 2000 Nexus Study):* The City Council has expressed an interest in improving the jobs housing balance and obtaining data to inform the goal of increasing the number of workers who live and work in Menlo Park. Therefore, for informational purposes, the report provides an additional goal-based estimate of housing units in Menlo Park based on a 20% commute share, which was a goal identified in the City's 2000 Commercial Linkage Fee Nexus Study. The possibility that availability and affordability of housing have contributed to a downward trend in Menlo Park's commute share is a primary reason for including this additional goal-based commute share estimate.

The percent of workers residing locally with the lower, higher, and goal-based commute share estimates were applied to the total housing need added by the proposed Project to calculate the number of workers estimated to seek and find housing in Menlo Park (e.g., 97 total demand X 3.8% = 4 units in Menlo Park). By this method, Menlo Park's share of the total housing need ranges from 4 units with the lower estimate, 6 units with the higher estimate and 19 units with the goal-based commute share estimate. Table 1-4, below, summarizes the estimated number of new workers in the proposed Project who would seek and find housing in Menlo Park by income tier.

Table 1-4. Estimated Menlo Park Share of Total Housing Needs*

	Lower Estimate of Commute Share (3.8%)	Higher Estimate of Commute Share (5.9%)	Goal-Based Commute Share Estimate (20%)
Extremely Low Income	0	0	0
Very Low Income	0	0	1
Low Income	0	1	2
Moderate Income	1	1	3
Subtotal: 0% to 120% AMI	1	2	6
Above Moderate Income	1	1	4
Subtotal: 0% to 150% AMI	2	3	10
Over 150% AMI	2	3	9
Total Employee Households	**4**	**6**	**19**

* Assumes distribution by income consistent with total housing need per Table 1-3.

With the lower estimate, of the four units of need projected, one unit is estimated to fall within the Moderate Income tier and one unit is projected for the Above Moderate tier. The remaining two units are projected within the Over 150% AMI tier. No units are estimated within the Extremely Low, Very Low, or Low Income tiers because application of the commute shares to

the estimated regional housing demand within these income tiers results in fractions that round down to zero.

With the higher estimate, of the six units of need projected, two units fall within the affordable income tiers through 120% of AMI and one additional unit is projected in the Above Moderate tier, through 150% of AMI. The remaining three units are projected within the Over 150% AMI tier.

With the goal-based commute share estimate, of the 19 units of need projected, six units fall within the affordable income tiers through 120% of AMI and an additional four units are projected in the Above Moderate tier, through 150% of AMI. The remaining nine units are projected within the Over 150% AMI tier.

The percentage factors used to estimate the Menlo Park share of housing need are applied uniformly across each of the income tiers. The actual distribution by income tier in Menlo Park would likely vary from these estimates based on factors such as the existing housing stock, limited availability of affordable units, and the future production of market rate and affordable units in Menlo Park.

The projected Menlo Park share of the total housing need of between of four and nineteen units is well within the 2,946 total units proposed to be assigned to Menlo Park under the Draft Regional Housing Needs Allocation (RHNA) process for the upcoming 2023 to 2031 planning period[8]. The projected Menlo Park share is also well within the 655 total units assigned to Menlo Park for the current RHNA cycle covering the 2014 to 2023 planning period; the City had already issued permits for 1,416 units as of 2020, which is 761 units more than the RHNA target, and had met approximately 47% of production targets for Very Low, Low, and Moderate Income, with 239 units permitted of the 505-unit total RHNA allocation for these three income categories[9]. In addition, several housing developments are currently going through the entitlement process or were recently approved in the vicinity of the proposed Project including the Menlo Uptown Project with 483 units, Menlo Portal Project with 335 units, 111 Independence Drive with 105 units, Menlo Flats with 158 units, 123 Independence with 432 units, and Willow Village with 1,730 units, for a combined total of over 3,000 new units in the vicinity. All the proposed new residential development projects include on-site Below Market Rate (BMR) units in compliance with the City's 15% BMR affordable housing requirement. Therefore, it is anticipated that the additional housing need of four to 19 units in Menlo Park would be absorbed through future housing construction in the City.

[8] Proposed Final Regional Housing Needs Allocation (RHNA) Plan: San Francisco Bay Area, 2023-2031, November 2021. Association of Bay Area Governments.

[9] Menlo Park 2020 Housing Element Annual Progress Report.

Displacement Analysis

Displacement occurs when housing or neighborhood conditions force existing residents to move, or households feel like their move is involuntary. Displacement can be caused by a range of physical, economic and social factors including but not limited to foreclosure, condominium conversion, building deterioration or condemnation, increased taxes, natural disasters, eminent domain and increases in housing costs[10, 11, 12]. The HNA is focused on economic drivers of displacement, specifically the potential for the proposed Project to affect the local housing market and contribute to increasing housing costs, although these economic drivers may also be associated with physical or social factors.

While displacement is not an impact for the purposes of the California Environmental Quality Act (CEQA), displacement has become an increasing regional concern in the Bay Area. A map produced by the Urban Displacement Project, a research and action initiative of UC Berkeley that aims to understand and describe the nature of gentrification and displacement, identifies numerous communities as undergoing displacement or at risk of displacement that extend from San Francisco down the Peninsula to many neighborhoods in San Jose and the East Bay.

The displacement analysis addresses the potential for the proposed Project to contribute to displacement of existing residents in two nearby communities, East Palo Alto and Belle Haven. These communities have risk factors for displacement based on their relatively lower-income existing population that includes a high percentage of households who spend 35% or more of their income on housing. They are identified by the Urban Displacement Project[13] as experiencing on-going gentrification and/or displacement or being at risk of displacement. Another recent study of baseline housing conditions in Belle Haven, East Palo Alto, and North Fair Oaks, prepared by the UC Berkeley Center for Community Innovation and its Y-PLAN initiative, identified similar conclusions[14].

The cost of housing in East Palo Alto and Belle Haven has been increasing rapidly, consistent with trends for the County and the greater Bay Area, which contribute to displacement pressures. These increases in housing costs partly reflect recovery from a decrease in housing prices during the housing market downturn and foreclosure crises during roughly the 2007 to 2012 period. However, during the subsequent economic expansion, the housing market moved

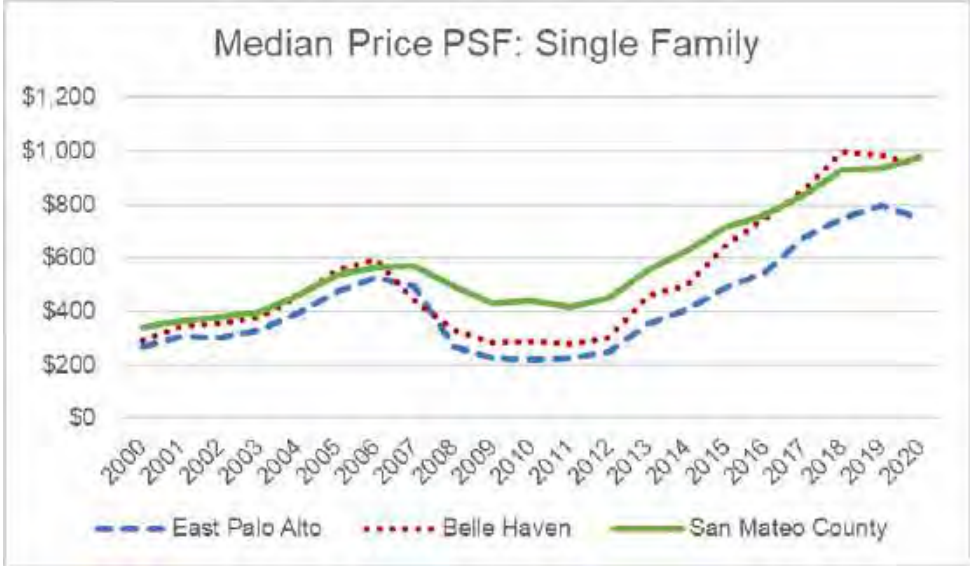
well past its prior peak in 2006, although rents declined in 2020 due to impacts of the global pandemic. The displacement analysis component of the HNA evaluates the potential for the proposed Project to be a contributing factor to displacement pressures in East Palo Alto and Belle Haven by:

1) Estimating direct housing demand in the two communities from Project workers; and
2) Evaluating historic relationships between job growth and real estate trends and using historic relationships to estimate the potential indirect influence on housing prices and rents.

Home Price Trends

Home prices in East Palo Alto and Belle Haven have generally tracked broader trends in the county housing market, which has experienced significant escalation in prices. During the housing market downturn from 2007 to 2012, prices in the two communities fell further than the county overall but outpaced the county in the subsequent recovery. This pattern likely reflects the impacts of the foreclosure crisis during the housing market downturn, which is reported to have heavily impacted East Palo Alto[15]. Over the entire period from 2000 to 2020 shown in the chart below, escalation in housing prices in East Palo Alto matches that of the county while Belle Haven outpaced the county by an annualized rate of approximately 0.6% per year. Median home prices per square foot (PSF) in 2020 are three times what they were in 2000 in both East Palo Alto and the county overall and more than three times the 2000 price level in Belle Haven.

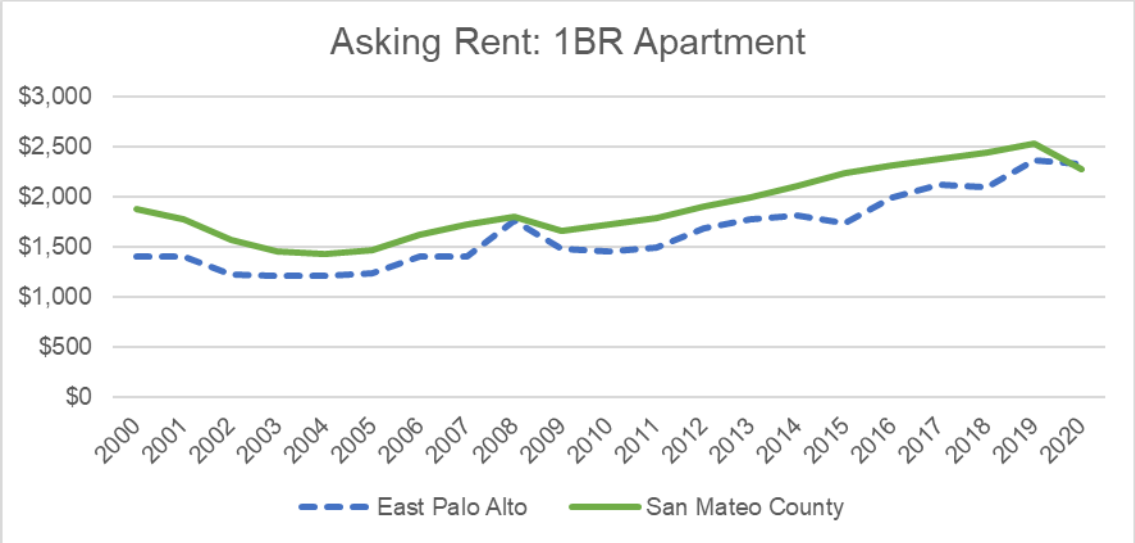


Source: CoreLogic

[15] Urban Displacement Project. 2015. East Palo Alto: An Island of Affordability in a Sea of Wealth.

Rental Market Trends

Trends in asking rents for available apartments in East Palo Alto were compared to the San Mateo County average for the period from 2000 to 2020. Belle Haven is not presented in the chart due to limited rental market data[16]. Rents increased significantly over the time period consistent with regional trends. According to CoStar, a commercial provider of multifamily market data, asking rents in East Palo Alto have increased over the period by approximately 67% versus 21% for the county. As indicated in the chart below, rents in East Palo Alto are now similar to the county average.[17]



Source: CoStar. Represents average asking rents for one-bedroom apartments regardless of year built.

Direct Housing Demand from Project

Direct influence on housing market conditions in East Palo Alto and Belle Haven from the proposed Project is anticipated to be negligible based on the minor share of overall housing demand that employees added by the proposed Project are estimated to represent. Based on the lower and higher commute share scenarios described above, approximately 1% to 3% of Project workers are projected to live in East Palo Alto and approximately 0.5% to 0.7% are

[16] Only approximately 160 units (20%) built before 2016 out of the total 795-unit Belle Haven rental housing stock per the U.S. Census is covered by the historic CoStar data used in the trends analysis. Most rental housing has historically consisted of single-family or small multifamily structures with fewer than five units which are less likely to report rents regularly for purposes of the commercially available data source used in this analysis. Since 2016, two new apartment projects have added approximately 340 units to the rental housing stock, but rents of new apartments tend to command a premium relative to the existing supply and cannot be used for purposes of historic trends at the neighborhood scale. Appendix C Table 13 provides the historic data that is available.

[17] Multifamily rental data in this section includes both new and existing buildings. In contrast, the comparison communities analysis excludes new buildings for purposes of the comparison of rental trends in East Palo Alto and eight comparison communities.

projected to live in Belle Haven. The third goal-based commute share scenario described above is not included for purposes of estimating direct housing demand in East Palo Alto and Belle Haven because it reflects a citywide goal for Menlo Park that is not specific to Belle Haven or East Palo Alto. The lower and higher commute share scenarios translate into a demand for one to three units in East Palo Alto and zero to one unit in Belle Haven. This level of demand represents 0.01% to 0.04% of the existing housing stock in East Palo Alto and 0% to 0.06% in Belle Haven and 1% or less of the units estimated to come available through normal turnover each year. Since this represents a very minor level of demand, potential influence on the local housing market is anticipated to be de minimis.

Indirect Housing Market Effects

Job growth, especially high-income job growth, exerts upward pressure on home prices and rents throughout the region. Potential indirect housing market effects of the proposed Project are analyzed by using a simple linear regression analysis to identify how real estate conditions in San Mateo County and job growth, adjusted for new housing units, have been correlated over the period from 2000 through 2020.[18] The regression analysis findings are then applied to the jobs added by the proposed Project to estimate the potential range of effects on the local housing market. Key findings of this analysis are that:

- Rents are highly correlated with job growth; and
- Home prices do correlate with job growth, but the correlation is weaker than for rental housing. Other factors such as interest rates, credit availability, and other economic trends appear to have been more influential for home prices over the 2000 to 2020 period.

The potential influence of the proposed Project on housing costs for newly vacated units is estimated to range from a 0.01% increase at the lower end up to a 0.12% increase at the upper end. These findings reflect a range of approaches to the regression analysis designed to provide an estimate of the upper and lower bounds of potential market influence from the proposed Project within East Palo Alto and Belle Haven.

[18] Selection of 2000 as the earliest date analyzed was based on availability of rental data from CoStar for 2000 onward. Employment data for 2020 reflects an average of the first three quarters because the Quarterly Census of Employment and Wages had yet to release annual data for 2020.

Table 1-5. Analysis of Indirect Housing Market Effects Potential Percentage Influence on Rents and Sales Prices		
	Lower Estimate (3-County Analysis)	Upper Estimate (Single County Analysis)
Correlation with All Job Growth		
Rents	0.01%	0.07%
Sales Prices	0.01%	0.07%
Correlation with High-Wage Job Growth *[to capture potential multiplier effect]*		
Rents	0.02%	0.11%
Sales Prices	0.01%	0.12%

The upper estimate of potential influence on housing costs is based on a "single-county" regression analysis which attributes variation in local rents and home prices to job growth within San Mateo County. The reality is that the San Mateo County economy and housing market are highly integrated with that of the larger Bay Area. Approximately 38% of workers who live in San Mateo County work in San Francisco or Santa Clara counties. Therefore, the upper estimate that attributes changes only to San Mateo County job growth likely overstates the impacts.

The lower estimate is based on a "three-county" analysis that includes San Francisco and Santa Clara counties. A combined 95% of all workers who live in San Mateo work in one of the three selected counties as shown in Table 5-2. Most San Mateo County workers either work within the county or commute to San Francisco or Santa Clara counties. Job growth in these three counties was anticipated to be most influential on local housing prices and rents. Alameda County was not included because just 3% of workers that live in San Mateo County commute east to jobs in Alameda County. Despite its proximity and accessibility, job growth occurring in Alameda County was assumed to be less influential on the housing market in San Mateo County because few San Mateo County residents commute to jobs located in Alameda County. The three-county analysis may understate the influence of local job growth by treating jobs added anywhere within the three counties as having an equal influence on housing costs in San Mateo County. Since the majority of San Mateo County residents work within the county (57%), job growth within San Mateo County likely has somewhat more of an influence than job growth in Santa Clara County or San Francisco.

The analysis tests how housing costs are correlated with all categories of job growth as well as a separate test of the correlation with high-wage job growth. Technology, bio-tech, and other high-wage sectors help to drive growth in other sectors of the local economy such as retail, food, and transportation supported by spending by these businesses and their workforce. Employment and economic growth generated through subsequent business and employee spending is commonly referred to as the "multiplier effect". The high-wage jobs analysis is an approach to capturing potential "multiplier effects." To the extent multiplier effects associated with the high-wage jobs are an influence on local home prices and rents, the effects would be

captured in the correlation between high-wage job growth and housing costs. Consistent with this, estimated market effects of the proposed Project are higher for the scenario specifically analyzing high-wage jobs. The high-wage analysis assumes, but does not prove, that high wage jobs are the primary influence on the housing market and that lower wage jobs either have less of an influence on the market or are an indirect result of the high-wage jobs by virtue of the associated multiplier effects.

The analysis of indirect housing market effects has the potential to overstate impacts by not distinguishing the effects of other important contributing factors that are correlated with job growth. Following are examples of factors that are correlated with job growth for which the effects may be ascribed to job growth, overstating the influence of job growth on the housing market:

- *Rising Incomes* – Rising incomes of existing Bay Area households, especially those of higher-income households, enable these households to compete for limited housing supply in the most desirable locations in the Bay Area, contributing to rising housing costs.

- *New Units Coming Online* – Some communities in San Mateo County, such as Redwood City, have seen construction of a significant number of new rental units that offer superior amenities and command premium rental rates. Inclusion of these new units in the data set could bring up averages even if rents for existing units are not increasing, or not increasing at the same pace. Therefore, one contributing factor to rising rents within the county overall may simply be the addition of newer units that can command higher rents.

The midpoint of the upper and lower percentage impact estimates presented in Table 1-5 are 0.04% based on all jobs and 0.07% based on high-wage jobs. The percentage findings presented in Table 1-5 may be converted to a potential dollar influence on housing costs. Multiplying the percentages by the average effective East Palo Alto rent of $2,766 per month (per CoStar for the year 2020), yields an estimated potential impact in the range of $1 to $2 per month. For for-sale housing, a comparable analysis applying the percentages to current median home prices and mortgage rates translates to a potential monthly mortgage payment increase for potential purchasers of homes available for sale in East Palo Alto and Belle Haven of between $1 and $2 per month.

Menlo Park has already issued building permits for 1,416 housing units during the current RHNA planning cycle for 2015 to 2023 and East Palo Alto has issued building permits for 222 units for a combined 1,638 units[19]. Menlo Park has a proposed RHNA allocation for the 2023 to 2031 planning period of 2,946 units and East Palo Alto has a proposed allocation of 829 units

[19] 2020 Housing Element Annual Progress Reports for Menlo Park and East Palo Alto.

for a combined 3,775 units. Menlo Park has over 3,000 additional housing units in the development pipeline in the vicinity and East Palo Alto has a pipeline of nearly 1,000 new units,[20] resulting in over 4,000 pipeline units in the vicinity, of which approximately 900 units would be below market rate (BMR) affordable units[21]. Estimates of potential impact on rents and home prices are before considering any offsetting effects of this additional new housing construction that is expected to absorb additional housing demand and moderate or offset the negligible potential effects that are estimated.

Potential for Project to Contribute to Displacement in East Palo Alto and Belle Haven

The proposed Project is not estimated to be a significant contributor to displacement in East Palo Alto or Belle Haven. Even if the potential impact on rents and home prices cited above were realized, it is not significant enough to materially influence residential location decisions. The proposed Project adds only nominally to housing demand in East Palo Alto and Belle Haven, estimated at one to three units in East Palo Alto and zero to one unit in Belle Haven. Since this represents a very minor level of demand that could be absorbed through normal market turnover, it is anticipated to represent a de minimis influence on the overall local housing market. Additionally, this new demand may be absorbed through recent and planned additions to housing supply in Menlo Park and East Palo Alto, which have a combined development pipeline of approximately 4,000 housing units. Therefore, the proposed Project would not materially affect pre-existing displacement pressures in East Palo Alto and Belle Haven.

[20] October 6, 2020 City of East Palo Alto Staff Report to the City Council RE: Follow-Up on Study Session Related to the Affordable Housing Component of the Euclid Improvements (Woodland Park) Project, Attachment 1. East Palo Alto Housing Breakdown, which indicates approved, planned, proposed or under construction housing units totaling 969 units, not including rebuilt units.

[21] Pipeline total of approximately 600 additional BMR units is summarized from prior HNA's prepared by KMA for projects in the Bayfront Area, the applicant proposals for 123 Independence, the City of Menlo Park summary of pipeline projects in the Bayfront Area, and the staff report referenced in the prior footnote with respect to East Palo Alto pipeline projects.

2.0 INTRODUCTION

This Housing Needs Assessment (HNA) provides an analysis of the proposed Project's potential impact on the need for housing in the City of Menlo Park and evaluates its potential to contribute to displacement of existing residents of the City of East Palo Alto (East Palo Alto) and the Belle Haven neighborhood of Menlo Park (Belle Haven), two proximate communities identified as having risk factors for displacement. The report has been prepared by Keyser Marston Associates (KMA) for the City of Menlo Park under a subcontract agreement with ICF International, the prime consultant responsible for preparation of the Environmental Impact Report (EIR).

In 2016, the City updated its General Plan, specifically the land use and circulation elements, and its Zoning Ordinance (commonly referred to as ConnectMenlo). The City completed and certified a program level EIR for ConnectMenlo, which determined that there would be a less than significant impact on population and housing, except cumulative impacts projected to be reduced to less than significant following an update of ABAG regional forecasts. Pursuant to the terms of the 2017 City of East Palo Alto v. City of Menlo Park Settlement Agreement, which settled the lawsuit regarding the ConnectMenlo EIR, preparation of this HNA is required. This HNA has been prepared consistent with the terms of that Settlement Agreement.

The following major housing-related topics are addressed in this HNA:

1) Demand for housing within commuting distance of Menlo Park generated by on-site employment at the proposed Project;
2) Estimated geographic distribution of housing need by jurisdiction; and
3) Potential for the proposed Project to contribute to rising housing costs and displacement of existing residents in East Palo Alto and Belle Haven, including, to the extent possible, as a result of indirect and induced employment or "multiplier effects."

These housing-related impacts are not required to be analyzed under the California Environmental Quality Act (CEQA) since economic or social changes are not considered significant effects on the environment. Nevertheless, this information is required by the Settlement Agreement and may be of interest to decision-makers and/or the public in evaluating the merits of the proposed Project.

Project Description and Total Employment Increase

O'Brien Drive Portfolio, LLC (Project Sponsor) is proposing to construct a new 131,825 gross square foot (gsf) building for life science research and development at 1125 O'Brien Drive in Menlo Park. The new building is being designed to accommodate either a single life sciences tenant or multiple tenants as well as a ground floor "grab and go" cafe. The new building would replace four existing office, R&D and warehouse buildings on the Project site at 1105, 1125, and 1165 O'Brien Drive and 1 Casey Court totaling 59,866 gsf. The proposed Project results in a net

increase in building area of 71,959 gsf on the Project site. Upon completion and lease-up, approximately 328 employees are estimated to occupy the proposed new building, a net increase of 185 employees over the 143 employees estimated for the existing buildings, per the Draft Environmental Impact Report (DEIR) Project Description.

Table 2-1. Project Summary

	Building Area	Estimated Employment
Proposed Building (1125 O'Brien)	131,825 gsf	328
Less: Existing Buildings (to be demolished)	(59,866 gsf)	(143)
Net Increase	71,959 gsf	185

Source: 1125 O'Brien Drive Project, DEIR Project Description.

The Project site totals 4.12 acres and is comprised of a 2.44 acre "Development Lot" parcel where the new building is proposed and a 1.68-acre "Accessory Parking Lot" parcel to be used as a surface parking lot. The Project site is planned and zoned for the uses proposed and is located within the existing Menlo Park Labs campus which includes 1.4 million gsf of space that houses a range of life sciences and biotechnology tenants.

Report Organization

This report is organized into five sections and three appendices:

- Section 1.0 provides an Executive Summary;
- Section 2.0 provides an Introduction;
- Section 3.0 presents the analysis of housing demand by affordability level, step by step including a documentation of sources;
- Section 4.0 presents information on total worker households and the share that currently lives in Menlo Park;
- Section 5.0 contains the analysis of the potential for the Project to contribute to displacement of existing residents in East Palo Alto and Belle Haven;
- Appendix A provides supporting tables on worker occupation and incomes;
- Appendix B includes a summary of U.S. Census data for East Palo Alto and Belle Haven; and
- Appendix C provides supporting technical tables for the displacement analysis.

Data Sources and Qualifications

Data sources used in this report include the American Community Survey (ACS) of the U.S. Census[22], the U.S. Bureau of Labor Statistics Quarterly Census of Employment and Wages and Occupational Employment Survey, commercial data providers CoStar, CoreLogic, the DEIR Project Description, and commute data for Menlo Park Labs. Other sources are noted in the text and footnotes. Local data was used wherever possible. Data sources reflect the best and most recent available at the time of preparation. While KMA believes all sources utilized are sufficiently accurate for the purposes of the analysis, KMA cannot guarantee their accuracy. KMA assumes no liability for information from these or other sources.

[22] Much of the U.S. Census data utilized in this report is from the 2015-2019 American Community Survey (ACS). Data from the 2020 Decennial Census is partially available as of the date of preparation but much of the data relevant to the HNA is yet to be released.

3.0 THE JOBS HOUSING ANALYSIS

This section summarizes the analysis of housing needs associated with on-site employment attributable to the proposed Project. A brief overview of the methodology and structure of the analysis is provided, followed by a walk-through of the analysis steps to the output and conclusions.

Methodology

To estimate the linkages between added employment, worker households, and housing needs by affordability levels, KMA employed the same methodology used for nexus studies in support of jobs housing linkage programs. The KMA jobs housing nexus methodology was developed for analyses supporting housing linkage programs, such as Menlo Park's. The methodology has also been refined and modified for use in quantifying the housing impacts of specific large projects. The analysis inputs are all local data, to the extent possible, and are fully documented.

The basic methodology is to establish the income or compensation of employees, distribute employees into households of various size and establish household income using ratios derived from U.S. Census data. Estimated household income is then compared to affordability levels established by the California Housing and Community Development Department (HCD) to determine the number of employee households by income category.

HCD Income Definitions

The income levels or tiers used in the analysis are expressed in relation to local Area Median Income (AMI). For example, Extremely Low Income is defined as households earning up to 30% of AMI. The AMI for each county or group of counties is issued annually by the U.S. Department of Housing and Urban Development (HUD), and released by the California Department of Housing and Community Development (HCD). Most housing programs and policies in California and its jurisdictions utilize these income definitions. The City of Menlo Park is located in San Mateo County and is covered by and utilizes the AMI information provided for San Mateo County.

Per HCD and statewide programs, the analysis includes households earning less than 120% AMI. In addition, an Above Moderate Income tier covering 120% to 150% AMI is presented in this analysis because this income tier also faces affordable housing challenges in Menlo Park and the greater Bay Area. In fact, due to the high cost of housing in Menlo Park, housing affordability challenges even extend to households earning more than 150% of AMI[23], especially

[23] An income of approximately 221% of AMI, is estimated to be needed to afford the median priced home in Menlo Park. The median priced home in Menlo Park is $2.35 million based on home sales from December 2019 through December 2020 from real estate data service provider CoreLogic. Estimates assume a down payment of 30% based on the median down payment for home purchases with a mortgage in Menlo Park estimated from CoreLogic data during this period, 35% of income spent on housing, and a mortgage interest rate of 3.1% based on the average 30-year fixed mortgage rate from January through December 2020 from Freddie Mac Primary Mortgage Market Survey.

in the for-sale housing market. As with HNAs prepared for prior projects in Menlo Park, the Above Moderate Income tier was included to provide decision makers more information on the housing needs of a broad spectrum of housing affordability levels.

In summary, the income tiers used in the analysis are:

- Extremely Low Income – households up to 30% of AMI;
- Very Low Income – households over 30% up to 50% of AMI;
- Low Income – households over 50% up to 80% of AMI;
- Moderate Income – households over 80% up to 120% of AMI;
- Above Moderate Income – households over 120% up to 150% of AMI; and
- Over 150% of AMI – households above 150% of AMI.

The 2021 income limits for San Mateo County by household size are presented below in Table 3-1.

Table 3-1. 2021 Household Income Limits

		Income Limit by Household Size					
Income Category	**Percent of AMI**	1-person	2-person	3-person	4-person	5-person	6-person
Extremely Low	30% of AMI	$38,400	$43,850	$49,350	$54,800	$59,200	$63,600
Very Low Income	50% of AMI	$63,950	$73,100	$82,250	$91,350	$98,700	$106,000
Low Income	80% of AMI	$102,450	$117,100	$131,750	$146,350	$158,100	$169,800
Moderate Income	120% of AMI	$125,650	$143,600	$161,550	$179,500	$193,850	$208,200
Above Moderate	150% of AMI	$157,050	$179,550	$202,000	$224,400	$242,350	$260,350
Median Income	100% of AMI	$104,700	$119,700	$134,650	$149,600	$161,550	$173,550

AMI = Area Median Income
Source: California Department of Housing and Community Development

Analysis Step 1 – Estimate of Added Employment

According to the Draft EIR Project Description, approximately 328 employees would occupy the proposed Project upon completion, an estimated net increase of 185 employees over the 143 employees within the four existing buildings on the Project site.

Table 3-2 provides an estimated breakdown of the existing and proposed employment at the Project site. Employment in the proposed building is estimated to consist of 313 direct employees of the R&D tenant(s), two café employees and 13 building services staff such as maintenance, janitorial, and security. Employment in the existing buildings is estimated to be comprised of 137 employees within office / R&D and warehouse tenants and six building services employees such as maintenance, janitorial and security. The number of building services staff is estimated based on staffing ratios derived from International Facility Management Association (IFMA) data based on a national survey of facility management professionals. Building services workers are evaluated separately because these services are

often provided by separate contractors and are therefore not fully reflected in the occupation profile for building tenants.

Table 3-2. Project Employment

Proposed Building	Employees
Life Sciences / R&D Tenant(s)	313
Café	2
Building Services	13
Total	328
Existing Buildings to be Demolished	
Office/R&D/Warehouse	(137)
Building Services	(6)
Total	(143)
Net Change	185

Sources: 1125 O'Brien Drive Project, DEIR Project Description. Project Sponsor for breakout of Cafe employment. International Facility Management Association (IFMA), Operations and Maintenance Benchmarks Research Report #33 to estimate breakout of building services staff such as maintenance, janitorial, grounds and security.

