Age Sensitivity Factor (unitless)	ASF	10	10	3	1
Exposure Duration (years)	ED			13.02	13.75
Averaging Time for Lifetime (years)	AT	70.0	70.0	70.0	70.0
Fraction of Time at Home (unitless)	FAH	1.0	1.0	1.0	1.0
Worker Adjustment Factor (unitless)	WAF	4.2	4.2	4.2	4.2
Cancer Conversion Factor (unitless)	CCF	1.00E+06	1.00E+06	1.00E+06	1.00E+06
Cancer Potency Factor $(mg/kg/day)^{-1}$	CPF	1.1	1.1	1.1	1.1

1. 95th percentile DBR for 3rd Tri & 0<2, 80th percentile for other age groups
2. Based on 350 days/365 days per year
3. Construction would last 3.23 years with 26.77 years of operational emissions.

School

Parameter	Abbr.	2<9
Daily Breathing Rate (mg/kg/day)[1]	DBR	640
Inhalation Absorption Factor (unitless)	A	1
Exposure Frequency (unitless)[2]	EF	0.5
Conversion Factor (ug to mg, L to m^3)	CF	1.00E-06
Age Sensitivity Factor (unitless)	ASF	3
Exposure Duration (years)	ED	6.77
Averaging Time for Lifetime (years)	AT	70
Fraction of Time at Home (unitless)	FAH	
Worker Adjustment Factor (unitless)	WAF	4.2
Cancer Conversion Factor (unitless)	CCF	1.00E+06
Cancer Potency Factor $(mg/kg/day)^{-1}$	CPF	1.1

1. 8-hour breathing rates (moderate intensity) from Table 5.8 of OEHHA guidance
2. School exposure based on 180 days and workers based on 250 days per year
3. ASF based on OEHHA Table 8.3
4. Duration of construction
5. WAF based on 5 workdays per week,8 hours per day

Road Dust Emission Factors

Daily Paved Road Dust EF[1]

$$E_{ext} = [\, k\,(sL)^{0.91} \times (W)^{1.02} \,]$$

EF_{paved}	Annual or other long-term average emission factor in the same units as k
k	particle size multiplier for particle size range and units of interest
sL	road surface silt loading (g/m^2)
W	average weight (tons) of all the vehicles raveling the road (2.4 tons)
P	Number of "wet' days with at least 0.254 (0.01 in) of precipitation during the averaging period
N	Number of days in the averaging period (e.g. 365 for annual, 91 for seasonal, 30 for monthly)

Parameters	**PM10**	**PM2.5**
k $(g/VMT)^2$	0.997898	0.244939
sL (g/m^2)	0.1	0.1
W (tons)	2.4	2.4
EF (g/mi)	0.30	0.07

2) AP42: Chapter 13: Miscellaneous Sources, 13.2.1 Paved Roads, Table 13.2.1-1

Daily Unpaved Road Dust EF[1]

$$E.F._{dust,i} = \left(\frac{k(s/12)^1 (S/30)^{0.5}}{(M/0.5)^{0.2}} - C \right)$$

k	particle size multiplier for particle size range and units of interest
s	surface material silt content (%)
M	surface material moisture content (%)
S	mean vehicle speed (mph)
C	emission factor for 1980s vehicle fleet exhaust, brakewear and tire wear

Parameters	PM10	PM2.5
k (g/VMT)[2]	816.462	81.6462
s[3]	8.5	8.5
M	0.5	0.5
S	10	10
C	0.213187	0.163292
EF (g/mi)	333.6842	33.22645

Notes:

1) Accounts for all exhaust and evaporative processes

2) Employee vehicle categories included LDA/LDT1/LDT2/MDV

3) Delivery vehicle categories included LHDT1/LHDT2/MHDT/HHDT

4) Conservatively assumed 10 percent of trips would occur on Saturdays and Sundays

5) Daily trips based on 598 employees traveling to and from site

6) Daily trucks provided by applicant

7) Trip length based on Traffic Study

Commonwealth Building 3 Project R&D Alt - Operational Emissions - San Mateo County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Commonwealth Building 3 Project R&D Alt - Operational Emissions

San Mateo County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Research & Development	249.50	1000sqft	1.47	249,500.00	0
Enclosed Parking Structure	1,290.00	Space	2.50	379,000.00	0
Parking Lot	6.50	1000sqft	0.15	6,500.00	0
City Park	0.78	Acre	0.78	34,020.36	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	70
Climate Zone	5			**Operational Year**	2025
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	0	**CH4 Intensity (lb/MWhr)**	0	**N2O Intensity (lb/MWhr)**	0

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project would produce/purchase 100 percent renewable energy.

Land Use - Proposed land uses

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Trips and VMT - Operations only - Construction was modeled in excel.

Commonwealth Building 3 Project R&D Alt - Operational Emissions - San Mateo County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Grading - Operations only - Construction was modeled in excel.

Architectural Coating - Operations only - Construction was modeled in excel.

Vehicle Trips - Operations only - Construction was modeled in excel.

Energy Use - No NG.

Water And Wastewater - CalEEMod defaults

Solid Waste - CalEEMod defaults

Stationary Sources - Emergency Generators and Fire Pumps - Emergency Generators and Fire Pumps - Emergency generator would have a rating of 400kW and be tested monthly for 15 minutes.

Commonwealth Building 3 Project Reduced Project Alt - Operational Emissions

San Mateo County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	199.60	1000sqft	1.47	199,600.00	0
Enclosed Parking Structure	1,070.00	Space	2.50	326,000.00	0
Parking Lot	6.50	1000sqft	0.15	6,500.00	0
City Park	0.78	Acre	0.78	34,020.36	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	70
Climate Zone	5			**Operational Year**	2025
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	0	**CH4 Intensity (lb/MWhr)**	0	**N2O Intensity (lb/MWhr)**	0

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project would produce/purchase 100 percent renewable energy.

Land Use - Proposed land uses

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Off-road Equipment - Operations only - Construction was modeled in excel.

Trips and VMT - Operations only - Construction was modeled in excel.

Commonwealth Building 3 Project Reduced Project Alt - Operational Emissions - San Mateo County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Grading -

Architectural Coating - Operations only - Construction was modeled in excel.

Vehicle Trips - Mobile emissions were modeled outside of CalEEMod.

Energy Use - CalEEMod defaults

Water And Wastewater - CalEEMod defaults

Solid Waste - CalEEMod defaults

Stationary Sources - Emergency Generators and Fire Pumps - Emergency Generators and Fire Pumps - Emergency generator would have a rating of 400kW and be tested monthly for 15 minutes.

Noise Appendix

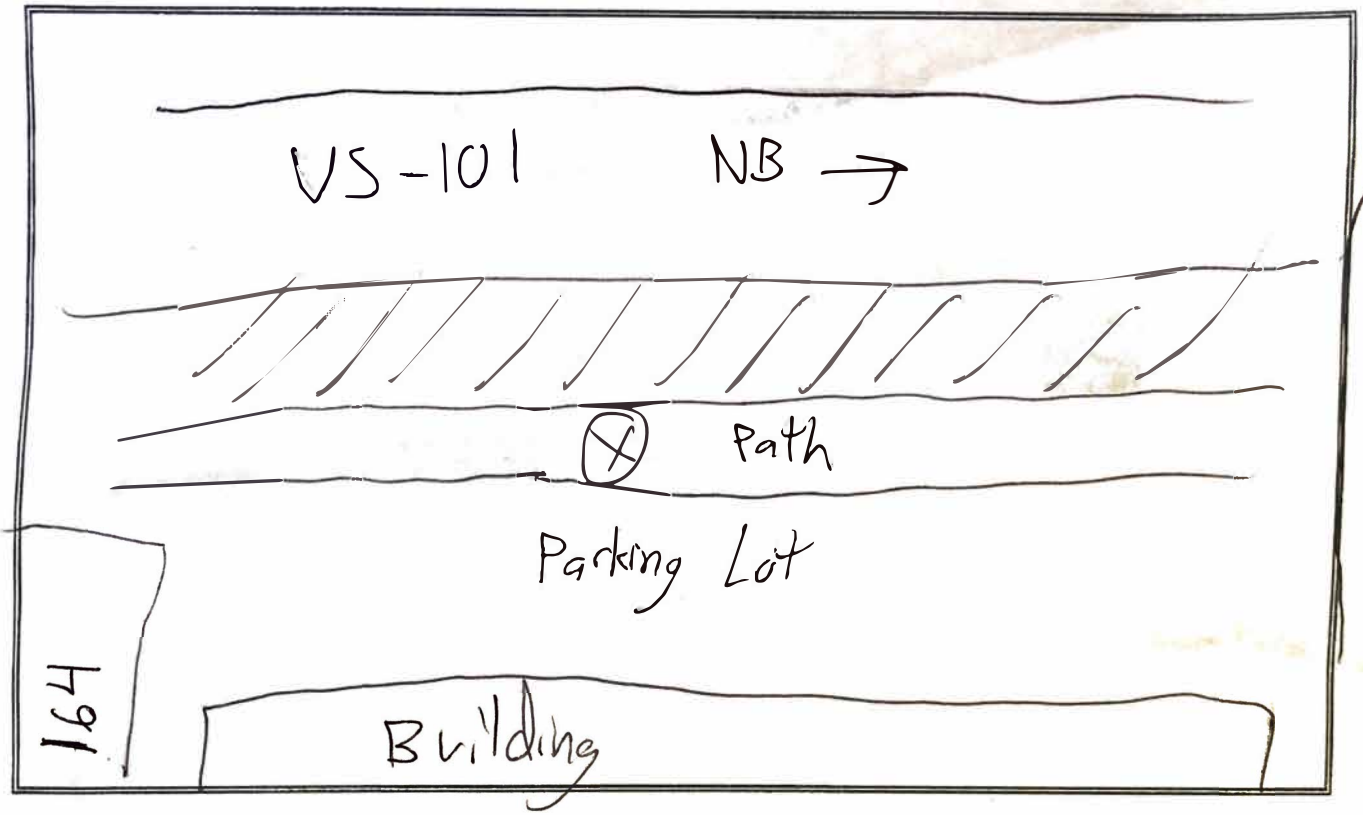
Field Sheets

NOISE MEASUREMENT SITE INFORMATION SHEET

Jones & Stokes

PROJECT NAME: Menlo Park
PROJECT #:
SITE NUMBER: ST-1
DATE/TIME: 7/28/21
LOCATION/ADDRESS: Path near Jefferson [162-164]
ENGINEERS: C. Matsui

SITE SKETCH: Show microphone location, nearby residences/buildings, potential reflective surfaces, project roadways, local roadways, driveways, ground type, trees. Indicate reference distances between objects, arrows showing wind direction, North, and camera locations/directions. Describe the line-of-sight and topography/elevation changes relative to noise sources.



WEATHER DATA: (temperature, wind speed/direction, sky conditions, relative humidity)

73°F, 1,2mph, mostly sunny, 67%

EQUIPMENT DATA: (sound level meter, microphone, preamp, calibrator, factory cal. date)

LxT

ESTIMATED CONSTRUCTION DATE OF RESIDENCES: (Pre-1978, or new construction)

POSTED SPEED: 65 (VS-101) COMMENTS:

TRAFFIC COUNTS:

Roadway/Direction	Autos	Medium	Heavy	Speed	Start Time	Duration

NOISE MEASUREMENT LOG SHEET (20)

Jones & Stokes

PROJECT NAME: Menlo Park
SITE NUMBER: ST-1
LOCATION/ADDRESS: Path near Jefferson (162-164)

PROJECT #:
DATE/TIME: 7/20/21
ENGINEERS: C. Matsui

#	Minute Starting	Measured Leq (dBA)	O or X	Autos	Medium Trucks	Heavy Trucks	Other Noise Sources/Comments (include SLM equipment, Calibration Data)

17							heavy traffic
18							
19							
20							

Leq	73.7
Lmax	81.2
Lmin	67.9
L10	75.1
L33	74.1
L50	73.5
L90	71.5

Overall Leq (Include "O" minutes, Exclude "X" minutes) = _____ dBA

Subset Leq (Exclude "O" and "X" minutes) = _____ dBA

"O" = other characteristic sources that contributed to the Leq

"X" = exclude from Leq calculation; a non-typical source contaminated the measurement

Noise Appendix

Field Pictures

Noise Monitoring Site LT-1.
Location: 149 Commonwealth Drive

Located in the Northeast corner of the parking lot for 149 Commonwealth Drive, looking South.

Looking East, ~450 feet North of Commonwealth Drive.

Looking North.

Looking West towards 149 Commonwealth Drive, sound level meter directly behind camera.

Noise Monitoring Site ST-1.
Location: 162 Jefferson Drive

Looking Southwest, ~50 feet from US 101.

Looking East, 162 Jefferson Drive to the left and US 101 to the right.

Looking North at 162 Jefferson Drive (~140 feet away).

Looking West, ~200 feet from Commonwealth Drive.

1.0 EXECUTIVE SUMMARY

This Housing Needs Assessment (HNA) provides an analysis of the housing needs associated with the proposed Commonwealth Building 3 Project (Project) in the City of Menlo Park (City). The HNA provides an estimate of increased demand for housing from the proposed Project and evaluates the potential that the proposed Project could contribute to displacement of existing residents within the City of East Palo Alto (East Palo Alto) and the Belle Haven neighborhood of Menlo Park (Belle Haven), two proximate communities identified as having risk factors for displacement. The HNA is part of a range of analyses provided to decision makers and the community to inform and assist in the decision-making and entitlement process for the proposed Project. Preparation of this HNA is required under the terms of a 2017 Settlement Agreement between the cities of Menlo Park and East Palo Alto, but is not required by the California Environmental Quality Act (CEQA)[1].

The proposed Project would add a new 249,500 gross square foot (gsf) office building and a new 1,336-space parking structure on the Project site within the Commonwealth Corporate Center property located at 162 and 164 Jefferson Drive. The proposed Project would add an estimated 1,996 new jobs. There are two existing office buildings within the Commonwealth Corporate Center property that would remain. The existing buildings are currently occupied by Facebook and have a combined 259,920 gsf of floor area. A summary of the proposed Project is provided in Table 1-1, below.

Table 1-1. Project Summary

Existing Office Buildings (to remain)	259,920	gsf
Proposed Commonwealth Building 3 (new)	249,500	gsf
Total building area (existing + new)	509,420	gsf
Net Added Employment	1,996	employees

Source: Commonwealth Building 3 Project, Draft EIR Project Description
Note: building area excludes proposed parking structure

Jobs / Housing Analysis / Demand for Housing

New jobs associated with the proposed Project would result in new worker households who would need housing somewhere within commuting distance to Menlo Park. Using the average

[1] In 2016, the City updated its General Plan, specifically the land use and circulation elements, commonly referred to as ConnectMenlo. The City completed and certified a program level EIR for ConnectMenlo, which determined that there would be a less than significant impact on population and housing, except cumulative impacts projected to be reduced to less than significant following an update of ABAG regional forecasts. Pursuant to the terms of the 2017 City of East Palo Alto v. City of Menlo Park Settlement Agreement, which settled the lawsuit regarding the ConnectMenlo EIR, preparation of this HNA is required.

number of workers per worker household[2] in San Mateo County ("County"), which is 1.91, the number of new worker households associated with the proposed Project is estimated at 1,046, which represents a need for 1,046 additional housing units.

Table 1-2. Increase in Employees and Households	
Increase in Employees	1,996
Increase in Employee Households (at 1.91 workers per household)	1,046

Keyser Marston Associates (KMA) estimated how many of the 1,046 additional housing units would be needed at each of six housing affordability or income levels, using a combination of data sources including U.S. Bureau of Labor Statistics occupation and wage data and U.S. Census data.

The following six affordability or income tiers are addressed, each expressed in relation to local Area Median Income (AMI):

- Extremely Low Income – households up to 30% of AMI;
- Very Low Income – households over 30% up to 50% of AMI;
- Low Income – households over 50% up to 80% of AMI;
- Moderate Income – households over 80% up to 120% of AMI;
- Above Moderate Income – households over 120% up to 150% of AMI; and
- Over 150% of AMI – households above 150% of AMI.

According to the California Department of Housing and Community Development (HCD), the AMI for a family of four in San Mateo County, is $149,600 as of 2021. Section 3 provides income limits applicable to each of the identified income categories. The affordability categories from 0% through 120% AMI reflect those addressed by statewide housing programs such as the Regional Housing Needs Allocation (RHNA) process. In addition, the Above Moderate Income tier is included in the analysis for consistency with HNAs prepared for prior projects in Menlo Park and to provide decision makers with information regarding a broad spectrum of housing affordability levels. Above Moderate Income households also face affordable housing challenges in Menlo Park as well as in the broader Bay Area. In fact, due to the high cost of housing, housing affordability challenges also extend to households earning over 150% of AMI[3], particularly in the for-sale housing market. The Over 150% of AMI category captures

[2] Households that have at least one member of the workforce are considered worker households.

[3] An income of approximately 221% of AMI, is estimated to be needed to afford the median priced home in Menlo Park. The median priced home in Menlo Park is $2.35 million based on home sales from December 2019 through December 2020 from real estate data service provider CoreLogic. Estimates assume a down payment of 30% based on the median down payment for home purchases with a mortgage in Menlo Park estimated from CoreLogic data during this period, 35% of income spent on housing, and a mortgage interest rate of 3.1% based on the average 30-year fixed mortgage rate from January through December 2020 from Freddie Mac Primary Mortgage Market Survey.

households with incomes that exceed 150% AMI and includes all households not included within one of the other income categories.

The analysis uses national data on worker occupations by industry paired with local compensation data applicable to San Mateo County. Worker occupations are representative of office tenants in the technology sector[4] as well as building services such as maintenance and janitorial. An office tenant in the technology sector is assumed given the Project objective to provide office space that meets the needs of technology tenants and because Facebook occupies the existing buildings on the Project site. Table 1-3 presents the results of the analysis of the number of employee households at each housing affordability level who would require housing within commuting distance of Menlo Park.

Table 1-3. Estimated Total Housing Needs Within Commuting Distance

	Total	Percent
Extremely Low Income	24	2.3%
Very Low Income	78	7.5%
Low Income	215	20.6%
Moderate Income	185	17.7%
Subtotal: 0% to 120% AMI	502	48.0%
Above Moderate Income	210	20.1%
Subtotal: 0% to 150% AMI	712	68.1%
Over 150% AMI	334	31.9%
Total Employee Households	**1,046**	100.0%

Of the 1,046 total employee households, approximately 2.3% of households are estimated to fall into the Extremely Low Income tier (under 30% AMI), 7.5% into the Very Low Income tier (30% to 50% AMI), 20.6% into the Low Income tier (50% to 80% AMI) and 17.7% into the Moderate Income tier (80% to 120% AMI). Combined, 502 units of need are projected for Extremely Low, Very Low, Low and Moderate Income households. Because the AMI for a family of four is $149,600, families of four earning 120% of AMI would earn $179,500 per year. Therefore, four-person households earning $179,500 per year or less will be included in one of the Extremely Low, Very Low, Low, or Moderate-Income categories based on the most recent income criteria available from the California Department of Housing and Community Development (HCD)[5]. Many of the workers within the technology sector have compensation levels of $179,500 per year or below based on compensation data for San Mateo County summarized in Appendix A Table 2. These include maintenance, security, janitorial, office and administrative support,

[4] North American Industrial Classification System (NAICS) industry codes used in the analysis are: NAICS code 511200: Software Publishers; NAICS code: 519100 Other Information Services (the industry code applicable to Facebook); NAICS code: 541500 Computer Systems Design and Related Services; NAICS code 561700: Services to Buildings and Dwellings; and NAICS code 561600: Investigation and Security Services.

[5] See Table 3-1 for more information about the income criteria used in the analysis.

editors, graphic designers, computer and mathematical, financial, and others. Based on this compensation data it is estimated that approximately 48% of workers would fall into one of the income categories from 0% to 120% of AMI, primarily workers in households that do not have multiple earners, as is the case for approximately 43% of working households living in San Mateo County. Of these one-worker households, approximately one third consist of single-person households and two thirds have other non-working household members such as a partner and/or children[6]. See Table 3-5 for more information regarding the distribution of worker household sizes by number of workers in the household.

Approximately 52% of all employee households are estimated to exceed 120% of AMI, which reflects the generally higher compensation levels characteristic of employees working in the technology sector and the fact that over half are estimated to live in households with multiple earners. For employee households earning over 120% of median, an estimated 210 units of need are estimated in the Above Moderate Income category (120% to 150% AMI), representing approximately 20.1% of the total, and 334 units of need are estimated in the Over 150% AMI tier. The Over 150% AMI Income tier is estimated to be the largest income category representing approximately 31.9% of total housing need.

Menlo Park Share of Total Housing Need

According to the U.S. Census 2015-2019 American Community Survey (ACS), 5.9% of those who currently work in the City of Menlo Park also live in the City of Menlo Park. This has declined since the 2000 Census which showed that 7.2% of those who work in Menlo Park live in the City. This share is low compared to most other cities in the Bay Area,[7] attributable to a range of factors such as affordability constraints that already limit workers' ability to find housing within the City and the large number of jobs in Menlo Park relative to the size of the housing stock. Another contributing factor is the location and boundary configuration of the City making many other jurisdictions within a short commute distance.

The Project site is located within the existing Commonwealth Corporate Center property, which is currently leased to Facebook. The share of Facebook workers at the company's Menlo Park campuses and leased offices who also live in Menlo Park is approximately 7.4%[8], slightly higher than the overall average of 5.9% of Menlo Park workers that both live and work in the City per the U.S. Census. Many factors influence how people select where to live, including, but not limited to, weather, family, community and cultural factors, housing affordability, quality of schools, access to employment and unit type. The reasons for a somewhat higher than average share of Facebook workers living in Menlo Park are not known; however, one possible contributing factor may be Facebook's corporate housing program in which apartments within

[6] KMA analysis of 2015 to 2019 U.S. Census American Community Survey data for San Mateo County.

[7] See Appendix A Table 5 for comparable information for other cities.

[8] Based on data provided by Facebook applicable to employees at its existing Menlo Park facilities as of March 2020.

three newer apartment properties in Menlo Park, including 777 Hamilton, Elan Menlo and Anton Menlo near the Facebook campuses, are made available to employees as temporary housing[9].

To estimate Menlo Park's share of the total housing need from the proposed Project, the analysis considers three scenarios, a lower estimate, a higher estimate, and a goal-based estimate of the percent of workers likely to seek and find housing within the City:

1. ***Lower Estimate of Commute Share at 5.9%*** *(based on City-wide average):* The lower estimate is based on U.S. Census data, which indicates that the existing City-wide average share of Menlo Park's workforce that lives in the City is approximately 5.9%. As the specific tenant for the proposed Project has not been determined, the City-wide average commute pattern provides a benchmark for the share of workers likely to live in Menlo Park.

2. ***Higher Estimate of Commute Share at 7.4%*** *(based on Facebook data):* The higher estimate reflects commute patterns for Facebook, which currently leases the two existing buildings at the Project site. Using this approach, approximately 7.4% of workers at the proposed Project are estimated to reside within the City of Menlo Park.

3. ***Goal-Based Commute Share Estimate at 20%*** *(based on 2000 Nexus Study)*: The City Council has expressed an interest in improving the jobs housing balance and obtaining data to inform the goal of increasing the number of workers who live and work in Menlo Park. Therefore, for informational purposes, the report provides an additional goal-based estimate of housing units in Menlo Park based on a 20% commute share, which was a goal identified in the City's 2000 Commercial Linkage Fee Nexus Study. The possibility that availability and affordability of housing have contributed to a downward trend in Menlo Park's commute share is a primary reason for including this additional goal-based commute share estimate.

The percent of workers residing locally with the lower, higher, and goal-based commute share estimates were applied to the total housing need to calculate the number of workers in the proposed Project that are estimated to seek and find housing in Menlo Park (e.g., 1,046 total demand X 5.9% = 62 units in Menlo Park). By this method, Menlo Park's share of the total housing need ranges from 62 units with the lower estimate, 77 units with the higher estimate and 209 units with the goal-based commute share estimate. Table 1-4, below, summarizes the estimated number of new workers in the proposed Project who would seek and find housing in Menlo Park by income tier.

[9] Per Synergy Housing website accessed on 3/14/2021 at https://www.synergyhousing.com/facebook-housing/#/

Table 1-4. Estimated Menlo Park Share of Total Housing Needs*			
	Lower Estimate of Commute Share (5.9%)	**Higher Estimate of Commute Share (7.4%)**	**Goal-Based Commute Share Estimate (20%)**
Extremely Low Income	1	2	5
Very Low Income	5	6	15
Low Income	13	16	43
Moderate Income	11	13	37
Subtotal: 0% to 120% AMI	30	37	100
Above Moderate Income	12	15	42
Subtotal: 0% to 150% AMI	42	52	142
Over 150% AMI	20	25	67
Total Employee Households	**62**	**77**	**209**

* Assumes distribution by income consistent with total housing need per Table 1-3.

With the lower estimate, of the 62 units of need projected, 30 units are estimated to fall within the Extremely Low, Very Low, Low and Moderate Income tiers and 12 units are projected for the Above Moderate tier. The remaining 20 units are projected within the Over 150% AMI tier.

With the higher estimate, of the 77 units of need projected, 37 units fall within the affordable income tiers through 120% of AMI and an additional 15 units are projected in the Above Moderate tier, through 150% of AMI. The remaining 25 units are projected within the Over 150% AMI tier.

With the goal-based commute share estimate, of the 209 units of need projected, 100 units fall within the affordable income tiers through 120% of AMI and an additional 42 units are projected in the Above Moderate tier, through 150% of AMI. The remaining 67 units are projected within the Over 150% AMI tier.

The percentage factors used to estimate the Menlo Park share of housing need are applied uniformly across each of the income tiers. The actual distribution by income tier in Menlo Park would likely vary from these estimates based on factors such as the existing housing stock, limited availability of affordable units, and the future production of market rate and affordable units in Menlo Park.

The projected Menlo Park share of the total housing need of between of 62 and 209 units is well within the 2,946 total units proposed to be assigned to Menlo Park under the Draft Regional Housing Needs Allocation (RHNA) Plan for the upcoming 2023 to 2031 planning period[10]. The projected Menlo Park share is also well within the 655 total units assigned to Menlo Park for the current RHNA cycle covering the 2014 to 2023 planning period; the City had already issued

[10] Draft Regional Housing Needs Allocation (RHNA) Plan: San Francisco Bay Area, 2023-2031, May 2021. Association of Bay Area Governments.

permits for 1,416 units as of 2020, which is 761 units more than the RHNA target, and had met approximately 47% of production targets for Very Low, Low, and Moderate Income, with 239 units permitted of the 505-unit total RHNA allocation for these three income categories[11]. In addition, several housing developments are currently going through the entitlement process or were recently approved in the vicinity of the proposed Project including the Menlo Uptown Project with 483 units, Menlo Portal Project with 335 units, 111 Independence Drive with 105 units, Menlo Flats with 158 units, 123 Independence with 383 units, and Willow Village with 1,729 units, for a combined total of over 3,000 new units in the vicinity. All the proposed new residential development projects include on-site Below Market Rate (BMR) units in compliance with the City's 15% BMR affordable housing requirement. Therefore, it is anticipated that the additional housing need of 62 to 209 units in Menlo Park would be absorbed through future housing construction in the City.

Displacement Analysis

Displacement occurs when housing or neighborhood conditions force existing residents to move or households feel like their move is involuntary. Displacement can be caused by a range of physical, economic and social factors including but not limited to foreclosure, condominium conversion, building deterioration or condemnation, increased taxes, natural disasters, eminent domain and increases in housing costs[12, 13, 14]. The HNA is focused on economic drivers of displacement, specifically the potential for the proposed Project to affect the local housing market and contribute to increasing housing costs, although these economic drivers may also be associated with physical or social factors.

While displacement is not an impact for the purposes of the California Environmental Quality Act (CEQA), displacement has become an increasing regional concern in the Bay Area. A map produced by the Urban Displacement Project, a research and action initiative of UC Berkeley that aims to understand and describe the nature of gentrification and displacement, identifies numerous communities as undergoing displacement or at risk of displacement that extend from San Francisco down the Peninsula to many neighborhoods in San Jose and the East Bay.

The displacement analysis addresses the potential for the proposed Project to contribute to displacement of existing residents in two nearby communities, East Palo Alto and Belle Haven. These communities have risk factors for displacement based on their relatively lower-income existing population that includes a high percentage of households who spend 35% or more of

[11] Menlo Park 2020 Housing Element Annual Progress Report.

[12] Center for Community Innovation (2020). Investment and Disinvestment as Neighbors, A Study of Baseline Housing Conditions in the Bay Area Peninsula.

[13] Zuk, M. et. al. 2017. Gentrification, Displacement, and the Role of Public Investment. Journal of Planning Literature. Journal of Planning Literature 1-14.

[14] Bradshaw, K. (2019). Uneven Ground: How unequal land use harms communities in southern San Mateo County. Palo Alto Online. https://paloaltoonline.atavist.com/uneven-ground.

their income on housing. They are identified by the Urban Displacement Project[15] as experiencing on-going gentrification and/or displacement or being at risk of displacement. Another recent study of baseline housing conditions in Belle Haven, East Palo Alto, and North Fair Oaks neighborhood, prepared by the UC Berkeley Center for Community Innovation and its Y-PLAN initiative, identified similar conclusions[16].

The cost of housing in East Palo Alto and Belle Haven has been increasing rapidly, consistent with trends for the County and the greater Bay Area, which contribute to displacement pressures. These increases in housing costs partly reflect recovery from a decrease in housing prices during the housing market downturn and foreclosure crises during roughly the 2007 to 2012 period. However, during the subsequent economic expansion, the housing market moved well past its prior peak in 2006, although rental housing market conditions have weakened somewhat over the past year due to the economic recession caused by the global pandemic. The displacement analysis component of the HNA evaluates the potential for the proposed Project to be a contributing factor to displacement pressures in East Palo Alto and Belle Haven by evaluating:

1) Housing demand in the two communities from Project workers; and
2) Potential indirect influence on housing prices and rents.

Potential displacement due to increases in housing costs is not required to be analyzed under the California Environmental Quality Act (CEQA) as displacement is a socio-economic consideration, not a physical change to the environment.

Home Price Trends

Home prices in East Palo Alto and Belle Haven have generally tracked broader trends in the County housing market, which has experienced significant escalation in prices. During the housing market downturn from 2007 to 2012, prices in the two communities fell further than the County overall, but have outpaced the County in the subsequent recovery. This pattern likely reflects the impacts of the foreclosure crises during the housing market downturn, which is reported to have heavily impacted East Palo Alto[17]. Over the entire period from 2000 to 2020 shown in the chart below, escalation in housing prices in East Palo Alto matches that of the County while Belle Haven outpaced the County by an annualized rate of approximately 1% per year. Median home prices per square foot (PSF) in 2020 are now nearly 3 times what they were in 2000 in both East Palo Alto and the County overall and are more than 3 times the 2000 price level in Belle Haven.