Step 2 – Adjustment from Employees to Employee Households

Table 3-3 summarizes Step 2 to convert the number of employees to the number of employee households that will work at or in the building type being analyzed. This step recognizes that there is, on average, more than one worker per household, and thus the number of housing units in demand for new workers must be reduced. The workers per worker household ratio eliminates from the equation all non-working households, such as households comprised of retired persons or students.

KMA derived the worker per worker household figure from U.S Census American Community Survey (ACS) data. The ACS data provide estimates of the total number of workers living in San Mateo County (405,474), and the total number of households with at least one working household member (212,545). The ratio between these two figures for San Mateo County is 1.91 workers per worker household. The ratio for households that have at least one working member is used because the new workers added by the proposed Project will live in households of this type. The San Mateo County figure is used in the analysis because workers would be more similar to the County as a whole than the smaller City of Menlo Park profile.

Table 3-3. Estimated Number of Employee Households		
	Employees	Households at 1.91 workers per worker HH[1]
Proposed Building		
Life Sciences / R&D Tenant(s)	313	164
Café	2	1
Building Services [1]	13	7
Total	328	172
Existing to be Demolished		
Tenants	(137)	(72)
Building Services [1]	(6)	(3)
Total	(143)	(75)
Net Change	185	97

(1) Derived from 2015-2019 U.S. Census American Community Survey data for San Mateo County

The adjustment from the number of employees to the number of households in Table 3-3 recognizes that if an added employee lives in a household with one or more other workers (i.e., a multiple-earner household), that added employee is not responsible for creating demand for an entire housing unit, only a portion of a unit. There is no implicit assumption that Project employees would live with one another. Multiple-earner households are a factor that must be recognized, irrespective of where the other working member(s) of the household is employed. Were the adjustment for multiple-earner households to be limited to the special case of Project employees living with one another in the same unit, housing needs of Project employees would be overstated by allotting an entire housing unit to one worker, even if that worker shares a housing unit with another worker who is employed elsewhere. The following two examples provide further illustrations as to why an adjustment to account for multiple-earner households is necessary regardless of where the other working member(s) of the household is employed:

- *Example #1* – Consider a worker added by the proposed Project who lives with a worker who has taken a job within a separate, newly developed, building. If it were assumed that each new worker (added by two separate developments) would require their own housing unit, the total housing demand would be overstated as a result of double counting the one unit that is shared by the two workers.

- *Example #2* – Consider two workers added by the proposed Project as well as two workers at long-established local employers. Say the two workers at long-established employers live with one another and the two workers at the proposed Project live with one another. There would be a need for two housing units in total. Now, instead say that each of the two workers in the proposed Project are in separate units, each with one of the workers at a long-established employer. There is still a need for two housing units in total. There is no difference in housing demand whether the two Project workers live with one another or live separately with a worker who holds a job elsewhere.

Step 3 – Occupational Distribution of Employees

Occupational distribution for employees added within the proposed Project is based on data from a national survey by the Bureau of Labor Statistics (BLS). Occupation refers to job description, such as management, sales clerk, cashier, etc. The survey provides the occupational distribution for various employment "industries." The following industry categories were identified to be most representative for the proposed Project:

- NAICS code 541710, Research and Development in the Physical, Engineering, and Life Sciences, is used to represent R&D / Life-Sciences tenancies expected at the proposed Project.

- NAICS 561700, Services to Buildings and Dwellings, and NAICS 561600, Investigation and Security Services, were used to represent occupations associated with janitorial, maintenance, security and other building services.

- NAICS code 541710, Research and Development in the Physical, Engineering, and Life Sciences is used to represent uses within the three existing buildings on the Development Lot parcel. NAICS codes 493100, Warehousing and Storage, and 238220 Plumbing, Heating, and Air-Conditioning Contractors, were selected as representative of uses within the existing warehouse building at 1 Casey Court based on recent occupants including a bottled water delivery service and an HVAC contractor.

For the two café employees, representative food service occupations were selected from the BLS data set.

National statistics are used because local data are not generally available, and for many industries, national data are a good reflection of the occupational distribution that can be expected locally.

Tables 3-4 summarizes the estimated percentage breakdown of worker occupations by major category while Table 3-5 identifies the estimated number of worker households by occupation category. Appendix A, Tables 2, 3, 5 and 7 provide further breakdown of worker occupations by Standard Occupational Classification (SOC) System codes.

The analysis of building services employee households in Table 3-5 is based on the net change of four employee households (seven new employee households minus three existing, per Table 3-3, for a net increase of four).

*For building services, the net change in employee households is shown (seven building services employee households in the proposed Project minus three existing employee households for a net increase of four).

Step 4 – Estimate of Employee Wage and Salary Distribution

The employee wage and salary distribution is based on the occupational distribution from Step 3 in combination with recent San Mateo County wage and salary information for each occupation from the California Employment Development Department (EDD) for the first quarter of 2021. In addition to the average compensation levels, the analysis also utilizes EDD data regarding the percentile distribution of wages within individual occupation categories in estimating the distribution of worker compensation levels. The data on employee wages and salaries utilized in the analysis is presented in Appendix Tables 2, 3, 5 and 7.

Step 5 – Household Size Distribution

In this step, the household size distribution of workers is estimated using U.S. Census 2015-2019 ACS data for San Mateo County. Data for the County is used since workers are more representative of the larger area in which workers live (the County) than the City of Menlo Park. In addition to the distribution in household sizes, the data also accounts for a range in the number of workers in households of various sizes. Table 3-6 indicates the percentage distribution utilized in the analysis.

Table 3-6. Percent of Households by Size and No. of Workers		
No. of Persons in Household	**No. of Workers in Household**	**Percent of Total Households**
1	1	14.7%
2	1	13.1%
	2	17.4%
3	1	7.3%
	2	10.1%
	3+	3.9%
4	1	4.9%
	2	8.9%
	3+	6.4%
5	1	1.9%
	2	3.4%
	3+	2.5%
6	1	1.3%
	2	2.4%
	3+	1.7%
Total		100.0%

Source: 2015-2019 American Community Survey data for San Mateo County.

Step 6 – Estimate of Households that meet HCD Size and Income Criteria

This step in the analysis calculates the number of employee households that fall into each income category for each size household. This calculation is based on the employee wage and salary income distribution (Step 4), the worker household distribution (Step 5) and the 2021 HCD income limits for San Mateo County, as described above.

Household incomes are estimated based upon ratios between individual employee income and household income derived from U.S. Census data shown in Table 3-7. The ratios adjust employee incomes upward even for households with only one worker in consideration of non-wage/salary income sources such as child support, disability, social security, investment income and others.

Table 3-7. Ratio of Household Income to Individual Worker Income			
Individual Worker Income	One Worker Households	Two Worker Households	Three or More Workers
$25,000 to $50,000	1.31	2.86	3.50
$50,000 to $75,000	1.15	2.21	2.55
$75,000 to $100,000	1.09	1.97	2.12
$100,000 to $150,000	1.06	1.77	1.84
$150,000 to $200,000	1.04	1.60	1.63
$200,000 to $250,000	1.04	1.54	1.54
$250,000 to $300,000	1.02	1.47	1.47
$300,000 to $500,000	1.04	1.32	1.32
$500,000 and above	1.02	1.25	1.25

Source: KMA analysis of 2015 to 2019 American Community Survey PUMS data for San Francisco Bay Area.

Estimated household incomes are compared to HCD income criteria to determine the percentage that qualify within each income category. The comparison is made for each potential household size/number of workers combination. The result is multiplied by the percentage distribution of household sizes and number of workers per household from Step 5 to calculate the distribution of worker households by income.

Table 3-8 presents the estimated number of households in each income tier by worker occupation category. It represents the results of the analysis after completing Step 4 (employee compensation levels), Step 5 (household size distribution of worker households), and Step 6 which uses this information to calculate the number of households that fall into each income category.

Notes:

(1) See Appendix Tables 1, 3, 4, and 6 for additional information on Major Occupation Categories.

(2) Represents occupation categories which have a minor amount of employment and for which detailed compensation analysis was not completed. These worker households are assumed to have a similar income distribution to other employees in the same industry. See Appendix Tables 1 - 7 for information on major and detailed occupation categories identified for detailed compensation analysis.

(3) Net change in building services employee households by income (seven new minus three existing = increase of four employee households)

Summary by Income Level

Table 3-9 presents the total projected housing demand within commuting distance of Menlo Park, or the number of housing units by affordability level where a member of the household works in the proposed Project.

Table 3-9. Estimated Number of Employee Households by Income

	Life Sciences / R&D	Building Services	Café	Existing Buildings	Net Change	Percent of Total
Extremely Low	2	1	0	(3)	0	0.0%
Very Low Income	8	0	0	(6)	2	2.1%
Low Income	26	2	1	(17)	12	12.4%
Moderate Income	27	1	0	(13)	15	15.5%
Subtotal: 0% to 120% AMI	63	4	1	(39)	29	29.9%
Above Moderate Income	36	0	0	(13)	23	23.7%
Subtotal: 0% to 150% AMI	99	4	1	(52)	52	53.6%
Over 150% AMI	65	0	0	(20)	45	46.4%
Total Employee Households	164	4	1	(72)	97	100%

The analysis finds that 97 new housing units somewhere in the region are required to meet the additional housing needs generated by the proposed Project. Of this new housing demand, 29 units are for households earning Very Low, Low and Moderate incomes. The Above Moderate income (120% to 150% of AMI) category represents a new housing demand of another 23 units. The largest share of net new housing demand is in the Over 150% AMI tier, estimated at 45 units or 46% of the total. This finding is consistent with the many well-compensated jobs found within the industry category applicable to life sciences research and development. In addition, added jobs are estimated to be somewhat higher compensated than the jobs removed, which contributes to a net change in housing demand that is weighted toward the Over 150% of AMI category.

4.0 MENLO PARK SHARE AND COMMUTING

The conclusions regarding the housing needs associated with the proposed Project, as presented at the end of Section 3.0 are for total housing need, irrespective of location or geography, somewhere within commuting distance of the proposed Project. Section 4.0 presents information for understanding existing conditions with respect to where people who work in Menlo Park now live, where workers at existing tenants within the Menlo Park Labs campus live, and an approach to assessing the share of new workers estimated to live in Menlo Park.

Commute Relationships for the City of Menlo Park

According to the U.S. Census 2015-2019 American Community Survey (ACS), 5.9% of those who currently work in the City of Menlo Park also live in the City of Menlo Park. The remaining 94.1% of the workforce commutes in from outside of the City. The existing percentage of workers commuting in from other jurisdictions is attributable to a number of factors including the supply of housing relative to the number of jobs and the high cost of housing in Menlo Park. Nevertheless, 5.9% does provide a benchmark for the propensity of Menlo Park workers to seek and find housing within the City.

The percentage of workers in Menlo Park who also live in the City has been generally decreasing over the decades with 10% of workers living in the City as of the 1990 Census, decreasing to 7.2% with the 2000 Census to 5.9% in the most recent ACS data. Workers most everywhere tend to commute more in recent years than in the past and, in addition, Menlo Park has become less affordable over time. Large employers that are newer to an area, or have a high turnover, typically have a smaller percent of workers living locally than employers who have been established locally for a long time. The relationship between job growth in Menlo Park relative to the amount and affordability level of housing that has been added over time is likely a significant factor in this trend. However, in any metropolitan region such as the Bay Area, there are numerous individual factors that influence how workers, in general, select their neighborhoods or communities to live in, beyond basic housing supply, price/rent, and proximity to work considerations. Examples listed below are by no means exhaustive and no hierarchy is implied by the order:

- Type of unit; people tend to be looking for a specific kind of housing – an apartment, a condo, a detached home. These choices are tied to stage of life as well as affordability and other factors.
- Commute to work – Travel time to work and commute options are important to those with a regular commute. In many households, more than one household member works, so a residential location may be a compromise to make commuting in multiple directions acceptable.
- Proximity to social, ethnic and religious communities.

- Accessibility to recreational resources. This can be general like proximity to parks and playgrounds, or specific to certain recreational interests ranging from jogging trails, to golf, to just about any recreational pursuit.
- Quality of schools – either indicated by specific measures or purely perception. This is mainly a factor of concern for those with children or seeking housing with future children in mind.
- Accessibility to culture and entertainment.
- Public safety – like schools either based on hard data or simply perceptions and reputation which may not be supported by hard data.
- Air quality is a commonly cited factor in the Los Angeles basin, but far less so in the Bay Area.
- Weather and microclimates in the Bay Area dictate communities of choice for many. People tend to either hate the cool fog near the ocean or love it.

Although many factors influence housing decisions, because the number of workers that both live and work in Menlo Park is so low and the cost of housing is so high, it is possible that the 5.9% existing commute share does not reflect the proportion of workers who would live in Menlo Park if they could find housing and could afford it. The possibility that availability and affordability of housing have contributed to a downward trend in Menlo Park's commute share is a primary reason for including a separate goal-based commute share scenario, as described below.

Commute Relationships for Existing Menlo Park Labs Campus

Data on commute patterns for three unidentified tenants within the Menlo Park Labs campus were provided in connection with preparation of the HNA for a separate development that is also located within the Menlo Park Labs campus at 1350 Adams Court, indicating approximately 3.8% of employees live in Menlo Park, significantly lower than the percentage for Menlo Park workers overall based on the ACS data. The location of the Menlo Park Labs campus near the Dumbarton Bridge and US 101 and the availability of shuttles to the Union City BART station, San Francisco and the Palo Alto Caltrain station might be factors that contribute to a greater level of commuting to other jurisdictions compared to the Citywide average.

Commute Scenarios for Subject Project

To estimate Menlo Park's share of the total housing need from the proposed Project, the analysis uses three commute scenarios, reflecting a lower estimate and higher estimate of the share of workers likely to seek and find housing within the City based on existing commute data plus a third goal-based scenario that assumes a larger share of the workforce is housed locally. The scenarios are intended to bracket the potential range of outcomes for the share of total housing need to be met within the City:

1. ***Lower Estimate of Menlo Park Share at 3.8%*** *(Menlo Park Labs existing average):* The lower estimate reflects commute patterns specific to the existing Menlo Park Labs campus. Using this approach, approximately 3.8% of workers at the proposed Project are estimated to reside within the City of Menlo Park.

2. ***Higher Estimate of Menlo Park Share at 5.9%*** *(current City-wide average):* The higher estimate is based on the existing City-wide average share of Menlo Park's workforce that lives in the City of approximately 5.9%, based on the U.S. Census. The higher estimate is to represent a scenario in which the share of workers within the proposed Project who seek and find housing locally is more similar to existing City averages than the current Menlo Park Labs pattern.

3. ***Goal-Based Commute Share at 20%*** *(goal from 2000 Nexus Study)*: the goal-based commute share estimate assumes 20% of new workers are housed within the City consistent with an assumption used in the City's 2000 commercial linkage fee nexus study[24] (2000 Nexus Study). The 20% commute share assumption from the 2000 Nexus Study reflects a goal of housing a larger share of the City's workforce locally that was approximately double the 10% commute share for Menlo Park as of the time the Nexus Study was prepared[25]. As stated in the 2000 Nexus Study:

   > *Using a relatively higher number provides a goal for the City to achieve. Although inflated housing prices in the 1990's have resulted in a decrease in the percentage of Menlo Park workers who can afford to live in Menlo Park, the City's goal is to encourage local workers to live in Menlo Park in order to achieve a better jobs/housing balance.*

   This goal-based commute share estimate provides additional information regarding how analysis findings would vary were the City to seek to house 20% of the added workforce locally consistent with the goal identified in the 2000 Nexus Study. This scenario is included for informational purposes in response to interest expressed by the City Council in improving the jobs housing balance and obtaining data to inform the goal of increasing the number of workers who live and work in Menlo Park.

[24] Commercial Linkage Fee Nexus Study prepared for the City of Menlo Park by Vernazza Wolfe Associates, Inc. dated September 2000.

[25] Per the 1990 Census, Menlo Park's commute share was 10% based on a total number working in Menlo Park of 26,048 of which 2,662 lived in Menlo Park. Figures do not include those who work out of their homes rather than commute to a separate workplace. The 1990 Census was the most recent data available at the time the 2000 Nexus Study was prepared as the 2000 Census data was not yet released. The 2000 Nexus Study references a separate factor of 23%, also as of 1990, which is not comparable to the 10% commute share in 1990. This 23% factor represents the share of Menlo Park *employed residents* (residents who are employed) who work in Menlo Park versus commute out of Menlo Park to a job located in another city.

Following is a discussion of factors that suggest the lower and higher commute share scenarios likely provide a good indicator of the range in the number of workers who would live in Menlo Park, followed by a discussion of an opposing factor suggesting a higher commute share could be possible in the future.

- *Factors That Suggest Current Lower and Higher Commute Shares Provide Good Indicator*

    1. Census data for Menlo Park since 1990 do not show a correlation between job growth and number of Menlo Park workers residing locally. The number of jobs in Menlo Park increased by 17,478 or 67% from the 1990 Census to the 2015 - 2019 ACS. During the same period, the number who both live and work in Menlo Park, excluding those who work out of their homes, decreased from 2,662 to 2,589 (a 3% decrease). Despite the addition of over 17,000 jobs during this period, of which at least a portion were likely highly compensated, the number of workers who both live and work in Menlo Park declined.

    2. The expanding size of the Bay Area's job and housing markets combined with an increase in multiple-earner households has created more options for where to live and work and more households who must take locations of multiple jobs into account in selecting a residential location.

    3. The proposed Project is very accessible to freeways including US-101 and SR-84 / the Dumbarton Bridge. It is arguably one of the most conducive locations in Menlo Park for commuting from other jurisdictions.

    4. Menlo Park is viewed as a highly desirable place to live. Workers in the proposed Project who wish to live in Menlo Park would be competing for a limited amount of available housing with many other households in the Peninsula / Silicon Valley housing market who may also be seeking to live in Menlo Park.

    5. The experience of remote work during the coronavirus pandemic has led many organizations to provide increased flexibility to work remotely. For workers that split their time between remote and in-person work, this additional flexibility may encourage workers to explore housing options further from jobs, which could become an additional contributing factor to a declining share of workers who live in Menlo Park.

- *Factor that Suggests Potential for Increased Commute Share*

    Housing developments that are currently going through the entitlement process or were recently approved in the vicinity of the proposed Project including the Menlo Uptown Project with 483 units, Menlo Portal Project with 335 units, 111 Independence Drive with 105 units, Menlo Flats with 158 units, 123 Independence with 432 units, and Willow Village with 1,730 units, a total of over 3,000 new units. Construction of new housing can be expected to

contribute toward increasing the number of workers that live locally by providing additional housing opportunities in Menlo Park. Overall, the approved and proposed units represent an approximately 23% increase in the size of the existing Menlo Park housing stock of 14,124 units[26]. The large number of units being added, which would represent a material expansion of the city's existing housing stock, could potentially contribute to an increase in the percentage share of workers living locally.

The focus of the commute shares described in this report are on the percentage share of those who work in Menlo Park that also live in Menlo Park. However, it is also possible to look at commuting from the opposite direction: considering residents of Menlo Park who are in the workforce, what share work in Menlo Park and what share commute out of the city to a job located elsewhere? Data from the ACS indicates that, 17% of working residents of Menlo Park work in Menlo Park while the remaining 83% commute out to jobs in other cities. The fact that many residents commute out to jobs elsewhere suggests a limit to how much Menlo Park's commute share could be increased by adding additional housing.

Estimate of Menlo Park's Share of New Housing Demand

Per the discussion above, three scenarios are provided based on 3.8%, 5.9% and 20% of workers at the proposed Project residing within the City of Menlo Park. The three factors are applied to the total housing need to estimate the number of new workers in the proposed Project who would seek and find housing in Menlo Park. In other words, between 3.8% and 20% of the housing needs concluded at the end of Section 3 is the estimated Menlo Park "share."

The factors are applied uniformly across each of the household income tiers to arrive at estimates of Menlo Park's "share" for each income tier, presented in Table 4-1. The actual distribution by income tier in Menlo Park would likely vary from these estimates based on factors, such as the existing housing stock in Menlo Park, limited availability of affordable units, and the future production of market rate and affordable units in Menlo Park.

[26] Number of housing units as of January 1, 2021 per California Department of Finance Table E-5, Population and Housing Estimates for Cities, Counties, and the State.

Estimated Commute Shed for Proposed Project

It is anticipated that workers at the proposed Project would commute to the Project site from throughout the region. Table 4-2 presents data on commuting by jurisdiction. Two different versions are provided, one based on commute patterns specific to the existing Menlo Park Labs campus and one based on averages derived from the U.S. Census. The estimates reflect the same data sources as used for the lower and higher Menlo Park share of housing needs described above. Based on the data in Table 4-2, it is anticipated that between 67% and 69% of workers would live in Santa Clara and San Mateo counties. Remaining workers are estimated to commute primarily from San Francisco and Alameda counties. Around 7% are estimated to commute from other counties.

The third goal-based commute share scenario is not presented in Table 4-2 because the 20% goal is focused on Menlo Park's commute share and does not identify targets for any other specific jurisdiction. Progress toward the 20% commute share goal would tend to reduce commuting from other jurisdictions relative to levels indicated in Table 4-2 by increasing the share of workers that live in Menlo Park.

Notes:

[1] Based on data on commuting for three existing tenants within the same business park as the Project provided for purposes of the nearby 1350 Adams Project.

[2] Includes workers residing in jurisdictions for which the relevant commute data has been suppressed by the U.S. Census.

[3] Data is derived from the 2012-2016 American Community Survey, the most recent available complete commute distribution data at the jurisdiction level. The share of Menlo Park's worker-force living in Menlo Park is an exception for which more recent data is available from the 2015-2019 American Community Survey. A reconciliation adjustment to the Balance of San Mateo County was made to account for the 0.6% reduction in the Menlo Park Share since the prior data.

5.0 DISPLACEMENT ANALYSIS

This section provides an evaluation of the potential for the proposed Project to contribute to displacement of existing residents and neighborhood change in two proximate communities known to be vulnerable to displacement, the City of East Palo Alto (East Palo Alto) and the Belle Haven neighborhood of Menlo Park (Belle Haven). As noted above, displacement is not an environmental impact for purposes of CEQA, but this analysis is provided for informational purposes and consistent with the requirements of the 2017 Settlement Agreement.

Displacement occurs when housing or neighborhood conditions force existing residents to move or households feel like their move is involuntary. Displacement can be caused by a range of physical, economic and social factors including but not limited to foreclosure, condominium conversion, building deterioration or condemnation, increased taxes, natural disasters, eminent domain, and increases in housing costs[27, 28, 29]. The HNA is focused on economic drivers of displacement, specifically the potential for the proposed Project to affect the local housing market and housing costs.

Lower income communities in the Bay Area have become increasingly vulnerable to displacement of existing residents. Employment growth, constrained housing production, and rising income inequality are among the factors that have contributed to increased displacement pressures, especially within lower income communities in locations accessible to employment centers where many households are housing-cost burdened.

Location of Proposed Project Relative to Belle Haven and East Palo Alto

The aerial image below shows the location of the proposed Project relative to Belle Haven and East Palo Alto. The Project site is located on O'Brien Drive within the Menlo Park Labs campus. Belle Haven is a residential neighborhood located west of the Project site generally bounded by U.S. 101, Willow Road and a railroad right-of-way, outlined in red on the aerial image below. East Palo Alto is located east and south of the Project site, outlined in green on the aerial image below.

Analysis Approach

Given the complex array of factors that influence housing markets and neighborhood change, precise estimates or projections of outcomes are not feasible; rather, the analysis provides information and context that will be useful in gauging the potential range of impacts. The following analyses were completed to provide this context:

1. *Comparative review of real estate trends* – Real estate market trends in East Palo Alto and Belle Haven since 2000 were analyzed in comparison to Countywide trends. The purpose is to help understand how localized trends relate to the broader County housing market.

2. *Review of employment trends* – Employment trends were reviewed for San Mateo County and adjacent counties. Employment data is delineated by compensation level so that growth in higher-income and lower-income jobs can be separately understood.

3. *Historic Relationship Between Job Growth and Housing Costs* – The extent to which employment growth and housing costs have been correlated with one another was analyzed using linear regression. Findings are used to identify the potential range of impacts on housing costs that could be experienced as a result of the proposed Project.

4. *Estimated direct housing demand in East Palo Alto and Belle Haven* – Commute shed data is used to estimate the number of new workers from the proposed Project likely to seek and find housing in East Palo Alto and Belle Haven. This is useful for

understanding the likely magnitude of influence the proposed Project could have on the housing market.

The above analyses all contribute to understanding the potential for the proposed Project to contribute to increases in home prices, rents and displacement pressures in East Palo Alto and Belle Haven.

Risk of Displacement

East Palo Alto and Belle Haven both have risk factors for displacement. Both have a relatively lower-income existing population that includes a high percentage of households who spend 35% or more of their income on housing. A review of demographics and displacement risk factors specific to the two communities is provided in Appendix B. East Palo Alto's rent control and just cause eviction ordinance provides significant protection to existing renters within multi-family buildings built prior to 1988 but does not preclude the potential for longer-term neighborhood change. The Urban Displacement Project,[30] an initiative of UC Berkeley "aimed at understanding the nature of gentrification and displacement in the Bay Area" has identified the Belle Haven census tract and census tracts within East Palo Alto as areas experiencing "ongoing gentrification and/or displacement" or "at risk of displacement." A separate analysis by the Urban Displacement Project[31] indicates that, despite risk factors for displacement, East Palo Alto had not experienced significant gentrification during the 2000 to 2013 period, potentially due to policies aimed at preventing displacement including rent control and just cause eviction protections. For additional background, see also the Urban Displacement Project report, "East Palo Alto: An Island of Affordability in a Sea of Wealth"[32].

A recent study by UC Berkeley's Center for Community Innovation and its Y-PLAN initiative, titled *Investment and Disinvestment as Neighbors: A Study of Baseline Housing Conditions in the Bay Area Peninsula*, provided an assessment of the baseline housing conditions in Belle Haven, East Palo Alto, and North Fair Oaks neighborhood (unincorporated San Mateo County). The study found indications of recent changes including increased population turnover, declining school age population, and an increase in homelessness. The study also identified a high incidence of rent burdened households and disproportionate pressure on the local housing market compared to the rest of San Mateo County. The study found more signs of disinvestment in East Palo Alto and more indications of real estate speculation in Belle Haven[33].

[31] Crispell, M, Harris L.R., and Cespedes S. March 2016. San Mateo County's East Palo Alto. Urban Displacement Project.

[32] Zuk, M., & Chapple, K. (2015). East Palo Alto: An Island of Affordability in a Sea of Wealth. Urban Displacement Project.

[33] Center for Community Innovation. (2020). Investment and Disinvestment as Neighbors, A Study of Baseline Housing Conditions in the Bay Area Peninsula.

East Palo Alto has been described as an “island” of affordability within the higher-priced Silicon Valley / Peninsula housing market. Belle Haven is also historically affordable relative to other neighborhoods in Menlo Park as well as many high-priced communities in San Mateo County and Silicon Valley. However, over the past two decades, home prices in East Palo Alto have increased at the same rapid pace as the County median, while home prices in Belle Haven are now slightly greater than the County median on a per square foot basis. Market rents as of 2020 for available one-bedroom apartments in East Palo Alto are approximately $2,355 per month, which is approximately the same as the County average of around $2,310. While many existing residents in East Palo Alto are shielded from escalating housing costs through rent control or having purchased homes when prices were lower, the comparatively high cost of entering East Palo Alto’s housing market relative to other more affordable locations in the Bay Area suggests that longer-term neighborhood change is likely.

The City of East Palo Alto has adopted policies focused on protecting affordability in the face of displacement pressures, including a rent control and just cause eviction policy described below.

East Palo Alto’s Rent Control Ordinance

The City of East Palo Alto regulates rent increases and eviction procedures through the Rent Stabilization and Just Cause for Eviction Ordinance (East Palo Alto Municipal Code Chapter 14.04). The ordinance limits annual rent increases to 80% of the increase in the Consumer Price Index over the prior year. Just cause provisions of the ordinance require landlords to present a valid reason for terminating a tenancy. Tenants are also protected from retaliation and harassment. Rent control applies to all rental units except: single family homes, units in owner-occupied properties of three units or less, new units built after 1988 (other than replacement units), and certain non-profit / group-quarters living arrangements. As required by state law, rents are free to reset to market rate upon turnover. The rent control ordinance shields existing renters from increases in market rents and economic displacement. Because rents reset to market upon vacancy, the ordinance does not preclude neighborhood change over the longer term.

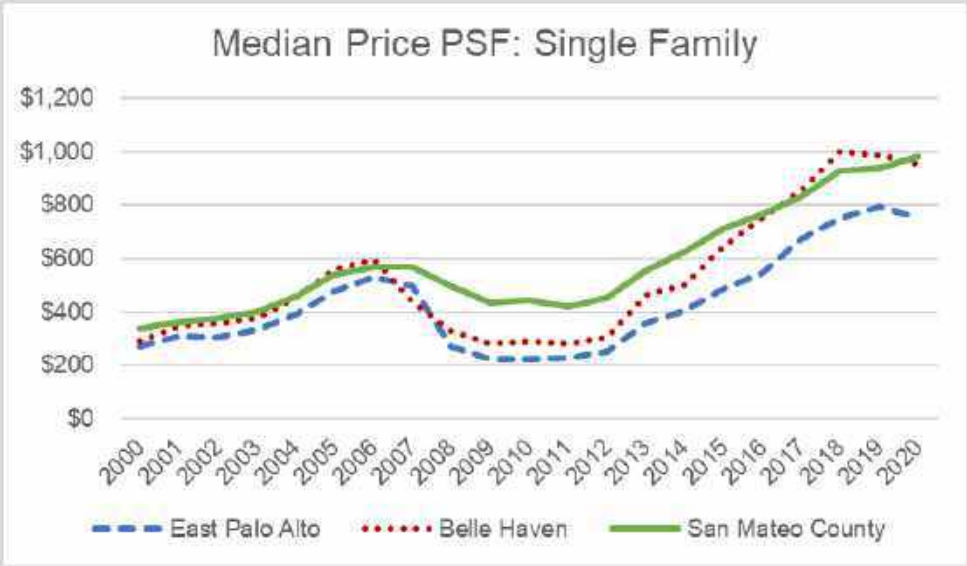
Real Estate Trends Since 2000

This section reviews data on real estate market trends for East Palo Alto, Belle Haven, and San Mateo County since 2000.

1. Home Prices

The chart below shows trends in median home price over the period from 2000 to 2020. In 2000, the median sales price per square foot in East Palo Alto of $270/SF represented approximately 80% of the county median of $338/SF, while the median price in Belle Haven of $291 per square foot represented 86% of the county median. In both East Palo Alto and Belle Haven, home prices decreased significantly during the housing market downturn and

foreclosure crisis, reaching a low of 50% and 65% of the county median, respectively, in 2010. However, prices in both communities have escalated more rapidly than the county median over the subsequent decade. As of 2020, the median sales price in East Palo Alto of $748 per square foot is once again roughly 80% of the county median of $980 per square foot, while the price per square foot in Belle Haven has approached or exceeded the county median for the past five years.