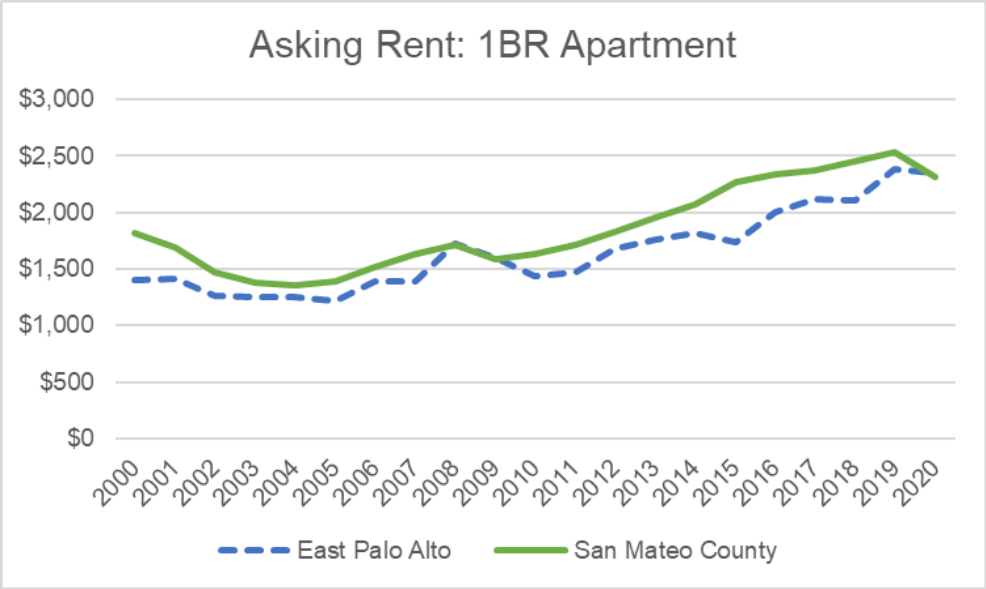
Source: CoreLogic

Rental Market Trends

Trends in asking rents for available apartments in East Palo Alto were compared to the San Mateo County average for the period from 2000 to 2020. Belle Haven is not presented in the chart due to limited rental market data[18]. Rents increased significantly over the time period consistent with regional trends. According to CoStar, a commercial provider of multifamily market data, asking rents in East Palo Alto have increased over the period by approximately 70% versus 30% for the County. As indicated in the chart below, rents in East Palo Alto are now similar to the County average.

[18] Only approximately 160 (20%) of the 795-unit Belle Haven rental housing stock built before 2017 per the U.S. Census is covered by the historic CoStar data used in the trends analysis. Most rental housing has historically consisted of single-family or small multifamily structures with fewer than five units which is less likely to report rents regularly for purposes of the commercially available data source used in this analysis. Since 2017, two new apartment projects have added approximately 340 units to the rental housing stock, but rents of new apartments tend to command a premium relative to the existing supply and cannot be used for purposes of historic trends. Appendix C Table 13 provides the historic data that is available.



Source: CoStar.

Direct Housing Demand from Project

The potential for the proposed Project to directly influence on housing market conditions in East Palo Alto and Belle Haven is evaluated based on the share of overall housing demand that proposed Project employees are estimated to represent. Based on the two commute share data sources described above, approximately 0.5% to 3% of Project workers are projected to live in East Palo Alto and approximately 0.4% to 0.7% are projected to live in Belle Haven. The goal-based commute share scenario described above is not included for purposes of estimating direct housing demand in East Palo Alto and Belle Haven because it reflects a citywide goal for Menlo Park that is not specific to Belle Haven or East Palo Alto. Application of the two commute share data sources results in an estimated demand for five to 33 units in East Palo Alto and four to eight units in Belle Haven. This level of demand represents 0.06% to 0.4% of the existing housing stock in East Palo Alto and 0.2% to 0.5% in Belle Haven and would represent a demand for approximately 1.3% to 5.7% of the units estimated to come available through normal turnover on a one-time basis at the time of initial lease up. Since this level of demand would represent a small fraction of the local housing stock and a small share of units available through regular turnover, the proposed Project is anticipated to represent a minor influence on the overall local housing market.

Indirect Housing Market Effects

Job growth, especially high-income job growth, exerts upward pressure on prices and rents throughout the region. Potential indirect housing market effects of the proposed Project are analyzed by using a simple linear regression analysis to identify how real estate conditions in San Mateo County and job growth have been correlated over the period from 2000 through

2019.[19] The regression analysis findings are then applied to the proposed Project's 1,996 new jobs to estimate the potential range of effects on the local housing market. Key findings of this analysis are that:

- Rents are highly correlated with job growth; and
- Home prices do correlate with job growth, but the correlation is weaker than for rental housing. Other factors such as interest rates, credit availability, and other economic trends appear to have been more influential for home prices over the 2000 to 2019 period.

The potential influence of the proposed Project on housing costs for newly vacated units is estimated to range from a 0.14% increase at the lower end up to a 1.39% increase at the upper end. These findings reflect a range of approaches to the regression analysis designed to provide an estimate of the upper and lower bounds of potential market influence from the proposed Project within East Palo Alto and Belle Haven.

Table 1-5. Analysis of Indirect Housing Market Effects
Potential Percentage Influence on Rents and Sales Prices

	Lower Estimate (3-County Analysis)	**Upper Estimate** (Single County Analysis)
Correlation with All Job Growth		
Rents	0.14%	0.79%
Sales Prices	0.11%	0.69%
Correlation with High-Wage Job Growth		
[to capture potential multiplier effect]		
Rents	0.22%	1.39%
Sales Prices	*relationship not statistically significant*	1.16%

The upper estimate of potential influence on housing costs is based on a "single-county" regression analysis which attributes variation in local rents and home prices to job growth within San Mateo County. The reality is that the San Mateo County economy and housing market are highly integrated with that of the larger Bay Area. Approximately 38% of workers who live in San Mateo County work in San Francisco or Santa Clara counties. Therefore, the upper estimate that attributes changes only to San Mateo County job growth likely overstates the impacts.

The lower estimate is based on a "three-county" analysis that includes San Francisco and Santa Clara counties. A combined 95% of all workers who live in San Mateo work in one of the three

[19] Selection of 2000 as the earliest date analyzed was based on availability of rental data from CoStar for 2000 onward. The analysis period ends in 2019 because the Quarterly Census of Employment and Wages has yet to publish employment data for the second half of 2020.

selected counties as shown in Table 5-4. Most San Mateo County workers either work within the County or commute to San Francisco or Santa Clara counties. Job growth in these three counties was anticipated to be most influential on local housing prices and rents. Alameda County was not included because just 3% of workers that live in San Mateo County commute east to jobs in Alameda County. Despite its proximity and accessibility, job growth occurring in Alameda County was assumed to be less influential on the housing market in San Mateo County because few San Mateo County residents commute to jobs located in Alameda County. The three-county analysis may understate the influence of local job growth and overstate the influence of job growth in other counties by treating jobs added anywhere within the three counties as having an equal influence on housing costs in San Mateo County. Since the majority of San Mateo County residents work within the County (57%), job growth within San Mateo County likely has somewhat more of an influence than job growth in Santa Clara County or San Francisco.

The analysis tests how housing costs are correlated with all categories of job growth as well as a separate test of the correlation with high-wage job growth. Technology, bio-tech, and other high-wage sectors help to drive growth in other sectors of the local economy such as retail, food, and transportation supported by spending by these businesses and their workforce. Employment and economic growth generated through subsequent business and employee spending is commonly referred to as the "multiplier effect". The high-wage jobs analysis is an approach to capturing potential "multiplier effects." To the extent multiplier effects associated with the high-wage jobs are an influence on local home prices and rents, the effects would be captured in the correlation between high-wage job growth and housing costs. Consistent with this, estimated market effects of the proposed Project are higher for the scenario specifically analyzing high-wage jobs. The high-wage analysis assumes, but does not prove, that high wage jobs are the primary influence on the housing market and that lower wage jobs either have less of an influence on the market or are an indirect result of the high-wage jobs by virtue of the associated multiplier effects.

The analysis of indirect housing market effects has the potential to overstate impacts by not distinguishing the effects of other important contributing factors that are correlated with job growth. Following are examples of factors that are correlated with job growth for which the effects may be ascribed to job growth, overstating the influence of job growth on the housing market:

- *Rising Incomes* – Rising incomes of existing Bay Area households, especially those of higher-income households, enable these households to compete for limited housing supply in the most desirable locations in the Bay Area, contributing to rising housing costs.

- *New Units Coming Online* – Some communities in San Mateo County, such as Redwood City, have seen construction of a significant number of new rental units that offer superior amenities and command premium rental rates. Inclusion of these new units

could bring up averages even if rents for existing units are not increasing, or not increasing at the same pace. Therefore, one contributing factor to rising rents within the County overall may simply be the addition of newer units that can command higher rents.

For rental housing, the midpoint of the upper and lower percentage impact estimates presented in Table 1-5 are 0.46% based on all jobs and 0.8% based on high-wage jobs. With for-sale housing, the midpoints are 0.4% based on all jobs and 0.58% based on high-wage jobs[20]. The percentage findings presented in Table 1-5 may be converted to a potential dollar influence on housing costs. Multiplying the percentages applicable to rental housing by the average effective East Palo Alto rent of $2,791 per month (per CoStar for the year 2020), yields an estimated potential impact in the range of $13 to $22. For for-sale housing, a comparable analysis applying the percentages to current median home prices and mortgage rates translates to a potential monthly mortgage payment increase for potential purchasers of homes available for sale in East Palo Alto and Belle Haven of between $11 and $20 per month.

Menlo Park has already issued building permits for 1,416 housing units during the current RHNA planning cycle for 2015 to 2023 and East Palo Alto has issued building permits for 222 units for a combined 1,638 units[21]. Menlo Park has a proposed RHNA allocation for the 2023 to 2031 planning period of 2,946 units and East Palo Alto has a proposed allocation of 829 units for a combined 3,775 units. Menlo Park has over 3,000 additional housing units in the development pipeline in the vicinity of the proposed Project while East Palo Alto has a pipeline of nearly 1,000 new units,[22] resulting in a combined total of approximately 4,000 pipeline units in Menlo Park and East Palo Alto, including approximately 900 below market rate (BMR) affordable units[23]. Estimates of potential impact on rents and home prices are before considering any offsetting effects of new housing construction that is expected to absorb additional housing demand and moderate or offset the potential effects that are estimated.

[20] For purposes of calculating the mid-point in the high-wage scenario, the insignificant result with the Three-County analysis is treated as zero.

[21] 2020 Housing Element Annual Progress Reports for Menlo Park and East Palo Alto.

[22] October 6, 2020 City of East Palo Alto Staff Report to the City Council RE: Follow-Up on Study Session Related to the Affordable Housing Component of the Euclid Improvements (Woodland Park) Project, Attachment 1. East Palo Alto Housing Breakdown, which indicates approved, planned, proposed or under construction housing units totaling 969 units, not including rebuilt units.

[23] Pipeline total of 900-unit BMR units summarized from prior HNA's prepared by KMA for projects in the Bayfront Area, applicant proposals for 123 Independence and Willow Village, the City of Menlo Park summary of pipeline projects in the Bayfront Area and the staff report referenced in the prior footnote with respect to East Palo Alto pipeline projects.

Potential for Project to Contribute to Displacement in East Palo Alto and Belle Haven

The proposed Project would not be a significant contributor to displacement in East Palo Alto or Belle Haven. Even if the potential impact on rents and home prices cited above were realized, it would be anticipated to have only a minor influence on residential location decisions. The proposed Project adds an estimated five to 33 units of housing demand in East Palo Alto and four to eight units in Belle Haven. Since this represents a minor level of demand that could be absorbed through normal market turnover, it is anticipated to represent a minor influence on the overall local housing market. Additionally, this new demand may be absorbed through recent and planned additions to housing supply in Menlo Park and East Palo Alto, which have a combined development pipeline of approximately 4,000 housing units. The proposed Project would also contribute to creation of additional Extremely Low, Very Low and Low Income housing units through payment of approximately $4.9 million[24] in affordable housing impact fees. Therefore, the proposed Project would not be a significant contributor to substantial pre-existing displacement pressures in East Palo Alto and Belle Haven.

[24] Estimate based on FY 20-21 fee level of $19.61 per square foot applied to the net square footage added by the proposed Project.

2.0 INTRODUCTION

This Housing Needs Assessment (HNA) provides an analysis of the proposed Project's potential impact on the need for housing in the City of Menlo Park and evaluates its potential to contribute to displacement of existing residents of the City of East Palo Alto (East Palo Alto) and the Belle Haven neighborhood of Menlo Park (Belle Haven), two proximate communities identified as having risk factors for displacement. The report has been prepared by Keyser Marston Associates (KMA) for the City of Menlo Park under a subcontract agreement with ICF International, the prime consultant responsible for preparation of the Environmental Impact Report (EIR).

In 2016, the City updated its General Plan, specifically the land use and circulation elements, and its Zoning Ordinance (commonly referred to as ConnectMenlo). The City completed and certified a program level EIR for ConnectMenlo, which determined that there would be a less than significant impact on population and housing, except cumulative impacts projected to be reduced to less than significant following an update of ABAG regional forecasts. Pursuant to the terms of the 2017 City of East Palo Alto v. City of Menlo Park Settlement Agreement, which settled the lawsuit regarding the ConnectMenlo EIR, preparation of this HNA is required. This HNA has been prepared consistent with the terms of that Settlement Agreement.

The following major housing-related topics are addressed in this HNA:

1) Demand for housing within commuting distance of Menlo Park generated by on-site employment at the proposed Project;
2) Estimated geographic distribution of housing need by jurisdiction; and
3) Potential for the proposed Project to contribute to rising housing costs and displacement of existing residents in East Palo Alto and Belle Haven, including, to the extent possible, as a result of indirect and induced employment or "multiplier effects."

These housing-related impacts are not required to be analyzed under the California Environmental Quality Act (CEQA) since economic or social changes are not considered significant effects on the environment. Nevertheless, this information is required by the Settlement Agreement and may be of interest to decision-makers and/or the public in evaluating the merits of the proposed Project.

Project Description and Total Employment Increase

The Sobrato Organization (Project Sponsor) is proposing to construct a new 249,500 gross square foot (sf) office building and a 1,336-space parking garage at 162 and 164 Jefferson Drive in Menlo Park. The Project site totals approximately 13.3 acres. Two existing office buildings are located on the Project site and are proposed to remain. The existing buildings are currently leased to Facebook and have a combined 259,920 gross square feet of floor area. According to the Draft EIR Project Description for the proposed Project, upon completion and

lease-up, approximately 1,996 employees are estimated to occupy the proposed new Commonwealth Building 3.

Table 2-1. Project Summary		
Existing Office Buildings (to remain)	259,920	gsf
Proposed Commonwealth Building 3	249,500	gsf
Total building area (existing + new)	509,420	gsf
Added Employment at Commonwealth Building 3	1,996	Employees

Note: Building area excludes parking garage

Report Organization

This report is organized into five sections and three appendices:

- Section 1.0 provides an Executive Summary;
- Section 2.0 provides an Introduction;
- Section 3.0 presents the analysis of housing demand by affordability level, step by step including a documentation of sources;
- Section 4.0 presents information on total worker households and the share that currently lives in Menlo Park;
- Section 5.0 contains the analysis of the potential for the Project to contribute to displacement of existing residents in East Palo Alto and Belle Haven;
- Appendix A provides supporting tables on worker occupation and incomes;
- Appendix B includes a summary of U.S. Census data for East Palo Alto and Belle Haven; and
- Appendix C provides supporting technical tables for the displacement analysis.

Data Sources and Qualifications

This report has been prepared using the best and most recent data available at the time the analyses were prepared. Local data was used wherever possible. Other sources, such as the U.S. Census Bureau[25], U.S. Bureau of Labor Statistics, and the California Employment

[25] Much of the U.S. Census data utilized in this report is from the 2015-2019 American Community Survey (ACS). Data from the 2020 Decennial Census is partially available as of the date of preparation but data relevant to the HNA is yet to be released.

Development Department were used extensively. While KMA believes all sources utilized are sufficiently accurate for the purposes of the analysis, KMA cannot guarantee their accuracy. KMA assumes no liability for information from these or other sources.

As Facebook occupies the two existing buildings on the Project site, data specific to Facebook is referenced for purposes of some analyses in this report as representative of the types of tenants that are likely to lease the proposed Project. However, it should be noted that information on the initial tenant(s) for the proposed Project is not available and, even if initial tenant(s) were known, the space may be leased to multiple tenants over time.

3.0 THE JOBS HOUSING ANALYSIS

This section summarizes the analysis of housing needs associated with on-site employment attributable to the proposed Project. A brief overview of the methodology and structure of the analysis is provided, followed by a walk-through of the analysis steps to the output and conclusions.

Methodology

To estimate the linkages between added employment, worker households, and housing needs by affordability levels, KMA employed the same methodology used for nexus studies in support of jobs housing linkage programs. The KMA jobs housing nexus methodology was developed for analyses supporting housing linkage programs, such as Menlo Park's. The methodology has also been refined and modified for use in quantifying the housing impacts of specific large projects. The analysis inputs are all local data, to the extent possible, and are fully documented.

The basic methodology is to establish the income or compensation of employees, distribute employees into households of various size and establish household income using ratios derived from U.S. Census data. Estimated household income is then compared to affordability levels established by the California Housing and Community Development Department (HCD) to determine the number of employee households by income.

HCD Income Definitions

The income levels or tiers used in the analysis are expressed in relation to local Area Median Income (AMI). For example, Extremely Low Income is defined as households earning up to 30% of AMI. The AMI for each county or group of counties is issued annually by the U.S. Department of Housing and Urban Development (HUD), and released by the California Department of Housing and Community Development (HCD). Most housing programs and policies in California and its jurisdictions utilize these income definitions. The City of Menlo Park is located in San Mateo County and is covered by and utilizes the AMI information provided for San Mateo County.

Per HCD and statewide programs, the analysis includes households earning less than 120% AMI. In addition, an Above Moderate Income tier covering 120% to 150% AMI is presented in this analysis because this income tier also faces affordable housing challenges in Menlo Park and the greater Bay Area. In fact, due to the high cost of housing in Menlo Park, housing affordability challenges even extend to households earning more than 150% of AMI[26], especially

[26] An income of approximately 221% of AMI, is estimated to be needed to afford the median priced home in Menlo Park. The median priced home in Menlo Park is $2.35 million based on home sales from December 2019 through December 2020 from real estate data service provider CoreLogic. Estimates assume a down payment of 30% based on the median down payment for home purchases with a mortgage in Menlo Park estimated from CoreLogic data during this period, 35% of income spent on housing, and a mortgage interest rate of 3.1% based on the average 30-year fixed mortgage rate from January through December 2020 from Freddie Mac Primary Mortgage Market Survey.

in the for-sale housing market. As with HNAs prepared for prior projects in Menlo Park, the Above Moderate Income tier was included to provide decision makers more information on the housing needs of a broad spectrum of housing affordability levels.

In summary, the income tiers used in the analysis are:

- Extremely Low Income – households up to 30% of AMI;
- Very Low Income – households over 30% up to 50% of AMI;
- Low Income – households over 50% up to 80% of AMI;
- Moderate Income – households over 80% up to 120% of AMI;
- Above Moderate Income – households over 120% up to 150% of AMI; and
- Over 150% of AMI – households above 150% of AMI.

The 2021 income limits for San Mateo County by household size are presented below in Table 3-1.

Table 3-1. 2021 Household Income Limits

		Income Limit by Household Size					
Income Category	**Percent of AMI**	1-person	2-person	3-person	4-person	5-person	6-person
Extremely Low	30% of AMI	$38,400	$43,850	$49,350	$54,800	$59,200	$63,600
Very Low Income	50% of AMI	$63,950	$73,100	$82,250	$91,350	$98,700	$106,000
Low Income	80% of AMI	$102,450	$117,100	$131,750	$146,350	$158,100	$169,800
Moderate Income	120% of AMI	$125,650	$143,600	$161,550	$179,500	$193,850	$208,200
Above Moderate	150% of AMI	$157,050	$179,550	$202,000	$224,400	$242,350	$260,350
Median Income	100% of AMI	$104,700	$119,700	$134,650	$149,600	$161,550	$173,550

AMI = Area Median Income
Source: California Department of Housing and Community Development

Analysis Step 1 – Estimate of Added Employment

An estimated 1,996 on-site employees would be added by the proposed Project according to the Draft EIR Project Description. The employment estimate reflects an employment density of approximately 1 employee for each 125 square feet of building area, which provides a conservative estimate of employment that is double a typical professional office employment density of 250 square feet per employee. The employment estimate also reflects a higher density of employment than has been estimated for Facebook's offices, which has a substantial footprint of properties and leased buildings in the area including the two existing buildings on the Project site. The Draft EIR for the Facebook Campus Expansion Project reflects an average of approximately 150 square feet per employee and the draft project description for Facebook's proposed Willow Village Master Plan Project reflects an average of approximately 180 square feet per employee within the office component of that project. The employment density assumption for the proposed Project results in 100% more employees than a typical professional office density, 20% more employees than the Facebook Campus Expansion

Project employment density and 44% more employees than current estimates for office space within Facebook's proposed Willow Village campus.

Table 3-2 provides a breakdown of the proposed Project's 1,996 employees between the direct employees of the office tenant(s) and building services staff such as maintenance, janitorial, and security. The number of building services staff is estimated at 25 based on staffing ratios derived from International Facility Management Association (IFMA) data based on a national survey of facility management professionals. Building services workers are evaluated separately because these services are often provided by separate contractors and are therefore not fully reflected in the occupation profile for the industries used in Step 3, below.

Table 3-2. Project Employment

	Net Added Building Area	SF Per Employee	Employees
Office Tenant	249,500	127	1,971
Building Services [(1)]	249,500	10,000	25
Total Added Employment	249,500	125	**1,996**

Sources: Commonwealth Building 3 Project Draft EIR Project Description. International Facility Management Association (IFMA), Operations and Maintenance Benchmarks Research Report #33 for staffing ratio for building services.
[(1)] Includes facility staff such as maintenance, janitorial, grounds and security not directly employed by the tenant. Staffing ratio of 1 per 10,000 square feet estimated from IFMA data on number of facilities staff for buildings in the 250,000-500,000 and 500,000 to 1,000,000 square feet size categories.

Step 2 – Adjustment from Employees to Employee Households

Table 3-3 summarizes Step 2 to convert the number of employees to the number of employee households that will work at or in the building type being analyzed. This step recognizes that there is, on average, more than one worker per household, and thus the number of housing units in demand for new workers must be reduced. The workers per worker household ratio eliminates from the equation all non-working households, such as households comprised of retired persons or students.

KMA derived the worker per worker household figure from U.S Census American Community Survey (ACS) data. The ACS data provide estimates of the total number of workers in San Mateo County (405,474), and the total number of households with at least one working household member (212,545). The ratio between these two figures for San Mateo County is 1.91 workers per worker household. The ratio for households that have at least one working member is used because the new workers added by the proposed Project will live in households of this type. The San Mateo County figure is used in the analysis because workers would be more similar to the County as a whole than the smaller City of Menlo Park profile.

Table 3-3. Estimated Number of Employee Households			
	Office Tenant(s)	Building Services	Total Project
Number of Employees	1,971	25	1,996
Ratio: Workers Per Worker Household (1)	1.91	1.91	1.91
Number of Households	1,033	13	1,046

(1) Derived from 2015-2019 U.S. Census American Community Survey data for San Mateo County

The adjustment from the number of employees to the number of households in Table 3-3 recognizes that if an added employee lives in a household with one or more other workers (i.e., a multiple-earner household), that added employee is not responsible for creating demand for an entire housing unit, only a portion of a unit. There is no implicit assumption that Project employees would live with one another. Multiple-earner households are a factor that must be recognized, irrespective of where the other working member(s) of the household is employed. Were the adjustment for multiple-earner households to be limited to the special case of Project employees living with one another in the same unit, housing needs of Project employees would be overstated by allotting an entire housing unit to one worker, even if that worker shares a housing unit with another worker who is employed elsewhere. The following two examples provide further illustrations as to why an adjustment to account for multiple-earner households is necessary regardless of where the other working member(s) of the household is employed:

- Example #1 – Consider a worker added by the proposed Project who lives with a worker who has taken a job within a separate, newly developed, building. If it were assumed that each new worker (added by two separate developments) would require their own housing unit, the total housing demand would be overstated as a result of double counting the one unit that is shared by the two workers.

- Example #2 – Consider two workers added by the proposed Project as well as two workers at long-established local employers. Say the two workers at long-established employers live with one another and the two workers at the proposed Project live with one another. There would be a need for two housing units in total. Now, instead say that each of the two workers in the proposed Project are in separate units, each with one of the workers at a long-established employer. There is still a need for two housing units in total. There is no difference in housing demand whether the two Project workers live with one another or live separately with a worker who holds a job elsewhere.

Step 3 – Occupational Distribution of Employees

Occupational distribution for employees added within the proposed Project is based on data from a national survey by the Bureau of Labor Statistics (BLS). Occupation refers to job description, such as management, sales clerk, cashier, etc. The survey provides the occupational distribution for various employment “industries.” The following industry categories were identified to be representative for the proposed Project:

- Office Tenants – Based on the project objective to "provide office space that meets the needs of today and tomorrow's technology tenants, including large floor plates that allow flexible floor plans," and the fact that Facebook leases the existing buildings on the Project site, office tenants are assumed to be primarily tech-sector tenants. NAICS code 511200, Software Publishers, NAICS code 519100, Other Information Services, the industry code applicable to Facebook, and NAICS code 541500, Computer Systems Design and Related Services, are used as representative of the types of high-tech office tenants likely to occupy the proposed Project.

- Building Services – NAICS 561700, Services to Buildings and Dwellings, and NAICS 561600, Investigation and Security Services, were used to represent occupations associated with janitorial, maintenance, security and other building services.

Protective service and building and grounds cleaning and maintenance occupations were removed from the occupation profile of the office tenants because these workers are separately accounted for.

National statistics are used because local data are not generally available, and for many industries, national data are a good reflection of the occupational distribution that can be expected locally.

Table 3-4 provides a summary of worker occupations by major category. Appendix A, Tables 2 and 4 provide further breakdown of worker occupations by Standard Occupational Classification (SOC) System codes.

Table 3-4. Worker Occupations

Occupation Category	Office Tenants		Building Services		Combined Total	
	percent	*number*	*percent*	*number*	*percent*	*number*
Management Occupations	12.9%	132.8	2%	0.3	13%	133.1
Business and Financial Operations	12.3%	127.3	1%	0.1	12%	127.5
Computer and Mathematical	39.0%	403.2	0%	0.0	39%	403.2
Architecture and Engineering	1.0%	10.1	0%	0.0	1%	10.1

Installation, Maintenance, and Repair	0.5%	5.1	5%	0.6	1%	5.7
Production	0.2%	2.4	0%	0.0	0%	2.4
Transportation and Material Moving	0.2%	1.9	1%	0.1	0%	2.0
Totals	100.0%	1,033	100%	13	100%	1,046

Source: Bureau of Labor Statistics Occupational Employment Survey, 2019.
See Appendix A Tables 1-4 for more detailed breakdown of occupation categories.

Step 4 – Estimate of Employee Wage and Salary Distribution

The employee wage and salary distribution is based on the occupational distribution from Step 3 in combination with recent San Mateo County wage and salary information for each occupation from the California Employment Development Department (EDD) for the first quarter of 2020. In addition to the average compensation levels, the analysis also utilizes EDD data regarding the percentile distribution of wages within individual occupation categories in estimating the distribution of worker compensation levels. The data on employee wages and salaries utilized in the analysis is presented in Appendix Tables 2 and 4.

Step 5 – Household Size Distribution

In this step, the household size distribution of workers is estimated using U.S. Census 2015-2019 ACS data for San Mateo County. Data for the County is used since workers are more representative of the larger area in which workers live (the County) than the City of Menlo Park. In addition to the distribution in household sizes, the data also accounts for a range in the number of workers in households of various sizes. Table 3-5 indicates the percentage distribution utilized in the analysis.

Table 3-5. Percent of Households by Size and No. of Workers		
No. of Persons in Household	**No. of Workers in Household**	**Percent of Total Households**
1	1	14.7%
2	1	13.1%
	2	17.4%
3	1	7.3%
	2	10.1%
	3+	3.9%
4	1	4.9%
	2	8.9%
	3+	6.4%
5	1	1.9%
	2	3.4%
	3+	2.5%
6	1	1.3%
	2	2.4%
	3+	1.7%
Total		100.0%

Source: 2015-2019 American Community Survey data for San Mateo County.

Step 6 – Estimate of Households that meet HCD Size and Income Criteria

This step in the analysis calculates the number of employee households that fall into each income category for each size household. This calculation is based on the employee wage and salary income distribution (Step 4), the worker household distribution (Step 5) and the 2021 HCD income limits for San Mateo County, as described above.

Household incomes are estimated based upon ratios between individual employee income and household income derived from U.S. Census data shown in Table 3-6. The ratios adjust employee incomes upward even for households with only one worker in consideration of non-wage/salary income sources such as child support, disability, social security, investment income and others.

Table 3-6. Ratio of Household Income to Individual Worker Income			
Individual Worker Income	One Worker Households	Two Worker Households	Three or More Workers
$25,000 to $50,000	1.31	2.86	3.50
$50,000 to $75,000	1.15	2.21	2.55
$75,000 to $100,000	1.09	1.97	2.12
$100,000 to $150,000	1.06	1.77	1.84
$150,000 to $200,000	1.04	1.60	1.63
$200,000 to $250,000	1.04	1.54	1.54
$250,000 to $300,000	1.02	1.47	1.47
$300,000 to $500,000	1.04	1.32	1.32
$500,000 and above	1.02	1.25	1.25

Source: KMA analysis of 2015 to 2019 American Community Survey PUMS data for San Francisco Bay Area.

Household income estimates for workers within each detailed occupation category are summarized in Appendix A. A separate estimate is provided for households with one, two, and three or more workers. Household income estimates are compared to HCD income criteria summarized in Table 3-1 to estimate the percent of worker households that would fall into each income category. The comparison is made for each potential household size/number of workers combination. The result is multiplied by the percentage distribution of household sizes and number of workers per household from Step 5 to calculate the distribution of worker households by income.

Table 3-7 presents the estimated number of households in each income tier by worker occupation category. It represents the results of the analysis after completing Step 4 (employee compensation levels), Step 5 (household size distribution of worker households), and Step 6 which uses this information to calculate the number of households that fall into each income category.

Notes:

[1] See Appendix Tables 2 and 4 for additional information on Major Occupation Categories.

[2] Represents occupation categories which have a minor amount of employment and for which detailed compensation analysis was not completed. These worker households are assumed to have a similar income distribution to other employees in the same industry. See Appendix Tables 1 - 4 for information on major and detailed occupation categories identified for detailed compensation analysis.