Source: CoreLogic

Table 5-1 shows how single family home prices per square foot in East Palo Alto and Belle Haven have changed over time relative to the county median.

Overall, single family median home prices in East Palo Alto have increased by approximately 180% since 2000, approaching the cumulative percent increase in the county median home price of 190% over the same time period. Median single family home prices in Belle Haven increased 227%, outpacing the county. Some of the factors that likely contributed to rising home prices over the period include strong economic growth and housing demand, limited construction of new housing, favorable interest rates and credit terms, and confidence in the Bay Area economy and housing market.

Table 5-1. East Palo Alto and Belle Haven Median Price PSF as Percent of County

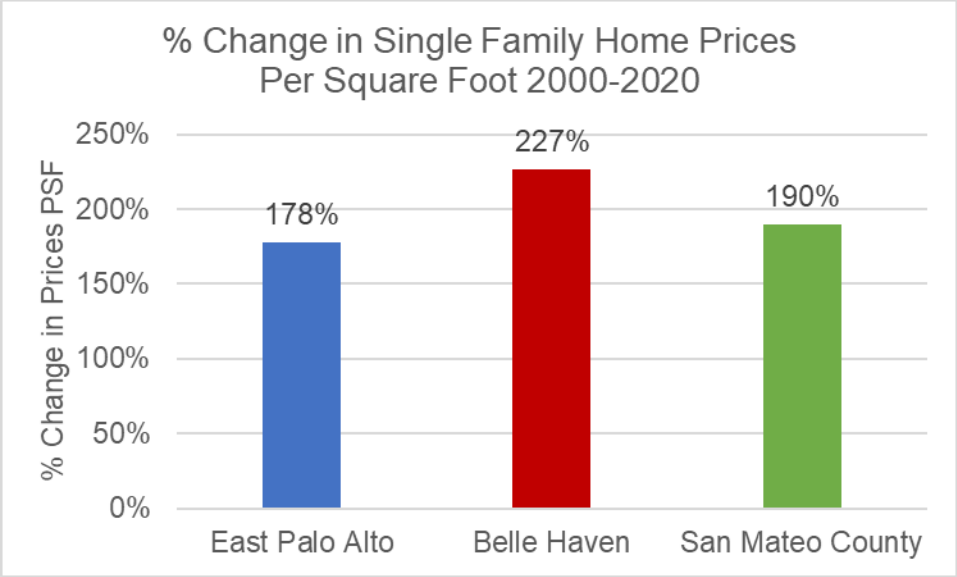
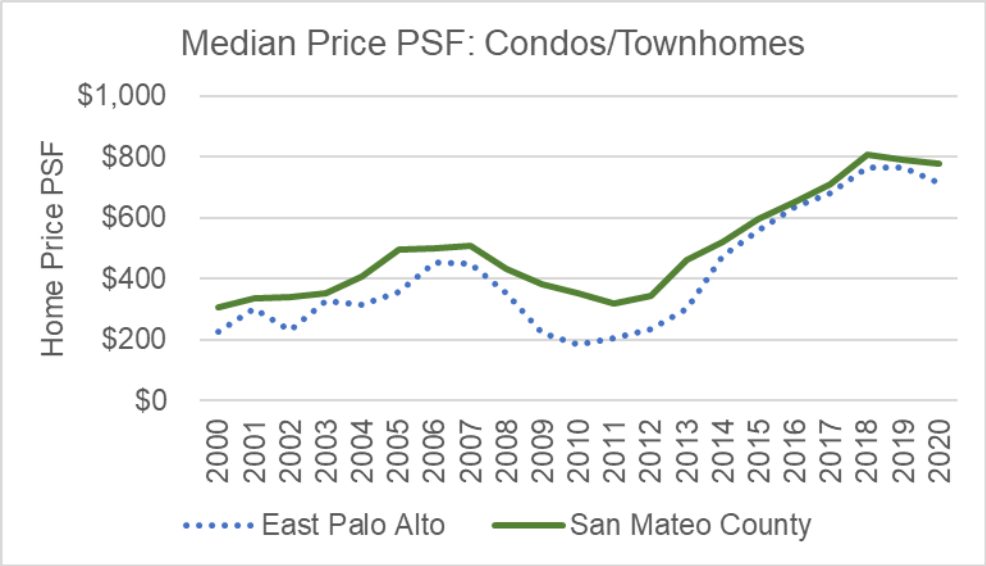
*for single family detached units



Source: CoreLogic

For condos and townhomes, the median price per square foot in East Palo Alto grew from 74% of the county median in 2000 to nearly match the county median over the past seven years. Condos and townhomes represent a smaller share of the market in East Palo Alto than do single family units (20 condo/townhome sales per year on average as compared to an average of approximately 160 single family sales per year). No condo/townhome sales were recorded in Belle Haven.



Source: CoreLogic

Home prices in East Palo Alto and Belle Haven have experienced more rapid escalation in the period from 2010 to 2020, in part, due to a recovery from the housing / foreclosure crisis. Belle Haven and East Palo Alto have both experienced a steep decline in the *number* of home sales from 2010. The number of sales in East Palo Alto fell from 260 units in 2010 to an average of 180 units per year from 2015 to 2020. In Belle Haven, the number of sales fell from 70 units in 2010 to an average of 36 units per year from 2015 to 2020. In contrast, the average number of home sales countywide from 2015 to 2020 is roughly unchanged from 2010.[34] This trend is consistent with a higher incidence of distressed sales activity in 2010 as reportedly occurred in East Palo Alto.[35] Distressed and foreclosure sales were prevalent nationally during this period and disproportionately impacted lower-income communities. Homeowners unable to sustain mortgage payments would fall into foreclosure, forcing a foreclosure sale, in some cases after an extended foreclosure process where the property was not being properly maintained. Distressed sales would drive home values in the area down and had the effect of inducing additional homeowners to go "underwater" (market value less than the mortgage debt) and let homes go to foreclosure, further exacerbating the condition, driving up the number of sales and

[34] All communities experienced a drop in sales volumes in 2020, likely a result of the coronavirus pandemic.

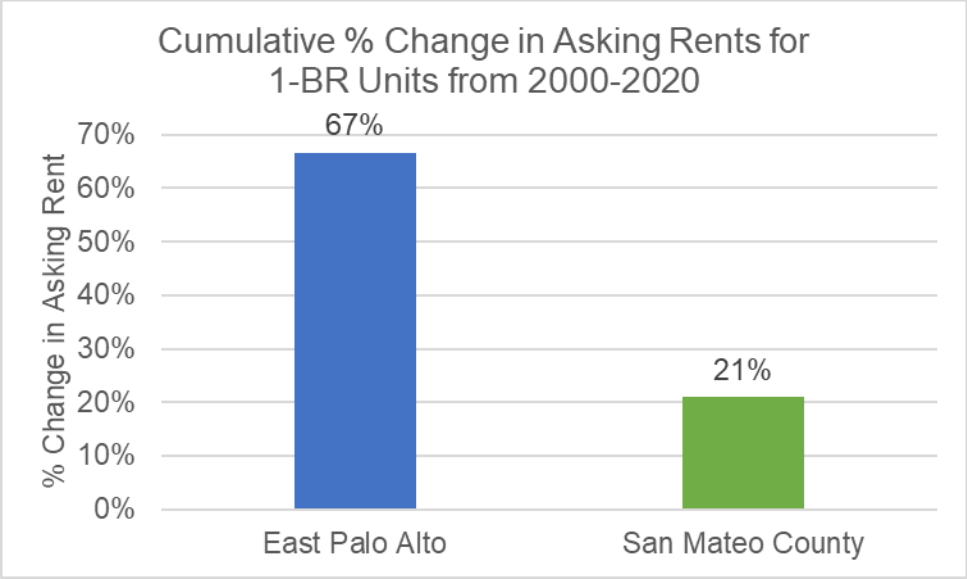
[35] KQED News. 2013. Can East Palo Alto Weather the Tech Boom and Increasing Gentrification? http://ww2.kqed.org/news/2013/07/18/104008/. The article indicates that from 2008 to 2013, 1,422 of approximately 4,000 single family homes in East Palo Alto had entered some stage of the foreclosure process.

driving down values. In some cases, homes were purchased out of foreclosure by investors who converted them to rental units. With recovery from the foreclosure crisis, the number of sales has now been reduced from the elevated levels that occurred during the foreclosure crises. Additional details on home price and sale trends are included in Appendix C Table 12. While it could be interpreted that existing homeowners will benefit from home price increases, in communities such as East Palo Alto and Belle Haven where more than a third of single-family homes are renter-occupied, rapid growth in home prices may present a heightened risk of renter displacement to the extent it encourages the sale of single family rental properties to new owner-occupants.

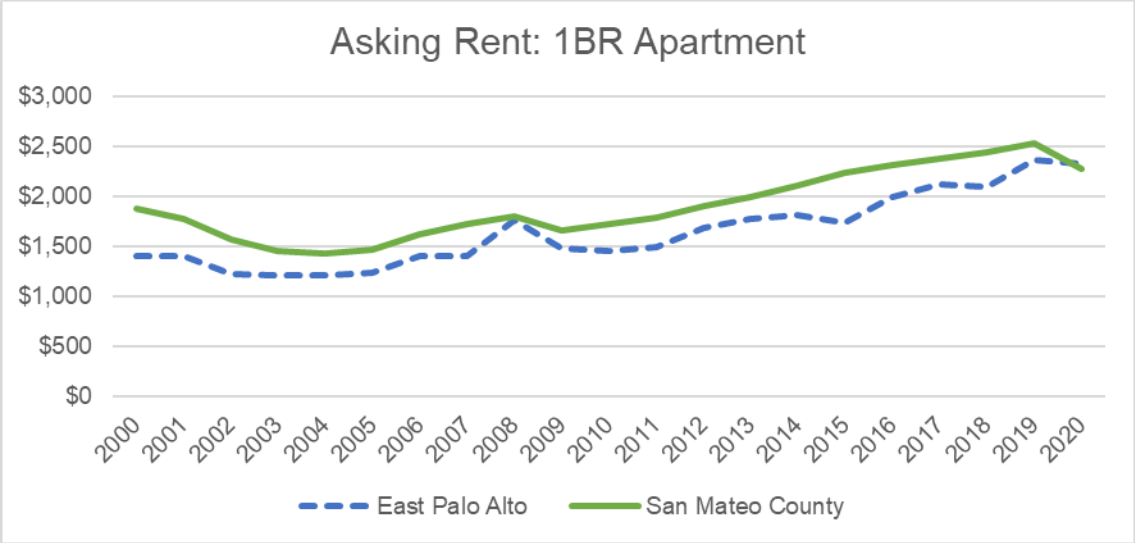
2. Apartment Rents

According to data from CoStar Group, which surveys multifamily buildings, apartment rents in San Mateo County increased by approximately 21% from 2000 to 2020. Rent growth in East Palo Alto outpaced the county with a 67% increase, as shown in the charts below. These rental rates reflect asking rents for one-bedroom units that have been vacated and are available for rent. For communities that have rent control, existing tenants in multifamily buildings are shielded from increases in market rents in excess of a predetermined rate (80% of CPI, in the case of East Palo Alto) as long as they remain in their current unit.

Rental market data for Belle Haven is not presented in the chart below as the data appears too limited to be reliable. CoStar data for Belle Haven is limited because three-quarters of rental units built prior to 2016 are for buildings with 10 or fewer units, less likely to be covered by published market surveys. Only approximately 160 (20%) of the 795-unit Belle Haven rental housing stock built before 2016 per the U.S. Census is covered by the historic CoStar data used in the trends analysis. While Costar data also covers two large apartment projects completed since 2016, rents at these projects reflect a premium for new construction which does not apply to the broader rental market in Belle Haven. Appendix C Table 13 provides the historical data that is available, excluding these recently built projects.



Source: CoStar. Includes all one-bedroom apartments regardless of year built.



Source: CoStar. Includes all one-bedroom apartments regardless of year built.

Following a period of robust job growth and limited housing production, home prices and rents have been rising throughout the Bay Area. The historically affordable communities of East Palo Alto and Belle Haven have either kept pace with or exceeded the significant increases that have been occurring in the county as a whole.

Employment Trends

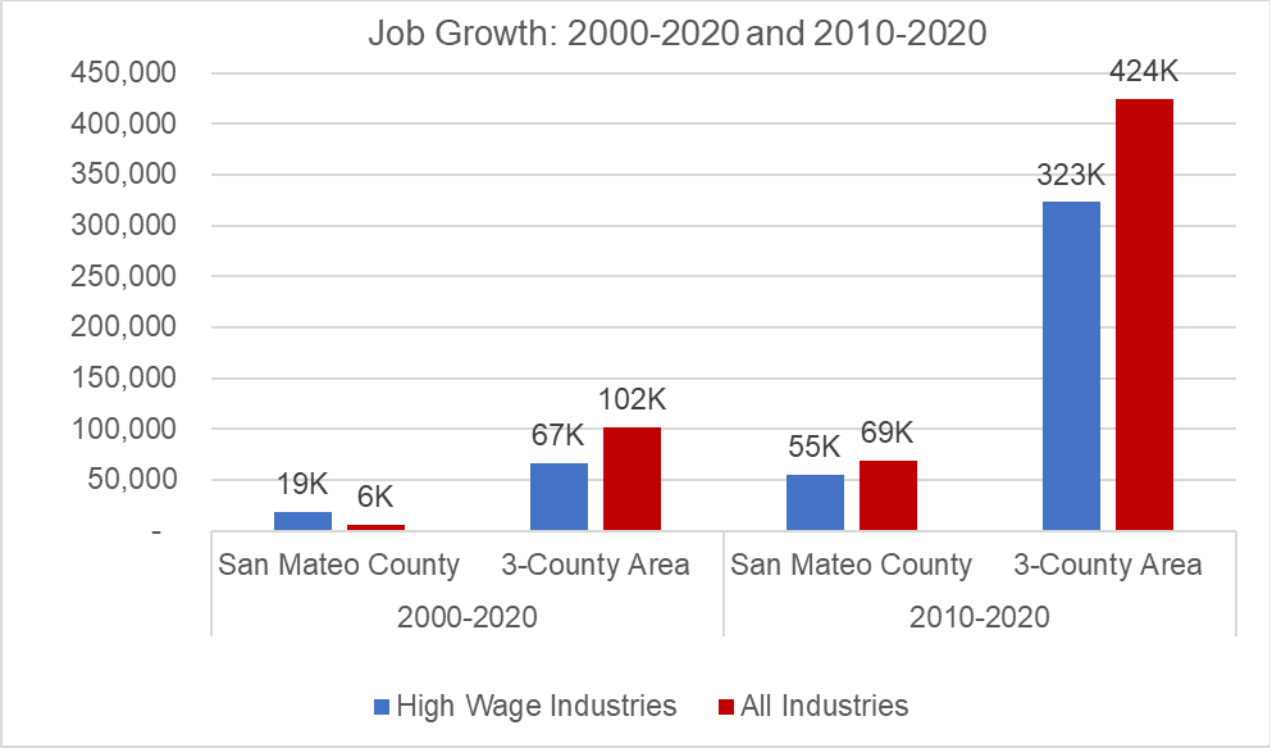
Employment growth is an important driver of housing demand both at the local level and regionally. Employment growth over the past decade has likely contributed to significant upward pressure on the housing market as evidenced in the rent and price increases documented

above. This section assembles data on historical employment trends since 2000 for San Mateo as well as Santa Clara and San Francisco counties. Approximately 95% of workers living in San Mateo County commute to jobs located in one of these three counties based on U.S. Census data.

According to the Quarterly Census of Employment and Wages, over the period from 2010 to 2019, a total of approximately 591,000 jobs were added in San Mateo, Santa Clara, and San Francisco counties (referred to in the chart below as the "three-county area"). More than half of the total job growth occurred in high-wage sectors. For purposes of this analysis, high-wage industry sectors are defined as those with average annual employee compensation above $100,000 as of 2016. From 2010 to 2019, high-wage industries posted annual job growth of 4.6% versus 3.4% annual growth for all industries. Job growth for the longer period from the peak of a previous boom cycle in 2000 to 2019 is less due to significant job losses from 2000 to 2004, offsetting more recent job growth.

The 2020 economic recession caused by the coronavirus pandemic eliminated a portion of the jobs added over the past decade. A significant decline in total employment occurred in 2020 within the three-county area. In the second quarter of 2020, total employment in the three-county area declined by 12% in all sectors and by 3% in high-wage sectors compared to the prior quarter. While some jobs were recovered by the third quarter of the year, total employment remained 6% less than the first quarter in all sectors and 1% less than the first quarter in high-wage sectors[36].

[36] Employment data for last quarter of 2020 was not yet available from the Quarterly Census of Employment and Wages as of mid-2021 when this analysis was prepared.



Source: Quarterly Census of Employment and Wages. Note: 2020 job estimate reflects first three quarters of calendar year.

Housing production has not kept pace with job growth in San Mateo County and adjacent counties. As illustrated in the chart below, the ratio of jobs to housing units steadily increased in San Mateo, Santa Clara and San Francisco counties over the prior decade. The jobs-housing ratio in 2019 neared the peak of the previous boom cycle, an imbalance that has undoubtedly contributed to increasing prices and rents. In 2020, the jobs-housing ratio declined as a result of job losses associated with the coronavirus pandemic.

Analysis of Historical Relationship Between Housing Costs and Job Growth

The following section analyzes the extent to which employment growth and real estate trends have been correlated with one another to provide context for understanding the degree of indirect influence the proposed Project may have on local home prices and rents. Simple linear regression is used to quantify the potential change in rents or home prices associated with a given change in jobs based on annual data from 2000 to 2020. Simple linear regression shows whether two variables are correlated with one another but does not prove that there is a causal relationship.

Geographic Scale

The regression analyses are performed for two geographic scales with respect to job growth:

a) San Mateo County ("single county"); and

b) San Mateo, Santa Clara, and San Francisco counties combined ("three-county").

The single-county analysis likely provides an upper-end estimate of the indirect influence of employment growth on local real estate trends, since it attributes all variation in local rents and home prices to job growth within the county. In reality, job growth in other counties would also have an influence, along with separate factors that may be correlated with job growth such as growth in incomes. Therefore, the single county analysis likely overstates the impacts.

The three-county analysis provides a lower estimate of the influence of employment growth on local real estate trends, at least for purposes of understanding the proposed Project's influence, since the analysis assumes that job growth across the three counties has a uniform influence on rents and home prices within San Mateo County. For workers who live in San Mateo County, 95% work in San Francisco, San Mateo, or Santa Clara counties as shown in Table 5-2. Comparatively few workers who live in San Mateo County commute east into Alameda County (3%). Therefore, job growth within the three selected counties is anticipated to have the greatest influence on housing prices and rents within San Mateo County. The three-county analysis may understate the influence of local job growth by treating jobs added anywhere within the three counties as having an equal influence on rents in San Mateo County. Since the majority of San Mateo County residents work within the county (57%), as shown in Table 5-2, job growth within San Mateo County likely has somewhat more of an influence than job growth in Santa Clara County or San Francisco.

Table 5-2. County of Work, Workers Residing in San Mateo County		
Workplace	Number Workers	Percent
San Mateo County	222,355	57%
San Francisco	84,195	22%
Santa Clara County	61,165	16%
Subtotal	367,715	95%
Alameda County	12,940	3%
Other Counties	6,936	2%
Grand Total	387,591	100%

U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates, County-to-County Commuting Flows.

Approach to Capturing Multiplier Effects: High-Wage Jobs Analysis

The regression analysis evaluated the relationship of home prices and rents to both total job growth and high-wage job growth. High-wage job growth is defined for purposes of the analysis as employment within industries that have average pay above $100,000 per year as of 2016.

The high-wage analysis is an approach to capturing the impact of "multiplier effects." Technology, bio-tech, and other high-wage sectors help drive growth in other sectors of the local economy such as retail, food, and transportation through spending by these businesses and their workforce. Employment and economic growth stimulated through this spending is commonly referred to as the "multiplier effect". Examining the relationship between housing costs and jobs in high-wage industries, specifically, enables the impact that potential multiplier effects have on housing costs to be captured. To the extent high-wage jobs are responsible for additional job creation through multiplier effects, potential impacts would be captured in the market data on home prices and rents and reflected as part of the correlative relationship identified by the analysis.

Adjustments for Inflation and Added Housing

Two adjustments were made to the real estate and employment data used in the regression analysis:

1. *Inflation adjustment* – Rent and sales price data for San Mateo County is expressed in constant 2020 dollars, adjusting for inflation based upon the Bureau of Labor Statistics Consumer Price Index for All Urban Consumers (CPI-U).

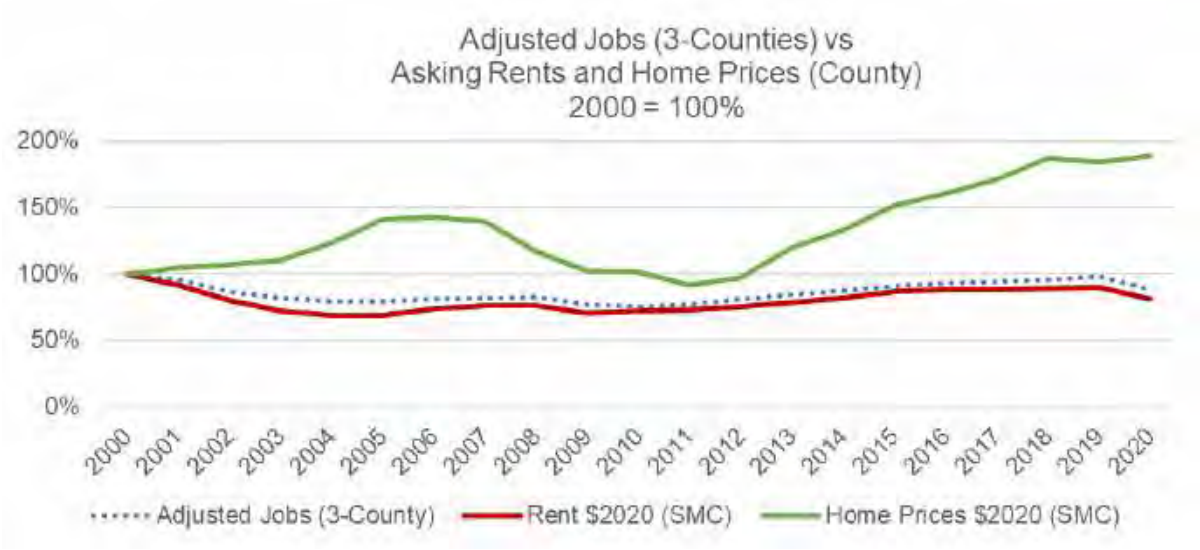
2. *Adjusted Jobs (net of housing growth)* – Employment data was adjusted to reflect the portion of job growth since 2000 that can be accommodated by housing construction since that time, using the same 1.91 workers per household factor applied in Sections 4 and 5 as detailed in Appendix C Tables 10 and 11. For example, as of 2010, there were

approximately 317,600 jobs in San Mateo County and 271,000 housing units, of which 10,400 units were built since 2000. The number of jobs accommodated by housing units built from 2000 to 2010 (10,400 housing units x 1.91 workers per household = approximately 19,900) is subtracted from total 2010 employment (317,600 jobs) to arrive at the adjusted estimate of 297,700 jobs as of 2010. In the case of the three-county analysis, employment within the three-county area is similarly adjusted by housing growth within the three-county area. Thus, the linear regression analyses estimate the relationship between inflation-adjusted rents and home prices and employment growth, net of the offsetting influence of housing growth.

Summary of the Data

The following two charts compare historical inflation-adjusted rents and home prices with changes in employment for San Mateo County and the three-county area including San Francisco and Santa Clara counties, respectively. The charts present the trends as an index relative to 2000 levels. Rents have generally trended down when the number of jobs was decreasing and up when jobs were added, suggesting a relatively strong correlation between rents and jobs. Rents decreased further than the number of jobs, in percentage terms, following the "dot com crash" around 2000 and were still below 2000 levels in inflation-adjusted terms as of 2020. Real home prices, on the other hand, grew from 2000 to 2006 by over 40% even as employment fell by approximately 15%. Jobs and home prices were positively correlated over the past decade; however, it is likely that interest rates and mortgage credit availability are as important, if not more important, than employment growth in explaining historical variation in home prices.

Sources: Quarterly Census of Employment and Wages, California Department of Finance, CoStar, CoreLogic, Bureau of Labor Statistics Consumer Price Index.



Sources: Quarterly Census of Employment and Wages, California Department of Finance, CoStar, CoreLogic, Bureau of Labor Statistics Consumer Price Index.

Regression Analysis Findings

Table 5-3 presents the results of the regression analysis for the eight separate scenarios tested. Additional supporting information is included in Appendix C. The primary findings of the analysis are:

- Rents have a positive, statistically significant correlation with job growth in all scenarios.
- Home prices were found to have a weak positive correlation with job growth in all scenarios.
- Each 10,000 total jobs added to the county (net of offsetting housing growth) is correlated with a 3.9% increase in rents and 3.6% increase in home prices and each 10,000 jobs within the three-county area is correlated with a 0.7% increase in rents and a 0.6% increase in home prices. As discussed below, the single-county and three-county findings are used to bracket an upper and lower estimate of the impacts.
- Each 10,000 high-wage jobs (net of offsetting housing growth) added to the county is correlated with a 6.1% increase in rents and 6.5% increase in home prices and each 10,000 high-wage jobs within the three-county area is correlated with a 1.0% increase in rents and a 0.8% increase in home prices.

Table 5-3. Summary of Regression Analysis Results				
	Scenario	Percent increase per 10,000 adjusted jobs	P-Value (statistically significant values = <0.05)	Adjusted R-Squared (1= perfect correlation; 0= no correlation)
	Single County Analysis [Upper Estimate]			
1	Correlation with All Job Growth			
	Rents	3.9%	<.05	0.90
	Sales Prices	3.6%	<.05	0.28
2	Correlation with High-Wage Job Growth *[proxy for inclusion of multiplier-effect]*			
	Rents	6.1%	<.05	0.76
	Sales Prices	6.5%	<.05	0.34
	Three-County Analysis [Lower Estimate]			
3	Correlation with All Job Growth			
	Rents	0.7%	<.05	0.92
	Sales Prices	0.6%	<.05	0.22
4	Correlation with High-Wage Job Growth *[proxy for inclusion of multiplier-effect]*			
	Rents	1.0%	<.05	0.85
	Sales Prices	0.8%	<.05	0.17

Regression Analysis Metrics

The following provides additional information regarding the regression analysis metrics identified in Table 5-3:

Adjusted R-squared – The adjusted R-squared is an indicator of the model's ability to explain historical variation in the dependent variable (rents or home prices) in relation to employment. An adjusted R-squared of 1 indicates a perfect correlation. An adjusted R-squared of 0 indicates no correlation. As would be expected based on the trends described above, the regression model explains most of the variation in rents but no more than one third of the variation in home prices.

P-Value – The p-value indicates the probability of no relationship between the independent and dependent variables. P-values of 0.05 and less indicate there is less than a 5% chance that the observed relationship can be explained by random chance and is a common threshold used to identify statistical significance. P-values for all of the scenarios are below the .05 threshold and are thus identified as significant.

Single-County Versus Three-County Results

The single-county analysis provides a more conservative estimate of the response of local housing costs to a given change in employment compared to the single-county analysis. The estimated change in asking rents and sale prices per 10,000 jobs is approximately six times larger under the single-county analysis versus the three-county analysis. The three-county analysis assumes jobs created anywhere in the three-county area have an equal influence on rents as jobs within San Mateo County. While regional employment dynamics are important, jobs added within San Mateo County probably have a more pronounced influence on local real estate conditions within the county. Thus, the change in rents and sales prices for a given change in jobs is likely to fall somewhere in between the value suggested by the single-county and three-county analysis.

The single-county regression model appears to explain most of the variation in local rents; however, it is important to recognize that job growth within San Mateo County is highly correlated with regional job growth. The single-county analysis will not distinguish the effects of county versus regional job growth and, as a result, will tend to overstate the relationship between job growth in the county and rents.

Analysis Limitations and Potential to Overstate Influence of Job Growth

The analysis relies on a very simple statistical technique to test for correlation but does not prove that the identified relationship between job growth and housing costs is causal. The approach likely overstates the importance of job growth by not distinguishing the effects of other important contributing factors that are correlated with job growth. For example, rising incomes, especially those of higher-income households, enable these households to compete for limited housing supply in the most desirable locations, contributing to rising housing costs. Some communities in San Mateo County, such as Redwood City, have seen construction of a significant number of new rental units that offer superior amenities and command a premium in the market. The inclusion of these newer units in the data set will tend to bring up averages due to higher rents being charged for the new units; however, this does not necessarily mean costs for existing units are increasing. The analysis technique will tend to attribute effects of other factors that are correlated with job growth to the job growth itself, which results in overstating the influence of job growth.

Application of Findings to Estimate Potential Project-Related Impacts

This section examines the potential for the proposed Project to contribute to displacement through an indirect influence on housing market conditions in East Palo Alto and Belle Haven. To the extent the proposed Project generates upward pressure on the housing market, effects are also likely to be experienced locally within the subject communities.

Findings from the regression analysis were applied to the jobs added by the proposed Project to estimate the potential range of impacts. The number of jobs is adjusted for the number of

housing units added by the proposed Project consistent with the adjusted jobs independent variable used in the regression analysis, as described above, and shown in Appendix C Tables 1 and 5. Findings regarding the potential influence of the Project on rents and sales prices are shown in Table 5-4. As shown, a wide range of potential influence is found, from a 0.01% increase in rents and sales prices, based on the finding of the three-county analysis for all jobs, up to a 0.11% and 0.12% increase in rents and sales prices, respectively, based on the single-county results for high-wage jobs. As discussed earlier, the high-wage jobs analysis is an approach to capturing potential multiplier effects in the analysis.

Table 5-4. Potential Percentage Influence on Rents and Sales Prices

	Lower Estimate (3-County Analysis)	Upper Estimate (SM County Analysis)	Midpoint (of Upper & Lower)
Correlation with All Job Growth			
Rents	0.01%	0.07%	0.04%
Sales Prices	0.01%	0.07%	0.04%
Correlation with High-Wage Job Growth *[captures potential multiplier effect]*			
Rents	0.02%	0.11%	0.07%
Sales Prices	0.01%	0.12%	0.07%

Since the upper and lower percentage impact estimates presented in Table 5-4 likely bracket the range, for purposes of the rental analysis, the midpoints of 0.04% based on all jobs and 0.07% based on high-wage jobs are used. The percentage findings presented in Table 5-4 may be converted to a potential dollar influence on rents and home prices. Applying the percentages to the $2,766 average effective monthly rent in East Palo Alto as of 2020 per CoStar yields an estimated dollar impact of $1 to $2, respectively. Applying the percentages to the 2020 median home prices in East Palo Alto of $870,000[37] yields a potential dollar influence on home prices of $300 and $600, which translates to a monthly mortgage payment difference of $1 and $2 per month[38], respectively. For Belle Haven, based on the 2020 median home price of $1,010,000[39] and applying the same percentage factors, the impact to home prices is estimated between $400 and $700, which translates into an estimated monthly mortgage payment difference of between $1 and $2 per month[40]. These minor estimated dollar impacts on rents and sales prices are not likely to have a detectable influence on residential location decisions; however, estimates are likely overstated for the following reasons:

[37] Price based on CoreLogic home sales data for 2020.

[38] This estimate is based on a mortgage interest rate of 3% as of June 2021 based on the average for 30-year mortgages per the Freddie Mac Primary Mortgage Market Survey and assumes a 20% down payment.

[39] Price based on CoreLogic home sales data for 2020.

[40] This estimate is based on a mortgage interest rate of 3% as of June 2021 based on the average for 30-year mortgages per the Freddie Mac Primary Mortgage Market Survey and assumes a 20% down payment.

- **Analysis Approach Will Tend to Overstate Importance of Job Growth** – the analysis will tend to overstate the influence of job growth by omitting other important variables that also affect housing costs. Two such variables include rising household incomes, which can influence housing costs through increased price competition, and addition of new rental and for-sale housing with modern finishes and amenities and higher prices and rents, which can bring up averages but does not necessarily mean costs for existing units are increasing. Both factors are correlated with job growth. The analysis approach will tend to ascribe the impact of these factors to job growth alone, overstating the potential effects of the proposed Project.

- **Offsetting Effects of Nearby Housing Construction Not Reflected** – New housing construction can absorb new demand and moderate or offset the minor potential rent and home price effects estimated. The City has already issued building permits for 1,416 housing units during the current RHNA planning cycle and has over 3,000 housing units proposed in the vicinity of the proposed Project, within the Bayfront Area. East Palo Alto has issued building permits for 222 units during the current RHNA planning cycle[41] and has nearly 1,000 new housing units in the development pipeline[42]. Combined, there are over 4,000 housing units currently in the development pipeline in Menlo Park and East Palo Alto, including approximately 900 below market rate (BMR) affordable units[43]. The more than 4,000 additional market rate and affordable units currently in the development pipeline in East Palo Alto and Menlo Park will tend to moderate or offset the potential rent and price effects described above; however, moderating effects are not taken into account in the analysis. Therefore, estimates of potential rent and price effects are likely overstated.

[41] East Palo Alto 2020 Housing Element Annual Progress Report.

[42] October 6, 2020 City of East Palo Alto Staff Report to the City Council RE: Follow-Up on Study Session Related to the Affordable Housing Component of the Euclid Improvements (Woodland Park) Project, Attachment 1. East Palo Alto Housing Breakdown, which indicates approved, planned, proposed or under construction housing units totaling 969 units, not including 108 rebuilt units.

[43] Pipeline total of 900 BMR units summarized from prior HNA's prepared by KMA for projects in the Bayfront Area and the applicant proposal for 123 Independence, the City of Menlo Park summary of pipeline projects in the Bayfront Area and the staff report referenced in the prior footnote with respect to East Palo Alto pipeline projects.

Estimated Direct Housing Demand in East Palo Alto and Belle Haven

This section describes the estimated share of new workers likely to seek and find housing in East Palo Alto and Belle Haven. The proposed Project's potential to directly impact housing conditions in East Palo Alto and Belle Haven or cause displacement of existing residents is driven by the extent to which workers at the proposed Project are likely to seek housing in either community. Direct displacement impacts will be minimal if a very limited number of workers seek housing in East Palo Alto or Belle Haven; conversely, if many proposed Project workers seek housing in East Palo Alto and Belle Haven, impacts would be greater unless new housing production keeps pace with the increased demand.

The following section summarizes data on the existing share of workers who live in East Palo Alto and Belle Haven. This data is then combined with the estimate of total housing demand from the Housing Needs Analysis (Section 3), to estimate the proposed Project's direct impact on housing demand in the two communities.

Commute Data

Similar to the analysis is Section 4, commute patterns are used to estimate the share of total regional housing demand within East Palo Alto and Belle Haven. Consistent with the Section 4 analysis, a lower estimate is provided based on data specific to the existing Menlo Park Labs campus and a higher estimate is provided based on average commute shares from the U.S. Census. The third goal-based commute share scenario addressed in Section 4 is not included for purposes of estimating direct housing demand in East Palo Alto and Belle Haven because it reflects a citywide goal for Menlo Park that is not specific to Belle Haven or East Palo Alto.

The lower estimate is based on data on commute patterns for three tenants of existing buildings at the Menlo Park Labs campus indicating approximately 1.1% of employees reside in East Palo Alto and 0.5% reside in Belle Haven[44].

The higher estimate is based on U.S. Census data on the overall share of those who work in Menlo Park that commute from East Palo Alto. For Belle Haven, the higher estimate reflects an allocation of the citywide commute share for Menlo Park from the U.S. Census in proportion to the number of occupied housing units, as data specific to Belle Haven is not available.

[44] Based on commute data provided in connection with preparation of the separate HNA for 1350 Adams Court, also located within the Menlo Park Labs campus. Figures reflect an allocation of the total number of workers commuting from the zip codes applicable to each community. East Palo Alto's zip code includes a portion of Palo Alto while Belle Haven is in the same zip code as the rest of Menlo Park. The share of workers within each community was estimated based on its housing stock as a share of the total for the applicable zip code.

Table 5-5. Percent of Workers Residing in East Palo Alto and Belle Haven		
	Lower Estimate based on Existing Menlo Park Lab Workers[1]	**Higher Estimate** based on Census Average [2]
Live in East Palo Alto	1.1%	3.1%
Live in Belle Haven	0.5%	0.7%
Live Elsewhere	98.4%	96.2%
Total	100%	100%

[1] Based on Commute data for three existing tenants within the Menlo Park Labs campus provided in connection with preparation of the separate HNA for 1350 Adams Court.

[2] Data for East Palo Alto per U.S. Census Bureau, American Community Survey 2012-2016 Five-year estimates. Special Tabulation: Census Transportation Planning. Figure for Belle Haven based on American Community Survey 2015-2019 for City of Menlo Park allocated to Belle Haven in proportionate to the number of occupied housing units.

Since it is difficult to predict the extent to which commute shares may evolve over the long term, for purposes of the estimates below, existing shares are applied.

Estimated Direct Housing Demand in East Palo Alto and Belle Haven

The lower and higher commute shares described above are used to estimate the East Palo Alto and Belle Haven shares of total housing demand from the proposed Project.

The total housing demand within commuting distance to the proposed Project estimated in Section 3 is 97 units. Based on current commute shares, the portion of this aggregate housing demand in East Palo Alto is estimated to range from one to three units. For Belle Haven, the estimated housing demand ranges from zero to one units under the lower and higher estimates. This estimate of direct Project-related housing demand in East Palo Alto and Belle Haven is estimated to represent in the range of 0.01% to 0.04% of the existing housing stock in East Palo Alto and 0% to 0.06% in Belle Haven.

Table 5-6. East Palo Alto and Belle Haven Shares of Housing Demand from Project Estimated Based on Existing Commute Shares					
		East Palo Alto Share of Housing Demand		**Belle Haven Share of Housing Demand**	
Housing Demand from Project	**Total** [(1)]	Lower Estimate	Higher Estimate	Lower Estimate	Higher Estimate
Total Direct Housing Demand [(1)]	97 Units				
Commute Share (Table 5-2)		1.1%	3.1%	0.48%	0.72%
Estimated Direct Housing Demand		1 Units	3 Units	0 Units	1 Units
Total Existing Housing Stock [(2)]		8,342 Units		1,670 Units	
Project Demand as % of Total Housing Stock		0.01%	0.04%	0.00%	0.06%

[(1)] See Section 3.

[(2)] ACS 2015-2019

Turnover of Existing Units

1. *Turnover of existing housing units in East Palo Alto* – The East Palo Alto housing stock is comprised of approximately 7,724 occupied housing units. KMA estimates East Palo Alto experiences an average turnover rate of approximately 8% of the occupied housing stock each year, based on U.S. Census 2015-2019 ACS data regarding the length of occupancy for housing units. This 8% turnover rate equates to approximately 620 units each year available through regular turnover. With the lower estimate, the estimated one unit of direct housing demand from the proposed Project in East Palo Alto would represent roughly 0.1% of the units coming available in one year through regular turnover. The higher estimate of four units is estimated represent 0.6% of the units coming available through regular turnover.

2. *Turnover of existing housing units in Belle Haven* – Belle Haven housing stock is comprised of approximately 1,450 occupied housing units. KMA estimates that Belle Haven experiences an average turnover rate of approximately 7% of the occupied housing stock per year based on Census data regarding the length of occupancy for housing units. This 7% turnover rate equates to approximately 100 units per year available through regular turnover. The estimated direct housing demand from the proposed Project in Belle Haven represents between 0% and 1% of the units estimated to come available through regular turnover in one year with both the lower and higher estimates, respectively.

Overall, the proposed Project is estimated to represent less than 0.6% of the market for units that come available through regular turnover in East Palo Alto and Belle Haven each year. This would mean that, as rental units come available through regular turnover, or as homeowners make the decision to sell, at the point in time that the proposed Project is initially occupied, workers could be competing for up to about 0.6% of the units that are available, along with others seeking housing within the two communities. This suggests no impact to very minimal direct impact on local housing market conditions.

Displacement Analysis Conclusion

Belle Haven and all areas of East Palo Alto are identified by the Urban Displacement Project as either at risk of or undergoing displacement. East Palo Alto's rent control ordinance shields existing renters in eligible units from rent increases; however, protections do not extend to the more than one third of single-family homes in East Palo Alto that are renter-occupied or to rentals in Belle Haven. Escalating rents and home prices have made these communities far less affordable than they once were. This makes longer term neighborhood change likely as units come available through rental unit turnover or sale of owner-occupied housing because newcomers will generally need to have higher incomes than existing residents to afford it.

The proposed Project is estimated to represent a negligible influence on displacement in East Palo Alto and Belle Haven which would not materially contribute to the substantial pre-existing displacement pressures. This conclusion is based on consideration of the following:

- The proposed Project is an incremental expansion of an existing use; therefore, it appears unlikely the proposed Project would generate an outsized or catalytic effect on the local housing market.

- The proposed Project adds nominally to housing demand estimated at one to three units in East Palo Alto and zero to one unit in Belle Haven. The estimated direct housing demand from proposed Project workers is estimated to represent up to approximately 0.06% of the existing housing stock and up to approximately 0.6% of the units estimated to come available through normal turnover in one year. Since this represents a minor level of demand, it is anticipated to represent a nominal influence on the overall local housing market. In addition, there are over 4,000 housing units proposed within Menlo Park and East Palo Alto, including approximately 900 BMR affordable units, that are likely to help absorb the new housing demand.

- The analysis indicates that the potential impact on monthly housing costs for newly vacated units could range from $1 to $2 depending on the analysis approach. Were an impact of this magnitude to occur, it would be unlikely to affect residents' decisions regarding where to live. Residents of rent control housing and existing homeowners would be protected from any increase. Further, while immaterial, the estimated impact is likely overstated because it is based on a methodology that does not isolate the effects of job growth from other contributing factors or account for the offsetting effects of the significant pipeline of new housing proposed for development in the vicinity of the proposed Project.

[1] The methodology utilized by the Bureau of Labor Statistics (BLS) assumes hourly paid employees are employed full-time. BLS data is adjusted by KMA to reflect the local minimum wage. Annual compensation is calculated by BLS by multiplying hourly wages by 40 hours per work week and by 52 weeks.

[2] Occupation percentages are based on the 2020 National Industry - Specific Occupational Employment survey compiled by the Bureau of Labor Statistics. Wages are based on the 2020 Occupational Employment Survey data applicable to San Francisco and San Mateo Counties updated by the California Employment Development Department to 2021 wage levels.

[3] Including occupations representing 2% or more of the major occupation group.

[4] Household income estimated based average worker compensation and ratios between employee income and household income identified in Table 3-7.

[1] The methodology utilized by the Bureau of Labor Statistics (BLS) assumes hourly paid employees are employed full-time. BLS data is adjusted by KMA to reflect the local minimum wage. Annual compensation is calculated by BLS by multiplying hourly wages by 40 hours per work week and by 52 weeks.

[2] Occupation percentages are based on the 2020 National Industry - Specific Occupational Employment survey compiled by the Bureau of Labor Statistics. Wages are based on the 2020 Occupational Employment Survey data applicable to San Francisco and San Mateo Counties updated by the California Employment Development Department to 2021 wage levels.

[3] Including occupations representing 2% or more of the major occupation group.

[4] Household income estimated based average worker compensation and ratios between employee income and household income identified in Table 3-7.

APPENDIX B – CENSUS DATA FOR EAST PALO ALTO AND BELLE HAVEN

The following Appendix section summarizes U.S. Census data on housing conditions and demographics for East Palo Alto and Belle Haven. In addition, data for San Mateo County as a whole is provided as a point of comparison. East Palo Alto and Belle Haven differ in several respects from San Mateo County averages including: a higher share of renter households, a concentration of households overspending on housing, a higher percentage living in overcrowded conditions, larger household sizes, a younger population, lower incomes, and an above average percentage of households below the poverty level.

1. Number of Housing Units and Tenure

East Palo Alto has an estimated 8,342 housing units. Approximately 60% of occupied units are rental and 40% are owner-occupied. Approximately 1,800 units of the rental units in East Palo Alto (39%) are part of the multi-building Woodland Park Apartments property acquired by Sand Hill Property Company in 2016 and located along the boundary with the City of Palo Alto on the West side of U.S. 101.

Belle Haven has approximately 1,670 housing units. Approximately 55% of the occupied units are rental and 45% are owner-occupied.

Housing Units by Tenure

	East Palo Alto		Belle Haven[(1)]		San Mateo County	
Housing Units by Tenure	Number	% of Occupied Units	Number	% of Occupied Units	Number	% of Occupied Units
Renter Occupied	4,648	60%	795	55%	105,000	40%
Owner Occupied	3,076	40%	656	45%	158,543	60%
Total Occupied Housing Units	*7,724*	100%	*1,451*	100%	*263,543*	100%
Vacant	618		219		14,230	
Total Housing Units	*8,342*		*1,670*		*277,773*	
Percent of County-wide Housing Stock	3.0%		0.6%			

(1) Reflects data for Census Tract 6117 which includes the Belle Haven neighborhood.

Source: 2015-2019 American Community Survey estimates, Table DP04

East Palo Alto represents about 3% of the total housing stock in San Mateo County and less than 1% of the more than 950,000 housing units in San Mateo and Santa Clara counties combined. Belle Haven represents approximately 0.6% of the total housing stock in San Mateo County and a fraction of the combined housing stock in the two counties.

2. Housing Units by Type

Approximately 58% of units in East Palo Alto are single family compared to 68% in Belle Haven and 65% County-wide. The balance of units are in multi-family and other structures.

Housing Units by Type

	East Palo Alto		Belle Haven[1]		San Mateo	
	Housing Units	% of Total	Housing Units	% of Total	Housing Units	% of Total
Single Family	4,848	58%	1,137	68%	179,731	65%
2- 4 unit buildings	250	3%	184	11%	19,743	7%
Five+ unit buildings	3,081	37%	331	20%	75,096	27%
Mobile Home, Boat, RV, etc.	163	2%	18	1%	3,203	1%
Total Housing Units	8,342	100%	1,670	100%	277,773	100%

(1) Reflects data for Census Tract 6117 corresponding to the Belle Haven neighborhood.
Source: 2015-2019 American Community Survey 5-Year Estimates.

3. Percent of Income Spent on Housing

In East Palo Alto, approximately 48% of renter households and 35% of homeowner households spend more than 35% of their income on housing, a general criterion for overspending, particularly for renters. In Belle Haven, the share spending more than 35% of their income on housing is 60% for renter households and 27% for homeowners. The percent spending more than 35% of their income on housing exceeds County averages in both communities.

Percent of Income Spent on Housing

	East Palo Alto		Belle Haven[1]		San Mateo County	
	Renter	Homeowner	Renter	Homeowner	Renter	Homeowner
Less than 35% of Income	48%	65%	35%	71%	57%	76%
Between 35% and 50% of Income	18%	13%	19%	14%	15%	10%
More than 50% of Income	29%	22%	41%	13%	24%	12%
Subtotal Over 35% of Income	48%	35%	60%	27%	39%	23%
Not Available	4%	0%	6%	2%	4%	1%

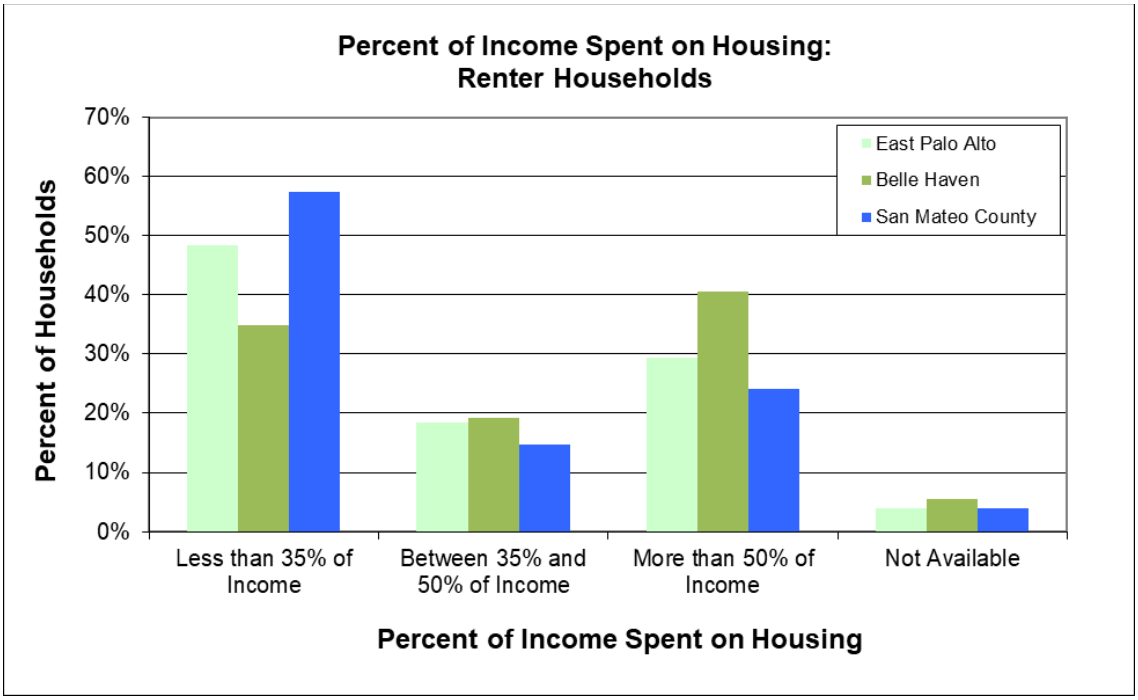
Source: 2015-2019 American Community Survey 5-Year Estimates.



Source: 2015-2019 American Community Survey 5-Year Estimates.

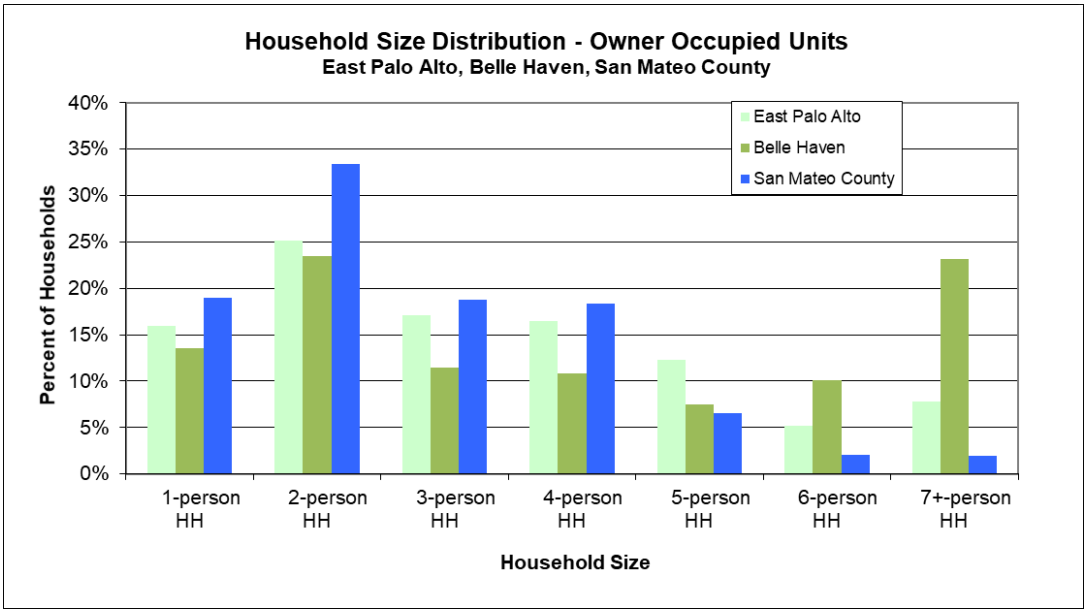
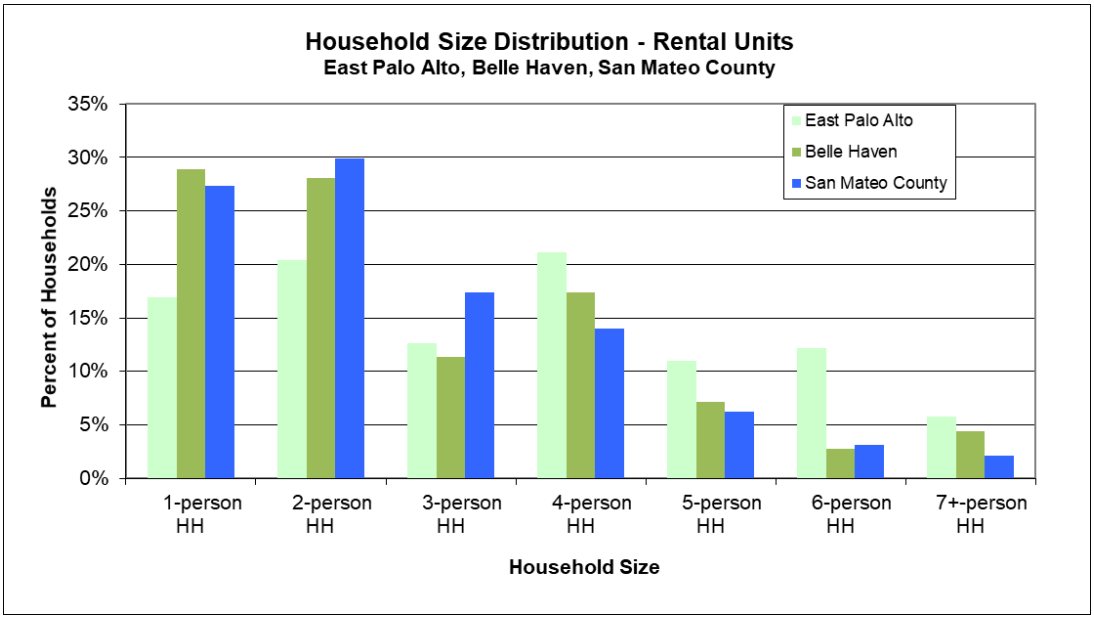
4. Household Size

Household sizes in East Palo Alto and Belle Haven are larger than County averages as shown in the charts below:

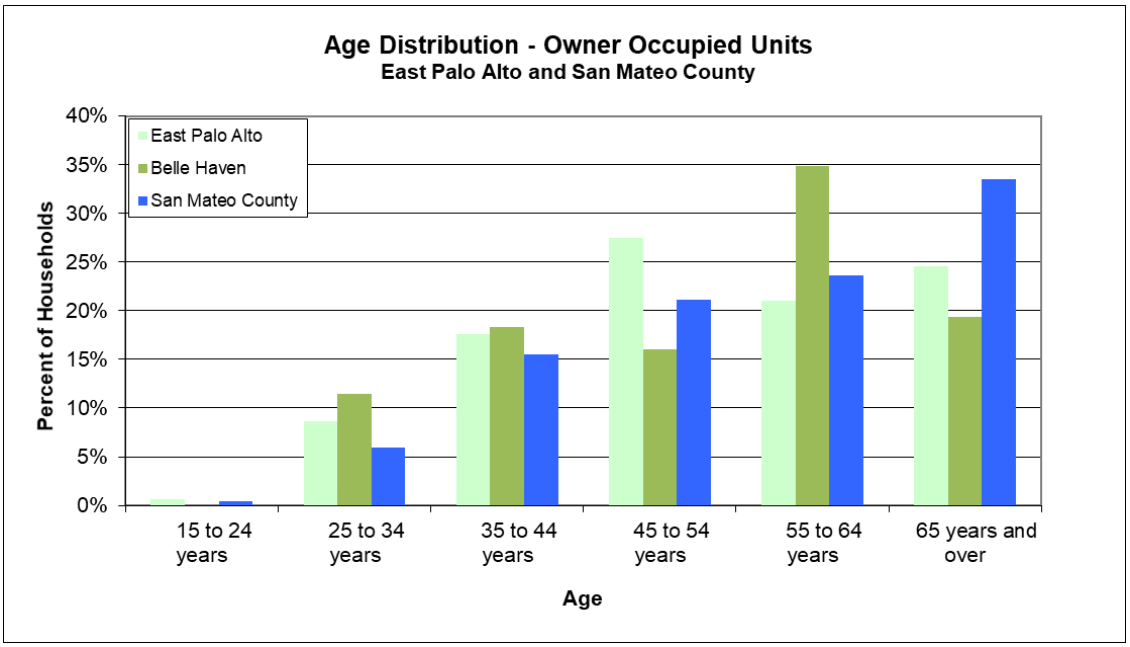


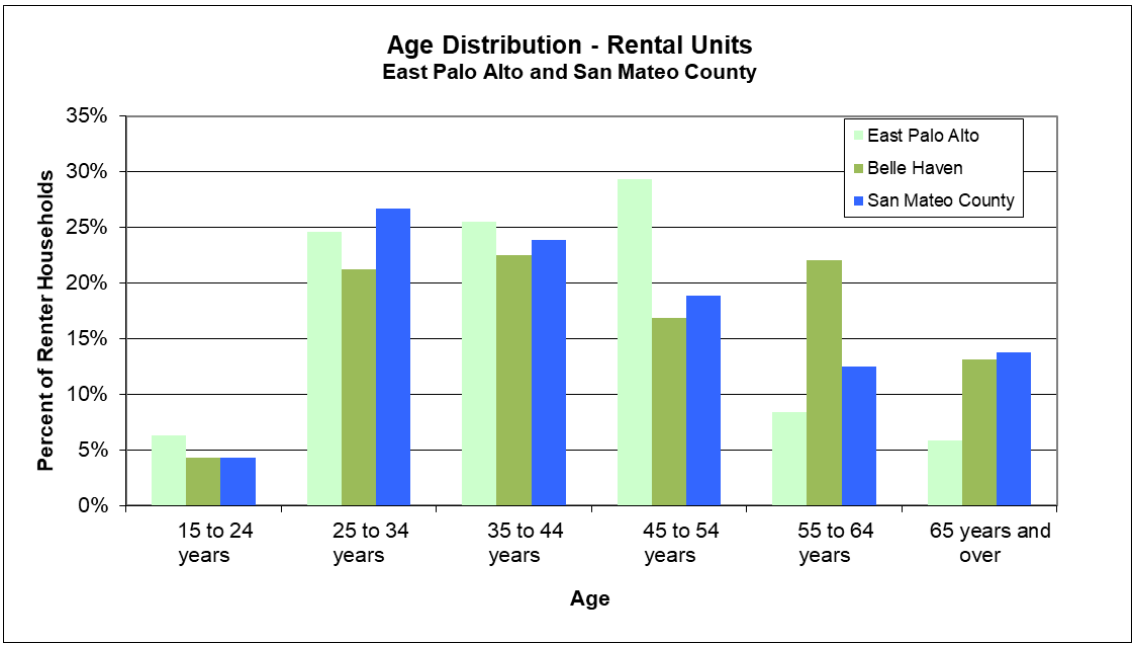


Source: American Community Survey, 2015-2019, Table B25009

5. Age

The population of East Palo Alto and Belle Haven is younger than for the County as a whole:

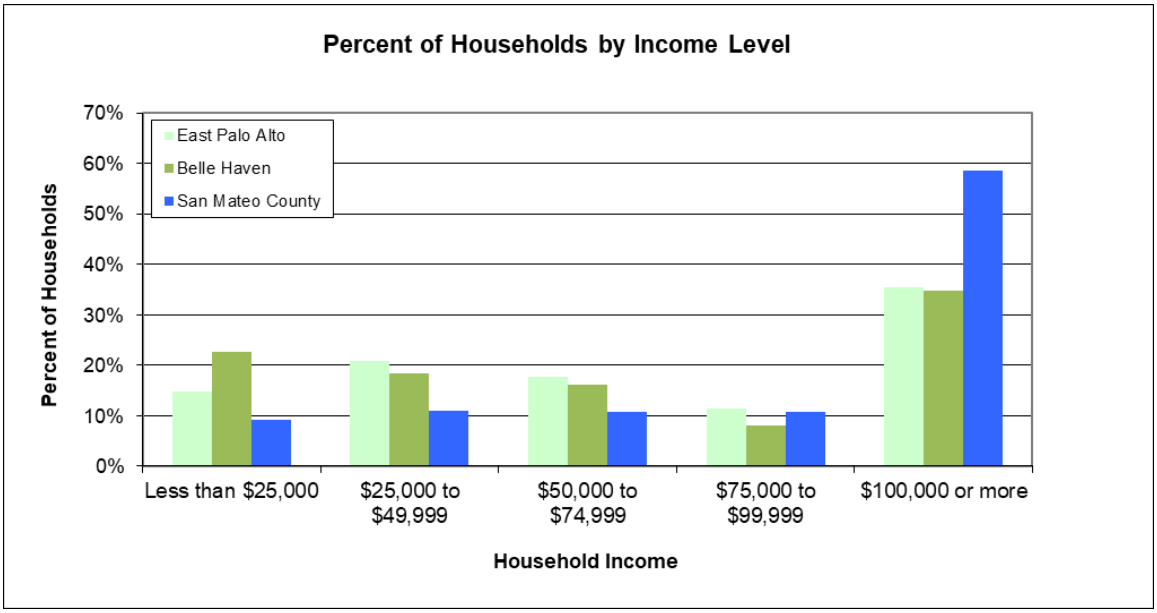




Source: American Community Survey, 2015-2019, Table B25007

6. Income and Employment status

East Palo Alto and Belle Haven households have lower incomes than County averages and a higher percentage of families below the poverty line. Unemployment levels in East Palo Alto and Belle Haven are similar to the County average.