Summary by Income Level

Table 3-8 presents the total projected housing demand within commuting distance of Menlo Park, or the number of housing units by affordability level where a member of the household works in the proposed Project.

Table 3-8. Estimated Number of Employee Households by Income

	Office Tenant(s)	Building Services	Total Project	Percent of Total
	from Table 3-7	*from Table 3-7*		
Extremely Low Income	21	3	24	2.3%
Very Low Income	76	2	78	7.5%
Low Income	209	6	215	20.6%
Moderate Income	183	2	185	17.7%
Subtotal: 0% to 120% AMI	489	13	502	48.0%
Above Moderate Income	210	0	210	20.1%
Subtotal: 0% to 150% AMI	699	13	712	68.1%
Over 150% AMI	334	0	334	31.9%
Total Employee Households	1,033	13	1,046	100%

The analysis finds that 1,046 new housing units somewhere in the region are required to meet the housing needs generated by the proposed Project. Of this new housing demand, 502 units are for households earning Extremely Low, Very Low, Low and Moderate incomes. Housing demand for building services employees is concentrated in the lower income tiers from 0% through 120% of AMI; however, these workers represent a relatively small share of the total estimated employment for the proposed Project. The Above Moderate income (120% to 150% of AMI) category represents a new housing demand of another 210 units.

The greatest single share of proposed Project employees (31.9%) is in the Over 150% AMI tier. This finding is consistent with the many well-compensated jobs found within the industry categories applicable to technology sector office tenants.

4.0 MENLO PARK SHARE AND COMMUTING

The conclusions regarding the housing needs associated with the proposed Project, as presented at the end of Section 3.0 are for total housing need, irrespective of location or geography, somewhere within commuting distance of the proposed Project. Section 4.0 presents information for understanding existing conditions with respect to where people who work in Menlo Park now live and an approach to assessing the share of new workers estimated to live in Menlo Park.

Commute Relationships for the City of Menlo Park

According to the U.S. Census 2015-2019 American Community Survey (ACS), 5.9% of those who currently work in the City of Menlo Park also live in the City of Menlo Park. The remaining 94.1% of the workforce commutes in from outside of the City. The existing percentage of workers commuting in from other jurisdictions is attributable to a number of factors including the supply of housing relative to the number of jobs and the high cost of housing in Menlo Park. Nevertheless, 5.9% does provide a benchmark for the propensity of Menlo Park workers to seek and find housing within the City.

The percentage of workers in Menlo Park who also live in the City has been generally decreasing over the decades with 10% of workers living in the City as of the 1990 Census, decreasing to 7.2% with the 2000 Census to 5.9% in the most recent ACS data. Workers most everywhere tend to commute more in recent years than in the past and, in addition, Menlo Park has become less affordable over time. Large employers that are newer to an area, or have a high turnover, typically have a smaller percent of workers living locally than employers who have been established locally for a long time. The relationship between job growth in Menlo Park relative to the amount and affordability level of housing that has been added over time is likely a significant factor in this trend. However, in any metropolitan region such as the Bay Area, there are numerous individual factors that influence how workers, in general, select their neighborhoods or communities to live in beyond basic housing supply, price/rent, and proximity to work considerations. Examples listed below are by no means exhaustive and no hierarchy is implied by the order:

- Type of unit; people tend to be looking for a specific kind of housing – an apartment, a condo, a detached home. These choices are tied to stage of life as well as affordability and other factors.
- Commute to work – a notable study found that people are willing to commute for a half hour to 45 minutes, but obviously this varies by metropolitan area and options. In many households, more than one household member works, so a residential location may be a compromise to make commuting in multiple directions acceptable.
- Proximity to social, ethnic and religious communities.

- Accessibility to recreational resources. This can be general like proximity to parks and playgrounds, or specific to certain recreational interests ranging from jogging trails, to golf, to just about any recreational pursuit.
- Quality of schools – either indicated by specific measures or purely perception. This is mainly a factor of concern for those with children or seeking housing with future children in mind.
- Accessibility to culture and entertainment.
- Public safety – like schools either based on hard data or simply perceptions and reputation which may not be supported by hard data.
- Air quality is a commonly cited factor in the Los Angeles basin, but far less so in the Bay Area.
- Weather and microclimates in the Bay Area dictate communities of choice for many. People tend to either hate the cool fog near the ocean or love it.

Although many factors influence housing decisions, because the number of workers that both live and work in Menlo Park is so low and the cost of housing is so high, it is possible that the 5.9% existing commute share does not reflect the proportion of workers who would live in Menlo Park if they could find housing and could afford it. The possibility that availability and affordability of housing have contributed to a downward trend in Menlo Park's commute share is a primary reason for including a separate goal-based commute share scenario, as described below.

Commute Relationships for Facebook Employees

As Facebook leases the two existing buildings on the Project site, data on commute patterns for Facebook workers is used to provide a second benchmark for the propensity of employees at the Project site to live in Menlo Park. Data provided by Facebook indicates that approximately 7.4% of Facebook's Menlo Park workforce lives in Menlo Park, somewhat higher than the percentage for Menlo Park workers overall per the ACS data. The reasons for Facebook worker's slightly higher propensity to live in Menlo Park are not known; however, one potential contributing factor may be that Facebook provides temporary corporate housing to some employees at three newer apartment properties in Menlo Park, 777 Hamilton, Elan Menlo and Anton Menlo[27].

Commute Scenarios for Subject Project

To estimate Menlo Park's share of the total housing need from the proposed Project, the analysis uses three commute scenarios, reflecting a lower estimate and higher estimate of the

[27] Per Synergy Housing website accessed on 3/14/2021 at https://www.synergyhousing.com/facebook-housing/#/

share of workers likely to seek and find housing within the City based on existing commute data plus a third goal-based scenario that assumes a larger share of the workforce is housed locally. The scenarios are intended to bracket the potential range of outcomes for the share of total housing need to be met within the City:

1. ***Lower Estimate of Menlo Park Share at 5.9%*** *(current City-wide average):* The lower estimate is based on the existing City-wide average share of Menlo Park's workforce that lives in the City of approximately 5.9%, based on the U.S. Census.

2. ***Higher Estimate of Menlo Park Share at 7.4%*** *(Facebook existing average):* The higher estimate reflects commute patterns specific to Facebook, which leases the existing office space at the Project site and has a large "footprint" of office space occupancy in the area. Using this approach, approximately 7.4% of workers at the proposed Project are estimated to reside within the City of Menlo Park.

3. ***Goal-Based Commute Share at 20%*** *(goal from 2000 Nexus Study)*: the goal-based commute share estimate assumes 20% of new workers are housed within the City consistent with an assumption used in the City's 2000 commercial linkage fee nexus study[28] (2000 Nexus Study). The 20% commute share assumption from the 2000 Nexus Study reflects a goal of housing a larger share of the City's workforce. This scenario is included for informational purposes in response to interest expressed by the City Council in improving the jobs housing balance and obtaining data to inform the goal of increasing the number of workers who live and work in Menlo Park.

The following observations suggest that the lower and higher estimates, which are similar, likely provide a good indicator of the share of workers who would live in Menlo Park, and that the share of workers at the Project who would live in Menlo Park is unlikely to exceed these estimates:

1. Census data for Menlo Park since 1990 do not show a correlation between job growth and number of Menlo Park workers residing locally. The number of jobs in Menlo Park increased by 17,478 or 67% from the 1990 Census to the 2015 - 2019 ACS. During the same period, the number who both live and work in Menlo Park, excluding those who work out of their homes, decreased from 2,662 to 2,589 (a 3% decrease). An analysis of compensation levels for jobs added since 1990 was not prepared; however, anecdotally one can observe that the employment growth during this period probably included a number of highly compensated jobs. Despite the addition of over 17,000 jobs during this period, of which at least a portion were likely highly compensated, the number of workers who both live and work in Menlo Park declined.

[28] Commercial Linkage Fee Nexus Study prepared for the City of Menlo Park by Vernazza Wolfe Associates, Inc. dated September 2000.

2. Large employers that are new to an area, or employers that have a high employee turnover, typically have a smaller percent of workers living locally than employers who have been established locally for a long time. One explanation for this is that employees of long-established firms are more likely to have entered the housing market years ago when it was more affordable. Another factor may be the expanding size of the Bay Area's job and housing markets combined with an increase in multiple-earner households. This has created more options for where to live and work and more households who must take locations of multiple jobs into account in selecting a residential location.

3. The proposed Project is very accessible to freeways including US-101 and SR-84 / the Dumbarton Bridge. It is arguably one of the most conducive locations in Menlo Park for commuting from other jurisdictions.

4. Menlo Park is viewed as a highly desirable place to live. Workers in the proposed Project who wish to live in Menlo Park would be competing for a limited amount of available housing with many other households in the Peninsula / Silicon Valley housing market who may also be seeking to live in Menlo Park.

5. The experience of remote work during the coronavirus pandemic has led several high-profile tech companies to announce plans to provide additional flexibility to work remotely on a more permanent basis. For employees that split their time between remote and in-person work, this additional flexibility may encourage employees to explore housing options further from the office, which could become an additional contributing factor to a declining share of workers who live in Menlo Park.

The goal-based commute share estimate is based on the City's 2000 Nexus Study which incorporated a commute share assumption of 20%. This 20% commute share assumption reflects a goal to house a larger share of the City's workforce locally that was approximately double the 10% commute share for Menlo Park as of the time the Nexus Study was prepared[29]. As stated in the 2000 Nexus Study:

> *Using a relatively higher number provides a goal for the City to achieve. Although inflated housing prices in the 1990's have resulted in a decrease in the percentage of Menlo Park workers who can afford to live in Menlo Park, the City's goal is to encourage local workers to live in Menlo Park in order to achieve a better jobs/housing balance.*

[29] Per the 1990 Census, Menlo Park's commute share was 10% based on a total number working in Menlo Park of 26,048 of which 2,662 lived in Menlo Park. Figures do not include those who work out of their homes rather than commute to a separate workplace. The 1990 Census was the most recent data available at the time the 2000 Nexus Study was prepared as the 2000 Census data was not yet released. The 2000 Nexus Study references a separate factor of 23%, also as of 1990, which is not comparable to the 10% commute share in 1990. This 23% factor represents the share of Menlo Park *employed residents* (residents who are employed) who work in Menlo Park versus commute out of Menlo Park to a job located in another city.

This goal-based commute share estimate provides additional information regarding how analysis findings would vary were the City to seek to house 20% of the added workforce locally consistent with the goal identified in the 2000 Nexus Study.

Estimate of Menlo Park's Share of New Housing Demand

Per the discussion above, three scenarios are provided based on 5.9%, 7.4% and 20% of workers at the proposed Project residing within the City of Menlo Park. The three factors are applied to the total housing need to estimate the number of new workers in the proposed Project who would seek and find housing in Menlo Park. In other words, between 5.9% and 20% of the housing needs concluded at the end of Section 3 is the estimated Menlo Park "share."

The factors are applied uniformly across each of the household income tiers to arrive at estimates of Menlo Park's "share" for each income tier. The actual distribution by income tier in Menlo Park would likely vary from these estimates based on factors, such as the existing housing stock in Menlo Park, limited availability of affordable units, and the future production of market rate and affordable units in Menlo Park.

Table 4-1. Estimated Menlo Park Share of Total Housing Needs

	Lower Estimate Commute Share (5.9%)	Higher Estimate Commute Share (7.4%)	Goal-Based Commute Share Estimate (20%)
Extremely Low Income	1	2	5
Very Low Income	5	6	15
Low Income	13	16	43
Moderate Income	11	13	37

Above Moderate Income	12	15	42
Subtotal: 0% to 150% AMI	42	52	142
Over 150% AMI	20	25	67
Total Employee Households	**62**	**77**	**209**

Estimated Commute Shed for Proposed Project

It is anticipated that workers at the proposed Project would commute to the Project site from throughout the region. Table 4-2 presents data on commuting by jurisdiction. Two different versions are provided, one based on averages derived from the U.S. Census and one based on commute patterns specific to Facebook, the current tenant for the existing buildings on the Project site. The estimates reflect the same data sources as used for the lower and higher Menlo Park share of housing needs described above. Based on the data in Table 4-2, it is anticipated that between 65% and 69% of workers would live in Santa Clara and San Mateo counties. Remaining workers are estimated to commute primarily from San Francisco and Alameda counties. Between 4% and 7% are estimated to commute from other counties.

The third goal-based commute share scenario is not presented in Table 4-2 because the 20% goal is focused on Menlo Park's commute share and does not identify targets for any other specific jurisdiction. Progress toward the 20% commute share goal would tend to reduce commuting from other jurisdictions relative to levels indicated in Table 4-2 by increasing the share of workers that live in Menlo Park.

Notes:

(1) Based on data provided by Facebook for its Menlo Park employees, provided for illustration given Facebook occupies the two existing buildings in the Commonwealth Corporate Center campus, although the tenant(s) for the Project is not known and may change over the life of the building.

(2) Includes workers residing in jurisdictions for which the relevant commute data has been suppressed by the U.S. Census.

(3) Data is derived from the 2012-2016 American Community Survey, the most recent available complete commute distribution data at the jurisdiction level. The share of Menlo Park's worker-force living in Menlo Park is an exception for which more recent data is available from the 2015-2019 American Community Survey. A reconciliation adjustment to the Balance of San Mateo County was made to account for the 0.6% reduction in the Menlo Park Share since the prior data.

5.0 DISPLACEMENT ANALYSIS

This section provides an evaluation of the potential for the proposed Project to contribute to displacement of existing residents and neighborhood change in two proximate communities known to be vulnerable to displacement, the City of East Palo Alto (East Palo Alto) and the Belle Haven neighborhood of Menlo Park (Belle Haven). As noted above, displacement is not an environmental impact for purposes of CEQA, but this analysis is provided for informational purposes and consistent with the requirements of the 2017 Settlement Agreement.

Displacement occurs when housing or neighborhood conditions force existing residents to move or households feel like their move is involuntary. Displacement can be caused by a range of physical, economic and social factors including but not limited to foreclosure, condominium conversion, building deterioration or condemnation, increased taxes, natural disasters, eminent domain, and increases in housing costs[30, 31, 32]. The HNA is focused on economic drivers of displacement, specifically the potential for the proposed Project to affect the local housing market and housing costs.

Lower income communities in the Bay Area have become increasingly vulnerable to displacement of existing residents. Employment growth, constrained housing production, and rising income inequality are among the factors that have contributed to increased displacement pressures, especially within lower income communities in locations accessible to employment centers where many households are housing-cost burdened.

Location of Proposed Project Relative to Belle Haven and East Palo Alto

The aerial image below shows the location of the proposed Project relative to Belle Haven and East Palo Alto. The Project site is located on Jefferson Drive in Menlo Park adjacent to U.S. 101 and the currently inactive Dumbarton Rail Corridor. Belle Haven is a residential neighborhood located just east of the Project site generally bounded by U.S. 101, Willow Road and the Dumbarton Rail Corridor, outlined in red on the aerial image below. East Palo Alto is located beyond Belle Haven to the east of the Project site, outlined in green on the aerial image below.

Analysis Approach

Given the complex array of factors that influence housing markets and neighborhood change, precise estimates or projections of outcomes are not feasible; rather, the analysis provides information and context that will be useful in gauging the potential range of impacts. The following analyses were completed to provide this context:

1. *Comparative review of real estate trends* – Real estate market trends in East Palo Alto and Belle Haven since 2000 were analyzed in comparison to Countywide trends. The purpose is to help understand how localized trends relate to the broader County housing market.

2. *Review of employment trends* – Employment trends were reviewed for San Mateo County and adjacent counties. Employment data is delineated by compensation level so that growth in higher-income and lower-income jobs can be separately understood.

3. *Estimated direct housing demand in East Palo Alto and Belle Haven* – Commute shed data is used to estimate the number of new workers from the proposed Project likely to seek and find housing in East Palo Alto and Belle Haven. This is useful for understanding the likely magnitude of influence the proposed Project could have on the housing market.

4. *Historic Relationship Between Job Growth and Housing Costs* – The extent to which employment growth and housing costs have been correlated with one another was

analyzed using linear regression. Findings are used to identify the potential range of impacts on housing costs that could be experienced as a result of the proposed Project.

The above analyses all contribute to understanding the potential for the proposed Project to contribute to increases in home prices, rents and displacement pressures in East Palo Alto and Belle Haven.

Data Sources for Displacement Analysis

The displacement analysis was prepared using data from sources including the American Community Survey (ACS) of the U.S. Census, the Quarterly Census of Employment and Wages, commercial data providers CoStar, CoreLogic, ESRI Business Analyst, and employee commute data from Facebook. Other sources are noted in the text and footnotes. While we believe all sources are sufficiently accurate for purposes of the analysis, we cannot guarantee their accuracy. KMA assumes no liability for information from these and other sources.

Risk of Displacement

East Palo Alto and Belle Haven both have risk factors for displacement. Both have a relatively lower-income existing population that includes a high percentage of households who spend 35% or more of their income on housing. A review of demographics and displacement risk factors specific to the two communities is provided in Appendix B. East Palo Alto's rent control and just cause eviction ordinance provides significant protection to existing renters within multi-family buildings built prior to 1988 but does not preclude the potential for longer-term neighborhood change. The Urban Displacement Project,[33] an initiative of UC Berkeley "aimed at understanding the nature of gentrification and displacement in the Bay Area" has identified the Belle Haven census tract and census tracts within East Palo Alto as areas experiencing "ongoing gentrification and/or displacement" or "at risk of displacement." A separate analysis by the Urban Displacement Project[34] indicates that, despite risk factors for displacement, East Palo Alto had not experienced significant gentrification during the 2000 to 2013 period, potentially due to policies aimed at preventing displacement including rent control and just cause eviction protections. For additional background, see also the Urban Displacement Project report, "East Palo Alto: An Island of Affordability in a Sea of Wealth"[35].

A recent study by UC Berkeley's Center for Community Innovation and its Y-PLAN initiative, titled *Investment and Disinvestment as Neighbors: A Study of Baseline Housing Conditions in the Bay Area Peninsula*, provided an assessment of the baseline housing conditions in Belle

[33] Zuk, M., & Chapple, K. (2019). Urban Displacement Project. http://www.urbandisplacement.org/

[34] Crispell, M, Harris L.R., and Cespedes S. March 2016. San Mateo County's East Palo Alto. Urban Displacement Project.

[35] Zuk, M., & Chapple, K. (2015). East Palo Alto: An Island of Affordability in a Sea of Wealth. Urban Displacement Project.

Haven, East Palo Alto, and North Fair Oaks neighborhood (unincorporated San Mateo County). The study found indications of recent changes including increased population turnover, declining school age population, and an increase in homelessness. The study also identified a high incidence of rent burdened households and disproportionate pressure on the local housing market compared to the rest of San Mateo County. The study found more signs of disinvestment in East Palo Alto and more indications of real estate speculation in Belle Haven[36].

East Palo Alto has been described as an "island" of affordability within the higher-priced Silicon Valley / Peninsula housing market. Belle Haven is also historically affordable relative to other neighborhoods in Menlo Park as well as many high-priced communities in San Mateo County and Silicon Valley. However, over the past two decades, home prices in East Palo Alto have increased at the same rapid pace as the County median, while home prices in Belle Haven are now slightly greater than the County median on a per square foot basis. Market rents for available one-bedroom apartments in East Palo Alto average approximately $2,355 per month which is approximately the same as the County average of around $2,310. While many existing residents in East Palo Alto are shielded from escalating housing costs through rent control or having purchased homes when prices were lower, the comparatively high cost of entering East Palo Alto's housing market relative to other more affordable locations in the Bay Area suggests that longer-term neighborhood change is likely.

The City of East Palo Alto has adopted policies focused on protecting affordability in the face of displacement pressures, including a rent control and just cause eviction policy described below.

East Palo Alto's Rent Control Ordinance

The City of East Palo Alto regulates rent increases and eviction procedures through the Rent Stabilization and Just Cause for Eviction Ordinance (East Palo Alto Municipal Code Chapter 14.04). The ordinance limits annual rent increases to 80% of the increase in the Consumer Price Index over the prior year. Just cause provisions of the ordinance require landlords to present a valid reason for terminating a tenancy. Tenants are also protected from retaliation and harassment. Rent control applies to all rental units except: single family homes, units in owner-occupied properties of three units or less, new units built after 1988 (other than replacement units), and certain non-profit / group-quarters living arrangements. As required by state law, rents are free to reset to market rate upon turnover. The rent control ordinance shields existing renters from increases in market rents and economic displacement. Because rents reset to market upon vacancy, the ordinance does not preclude neighborhood change over the longer term.

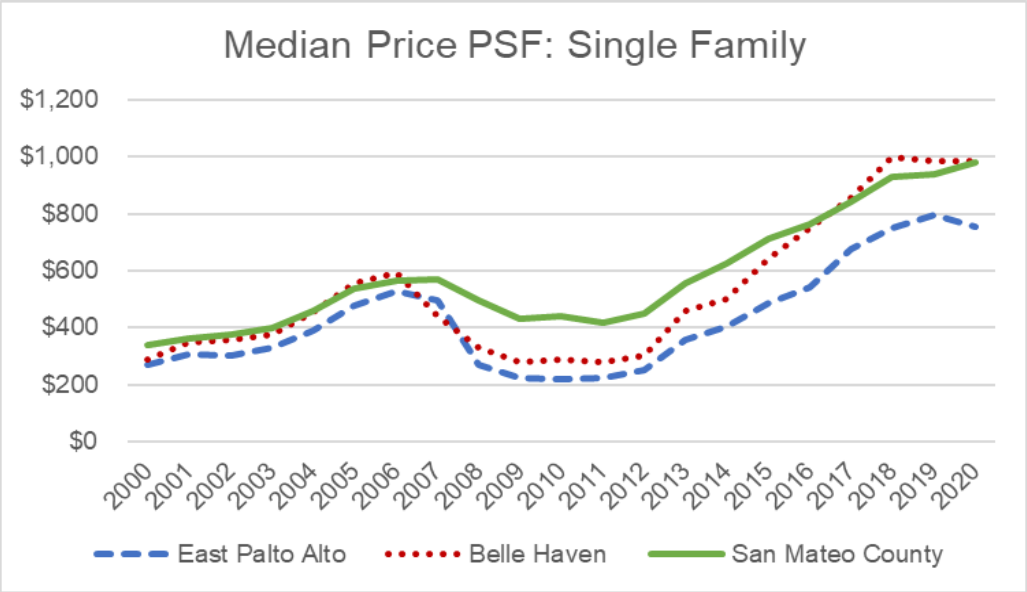
Real Estate Trends

This section reviews data on real estate market trends for East Palo Alto, Belle Haven, and San Mateo County since 2000.

1. Home Prices

The chart below shows trends in median home price over the period from 2000 to 2020. In 2000, the median sales price per square foot in East Palo Alto of $270/SF represented approximately 80% of the County median of $338/SF, while the median price in Belle Haven of $291 per square foot represented 86% of the County median. In both East Palo Alto and Belle Haven, home prices decreased significantly during the housing market downturn and foreclosure crisis, reaching a low of 50% and 65% of the County median, respectively, in 2010. However, prices in both communities have escalated more rapidly than the County median over the subsequent decade. As of 2020, the median sales price in East Palo Alto of $754 per square foot is once again roughly 80% of the County median of $983 per square foot, while the price per square foot in Belle Haven has matched or exceeded the County median for the past four years.



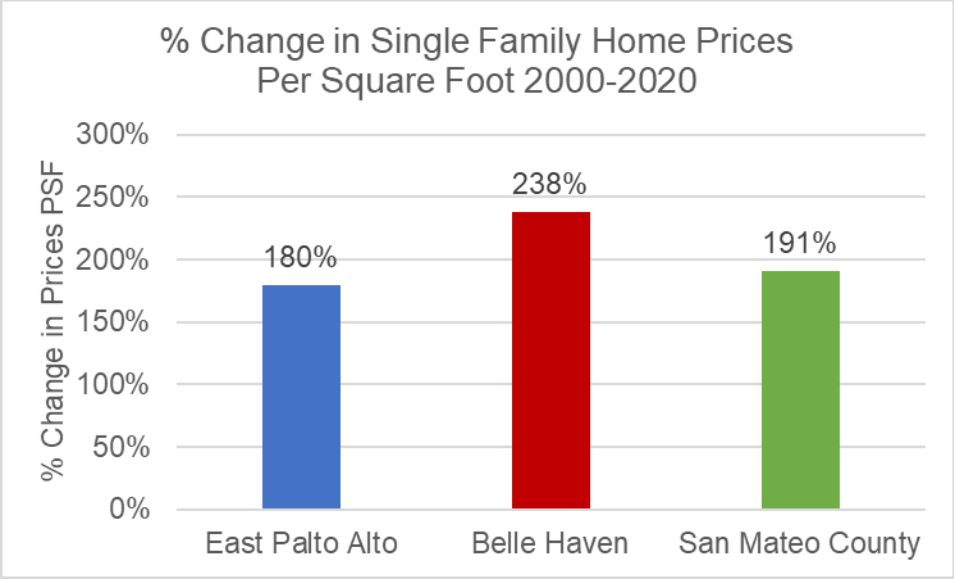
Source: CoreLogic

Table 5-1 shows how single family home prices per square foot in East Palo Alto and Belle Haven have changed over time relative to the County median.

Table 5-1. East Palo Alto and Belle Haven Median Price PSF as Percent of County		
	East Palo Alto as % of County Median Price PSF*	Belle Haven as % of County Median Price PSF*
2000	80%	86%
2001	84%	96%
2002	80%	94%
2003	83%	94%
2004	85%	99%
2005	89%	104%
2006	93%	105%
2007	87%	77%
2008	54%	66%
2009	52%	65%
2010	50%	65%
2011	54%	67%
2012	55%	67%
2013	64%	83%
2014	65%	80%
2015	68%	90%
2016	71%	98%
2017	80%	102%
2018	81%	108%
2019	85%	105%
2020	77%	100%

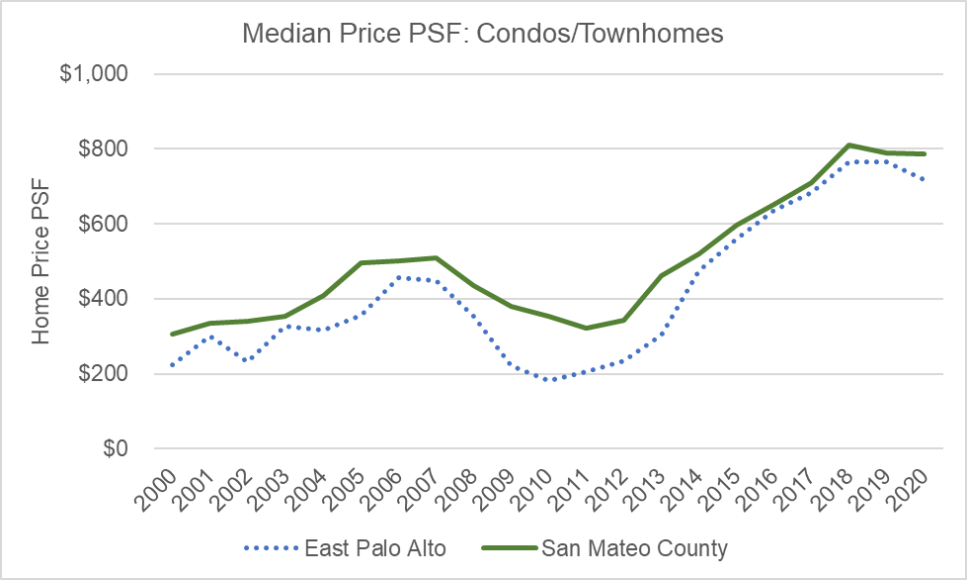
*for single family detached units

Overall, single family median home prices in East Palo Alto have increased by approximately 180% since 2000, approaching the cumulative percent increase in the County median home price of 190% over the same time period. Median single family home prices in Belle Haven increased 238%, outpacing the County. Some of the factors that likely contributed to rising home prices over the period include strong economic growth and housing demand, limited construction of new housing, favorable interest rates and credit terms, and confidence in the Bay Area economy and housing market.



Source: CoreLogic

For condos and townhomes, the median price per square foot in East Palo Alto grew from 74% of the County median in 2000 to nearly match the County median over the past seven years. Condos and townhomes represent a smaller share of the market in East Palo Alto than do single family units (20 condo/townhome sales per year on average as compared to an average of approximately 200 single family sales per year). No condo/townhome sales were recorded in Belle Haven.



Source: CoreLogic

Home prices in East Palo Alto and Belle Haven have experienced more rapid escalation in the period from 2010 to 2020, in part, due to a recovery from the housing / foreclosure crisis. Belle Haven and East Palo Alto have both experienced a steep decline in the *number* of home sales

from 2010. The number of sales in East Palo Alto fell from 260 units in 2010 to 160 units in 2019. In Belle Haven, the number of sales fell from 70 units in 2010 to 29 units in 2019. In contrast, the total number of home sales Countywide is roughly unchanged between 2010 and 2019.[37] This trend is consistent with a higher incidence of distressed sales activity in 2010 as reportedly occurred in East Palo Alto.[38] Distressed and foreclosure sales were prevalent nationally during this period and disproportionately impacted lower-income communities. Homeowners unable to sustain mortgage payments would fall into foreclosure, forcing a foreclosure sale, in some cases after an extended foreclosure process where the property was not being properly maintained. Distressed sales would drive home values in the area down and had the effect of inducing additional homeowners to go "underwater" (market value less than the mortgage debt) and let homes go to foreclosure, further exacerbating the condition, driving up the number of sales and driving down values. In some cases, homes were purchased out of foreclosure by investors who converted them to rental units. With recovery from the foreclosure crisis, the number of sales has now been reduced from the elevated levels that occurred during the foreclosure crises. Additional details on home price and sale trends are included in Appendix C Table 12.

While it could be interpreted that existing homeowners will benefit from home price increases, in communities such as East Palo Alto and Belle Haven where more than a third of single-family homes are renter-occupied, rapid growth in home prices may present a heightened risk of renter displacement to the extent it encourages the sale of single family rental properties to new owner-occupants.