Source: 2015-2019 American Community Survey 5-Year Estimates

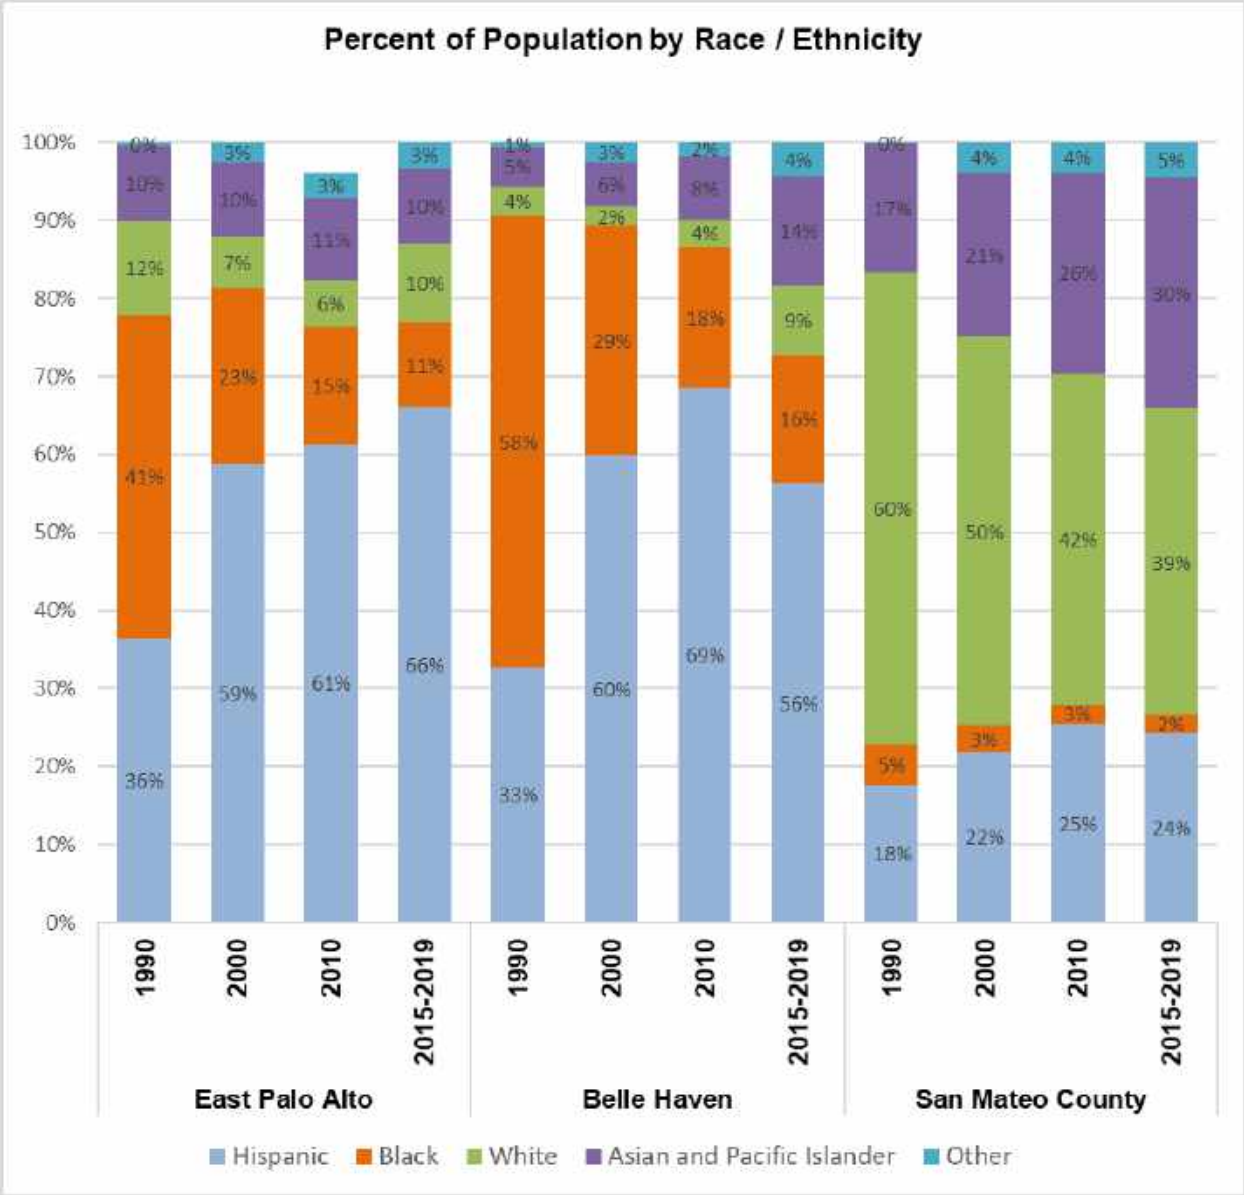
7. Race and Ethnicity

Approximately two-thirds of East Palo Alto and 56% of Belle Haven residents are Hispanic, compared to the County average of 24%. African American residents represent 11% and 16%

of the population in East Palo Alto and Belle Haven, respectively. The Hispanic population of both communities has increased since 1990 while the African American population has declined, as shown in the chart below. The most recent ACS data suggests a shift in longer-term trends within Belle Haven including a reversal of the trend toward increasing Hispanic population and an increase in the white and Asian populations.

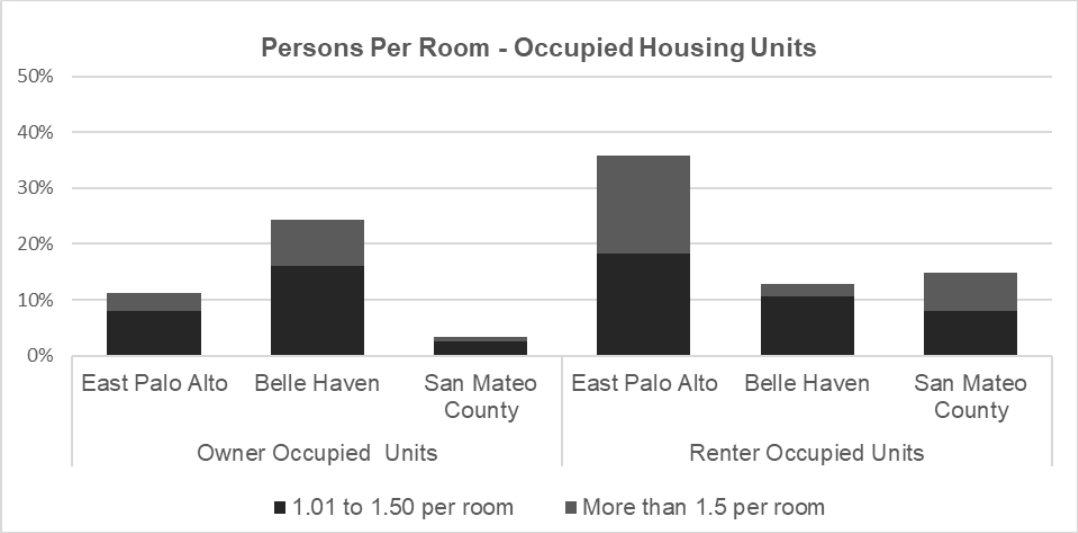


Sources: 1990, 2000, 2010 Census; 2015-2019 American Community Survey

8. Overcrowding

Overcrowding is generally defined as an occupancy level above one person per room. In East Palo Alto, about 11% of owner-occupied units and 36% of renter-occupied units have more than one person per room. The incidence of over-crowding in East Palo Alto is significantly greater

than San Mateo County as a whole, especially in the rental stock. In Belle Haven, overcrowding in owner occupied housing is also above the County average while crowding in the rental housing stock is similar to the County average.



Source: 2015-2019 American Community Survey 5-Year Estimates.

Occupants Per Room

Occupants Per Room	Owner Occupied			Renter Occupied		
	East Palo Alto	Belle Haven	San Mateo County	East Palo Alto	Belle Haven	San Mateo County
1 Person or fewer per room	89%	76%	97%	64%	87%	85%
1.01 to 1.50 per room	8%	16%	3%	18%	11%	8%
1.51 to 2.00 per room	2%	5%	1%	11%	2%	5%
2.01 or more per room	1%	3%	0%	6%	0%	2%
1.01 Per Room or more[(1)]	**11%**	**24%**	**3%**	**36%**	**13%**	**15%**
Total	100%	100%	100%	100%	100%	100%

(1) The Census has no official definition of over-crowding but it is sometimes defined as more than one person per room.
Source: 2015-2019 American Community Survey 5-Year Estimates.

Both conditions of overspending and overcrowding are directly linked to the high cost of housing relative to residents' incomes. Households are forced to spend a high percentage of their income on housing if lower cost housing is not available. Overcrowding is a direct response to high housing costs, as households make do with smaller units or double up with other family members, roommates, etc.

2020	347,720	149,195	$3.24	$939

[1] Adjusted jobs defined as total employment less the number of jobs that can be accommodated by housing growth since 2000, based on a factor of 1.91 workers per household. Housing growth adjustment for high-wage jobs reflects a lesser adjustment based on high-wage job share of overall jobs. See Appendix C Table 10 and 11 for calculations.

[2] High wage jobs defined as industries with $100k or more average annual wages in 2016.

[3] Asking rents and home prices are adjusted for inflation in linear regression analysis. See Appendix C Table 9.

1.0 INTRODUCTION

On August 1, 2019, WRA, Inc. (WRA) conducted a biological resources assessment (BRA) at 1125 O'Brien Drive, located in Menlo Park, San Mateo County, California. On October 6, 2020, WRA conducted a subsequent assessment at the adjacent 1 Casey Court. The two sites comprise the proposed 1125 O'Brien Drive Development Project (Project) (Appendix A, Figures 1 and 2). This BRA is consistent with the requirements of Mitigation Measure BIO-1 of the ConnectMenlo Environmental Impact Report (EIR), and provides evidence to support the Project's review under the California Environmental Quality Act (CEQA).

The Project will be located on a building site which consists of three separate legal lots (1105, 1135, and 1165 O'Brien Drive and an adjacent drainage ditch, Study Area) which will be merged into one lot (Parcel 1 or Development Lot). Parcel 1 is 2.44 acres and is part of the Menlo Park Labs Campus (Campus). It is currently developed with three single-story buildings totaling approximately 38,900 sf. The Proposed Sponsor would demolish the existing buildings and construct a new 131,284 square foot five-story building that would include Research and Development (R&D) uses, office uses associated with the primary R&D use, and ground-floor commercial space. The roof of the building would have a 3,600 sf paved roof deck area with seating areas, and 3,000 sf of landscaping. The exterior of the Development Lot would feature an entry plaza, a shuttle stop, bioretention areas, and two driveways from O'Brien Drive. The Project would provide a total of 249 parking stalls, with approximately 89 stalls in a surface accessory parking lot west of the building and an additional 160 parking stalls serving the building on the property at the adjacent lot at 1 Casey Court (Parcel 2 or Accessory Parking Lot). Parcel 2 is 1.68 acres and currently developed with a single-story building of approximately 20,955 sf which would be demolished as part of the Project. The Project Area is a total of 4.12 acres and includes the Development Lot and the Accessory Parking Lot. The Project will retain existing stormwater drainage patterns.

There are currently 40 existing trees on the Project site, all of which would be removed during construction of the Project. Of these, 13 are heritage trees defined by the City of Menlo Park, within the Project Area according to the Project Plans (Appendix C). The Project Sponsor would be required to plant 13 trees to replace the removed heritage trees; however, 101 trees are proposed to be planted within the Project Area. No invasive plant species or noxious weeds would be planted in accordance to the Menlo Park Municipal Code.

This report describes the results of the biological resources assessments ofthe Study Area for the potential to support special-status species and the presence of other sensitive biological resources protected by local, state, and federal laws and regulations. The assessments did not constitute a protocol-level survey for individual listed species, as a protocol-level survey is not required in support of an EIR where species are not likely to occur. (*Association of Irritated Residents v County of Madera* (2003) 107 Cal.App.4th 1383, 1396). Consistent with the requirements of CEQA and Mitigation Measure BIO-1, this BRA provides information on the potential for jurisdictional habitat, sensitive habitat, and special-status plant and wildlife species to occur. Species that have a moderate or higher potential to occur may require a protocol-level survey or other mitigation to ensure that there will be no significant impacts. This BRA identifies one special-status wildlife species with a moderate or high potential to occur (white-tailed kite [*Elanus leucurus*]; moderate potential) and includes Mitigation Measure 1 to either avoid the nesting bird

season or conduct preconstruction nesting bird surveys and mitigation to reduce this impact to less than significant under CEQA. This assessment is based on information available at the time of the study and on-site conditions that were observed on August 1, 2019 and October 6, 2020.

2.0 REGULATORY BACKGROUND

The following sections explain the regulatory context of the BRA, including applicable laws and regulations that relate to the field investigations.

2.1 Special-Status Species

Special-status species include plant and wildlife species that have been formally listed, are proposed as endangered or threatened, or are candidates for such listing under the Federal Endangered Species Act (ESA) or the California Endangered Species Act (CESA). These acts afford protection to both listed species and those that are formal candidates for listing. The federal Bald and Golden Eagle Protection Act also provides broad protections to both eagle species that in some regards are similar to those provided by the ESA. Additionally, the California Department of Fish and Wildlife (CDFW) Species of Special Concern, CDFW California Fully Protected Species, United States Fish and Wildlife Service (USFWS) Birds of Conservation Concern, and CDFW Special-status Invertebrates are all considered special-status species. Although these aforementioned species generally have no special legal status, they are given special consideration under the California Environmental Quality Act (CEQA). Bat species are also evaluated for conservation status by the Western Bat Working Group (WBWG), a non-governmental entity; bats named as "High Priority" or "Medium Priority" species for conservation by the WBWG are typically considered special-status and are also considered under CEQA (WBWG 2015). In addition to regulations for special-status species, most native birds in the United States (including non-status species) are protected by the federal Migratory Bird Treaty Act of 1918 (MBTA) and the California Fish and Game Code (CFGC) (i.e., Sections 3503, 3503.5, and 3513). Under these laws, deliberately destroying active bird nests, eggs, and/or young is illegal.

Plant species on the California Native Plant Society (CNPS) Rare and Endangered Plant Inventory with California Rare Plant Ranks of 1 and 2 are also considered special-status plant species and must be considered under CEQA. Rank 3 and Rank 4 species are afforded little or no protection under CEQA, but are included in this analysis for completeness. A description of the CNPS Ranks is provided below in Table 1.

Critical Habitat

Critical habitat is a term defined in the ESA as a specific and designated geographic area that contains features essential for the conservation of a threatened or endangered species and that may require special management and protection. The ESA requires federal agencies to consult with the USFWS to conserve listed species on their lands and to ensure that any activities or projects they fund, authorize, or carry out will not jeopardize the survival of a threatened or endangered species. In consultation for those species with critical habitat, federal agencies must also ensure that their activities or projects do not adversely modify critical habitat to the point that it will no longer aid in the species' recovery. In many cases, this level of protection is similar to that already provided to species by the ESA jeopardy standard. However, areas that are currently unoccupied by

the species but which are needed for the species' recovery are protected by the prohibition against adverse modification of critical habitat.

Table 1. Description of CNPS Ranks and Threat Codes

California Rare Plant Ranks (formerly known as CNPS Lists)	
Rank 1A	Presumed extirpated in California and either rare or extinct elsewhere
Rank 1B	Rare, threatened, or endangered in California and elsewhere
Rank 2A	Presumed extirpated in California, but more common elsewhere
Rank 2B	Rare, threatened, or endangered in California, but more common elsewhere
Rank 3	Plants about which more information is needed - A review list
Rank 4	Plants of limited distribution - A watch list
Threat Ranks	
0.1	Seriously threatened in California
0.2	Moderately threatened in California
0.3	Not very threatened in California

2.2 Sensitive Biological Communities

Sensitive biological communities include habitats that fulfill special functions or have special values, such as wetlands, streams, or riparian habitat. These habitats are protected under federal regulations, such as the Clean Water Act (CWA); state regulations, such as the Porter-Cologne Act, the CDFW Streambed Alteration Program, and the CEQA; or local ordinances or policies, such as city or county tree ordinances, Special Habitat Management Areas, and General Plan Elements.

Waters of the United States

The United States Army Corps of Engineers (Corps) regulates "Waters of the United States" under Section 404 of the Clean Water Act (CWA). Waters of the United States are defined in the Code of Federal Regulations (CFR) as including the territorial seas, and waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, such as tributaries, lakes and ponds, impoundments of waters of the U.S., and wetlands that are hydrologically connected with these navigable features (33 CFR 328.3). Potential wetland areas, according to the three criteria used to

delineate wetlands as defined in the Corps Wetlands Delineation Manual (Environmental Laboratory 1987), are identified by the presence of (1) hydrophytic vegetation, (2) hydric soils, and (3) wetland hydrology. Unvegetated waters including lakes, rivers, and streams may also be subject to Section 404 jurisdiction and are characterized by an ordinary high water mark (OHWM) identified based on field indicators such as the lack of vegetation, sorting of sediments, and other indicators of flowing or standing water. The placement of fill material into Waters of the United States generally requires a permit from the Corps under Section 404 of the CWA.

Waters of the State

The term "Waters of the State" is defined by the Porter-Cologne Act as "any surface water or groundwater, including saline waters, within the boundaries of the state." The State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Boards (RWQCB) protect waters within this broad regulatory scope through many different regulatory programs. Waters of the State in the context of a CEQA Biological Resources evaluation include wetlands and other surface waters protected by the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State*. The SWRCB and RWQCB issue permits for the discharge of fill material into surface waters through the State Water Quality Certification Program, which fulfills requirements of Section 401 of the CWA and the Porter-Cologne Water Quality Control Act. Projects that require a Clean Water Act permit are also required to obtain a Water Quality Certification. If a project does not require a federal permit, but does involve discharge of dredge or fill material into surface waters of the State, the SWRCB and RWQCB may issue a permit in the form of Waste Discharge Requirements.

Streams, Lakes, and Riparian Habitat

Streams and lakes, as habitat for fish and wildlife species, are subject to jurisdiction by CDFW under Sections 1600-1616 of the CFGC. Alterations to or work within or adjacent to streambeds or lakes generally require a 1602 Lake and Streambed Alteration Agreement. The term "stream", which includes creeks and rivers, is defined in the California Code of Regulations (CCR) as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life [including] watercourses having a surface or subsurface flow that supports or has supported riparian vegetation" (14 CCR 1.72). In addition, the term "stream" can include ephemeral streams, dry washes, watercourses with subsurface flows, canals, aqueducts, irrigation ditches, and other means of water conveyance if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife (CDFG 1994). "Riparian" is defined as "on, or pertaining to, the banks of a stream." Riparian vegetation is defined as "vegetation which occurs in and/or adjacent to a stream and is dependent on, and occurs because of, the stream itself" (CDFG 1994). Removal of riparian vegetation also requires a Section 1602 Lake and Streambed Alteration Agreement from the CDFW.

Other Sensitive Biological Communities

Other sensitive biological communities not discussed above include habitats that fulfill special functions or have special values. Natural communities considered sensitive are those identified in local or regional plans, policies, regulations, or by the CDFW. CDFW ranks sensitive communities (alliances) as "threatened" or "very threatened" and keeps records of their occurrences in its California Natural Diversity Database (CNDDB; CDFW

2020). CNDDB vegetation alliances are ranked 1 through 5 based on NatureServe's (2010) methodology, with those alliances ranked globally (G) or statewide (S) as 1 through 3 considered sensitive. Impacts to sensitive natural communities identified in local or regional plans, policies, or regulations or those identified by the CDFW or USFWS must be considered and evaluated under CEQA (CCR Title 14, Div. 6, Chap. 3, Appendix G). Specific habitats may also be identified as sensitive in city or county general plans or ordinances.

2.3 Menlo Park Municipal Code

The Menlo Park Municipal Code contains all ordinances for the City of Menlo Park. The Menlo Park Municipal Code includes regulations relevant to biological resources within the Study Area as discussed below.

Heritage Trees

Chapter 13.24, "Heritage Trees", of the Menlo Park Municipal Code stipulates regulations designed to preserve and protect heritage trees within the City of Menlo Park. The ordinance defines a heritage tree as:

- A tree or group of trees of historical significance, special character, or community benefit, specifically designated by resolution of the City Council;
- An oak tree, which is native to California, and has a trunk with a circumference of 31.4 inches (or a diameter of 10 inches) or more, measured at 54 inches above natural grade. Trees with more than one trunk shall be measured at the point where the trunks divide, with the exception of trees that are under 12 feet in height, which will be exempt.
- All trees other than oaks which have a trunk with a circumference of 47.1 inches (or a diameter of 15 inches) or more, measured 54 inches above natural grade. Trees with more than one trunk shall be measured at the point where the trunks divide, with exception of trees that are under 12 feet in height, which will be exempt.

Because of their value to the City of Menlo Park, heritage trees may not be removed or have more than a quarter of their branches pruned within a 12-month period without a permit from the City's Director of Public Works, or his or her designee. The Director of Public Works, or his or her designee, may only issue a permit for the removal or major pruning of a heritage tree if he or she determines there is good cause for such action.

Any person who conducts any grading, excavation, demolition, or construction activity shall do so in such a manner as to not threaten the health or viability, or cause the removal of any heritage tree. A certified arborist shall prepare a tree protection plan when any work is to be performed within an area ten times the diameter of a heritage tree (i.e., the tree protection zone). The tree protection plan will be reviewed and approved by the Director of Community Development, or his or her designee, prior to the issuance of any permit for grading or construction.

Bird Friendly Design

Chapter 16.44.130 of the Menlo Park Municipal Code requires all new construction, regardless of size, to implement the following bird-friendly design measures:

- No more than 10% of a facade's surface area shall have non-bird-friendly glazing.
- Bird-friendly glazing includes, but is not limited to, opaque glass, covering of clear glass surface with patterns, paned glass with fenestration patterns, and external screens over non-reflective glass.
- Placement of buildings shall avoid the potential funneling of flight paths towards a building facade
- Glass skyways or walkways, freestanding glass walls, and transparent building corners shall not be allowed
- Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with green roofs
- Use of rodenticides shall not be allowed
- Occupancy sensors or other switch control devices shall be installed on nonemergency lights and shall be programmed to shut off during non-work hours and between ten (10) p.m. and sunrise.

Landscape Design Plan

Chapter 12.44.090 of the Menlo Park Municipal Code states that the use of invasive and/ or noxious plant species is strongly discouraged. Invasive species are defined as those plants not historically found in California that spread outside of cultivated areas and can damage environmental or economic resources. A noxious weed refers to any weed designated by the weed control regulations in the Weed Control Act that is identified on a regional district noxious weed list.

3.0 METHODS

On August 1, 2019, APNs 055-433-320 and 055-433-330 within the Study Area were traversed on foot. On October 6, 2020, the remainder of the Study Area was traversed on foot. These site visits were conducted to determine: (1) plant communities present within the Study Area, (2) if existing conditions provided suitable habitat for any special-status plant or wildlife species, and (3) if sensitive habitats were present.

3.1 Biological Communities

Prior to the BRA surveys, the Soil Survey of San Mateo County, California (U.S. Department of Agriculture [USDA] 1961) was examined to determine if any unique soil types that could support sensitive plant communities and/or aquatic features were present in the Study Area. Biological communities present in the Study Area were classified based on existing plant community descriptions described in the *Preliminary Descriptions of the Terrestrial Natural Communities of California* (Holland 1986) or the *Manual of California Vegetation* (Sawyer et.al. 2009). However, in some cases, it was necessary to identify variants of community types or to describe non-vegetated areas that are not described in the literature. Biological communities were classified as sensitive or non-sensitive as defined by CEQA and other applicable laws and regulations.

3.1.1 Non-sensitive Biological Communities

Non-sensitive biological communities are not afforded special protection under state, federal, or local laws, regulations, and ordinances. Impacts to such communities would not be significant under CEQA. These communities may, however, provide suitable habitat for some special-status plant or wildlife species.

3.1.2 Sensitive Biological Communities

Sensitive biological communities are given special protection under CEQA and other applicable federal, state, and local laws, regulations, and ordinances. Applicable laws and ordinances are discussed above in Section 2.0. Methods used to identify sensitive biological communities are discussed below.

Wetlands and Non-wetland Waters

The Study Area was surveyed to determine if any wetlands or non-wetland waters potentially subject to jurisdiction by the Corps, RWQCB, or CDFW were present. Consistent with the guidance provided by these agencies, including the State Wetland Definition and Procedures for Discharges of Dredged or Fill Materials to Waters of the State that was adopted by the State Water Resources Control Board on April 2, 2019 the BRA was based primarily on the presence of wetland plant indicators, but also included any observed indicators of wetland hydrology or wetland soils. Any potential wetland areas were identified as areas dominated by plant species with a wetland indicator status[1] of OBL (obligate), FACW (facultative wetland), or FAC (facultative) as provided on the Corps National Wetlands Plant List (Lichvar et al. 2016, as updated in 2018). Evidence of wetland hydrology can include direct (primary) indicators, such as visible inundation or saturation, algal mats, and oxidized root channels, or indirect (secondary) indicators, such as a water table within 2 feet of the soil surface during the dry season. Some indicators of wetland soils include dark colored soils, soils with a sulfidic odor, and soils that contain redoximorphic features as defined by the Corps Manual (Environmental Laboratory 1987), Arid West Regional Supplement (Corps 2008), and Field Indicators of Hydric Soils in the United States (Natural Resources Conservation Service [NRCS] 2018).

The preliminary non-wetland waters assessment was based primarily on the presence of unvegetated, ponded areas or flowing water, areas vegetated with hydrophytic plant species, or evidence indicating their presence, such as a high water mark or a defined drainage course. If the preliminary waters assessment identified potential wetlands, the collection of additional data will be necessary to prepare a formal delineation report suitable for submission to the Corps. However, no impacts to wetland habitats or waters are anticipated for Project implementation.

Other Sensitive Biological Communities

The Study Area was evaluated for the presence of other sensitive biological communities, including riparian areas and sensitive plant communities recognized by the CDFW. If

[1] OBL = Obligate, always found in wetlands (> 99% frequency of occurrence); FACW = Facultative wetland, usually found in wetlands (67-99% frequency of occurrence); FAC = Facultative, equal occurrence in wetland or non-wetlands (34-66% frequency of occurrence).

present in the Study Area, these sensitive biological communities were mapped and are described below.

3.2 Special-Status Species

3.2.1 Literature Review

The potential occurrence of special-status species in the Study Area was evaluated by first determining which special-status species occur in the vicinity of the Study Area through a literature and database search. Database searches for known occurrences of special-status species focused on the Palo Alto 7.5-minute United States Geological Survey (USGS) quadrangle. The following sources were reviewed to determine which special-status plant and wildlife species have been documented to occur in the vicinity of the Study Area:

- CNDDB records (CDFW 2020)
- USFWS Information for Planning and Conservation Species Lists (USFWS 2020)
- CNPS Inventory records (CNPS 2020)
- CDFG publication "California's Wildlife, Volumes I-III" (Zeiner et al. 1990)
- CDFG publication *California Bird Species of Special Concern* (Shuford and Gardali 2008)
- CDFW and University of California Press publication *California Amphibian and Reptile Species of Special Concern* (Thomson et al. 2016)
- *A Field Guide to Western Reptiles and Amphibians* (Stebbins 2003)

3.2.2 Site Assessment

A site assessment was conducted in the Study Area to search for suitable habitats for special-status species. Habitat conditions observed in the Study Area were used to evaluate the potential for presence of special-status species based on these searches and the professional expertise of the investigating biologist. The potential for each special-status species to occur in the Study Area was then evaluated according to the following criteria:

- No Potential. Habitat on and adjacent to the site is clearly unsuitable for the species requirements (foraging, breeding, cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).
- Unlikely. Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.
- Moderate Potential. Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.
- High Potential. All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.
- Present. Species is observed on the site or has been recorded (i.e. CNDDB, other reports) on the site recently.

The site assessment was intended to identify the presence or absence of suitable habitat for each special-status species known to occur in the vicinity to determine its potential to occur in the Study Area. The site visits did not constitute a protocol-level survey and was not intended to determine the actual presence or absence of a species; however, if a special-status species was observed during the site visit, its presence was recorded and is discussed in Section 4.0, below.

Appendix B presents the evaluation of the potential for occurrence of each special-status plant and wildlife species known to occur in the vicinity of the Study Area with their habitat requirements, potential for occurrence, and rationale for the classification based on criteria listed above. Recommendations for further surveys for species with a moderate or high potential to occur in the Study Area are provided in Section 5.0 below.

4.0 RESULTS

The 4.12-acre Study Area is located in the northeastern portion of the Palo Alto USGS 7.5-minute quadrangle. The Study Area is relatively flat with elevations ranging from 10 to 13 feet above mean sea level. The Study Area is located approximately 0.5 mile south of Highway 84. Historic aerial imagery indicates that the Study Area and surrounding areas were utilized for agricultural purposes dating back to at least 1948 (Google Earth 2020). By 1991, the Study Area was occupied by the four buildings that presently exist. The Study Area is surrounded by commercial development utilized for warehousing and light industrial uses and the undeveloped right-of-way for the underground Hetch Hetchy Aqueduct operated by SFPUC.

The Study Area is underlain by one soil type, Urban land (USDA 1961). Urban land consists of areas where more than 85 percent of the surface is covered by asphalt, concrete, buildings, or other structures. Included in this soil type are small areas of Orthents, cut and fill, and Orthents, reclaimed. This soil type is considered to have a high runoff rate and is not considered a hydric soil.

4.1 Biological Communities and Land Cover Types

The Study Area is comprised of three land cover types, including developed, landscaped, and non-jurisdictional manmade and partially concrete-lined drainage ditch. No natural biological communities or sensitive communities were present within the Study Area. Table 2 provides land cover acreages in the Study Area. Figure 3 in Appendix A depicts the location and extent of each land cover type. A description of the land cover types found in the Study Area is provided below.

Table 2. Land Cover Types within the Study Area

Land Cover Type	Area (acres)[1]
Developed	3.65
Landscaped	0.24

[1] Due to rounding, subtotals do not equal total land area of the Project Site.

Land Cover Type	Area (acres)[1]
Non-jurisdictional Manmade and Partially Concrete-lined Drainage Ditch	0.22 (525 ln. ft.)
Total	**4.12**

4.1.1 Non-sensitive Land Cover Types

Developed

Developed land cover occupies 3.65 acres of the Study Area. Developed land cover consists of four existing buildings in the central portion of the Study Area and paved parking areas and walkways surrounding the four buildings. Developed portions of the Study Area lack vegetation and are composed entirely of impervious surfaces.

Landscaped

Landscaped land cover occupies 0.24 acre of the Study Area. Landscaped land cover consists of planting strips adjacent to the sidewalk along O'Brien Drive and raised areas in the southeastern portion of the Study Area that contain planted trees and low-lying ornamental shrubs. Landscaped areas were also observed along the fenceline of the northern and eastern boundaries of the Study Area. Planted tree species within landscaped areas in the Study Area include raywood ash (*Fraxinus angustifolia*), purple leaf plum (*Prunus cerasifera*), Japanese privet (*Ligustrum japonicum*), giant yucca (*Yucca gigantea*), and coast redwood (*Sequoia sempervirens).* One remnant large coast live oak (*Quercus agrifolia*) is present on the northern edge of the Study Area within landscaped cover. All landscaped land cover within the Study Area appears to be maintained and frequently watered via an irrigation system.

Non-jurisdictional Manmade and Partially Concrete-lined Drainage Ditch

A non-jurisdictional manmade and partially concrete-lined drainage ditchoccurs along the western edge of the Study Area. This feature (located in the Study Area) is approximately 525 linear feet in length and is approximately 0.22 acre in size. The drainage ditch is lined with concrete for most of its length and was constructed in upland areas sometime in the late 1960s when the Study Area was developed with commercial buildings as documented in the Stormwater Ditch Assessment written by WRA in January 2013 (WRA 2013). This feature has never been a blue line stream or a historic wetland. Moreover, both the Study Area and the stormwater conveyance system downstream of the ditch do not fall within the footprint of a historical stream, marsh, or wetland boundary. Prior discussions with the City of Menlo Park and East Palo Alto stormwater specialists confirmed that water entering the ditch from the south drains from upland sources from the City of East Palo Alto's paved streets (WRA 2013).

Stormwater that enters the ditch is urban runoff from a residential and commercial area. Stormwater enters the ditch at O'Brien Drive via a culverted, underground stormwater system to the south, and then it flows through the Study Area in the stormwater drainage ditch. An additional stormwater input from a Kelly Court stormdrain discharges into the stormwater drainage ditch in the northwestern portion of the Study Area via a 12-inch diameter stormwater pipe. The stormwater drainage ditch flows to an enclosed culvert

between several large commercial buildings that terminates in an area south of the berm along the elevated train tracks that is adjacent to lands mapped “depressional unnatural vegetated” habitats by the Bay Area Aquatic Resources Inventory (WRA 2013). In summary, the stormwater drainage ditch is part of a larger man-made stormwater conveyance system that drains wholly upland residential and commercial areas. The partially concrete-lined drainage ditch contains moderately hydrophytic vegetation, including patches of curly dock (*Rumex crispus*; FAC), tall flatsedge (*Cyperus eragrostis*; FACW), Italian rye grass (*Festuca perennis*; FAC), and bristly ox-tongue (*Helminthotheca echioides*; FAC), mixed with upland vegetation, such as prickly lettuce (*Lactuca serriola*; FACU), sweet fennel (*Foeniculum vulgare*; UPL), and slender oat (*Avena barbata*; UPL), which grows in sediment deposited and compacted at the bottom of the channel as a result of urban stormwater runoff. Two Chinese pistache (*Pistacia chinensis*, NR) are also located on the eastern side of the ditch, near the northern boundary of the Study Area. FAC vegetation that occurs in the ditch is equally likely to occur in wetland or upland conditions as defined by the National Wetland Plant List (Lichvar 2016, 2018). The ditch receives periodic hydrologic inputs during the rainy season, but is most likely dry for the remainder of the year between rain events. The ditch was dry during the site visit in October. It does not pond or hold water for significant durations between rain events, nor does it contain suitable habitat for sensitive wildlife species.

This man-made ditch would most likely not be subject to Corps jurisdiction under Section 404 of the CWA according to the (b)(5) exclusion in Final Rule, since this ditch was constructed in uplands. Historic aerial photographs clearly show that there is no evidence of tributaries or wetlands in the locations where this ditch was constructed. Furthermore, this ditch is an ephemeral feature (e.g., an ordinarily dry channel only flowing during or in immediate response to precipitation) and lacks the required perennial or intermittent flow to satisfy the ‘‘tributary’’ definition to be considered a CWA jurisdictional feature. Finally, stormwater control features constructed or excavated in upland or in non-jurisdictional waters to convey, treat, infiltrate, or store stormwater runoff are also exempt from CWA jurisdiction; however, the ultimate determination of jurisdiction is the responsibility of the regulatory agencies, and may differ from the conclusion reached by WRA. Additionally, this feature does not meet the definition of a wetland under the State Wetland Definition that was adopted on April 2, 2019 by the State Water Resources Control Board since it is artificial (not a wetland created by modification of surface waters of the state [state wetland criteria 2]), is less than 1 acre in size, was not approved for mitigation (state wetland criteria 3.a), is not identified in a water quality control plan (state wetland criteria 3.b), is subject to ongoing operation and maintenance (state wetland criteria 3.c), and is situated in a dense commercial setting (i.e., not part of a natural landscape [state wetland criteria 3.c]) (State Water Resources Control Board 2019). Per the State Wetland Rule, “all artificial wetlands that are less than an acre in size and do not satisfy the criteria set forth in 2, 3.a, 3.b, or 3.c are not waters of the state” (State Water Resources Control Board 2019). As such, the stormwater drainage ditch does not meet the State Wetland Definition; however, the ultimate determination of jurisdiction is the responsibility of the regulatory agencies.

4.1.2 Potentially Sensitive Biological Communities

No potentially sensitive biological communities exist within the Study Area.

4.2 Special Status Species

4.2.1 Plants

Based on a review of the resources and databases discussed in Section 3.2.1, 25 special-status plant species have been documented in the vicinity of the Study Area. The locations of 14 special-status plant species in the CNDDB within 5 miles of the Study Area are depicted on Figure 4 in Appendix A. Appendix B summarizes the potential occurrence for each special-status plant species located in the vicinity of the Study Area. No special-status plant species were observed during the site visit and none have potential to occur in the Study Area due to at least one of the following reasons:

- Absence of specific soil types (e.g., serpentine soils)
- Absence of suitable habitat (e.g., chaparral, grassland, coastal salt marsh)
- Dominance of invasive, non-native species
- Outside the geographic range of species (e.g., Study Area is below known elevation range)
- Outside the known distribution of species (e.g., Study Area is too far north)

4.2.2 Wildlife

Based on a review of the resources and databases listed in Section 3.2.1, 40 special-status wildlife species have been documented in the vicinity of the Study Area[2]. The locations of 28 special-status wildlife species in the CNDDB within 5 miles of the Study Area are depicted on Figure 5 in Appendix A. Appendix B summarizes the potential for each of these species to occur within the Study Area. Of the 40 special-status species examined, none are considered to have a high potential to occur in the study area and only one (1) was considered to have moderate potential to occur in the Study Area and is therefore discussed below. The remaining 39 species are considered unlikely, or have no potential, to occur in the Study Area for one or more of the following reasons:

- The Study Area is outside of the known or historical range of the species
- The Study Area lacks suitable aquatic habitat (e.g., rivers, streams, vernal pools)
- The Study Area lacks suitable foraging or breeding habitat (e.g., marshes)
- The Study Area lacks suitable nesting structures
- The Study Area lacks suitable soil for den development
- The Study Area lacks suitable burrows for occupancy
- No mine shafts, caves, or abandoned buildings are present
- There is a lack of connectivity with suitable occupied habitat

While the aforementioned factors contribute to the absence of many special-status wildlife species, the Study Area was determined to have adequate conditions and locality to warrant a moderate potential for one special-status species to occur. In addition, native nesting birds and roosting bats are protected by the MBTA and CFGC, as discussed below.

---

[2] The following species without special status, but which are tracked in the CNNDB, occur in the vicinity of the Study Area but are not addressed in this report: Santa Cruz Kangaroo Rat

Species with Moderate Potential to Occur in the Study Area

White-tailed Kite (*Elanus leucurus*), CDFW Fully Protected. Moderate Potential. White-tailed kites occur in low-elevation grassland, agricultural areas, wetlands, oak woodland, and savannah habitats. Riparian zones adjacent to open areas are also used. Vegetative structure and prey availability seem to be more important than specific associations with plant species or vegetative communities. Lightly grazed or ungrazed fields generally support large prey populations and are often preferred to other habitats. Kites primarily feed on small mammals, although birds, reptiles, amphibians, and insects are also taken. Nest trees range from single isolated trees to trees within large contiguous forests. Preferred nest trees are extremely variable, ranging from small shrubs (less than 10 feet tall), to large trees (greater than 150 feet tall) (Dunk 1995).

Although neither white-tailed kite nor any old stick nests of suitable size to support a white-tailed kite were observed during the site visits, suitable nesting habitat for this species is present within the Study Area or in the very close vicinity. Several suitably-sized nest trees are located within the Study Area, and adjacent properties possess large eucalyptus trees (*Eucalyptus globulus*) that could provide suitable nest sites for this species. Although the Study Area itself does not support foraging habitat for this species, open spaces less than 0.5 mile to the north and northeast provide excellent foraging opportunities for small birds and small mammals. Several CNDDB occurrences occur within approximately 6 miles of the Study Area. As such, white-tailed kite has moderate potential to occur on the Study Area.

4.2.3 Critical Habitat

The Study Area is not located within any units of designated critical habitat.

5.0 PROJECT IMPACTS AND MITIGATION MEASURES

Pursuant to Appendix G, Section IV of the State CEQA Guidelines, a project would have a significant impact on biological resources if it would:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; and/or,

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

These thresholds were utilized in completing the analysis of potential project impacts for CEQA purposes. For the purposes of this analysis, a "substantial adverse effect" is generally interpreted to mean that a potential impact could directly or indirectly affect the resiliency or presence of a local biological community or species population. Potential impacts to natural processes that support biological communities and special-status species populations that can produce similar effects are also considered potentially significant. Impacts to individuals of a species or small areas of existing biological communities may be considered less than significant if those impacts are speculative, beneficial, deminimis, and/or would not affect the resiliency of a local population.

Per Mitigation Measure BIO-1 of the ConnectMenlo EIR, a BRA should be conducted by a qualified biologist to determine if any sensitive biological resources are present on or within 10 feet of the Project Area (PlaceWorks 2016). As this BRA meets the requirements presented in Mitigation Measure BIO-1 of the ConnectMenlo EIR, this measure is not discussed in the sections below.

Potential impacts on existing biological resources were evaluated by comparing the quantity and quality of habitats present in the Project Area under baseline conditions to the anticipated conditions after implementation of proposed Project activities and are depicted on Figure 4. Direct and indirect impacts on special-status species and sensitive natural communities were assessed based on the potential for the species, their habitat, or the natural community in question to be disturbed or enhanced by construction or operation of the proposed Project. Table 3 lists permanent and temporary impacts proposed by the Project within each land cover type.

Table 3. Project Impacts within Each Land Cover Type in the Study Area

Land Cover Type	Permanent (acres)	Temporary (acres)
Developed	3.65	0.00
Landscaped	0.24	0.00
Non-jurisdictional Manmade and Partially Concrete-lined Drainage Ditch	0.00	0.00
Total	**3.89**	**0.00**

5.1 Impact BIO-1: Special-Status Species

Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.

The following impact analysis describes the Project's adverse effects on special-status species. The analysis is organized by the listing status (federal, state, and/or California Rare Plant Rank [CRPR]) of special-status species. Appendix B lists the potentially occurring special-status plant species, along with their listing status and basis for the determination of their absence from the Study Area.

Impact BIO-1a: Impacts on Federally- and State-Listed Special-Status Plants and CRPR 1 or 2 Plants

The Project Area has no potential to support special-status plant species due to the absence of suitable habitat and presence of non-native plant species. The proposed Project is not expected to impact any special-status plant species.

Level of Significance: No Impact

Impact BIO-1b: Impacts on Special-status and Non-special-status Native Nesting Birds

The Project has the potential to impact special-status and non-special-status native nesting birds protected by the MBTA and/or CFGC, including white-tailed kite. Project activities, such as vegetation removal, tree removal, and ground disturbance associated with development, have the potential to impact these species by causing direct mortality of eggs or young, or by causing auditory, vibratory, and/or visual disturbance of a sufficient level to cause abandonment of an active nest. If Project activities occur during the nesting season, which generally extends from February 1 through August 31, nests of both special-status and non-special-status native birds could be impacted by construction and other ground-disturbing activities. As such, impacts to nesting birds would be considered potentially significant under CEQA.

Level of Significance: Potentially Significant

<u>Mitigation Measure 1. Avoid the Bird Nesting Season or Conduct Pre-Construction Nesting Bird Surveys</u>

Project activities such as vegetation removal, grading, or initial ground-disturbance, will be conducted, or at least commenced, between September 1 and January 31 (outside of the February 1 to August 31 nesting season) to the extent feasible.

If Project activities must be conducted during the nesting season, a pre-construction nesting bird survey will be conducted by a qualified biologist no more than 14 days prior to vegetation removal or initial ground disturbance. The survey will include the Project Area and immediately adjacent area to identify the location and status of any nests that could potentially be affected either directly or indirectly by Project activities.

If active nests of native nesting bird species are located, a work exclusion zone will be established around each nest by the qualified biologist. Established exclusion zones will remain in place until all young in the nest have fledged or the nest otherwise becomes inactive (e.g., due to predation). Appropriate exclusion zone sizes will be determined by a qualified biologist and will vary based on species, nest location, existing visual buffers, noise levels, and other factors. An exclusion zone radius may be as small as 50 feet for common, disturbance-adapted species, or as large as 300 feet for kites. Exclusion zone size will be reduced from established levels by a qualified biologist if nest monitoring findings indicate that Project activities do not adversely impact the nest, and if a reduced exclusion zone would not adversely affect the nest. After the nesting effort is complete, the tree can be removed.

Mitigation Measure 2. Inhibition of Nesting

If construction activities begin during the nesting season, all potential nesting substrates, such as trees, that are proposed for removal must be removed outside the nesting season (February 1-August 31), which would preclude the initiation of nest creation in these trees, or unoccupied trees can be removed at any time following a preconstruction nesting survey.

Level of Significance After Mitigation: Less Than Significant

5.2 Impact BIO-2: Sensitive Communities

Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the CDFW and USFWS.

The CDFW defines sensitive natural communities and vegetation alliances using NatureServe's standard heritage program methodology (CDFG 2007), as described above in Section 2.2. Project impacts on CDFW sensitive natural communities, vegetation alliances/associations, or any such community identified in local or regional plans, policies, and regulations, were considered and evaluated. Furthermore, aquatic, wetland, and riparian habitats are also protected under applicable federal, state, or local regulations, and are generally subject to regulation, protection, or consideration by the Corps, RWQCB, the CDFW, and/or the USFWS.

Impact BIO-2a: Impacts on Riparian Habitat or Other Sensitive Natural Communities

The Project has no potential to impact riparian habitat or any sensitive natural communities due to the absence of riparian habitat and natural communities within and immediately adjacent to the Project Area. The proposed Project is not expected to impact riparian habitat or any sensitive natural communities.

Level of Significance: No Impact

5.3 Impact BIO-3: Jurisdictional Waters

Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the CWA (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

Wetlands are considered sensitive environmental resources protected at federal, state, and local levels. They provide unique habitat functions and values for wildlife, and provide habitat for plant species adapted to wetland hydrology. Throughout California, the quality and quantity of wetlands has dramatically declined owing to the construction of dams, dikes, and levees, as well as because of water diversions, the filling of wetlands for development, and the overall degradation of water quality by inputs of runoff from agricultural, urban, and infrastructure development and other sources.

Impact BIO-3a: Impacts on Jurisdictional Waters

Based on the discussion in Section 4.1.1, the man-made concrete-lined ditch along the western boundary of the Project Area would not be subject to Corps jurisdiction under Section 404 of the CWA and this feature does not meet the definition of a wetland under the State Wetland Definition that was adopted on April 2, 2019 by the State Water Resources Control Board. Further, the Project is not anticipating impacts to the ditch, therefore no permits from the Corps or RWQCB would be required for the project.

Level of Significance: No Impact

5.4 Impact BIO-4: Wildlife Movement

Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

For many species, the landscape is a mosaic of suitable and unsuitable habitat types. Environmental corridors are segments of land that provide a link between these different habitats while also providing cover. Development that fragments natural habitats (i.e., breaks them into smaller, disjunct pieces) can have a twofold impact on wildlife: (1) as habitat patches become smaller they are unable to support as many individuals (patch size), and (2) the area between habitat patches may be unsuitable for wildlife species to traverse (connectivity).

The Project Area is not considered a wildlife corridor, though local wildlife may move through it. The surrounding area is largely fragmented due to the presence of extensive existing light industrial development, which includes roads. The location of the Project Area within a surrounding matrix of residential and light industrial activities suggests that no impacts will occur to species movement as a result of Project activities.

Level of Significance: Less Than Significant

5.5 Impact BIO-5: Impacts due to Conflicts with Local Policies

Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Impact BIO-5a: Impacts on Heritage Trees

According to the Project Plans (Appendix C), the Project Area contains 40 trees, including 13 potential heritage trees, as defined by the City of Menlo Park Municipal Code. Some of these trees may be removed during the Project. An approved tree removal permit should be obtained in accordance with provisions outlined in Chapter 13.24 of the Menlo Park Municipal Code prior to any pruning or removal of any heritage tree in the Project Area. The Project proposes to provide replacement trees for all heritage trees removed in accordance with the Menlo Park Municipal Code. A tree protection plan should be prepared by a certified arborist if work is proposed in the tree protection zone of heritage trees proposed for retention. With adherence to Chapter 13.24 of the City Municipal Code, impacts on heritage trees would be less than significant.

Level of Significance: Less Than Significant

Impact BIO-5b: Impacts Related to compliance with Municipal Code 16.44.130 (6), Bird Safe Designs

The proposed Project will include the construction of a new building with a maximum height of 88.5 feet, utilizing glazing (i.e. glass surfaces) as a primary design component. Generally speaking, buildings that feature extensive amounts of clear or especially reflective glass on the exterior and/or heavily vegetated areas directly adjacent to buildings can result in a relatively high incidence of bird collisions. Though not thoroughly understood, it is presumed that birds in flight see through glass facades and discern apparently desirable areas on the other side, and/or interpret reflections of the surrounding environment (e.g., the sky, vegetation) to be actual habitat or otherwise attractive space. This causes building features, such as transparent corners, glass guardrails, or contiguous areas of untreated glass, to present a potential risk for avian collision mortality. Vegetated pathways leading towards building facades can also encourage birds to fly towards buildings, resulting in collisions primarily on the lower stories (i.e., 60 feet and below) because most bird species spend most of their time in this elevation range engaging in foraging, breeding, and other behaviors (San Francisco Planning Department 2011). Lastly, lighting associated with development can disorient or attract migrating birds, particularly at night, creating increased collision risk if high-use avian habitats are nearby.

Despite the Study Area's location (i.e., in the general vicinity of the San Francisco Bay and associated avian habitat), the general land use surrounding the Study Area can be classified as dense light industrial or residential. Natural habitats are extremely limited in the surrounding area, and what natural cover does exist is mainly composed of landscaped areas. While birds may use landscaped areas for nesting, they typically do not do so in large numbers. Additionally, the relatively high level of baseline disturbance surrounding the Study Area would contribute to a reduced level of bird nesting in the immediate vicinity. Thus, although occasional collisions may occur by urban-adapted passerine species, they would likely be very few in number due to the limited avian habitat directly adjacent to the Study Area. Several avian species are known to use habitats of nearby Don Edwards National Wildlife Refuge both to nest and to congregate during migration; however, the fact that the Study Area is surrounded on all sides by dense urban development and does constitute a wildlife movement corridor make it highly unlikely that the proposed structure would pose a significant obstruction to bird movement or mortality risk.

The structure will be constructed, by nature, within the high collision elevation zone (i.e. within 60 feet of the ground), but incorporates design aspects to reduce the likelihood of avian collisions (described below), including complying with the following items outlined in Municipal Code Chapter 16.44.130 (6):

- No more than 10 percent of a facade's surface area shall have non-bird-friendly glazing.
- Bird-friendly glazing includes but is not limited to, opaque glass, covering of clear glass surface with patterns, paned glass with fenestration patterns, and external screens over non-reflective glass.
- Occupancy sensors or other switch control devices shall be installed on nonemergency lights and shall be programmed to shut off during non-work hours and between ten (10) p.m. and sunrise
- Placement of buildings shall avoid the potential funneling of flight paths towards a building facade

- Glass skyways or walkways, freestanding glass walls, and transparent building corners shall not be allowed
- Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with green roofs
- Use of rodenticides shall not be allowed

All glazing used in the building design is indicated in the Project plans to be bird-friendly, particularly in areas where glazing comprises more than 10 percent of the building's elevation. Other portions of glass that are not treated with anti-reflective coatings are otherwise textured or fritted to create "visual noise". Guardrails on stairways and patios will be composed of wire mesh rather than glass so as not to present collision risk. All elevations of the building will additionally incorporate variations in surface color, texture, and "relief", which aid in providing birds the opportunity to see the building before colliding with it. Lighting associated with the building will be scheduled to comply with the municipal code, and thus limit potential disorientation or attraction from nearby high-use avian habitat. Overall, building design elements have been incorporated that comply with Municipal Code Chapter 16.44.130 (6) and provide additional protections against avian collisions.

Level of Significance: Less than Significant

5.6 Impact due to Conflicts with an Adopted Habitat Conservation Plan

Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan.

The Project will not conflict with the provisions of an adopted HCP, natural community conservation plan, or other approved local, regional, or state habitat conservation plan. The Study Area is not within a geographic area covered by an adopted HCP or a natural community conservation plan. The Stanford HCP, associated with an area in the Matadero/Deer Creek and San Francisquito watersheds, is the closest such plan, located approximately 3 miles to the south. This BRA was prepared for the Project in accordance with Mitigation Measure BIO-1 of the ConnectMenlo EIR, which has not been altered with significant information that would affect this Project since its preparation in 2016. Therefore, since the Study Area is not covered under an existing HCP, the Project would have no impact on provisions of an adopted, HCP, natural community conservation plan, or other approved local, regional, or state habitat conservation plan.

Level of Significance: No Impact

5.7 Cumulative Impacts

Cumulative impacts on the biological resources that could be affected by the Project may result from a number of past, current, and reasonably foreseeable future projects that occur in the area. Although such projects could result in impacts on these sensitive habitats and species, it is expected that most current and future projects that impact these species and their habitats would be required to mitigate these impacts through the CEQA, Section 1602, or Section 404/401 permitting process, as well as through the ESA Section 7 consultation process. As a result, most projects in the region will mitigate their impacts on these resources, minimizing cumulative impacts on these species.

Through implementation of the avoidance and minimization measures incorporated into the Project, it will not result in a cumulatively considerable contribution to any significant cumulative impacts to biological resources.

Level of Significance: No Impact

APPENDIX B

SPECIAL-STATUS PLANT AND WILDLIFE SPECIES POTENTIALS TABLE

[this page left blank intentionally]

Appendix B. Potential for Special Status Plant and Wildlife Species to Occur in the Study Area. List compiled from the California Department of Fish and Wildlife (CDFW) Natural Diversity Database (2020), U.S. Fish and Wildlife Service (USFWS) Species Lists (2020), and California Native Plant Society (CNPS) Electronic Inventory (2020) searches focused on the Palo Alto USGS 7.5' quadrangle.