2. Apartment Rents

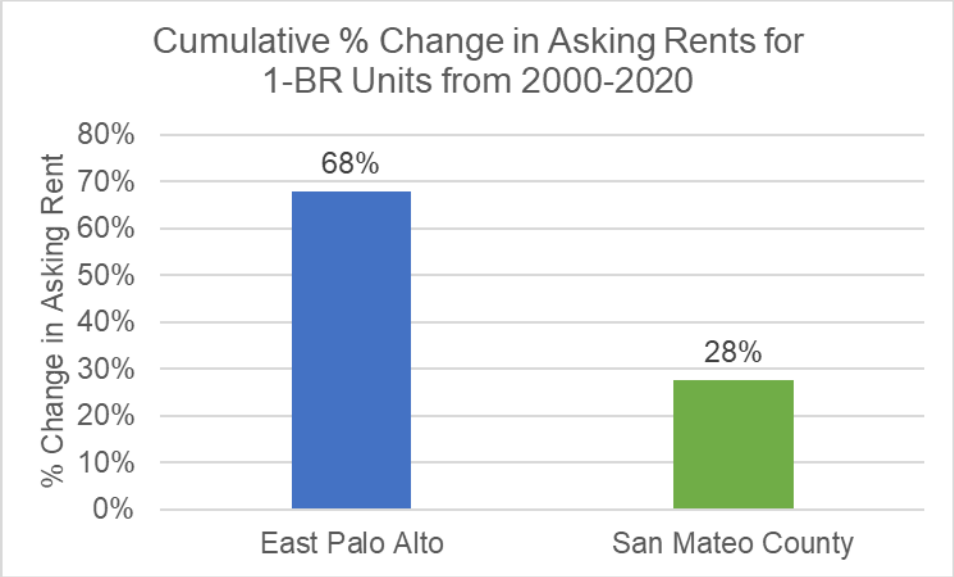
According to data from CoStar Group, which surveys multifamily buildings, apartment rents in San Mateo County increased by approximately 28% from 2000 to 2020. Rent growth in East Palo Alto outpaced the County with a 68% increase. These trends are presented in the charts below with additional details provided in Appendix Table 13. These rental rates reflect asking rents for one-bedroom units that have been vacated and are available for rent. For communities that have rent control, existing tenants in multifamily buildings are shielded from increases in market rents in excess of a predetermined rate (80% of CPI, in the case of East Palo Alto) as long as they remain in their current unit.

Rental market data for Belle Haven is not presented in the chart below as the data appears too limited to be reliable. CoStar data for Belle Haven is limited because three-quarters of rental units built before 2017 are for buildings with 10 or fewer units, less likely to be covered by published market surveys. Only approximately 160 (20%) of the 795-unit Belle Haven rental

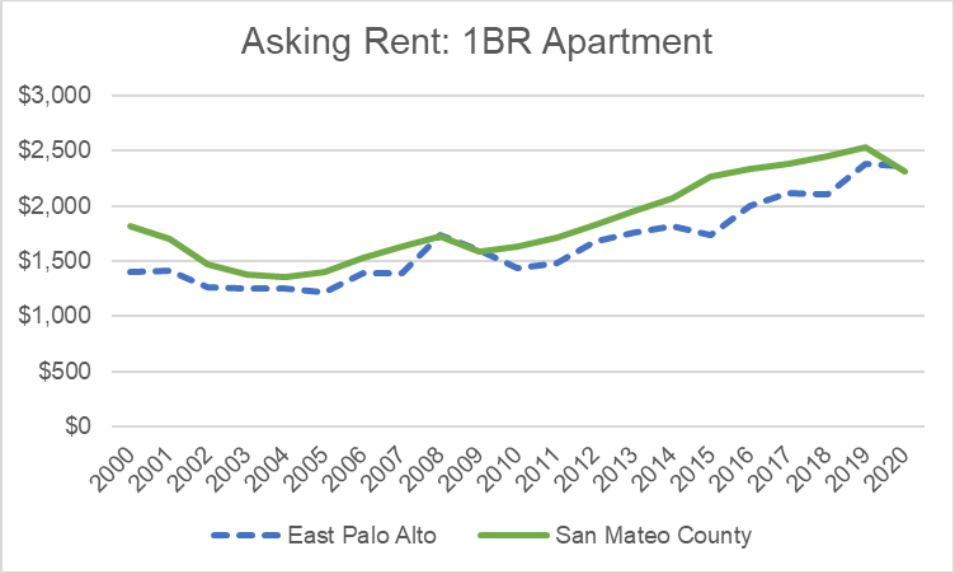
[37] All communities experienced a significant drop in sales volumes in 2020, likely a result of the coronavirus pandemic.

[38] KQED News. 2013. Can East Palo Alto Weather the Tech Boom and Increasing Gentrification? http://ww2.kqed.org/news/2013/07/18/104008/. The article indicates that from 2008 to 2013, 1,422 of approximately 4,000 single family homes in East Palo Alto had entered some stage of the foreclosure process.

housing stock built before 2017 per the U.S. Census is covered by the historic CoStar data used in the trends analysis. While Costar data also covers two large apartment projects completed since 2017, rents at these projects reflect a premium for new construction which does not apply to the broader rental market in Belle Haven. Appendix C Table 13 provides the historical data that is available, excluding these recently built projects.



Source: CoStar.



Source: CoStar.

Following a period of robust job growth and limited housing production, home prices and rents have been rising throughout the Bay Area. The historically affordable communities of East Palo Alto and Belle Haven have either kept pace with or exceeded the significant increases that have been occurring in the County as a whole.

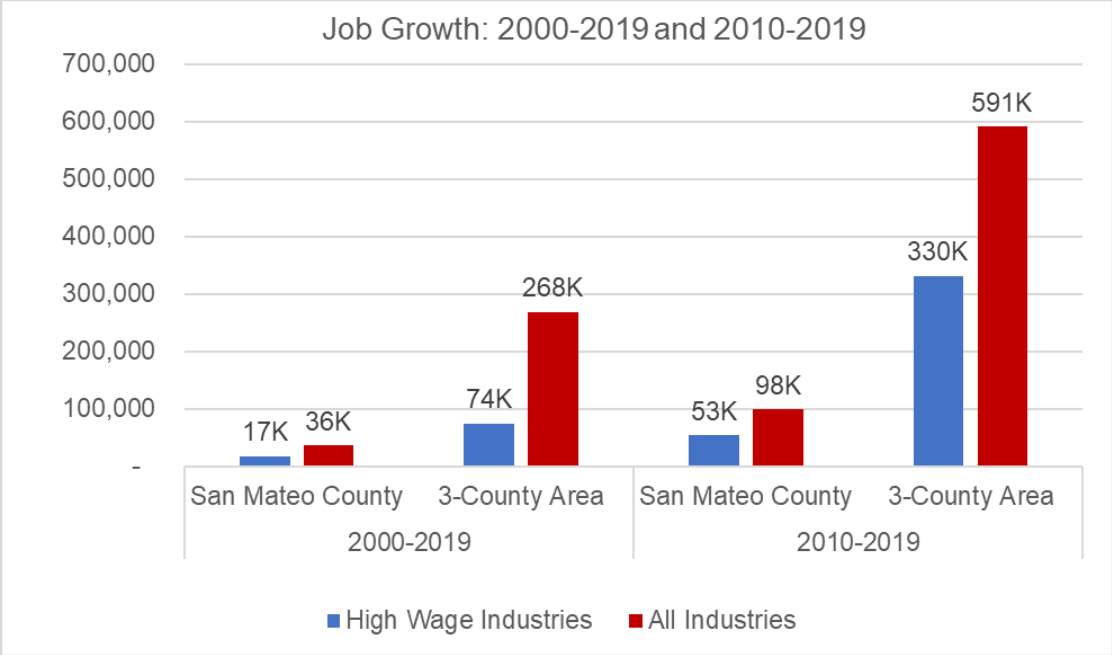
Employment Trends

Employment growth is an important driver of housing demand both at the local level and regionally. Employment growth over the past several years has likely contributed to significant upward pressure on the housing market as evidenced in the rent and price increases documented above. This section assembles data on historical employment trends since 2000 for San Mateo as well as Santa Clara and San Francisco counties. Approximately 95% of workers living in San Mateo County commute to jobs located in one of these three counties based on U.S. Census data.

According to the Quarterly Census of Employment and Wages, over the period from 2010 to 2019, a total of approximately 591,000 jobs were added in San Mateo, Santa Clara, and San Francisco counties (referred to in the chart below as the "three-county area").[39] More than half of the total job growth occurred in high-wage sectors. For purposes of this analysis, high-wage industry sectors are defined as those with average annual employee compensation above $100,000 as of 2016. Over the past decade, high-wage industries posted annual job growth of 4.6% versus 3.4% annual growth for all industries. Job growth for the longer period from the peak of a previous boom cycle in 2000 to 2019 is less due to significant job losses from 2000 to 2004, offsetting more recent job growth.

The 2020 economic recession caused by the coronavirus pandemic eliminated a portion of the jobs added over the past decade. While data for the full year of 2020 is not available from the Quarterly Census of Employment and Wages, data for the first half of 2020 shows a significant decline in total employment in the three-county area. In the second quarter of 2020, total employment in the three-county area declined by 12% in all sectors and by 3% in high-wage sectors compared to the prior quarter.

[39] Employment data for the second half of 2020 was not yet available from the Quarterly Census of Employment and Wages as of early 2021 when this analysis was prepared.



Source: Quarterly Census of Employment and Wages

Housing production has not kept pace with job growth in San Mateo County and adjacent counties. As illustrated in the chart below, the ratio of jobs to housing units has steadily increased in San Mateo, Santa Clara and San Francisco counties since 2010. The jobs-housing ratio in 2019 neared the peak of the previous boom cycle, an imbalance that has undoubtedly contributed to increasing prices and rents.

Estimated Direct Housing Demand in East Palo Alto and Belle Haven

This section describes the estimated share of new workers likely to seek and find housing in East Palo Alto and Belle Haven. The proposed Project's potential to directly impact housing conditions in East Palo Alto and Belle Haven or cause displacement of existing residents is driven by the extent to which workers at the proposed Project are likely to seek housing in either community. Direct displacement impacts will be minimal if a very limited number of workers seek housing in East Palo Alto or Belle Haven; conversely, if many proposed Project workers seek housing in East Palo Alto and Belle Haven, impacts would be greater unless new housing production keeps pace with the increased demand.

The following section summarizes data on the existing share of workers who live in East Palo Alto and Belle Haven. This data is then combined with the estimate of total housing demand from the Housing Needs Analysis (Section 3), to estimate the proposed Project's direct impact on housing demand in the two communities.

Commute Data

Similar to the analysis is Section 4, commute patterns are used to estimate the share of total regional housing demand within East Palo Alto and Belle Haven. Consistent with the Section 4 analysis, estimates are provided based on data specific to Facebook, the existing tenant on the Project site, and based on average commute shares from the U.S. Census[40]. Approximately 0.5% of Facebook's Menlo Park employees reside in East Palo Alto, while another 0.4% reside in Belle Haven. Data from the U.S. Census indicates approximately 3.1% of those who work in Menlo Park commute from East Palo Alto. For Belle Haven, an allocation of the citywide commute share for Menlo Park is necessary as data specific to Belle Haven is not available from the U.S. Census. This allocation is made in proportion to the number of occupied housing units and results in an estimated commute share for Belle Haven of 0.7%. The third goal-based commute share scenario addressed in Section 4 is not included for purposes of estimating direct housing demand in East Palo Alto and Belle Haven because it reflects a citywide goal for Menlo Park that is not specific to Belle Haven or East Palo Alto. Commute share figures are summarized in Table 5-2.

[40] The terms "lower estimate" and "higher estimate" are not used for purposes of Section 5 to avoid confusion since the data source resulting in the lower and higher estimates for East Palo Alto and Belle Haven is the reverse of the Section 4 analysis for Menlo Park.

Table 5-2. Percent of Workers Residing in East Palo Alto and Belle Haven		
	Based on Facebook Workers[1]	**Based on Census Average [2]**
Live in East Palo Alto	0.5%	3.1%
Live in Belle Haven	0.4%	0.7%
Live Elsewhere	99.1%	96.2%
Total	100%	100%

[1] Based on data provided by Facebook for its existing Menlo Park employees in March 2020.

[2] Data for East Palo Alto per U.S. Census Bureau, American Community Survey 2012-2016 Five-year estimates. Special Tabulation: Census Transportation Planning. Figure for Belle Haven based on American Community Survey 2015-2019 for City of Menlo Park allocated to Belle Haven in proportionate to the number of occupied housing units.

Since it is difficult to predict the extent to which commute shares may evolve over the long term, for purposes of the estimates below, existing shares using the two data sources described above are applied.

Estimated Direct Housing Demand in East Palo Alto and Belle Haven

The commute shares described above are used to estimate the East Palo Alto and Belle Haven shares of total housing demand from the proposed Project.

The total housing demand within commuting distance to the proposed Project estimated in Section 3 is 1,046 units. Based on the two data sources for commute shares, the portion of this aggregate housing demand in East Palo Alto is estimated to range from five to 33 units and four to eight units for Belle Haven. This estimate of direct Project-related housing demand in East Palo Alto and Belle Haven is estimated to represent in the range of 0.06% to 0.4% of the existing housing stock in East Palo Alto and 0.24% to 0.48% in Belle Haven.

Table 5-3. East Palo Alto and Belle Haven Shares of Housing Demand from Project Estimated Based on Existing Commute Shares					
	Total [(1)]	**East Palo Alto Share of Housing Demand**		**Belle Haven Share of Housing Demand**	
Housing Demand from Project		Facebook Data	Census Average	Facebook Data	Census Average
Total Direct Housing Demand [(1)]	1,046 Units				
Commute Share (Table 5-2)		0.5%	3.1%	0.4%	0.72%
Estimated Direct Housing Demand		5 Units	33 Units	4 Units	8 Units
Total Existing Housing Stock [(2)]		8,342 Units		1,670 Units	
Project Demand as % of Total Housing Stock		0.06%	0.40%	0.24%	0.48%

[(1)] See Section 3.

[(2)] ACS 2015-2019

Turnover of Existing Units

1. *Turnover of existing housing units in East Palo Alto* – The East Palo Alto housing stock is comprised of approximately 7,724 occupied housing units. KMA estimates East Palo Alto experiences an average turnover rate of approximately 8% of the occupied housing stock each year, based on U.S. Census 2015-2019 ACS data regarding the length of occupancy for housing units. This 8% turnover rate equates to approximately 620 units each year available through regular turnover. The estimated five to 33 units of direct housing demand from the proposed Project in East Palo Alto would represent roughly 0.8% to 5.3%, respectively, of the units coming available in one year through regular turnover.

2. *Turnover of existing housing units in Belle Haven* – Belle Haven housing stock is comprised of approximately 1,450 occupied housing units. KMA estimates that Belle Haven experiences an average turnover rate of approximately 7% of the occupied housing stock per year based on Census data regarding the length of occupancy for housing units. This 7% turnover rate equates to approximately 100 units per year available through regular turnover. The estimated four to eight units of direct housing demand from the proposed Project in Belle Haven represents approximately 4% to 8% of the units estimated to come available through regular turnover in one year.

Overall, the proposed Project is estimated to represent between 1% and 6% of the market for units that come available through regular turnover in East Palo Alto and Belle Haven each year. This would mean that, as rental units come available through regular turnover, or as homeowners make the decision to sell, at the point in time that the proposed Project is initially occupied, workers could be competing for approximately 1% to 6% of the units that are available, along with others seeking housing within the two communities. This suggests a minor impact on local housing market conditions.

Analysis of Historic Relationship Between Housing Costs and Job Growth

The following section analyzes the extent to which employment growth and real estate trends have been correlated with one another to provide context for understanding the degree of indirect influence the proposed Project may have on local home prices and rents. Simple linear regression is used to quantify the potential change in rents or home prices associated with a given change in jobs based on annual data from 2000 to 2019. Simple linear regression shows whether two variables are correlated with one another but does not prove that there is a causal relationship.

Geographic Scale

The regression analyses are performed for two geographic scales with respect to job growth:

a) San Mateo County (“single county”); and

b) San Mateo, Santa Clara, and San Francisco counties combined (“three-county”).

The single-county analysis likely provides an upper-end estimate of the indirect influence of employment growth on local real estate trends, since it attributes all variation in local rents and home prices to job growth within the County. In reality, job growth in other counties would also have an influence, along with separate factors that may be correlated with job growth such as growth in incomes. Therefore, the single county analysis likely overstates the impacts.

The three-county analysis provides a lower estimate of the influence of employment growth on local real estate trends, at least for purposes of understanding the proposed Project's influence, since the analysis assumes that job growth across the three counties has a uniform influence on rents and home prices within San Mateo County. For workers who live in San Mateo County, 95% work in San Francisco, San Mateo, or Santa Clara counties as shown in Table 5-4. Comparatively few workers who live in San Mateo County commute east into Alameda County (3%). Therefore, job growth within the three selected counties is anticipated to have the greatest influence on housing prices and rents within San Mateo County. The three-county analysis may understate the influence of local job growth by treating jobs added anywhere within the three counties as having an equal influence on rents in San Mateo County. Since the majority of San Mateo County residents work within the County (57%), as shown in Table 5-4, job growth within San Mateo County likely has somewhat more of an influence than job growth in Santa Clara County or San Francisco.

Table 5-4. County of Work, Workers Residing in San Mateo County

Workplace	Number Workers	Percent
San Mateo County	222,355	57%
San Francisco	84,195	22%
Santa Clara County	61,165	16%
Subtotal	367,715	95%
Alameda County	12,940	3%
Other Counties	6,936	2%
Grand Total	387,591	100%

U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates, County-to-County Commuting Flows.

Approach to Capturing Multiplier Effects: High-Wage Jobs Analysis

The regression analysis evaluated the relationship of home prices and rents to both total job growth and high-wage job growth. High-wage job growth is defined for purposes of the analysis as employment within industries that have average pay above $100,000 per year as of 2016.

The high-wage analysis is an approach to capturing the impact of "multiplier effects." Technology, bio-tech, and other high-wage sectors help drive growth in other sectors of the local economy such as retail, food, and transportation through spending by these businesses and their workforce. Employment and economic growth stimulated through this spending is

commonly referred to as the “multiplier effect”. Examining the relationship between housing costs and jobs in high-wage industries, specifically, enables the impact that potential multiplier effects have on housing costs to be captured. To the extent high-wage jobs are responsible for additional job creation through multiplier effects, potential impacts would be captured in the market data on home prices and rents and reflected as part of the correlative relationship identified by the analysis.

Adjustments for Inflation and Added Housing

Two adjustments were made to the real estate and employment data used in the regression analysis:

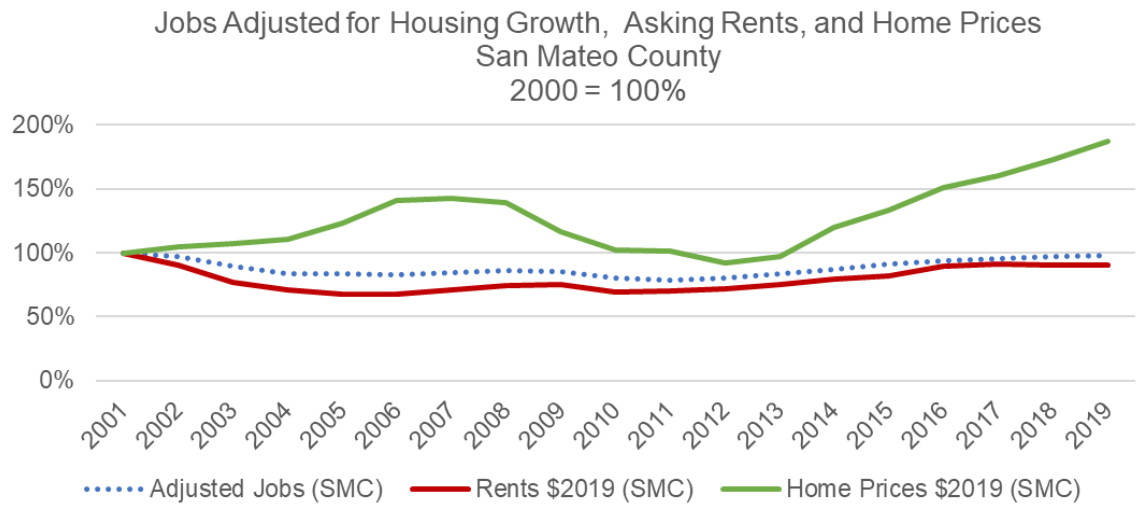
1. *Inflation adjustment* – Rent and sales price data for San Mateo County is expressed in constant 2019 dollars, adjusting for inflation based upon the Bureau of Labor Statistics Consumer Price Index for All Urban Consumers (CPI-U).

2. *Adjusted Jobs (net of housing growth)* – Employment data was adjusted to reflect the portion of job growth since 2000 that can be accommodated by housing construction since that time, using the same 1.91 workers per household factor applied in Section 3 as detailed in Appendix C Tables 10 and 11. For example, as of 2010, there were approximately 317,600 jobs in San Mateo County and 271,000 housing units, of which 10,400 units were built since 2000. The number of jobs accommodated by housing units built from 2000 to 2010 (10,400 housing units x 1.91 workers per household = approximately 19,900) is subtracted from total 2010 employment (317,600 jobs) to arrive at the adjusted estimate of 297,700 jobs as of 2010. In the case of the three-county analysis, employment within the three-county area is similarly adjusted by housing growth within the three-county area. Thus, the linear regression analyses estimate the relationship between inflation-adjusted rents and home prices and employment growth, net of the offsetting influence of housing growth.

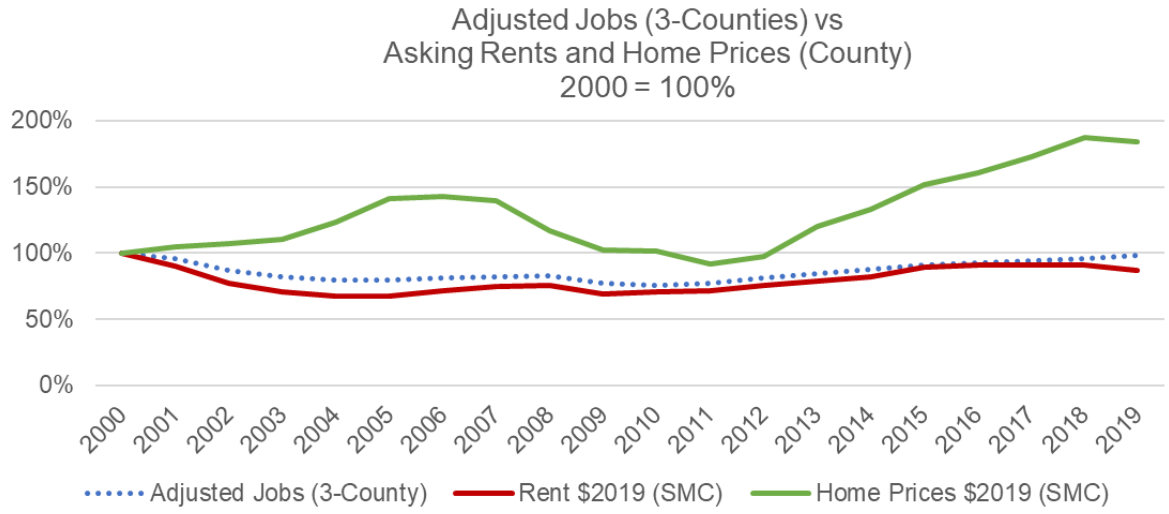
Summary of the Data

The following two charts compare historical inflation-adjusted rents and home prices with changes in employment for San Mateo County and the three-county area including San Francisco and Santa Clara counties, respectively. The charts present the trends as an index relative to 2000 levels. Rents have generally trended down when the number of jobs was decreasing and up when jobs were added, suggesting a relatively strong correlation between rents and jobs. Rents decreased further than the number of jobs, in percentage terms, following the “dot com crash” around 2000 and were still below 2000 levels in inflation-adjusted terms as of 2019. Real home prices, on the other hand, grew from 2000 to 2006 by over 40% even as employment fell by approximately 15%. Jobs and home prices have been positively correlated during the current economic cycle; however, it is likely that interest rates and mortgage credit

availability are as important, if not more important, than employment growth in explaining historical variation in home prices.



Sources: Quarterly Census of Employment and Wages, California Department of Finance, CoStar, CoreLogic, Bureau of Labor Statistics Consumer Price Index.



Sources: Quarterly Census of Employment and Wages, California Department of Finance, CoStar, CoreLogic, Bureau of Labor Statistics Consumer Price Index.

Regression Analysis Findings

Table 5-5 presents the results of the regression analysis for the eight separate scenarios tested. Additional supporting information is included in Appendix C. The primary findings of the analysis are:

- Rents have a positive, statistically significant correlation with job growth in all scenarios.
- Job growth was found to have a weak positive correlation to home prices in three of four scenarios tested and did not have a statistically significant relationship to home prices in a fourth scenario.
- Each 10,000 total jobs added to the County (net of offsetting housing growth) is correlated with a 4.0% increase in rents and 3.5% increase in home prices and each 10,000 jobs within the three-county area is correlated with a 0.7% increase in rents and a 1.1% increase in home prices. As discussed below, the single-county and three-county findings are used to bracket an upper and lower estimate of the impacts.
- Each 10,000 high-wage jobs (net of offsetting housing growth) added to the County is correlated with a 7.0% increase in rents and 5.8% increase in home prices and each 10,000 high-wage jobs within the three-county area is correlated with a 1.1% increase in rents but did not have a statistically significant correlation with home prices.

Table 5-5. Summary of Regression Analysis Results

	Scenario	Percent increase per 10,000 adjusted jobs	P-Value (statistically significant values = <0.05)	Adjusted R-Squared (1= perfect correlation; 0= no correlation)
	Single County Analysis [Upper Estimate]			
1	**Correlation with All Job Growth**			
R	Rents	4.0%	<.05	0.88
S	Sales Prices	3.5%	<.05	0.30
2	**Correlation with High-Wage Job Growth**			
	[proxy for inclusion of multiplier-effect]			
R	Rents	7.0%	<.05	0.82
S	Sales Prices	5.8%	<.05	0.25
	Three-County Analysis [Lower Estimate]			
3	**Correlation with All Job Growth**			
R	Rents	0.7%	<.05	0.89
S	Sales Prices	1.1%	<.05	0.23
4	**Correlation with High-Wage Job Growth**			
	[proxy for inclusion of multiplier-effect]			
R	Rents	1.1%	<.05	0.83
S	Sales Prices	n/a -relationship not significant	0.08 (not significant)	0.12

Regression Analysis Metrics

The following provides additional information regarding the regression analysis metrics identified in Table 5-5:

Adjusted R-squared – The adjusted R-Squared is an indicator of the model's ability to explain historical variation in the dependent variable (rents or home prices) in relation to employment. An adjusted R-squared of 1 indicates a perfect correlation. An adjusted R-squared of 0 indicates no correlation. As would be expected based on the trends described above, the regression model explains most of the variation in rents but less than one third of the variation in home prices.

P-Value – The p-value indicates the probability of no relationship between the independent and dependent variables. P-values of 0.05 and less indicate there is less than a 5% chance that the observed relationship can be explained by random chance and is a common threshold used to identify statistical significance. P-values for all of the rental scenarios and three of the for-sale scenarios are below the .05 threshold and are thus identified as significant. The p-value of the fourth for-sale scenario exceeds the .05 threshold and therefore does not meet the criteria for a statistically significant correlative relationship.

Single-County Versus Three-County Results

The single-county analysis provides a higher estimate of the response of local housing costs to a given change in employment compared to the three-county analysis. The estimated change in asking rents per 10,000 jobs is approximately six times larger and the estimated change in sale prices is three times larger under the single-county analysis versus the three-county analysis. The three-county analysis assumes jobs created anywhere in the three-county area have an equal influence on rents as jobs within San Mateo County. While regional employment dynamics are important, jobs added within San Mateo County probably have a more pronounced influence on local real estate conditions within the County. Thus, the change in rents and sales prices for a given change in jobs is likely to fall somewhere in between the value suggested by the single-county and three-county analysis.

The single-county regression model appears to explain most of the variation in local rents; however, it is important to recognize that job growth within San Mateo County is highly correlated with regional job growth. The single-county analysis will not distinguish the effects of county versus regional job growth and, as a result, will tend to overstate the relationship between job growth in the County and rents.

Analysis Limitations and Potential to Overstate Influence of Job Growth

The analysis relies on a very simple statistical technique to test for correlation but does not prove that the identified relationship between job growth and housing costs is causal. The approach likely

overstates the importance of job growth by not distinguishing the effects of other important contributing factors that are correlated with job growth. For example, rising incomes, especially those of higher-income households, enable these households to compete for limited housing supply in the most desirable locations, contributing to rising housing costs. Some communities in San Mateo County, such as Redwood City, have seen construction of a significant number of new rental units that offer superior amenities and command a premium in the market. The inclusion of these newer units in the data set will tend to bring up averages due to higher rents being charged for the new units; however, this does not necessarily mean costs for existing units are increasing. The analysis technique will tend to attribute effects of other factors that are correlated with job growth to the job growth itself, which results in overstating the influence of job growth.

Application of Findings to Estimate Potential Project-Related Impacts

This section examines the potential for the proposed Project to contribute to displacement through an indirect influence on housing market conditions in East Palo Alto and Belle Haven. To the extent the proposed Project generates upward pressure on the housing market, effects are also likely to be experienced locally within the subject communities.

Findings from the regression analysis were applied to the 1,996 jobs that would be added by the proposed Project to estimate the potential range of impacts. Findings are summarized in Table 5-6. As shown, a wide range of potential influence is found, from a 0.11% and 0.14% increase in rents and sales prices, respectively, based on the finding of the three-county analysis, up to a 1.39% and 1.16% increase in rents and sales prices, respectively, based on the single-county results for high-wage jobs. As discussed earlier, the high-wage jobs analysis is an approach to capturing potential multiplier effects in the analysis.

Table 5-6. Potential Percentage Influence on Rents and Sales Prices

	Lower Estimate (3-County Analysis)	Upper Estimate (SM County Analysis)
Correlation with All Job Growth		
Rents	0.14%	0.79%
Sales Prices	0.11%	0.69%
Correlation with High-Wage Job Growth *[captures potential multiplier effect]*		
Rents	0.22%	1.39%
Sales Prices	*relationship not statistically significant*	1.16%

Since the upper and lower percentage impact estimates presented in Table 5-6 likely bracket the range, for purposes of the rental analysis, the midpoints of 0.46% based on all jobs and 0.8% based on high-wage jobs are used. For purposes of the for-sale analysis, the midpoints

are 0.4% based on all jobs and 0.58% based on high-wage jobs[41]. The percentage findings presented in Table 5-6 may be converted to a potential dollar influence on rents and home prices. Applying the percentages from the rental analysis to the $2,791 average effective monthly rent in East Palo Alto as of 2020 per CoStar yields an estimated dollar impact of $13 and $22, respectively. Applying the percentages from the for-sale analysis to the 2020 median home prices in East Palo Alto of $878,000[42] yields a potential dollar influence on home prices of $3,100 and $5,100, which translates to a monthly mortgage payment difference of $11 and $16 per month[43], respectively. For Belle Haven, based on the 2020 median home price of $1,088,000[44] and applying the same percentage factors, the impact to home prices is estimated between $4,400 and $6,300, which translates into an estimated monthly mortgage payment difference of between $14 and $20 per month[45]. These estimated dollar impacts on rents and sales prices could have a minor influence on residential location decisions; however, estimates are likely overstated for the following reasons:

- **Analysis Approach Will Tend to Overstate Importance of Job Growth** – the analysis will tend to overstate the influence of job growth by omitting other important variables that also affect housing costs. Two such variables include rising household incomes, which can influence housing costs through increased price competition, and addition of new rental and for-sale housing with modern finishes and amenities and higher prices and rents, which can bring up averages but does not necessarily mean costs for existing units are increasing. Both factors are correlated with job growth. The analysis approach will tend to ascribe the impact of these factors to job growth alone, overstating the potential effects of the proposed Project.

- **Offsetting Effects of New Housing Not Reflected.** New housing construction can absorb new demand and moderate or offset the minor potential rent and home price effects estimated. The City has already issued building permits for 1,416 housing units during the current RHNA planning cycle and has over 3,000 additional housing units proposed in the vicinity of the proposed Project, within the Bayfront Area. East Palo Alto has issued building permits for 222 units during the current RHNA planning cycle[46] and

[41] For purposes of calculating the mid-point in the high-wage scenario, the insignificant result with the three-county analysis is treated as zero.

[42] Price based on CoreLogic home sales data for January 2020 through October 2020.

[43] This estimate is based on a mortgage interest rate of 2.65% as of January 2021 based on the average for 30-year mortgages per the Freddie Mac Primary Mortgage Market Survey and assumes a 20% down payment.

[44] Price based on CoreLogic home sales data for January 2020 through October 2020.

[45] This estimate is based on a mortgage interest rate of 2.65% as of January 2021 based on the average for 30-year mortgages per the Freddie Mac Primary Mortgage Market Survey and assumes a 20% down payment.

[46] East Palo Alto 2020 Housing Element Annual Progress Report.

has nearly 1,000 new housing units in the development pipeline[47]. Combined, there are approximately 4,000 housing units currently in the development pipeline in Menlo Park and East Palo Alto, including approximately 900 below market rate (BMR) affordable units[48], which would be expected to absorb a share of the additional housing demand from the proposed Project. The proposed Project would also contribute to creation of additional Extremely Low, Very Low and Low Income housing units through payment of approximately $4.9 million[49] in affordable housing impact fees. Absorption of new housing demand from the proposed Project by the over 4,000 new housing units currently in the development pipeline in East Palo Alto and Menlo Park, along with additional affordable units funded with affordable housing impact fees will tend to moderate or offset the potential rent and price effects described above. As these moderating effects are not taken into account in the analysis, estimates of potential rent and price effects are likely overstated.

Displacement Analysis Conclusion

Belle Haven and all areas of East Palo Alto are identified by the Urban Displacement Project as either at risk of or undergoing displacement. East Palo Alto's rent control ordinance shields existing renters in eligible units from rent increases; however, protections do not extend to the more than one third of single-family homes in East Palo Alto that are renter-occupied or to rentals in Belle Haven. Escalating rents and home prices have made these communities far less affordable than they once were. This makes longer term neighborhood change likely as units come available through rental unit turnover or sale of owner-occupied housing because newcomers will generally need to have higher incomes than existing residents to afford it.

The proposed Project is estimated to represent a minor influence on displacement in East Palo Alto and Belle Haven which would not significantly increase the substantial pre-existing displacement pressures. This conclusion is based on consideration of the following:

- The proposed Project would not alter land use in a fundamental way, rather it is an expansion of an existing use that is consistent with existing land uses in the local area. Therefore, it appears unlikely the proposed Project would generate an outsized or catalytic effect on the local housing market.

[47] October 6, 2020 City of East Palo Alto Staff Report to the City Council RE: Follow-Up on Study Session Related to the Affordable Housing Component of the Euclid Improvements (Woodland Park) Project, Attachment 1. East Palo Alto Housing Breakdown, which indicates approved, planned, proposed or under construction housing units totaling 969 units, not including 108 rebuilt units.

[48] Pipeline total of 900-unit BMR units summarized from prior HNA's prepared by KMA for projects in the Bayfront Area, applicant proposals for 123 Independence and Willow Village, the City of Menlo Park summary of pipeline projects in the Bayfront Area and the staff report referenced in the prior footnote with respect to East Palo Alto pipeline projects.

[49] Estimate based on FY 20-21 fee level of $19.61 per square foot applied to the net square footage added by the Project.

- The proposed Project adds a minor level to housing demand, estimated at five to 33 units in East Palo Alto and four to eight units in Belle Haven. The estimated direct housing demand from proposed Project workers is estimated to represent up to approximately 0.5% of the existing housing stock and 1% to 6% of the units estimated to come available through normal turnover in one year. Estimates use a conservatively high estimate of employment to be added by the proposed Project that results in an estimated 20% to 100% more employees than representative employment densities used for the prior Facebook Campus Expansion Project and a more typical professional office employment density, respectively. Despite conservatively high employment estimates, demand for a small share of housing stock in East Palo Alto and Belle Haven is estimated, which is anticipated to represent a minor influence on the overall local housing market. In addition, there are over 4,000 housing units proposed within Menlo Park and East Palo Alto, including approximately 900 BMR affordable units, that are likely to help absorb the new housing demand.

- The analysis indicates that the potential impact on monthly housing costs for newly vacated units could range from $11 to $22 depending on the analysis approach. Were an impact of this magnitude to occur, it would likely represent a minor influence on residents' decisions regarding where to live. Residents of rent control housing and existing homeowners would be protected from any increase. Further, even though a minor amount, the estimated impact is likely overstated because it is based on a methodology that does not isolate the effects of job growth from other contributing factors or account for the offsetting effects of the significant pipeline of new housing proposed for development in the vicinity of the proposed Project.

[1] The methodology utilized by the California Employment Development Department (EDD) assumes hourly paid employees are employed full-time. EDD data is adjusted by KMA to reflect minimum wage. Annual compensation is calculated by EDD by multiplying hourly wages by 40 hours per work week by 52 weeks.

[2] Occupation percentages are based on the 2019 National Industry - Specific Occupational Employment survey compiled by the Bureau of Labor Statistics. Wages are based on Occupational Employment Survey data applicable to San Mateo County as of 2019 and are adjusted by EDD to the first quarter of 2020.

[3] Including occupations representing 2% or more of the major occupation group.

[4] Household income estimated based average worker compensation and ratios between employee income and household income see Table 3-6.

[1] The methodology utilized by the California Employment Development Department (EDD) assumes hourly paid employees are employed full-time. EDD data is adjusted by KMA to reflect minimum wage. Annual compensation is calculated by EDD by multiplying hourly wages by 40 hours per work week by 52 weeks.

[2] Occupation percentages are based on the 2019 National Industry - Specific Occupational Employment survey compiled by the Bureau of Labor Statistics. Wages are based on Occupational Employment Survey data applicable to San Mateo County as of 2019 and are adjusted by EDD to the first quarter of 2020.

[3] Including occupations representing 2% or more of the major occupation group.

[4] Household income estimated based average worker compensation and ratios between employee income and household income identified in Table 3-6.

APPENDIX B – CENSUS DATA FOR EAST PALO ALTO AND BELLE HAVEN

The following Appendix section summarizes U.S. Census data on housing conditions and demographics for East Palo Alto and Belle Haven. In addition, data for San Mateo County as a whole is provided as a point of comparison. East Palo Alto and Belle Haven differ in several respects from San Mateo County averages including: a higher share of renter households, a concentration of households overspending on housing, a higher percentage living in overcrowded conditions, larger household sizes, a younger population, lower incomes, and an above average percentage of households below the poverty level.

1. Number of Housing Units and Tenure

East Palo Alto has an estimated 8,342 housing units. Approximately 60% of occupied units are rental and 40% are owner-occupied. Approximately 1,800 units of the rental units in East Palo Alto (39%) are part of the multi-building Woodland Park Apartments property acquired by Sand Hill Property Company in 2016 and located along the boundary with the City of Palo Alto on the West side of U.S. 101.

Belle Haven has approximately 1,670 housing units. Approximately 55% of the occupied units are rental and 45% are owner-occupied.

Housing Units by Tenure

	East Palo Alto		Belle Haven[1]		San Mateo County	
Housing Units by Tenure	Number	% of Occupied Units	Number	% of Occupied Units	Number	% of Occupied Units
Renter Occupied	4,648	60%	795	55%	105,000	40%
Owner Occupied	3,076	40%	656	45%	158,543	60%
Total Occupied Housing Units	*7,724*	100%	*1,451*	100%	*263,543*	100%
Vacant	618		219		14,230	
Total Housing Units	*8,342*		*1,670*		*277,773*	
Percent of County-wide Housing Stock	3.0%		0.6%			

(1) Reflects data for Census Tract 6117 which includes the Belle Haven neighborhood.

Source: 2015-2019 American Community Survey estimates, Table DP04

East Palo Alto represents about 3% of the total housing stock in San Mateo County and less than 1% of the more than 950,000 housing units in San Mateo and Santa Clara counties combined. Belle Haven represents approximately 0.6% of the total housing stock in San Mateo County and a fraction of the combined housing stock in the two counties.

2. Housing Units by Type

Approximately 58% of units in East Palo Alto are single family compared to 68% in Belle Haven and 65% County-wide. The balance of units are in multi-family and other structures.

Housing Units by Type

	East Palo Alto		Belle Haven[1]		San Mateo	
	Housing Units	% of Total	Housing Units	% of Total	Housing Units	% of Total
Single Family	4,848	58%	1,137	68%	179,731	65%
2- 4 unit buildings	250	3%	184	11%	19,743	7%
Five+ unit buildings	3,081	37%	331	20%	75,096	27%
Mobile Home, Boat, RV, etc.	163	2%	18	1%	3,203	1%
Total Housing Units	8,342	100%	1,670	100%	277,773	100%

(1) Reflects data for Census Tract 6117 corresponding to the Belle Haven neighborhood.
Source: 2015-2019 American Community Survey 5-Year Estimates.

3. Percent of Income Spent on Housing

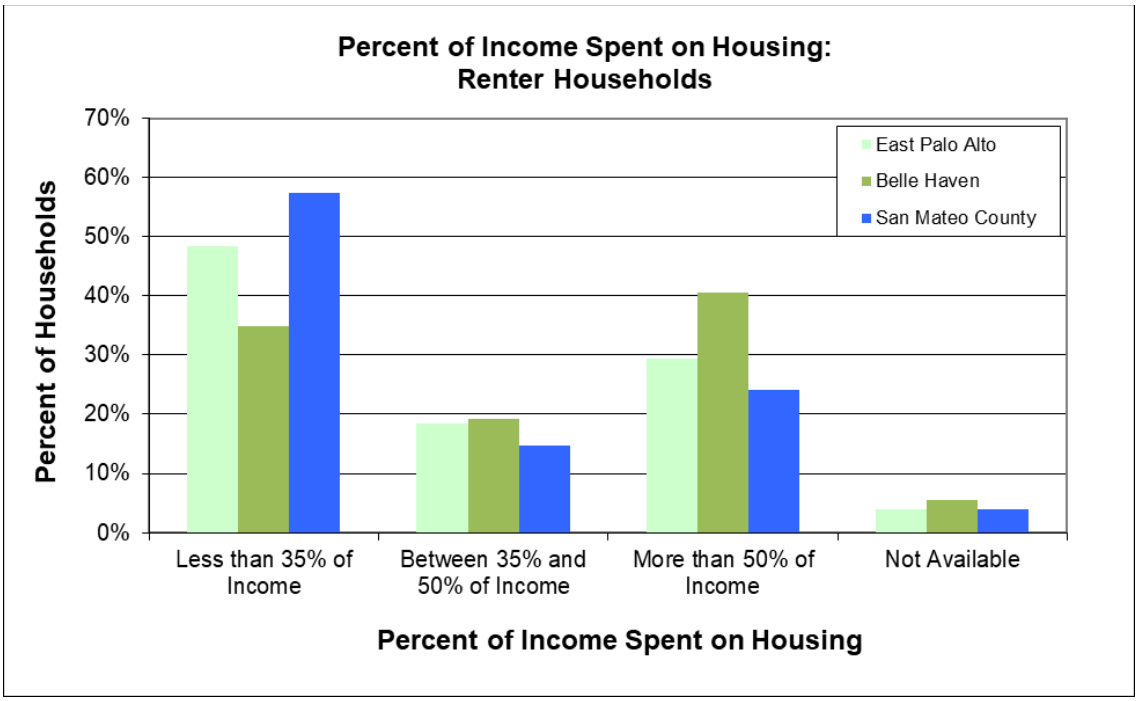
In East Palo Alto, approximately 48% of renter households and 35% of homeowner households spend more than 35% of their income on housing, a general criterion for overspending, particularly for renters. In Belle Haven, the share spending more than 35% of their income on housing is 60% for renter households and 27% for homeowners. The percent spending more than 35% of their income on housing exceeds County averages in both communities.

Percent of Income Spent on Housing

	East Palo Alto		Belle Haven[1]		San Mateo County	
	Renter	Homeowner	Renter	Homeowner	Renter	Homeowner
Less than 35% of Income	48%	65%	35%	71%	57%	76%
Between 35% and 50% of Income	18%	13%	19%	14%	15%	10%
More than 50% of Income	29%	22%	41%	13%	24%	12%
Subtotal Over 35% of Income	48%	35%	60%	27%	39%	23%
Not Available	4%	0%	6%	2%	4%	1%

(1) Reflects data for Census Tract 6117 corresponding to the Belle Haven neighborhood.

Source: 2015-2019 American Community Survey 5-Year Estimates.



Source: 2015-2019 American Community Survey 5-Year Estimates.

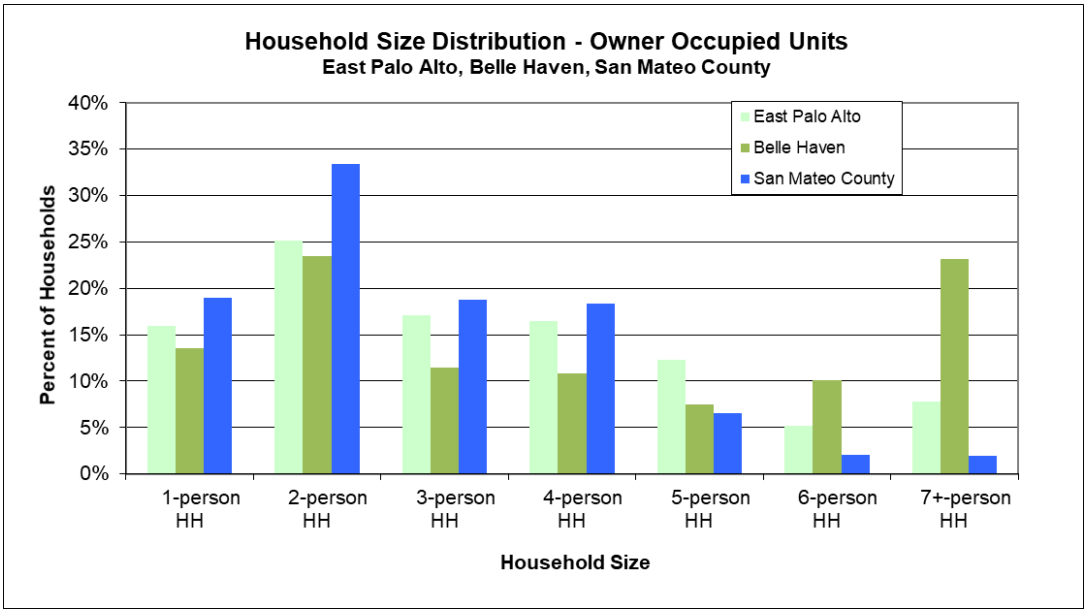
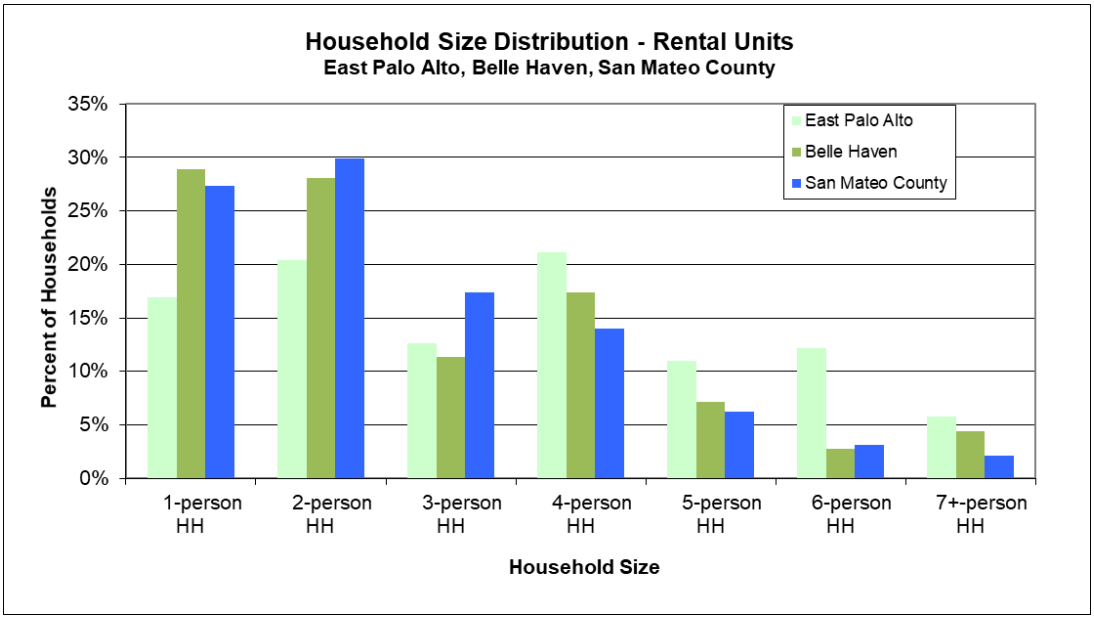
4. Household Size

Household sizes in East Palo Alto and Belle Haven are larger than County averages as shown in the charts below:

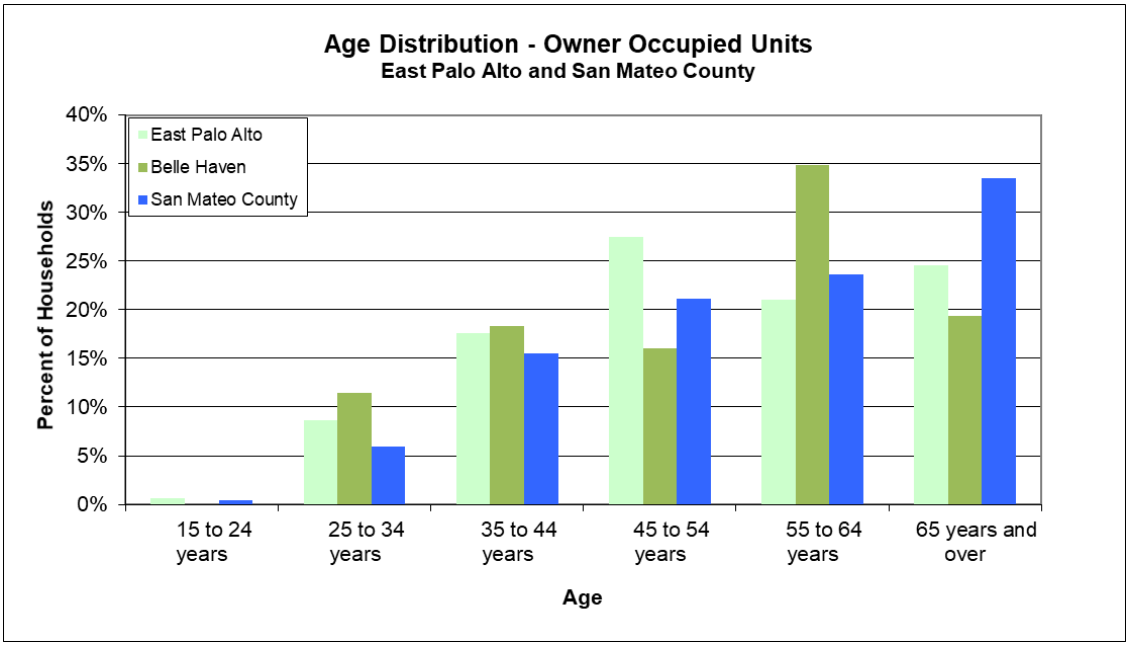


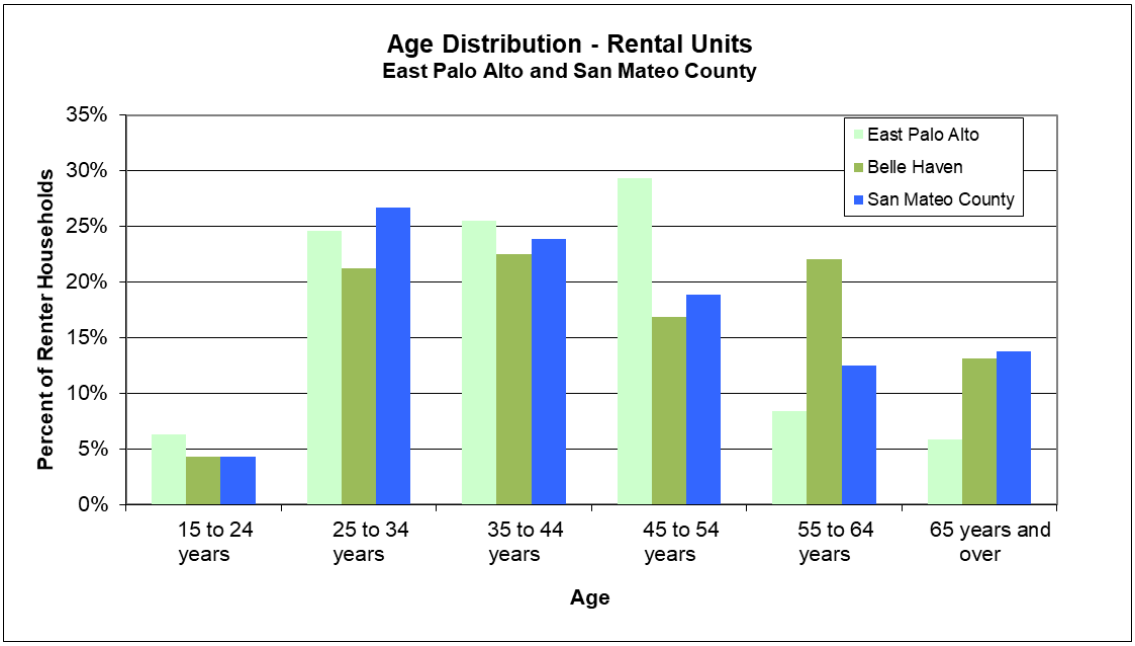


Source: American Community Survey, 2015-2019, Table B25009

5. Age

The population of East Palo Alto and Belle Haven is younger than for the County as a whole:

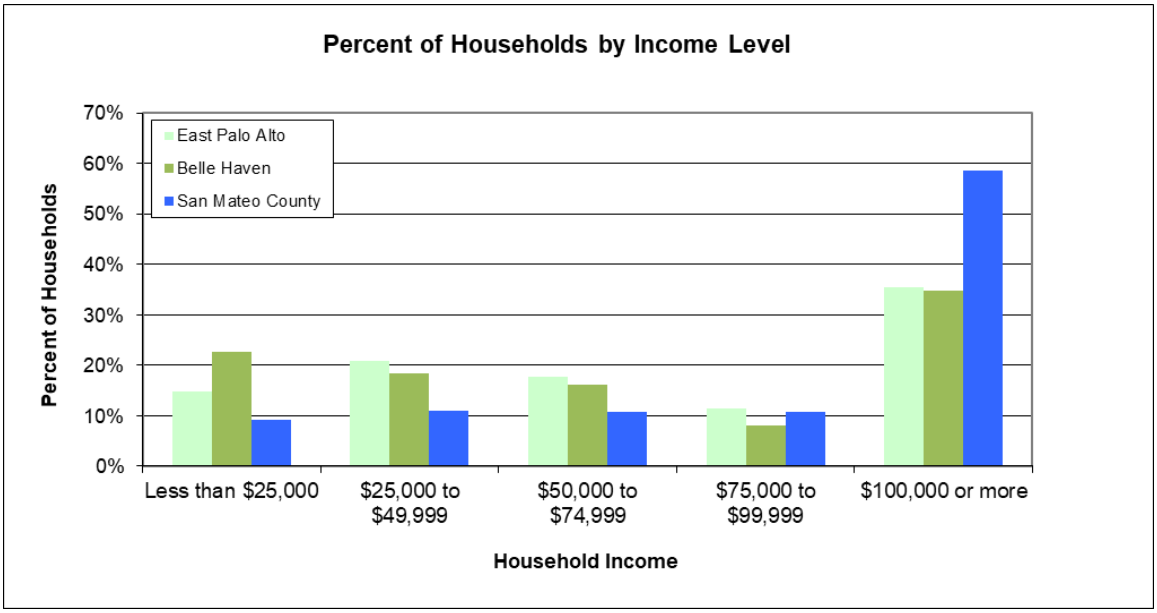




Source: American Community Survey, 2015-2019, Table B25007

6. Income and Employment status

East Palo Alto and Belle Haven households have lower incomes than County averages and a higher percentage of families below the poverty line. Unemployment levels in East Palo Alto and Belle Haven are similar to the County average.



Source: 2015-2019 American Community Survey 5-Year Estimates

Employment Status, Median Income, Poverty

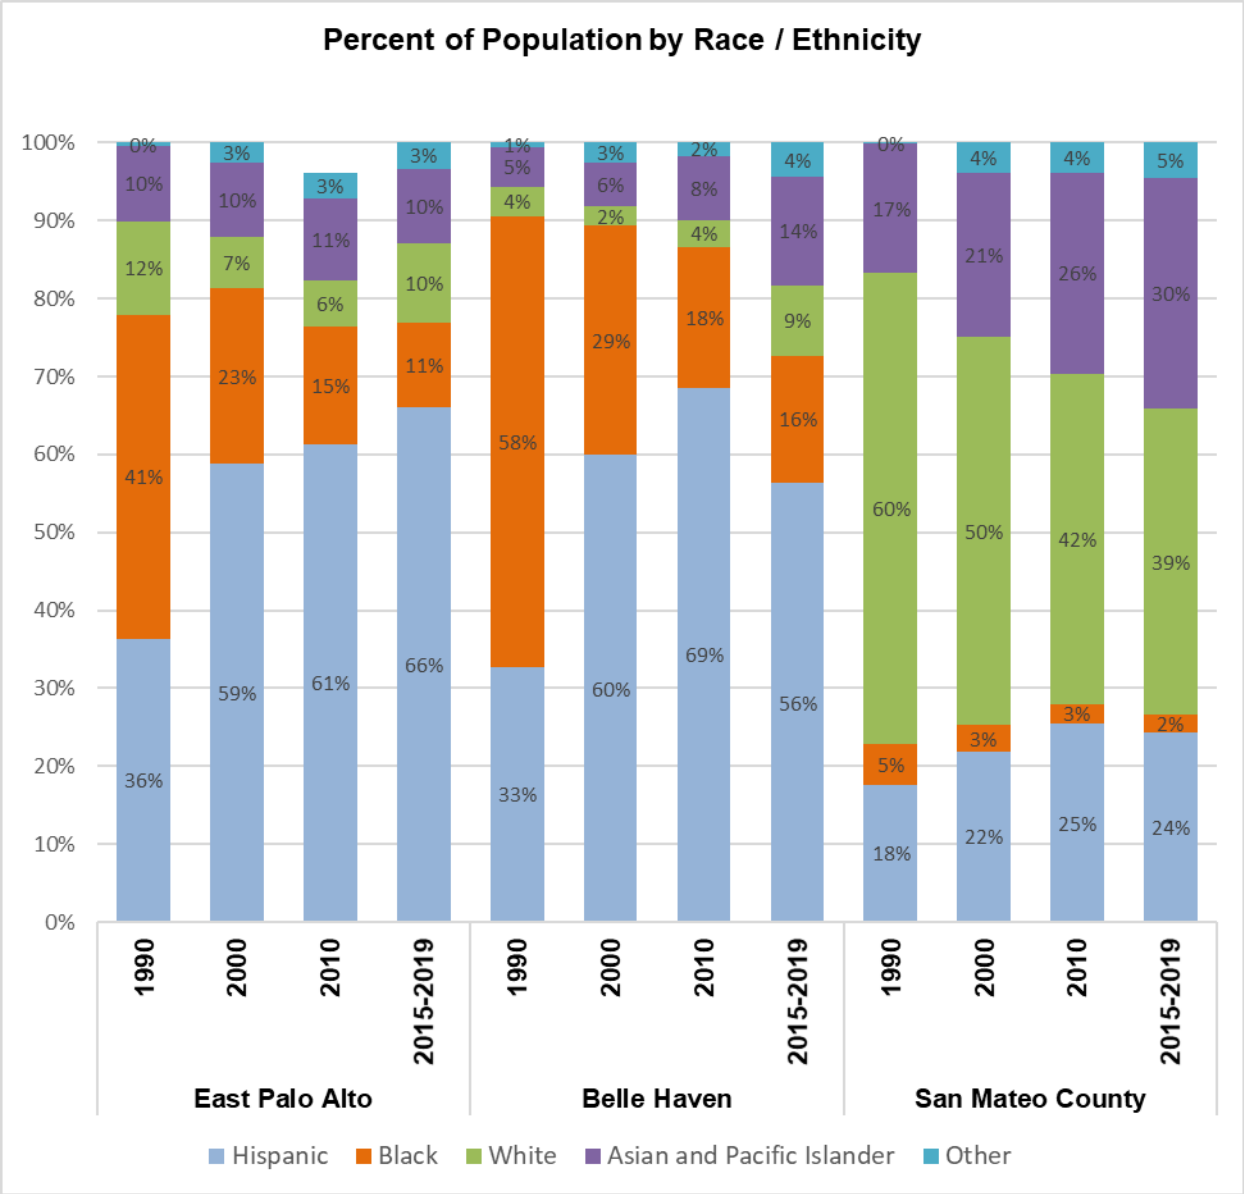
	East Palo Alto		Belle Haven		San Mateo County	
	Number	Percent	Number	Percent	Number	Percent
Employment Status						
Employed	15,507	69%	3,139	69%	414,747	66%
Unemployed	712	3%	145	3%	16,104	3%
Not in Labor Force	6,170	28%	1,252	28%	194,832	31%
Total Population Over 16 Years	22,413	100%	4,536	100%	625,917	100%
Median Household Income (2019 dollars)		$67,087		$65,613		$122,641
Percent of Families Below Poverty Level		10.60%		12.10%		4.00%

Source: 2015-2019 American Community Survey 5-Year Estimates

7. Race and Ethnicity

Approximately two-thirds of East Palo Alto and 56% of Belle Haven residents are Hispanic, compared to the County average of 24%. African American residents represent 11% and 16% of the population in East Palo Alto and Belle Haven, respectively. The Hispanic population of

both communities has increased since 1990 while the African American population has declined, as shown in the chart below. The most recent ACS data suggests a shift in longer-term trends within Belle Haven including a reversal of the trend toward increasing Hispanic population and an increase in the white and Asian populations.