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Plants				
San Mateo thorn-mint *Acanthomintha duttonii*	FE, SE, Rank 1B.1	Chaparral, valley and foothill grassland. Elevation ranges from 160 to 985 feet (50 to 300 meters). Blooms Apr-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Franciscan onion *Allium peninsulare var. franciscanum*	Rank 1B.2	Cismontane woodland, valley and foothill grassland. Elevation ranges from 170 to 1000 feet (52 to 305 meters). Blooms (Apr)May-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
bent-flowered fiddleneck *Amsinckia lunaris*	Rank 1B.2	Coastal bluff scrub, cismontane woodland, valley and foothill grassland. Elevation ranges from 5 to 1640 feet (3 to 500 meters). Blooms Mar-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
California androsace *Androsace elongata ssp. acuta*	Rank 4.2	Chaparral, cismontane woodland, coastal scrub, meadows and seeps, pinyon and juniper woodland, valley and foothill grassland. Elevation ranges from 490 to 4280 feet (150 to 1305 meters). Blooms Mar-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Kings Mountain manzanita *Arctostaphylos regismontana*	Rank 1B.2	Broadleafed upland forest, chaparral, north coast coniferous forest. Elevation ranges from 1000 to 2395 feet (305 to 730 meters). Blooms Dec-Apr.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Brewer's calandrinia *Calandrinia breweri*	Rank 4.2	Chaparral, coastal scrub. Elevation ranges from 30 to 4005 feet (10 to 1220 meters). Blooms (Jan)Mar-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Congdon's tarplant *Centromadia parryi ssp. congdonii*	Rank 1B.1	Valley and foothill grassland (alkaline). Elevation ranges from 0 to 755 feet (0 to 230 meters). Blooms May-Oct(Nov).	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Crystal Springs fountain thistle *Cirsium fontinale var. fontinale*	FE, SE, Rank 1B.1	Chaparral (openings), cismontane woodland, meadows and seeps, valley and foothill grassland. Elevation ranges from 145 to 575 feet (45 to 175 meters). Blooms (Apr)May-Oct.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
lost thistle *Cirsium praeteriens*	Rank 1A	Elevation ranges from 0 to 330 feet (0 to 100 meters). Blooms Jun-Jul.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
round-headed Chinese-houses *Collinsia corymbosa*	Rank 1B.2	Coastal dunes. Elevation ranges from 0 to 65 feet (0 to 20 meters). Blooms Apr-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
San Francisco collinsia *Collinsia multicolor*	Rank 1B.2	Closed-cone coniferous forest, coastal scrub. Elevation ranges from 95 to 820 feet (30 to 250 meters). Blooms (Feb)Mar-May.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
western leatherwood *Dirca occidentalis*	Rank 1B.2	Broadleafed upland forest, closed-cone coniferous forest, chaparral, cismontane woodland, north coast coniferous forest, riparian forest, riparian woodland. Elevation ranges from 80 to 1395 feet (25 to 425 meters). Blooms Jan-Mar(Apr).	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Hoover's button-celery *Eryngium aristulatum var. hooveri*	Rank 1B.1	Vernal pools. Elevation ranges from 5 to 150 feet (3 to 45 meters). Blooms (Jun)Jul(Aug).	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Jepson's coyote thistle *Eryngium jepsonii*	Rank 1B.2	Valley and foothill grassland, vernal pools. Elevation ranges from 5 to 985 feet (3 to 300 meters). Blooms Apr-Aug.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
fragrant fritillary *Fritillaria liliacea*	Rank 1B.2	Cismontane woodland, coastal prairie, coastal scrub, valley and foothill grassland. Elevation ranges from 5 to 1345 feet (3 to 410 meters). Blooms Feb-Apr.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Marin western flax *Hesperolinon congestum*	FT, ST, Rank 1B.1	Chaparral, valley and foothill grassland. Elevation ranges from 15 to 1215 feet (5 to 370 meters). Blooms Apr-Jul.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
woolly-headed lessingia *Lessingia hololeuca*	Rank 3	Broadleafed upland forest, coastal scrub, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 45 to 1000 feet (15 to 305 meters). Blooms Jun-Oct.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
arcuate bush-mallow *Malacothamnus arcuatus*	Rank 1B.2	Chaparral, cismontane woodland. Elevation ranges from 45 to 1165 feet (15 to 355 meters). Blooms Apr-Sep.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Davidson's bush-mallow *Malacothamnus davidsonii*	Rank 1B.2	Chaparral, cismontane woodland, coastal scrub, riparian woodland. Elevation ranges from 605 to 3740 feet (185 to 1140 meters). Blooms Jun-Jan.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
Mt. Diablo cottonweed *Micropus amphibolus*	Rank 3.2	Broadleafed upland forest, chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 145 to 2705 feet (45 to 825 meters). Blooms Mar-May.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
woodland woolythreads *Monolopia gracilens*	Rank 1B.2	Broadleafed upland forest (openings), chaparral (openings), cismontane woodland, north coast coniferous forest (openings), valley and foothill grassland. Elevation ranges from 325 to 3935 feet (100 to 1200 meters). Blooms (Feb)Mar-Jul.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
Choris' popcornflower *Plagiobothrys chorisianus var. chorisianus*	Rank 1B.2	Chaparral, coastal prairie, coastal scrub. Elevation ranges from 5 to 525 feet (3 to 160 meters). Blooms Mar-Jun.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
slender-leaved pondweed *Stuckenia filiformis ssp. alpina*	Rank 2B.2	Marshes and swamps (assorted shallow freshwater). Elevation ranges from 980 to 7055 feet (300 to 2150 meters). Blooms May-Jul.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary
two-fork clover *Trifolium amoenum*	FE, Rank 1B.1	Coastal bluff scrub, valley and foothill grassland (sometimes serpentine). Elevation ranges from 15 to 1360 feet (5 to 415 meters). Blooms Apr-Jun.	**No Potential.** Suitable habitat not present within the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE**	RECOMMENDATIONS
caper-fruited tropidocarpum *Tropidocarpum capparideum*	Rank 1B.1	Valley and foothill grassland (alkaline hills). Elevation ranges from 0 to 1495 feet (1 to 455 meters). Blooms Mar-Apr.	**No Potential.** Suitable habitat not present within the Study Area. Site is composed entirely of composed and developed land cover.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
MAMMALS				
salt-marsh wandering shrew *Sorex vagrans halicoetes*	SSC	Salt marshes of the south arm of San Francisco Bay. Medium high marsh 6 to 8 feet above sea level where abundant driftwood is scattered among *Salicornia*.	**No Potential.** No salt marsh habitat is present on the Study Area.	No further action necessary
pallid bat *Antrozous pallidus*	SSC, WBWG High	Found in a variety of habitats ranging from grasslands to mixed forests, favoring open and dry, rocky areas. Roost sites include crevices in rock outcrops and cliffs, caves, mines, and also hollow trees and various manmade structures such as bridges, barns, and buildings (including occupied buildings). Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	**No Potential.** No rock outcroppings or other suitable human structures exist on the Study Area to provide roost habitat for this species.	No further action necessary
Townsend's big-eared bat *Corynorhinus townsendii*	SSC, WBWG High	Associated with a wide variety of habitats from deserts to higher-elevation mixed and coniferous forests. Females form maternity colonies in buildings, caves and mines, and males roost singly or in small groups. Foraging typically occurs at edge habitats near wooded areas, e.g. along streams.	**No Potential.** No potential roost habitat for this species exists on or near the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
hoary bat *Lasiurus cinereus*	WBWG Medium	Prefers open forested habitats or habitat mosaics, with access to trees for cover and open areas or habitat edges for feeding. Roosts in dense foliage of medium to large trees. Feeds primarily on moths.	**Unlikely.** Though individuals may forage or roost in broad-leafed trees on the Study Area, all nearby occurrences in CNDDB are extremely old specimen collection samples that do not suggest the species is still present nearby. Furthermore, ongoing antropogenic disturbance around the Study Area is likely to deter bat roosting.	No further action necessary
San Francisco dusky-footed woodrat *Neotoma fuscipes annectens*	SSC	Forest habitats of moderate canopy and moderate to dense understory. Also in chaparral habitats. Constructs nests of shredded grass, leaves, and other material. May be limited by availability of nest-building materials.	**No Potential.** No dense understory with significant availability of nest-building materials is present on the Study Area.	No further action necessary
salt-marsh harvest mouse *Reithrodontomys raviventris*	FE, SE, CFP	Endemic to emergent salt and brackish wetlands of the San Francisco Bay Estuary. Pickleweed marshes are primary habitat; also occurs in various other wetland communities with dense vegetation. Does not burrow, builds loosely organized nests. Requires higher areas for flood escape.	**No Potential.** No salt marsh habitat is present on the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
American badger *Taxidea taxus*	SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Requires friable soils and open, uncultivated ground. Preys on burrowing rodents.	**No Potential.** All open areas within the Study Area are landscaped, indicating that no suitable burrow locations exist for this species.	No further action necessary
BIRDS				
white-tailed kite *Elanus leucurus*	CFP	Year-round resident in coastal and valley lowlands with scattered trees and large shrubs, including grasslands, marshes and agricultural areas. Nests in trees, of which the type and setting are highly variable. Preys on small mammals and other vertebrates.	**Moderate Potential.** Several large trees at the perimeter of the Study Area could support nesting of this species.	Pre-construction nesting bird surveys should be conducted to ensure no nesting activity by this species is occurring on or near the Study Area. See Mitigation Measure 1 for further detail.
bald eagle *Haliaeetus leucocephalus*	FD, SE, CFP, BCC	Occurs year-round in California, but primarily a winter visitor; breeding population is growing. Nests in large trees in the vicinity of larger lakes, reservoirs and rivers. Wintering habitat somewhat more variable but usually features large concentrations of waterfowl or fish.	**Unlikely.** The nearest large body of water to the Study Area is San Francisco Bay, which does not provide ideal foraging habitat for this species. Suitable nest trees are also limited in the vicinity.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
yellow rail *Coturnicops noveboracensis*	BCC, SSC	Summer resident in eastern Sierra Nevada in Mono County, breeding in shallow freshwater marshes and wet meadows with dense vegetation. Also a rare winter visitor along the coast and other portions of the state. Extremely cryptic.	**No Potential.** The Study Area is located outside the known breeding range of this species.	No further action necessary
California black rail *Laterallus jamaicensis coturniculus*	ST, CFP	Year-round resident in marshes (saline to freshwater) with dense vegetation within four inches of the ground. Prefers larger, undisturbed marshes that have an extensive upper zone and are close to a major water source. Extremely secretive and cryptic.	**No Potential.** No tidal marsh habitat is present on the Study Area.	No further action necessary
California Ridgway's (clapper) rail *Rallus obsoletus obsoletus*	FE, SE, CFP	Year-round resident in tidal marshes of the San Francisco Bay estuary. Requires tidal sloughs and intertidal mud flats for foraging, and dense marsh vegetation for nesting and cover. Typical habitat features abundant growth of cordgrass and pickleweed. Feeds primarily on molluscs and crustaceans.	**No Potential.** No tidal marsh habitat is present on the Study Area.	No further action necessary
western snowy plover *Charadrius nivosus (alexandrines) nivosus*	FT, SSC, BCC, RP	Federal listing applies only to the Pacific coastal population. Year-round resident and winter visitor. Occurs on sandy beaches, salt pond levees, and the shores of large alkali lakes. Nests on the ground, requiring sandy, gravelly or friable soils.	**No Potential.** Salt flats, sandy beaches, or graveled areas suitable for nesting by this species are not present on the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
California least tern *Sternula antillarum browni*	FE, SE, CFP	Summer resident along the coast from San Francisco Bay south to northern Baja California; inland breeding also very rarely occurs. Nests colonially on barren or sparsely vegetated areas with sandy or gravelly substrates near water, including beaches, islands, and gravel bars. In San Francisco Bay, has also nested on salt pond margins.	**No Potential.** Barren substrates necessary for nesting of this species are not present on the Study Area.	No further action necessary
black skimmer *Rynchops niger*	BCC, SSC	Found primarily in southern California; South San Francisco Bay has a small resident population. Nests colonially on gravel bars, low islets, and sandy beaches	**No Potential.** Though the Study Area is within 0.75 mile of potential nesting and foraging habitat, the Study Area itself provides no habitat value for this species due to lack of aquatic features or associated terrestrial areas.	No further action necessary
marbled murrelet *Brachyramphus marmoratus*	FT, SE	Predominantly coastal marine. Nests in old-growth coniferous forests up to 30 miles inland along the Pacific coast, from Eureka to Oregon border, and in Santa Cruz/San Mateo Counties. Nests are highly cryptic, and typically located on platform-like branches of mature redwoods and Douglas firs. Forages on marine invertebrates and small fishes.	**No Potential.** No large stands of coniferous forest are present on or near the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
burrowing owl *Athene cunicularia*	SSC, BCC	Year-round resident and winter visitor. Occurs in open, dry grasslands and scrub habitats with low-growing vegetation, perches and abundant mammal burrows. Preys upon insects and small vertebrates. Nests and roosts in old mammal burrows, most commonly those of ground squirrels.	**No Potential.** No burrowing mammal activity was observed on the Study Area, nor were any suitable burrows surrogates.	No further action necessary
San Francisco common yellowthroat *Geothlypis trichas sinuosa*	BCC, SSC	Resident of the San Francisco Bay region, in fresh and salt-water marshes. Requires thick, continuous cover down to water surface for foraging; tall grasses, tule patches, willows for nesting.	**No Potential.** No suitable salt-marsh or wetland habitat for this species exists on the Study Area.	No further action necessary
Alameda song sparrow *Melospiza melodia pusillula*	BCC, SSC	Year-round resident of salt marshes bordering the south arm of San Francisco Bay. Inhabits primarily pickleweed marshes; nests placed in marsh vegetation, typically shrubs such as gumplant.	**No Potential.** No salt-marsh habitat exists on the Study Area.	No further action necessary
great blue heron *Ardea herodias*	none (breeding sites protected by CDFW); CDF sensitive	Year-round resident. Nests colonially or semi-colonially in tall trees and on cliffs, also sequested terrestrial substrates. Breeding sites usually in close proximity to foraging areas: marshes, lake margins, tidal flats, and rivers. Forages primarily on fishes and other aquatic prey, also smaller terrestrial vertebrates.	**No Potential.** No aquatic features are present sufficiently close to the Study Area to suggest the establishment of a nesting colony by this species.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
snowy egret *Egretta thula*	none (breeding sites protected by CDFW)	Year-round resident. Nests colonially, usually in trees, at times in sequestered beds of dense tules. Rookery sites usually situated close to foraging areas: marshes, tidal-flats, streams, wet meadows, and borders of lakes.	**No Potential.** No aquatic features are present sufficiently close to the Study Area to suggest the establishment of a nesting colony by this species.	No further action necessary
AMPHIBIANS				
Santa Cruz black salamander *Aneides flavipunctatus niger*	SSC	Climbing salamanders of the genus *Aneides* frequent damp woodlands and are usually found hiding under various debris (i.e. bark, woodrat nests, logs). The Santa Cruz black salamander exists south of the San Francisco Bay and was only recently recognized as a separate and protected species. Santa Cruz black salamander is highly sedentary, preferring to stay hidden under riparian debris.	**No Potential.** The Study Area is outside the known breeding range of this species, and does not possess wetland habitat	No further action necessary
California tiger salamander *Ambystoma californiense*	FE/FT, ST, RP	Populations in Santa Barbara and Sonoma counties currently listed as endangered; threatened in remainder of range. Inhabits grassland, oak woodland, ruderal and seasonal pool habitats. Adults are fossorial and utilize mammal burrows and other subterranean refugia. Breeding occurs primarily in vernal pools and other seasonal water features.	**No Potential.** No perennial aquatic habitat or suitable burrows are present on the Study Area to support this species.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
California giant salamander *Dicamptodon ensatus*	SSC	Occurs in the north-central Coast Ranges. Moist coniferous and mixed forests are typical habitat; also uses woodland and chaparral. Adults are terrestrial and fossorial, breeding in cold, permanent or semi-permanent streams. Larvae usually remain aquatic for over a year.	**No Potential.** No forested habitat exists on the Study Area to support this species.	No further action necessary
California red-legged frog *Rana draytonii*	FT, SSC, RP	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11 to 20 weeks of permanent water for larval development. Associated with quiet perennial to intermittent ponds, stream pools and wetlands. Prefers shorelines with extensive vegetation. Disperses through upland habitats after rains.	**No Potential.** The Study Area is outside the known breeding range for this species.	No further action necessary
foothill yellow-legged frog *Rana boylii*	SC, SSC	Found in or adjacent to rocky streams in a variety of habitats. Prefers partly-shaded, shallow streams and riffles with a rocky substrate; requires at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis. Feeds on both aquatic and terrestrial invertebrates.	**No Potential.** The Study Area is outside the known breeding range for this species.	No further action necessary
REPTILES				

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
Pacific (western) pond turtle *Actinemys marmorata*	SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches with aquatic vegetation. Require basking sites such as partially submerged logs, vegetation mats, or open mud banks, and suitable upland habitat (sandy banks or grassy open fields) for egg-laying.	**No Potential.** No perennial water bodies are present on the Study Area.	No further action necessary
green sea turtle *Chelonia mydas*	FT (west coast populations)	Found in fairly shallow waters inside reefs, bays and inlets with marine grass and algae. Open beaches with a sloping platform and minimal disturbance are required for nesting. This species exhibits high site fidelity.	**No Potential.** No marine habitat exists on the Study Area.	No further action necessary
Alameda whipsnake *Masticophis lateralis euryxanthus*	FT, ST	Inhabits chaparral and foothill-hardwood habitats in the eastern Bay Area. Prefers south-facing slopes and ravines with rock outcroppings where shrubs form a vegetative mosaic with oak trees and grasses and small mammal burrows provide basking and refuge.	**No Potential.** The Study Area is outside the known breeding range of this species.	No further action necessary
San Francisco garter snake *Thamnophis sirtalis tetrataenia*	FE, SE, CFP, RP	Vicinity of freshwater marshes, ponds and slow moving streams in San Mateo County and extreme northern Santa Cruz County. Prefers dense cover and water depths of at least one foot. Upland areas near water are also very important.	**No Potential.** No aquatic habitat with potential to support this species is present within or in the vicinity of the Study Area.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
FISHES				
Delta smelt *Hypomesus transpacificus*	FT, SE, RP	Lives in the Sacramento-San Joaquin estuary in areas where salt and freshwater systems meet. Occurs seasonally in Suisun Bay, Carquinez Strait and San Pablo Bay. Seldom found at salinities > 10 ppt; most often at salinities < 2 ppt.	**No Potential.** No marine habitat exists on the Study Area.	No further action necessary
longfin smelt *Spirinchus thaleichthys*	FC, ST, SSC, RP	Euryhaline, nektonic and anadromous. Found in open waters of estuaries, mostly in middle or bottom of water column. Prefer salinities of 15 to 30 ppt, but can be found in completely freshwater to almost pure seawater.	**No Potential.** No marine habitat exists on the Study Area.	No further action necessary
tidewater goby *Eucyclogobius newberryi*	FE, SSC	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County to the mouth of the Smith River. Found in shallow lagoons and lower stream reaches; requires fairly still but not stagnant water and high oxygen levels.	**No Potential.** No marine habitat exists on the Study Area.	No further action necessary
INVERTEBRATES				

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
vernal pool fairy shrimp *Branchinecta lynchi*	FT, SSI, RP	Endemic to the grasslands of the Central Valley, central coast mountains, and south coast mountains, in astatic rain-filled pools. Inhabit small, clear-water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression pools.	**No Potential.** No vernal pool habitats exist on the Study Area.	No further action necessary
vernal pool tadpole shrimp *Lepidurus packardi*	FE, SSI, RP	Inhabits vernal pools and swales in the Sacramento Valley containing clear to highly turbid water. Pools commonly found in grass bottomed swales of unplowed grasslands. Some pools are mud-bottomed and highly turbid.	**No Potential.** No vernal pool habitats exist on the Study Area.	No further action necessary
California linderiella *Linderiella occidentalis*	SSI	Seasonal pools in unplowed grasslands with old alluvial soils underlain by hardpan or in sandstone depressions. Water in the pools has very low alkalinity, conductivity, and TDS.	**No Potential.** No seasonal pools exist on the Study Area.	No further action necessary
San Bruno elfin butterfly *Callophrys mossii bayensis*	FE, SSI	Limited to the vicinity of San Bruno Mountain, San Mateo County. Colonies are located on in rocky outcrops and cliffs in coastal scrub habitat on steep, north-facing slopes within the fog belt. Species range is tied to the distribution of the larval host plant, Sedum spathulifolium.	**No Potential.** The Study Area is outside the known breeding range of this species.	No further action necessary

SPECIES	STATUS*	HABITAT	POTENTIAL FOR OCCURRENCE	RECOMMENDATIONS
Bay checkerspot butterfly *Euphydryas editha bayensis*	FT, SSI, RP	Restricted to native grasslands on outcrops of serpentine soil in the vicinity of San Francisco Bay. *Plantago erecta* is the primary host plant; *Orthocarpus densiflorus* and *O. purpurscens* are the secondary host plants.	**No Potential.** The Study Area is outside the known breeding range of this species.	No further action necessary
Mission blue butterfly *Icaricia icarioides missionensis*	FE, SSI, RP	Inhabits grasslands and coastal chaparral of the San Francisco peninsula and southern Marin County, but mostly found on San Bruno Mountain. Three larval host plants: *Lupinus albifrons*, *L. variicolor*, and *L. formosus*, of which *L. albifrons* is favored.	**No Potential.** No grassland or chaparral habitat exists on the Study Area to support this species or its host plants.	No further action necessary
Myrtle's silverspot butterfly *Speyeria zerene myrtleae*	FE, RP, SSI	Restricted to the fog belt of northern Marin and southernmost Sonoma County, including the Point Reyes peninsula; extirpated from coastal San Mateo County. Occurs in coastal prairie, dunes, and grassland. Larval foodplant is typically *Viola adunca*. Adult flight season may range from late June to early September.	**No Potential.** The Study Area is outside the known breeding range of this species.	No further action necessary

*** Key to status codes:**

FE	Federal Endangered
FT	Federal Threatened
FC	Federal Candidate
BCC	USFWS Birds of Conservation Concern
SE	State Endangered
ST	State Threatened
SC	State Candidate

SSC	CDFW Species of Special Concern
CFP	CDFW Fully Protected Animal
WBWG	Western Bat Working Group High or Medium Priority Species
Rank 1A	CNPS Rank 1A: Plants presumed extinct in California
Rank 1B	CNPS Rank 1B: Plants rare, threatened or endangered in California and elsewhere
Rank 2A	CNPS Rank 2A: Plants presumed extirpated in California, but more common elsewhere
Rank 2B	CNPS Rank 2B: Plants rare, threatened, or endangered in California, but more common elsewhere

Potential to Occur:

No Potential. Habitat on and adjacent to the site is clearly unsuitable for the species requirements (cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).

Unlikely. Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.

Moderate Potential. Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.

High Potential. All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.

Results and Recommendations:

Present. Species was observed on the site or has been recorded (i.e. CNDDB, other reports) on the site recently.

Not Present. Species is assumed to not be present due to a lack of key habitat components.

Not Observed. Species was not observed during surveys.

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	SIZE		CONDITION			Suitability for Preservation (Good/Moderate/Low)	Heritage Tree	Street Tree
		Trunk Diameter (in.)	Height (ft.)	Health Condition (100%=Best, 0%=Worst)	Structural Integrity (100%=Best, 0%=Worst)	Overall Condition (Good/Fair/Poor/Dead)			
1	Modesto ash (*Fraxinus v.* 'Modesto')	22	35	50%	30%	Poor	Low	X	X
	Comments: Base/root crown grows against and 1-inch over adjacent curb. Curb and gutter are cracked and pushed slightly towards street. Partly beneath high-voltage wires and crown is reduced; wounds throughout are decaying. Highly elevated canopy, and multiple leaders originate at 9' high. Between two dominant leaders is a distinct seam indicative of a narrow crack where slight separation has occurred.								
2	Bradford flowering pear (*Pyrus c.* 'Bradford')	<15	35	60%	30%	Poor	Low		
	Comments: Crown reduced in past. Multi-leaders at 7' high and form weak attachments. Leggy form and a broad spreading crown. Infected with fireblight.								
3	Bradford flowering pear (*Pyrus c.* 'Bradford')	13	30	60%	30%	Poor	Low		
	Comments: Crown reduced in past. Narrow form and multiple leaders begin at 8' high, numerous forming weak attachments. Large prior, decaying cut at 5' high. Infected with fireblight.								
4	Modesto ash (*Fraxinus v.* 'Modesto')	18	30	60%	20%	Poor	Low	X	X
	Comments: Beneath high-voltage wires, and crown is reduced. Base is 6" from back of curb, and has a pronounced surface root mass towards curb and gutter. Multiple leaders begin 6.5' high, and there is large decay column from this point down to soil grade. Buried root collar upslope. Highly elevated canopy.								
5	Modesto ash (*Fraxinus v.* 'Modesto')	22	35	60%	30%	Poor	Low	X	X
	Comments: Beneath high-voltage wires, and crown is reduced. Highly elevated canopy. Base is near curb. Multiple leaders begin at 5' high. Buried root collar upslope.								
6	Coast redwood (*Sequoia sempervirens*)	35	80	60%	70%	Fair	Good	X	
	Comments: Curb is raised 9' from trunk. Water meter is 6' feet from trunk. Canopy grows to 5.5' high. Lower trunk leans east, then at ~35', sweeps towards vertical.								

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	SIZE		CONDITION			Suitability for Preservation (Good/Moderate/Low)	Heritage Tree	Street Tree
		Trunk Diameter (in.)	Height (ft.)	Health Condition (100%=Best, 0%=Worst)	Structural Integrity (100%=Best, 0%=Worst)	Overall Condition (Good/Fair/Poor/Dead)			
7	Coast redwood (*Sequoia sempervirens*)	29	95	80%	40%	Fair	Moderate	X	
	Comments: Formed by two trunks which form a union up to 4' high. Full crown, canopy nearing 8' high.								
8	Modesto ash (*Fraxinus v.* 'Modesto')	17	45	50%	30%	Poor	Low	X	X
	Comments: Grows alongside, and has a nearly one sided canopy away from #6 and 7. Crown was reduced some time ago, and canopy is highly elevated. Large decaying basal wound. Buried root collar.								
9	Aristocrat flowering pear (*Pyrus c.* 'Aristocrat')	7	20	60%	30%	Poor	Low		
	Comments: Within courtyard. Leans NW towards building. Low crown over south side. Base is flat along NE side, likely from a girdling root and/or old wound.								
10	Aristocrat flowering pear (*Pyrus c.* 'Aristocrat')	10	30	60%	70%	Fair	Moderate		
	Comments: Within courtyard. Small girdling root, and has a slight SW lean. Infected with fireblight.								
11	Purple-leaf plum (*Prunus c.* 'Krauter Vesuvius')	6	15	70%	40%	Fair	Moderate		
	Comments: Adjacent to courtyard. Low-branching structure begins at 3' high. Leans east.								
12	Modesto ash (*Fraxinus v.* 'Modesto')	18	40	50%	20%	Poor	Low	X	X
	Comments: Mostly beneath high-voltage wires, and section of crown is reduced. Highly elevated canopy. Multiple leaders at 5' high. Has a large basal wound. Buried root collar. Adjacent curb is 14" away from base and is cracked/pushed out. History of limb failure at multiple locations, all with decaying wounds.								
13	Modesto ash (*Fraxinus v.* 'Modesto')	18	40	50%	30%	Poor	Low	X	X
	Comments: Mostly beneath high-voltage wires, and crown is reduced. Adjacent curb is 18" from base and raised. Has a highly elevated canopy. Multiple leaders at 6.5' high.								

TREE INVENTORY TABLE

TREE/ TAG NO.	TREE NAME	SIZE		CONDITION			Suitability for Preservation (Good/Moderate/Low)	Heritage Tree	Street Tree
		Trunk Diameter (in.)	Height (ft.)	Health Condition (100%=Best, 0%=Worst)	Structural Integrity (100%=Best, 0%=Worst)	Overall Condition (Good/Fair/Poor/Dead)			
14	Shamel ash (*Fraxinus uhdei*)	19	35	60%	30%	Poor	Low	X	X
	Comments: Beneath high-voltage wires, and crown is reduced. Surface roots radiate 10' east towards NE. Base is at edge of driveway apron, the buttress root growing over concrete by 6". Adjacent curb is cracked and pushed out. Asphalt within lot is rippled from roots. Pronounced buttress root area at an elevation higher than adjacent curb and driveway apron.								
15	Modesto ash (*Fraxinus v.* 'Modesto')	14	35	50%	30%	Poor	Low		X
	Comments: Beneath high-voltage wires, and crown is reduced. Highly elevated canopy. Buried root collar. Codominant leaders at 8' high. Trunk is at corner of driveway apron and curb, which is 4" away. Large decaying wound 4.5' along the trunk's east side, created from a prior limb failure.								
16	Raywood ash (*Fraxinus a.* 'Raywood')	10	30	40%	30%	Poor	Low		X
	Comments: Beneath high-voltage wires, and crown is reduced. Very thin and highly elevated canopy. Curb is within 2' from base. Phone and cable wires through canopy.								
17	Modesto ash (*Fraxinus v.* 'Modesto')	13	35	60%	40%	Poor	Low		X
	Comments: Beneath high-voltage wires, and crown is reduced. Highly elevated canopy. Buried root collar. Curb is 6" from base. Water meter is <3' from base. Phone and cable routed through canopy.								
18	Raywood ash (*Fraxinus a.* 'Raywood')	9	25	50%	30%	Poor	Low		X
	Comments: Beneath high-voltage wires, and was extensively pruned sometime ago. Curb is 6" from base. Leggy remaining form. Phone and cable wires routed through canopy.								
19	Columbia London plane (*Platanus × h.* 'Columbia')	10	35	70%	40%	Fair	Moderate		X
	Comments: Beneath high-voltage wires and leans towards street. Buttress root 6" from cracked curb. Crown is not yet reduced, but will inevitably as foliage nears wires. Phone and cable routed through canopy.

NOTES

1. This survey was prepared from information furnished in a Preliminary Title Report, prepared by First American Title Insurance Company, dated November 27, 2017, Order No. NCS-883544-SM. No liability is assumed for matters of record not stated in said Preliminary Title Report that may affect the title lines, or exceptions, or easements of the property.
2. The types, locations, sizes and/or depths of existing underground utilities as shown on this topographic survey were obtained from sources of varying reliability. The contractor is cautioned that only actual excavation will reveal the types, extent, sizes, locations and depths of such underground utilities. (A reasonable effort has been made to locate and delineate all unknown underground utilities.) However, the engineer can assume no responsibility for the completeness or accuracy of its delineation of such underground utilities which may be encountered, but which are not shown on these drawings.
3. Benchmark:
   W-150; (PID HT 1394) Brass Disk set in top of concrete monument, stamped W150-1933.
   Elevation: 9.88' (NAVD 88 Datum)
4. Flood Zone Note:
   The subject property is shown on the Federal Emergency Management Agency Flood Insurance Rate Map, Community Panel Number 060321 0307 E, dated October 16, 2012, with the site being located in Flood Zone "AE";

   Areas of the 1% annual flood (100-year flood), also know as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year: Base Flood elevation determined as 12.8 feet.

   Information was obtained from the FEMA website (www.fema.gov) on December 7, 2017.
5. Basis of Bearings:
   The bearing of North 89°11'17" East taken on the centerline of O'Brien Drive as shown on that certain Final Map of Menlo Business Park filed for record on April 9, 1984 in Book 111 of Maps at Pages 50-52, San Mateo County Records was taken as the Basis of all Bearings shown hereon.
6. This map was prepared using computer assisted, photogrammetric methods by Mira Solutions, Inc., in Union City, California. In areas of dense vegetation, accuracy of contours may deviate from accepted accuracy standards. The date of Photography was November 1, 2017 as Job No. K&WSC10-2017_025.
7. TOTAL AREA: 95,862 SF for both lots combined.

TITLE EXCEPTION NOTES

NOTE: THE FOLLOWING ITEMS CONTAINED IN SCHEDULE "B" OF THE HEREON REFERENCED PRELIMINARY TITLE REPORT ARE NOT A MATTER OF SURVEY: 1, 2, 3 & 7.

(4) THE EFFECTS OF AN EASEMENT FOR ELECTRIC ENERGY AND COMMUNICATION SERVICES AND INCIDENTAL PURPOSES, RECORDED NOVEMBER 03, 1962 AS INSTRUMENT NO. 67017U IN BOOK 4198, PAGE 651 OF OFFICIAL RECORDS.
IN FAVOR OF: PACIFIC GAS AND ELECTRIC COMPANY AND PACIFIC TELEPHONE AND TELEGRAPH COMPANY
(THE LOCATION OF SAID EASEMENT HAS BEEN PLOTTED HEREON)

(5) THE FACT THAT THE LAND LIES WITHIN THE BOUNDARIES OF THE ORDINANCE ADOPTING COMMUNITY DEVELOPMENT PLAN FOR THE LAS PULGAS PROJECT AREA AND MAKING CERTAIN FINDINGS AND DETERMINATIONS PURSUANT TO THE COMMUNITY REDEVELOPMENT LAW OF THE STATE OF CALIFORNIA REDEVELOPMENT PROJECT AREA, AS DISCLOSED BY THE DOCUMENT RECORDED DECEMBER 21, 1981 AS INSTRUMENT NO. 19388-AT OF OFFICIAL RECORDS.

DOCUMENT(S) DECLARING MODIFICATIONS THEREOF RECORDED SEPTEMBER 11, 1991 AS INSTRUMENT NO. 91120049 OF OFFICIAL RECORDS.
DOCUMENT(S) DECLARING MODIFICATIONS THEREOF RECORDED SEPTEMBER 11, 1991 AS INSTRUMENT NO. 91120050 OF OFFICIAL RECORDS.
DOCUMENT(S) DECLARING MODIFICATIONS THEREOF RECORDED AUGUST 10, 1995 AS INSTRUMENT NO. 95081846 OF OFFICIAL RECORDS.
(BLANKET IN NATURE)

(6) THE EFFECTS OF AN EASEMENT SHOWN OR DEDICATED ON THE MAP FILED OR RECORDED MAY 24, 1967 AND ON FILE IN BOOK 3, PAGE 3, OF PARCEL MAPS.
FOR: DRAINAGE CANAL AND INCIDENTAL PURPOSES.
(THE LOCATION OF SAID EASEMENT HAS BEEN PLOTTED HEREON)

GENERAL NOTES

1. ALL DISTANCES SHOWN HEREON ARE IN FEET AND DECIMALS THEREOF.
2. APN: 055-433-350
3. THIS SURVEY WAS PREPARED FROM INFORMATION FURNISHED IN A PRELIMINARY TITLE REPORT PREPARED BY FIRST AMERICAN TITLE INSURANCE COMPANY DATED AS OF JANUARY 11, 2019, FILE NUMBER NCS-944278-SM, FURNISHED TO KIER & WRIGHT CIVIL ENGINEERS & SURVEYORS, INC BY TARLTON PROPERTIES, INC. ON JANUARY 30, 2019. NO LIABILITY IS ASSUMED FOR MATTERS OF RECORD NOT STATED IN SAID REPORT THAT MAY AFFECT THE TITLE LINES, OR EXCEPTIONS, OR EASEMENTS OF THE PROPERTY.
4. BASIS OF BEARINGS:
   THE BEARING OF NORTH 89°11'17" EAST TAKEN ON THE CENTERLINE OF O'BRIEN DRIVE AS SHOWN ON THAT CERTAIN FINAL MAP OF MENLO BUSINESS PARK FILED FOR RECORD ON APRIL 9, 1984 IN BOOK 111 OF MAPS AT PAGES 50-52, SAN MATEO COUNTY RECORDS WAS TAKEN AS THE BASIS OF ALL BEARINGS SHOWN HEREON.
5. PHYSICAL ITEMS SHOWN ON THIS SURVEY ARE LIMITED TO THOSE ITEMS VISIBLE AS OF THE DATE OF THIS SURVEY. SUBSURFACE STRUCTURES, IF ANY, ARE NOT SHOWN. SAID SUBSURFACE OBJECTS MAY INCLUDE, BUT ARE NOT LIMITED TO, CONCRETE FOOTINGS, SLABS, SHORING, STRUCTURAL PILES, UTILITY VAULTS, PIPING, UNDERGROUND TANKS, AND ANY OTHER SUBSURFACE STRUCTURES NOT REVEALED BY A SURFACE INSPECTION.

2016 ALTA/NSPS TABLE A OPTIONAL SURVEY ITEMS

2 THE SUBJECT PROPERTY ADDRESS IS KNOWN AS: VACANT LAND (NO ADDRESS)

3 THE SUBJECT PROPERTY IS SHOWN ON THE FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) FLOOD INSURANCE RATE MAP (FIRM) FOR SAN MATEO COUNTY, CALIFORNIA, MAP NUMBER 06081C 0307 E FOR COMMUNITY NUMBER 060321, WITH AN EFFECTIVE DATE OF OCTOBER 16, 2012, AS BEING LOCATED IN FLOOD ZONE "AE".

AREAS OF THE 1% ANNUAL FLOOD (100-YEAR FLOOD), ALSO KNOW AS THE BASE FLOOD, IS THE FLOOD THAT HAS A 1% CHANCE OF BEING EQUALED OR EXCEEDED IN ANY GIVEN YEAR; BASE FLOOD ELEVATION DETERMINED AS 11.7 FEET.

INFORMATION WAS OBTAINED FROM THE FEMA WEBSITE (WWW.FEMA.GOV) ON FEBRUARY 5, 2019.

4 GROSS LAND AREA: AS SHOWN HEREON

6(B) ZONING NOTE: THIS SURVEY MAKES NO EVALUATION AS TO COMPLIANCE WITH ZONING CODES AND/OR ORDINANCES OTHER THAN CURRENT MUNICIPAL BUILDING SETBACK LINE LOCATIONS.

THE SUBJECT PROPERTY IS CURRENTLY ZONED "LS-B"; LIFE SCIENCES-BONUS DISTRICT

THE CURRENT BUILDING SETBACKS FOR THIS ZONING DESIGNATION ARE:
STREET SIDE: 5 FEET
INTERIOR SIDE: 10 FEET
REAR: 10 FEET

MAXIMUM FLOOR AREA RATIO:
BASE LEVEL: 55% PLUS 10% COMMERCIAL
BONUS LEVEL: 125% PLUS 10% COMMERCIAL

MAXIMUM BUILDING HEIGHT:
BASE LEVEL: 35 FEET
BONUS LEVEL: 110 FEET

INFORMATION WAS OBTAINED FROM THE CITY OF MENLO PARK ZONING WEBSITE ON FEBRUARY 6, 2019.

8 SUBSTANTIAL FEATURES OBSERVED IN THE PROCESS OF CONDUCTING THE SURVEY SUCH AS PARKING LOTS, BILLBOARDS, SIGNS, SWIMMING POOLS, LANDSCAPED AREAS, ETC. SHOWN HEREON.