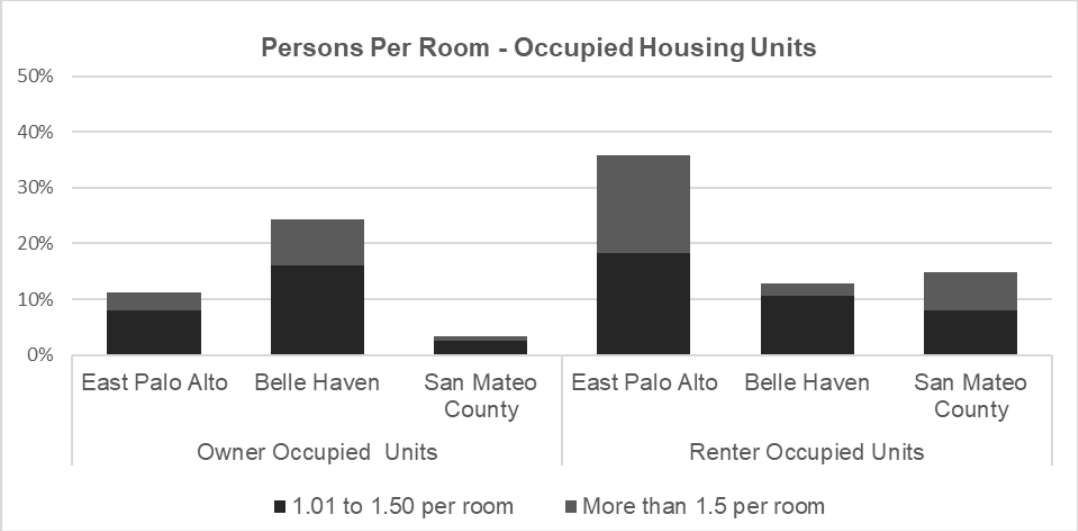


Sources: 1990, 2000, 2010 Census; 2015-2019 American Community Survey

8. Overcrowding

Overcrowding is generally defined as an occupancy level above one person per room. In East Palo Alto, about 11% of owner-occupied units and 36% of renter-occupied units have more than one person per room. The incidence of over-crowding in East Palo Alto is significantly greater than San Mateo County as a whole, especially in the rental stock. In Belle Haven, overcrowding

in owner occupied housing is also above the County average while crowding in the rental housing stock is similar to the County average.



Source: 2015-2019 American Community Survey 5-Year Estimates.

Occupants Per Room

Occupants Per Room	Owner Occupied			Renter Occupied		
	East Palo Alto	Belle Haven	San Mateo County	East Palo Alto	Belle Haven	San Mateo County
1 Person or fewer per room	89%	76%	97%	64%	87%	85%
1.01 to 1.50 per room	8%	16%	3%	18%	11%	8%
1.51 to 2.00 per room	2%	5%	1%	11%	2%	5%
2.01 or more per room	1%	3%	0%	6%	0%	2%
1.01 Per Room or more[(1)]	**11%**	**24%**	**3%**	**36%**	**13%**	**15%**
Total	100%	100%	100%	100%	100%	100%

(1) The Census has no official definition of over-crowding but it is sometimes defined as more than one person per room.
Source: 2015-2019 American Community Survey 5-Year Estimates.

Both conditions of overspending and overcrowding are directly linked to the high cost of housing relative to residents' incomes. Households are forced to spend a high percentage of their income on housing if lower cost housing is not available. Overcrowding is a direct response to high housing costs, as households make do with smaller units or double up with other family members, roommates, etc.

2019	1,984,264	854,658	$3.52	$907

[1] Adjusted jobs defined as total employment less the number of jobs that can be accommodated by housing growth since 2000, based on a factor of 1.91 workers per household. See Appendix 2 for calculation.

[2] Asking rents and home prices are adjusted for inflation in linear regression analysis. See Appendix 1.

[3] San Mateo, Santa Clara, and San Francisco counties.

Commonwealth Building 3 Project
Water Supply Assessment

EXECUTIVE SUMMARY

Overview

This Water Supply Assessment (WSA) has been prepared for Menlo Park Municipal Water (MPMW) by West Yost in accordance with California Water Code sections 10910 through 10915 in connection with the proposed Commonwealth Building 3 Project (Proposed Project). The Proposed Project includes a new approximately 249,500 gross square foot (gsf) office building (Building 3) that would accommodate approximately 1,996 employees, an approximately 404,464 gsf parking structure with 1,340 parking spaces, and the conversion of an existing surface parking lot to a community park that would be privately owned but publicly accessible.

The Proposed Project is located in the Bayfront Area of the City of Menlo Park (City) within the Lower Zone of MPMW's service area. The Bayfront Area is between Highway 101 and Bayfront Expressway and is generally comprised of office, life sciences, mixed use residential, light industrial, commercial, and commercial business park land uses.

In 2016, the City completed a multi-year planning effort to update the Land Use and Circulation Elements of its General Plan for the 2040 planning horizon. This General Plan Update process was known as ConnectMenlo. ConnectMenlo reaffirmed existing remaining development potential throughout the City and incorporated land use changes in the Bayfront Area, including development potential for up to 4,500 new multi-family residential units, 2.3 million square feet of new non-residential uses (including 1.4 million square feet of Life Sciences research and development (R&D) uses), and 400 new hotel rooms. The Proposed Project, located within the ConnectMenlo study area, is within this development capacity.

Projected Water Demands

The projected water demands for buildout of the Proposed Project have been calculated based on CALGreen and Model Water Efficient Landscape Ordinance (MWELO) standards. The projected water demand for the Proposed Project is 13.7 million gallons per year (MG/yr).

ConnectMenlo identifies the maximum development that could occur in the ConnectMenlo study area, including potential bonus-level increased development, and the ConnectMenlo EIR further studied the maximum development potential by more specific land uses. MPMW and the City's Planning Division are actively tracking projects within the ConnectMenlo study area on a cumulative basis to ensure that developed projects remain within the maximum development permitted through ConnectMenlo and that the approved projects would be consistent with the ConnectMenlo EIR. The Proposed Project, if approved, would be within this permitted cumulative development total identified in ConnectMenlo and studied in the EIR. Because the Proposed Project is within the maximum development studied in ConnectMenlo, the water demand for the Proposed Project is included in the ConnectMenlo EIR and MPMW 2020 Urban Water Management Plan (UWMP) water demand assumptions.

The Proposed Project does not include the use of recycled water, but will include the installation of water efficient fixtures and implementation of water conservation practices. The Proposed Project will also be dual-plumbed for recycled water use, should recycled water use become feasible in the future. Summaries of the availability and reliability of potable water supplies to serve the projected water demands for the Proposed Project are discussed below.

Water Supply Availability and Reliability

As discussed in this WSA, MPMW purchases all of its potable water supplies from the Regional Water System (RWS), which is operated by the San Francisco Public Utilities Commission (SFPUC). MPMW is a Wholesale Customer of the SFPUC. The availability and reliability of MPMW's water supplies as described in this WSA are based primarily on information contained in the MPMW 2020 UWMP and the SFPUC 2020 UWMP. The MPMW 2020 UWMP is incorporated by reference into this WSA.

The reliability of the SFPUC RWS supply is highly dependent on the assumption of whether or not the 2018 Bay-Delta Plan Amendment is implemented. The Bay-Delta Plan Amendment was adopted in December 2018 by the State Water Resources Control Board (SWRCB) to establish water quality objectives to maintain the health of the Bay-Delta ecosystem. The adopted Bay-Delta Plan Amendment was developed with the stated goal of increasing salmonid populations in three San Joaquin River tributaries (the Stanislaus, Merced, and Tuolumne Rivers) and the Bay-Delta. The Bay-Delta Plan Amendment requires the release of 40 percent of the "unimpaired flow" on the three tributaries from February through June in every year type, whether wet, normal, dry, or critically dry. The implementation of the Bay-Delta Plan Amendment significantly impacts the SFPUC RWS supply reliability in dry years; however, the actual implementation of the Bay-Delta Plan Amendment is uncertain.

Because of the uncertainties surrounding the implementation of the Bay-Delta Plan Amendment, this WSA presents findings for two scenarios, one assuming the Bay-Delta Plan Amendment is implemented and one assuming that the Bay-Delta Plan Amendment is not implemented.

Under the scenario where it is assumed the Bay-Delta Plan Amendment is implemented, the total projected water supplies determined to be available for the Proposed Project in normal years will meet the projected water demand associated with the Proposed Project, in addition to MPMW's existing and planned future uses through 2040. However, with the implementation of the Bay-Delta Plan Amendment, significant supply shortfalls are projected in dry years for agencies that receive water supplies from the SFPUC RWS, as well as other agencies whose water supplies would be affected by the Amendment. For MPMW, supply shortfalls are projected in single dry years (ranging from 27 to 32 percent) and in multiple dry years (ranging from 27 to 44 percent) through 2040, with similar shortfalls through 2045 based on SFPUC's analysis.

If supply shortfalls do occur, MPMW expects to meet these supply shortfalls through water demand reductions and other shortage response actions by implementation of its Water Shortage Contingency Plan (WSCP). The projected single dry year shortfalls would require implementation of Stage 3 or 4 of the MPMW WSCP, and the projected multiple dry year shortfalls would require implementation of Stage 3, 4 or 5 of the MPMW WSCP. The Proposed Project would be subject to the same water conservation and water use restrictions as other water users within the MPMW system.

Under the scenario where it is assumed the Bay-Delta Plan Amendment is not implemented, the total projected water supplies determined to be available for the Proposed Project in normal years, single dry years and multiple dry years will meet the projected water demand associated with the Proposed Project, in addition to MPMW's existing and planned future uses through 2040. A 16.5 percent supply shortfall is projected during the fourth and fifth consecutive dry years for base year 2045 based on SFPUC's analysis. These projected supply shortfalls are significantly less than the projected supply shortfalls if the Bay-Delta Plan Amendment is implemented. If supply shortfalls do occur, MPMW expects to meet these supply shortfalls through water demand reductions and other shortage response actions by implementation of

its WSCP. The projected multiple dry year shortfalls in 2045 would require implementation of Stage 2 of the MPMW WSCP. The Proposed Project would be subject to the same water conservation and water use restrictions as other water users within the MPMW system.

As described in this WSA, the SFPUC is implementing an Alternative Water Supply Planning Program to investigate and plan for new water supplies to address future long-term water supply reliability challenges and vulnerabilities on the RWS. Also, MPMW is implementing an Emergency Water Storage/Supply Project to provide a backup water supply to MPMW's Lower Zone, which the project site is located within.

1.0 INTRODUCTION

The Commonwealth Building 3 Project (Proposed Project) includes a proposed four-story 249,500 gross square foot (gsf) office building, a four-story 404,464 gsf parking structure, and the conversion of an existing surface parking lot to a community park in the Bayfront Area of the City of Menlo Park (City) in the Menlo Park Municipal Water (MPMW) service area.

The purpose of this Water Supply Assessment (WSA) is to support the Environmental Impact Report (EIR) for the Proposed Project. The following sections describe the legal requirement for the WSA and the project background.

1.1 Legal Requirement for a Water Supply Assessment

California Senate Bill 610 (SB 610) and Senate Bill 221 (SB 221) amended state law, effective January 1, 2002, to improve the link between information on water supply availability and certain land use decisions made by cities and counties. SB 610 and SB 221 were companion measures which sought to promote more collaborative planning between local water suppliers and cities and counties. Both statutes require detailed information regarding water availability to be provided to the city and county decision-makers prior to approval of specified large development projects. The purpose of this coordination is to ensure that prudent water supply planning has been conducted, and that planned water supplies are adequate to meet existing demands, anticipated demands from approved projects and tentative maps, and the demands of proposed projects.

SB 610 amended California Water Code sections 10910 through 10915 (inclusive) to require land use lead agencies to:

- Identify any public water purveyor that may supply water for a proposed development project[1]
- Request a WSA from the identified water purveyor

The purpose of the WSA is to demonstrate the sufficiency of the purveyor's water supplies to satisfy the water demands of the proposed development project, while still meeting the water purveyor's existing and planned future uses. Water Code sections 10910 through 10915 delineate the specific information that must be included in the WSA.

SB 221 amended State law (California Government Code section 66473.7) to require that approval by a city or county of certain residential subdivisions[2] requires an affirmative written verification of sufficient water supply. SB 221 was intended as a fail-safe mechanism to ensure that collaboration on finding the needed water supplies to serve a new large residential subdivision occurs before construction begins. It should be noted that SB 221 does not apply to the Proposed Project as the Proposed Project does not include a residential subdivision.

[1] The definition of a "project" is provided in Water Code section 10912(a) and is discussed further in Section 3.1 of this WSA.

[2] Per Government Code Section 66473.7(a)(1) subdivision means a proposed residential development of more than 500 dwelling units.

1.2 Need for and Purpose of Water Supply Assessment

The purpose of this WSA is to perform the evaluation required by SB 610 (Water Code sections 10910 through 10915) in connection with the Proposed Project, located within MPMW's service area.

This WSA does not reserve water, or to function as a "will serve" letter or any other form of commitment to supply water (see Water Code section 10914). The provision of water service will continue to be undertaken in a manner consistent with applicable policies and procedures, consistent with existing law.

This WSA for the Proposed Project has been prepared by West Yost, as requested by MPMW, the responsible water purveyor for the Proposed Project.

1.3 Water Supply Assessment Preparation, Format, and Organization

The format of this WSA is intended to follow Water Code sections 10910 through 10915 to clearly delineate compliance with the specific requirements for a WSA. This WSA includes the following sections:

Section 1: Introduction
Section 2: Description of the Proposed Project
Section 3: Required Determinations
Section 4: Menlo Park Municipal Water System
Section 5: Menlo Park Municipal Water Demands
Section 6: Menlo Park Municipal Water Supplies
Section 7: Water Supply Reliability
Section 8: Determination of Water Supply Sufficiency Based on the Requirements of SB 610
Section 9: Water Supply Assessment Approval Process
Section 10: References

Relevant citations of Water Code sections 10910 through 10915 are included throughout this WSA in *italics* to demonstrate compliance with the specific requirements of SB 610.

2.0 DESCRIPTION OF THE PROPOSED PROJECT

The following sections describe the Proposed Project, including the Proposed Project's location, proposed land uses, and projected water demand.

2.1 Proposed Project Location and Overview

The Proposed Project is located in the Bayfront Area of the City, in MPMW's service area. The Bayfront Area is generally comprised of office, life sciences, mixed use residential, light industrial, commercial, and commercial business park land uses between Highway 101 and the Bayfront Expressway.

The Proposed Project consists of two sites, the Commonwealth Site and the Jefferson Site, and is bounded by Jefferson Drive and office buildings to the north, the currently inactive Dumbarton Rail Corridor to the southeast, and US 101 to the south. The Proposed Project site is shown on Figure 2-1.

Source: Figure 2-1, Initial Study Commonwealth Building 3 Project, prepared by ICF, dated May 2019.

Figure 2-1. Proposed Project Location

The Sobrato Organization (Project Sponsor) is proposing to construct an approximately 249,500 gsf office building and an approximately 404,464 gsf parking structure as part of the proposed Commonwealth Building 3 Project. The Proposed Project site is within the existing Commonwealth Corporate Center property, which includes the Commonwealth Site at 162 and 164 Jefferson Drive and the Jefferson Site (also 164 Jefferson Drive). Two existing buildings (Buildings 1 and 2), currently occupied by Meta (referred to by Meta as Buildings 27 and 28), were constructed as part of the Commonwealth Corporate Center Project. The Proposed Project would add a four-story office building (Building 3) and a four-story parking structure with 1,340 parking spaces to the Proposed Project site. In addition to the proposed Building 3 and parking structure at the Commonwealth Site, the Jefferson Site would be converted from an existing surface parking lot to a community park that would be privately owned but publicly accessible. The Proposed Project site plan is shown on Figure 2-2.

Source: Commonwealth Building 3 Planning Application Sheet L1.01 Illustrative Landscape Plan, prepared by Architectural Technologies, Inc., dated July 2021.

Figure 2-2. Proposed Project Site Plan

2.2 Projected Water Demand for the Proposed Project

The Proposed Project site was rezoned Office-Bonus (O-B) in 2016 through the ConnectMenlo process. As such, its development is required to comply with the City Municipal Code Chapter 16.43 O Office District, including specifically Section 16.43.140 Green and Sustainable Building. In that section of the Municipal Code, the following specific requirements for water use efficiency and recycled water use are provided:

> 16.43.140 (3) Water Use Efficiency and Recycled Water.
>
> A. Single pass cooling systems shall be prohibited in all new buildings.
>
> B. All new buildings shall be built and maintained without the use of well water.
>
> C. Applicants for a new building more than one hundred thousand (100,000) square feet of gross floor area shall prepare and submit a proposed water budget and accompanying calculations following the methodology approved by the City. For all new buildings two hundred fifty thousand (250,000) square feet or more in gross floor area, the water budget shall account for the potable water demand reduction resulting from the use of an alternative water source for all City-approved non-potable applications. The water budget and calculations shall be reviewed and approved by the City's Public Works Director prior to certification of occupancy. Twelve (12) months after the date of the certification of occupancy, the building owner shall submit data and information sufficient to allow the City to compare the actual water use to the allocation in the approved water budget. In the event that actual water consumption exceeds the water budget, a water conservation program, as approved by the City's Public Works Director, shall be implemented. Twelve (12) months after City approval of the water conservation program, the building owner shall submit data and information sufficient to allow the City to determine compliance with the conservation program. If water consumption exceeds the budgeted amount, the City's Public Works Director may prohibit the use of water for irrigation or enforce compliance as an infraction pursuant to Chapter 1.12 until compliance with the water budget is achieved.
>
> D. All new buildings shall be dual plumbed for the internal use of recycled water.
>
> E. All new buildings two hundred fifty thousand (250,000) square feet or more in gross floor area shall use an alternate water source for all City-approved non-potable applications. An alternative water source may include, but is not limited to, treated non-potable water such as graywater. An alternate water source assessment shall be submitted that describes the alternative water source and proposed non-potable application. Approval of the alternate water source assessment, the alternative water source and its proposed uses shall be approved by the City's Public Works Director and Community Development Director. If Menlo Park Municipal Water has not designated a recycled water purveyor and/or municipal recycled water source is not available prior to planning project approval, applicants may propose conservation measures to meet the requirements of this section subject to approval of the City Council. The conservation measures shall achieve a reduction in potable water use equivalent to the projected demand of City-approved non-potable applications, but in no case shall the reduction be less than 30 percent (30%) compared to the water budget in subsection (3)(C) of this section. The conservation measures may include on-site measures, off-site measures or a combination thereof.

F. Potable water shall not be used for dust control on construction projects.

G. Potable water shall not be used for decorative features, unless the water recirculates.

As required by the City Municipal Code described above, the Project Applicant prepared a Water Use Budget for the Proposed Project (see Appendix A). Because the Proposed Project building is less than 250,000 square feet, an Alternative Water Source Assessment is not required. It should be noted that recycled water use is not proposed for the Proposed Project; instead, the Proposed Project will install water efficient fixtures and implement water conservation measures, both in the design of the base building and tenant spaces, and in the optimization of the operations and employee practices. The Proposed Project will also be dual-plumbed for recycled water use, should recycled water use become feasible in the future.

The Proposed Project will comply with the City's water use regulations by using ultra-low-flow fixtures within the building. Flow rates for the selected fixtures would be equal to or less than the 2016 CALGreen flow rates for commercial fixtures. The Project Applicant estimated water use for the Proposed Project using the following assumptions:

- Water usage for plumbing fixtures (including water closets, urinals, public lavatories, kitchen faucets and showerheads) were estimated using CALGreen standards
- Water usage for food services were based on average of modeled water use for office buildings, restaurants, and efficient restaurants
- Water usage for irrigation is estimated based on the Maximum Applied Water Allowance in accordance with the Model Water Efficient Landscape Ordinance (MWELO)
- Water usage for cooling towers is estimated based on operational assumptions for the proposed building and weather data for the site.

A summary of the water demands for the Proposed Project, as estimated by the Project Applicant, is provided in Table 2-1. As shown, the projected water demand for the Proposed Project is 13.7 million gallons per year (MG/yr). Additional information on the water demand projections for the Proposed Project is provided in Appendix A.

Table 2-1. Estimated Water Demand for the Proposed Project[(a)]

Water Use	Estimated Annual Demand, gallons/yr
Plumbing Fixtures and Fittings (toilets, urinals)	1,393,408
Plumbing Fixtures and Fittings (lavatories, kitchen faucets, showers)	1,089,816
Food Services	9,081,800
Irrigation	892,323
Cooling Tower	1,273,144
Total (gallons per year, gal/yr)	**13,730,491**
Total (million gallons per year, MG/yr)	**13.7**

(a) As estimated for the Proposed Project by the Project Applicant in July 2020 (see Appendix A).

2.3 Proposed Project Relationship to ConnectMenlo

In 2016, the City completed a multi-year planning effort to update the Land Use and Circulation Elements of its General Plan for the 2040 planning horizon. This General Plan Update process was known as ConnectMenlo. ConnectMenlo reaffirmed existing remaining development potential within the City and incorporated land use changes in the Bayfront Area, including development potential for up to 4,500 new multi-family residential units, 2.3 million square feet of new non-residential uses, and 400 new hotel rooms.

A program-level EIR was prepared for ConnectMenlo. In conjunction with the ConnectMenlo EIR, a Water Supply Evaluation Study (WSE Study) was prepared to evaluate whether there would be sufficient water supply to meet the current and planned water demands within the service area during normal and dry hydrologic years over a 20-year time horizon. More specifically, the WSE Study includes:

- A summary of the WSA requirements articulated in Water Code §10910-10915 and a description of how they have been addressed in the WSE Study
- A description and analysis of the current and projected future water demands for the ConnectMenlo project through the year 2040
- A description and analysis of the historical, current, and projected future water demands for the MPMW service area through the year 2040
- A description and analysis of the current and projected future water supplies for the MPMW service area through the year 2040
- A comparison of the water supplies and demands for MPMW's water service area, including the projected water demands associated with the ConnectMenlo project

The data in the WSE Study were based primarily on the MPMW 2010 UWMP, the draft MPMW 2015 UWMP (which was being developed at the same time as the WSE Study), information from City staff, and specific information from PlaceWorks (preparer of the 2016 ConnectMenlo General Plan Update and program-level EIR). The final adopted MPMW 2015 UWMP and the MPMW 2020 UWMP incorporated the ConnectMenlo projections.

ConnectMenlo identifies the maximum development potential that could occur within the ConnectMenlo study area, including potential bonus-level increased development, and the associated program-level EIR further defines the maximum development that can occur by specific land uses. MPMW and the City's Planning Division are actively tracking projects within the ConnectMenlo study area on a cumulative basis to ensure that developed projects remain within the maximum development permitted by ConnectMenlo and are consistent with the program-level EIR.[3] The Proposed Project, if approved, would be within this permitted cumulative development total for both ConnectMenlo and the associated program-level EIR.

Table 2-2 shows the Proposed Project's impact on the cumulative water demand permitted for ConnectMenlo.

[3] For projects that require a water budget, the City includes Conditions of Approval requiring annual monitoring to document water usage at or below the limits identified in the approved water budget. Exempt projects (below the water budget threshold) are not tracked.

Table 2-2. Proposed Project Impact on ConnectMenlo Study Area Potable Water Demand

Demand Source	Annual Water Demand, MG/yr
ConnectMenlo Total Potable Water Demand at Buildout[(a)]	343
Proposed Project Potable Water Demand[(b)]	14
Remaining Potable Water Demand for Other Projects within ConnectMenlo Study Area[(c)]	**329**

(a) Water Supply Evaluation Study for ConnectMenlo – General Plan and M-2 Area Zoning Update (Table 2), prepared by EKI, February 2016. The Water Supply Evaluation Study assumed that total water demand in the ConnectMenlo study area would be met using potable water.

(b) From Table 2-1 above.

(c) Other projects in the ConnectMenlo study area currently in the planning stages include Willow Village with a projected net potable water demand of approximately 85 MG/yr and 1350 Adams Court with a projected potable water demand of approximately 5 MG/yr. These projects are still in the planning stage so their projected water demands are subject to change. Recently approved projects subject to water budgets and annual water usage limits include Menlo Portal and Menlo Uptown which are anticipated to use 12.6 and 9.1 MG/yr, respectively.

The remaining potable water demand for other projects within the ConnectMenlo study area shown in Table 2-2 is available to serve both approved, but not yet constructed, and future projects (whether or not they require a WSA).

3.0 REQUIRED DETERMINATIONS

The following sections describe the required determinations for a WSA.

3.1 Does SB 610 Apply to the Proposed Project?

10910 (a) Any city or county that determines that a project, as defined in Section 10912, is subject to the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code) under Section 21080 of the Public Resources Code shall comply with this part.

10912 (a) "Project" means any of the following:

(1) A proposed residential development of more than 500 dwelling units.

(2) A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.

(3) A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.

(4) A proposed hotel or motel, or both, having more than 500 rooms.

(5) A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.

(6) A mixed-use project that includes one or more of the projects specified in this subdivision.

(7) A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500-dwelling unit project.

As shown in Table 3-1, the Proposed Project does meet the definition of a "Project" as specified in Water Code section 10912(a). The Proposed Project has not been the subject of a previously adopted WSA and has not been included in an adopted WSA for a larger project. Therefore, according to Water Code section 10910(a), a WSA is required for the Proposed Project.

Table 3-1. Does the Proposed Project Meet the SB 610 Definition of a "Project"?

SB 610 Project Definition Components	Proposed Project Quantity	Meets the SB 610 Definition of a "Project"?
Residential > 500 dwelling units	N/A	NO
Retail > 1,000 employees or > 500,000 sf	N/A	NO
Commercial Office Building > 1,000 employees or > 250,000 sf	1,996 employees 249,500 sf	YES
Hotel/Motel > 500 rooms	N/A	NO
Industrial Plant/Park > 1,000 employees or > 40 acres or > 650,000 sf	N/A	NO
Mixed Use Project that includes one or more of the above	N/A	NO
A Project that would demand the amount of water required by a 500-dwelling unit project	N/A	NO
SB 610 Required?	--	**YES**

The City has also determined that the Proposed Project is subject to the California Environmental Quality Act (CEQA) and that an EIR is required. Because the Proposed Project's location and development parameters are consistent with ConnectMenlo, the ConnectMenlo Program-level EIR serves as the first tier environmental analysis for the Project. However, an EIR will be prepared for the Proposed Project to address impacts that need further discussion and/or mitigation beyond that provided in the ConnectMenlo EIR, as well as to satisfy the requirements of a settlement agreement between the City of Menlo Park and the City of East Palo Alto. The EIR will utilize the findings of this WSA as appropriate in the EIR for the Proposed Project.

3.2 Does SB 221 Apply to the Proposed Project?

In 2001, SB 221 amended State law to require that approval by a city or county of certain residential subdivisions requires an affirmative written verification of sufficient water supply. Per California Government Code section 66473.7(a)(1), a subdivision means a proposed residential development of more than 500 dwelling units. The Proposed Project does not include a residential subdivision, so the requirements of SB 221 do not apply to the Proposed Project.

3.3 Who is the Identified Public Water System?

> *10910(b) The city or county, at the time that it determines whether an environmental impact report, a negative declaration, or a mitigated negative declaration is required for any project subject to the California Environmental Quality Act pursuant to Section 21080.1 of the Public Resources Code, shall identify any water system that is, or may become as a result of supplying water to the project identified pursuant to this subdivision, a public water system, as defined by Section 10912, that may supply water for the project*
>
> *10912 (c) "Public water system" means a system for the provision of piped water to the public for human consumption that has 3,000 or more service connections…*

The Proposed Project is located in the City within MPMW's service area. MPMW's service area consists of three zones: the Lower Zone (located north and east of El Camino Real and serves residential, small commercial, and light industrial land uses), the High Pressure Zone (located in northern Menlo Park between Highway 101 and Bayfront Expressway, north of Chilco Street, and serves multi-family residential, commercial and light industrial, and a mobile home park outside the City's northern-most boundary), and the Upper Zone (located in the southwest portion of Menlo Park near Interstate 280 and geographically and hydraulically disconnected from the other pressure zones). The Proposed Project is located in MPMW's Lower Zone. Therefore, MPMW is the identified public water system for the Proposed Project.

3.4 Does the Identified Public Water Supplier have an adopted UWMP and does the UWMP include the projected water demand for the Proposed Project?

10910(c)(1) The city or county, at the time it makes the determination required under Section 21080.1 of the Public Resources Code, shall request each public water system identified pursuant to subdivision (b) to determine whether the projected water demand associated with a proposed project was included as part of the most recently adopted urban water management plan adopted pursuant to Part 2.6 (commencing with Section 10610).

The City's most recently adopted UWMP is the 2020 UWMP, which was adopted in May 2021. The MPMW 2020 UWMP is incorporated by reference into this WSA.

The MPMW 2020 UWMP incorporated the future population, employment and water demand projections for buildout of the General Plan, including the additional allowable development associated with ConnectMenlo and other major development projects within the MPMW service area.[4] As described in Section 2.3 of this WSA, ConnectMenlo identifies the maximum development potential that could occur within the ConnectMenlo study area, including potential bonus-level increased development, and the associated program level EIR further defines the maximum development that can occur by specific land uses. MPMW and the City's Planning Division are actively tracking projects within the ConnectMenlo study area on a cumulative basis to ensure that developed projects remain within the maximum development permitted in ConnectMenlo and would be consistent with the program-level EIR. The Proposed Project, if approved, would be within this permitted total development potential permitted for both ConnectMenlo and the associated program-level EIR. Therefore, the water demand for the Proposed Project is included in the MPMW 2020 UWMP water demand.

Table 3-2 presents the projected future water demand for buildout of the General Plan, which would include the Proposed Project, in normal years as presented in the MPMW 2020 UWMP. Additional discussion on the MPMW's existing and projected water demands is provided in Section 5 of this WSA.

Table 3-2. Projected Future Water Demand – Normal Years

	Projected Water Demand after Passive and Active Conservation, MG			
2020 (Actual), MG	2025	2030	2035	2040
1,069	1,296	1,345	1,410	1,483

Source: MPMW 2020 UWMP, Table 4-5.

[4] MPMW 2020 UWMP, Section 3.2 Land Uses within Service Area, page 18.

4.0 MENLO PARK MUNICIPAL WATER SYSTEM

The following sections describe the MPMW existing water service area, including existing and projected population.

4.1 Water Service Area

MPMW is located within the City, along the San Francisco Peninsula in San Mateo County, between the cities of Palo Alto, East Palo Alto, and Redwood City. MPMW provides water service to approximately half of the City, serving an area of approximately 9 square miles. The remainder of the City is served by California Water Service, O'Connor Tract Co-operative Water Company, and Palo Alto Park Mutual Water Company.

There were 4,296 MPMW service connections as of 2020. Land uses throughout the water service area consist primarily of residential, commercial, and industrial land uses. Customer service connections include residential users, industrial connections, commercial service connections, irrigation accounts, and 'Other' connections (including temporary services and sales, private fire services, and hydrant services).

4.2 Population

The MPMW service area is largely built-out, with future growth trends principally due to redevelopment within the Bayfront Area. As shown in Table 4-1, the total population within the MPMW service area is projected to increase to 30,184 people by 2040, a 65 percent increase from the current 2020 population of 18,276 people. The City's Planning Division expects more than 40 percent of the projected population increase to occur within the next five years (2020 through 2025) based on approved and pending projects in the Bayfront Area (driven by the ConnectMenlo General Plan). The MPMW service area includes areas outside of the Bayfront Area; however, given the focus of the ConnectMenlo General Plan Update on land use changes within the Bayfront Area, most population growth through 2040 is expected to occur in that geographic area.[5]

Table 4-1. MPMW Service Area Existing and Projected Population

Year	2020	2025	2030	2035	2040
Population Served	18,276	23,383	25,166	27,675	30,184

Source: MPMW 2020 UWMP, Table 3-1.

[5] The City is conducting the required update to its Housing Element that would likely increase population growth outside of the Bayfront Area, some of which may be located within the MPMW's Upper Zone.

5.0 MENLO PARK MUNICIPAL WATER DEMANDS

10910(c)(2) If the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f) and (g).

The descriptions provided below for the City's water demands are based on the MPMW 2020 UWMP (adopted in May 2021).

5.1 Historical and Existing Water Demand

Table 5-1 shows the MPMW water demand (based on water production) for 2010 through 2020. According to MPMW's 2020 UWMP, from 2010 through 2020, the service area population had grown by about 24 percent, while the total volume of water sold increased by just 1.6 percent. The decrease in water demand from 2013 to 2016 can be attributed to mandatory statewide restrictions issued by the State Water Resources Control Board (SWRCB) during the drought and water conservation efforts by the City's residents and businesses. Since 2016, there has been a rebound in demand.

Table 5-1. Historical Water Demand

Year	Potable Water Demand, MG
2010	1,052
2011	1,033
2012	1,079
2013	1,189
2014	1,030
2015	883
2016	898
2017	1,003
2018	1,108
2019	1,028
2020	1,069

Source: MPMW 2020 UWMP, Table 4-2.

5.2 Future Water Demand

Table 5-2 shows MPMW's projected normal year water demands through 2040 as included in MPMW's 2020 UWMP. These projections are based on anticipated future water demands corresponding to buildout of the City's current General Plan, including development of ConnectMenlo and other planned projects within MPMW's service area. The projected increase in demand reflects a rebound in water use following the end of the suppressed demands due to the 2015-2016 drought and an accelerated growth in employment due to planned development projects.

Table 5-2. Projected Future Water Demand – Normal Years				
	Projected Water Demand after Passive and Active Conservation, MG			
2020 (Actual), MG	2025	2030	2035	2040
1,069	1,296	1,345	1,410	1,483
Source: MPMW 2020 UWMP, Table 4-5.				

5.3 Dry Year Water Demand

As shown in Table 5-1, MPMW's 2015 and 2016 demands were significantly lower than the demand in previous years. This reduction in demands occurred in response to the drought and mandated statewide reductions in urban potable water usage.

Following the drought, MPMW updated the stages of action to be taken in response to water supply shortages. The updated stages of action are included in Chapter 8 of the MPMW 2020 UWMP and are reflected in MPMW's Water Shortage Contingency Plan (WSCP) (included in Appendix K of the MPMW 2020 UWMP). MPMW has also implemented a demand management program with mandatory prohibitions that are in force at all times, as described in Chapter 8 of the MPMW 2020 UWMP. The projected future water demand presented in Table 5-2 includes continued implementation of the existing demand management program and is based on future normal hydrologic years.

Under dry water year conditions, MPMW anticipates implementing the demand reduction measures outlined in the WSCP as appropriate to reduce water demands to match the reduction in the supply. However, to be conservative, the MPMW 2020 UWMP and this WSA do not assume additional water conservation will occur in single dry or multiple dry years, even though additional water conservation is likely to occur during dry years or other water supply shortages as a result of MPMW implementing additional water conservation measures.

Table 5-3 presents the projected future single and multiple dry year water demand, as presented in the MPMW 2020 UWMP.

Table 5-3. Projected Future Water Demand – Dry Years					
Hydrologic Condition	Demand Reduction[a]	Projected Water Demand, MG			
		2025	2030	2035	2040
Single Dry Year[b]	0%	1,296	1,345	1,410	1,483
Multiple Dry Years[c,d]	0%	1,296	1,345	1,410	1,483

(a) Conservatively assumes no demand reduction in dry years. Demands may be reduced in dry years as a result of MPMW's implementation of its Water Shortage Contingency Plan; however, such a demand reduction is not assumed or relied upon for the purposes of the Single Dry Year and Multiple Dry Year evaluations for this WSA.

(b) Source: MPMW 2020 UWMP, Table 7-5.

(c) Source: MPMW 2020 UWMP, Table 7-6.

(d) Represents demands for each year of the 5-year multiple dry year period.

6.0 MENLO PARK MUNICIPAL WATER SUPPLIES

10910(c)(2) If the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f) and (g).

10910(d)(1) The assessment required by this section shall include an identification of any existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and a description of the quantities of water received in prior years by the public water system…under the existing water supply entitlements, water rights, or water service contracts.

10910(e) If no water has been received in prior years by the public water system…under the existing water supply entitlements, water rights, or water service contracts, the public water system…shall also include in its water supply assessment…an identification of the other public water systems or water service contract holders that receive a water supply or have existing water supply entitlements, water rights, or water service contracts, to the same source of water as the public water system.

10910(f) If a water supply for a proposed project includes groundwater, the following additional information shall be included in the water supply assessment.

(1) A review of any information contained in the urban water management plan relevant to the identified water supply for the proposed project.

(2) A description of any groundwater basin or basins from which the proposed project will be supplied. For those basins for which a court or the board has adjudicated the rights to pump groundwater, a copy of the order or decree adopted by the court or the board and a description of the amount of groundwater the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), has the legal right to pump under the order or decree. For basins that have not been adjudicated, information as to whether the department has identified the basin or basins as overdrafted or has projected that the basin will become overdrafted if present management conditions continue, in the most recent bulletin of the department that characterizes the condition of the groundwater basin, and a detailed description by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), of the efforts being undertaken in the basin or basins to eliminate the long-term overdraft condition.

(3) A detailed description and analysis of the amount and location of groundwater pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), for the past five years from any groundwater basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historical use records.

(4) A detailed description and analysis of the amount and location of groundwater that is projected to be pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), from any basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historical use records.

(5) An analysis of the sufficiency of the groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project. A water assessment shall not be required to include the information required by this paragraph if the public water system determines, as part of the review required by paragraph (1), that the sufficiency of groundwater necessary to meet the initial and projected water demand associated with the project was addressed in the description and analysis required by paragraph (4) of subdivision (b) of Section 10631.

As described in Section 3.4 of this WSA, the projected water demand associated with buildout of ConnectMenlo, which includes the Proposed Project, was accounted for in MPMW's most recently adopted UWMP. The descriptions provided below for MPMW's water supplies are based on the MPMW 2020 UWMP (adopted in May 2021) and the SFPUC 2020 UWMP (adopted in June 2021).

6.1 Water Supply Overview

MPMW currently purchases all of its potable water supplies from the SFPUC RWS. MPMW has reservoirs in its Upper Zone to provide for emergency supply and an emergency groundwater well has been constructed at MPMW's Corporation Yard. Additional groundwater wells and reservoirs for emergency supply are in the planning stages for the Lower Zone and the High Pressure Zone.

Recycled water supplied by West Bay Sanitary District (WBSD) is currently utilized within the MPMW service area for irrigation at the Sharon Heights Golf & Country Club and is under development for the Bayfront Area. According to the MPMW 2020 UWMP, MPMW plans to utilize up to 120 MG/yr of recycled water from WBSD for landscape and golf course irrigation and commercial non-potable applications at Sharon Heights and in the Bayfront Area.

6.2 Water Supply from the SFPUC RWS

The SFPUC RWS supplies water to both retail and wholesale customers. Retail customers include residents, businesses, and industries located within the City and County of San Francisco's boundaries. Wholesale customers include 26 cities and water supply agencies in Alameda, San Mateo, and Santa Clara counties, including MPMW.

MPMW is a member agency of Bay Area Water Supply and Conservation Agency (BAWSCA) and purchases treated water from the SFPUC RWS in accordance with the November 2018 Amended and Restated Water Supply Agreement between the City and County of San Francisco and Wholesale Customers in Alameda, San Mateo and Santa Clara Counties which was adopted in 2019. The term of the agreement is 25 years, with a beginning date of July 1, 2009 and an expiration date of June 30, 2034. Per the agreement, MPMW has an Individual Supply Guarantee (ISG) of 4.456 million gallons per day (mgd), or 1,630 million gallons per year, supplied by the SFPUC RWS. Over the last five years (2016-2020) MPMW has purchased between 52 percent and 66 percent of its ISG.

Additional discussion of the SFPUC RWS water supplies is provided in MPMW's 2020 UWMP and SFPUC's 2020 UWMP.

6.3 Groundwater Supply

MPMW does not rely upon groundwater supplies for its potable water supply since the entirety of the MPMW supply is purchased from the SFPUC RWS. However, MPMW has undertaken a multi-year Emergency Water Storage/Supply Project to construct emergency groundwater wells. As such, this WSA evaluates groundwater basin conditions pursuant to Section 10910(f).

6.3.1 Groundwater Basin Description

The MPMW service area overlies the southern end of the Santa Clara Valley Groundwater Basin's San Mateo Plain Groundwater Subbasin (DWR basin number 2-9.03; DWR, 2004; or "subbasin"). The subbasin is not adjudicated, nor has it been found by the Department of Water Resources (DWR) to be in a condition

of overdraft. As part of the implementation of the Sustainable Groundwater Management Act (SGMA), the subbasin was ranked as a "very low priority" basin under the California Statewide Groundwater Elevation Monitoring basin prioritization process. As such, the basin is not subject to the requirements of SGMA.

Located within the 45-square mile San Francisquito Creek Watershed, the MPMW service area contains both mountainous bedrock terrain and comparatively flat alluvial deposits. Coarse- and fine-grained alluvial deposits from the San Francisquito Creek can be found in the MPMW service area. There is a shallow aquifer and a deep aquifer that has an upper and a lower zone in the MPMW service area. Both aquifers lie beneath a laterally extensive confining layer. The shallow aquifer is unconfined while the deep aquifer is semi-confined. Pump tests and empirical transmissivity data show that it is feasible to develop a municipal supply from the groundwater subbasin. It is estimated that the groundwater subbasin can be as thick as 1,000 feet in some locations.

Groundwater in the Santa Clara Valley Groundwater Basin naturally flows toward the San Francisco Bay from the uplands in the southwest. Reverse groundwater gradients, from the San Francisco Bay toward the uplands, have been seen when pumping has exceeded the rate of recharge. The estimated annual recharge rate of the San Francisquito Creek watershed ranges from 4,000 to 8,000 AF per year, 3.6 to 7.2 mgd.

Additional discussion of the groundwater conditions and groundwater management is provided in MPMW's 2020 UWMP.

6.3.2 Emergency Water Storage/Supply Project

The MPMW Emergency Water Storage/Supply Project intends to provide a backup water supply to MPMW's Lower Zone, which lacks emergency storage, in the event water from the SFPUC RWS is reduced or unavailable. The MPMW Emergency Water Storage/Supply Project will provide a total capacity of up to 3,000 gpm, or approximately 4.32 mgd, between two to three wells at separate locations. MPMW initiated the project in 2010 and completed site screening, site ranking, and detailed engineering and hydrologic evaluation in 2013, including extensive community engagement. The City selected the Corporation Yard at 333 Burgess Drive for the first well, completed the CEQA evaluation in 2016, and drilled the well in 2017. Construction of the well facility (e.g., generator, disinfection equipment, associated piping) was completed in late 2020, and MPMW is working with the State Water Resources Control Board (SWRCB) to permit the well. MPMW is also investigating locations for a future underground reservoir for the Lower Zone and High Pressure Zone.

The SWRCB Division of Drinking Water classifies wells as "active" or "standby." Active wells, with water quality testing requirements every 3 years, must meet all primary and secondary standards and have no restrictions on when the well can be used. Standby wells, with water quality testing requirements every 9 years, must meet all primary standards (but not secondary standards) and have restrictions that the well cannot be used for more than 14 days per year or more than 5 consecutive days. To provide flexibility, the City plans to permit its emergency wells as "active" wells as long as primary and secondary standards can be met. The City's plan is to use the wells for emergency purposes only, but have the flexibility to provide well water during emergencies that last more than 14 days per year or more than 5 consecutive days.

6.4 Recycled Water Supply

WBSD provides wastewater collection services to the MPMW service area. WBSD also acts as the recycled water purveyor in MPMW's Upper Zone and WBSD is developing a recycled water system to serve the Lower Zone and High Pressure Zone.

Currently, recycled water is only used at the Sharon Heights Golf & Country Club, which is a 170-acre property located in the Upper Zone of MPMW's service area. The recycled water system consists of the Sharon Heights Recycled Water Facility, a pump station, recycled water distribution pipelines to the golf course irrigation system, and a solids disposal pipeline. In 2020, the satellite wastewater treatment plant (WWTP) provided 20 MG of recycled water to the Sharon Heights Golf & Country Club, offsetting demand in potable water purchased from SFPUC. A second phase of the project, in the very early planning stages, could supply approximately 28 MG of recycled water over seven months a year to the Stanford Linear Accelerator Center for irrigation and industrial uses such as for cooling towers.

Planning for a similar recycled water facility in the Bayfront Area is ongoing. WBSD has completed a feasibility study exploring the viability of a Resource Recovery Center at WBSD's former treatment plant behind Bedwell Bayfront Park, which could produce approximately 500,000 gallons per day of recycled water for reuse (the MPMW 2020 UWMP projects an annual recycled water supply of 72 MG/yr from this new facility). The feasibility study concluded that the project is feasible. In a public/private partnership with Meta, the WBSD Board of Directors spearheaded the effort to install 2,800 feet of purple recycled water pipe parallel with the storm drainpipe Meta was replacing on Chilco Street. This pipe will be used to distribute recycled water in the area. According to WBSD, recycled water will be used for irrigation, industrial purposes, firefighting, public fill stations and toilet flushing in the Bayfront Area.

6.5 Summary of Existing and Additional Planned Future Water Supplies

Table 6-2 provides a summary of MPMW's current and projected future normal year supplies as presented in MPMW's 2020 UWMP. The availability and reliability of MPMW's water supplies in dry years is discussed in Section 7 of this WSA.

Table 6-1. MPMW Current and Projected Future Water Supplies – Normal Years

Water Source	Water Supply, MG				
	2020 Actual[a,b]	2025[c]	2030[c]	2035[c]	2040[c]
Potable Water - Purchased from SFPUC RWS	1,069	1,630	1,630	1,630	1,630
Recycled Water – Sharon Heights Recycled Water Facility	20	48	48	48	48
Recycled Water – Bayfront Recycled Water Facility	--	0	72	72	72
Total	**1,089**	**1,678**	**1,750**	**1,750**	**1,750**

(a) 1,069 MG represents only 65.5% of the ISG to MPMW.
(b) Source: MPMW 2020 UWMP, Table 4-7.
(c) Source: MPMW 2020 UWMP, Table 6-9.

7.0 WATER SUPPLY RELIABILITY

10910(c)(4) If the city or county is required to comply with this part pursuant to subdivision (b), the water supply assessment for the project shall include a discussion with regard to whether the total projected water supplies, determined to be available by the city or county for the project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to existing and planned future uses, including agricultural and manufacturing uses.

10911(a) If, as a result of its assessment, the public water system concludes that its water supplies are, or will be, insufficient, the public water system shall provide to the city or county its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies. If the city or county, if either is required to comply with this part pursuant to subdivision (b), concludes as a result of its assessment, that water supplies are, or will be, insufficient, the city or county shall include in its water supply assessment its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies. Those plans may include, but are not limited to, information concerning all of the following:

(1) The estimated total costs, and the proposed method of financing the costs, associated with acquiring the additional water supplies.

(2) All federal, state, and local permits, approvals, or entitlements that are anticipated to be required in order to acquire and develop the additional water supplies.

(3) Based on the consideration set forth in paragraphs (1) and (2), the estimated timeframes within which the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), expects to able to acquire additional water supplies.

The current reliability of MPMW's water supply is largely dependent upon its water supply contract with SFPUC and SFPUC's water supply reliability. The reliability discussion provided below is based on the MPMW 2020 UWMP (adopted in May 2021) and the SFPUC 2020 UWMP (adopted in June 2021). It should be noted that SFPUC's 2020 UWMP extends to a 2045 horizon year, which is beyond the statutorily required horizon year of 2040 presented in the MPMW 2020 UWMP.

7.1 SFPUC RWS Reliability

Information regarding the reliability of the SFPUC RWS was provided to MPMW by BAWSCA, in coordination with SFPUC, during the preparation of the MPMW 2020 UWMP. The following sections describe the potential impacts of the 2018 Bay-Delta Plan Amendment on SFPUC RWS reliability, allocation of RWS supplies during supply shortages, as well as SFPUC's Alternative Water Supply Planning Program designed to investigate and plan for new water supplies to address future long-term water supply reliability challenges and vulnerabilities on the RWS.

7.1.1 Potential Impacts of the 2018 Bay-Delta Plan Amendment on SFPUC RWS Reliability

In December 2018, the SWRCB adopted amendments to the Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary (Bay-Delta Plan Amendment) to establish water quality objectives to maintain the health of the Bay-Delta ecosystem. The SWRCB is required by law to regularly review this plan. The adopted Bay-Delta Plan Amendment was developed with the stated goal of increasing salmonid populations in three San Joaquin River tributaries (the Stanislaus, Merced, and Tuolumne Rivers) and the Bay-Delta. The Bay-Delta Plan Amendment requires the release of 40 percent

of the "unimpaired flow" on the three tributaries from February through June in every year type, whether wet, normal, dry, or critically dry.

The SWRCB has stated that it intends to implement the Bay-Delta Plan Amendment on the Tuolumne River by the year 2022, assuming all required approvals are obtained by that time. But implementation of the Plan Amendment is uncertain for several reasons:

- Since adoption of the Bay-Delta Plan Amendment, over a dozen lawsuits have been filed in both state and federal court, challenging the SWRCB's adoption of the Bay-Delta Plan Amendment, including two legal challenges filed by the federal government, at the request of the U.S. Department of Interior, Bureau of Reclamation in state and federal courts. These cases are in the early stage and there have been no dispositive court rulings to date.
- The Bay-Delta Plan Amendment is not self-implementing and does not allocate responsibility for meeting its new flow requirements to the SFPUC or any other water rights holders. Rather, the Plan Amendment merely provides a regulatory framework for flow allocation, which must be accomplished by other regulatory and/or adjudicatory proceedings, such as a comprehensive water rights adjudication or, in the case of the Tuolumne River, the 401 certification process in the Federal Energy Regulatory Commission's (FERC) relicensing proceeding for Don Pedro Dam. The license amendment process is currently expected to be completed in the 2022-23 timeframe. This process and the other regulatory and/or adjudicatory proceedings would likely face legal challenges and have lengthy timelines, and quite possibly could result in a different assignment of flow responsibility (and therefore a different water supply impact on the SFPUC).
- In recognition of the obstacles to implementation of the Bay-Delta Plan Amendment, SWRCB Resolution No. 2018-0059 adopting the Bay-Delta Plan Amendment directed staff to help complete a "Delta watershed-wide agreement, including potential flow measures for the Tuolumne River" by March 1, 2019, and to incorporate such agreements as an "alternative" for a future amendment to the Bay-Delta Plan to be presented to the SWRCB "as early as possible after December 1, 2019." In accordance with the SWRCB's instruction, on March 1, 2019, SFPUC, in partnership with other key stakeholders, submitted a proposed project description for the Tuolumne River that could be the basis for a voluntary substitute agreement with the SWRCB ("March 1st Proposed Voluntary Agreement"). On March 26, 2019, the Commission adopted Resolution No. 19-0057 to support SFPUC's participation in the Voluntary Agreement negotiation process. To date, those negotiations are ongoing under the California Natural Resources Agency and California Environmental Protection Agency and the leadership of the Newsom administration. The negotiations for a voluntary agreement have made significant progress since an initial framework was presented to the SWRCB on December 12, 2018. The package submitted on March 1, 2019 is the product of renewed discussions since Governor Newsom took office. While significant work remains, the package represents an important step forward in bringing together diverse California water interests.[6]

[6] In late October 2021, State regulators announced that these negotiations stopped before an agreement was reached. It is unclear whether or when negotiations might be reinitiated.

Because of the uncertainties surrounding the implementation of the Bay-Delta Plan Amendment, the SFPUC 2020 UWMP analyzed two supply scenarios, one with the Bay-Delta Plan Amendment assuming implementation starting in 2023, and one without the Bay-Delta Plan Amendment. Results of these analyses are summarized as follows:[7]

- If the Bay-Delta Plan Amendment is implemented, SFPUC will be able to meet its contractual obligations to its wholesale customers as presented in the SFPUC 2020 UWMP in normal years but would experience significant supply shortages in dry years. In single dry years, supply shortages would range from 36 to 46 percent. In multiple dry years, supply shortages would range from 36 to 54 percent. Implementation of the Bay-Delta Plan Amendment will require rationing in all single dry and multiple dry years through 2045.
- If the Bay-Delta Plan Amendment is not implemented, SFPUC would be able to meet 100 percent of the projected purchases of its wholesale customers during all year types through 2045 except during the fourth and fifth consecutive dry years for base year 2045 when 15 percent wholesale supply shortages are projected.

In June 2021, in response to various comments from wholesale customers regarding the reliability of the RWS as described in SFPUC's 2020 UWMP, the SFPUC provided a memorandum describing SFPUC's efforts to remedy the potential effects of the Bay-Delta Plan Amendment. As described in the memorandum (included in Appendix B of this WSA), SFPUC's efforts include the following:

- Pursuing a Tuolumne River Voluntary Agreement
- Evaluating the drought planning scenario in light of climate change
- Pursuing alternative water supplies
- In litigation with the State over the Bay-Delta Plan Amendment
- In litigation with the State over the proposed Don Pedro FERC Water Quality Certification

7.1.2 Allocation of RWS Supplies During Supply Shortages

The wholesale customers and SFPUC adopted the November 2018 Amended and Restated Water Supply Agreement in 2019, which included a Water Shortage Allocation Plan (WSAP) to allocate water from the RWS to retail and wholesale customers during system-wide shortages of 20 percent or less, including such shortages occurring as a result of implementation of the Bay-Delta Plan Amendment. The WSAP has two tiers which are described below.

- The Tier One Plan allocates water between SFPUC and the wholesale customers collectively based on the level of the shortage (up to 20 percent). This plan applies only when SFPUC determines that a system-wide water shortage exists and issues a declaration of a water shortage emergency under California Water Code Section 350. The SFPUC may also opt to request voluntary cutbacks from San Francisco and the wholesale customers to achieve necessary water use reductions during drought periods. The allocations outlined in the Tier One Plan are provided in Table 7-1.

[7] BAWSCA Drought Allocation Tables by Agency (Table E: Percent Cutback to the Wholesale Customers With Bay-Delta Plan and Table N: Percent Cutback to the Wholesale Customers Without Bay-Delta Plan), dated April 1, 2021.

Table 7-1. Tier One Plan Water Shortage Allocations		
System-Wide Reduction Required, percent	Share of Available Water, percent	
	SFPUC	Wholesale Customers
≤ 5	35.5	64.5
6 to 10	36.0	64.0
11 to 15	37.0	63.0
16 to 20	37.5	62.5

- The Tier Two Plan allocates the collective wholesale customer share among the wholesale customers based on a formula that accounts for each wholesale customer's ISG, seasonal use of all available water supplies, and residential per capita use. BAWSCA calculates each wholesale customer's Allocation Factors annually in preparation for a potential water shortage emergency.

BAWSCA recognizes that the Tier Two Plan was not designed for RWS shortages greater than 20 percent, and in a memorandum dated March 1, 2021, BAWSCA provided a refined methodology to allocate RWS supplies during projected future single dry and multiple dry years in the instance where supply shortfalls are greater than 20 percent for the purposes of the BAWSCA member agencies' 2020 UWMPs. The revised methodology developed by BAWSCA allocates the wholesale supplies as follows:

- When the average Wholesale Customers' RWS shortages are 10 percent or less, an equal percent reduction will be applied across all agencies. This is consistent with the existing Tier Two requirements in a Tier Two application scenario.
- When average Wholesale Customers' shortages are between 10 and 20 percent, the Tier Two Plan will be applied.
- When the average Wholesale Customers' RWS shortages are greater than 20 percent, an equal percent reduction will be applied across all agencies.

In another memorandum dated February 18, 2021, BAWSCA explains that in actual RWS shortages greater than 20 percent, BAWSCA Member Agencies would have the opportunity to negotiate and agree upon a more nuanced and equitable approach. This would likely consider basic health and safety needs, the water needs to support critical institutions, and minimizing economic impacts on individual communities and the region. As such, the allocation method described in the MPMW 2020 UWMP is only intended to serve as the preliminary basis for the 2020 UWMP supply reliability analysis. The analysis provided in the SFPUC 2020 UWMP and the MPMW 2020 UWMP does not in any way imply an agreement by BAWSCA member agencies as to the exact allocation methodology. BAWSCA member agencies are in discussions about jointly developing an allocation method that would consider additional equity factors in the event that SFPUC is not able to deliver its contractual supply volume, and its cutbacks to the RWS supply exceed 20 percent.

7.1.3 Alternative Water Supply Program

In early 2020, the SFPUC began implementation of the Alternative Water Supply Planning Program (AWSP), a program designed to investigate and plan for new water supplies to address future long-term water supply reliability challenges and vulnerabilities of the RWS particularly in light of the possible implementation of the Bay-Delta Plan Amendment.

Included in the AWSP is a suite of diverse, non-traditional supply projects that, to a great degree, leverage regional partnerships and are designed to meet the water supply needs of the SFPUC Retail and Wholesale Customers through 2045. As of the most recent Alternative Water Supply Planning Quarterly Update, SFPUC has budgeted $264 million over the next ten years to fund water supply projects. The drivers for the program include: (1) the adoption of the Bay-Delta Plan Amendment and the resulting potential limitations to RWS supply during dry years; (2) the net supply shortfall following the implementation of SFPUC's Water System Improvement Plan (WSIP)[8]; (3) San Francisco's perpetual obligation to supply 184 mgd to the Wholesale Customers; (4) adopted Level of Service Goals to limit rationing to no more than 20 percent system-wide during droughts; and (5) the potential need to identify water supplies that would be required to offer permanent status to interruptible customers.

The SFPUC is considering several water supply options and opportunities to meet all foreseeable water supply needs, including surface water storage expansion, recycled water expansion, water transfers, desalination, and potable reuse. These efforts and their expected benefit to supply reliability are listed below, and described in further detail in the MPMW 2020 UWMP and SFPUC 2020 UWMP:

- Daly City Recycled Water Expansion (Regional; Normal and Dry-Year Supply)
- Alameda County Water District – Union Sanitary District Purified Water Partnership (Regional; Normal and Dry-Year Supply)
- Crystal Springs Purified Water (Regional; Normal and Dry-Year Supply)
- Los Vaqueros Reservoir Expansion (Regional; Dry Year Supply)
- Bay Area Brackish Water Desalination (Regional; Normal and Dry-Year Supply)
- Calaveras Reservoir Expansion (Regional; Dry Year Supply)
- Groundwater Banking (Dry Year Supply)
- Inter-Basin Collaborations

Capital projects under consideration would be costly and are still in the early feasibility and conceptual planning stages. The exact yields from these projects are not quantified at this time, as these supply

[8] The Water System Improvement Program (WSIP) is a $4.8 billion dollar, multi-year capital program to upgrade the SFPUC's regional and local water systems. The program repairs, replaces, and seismically upgrades crucial portions of the Hetch Hetchy Regional Water System. The program consists of 87 projects (35 local projects located within San Francisco and 52 regional projects) spread over seven counties from the Sierra foothills to San Francisco. The San Francisco portion of the program is 100 percent complete as of October 2020. The Regional portion is approximately 99 percent complete. The current forecasted date to complete the overall WSIP is May 2023. Additional information on the WSIP is provided in Chapter 7 of MPMW's 2020 UWMP.

projects would take 10 to 30 years to implement and the exact amount of water that can be reasonably developed is currently unknown.

As with traditional infrastructure projects, there is a need to progress systematically from planning to environmental review, and then on to detailed design, permitting, and construction of these alternative water supply projects. Given the complexity and inherent challenges, these projects will require a long lead time to develop and implement. SFPUC staff have developed an approach and timeline to substantially complete planning and initiate environmental review by July 2023 for a majority of the alternative water supply projects under consideration.

Additional information on the AWSP is provided in Chapter 7 of MPMW's 2020 UWMP.

7.2 MPMW Water Supply Reliability

In the MPMW 2020 UWMP, projected normal year supplies are shown to be adequate to satisfy MPMW's projected normal year demands. However, in the MPMW 2020 UWMP, and this WSA, MPMW's purchased supplies from the SFPUC RWS assume dry year supply reductions as a result of the implementation of the Bay-Delta Plan Amendment, which significantly reduces dry year allocations for SFPUC wholesale customers. Recycled water is estimated to be available during all hydrologic years at a volume that meets MPMW's projected recycled water demands.

Table 7-2 shows MPMW's projected supplies during normal, single dry and multiple dry years through 2040 based on the assumptions in the MPMW 2020 UWMP which assumes implementation of the Bay-Delta Plan Amendment. Based on the SFPUC's analysis, similar water supply quantities would be available to MPMW in 2045 under the various hydrologic conditions.[9]

Table 7-2. Projected MPMW Water Supplies with Bay-Delta Plan Amendment

Hydrologic Condition	Projected Water Supply, MG[(a)]			
	2025	2030	2035	2040
Normal Year[(b)]	1,678	1,750	1,750	1,750
Single Dry Year[(c)]	877	978	1,018	1,062
Multiple Dry Years – Year 1[(d)]	877	978	1,018	1,062
Multiple Dry Years – Year 2[(d)]	760	854	887	927
Multiple Dry Years – Year 3[(d)]	760	854	887	927
Multiple Dry Years – Year 4[(d)]	760	854	887	832
Multiple Dry Years – Year 5[(d)]	760	854	824	832

(a) Includes projected potable water supply from the SFPUC RWS and projected recycled water supply (48 MG/yr in 2025 and 120 MG/yr for 2030 to 2040) (see Table 6-1).
(b) Source: MPMW 2020 UWMP, Table 7-4.
(c) Source: MPMW 2020 UWMP, Table 7-5.
(d) Source: MPMW 2020 UWMP, Table 7-6

[9] BAWSCA Drought Allocation Tables by Agency (Table K: Individual Agency Drought Allocations, Base Year 2045, With Bay-Delta Plan), dated April 1, 2021.