9 THERE WERE NO PARKING STALLS OBSERVED WITHIN THE BOUNDARY OF THE SUBJECT PROPERTY DURING THE COURSE OF THIS SURVEY.

13 NAMES OF ADJOINING OWNERS OF PLATTED LANDS ACCORDING TO CURRENT PUBLIC RECORDS. SHOWN HEREON.

14 DISTANCE TO THE NEAREST INTERSECTING STREET AS SPECIFIED BY THE CLIENT. SHOWN HEREON.

16 AS OF THE DATE OF THIS SURVEY, THERE IS OBSERVED EVIDENCE OF CURRENT EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS.

17 AS OF THE DATE OF THIS SURVEY, THERE ARE NO PROPOSED CHANGES IN STREET RIGHT OF WAY LINES, AS AVAILABLE FROM THE CONTROLLING JURISDICTION. THERE IS NO OBSERVED EVIDENCE OF RECENT STREET OR SIDEWALK CONSTRUCTION OR REPAIRS.

LEGAL DESCRIPTION

Real property in the City of Menlo Park, County of San Mateo, State of California, described as follows:

ALL THAT CERTAIN STRIP OF LAND BEING APPROXIMATELY 20' WIDE X 524' IN LENGTH, AND DESIGNATED AS "LANDS OF KAVANAUGH" AS SHOWN ON THAT CERTAIN MAP ENTITLED, "PARCEL MAP SUBDIVISION OF A PORTION OF THE LANDS OF KAVANAUGH (BOOK 2721 O.R. 180) MENLO PARK, SAN MATEO COUNTY, CALIFORNIA", WHICH MAP WAS FILED IN THE OFFICE OF THE RECORDER OF THE COUNTY OF SAN MATEO, STATE OF CALIFORNIA ON MAY 24, 1967 IN BOOK 3 OF PARCEL MAPS, PAGE 3, SAID STRIP OF LAND ALSO IDENTIFIED THEREON AS "20' STRIP FOR DRAINAGE CANAL" LYING ADJACENT TO AND WESTERLY OF, "PARCEL 1" ON SAID PARCEL MAP AND THE LANDS IDENTIFIED AS "RECORD OF SURVEY (VOL. 5 OF L.L.S. MAPS, PAGE 12)" ON SAID PARCEL MAP.

SURVEYOR'S CERTIFICATE

TO: TARLTON PROPERTIES, INC.
AND: FIRST AMERICAN TITLE INSURANCE COMPANY

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH THE 2016 MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/NSPS LAND TITLE SURVEYS, JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS, AND INCLUDES 2, 3, 4, 6(b), 8, 13, 14, 16 AND 17 OF TABLE A THEREOF. THE FIELD WORK WAS COMPLETED ON FEBRUARY 7, 2019.

APPENDIX D

OBSERVED SPECIES LIST

[this page left blank intentionally]

Appendix D. Plant and wildlife species observed within the Study Area during the August 1, 2019 and October 6, 2020 site visits.

Plants						
Scientific Name	**Common Name**	**Origin**	**Form**	**Rarity Status[1]**	**CAL-IPC Status[2]**	**Wetland Status (AW 2016)[3]**
Avena barbata	Slim oat	non-native (invasive)	annual, perennial grass		Moderate	
Callistemon sp.						
Cinnamomum camphora	Camphor tree	non-native	tree			UPL
Cyperus eragrostis	Tall cyperus	native	perennial grasslike herb			FACW
Festuca perennis	Italian rye grass	non-native (invasive)	annual, perennial grass		Moderate	FAC
Foeniculum vulgare	Fennel	non-native (invasive)	perennial herb		High	
Fraxinus sp.						
Hedera helix	English ivy	non-native (invasive)	vine, shrub		High	FACU
Helminthotheca echioides	Bristly ox-tongue	non-native (invasive)	annual, perennial herb		Limited	FAC
Juglans hindsii	Northern California black walnut	native	tree			FAC
Juncus sp.						
Lactuca serriola	Prickly lettuce	non-native	annual herb			FACU
Ligustrum japonicum	Japanese privet	non-native	tree			
Muhlenbergia rigens	Deergrass	native	perennial grass			FAC
Platanus x *hispanica*	London plane tree	non-native	tree			
Quercus agrifolia	Coast live oak	native	tree			
Rumex crispus	Curly dock	non-native (invasive)	perennial herb		Limited	FAC
Sequoia sempervirens	Coast redwood	native	tree			
Yucca gigantea	Giant yucca	non-native	tree			

Wildlife		
Scientific Name	**Common Name**	**Status**
Corvus brachyrhynchos	American crow	None
Haemorhous mexicanus	House finch	None

Junco hyemalis	Dark-eyed junco	None
Mimus polyglottos	Northern mockingbird	None
Zenaida macroura	Mourning dove	None
Zonotrichia leucophrys	White-crowned sparrow	None

- All species identified using the *Jepson eFlora* [Jepson Flora Project (eds.) 2019]; nomenclature follows *Jepson eFlora* [Jepson Flora Project (eds.) 2019]

[1]Rarity Status: The CNPS Inventory of Rare and Endangered Plants (CNPS 2019)

FE:	Federal Endangered
FT:	Federal Threatened
SE:	State Endangered
ST:	State Threatened
SR:	State Rare
Rank 1A:	Plants presumed extinct in California
Rank 1B:	Plants rare, threatened, or endangered in California and elsewhere
Rank 2:	Plants rare, threatened, or endangered in California, but more common elsewhere
Rank 3:	Plants about which we need more information – a review list
Rank 4:	Plants of limited distribution – a watch list

[2]Invasive Status: California Invasive Plant Inventory (Cal-IPC 2019)

High:	Severe ecological impacts; high rates of dispersal and establishment; most are widely distributed ecologically.
Moderate:	Substantial and apparent ecological impacts; moderate-high rates of dispersal, establishment dependent on disturbance; limited-moderate distribution ecologically
Limited:	Minor or not well documented ecological impacts; low-moderate rate of invasiveness; limited distribution ecologically
Assessed:	Assessed by Cal-IPC and determined to not be an existing current threat

[3]Wetland Status: National List of Plant Species that Occur in Wetlands, California – Arid West (Lichvar et al. 2016)

OBL:	Almost always found in wetlands;
FACW:	Usually found in wetlands
FAC:	Equally found in wetlands and uplands
FACU:	Usually not found in wetlands
UPL:	Almost never found in wetlands
NL:	Not listed, assumed almost never found in wetlands
NI:	No information; not factored during wetland delineation

Appendix 3.7-2

Special-Status Species Occurrences Tables

[this page left blank intentionally]

Table 3.7-1. Analysis of Potential for Occurrence of Special-Status Plant Species in the Project Site

Common Name Scientific Name	Status* Federal/ State/ Other	General Habitat Description	Potential for Occurrence**
Plants			
San Mateo thorn-mint *Acanthomintha duttonii*	FE, SE, Rank 1B.1	Chaparral, valley and foothill grassland. Elevation ranges from 160 to 985 feet (50 to 300 meters). Blooms Apr-Jun.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
Franciscan onion *Allium peninsulare* var. *franciscanum*	Rank 1B.2	Cismontane woodland, valley and foothill grassland. Elevation ranges from 170 to 1000 feet (52 to 305 meters). Blooms (Apr) May-Jun.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
bent-flowered fiddleneck *Amsinckia lunaris*	Rank 1B.2	Coastal bluff scrub, cismontane woodland, valley and foothill grassland. Elevation ranges from 5 to 1640 feet (3 to 500 meters). Blooms Mar-Jun.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
California androsace *Androsace elongata* ssp. *acuta*	Rank 4.2	Chaparral, cismontane woodland, coastal scrub, meadows and seeps, pinyon and juniper woodland, valley and foothill grassland. Elevation ranges from 490 to 4280 feet (150 to 1305 meters). Blooms Mar-Jun.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
Kings Mountain manzanita *Arctostaphylos regismontana*	Rank 1B.2	Broadleafed upland forest, chaparral, north coast coniferous forest. Elevation ranges from 1000 to 2395 feet (305 to 730 meters). Blooms Dec-Apr.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
Brewer's calandrinia *Calandrinia breweri*	Rank 4.2	Chaparral, coastal scrub. Elevation ranges from 30 to 4005 feet (10 to 1220 meters). Blooms (Jan)Mar-Jun.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
Congdon's tarplant *Centromadia parryi* ssp. *congdonii*	Rank 1B.1	Valley and foothill grassland (alkaline). Elevation ranges from 0 to 755 feet (0 to 230 meters). Blooms May-Oct (Nov).	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.

Common Name Scientific Name	Status* Federal/ State/ Other	General Habitat Description	Potential for Occurrence**
Crystal Springs fountain thistle *Cirsium fontinale* var. *fontinale*	FE, SE, Rank 1B.1	Chaparral (openings), cismontane woodland, meadows and seeps, valley and foothill grassland. Elevation ranges from 145 to 575 feet (45 to 175 meters). Blooms (Apr)May- Oct.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
lost thistle *Cirsium praeteriens*	Rank 1A	Elevation ranges from 0 to 330 feet (0 to 100 meters). Blooms Jun-Jul.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
round-headed Chinese-houses *Collinsia corymbosa*	Rank 1B.2	Coastal dunes. Elevation ranges from 0 to 65 feet (0 to 20 meters). Blooms Apr-Jun.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
San Francisco collinsia *Collinsia multicolor*	Rank 1B.2	Closed-cone coniferous forest, coastal scrub. Elevation ranges from 95 to 820 feet (30 to 250 meters). Blooms (Feb) Mar-May.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
western leatherwood *Dirca occidentalis*	Rank 1B.2	Broadleafed upland forest, closed-cone coniferous forest, chaparral, cismontane woodland, north coast coniferous forest, riparian forest, riparian woodland. Elevation ranges from 80 to 1395 feet (25 to 425 meters). Blooms Jan-Mar (Apr).	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
Hoover's button-celery *Eryngium aristulatum* var. *hooveri*	Rank 1B.1	Vernal pools. Elevation ranges from 5 to 150 feet (3 to 45 meters). Blooms (Jun) Jul (Aug).	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
Jepson's coyote thistle *Eryngium jepsonii*	Rank 1B.2	Valley and foothill grassland, vernal pools. Elevation ranges from 5 to 985 feet (3 to 300 meters). Blooms Apr-Aug.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
fragrant fritillary *Fritillaria liliacea*	Rank 1B.2	Cismontane woodland, coastal prairie, coastal scrub, valley and foothill grassland. Elevation ranges from 5 to 1345 feet (3 to 410 meters). Blooms Feb-Apr.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.

Common Name Scientific Name	Status* Federal/ State/ Other	General Habitat Description	Potential for Occurrence**
Marin western flax *Hesperolinon congestum*	FT, ST, Rank 1B.1	Chaparral, valley and foothill grassland. Elevation ranges from 15 to 1215 feet (5 to 370 meters). Blooms Apr-Jul.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
woolly-headed lessingia *Lessingia hololeuca*	Rank 3	Broadleafed upland forest, coastal scrub, lower montane coniferous forest, valley and foothill grassland. Elevation ranges from 45 to 1000 feet (15 to 305 meters). Blooms Jun-Oct.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
arcuate bush-mallow *Malacothamnus arcuatus*	Rank 1B.2	Chaparral, cismontane woodland. Elevation ranges from 45 to 1165 feet (15 to 355 meters). Blooms Apr-Sep.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
Davidson's bush-mallow *Malacothamnus davidsonii*	Rank 1B.2	Chaparral, cismontane woodland, coastal scrub, riparian woodland. Elevation ranges from 605 to 3740 feet (185 to 1140 meters). Blooms Jun-Jan.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
Mt. Diablo cottonweed *Micropus amphibolus*	Rank 3.2	Broadleafed upland forest, chaparral, cismontane woodland, valley and foothill grassland. Elevation ranges from 145 to 2705 feet (45 to 825 meters). Blooms Mar-May.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
woodland woolythreads *Monolopia gracilens*	Rank 1B.2	Broadleafed upland forest (openings), chaparral (openings), cismontane woodland, north coast coniferous forest (openings), valley and foothill grassland. Elevation ranges from 325 to 3935 feet (100 to 1200 meters). Blooms (Feb) Mar-Jul.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
Choris' popcornflower *Plagiobothrys chorisianus* var. *chorisianus*	Rank 1B.2	Chaparral, coastal prairie, coastal scrub. Elevation ranges from 5 to 525 feet (3 to 160 meters). Blooms Mar-Jun.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
slender-leaved pondweed *Stuckenia filiformis* ssp. *alpina*	Rank 2B.2	Marshes and swamps (assorted shallow freshwater). Elevation ranges from 980 to 7055 feet (300 to 2150 meters). Blooms May-Jul.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.

Common Name Scientific Name	Status* Federal/ State/ Other	General Habitat Description	Potential for Occurrence**
two-fork clover *Trifolium amoenum*	FE, Rank 1B.1	Coastal bluff scrub, valley and foothill grassland (sometimes serpentine). Elevation ranges from 15 to 1360 feet (5 to 415 meters). Blooms Apr-Jun.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.
caper-fruited tropidocarpum *Tropidocarpum capparideum*	Rank 1B.2	Valley and foothill grassland (alkaline hills). Elevation ranges from 0 to 1495 feet (1 to 455 meters). Blooms Mar-Apr.	**No Potential.** Suitable habitat not present within the Project site. Site is composed entirely of composed and developed land cover.

Sources: List compiled from the California Department of Fish and Wildlife (CDFW) Natural Diversity Database (2020), U.S. Fish and Wildlife Service (USFWS) Species Lists (2020), and California Native Plant Society (CNPS) Electronic Inventory (2020) searches focused on the Palo Alto USGS 7.5' quadrangle.

***Key to status codes:**

FE	Federal Endangered
FT	Federal Threatened
SE	State Endangered
ST	State Threatened
Rank 1A	Plants presumed extirpated in California and either rare or extinct elsewhere
Rank 1B	Plants rare, threatened, or endangered in California and elsewhere
Rank 2A	Plants presumed extirpated in California but common elsewhere
Rank 2B	Plants rare, threatened, or endangered in California but more common elsewhere
Rank 3	Review List: Plants about which more information is needed
Rank 4	Watch List: Plants of Limited Distribution

****Threat Ranks:** (a) 0.1- seriously threatened in California (over 80% of occurrences threatened/high degree and immediacy of threat); (b) 0.2- moderately threatened in California (20-80% occurrences threatened/ moderate degree and immediacy of threat); and (c) 0.3- not very threatened in California (less than 20% of occurrences threatened/low degree and immediacy of threat or no current threats known).

Table 3.7-2. Analysis of Potential for Occurrence of Special-Status Wildlife Species in the Project Site

Species	Status*	Habitat	Potential for Occurrence
Mammals			
salt marsh wandering shrew *Sorex vagrans halicoetes*	SSC	Salt marshes of the south arm of San Francisco Bay. Medium high marsh 6 to 8 feet above sea level where abundant driftwood is scattered among *Salicornia*.	**No Potential.** No salt marsh habitat is present on the Project site.
pallid bat *Antrozous pallidus*	SSC, WBWG High	Found in a variety of habitats ranging from grasslands to mixed forests, favoring open and dry, rocky areas. Roost sites include crevices in rock outcrops and cliffs, caves, mines, and hollow trees and various manmade structures such as bridges, barns, and buildings (including occupied buildings). Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	**No Potential.** No rock outcroppings or other suitable human structures exist on the Project site to provide roost habitat for this species.
Townsend's big-eared bat *Corynorhinus townsendii*	SSC, WBWG High	Associated with a wide variety of habitats from deserts to higher-elevation mixed and coniferous forests. Females form maternity colonies in buildings, caves and mines, and males roost singly or in small groups. Foraging typically occurs at edge habitats near wooded areas (e.g., along streams).	**No Potential.** No potential roost habitat for this species exists on or near the Project site.
hoary bat *Lasiurus cinereus*	WBWG Medium	Prefers open forested habitats or habitat mosaics, with access to trees for cover and open areas or habitat edges for feeding. Roosts in dense foliage of medium to large trees. Feeds primarily on moths.	**Unlikely.** Though individuals may forage or roost in broad- leafed trees on the Project site, all nearby occurrences in CNDDB are extremely old specimen collection samples that do not suggest the species is still present nearby. Furthermore, ongoing anthropogenic disturbance around the Project site is likely to deter bat roosting.
San Francisco dusky-footed woodrat *Neotoma fuscipes annectens*	SSC	Forest habitats of moderate canopy and moderate to dense understory. Also in chaparral habitats. Constructs nests of shredded grass, leaves, and other material. May be limited by availability of nest-building materials.	**No Potential.** No dense understory with significant availability of nest-building materials is present on the Project site.

Species	Status*	Habitat	Potential for Occurrence
salt marsh harvest mouse *Reithrodontomys raviventris*	FE, SE, CFP	Endemic to emergent salt and brackish wetlands of the San Francisco Bay Estuary. Pickleweed marshes are primary habitat; also occurs in various other wetland communities with dense vegetation. Does not burrow, builds loosely organized nests. Requires higher areas for flood escape.	**No Potential.** No salt marsh habitat is present on the Project site.
American badger *Taxidea taxus*	SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Requires friable soils and open, uncultivated ground. Preys on burrowing rodents.	**No Potential.** All open areas within the Project site are landscaped, indicating that no suitable burrow locations exist for this species.
Birds			
white-tailed kite *Elanus leucurus*	CFP	Year-round resident in coastal and valley lowlands with scattered trees and large shrubs, including grasslands, marshes, and agricultural areas. Nests in trees, of which the type and setting are highly variable. Preys on small mammals and other vertebrates.	**Moderate Potential.** Several large trees at the perimeter of the Project site could support nesting of this species.
bald eagle *Haliaeetus leucocephalus*	FD, SE, CFP, BCC	Occurs year-round in California, but primarily a winter visitor; breeding population is growing. Nests in large trees in the vicinity of larger lakes, reservoirs, and rivers. Wintering habitat somewhat more variable but usually features large concentrations of waterfowl or fish.	**Unlikely.** The nearest large body of water to the Project site is San Francisco Bay, which does not provide ideal foraging habitat forthis species. Suitable nest trees are also limited in the vicinity.
yellow rail *Coturnicops noveboracensis*	BCC, SSC	Summer resident in eastern Sierra Nevada in Mono County, breeding in shallow freshwater marshes and wet meadows with dense vegetation. Also a rare winter visitor along the coast and other portions of the state. Extremely cryptic.	**No Potential.** The Project site is located outside the known breeding range of this species.
California black rail *Laterallus jamaicensis coturniculus*	ST, CFP	Year-round resident in marshes (saline to freshwater) with dense vegetation within four inches of the ground. Prefers larger, undisturbed marshes that have an extensive upper zone and are close to a major water source. Extremely secretive and cryptic.	**No Potential.** No tidal marsh habitat is present on the Project site.
California Ridgway's (clapper) rail *Rallus obsoletus obsoletus*	FE, SE, CFP	Year-round resident in tidal marshes of the San Francisco Bay estuary. Requires tidal sloughs and intertidal mud flats for foraging, and dense marsh vegetation for nesting and cover. Typical habitat features abundant growth of cordgrass and pickleweed. Feeds primarily on mollusks and crustaceans.	**No Potential.** No tidal marsh habitat is present on the Project site.
western snowy plover	FT, SSC, BCC, RP	Federal listing applies only to the Pacific coastal population. Year-round resident and winter visitor. Occurs on sandy beaches, salt	**No Potential.** Salt flats, sandy beaches, or graveled areas suitable for nesting by

Species	Status*	Habitat	Potential for Occurrence
Charadrius nivosus (alexandrines) nivosus		pond levees, and the shores of large alkali lakes. Nests on the ground, requiring sandy, gravelly, or friable soils.	this species are not present on the Project site.
California least tern *Sternula antillarum browni*	FE, SE, CFP	Summer resident along the coast from San Francisco Bay south to northern Baja California; inland breeding also very rarely occurs. Nests colonially on barren or sparsely vegetated areas with sandy or gravelly substrates near water, including beaches, islands, and gravel bars. In San Francisco Bay, has also nested on salt pond margins.	**No Potential.** Barren substrates necessary for nesting of this species are not present on the Project site.
black skimmer *Rynchops niger*	BCC, SSC	Found primarily in southern California; South San Francisco Bay has a small resident population. Nests colonially on gravel bars, low islets, and sandy beaches	**No Potential.** Though the Project site is within 0.75 mile of potential nesting and foraging habitat, the Project site itself provides no habitat value for this species due to lack of aquatic features or associated terrestrial areas.
marbled murrelet *Brachyramphus marmoratus*	FT, SE	Predominantly coastal marine. Nests in old-growth coniferous forests up to 30 miles inland along the Pacific coast, from Eureka to Oregon border, and in Santa Cruz/San Mateo Counties. Nests are highly cryptic, and typically located on platform-like branches of mature redwoods and Douglas firs. Forages on marine invertebrates and small fishes.	**No Potential.** No large stands of coniferous forest are present on or near the Project site.
burrowing owl *Athene cunicularia*	SSC, BCC	Year-round resident and winter visitor. Occurs in open, dry grasslands and scrub habitats with low-growing vegetation, perches, and abundant mammal burrows. Preys upon insects and small vertebrates. Nests and roosts in old mammal burrows, most commonly those of ground squirrels.	**No Potential.** No burrowing mammal activity was observed on the Project site, nor were any suitable burrows surrogates.
San Francisco common yellowthroat *Geothlypis trichas sinuosa*	BCC, SSC	Resident of the San Francisco Bay region, in fresh and salt-water marshes. Requires thick, continuous cover down to water surface for foraging; tall grasses, tule patches, willows for nesting.	**No Potential.** No suitable salt marsh or wetland habitat for this species exists on the Project site.
Alameda song sparrow *Melospiza melodia pusillula*	BCC, SSC	Year-round resident of salt marshes bordering the south arm of San Francisco Bay. Inhabits primarily pickleweed marshes; nests placed in marsh vegetation, typically shrubs such as gumplant.	**No Potential.** No salt- marsh habitat exists on the Project site.

Species	Status*	Habitat	Potential for Occurrence
great blue heron *Ardea herodias*	none (breeding sites protected by CDFW), CDFW sensitive	Year-round resident. Nests colonially or semi-colonially in tall trees and on cliffs, also sequestered terrestrial substrates. Breeding sites usually in close proximity to foraging areas: marshes, lake margins, tidal flats, and rivers. Forages primarily on fishes and other aquatic prey, also smaller terrestrial vertebrates.	**No Potential.** No aquatic features are present sufficiently close to the Project site to suggest the establishment of a nesting colony by this species.
snowy egret *Egretta thula*	none (breeding sites protected by CDFW)	Year-round resident. Nests colonially, usually in trees, at times in sequestered beds of dense tules. Rookery sites usually situated close to foraging areas: marshes, tidal-flats, streams, wet meadows, and borders of lakes.	**No Potential.** No aquatic features are present sufficiently close to the Project site to suggest the establishment of a nesting colony by this species.
Amphibians			
Santa Cruz black salamander *Aneides flavipunctatus niger*	SSC	Climbing salamanders of the genus *Aneides* frequent damp woodlands and are usually found hiding under various debris (i.e., bark, woodrat nests, logs). The Santa Cruz black salamander exists south of the San Francisco Bay and was only recently recognized as a separate and protected species. Santa Cruz black salamander is highly sedentary, preferring to stay hidden under riparian debris.	**No Potential.** The Project site is outside the known breeding range of this species, and does not possess wetland habitat
California tiger salamander *Ambystoma californiense*	FE/FT, ST, RP	Populations in Santa Barbara and Sonoma counties currently listed as endangered; threatened in remainder of range. Inhabits grassland, oak woodland, ruderal, and seasonal pool habitats. Adults are fossorial and utilize mammal burrows and other subterranean refugia. Breeding occurs primarily in vernal pools and other seasonal water features.	**No Potential.** No perennial aquatic habitat or suitable burrows are present on the Project site to support this species.
California giant salamander *Dicamptodon ensatus*	SSC	Occurs in the north-central Coast Ranges. Moist coniferous and mixed forests are typical habitat; also uses woodland and chaparral. Adults are terrestrial and fossorial, breeding in cold permanent or semi-permanent streams. Larvae usually remain aquatic for over a year.	**No Potential.** No forested habitat exists on the Project site to support this species.
California red-legged frog *Rana draytonii*	FT, SSC, RP	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby, or emergent riparian vegetation. Requires 11 to 20 weeks of permanent water for larval development. Associated with quiet perennial to intermittent ponds, stream pools and wetlands. Prefers shorelines with extensive vegetation. Disperses through upland habitats after rains.	**No Potential.** The Project site is outside the known breeding range for this species.

Species	Status*	Habitat	Potential for Occurrence
foothill yellow-legged frog *Rana boylii*	SC, SSC	Found in or adjacent to rocky streams in a variety of habitats. Prefers partly- shaded, shallow streams and riffles with a rocky substrate; requires at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis. Feeds on both aquatic and terrestrial invertebrates.	**No Potential.** The Project site is outside the known breeding range for this species.
Reptiles			
Pacific (western) pond turtle *Actinemys marmorata*	SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams, and irrigation ditches with aquatic vegetation. Require basking sites such as partially submerged logs, vegetation mats, or open mud banks, and suitable upland habitat (sandy banks or grassy open fields) for egg- laying.	**No Potential.** No perennial water bodies are present on the Project site.
green sea turtle *Chelonia mydas*	FT (west coast populations)	Found in fairly shallow waters inside reefs, bays and inlets with marine grass and algae. Open beaches with a sloping platform and minimal disturbance are required for nesting. This species exhibits high site fidelity.	**No Potential.** No marine habitat exists on the Project site.
Alameda whipsnake *Masticophis lateralis euryxanthus*	FT, ST	Inhabits chaparral and foothill- hardwood habitats in the eastern Bay Area. Prefers south-facing slopes and ravines with rock outcroppings where shrubs form a vegetative mosaic with oak trees and grasses and small mammal burrows provide basking and refuge.	**No Potential.** The Project site is outside the known breeding range of this species.
San Francisco garter snake *Thamnophis sirtalis tetrataenia*	FE, SE, CFP, RP	Vicinity of freshwater marshes, ponds and slow-moving streams in San Mateo County and extreme northern Santa Cruz County. Prefers dense cover and water depths of at least one foot. Upland areas near water are also very important.	**No Potential.** No aquatic habitat with potential to support this species is present within or in the vicinity of the Project site.
Fish			
Delta smelt *Hypomesus transpacificus*	FT, SE, RP	Lives in the Sacramento-San Joaquin estuary in areas where salt and freshwater systems meet. Occurs seasonally in Suisun Bay,	**No Potential.** No marine habitat exists on the Project site.

Species	Status*	Habitat	Potential for Occurrence
		Carquinez Strait and San Pablo Bay. Seldom found at salinities > 10 ppt; most often at salinities < 2 ppt.	
longfin smelt *Spirinchus thaleichthys*	FC, ST, SSC, RP	Euryhaline, nektonic and anadromous. Found in open waters of estuaries, mostly in middle or bottom of water column. Prefer salinities of 15 to 30 ppt but can be found in completely freshwater to almost pure seawater.	**No Potential.** No marine habitat exists on the Project site.
tidewater goby *Eucyclogobius newberryi*	FE, SSC	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County to the mouth of the Smith River. Found in shallow lagoons and lower stream reaches; requires fairly still but not stagnant water and high oxygen levels.	**No Potential.** No marine habitat exists on the Project site.
Invertebrates			
vernal pool fairy shrimp *Branchinecta lynchi*	FT, SSI, RP	Endemic to the grasslands of the Central Valley, central coast mountains, and south coast mountains, in astatic rain-filled pools. Inhabit small, clear-water sandstone- depression pools and grassed swale, earth slump, or basalt-flow depression pools.	**No Potential.** No vernal pool habitats exist on the Project site.
vernal pool tadpole shrimp *Lepidurus packardi*	FE, SSI, RP	Inhabits vernal pools and swales in the Sacramento Valley containing clear to highly turbid water. Pools commonly found in grass bottomed swales of unplowed grasslands. Some pools are mud-bottomed and highly turbid.	**No Potential.** No vernal pool habitats exist on the Project site.
California linderiella *Linderiella occidentalis*	SSI	Seasonal pools in unplowed grasslands with old alluvial soils underlain by hardpan or in sandstone depressions. Water in the pools has very low alkalinity, conductivity, and TDS.	**No Potential.** No seasonal pools exist on the Project site.
San Bruno elfin butterfly *Callophrys mossii bayensis*	FE, SSI	Limited to the vicinity of San Bruno Mountain, San Mateo County. Colonies are located on in rocky outcrops and cliffs in coastal scrub habitat on steep, north-facing slopes within the fog belt. Species range is tied to the distribution of the larval host plant, Sedum spathulifolium.	**No Potential.** The Project site is outside the known breeding range of this species.
Bay checkerspot butterfly *Euphydryas editha bayensis*	FT, SSI, RP	Restricted to native grasslands on outcrops of serpentine soil in the vicinity of San Francisco Bay. *Plantago erecta* is the primary host plant; *Orthocarpus densiflorus* and *O. purpurscens* are the secondary host plants.	**No Potential.** The Project site is outside the known breeding range of this species.

Species	Status*	Habitat	Potential for Occurrence
Mission blue butterfly *Icaricia icarioides missionensis*	FE, SSI, RP	Inhabits grasslands and coastal chaparral of the San Francisco Peninsula and southern Marin County, but mostly found on San Bruno Mountain. Three larval host plants: *Lupinus albifrons*, *L. variicolor*, and *L. formosus*, of which *L. albifrons* is favored.	**No Potential.** No grassland or chaparral habitat exists on the Project site to support this species or its host plants.
Myrtle's silverspot butterfly *Speyeria zerene myrtleae*	FE, RP, SSI	Restricted to the fog belt of northern Marin and southernmost Sonoma County, including the Point Reyes peninsula; extirpated from coastal San Mateo County. Occurs in coastal prairie, dunes, and grassland. Larval foodplant is typically *Viola adunca*. Adult flight season may range from late June to early September.	**No Potential.** The Project site is outside the known breeding range of this species.

Sources: List compiled from the California Department of Fish and Wildlife (CDFW) Natural Diversity Database (2020), U.S. Fish and Wildlife Service (USFWS) Species Lists (2020), and California Native Plant Society (CNPS) Electronic Inventory (2020) searches focused on the Palo Alto USGS 7.5' quadrangle.

***Key to status codes:**

FE	Federal Endangered
FT	Federal Threatened
FC	Federal Candidate
FD	Federal Delisted
RP	Sensitive Species included in a USFWS Recovery Plan or Draft Recovery Plan
BCC	USFWS Birds of Conservation Concern
SE	State Endangered
ST	State Threatened
SC	State Candidate
SSC	CDFW Species of Special Concern
SSI	CDFW Species Status Invertebrates
CFP	CDFW Fully Protected Animal

WBWG Western Bat Working Group High or Medium Priority Species

****Potential to Occur**

No Potential. Habitat on and adjacent to the site is clearly unsuitable for the species requirements (cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).

Unlikely. Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.

Moderate Potential. Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.

High Potential. All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.