The water supply estimates provided in Table 7-2 use the best available data at the time of the MPMW 2020 UWMP, but do not account for the following factors:

- Potential changes to the implementation of the Bay-Delta Plan Amendment as discussed in Section 7.1.1 of this WSA
- Climate change impacts on the SFPUC RWS
- Potential delays in completion of the WSIP[10]

For comparison purposes, the SFPUC 2020 UWMP also evaluated a scenario without implementation of the Bay-Delta Plan Amendment. Table 7-3 shows MPMW's projected supplies during normal, single dry and multiple dry years for 2025 through 2040 assuming that the Bay-Delta Plan Amendment is not implemented. SFPUC's analysis indicated that it would be able to meet 100 percent of the wholesale projected purchases during all year types through 2045 except during the fourth and fifth consecutive dry years for base year 2045 when a 16.5 percent supply shortfall is projected for MPMW (note that 2045 supplies are not shown in Table 7-3 as they were not shown in MPMW's 2020 UWMP).

Table 7-3. Projected MPMW Water Supplies without Bay-Delta Plan Amendment

Hydrologic Condition	Projected Water Supply, MG[(a)]			
	2025	2030	2035	2040
Normal Year[(b)]	1,678	1,750	1,750	1,750
Single Dry Year[(c)]	1,344	1,465	1,530	1,603
Multiple Dry Years – Year 1[(c)]	1,344	1,465	1,530	1,603
Multiple Dry Years – Year 2[(c)]	1,344	1,465	1,530	1,603
Multiple Dry Years – Year 3[(c)]	1,344	1,465	1,530	1,603
Multiple Dry Years – Year 4[(c,d)]	1,344	1,465	1,530	1,603
Multiple Dry Years – Year 5[(c,d)]	1,344	1,465	1,530	1,603

(a) Includes projected potable water supply from the SFPUC RWS (based on projected purchases) and projected recycled water supply (48 MG/yr in 2025 and 120 MG/yr for 2030 to 2040) (see Table 6-1).

(b) Source: MPMW 2020 UWMP, Table 7-4.

(c) Source: BAWSCA Drought Allocation Tables by Agency (Table A: Wholesale RWS Actual Purchases in 2020 and Projected Purchases for 2025, 2030, 2035, 2040 and 2045), dated April 1, 2021. Totals include projected recycled water supply.

(d) A 16.5 percent reduction in supply from the SFPUC RWS is projected for MPMW in the fourth and fifth years of a multiple dry year drought, but not until 2045 (BAWSCA Drought Allocation Tables by Agency (Table O2: Individual Agency Drought Allocations, Base Year 2045, Without Bay-Delta Plan), dated April 1, 2021.

[10] The San Francisco portion of the WSIP is 100 percent complete as of October 2020. The Regional portion of the WSIP is approximately 99 percent complete. The current forecasted date to complete the overall WSIP is May 2023.

8.0 DETERMINATION OF WATER SUPPLY SUFFICIENCY BASED ON THE REQUIREMENTS OF SB 610

> *10910(c)(4) If the city or county is required to comply with this part pursuant to subdivision (b), the water supply assessment for the project shall include a discussion with regard to whether the total projected water supplies, determined to be available by the city or county for the project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to existing and planned future uses, including agricultural and manufacturing uses.*
>
> *10911 (a) If, as a result of its assessment, the public water system concludes that its water supplies are, or will be, insufficient, the public water system shall provide to the city or county its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies.*

Because of the uncertainties surrounding the implementation of the Bay-Delta Plan Amendment, this WSA presents findings for two scenarios, one assuming the Bay-Delta Plan Amendment is implemented and one assuming that the Bay-Delta Plan Amendment is not implemented.

Table 8-1 summarizes the scenario where it is assumed the Bay-Delta Plan Amendment is implemented. Under this scenario, the total projected water supplies determined to be available for the Proposed Project in normal years will meet the projected water demand associated with the Proposed Project, in addition to MPMW's existing and planned future uses, through 2040. However, with the implementation of the Bay-Delta Plan Amendment, significant supply shortfalls are projected in dry years for agencies that receive water supplies from the SFPUC RWS, as well as other agencies whose water supplies are affected by the Amendment. For MPMW, supply shortfalls are projected in single dry years (ranging from 27 to 32 percent) and in multiple dry years (ranging from 27 to 44 percent) through 2040. Based on SFPUC's analysis, similar supply shortfalls would occur through 2045.

If supply shortfalls do occur, MPMW expects to meet these supply shortfalls through water demand reductions and other shortage response actions by implementation of its WSCP.[11] The projected single dry year shortfalls would require implementation of Stage 3 or 4 of the MPMW WSCP, and the projected multiple dry year shortfalls would require implementation of Stage 3, 4 or 5 of the MPMW WSCP.

As described in Section 7.1.3 of this WSA, the SFPUC is implementing an Alternative Water Supply Planning Program to investigate and plan for new water supplies to address future long-term water supply reliability challenges and vulnerabilities on the RWS. Also, as described in Section 6.3.2 of this WSA, MPMW is implementing an Emergency Water Storage/Supply Project to provide a backup water supply to MPMW's Lower Zone. However, because these potential additional supplies are still being developed, they are not included in Table 8-1.

[11] A main focus of MPMW's planned demand reduction measures is to increase public outreach and keep customers informed of the water shortage emergency and actions they can take to reduce consumption. The City will utilize its emergency supply well(s) as supply augmentation during WSCP Stages 5 and 6. Other actions that the City will take will include coordination with other agencies, implementing drought surcharge, increasing water waste patrols, etc. Additional information on MPMW's WSCP is provided in Chapter 8 of MPMW's 2020 UWMP.

Table 8-1. MPMW Summary of Water Demand Versus Supply with Bay-Delta Plan Amendment During Hydrologic Normal, Single Dry, and Multiple Dry Years

Hydrologic Condition		Supply and Demand Comparison, MG			
		2025	2030	2035	2040
Normal Year					
Available Water Supply[(a)]		1,678	1,750	1,750	1,750
Total Water Demand[(b)]		1,296	1,345	1,410	1,483
	Potential Surplus (Deficit)	382	405	340	267
	Percent Shortfall of Demand	-	-	-	-
Single Dry Year					
Available Water Supply[(c)]		877	978	1,018	1,062
Total Water Demand[(d)]		1,296	1,345	1,410	1,483
	Potential Surplus (Deficit)	(419)	(367)	(392)	(421)
	Percent Shortfall of Demand	32%	27%	28%	28%
Multiple Dry Years					
Multiple-Dry Year 1	Available Water Supply[(c)]	877	978	1,018	1,062
	Total Water Demand[(d)]	1,296	1,345	1,410	1,483
	Potential Surplus (Deficit)	(419)	(367)	(392)	(421)
	Percent Shortfall of Demand	32%	27%	28%	28%
Multiple-Dry Year 2	Available Water Supply[(c)]	760	854	887	927
	Total Water Demand[(d)]	1,296	1,345	1,410	1,483
	Potential Surplus (Deficit)	(536)	(491)	(523)	(557)
	Percent Shortfall of Demand	41%	37%	37%	38%
Multiple-Dry Year 3	Available Water Supply[(c)]	760	854	887	927
	Total Water Demand[(d)]	1,296	1,345	1,410	1,483
	Potential Surplus (Deficit)	(536)	(491)	(523)	(557)
	Percent Shortfall of Demand	41%	37%	37%	38%
Multiple-Dry Year 4	Available Water Supply[(c)]	760	854	887	832
	Total Water Demand[(d)]	1,296	1,345	1,410	1,483
	Potential Surplus (Deficit)	(536)	(491)	(523)	(652)
	Percent Shortfall of Demand	41%	37%	37%	44%
Multiple-Dry Year 5	Available Water Supply[(c)]	760	854	824	832
	Total Water Demand[(d)]	1,296	1,345	1,410	1,483
	Potential Surplus (Deficit)	(536)	(491)	(586)	(652)
	Percent Shortfall of Demand	41%	37%	42%	44%

(a) From Table 6-1 of this WSA.
(b) From Table 5-2 of this WSA.
(c) From Table 7-2 of this WSA.
(d) From Table 5-3 of this WSA.

Table 8-2 summarizes the scenario where it is assumed the Bay-Delta Plan Amendment is not implemented. Under this scenario, the total projected water supplies determined to be available for the Proposed Project in normal years, single dry years and multiple dry years will meet the projected water demand associated with the Proposed Project, in addition to MPMW's existing and planned future uses, through 2040. As described in Section 7.2, based on SFPUC's analysis, a 16.5 percent supply shortfall is projected during the fourth and fifth consecutive dry years for base year 2045 (note that 2045 supplies and demands are not shown in Table 8-2 as they were not shown in MPMW's 2020 UWMP). These projected supply shortfalls are significantly less than the projected supply shortfalls if the Bay-Delta Plan Amendment is implemented.

If supply shortfalls do occur, MPMW expects to meet these supply shortfalls through water demand reductions and other shortage response actions by implementation of its WSCP.[12] The projected multiple dry year shortfalls in 2045 would require implementation of Stage 2 of the MPMW WSCP.

The water demand associated with buildout of ConnectMenlo, which includes the Proposed Project, is included in the MPMW water demand projections in its 2020 UWMP, and the Proposed Project would be subject to the same water conservation and water use restrictions as other water users within the MPMW system.

[12] A main focus of MPMW's planned demand reduction measures is to increase public outreach and keep customers informed of the water shortage emergency and actions they can take to reduce consumption. The City will utilize its emergency supply well(s) as supply augmentation during WSCP Stages 5 and 6. Other actions that the City will take will include coordination with other agencies, implementing drought surcharge, increasing water waste patrols, etc. Additional information on MPMW's WSCP is provided in Chapter 8 of MPMW's 2020 UWMP.

Table 8-2. MPMW Summary of Water Demand Versus Supply without Bay-Delta Plan Amendment During Hydrologic Normal, Single Dry, and Multiple Dry Years

Hydrologic Condition		Supply and Demand Comparison, MG			
		2025	2030	2035	2040
Normal Year					
Available Water Supply[(a)]		1,678	1,750	1,750	1,750

9.0 WATER SUPPLY ASSESSMENT APPROVAL PROCESS

> *10910 (g)(1) Subject to paragraph (2), the governing body of each public water system shall submit the assessment to the city or county not later than 90 days from the date on which the request was received. The governing body of each public water system, or the city or county if either is required to comply with this act pursuant to subdivision (b), shall approve the assessment prepared pursuant to this section at a regular or special meeting.*

The Menlo Park City Council must approve this WSA at a regular or special meeting. This WSA will be included in the Draft EIR being prepared for the Proposed Project.

Commonwealth Building 3 Project Water Use Budget

Water Use Analysis Calculator

General Project Information:

Project Name	Commonwealth
General Description/Background	The project is a 4-story 249,500 SF Class-A office building with a 4-story parking structure. The project expands the existing campus 2 building campus.
Applicant Information	The Sobrato Organization: 599 Castro Street, Suite 400, Mountain View, CA 94041
Project Address	TBD Jefferson Drive Menlo Park, CA
Project Lot Size	578,472 Sq. Ft.
Building Size (Gross Sq. Ft.)	249,500 Sq. Ft.
Land Use Designation	Zoning: O-B General Plan Land Use: Office
Estimated Project Completion Date:	2021

Water Budget Calculator Information:

Description: This spreadsheet is used to analyze the water usage for a project. It provides gallons per year water usage and as well water available for collection & treatment.
This spreadsheet is a tool for determining the best water conservation options for a project.
This spreadsheet auto creates graphs to include in reports/presenations.

Spreadsheet Information:

Overview:
A. "Green Tabs" Provide primary input and output information for the Water Budget
B. "Blue" Tabs - Contain Reference Information, Reference Tabs further explained below. Specific project calculation assumptions are given within each tab.

Tab 1: Fixture Water Usage Tab
1a. Basis of design for individual fixture flow rates and daily usage have been input. Assumptions given within Tab.

Tab 2: Annual Fixture Water Usage Tab
2a. Fixture flow rates and daily usage have been utilized to calculate annual fixture and water usage.

Tab 3: Cooling Tower

3a. Cooling tower water consumption calculated based on annual weather conditions for the site and assumptions based on total cooling load for the buidling type. Assumptions given within tab.

Tab 4: Water Use Per Meal
4a. Provides snips from a Formal document referenced to provide a quantitative figure for water consumed in the food service portion of the building (gal/meal).

Tab 5: Irrigation Demand
4a. Provides snips from the WELO report generated by the Irrigation consultant to document the assumption made for water consumed by irrigation at the site.

Public Occupancy								
Program	Area (sf)	Operation (days/year)	Occupant Density (sf/person)	Occupancy Ratio M/F (-)	Male (#/day)	Female (#/day)	Total People (#/day)	Occupancy Type

ASSUMPTIONS & NOTES:

1. Refer to Landscape Reference Tab, landscape data provided 02/20/2019. Landscape irrigation water volume utilized in water balance assumes irrigation uses Maximum Allocated Water Allowance value provided within WELO water budget for the site
2. Occupant density based on assumption given by Architects on 02/06/2019
3. Total Building area and program provided by Owner on 01/30/2019
4. Operational days per year assumes business calendar year which excludes weekends and federal holidays
5. Water usage per meal (gal/meal) is based on Appendix E (page 62)Modeled Water Use in Office Buildings, Water Supply Evaluation Study Feb 2016

Cooling Tower Water Use

Description: The intent of this spreadsheet is to calculate the water consumption for a cooling tower based on anticipated building loads and TMY3 weather data for the site.

Instructions:

1 Enter facility data into table below.

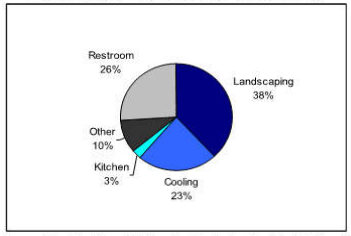
2 Enter TMY3 weather data into "TMY3" tab, from this website:
http://rredc.nrel.gov/solar/old_data/nsrdb/1991-2005/tmy3/by_state_and_city.html

INPUTS		NOTES
Cooling Design Day Dry Bulb Temperature (F)	88.1	Refer to ASHRAE weather table "Cooling DB - 0.4%" for the site.
Chiller at Zero Capacity Dry Bulb Temperature (F)	55	Outdoor Air Temperature where it is assumed that the chiller will be off (air-side economizer limit).
Peak Chiller Capacity (Tons)	0	Peak chiller capacity based 375 sq. ft. per ton.
Chiller Efficiency at Peak Output (kW/Ton)	0.55	Manufacturer based value.
Drift (%)	0.005%	0.001 to 0.005% of the circulation rate are typical.
Cycles of Concentration	5	3-6 are typical, 10 is high. Varies greatly depending on make-up water quality.
Facility Hours of Operation	7:00 AM	Daily Start Time
	7:00 PM	Daily End Time
	Weekdays	Days of the Week

OUTPUTS		NOTES
Cooling Plant Hours of Operation per Year	2581	Hours of the year during operating hours when Outdoor Air Temperature is above 55 deg F.
Cooling Tower Load	9,365,963 BTUH	
Full Load Evaporation Rate	1,123 GPH	One pound of water evaporated for 1,000 BTUH cooling tower load, water density is 8.337 lbs/1 gallon.
Full Load Drift Rate	6 GPH	
Full Load Blowdown	281 GPH	
Full Load Water Use	1,410 GPH	

Chiller Plant Operating Capacity	Hours	Percent	Water Consumption
>=100% Capacity	21	0.80%	29,214 gallons
75-99% Capacity	114	4.40%	140,955 gallons
50-74% Capacity	542	21.01%	481,706 gallons
25-49% Capacity	771	29.89%	413,434 gallons
0-24% Capacity	1134	43.92%	207,835 gallons
Total	2581	100%	1,273,144 Gallons

Figure E-1
Water Use, by End Use, in Office Buildings



Source: Calculated from MWD audit data of selected office buildings (MWD 2002).

Comparison of GED-derived Estimate to Modeled Water Use

We modeled water use in office buildings, using published estimates of restroom visits by employees, irrigated turf area, cooling requirements etc. We compared our GED-derived estimate of water use per employee to that predicted by the model Table E-2. The end-use calculations in the GED-derived estimate are from Figure E-1 and the model's assumptions are derived from the end use data in Appendix D.

Table E-2
Modeled Water Use in Office Buildings (2000)

End Use	Unit	Rate	Number	Modeled Water Use (GED)	GED-derived (GED)
Toilets[1]					
Employee use	gpf	3.00	2.60 flushes/day	7.8	
Visitor use	gpf	3.00	0.33 flushes/day	1.0	
Urinals[1]					
Employee use	gpf	1.60	1.25 flushes/day	2.0	
Visitor use	gpf	1.60	0.17 flushes/day	0.3	
Faucets[1]					
Employee use	gpf	0.11	3.85 flushes/day	0.4	
Visitor use	gpf	0.11	0.50 flushes/day	0.1	
Total restroom				11.6	33.0
Cooling	gal/sq ft/day	0.07[2]	350[3] sq.ft/employee	23.3	29.2
Landscaping	gal/sq ft	0.08[4]	547[5] sq. ft/employee	20.7	48.3
Kitchen	gal/meal	10.1[6]	0.33 meals/employee/day	3.3	3.8
Other				12.7	12.7
Total				**72**	**127**

[1] See Appendix D.

Table E-18
Modeled Daily Water Use in Restaurants (2000)

Water End Use	Volume[1]	Times Per Day[1]	Use Gal/Day	Use Gal/Meal/Day	Use Efficient Gal/Meal/Day[2]
Dishwasher					
Pre-rinse nozzles	2.5 gpm	60 min	150	0.6	0.40
Pot and pan sink	40 gal	3 sinks * 2 fills[3]	300	1.20	1.20
Garbage disposal	4.5 gpm	30 min	135	0.54	0.20
Dishwasher	2.4 gal/rack	0.5 racks/meal, 70 percent capacity[4]	429	1.71	0.79
Restrooms[5]					
Employee use restrooms	2.8 gal/visit	25 employees * 4.6 visits/day gal/day	322	1.3	0.72
Customer use restrooms	2.7 gal/visit	250 customers *50 percent of customers	338	1.4	0.79
Food Prep					
Preparation sink	15 gal	2 fills/day	30	0.12	0.12
Water used in food	0.5 gal/meal	250 meals/day	125	0.50	0.50
Icemaker					
Ice maker	1 gal/lb[6]	1.5 lb/meal[7]*250 meals	338	1.5	1.2
General Sanitation					
Floor wash	12 gal/clean	3 cleans[8]	36	0.14	0.14
Other[9]	30 gal		125	0.50	0.50
Miscellaneous	100 gal		100	0.40	0.40
Total			**25,607**	**9.91**	**6.96**

[1] Volume and use were estimated from data in several case studies (LADWP, 1991 (a & b), MWD, 1992, MWRA, 1990), except where otherwise noted.
[2] See Appendix D
[3] Three pot sinks of 50 gallons capacity are filled and emptied twice daily.
[4] The amount of dishes generated was assumed to be 2.5 racks/guest (Bohlig 2002).
[5] See Appendix D.

Table E-19
Comparison of Estimates of Water Use in a Typical Restaurant

	GED-derived (gallons/meal)	Model 1 (typical use)	Model 2 (efficient use)
Total	12.9[1]	9.9	7.0

[1] Using 163 TAF in 2000 for SIC code 58 and dividing this by the number of meals per day and then by 365 days in a year, we got about 12.9 gal/meal.

Irrigation Water Use

PER UPDATE ON 02/18/2019
This table includes the "special landscape area"
This table is used for the MAWA for the site and to calculate the curve / monthly % irrigation
Total Irrigation consumption for site includes a 10% safety factor added to the MAWA to account for adjustments to landscape area design.

- What is the basis of the assumed Plant Factor (PF) for each hydrozone. Provide additional detail.

GUZZARDO: PLANT FACTORS ARE BASED ON THE WUCOLS LIST FOR THE HIGHEST WATER USE PLANT WITHIN EACH HYDROZONE.

- Why does Zone 3 utilize an Irrigation Efficiency (IE) of 0.81? If overhead spray, should assume 0.75.

GUZZARDO: SPREADSHEET INPUT ERROR. 75% IS THE CORRECT IE. ATTACHED ADJUSTED WATER ESTIMATES INCLUDED IN RESPONSE.

TO: SFPUC Wholesale Customers

FROM: Steven R. Ritchie, Assistant General Manager, Water

DATE: June 2, 2021

RE: Regional Water System Supply Reliability and UWMP 2020

This memo is in response to various comments from Wholesale Customers we have received regarding the reliability of the Regional Water System supply and San Francisco's 2020 Urban Water Management Plan (UWMP).

As you are all aware, the UWMP makes clear the potential effect of the amendments to the Bay-Delta Water Quality Control Plan adopted by the State Water Resources Control Board on December 12, 2018 should it be implemented. Regional Water System-wide water supply shortages of 40-50% could occur until alternative water supplies are developed to replace those shortfalls. Those shortages could increase dramatically if the State Water Board's proposed Water Quality Certification of the Don Pedro Federal Energy Regulatory Commission (FERC) relicensing were implemented.

We are pursuing several courses of action to remedy this situation as detailed below.

Pursuing a Tuolumne River Voluntary Agreement

The State Water Board included in its action of December 12, 2018 a provision allowing for the development of Voluntary Agreements as an alternative to the adopted Plan. Together with the Modesto and Turlock Irrigation Districts, we have been actively pursuing a Tuolumne River Voluntary Agreement (TRVA) since January 2017. We believe the TRVA is a superior approach to producing benefits for fish with a much more modest effect on our water supply. Unfortunately, it has been a challenge to work with the State on this, but we continue to persist, and of course we are still interested in early implementation of the TRVA.

Evaluating our Drought Planning Scenario in light of climate change

Ever since the drought of 1987-92, we have been using a Drought Planning Scenario with a duration of 8.5 years as a stress test of our Regional Water System supplies. Some stakeholders have criticized this methodology as being too conservative. This fall we anticipate our Commission convening a workshop

General Manager

regarding our use of the 8.5-year Drought Planning Scenario, particularly in light of climate change resilience assessment work that we have funded through the Water Research Foundation. We look forward to a valuable discussion with our various stakeholders and the Commission.

Pursuing Alternative Water Supplies

The SFPUC continues to aggressively pursue Alternative Water Supplies to address whatever shortfall may ultimately occur pending the outcome of negotiation and/or litigation. The most extreme degree of Regional Water System supply shortfall is modeled to be 93 million gallons per day under implementation of the Bay-Delta Plan amendments. We are actively pursuing more than a dozen projects, including recycled water for irrigation, purified water for potable use, increased reservoir storage and conveyance, brackish water desalination, and partnerships with other agencies, particularly the Turlock and Modesto Irrigation Districts. Our goal is to have a suite of alternative water supply projects ready for CEQA review by July 1, 2023.

In litigation with the State over the Bay-Delta Plan Amendments

On January 10, 2019, we joined in litigation against the State over the adoption of the Bay-Delta Water Quality Control Plan Amendments on substantive and procedural grounds. The lawsuit was necessary because there is a statute of limitations on CEQA cases of 30 days, and we needed to preserve our legal options in the event that we are unsuccessful in reaching a voluntary agreement for the Tuolumne River. Even then, potential settlement of this litigation is a possibility in the future.

In litigation with the State over the proposed Don Pedro FERC Water Quality Certification

The State Water Board staff raised the stakes on these matters by issuing a Water Quality Certification for the Don Pedro FERC relicensing on January 15, 2021 that goes well beyond the Bay-Delta Plan amendments. The potential impact of the conditions included in the Certification appear to virtually double the water supply impact on our Regional Water System of the Bay-Delta Plan amendments. We requested that the State Water Board reconsider the Certification, including conducting hearings on it, but the State Water Board took no action. As a result, we were left with no choice but to once again file suit against the State. Again, the Certification includes a clause that it could be replaced by a Voluntary Agreement, but that is far from a certainty.

I hope this makes it clear that we are actively pursuing all options to resolve this difficult situation. We remain committed to creating benefits for the Tuolumne River while meeting our Water Supply Level of Service Goals and Objectives for our retail and wholesale customers.

Section 1. Introduction

This report describes the biological resources present in and adjacent to the proposed Commonwealth Corporate Center Building 3 project, as well as the potential impacts of the proposed project and measures necessary to reduce impacts to less-than-significant levels under the California Environmental Quality Act (CEQA). This report was prepared to facilitate CEQA review of the project by the City of Menlo Park. In addition, this report contains the information needed to satisfy Mitigation Measure BIO-1 from the ConnectMenlo General Plan Environmental Impact Report (EIR) (PlaceWorks 2016), which requires preparation of a biological resources assessment.

1.1 Project Description

The 13.3-acre (ac) project site is located at 162-164 Jefferson Drive in Menlo Park, California (Figures 1 and 2). Office and research and development buildings are located north and west of the project site. To the south, the site is bounded by U.S. Highway 101. Kelly Park is located southeast of the project site, across the inactive Dumbarton Rail Corridor. Currently, the project site is occupied by two, four-story office buildings, each approximately 129,960 square feet (ft^2) in size, and surface parking lots.

The proposed project entails the development of a new four-story, 249,500 ft^2 office building, a four-level parking structure, a loading dock, and a trash enclosure as well as installation of landscaping. The proposed office building would be located to the north of the existing buildings on a portion of the project site currently used for surface parking. The proposed parking structure would be located on the eastern half of the parcel, also on a portion of the site currently used for surface parking. Construction would require the demolition of existing surface parking lots, landscaping, and an existing trash enclosure. The total existing and proposed office development on the parcel would be approximately 509,420 ft^2.

Section 2. Methods

2.1 Background Review

Prior to conducting field work, H. T. Harvey & Associates ecologists reviewed the project plans and description provided by the project applicant in January 2019; aerial images (Google Inc. 2019); a U.S. Geological Survey (USGS) topographic map; the California Department of Fish and Wildlife's (CDFW's) California Natural Diversity Database (CNDDB 2019); and other relevant scientific literature and technical databases. Previous reports prepared for the project vicinity were also reviewed, including the Commonwealth Corporate Center Project Final EIR (ICF International 2014); the Facebook Campus Expansion Project EIR (ICF International 2016); the Final EIR for the ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update for the City of Menlo Park (PlaceWorks 2016); the Endangered Species Assessment for the Menlo Gateway Project (H. T. Harvey & Associates 2016); the Commonwealth Building 3 Project – Avian Collision Risk Assessment (H. T. Harvey & Associates 2018); and the Comprehensive Conservation Plan and Environmental Assessment for the Don Edwards San Francisco Bay National Wildlife Refuge (NWR) (USFWS 2012). In addition, for plants, we reviewed all species on current California Native Plant Society (CNPS) California Rare Plant Rank (CRPR) 1A, 1B, 2A, and 2B lists occurring in the *Palo Alto, California* 7.5-minute USGS quadrangle and surrounding eight quadrangles (*Woodside, San Mateo, Redwood Point, Newark, Mountain View, Cupertino, Mindego Hill,* and *La Honda, California*). Quadrangle-level results are not maintained for CRPR 3 and 4 species, so we also conducted a search of the CNPS Inventory records for these species occurring in San Mateo County (CNPS 2019). In addition, we queried the CNDDB (2019) for natural communities of special concern that occur in the project region. For the purposes of this report, the "project vicinity" encompasses a 5-mile (mi) radius surrounding the project site.

2.2 Site Visits

Reconnaissance-level field surveys of the project site were conducted on January 29, 2019 by H. T. Harvey & Associates plant ecologist Matthew Mosher, B.S., and on February 8, 2019 by H. T. Harvey & Associates senior wildlife ecologist Ginger Bolen, Ph.D. The purpose of these surveys was to provide a project-specific impact assessment for the proposed project as described above. Specifically, the surveys were conducted to (1) assess existing biotic habitats and general plant and wildlife communities on the project site, (2) assess the potential for the project to impact special-status species and/or their habitats, and (3) identify potential jurisdictional habitats, such as Waters of the U.S./State and riparian habitat.

Section 3. Regulatory Setting

Biological resources on the project site are regulated by a number of federal, state, and local laws and ordinances, as described below.

3.1 Federal

3.1.1 Clean Water Act

The Clean Water Act (CWA) functions to maintain and restore the physical, chemical, and biological integrity of Waters of the U.S., which include, but are not limited to, tributaries to traditionally navigable waters currently or historically used for interstate or foreign commerce, and adjacent wetlands. Historically, in non-tidal waters, U.S. Army Corp of Engineers (USACE) jurisdiction extends to the ordinary high water (OHW) mark, which is defined in Title 33, Code of Federal Regulations (CFR), Part 328.3 If there are wetlands adjacent to channelized features, the limits of USACE jurisdiction extend beyond the OHW mark to the outer edges of the wetlands. Wetlands that are not adjacent to Waters of the U.S. are termed "isolated wetlands" and, depending on the circumstances, may be subject to USACE jurisdiction. In tidal waters, USACE jurisdiction extends to the landward extent of vegetation associated with salt or brackish water or the high tide line. The high tide line is defined in 33 CFR Part 328.3 as "the line of intersection of the land with the water's surface at the maximum height reached by a rising tide." If there are wetlands adjacent to channelized features, the limits of USACE jurisdiction extend beyond the OHW mark or high tide line to the outer edges of the wetlands.

Construction activities within jurisdictional waters are regulated by the USACE. The placement of fill into such waters must comply with permit requirements of the USACE. No USACE permit will be effective in the absence of Section 401 Water Quality Certification. The State Water Resources Control Board (SWRCB) is the state agency (together with the Regional Water Quality Control Boards [RWQCBs] charged with implementing water quality certification in California.

Project Applicability: The project site does not support wetland or aquatic habitats. Therefore, a permit from the USACE would not be required for the project.

3.1.2 Rivers and Harbors Act

Section 10 of the Rivers and Harbors Act of 1899 prohibits the creation of any obstruction to the navigable capacity of Waters of the U.S., including discharge of fill and the building of any wharfs, piers, jetties, and other structures without Congressional approval or authorization by the Chief of Engineers and Secretary of the Army (33 U.S.C. 403).

Navigable Waters of the U.S., which are defined in 33 CFR, Part 329.4, include all waters subject to the ebb and flow of the tide, and/or those which are presently or have historically been used to transport commerce.

The shoreward jurisdictional limit of tidal waters is further defined in 33 CFR, Part 329.12 as "the line on the shore reached by the plane of the mean (average) high water." It is important to understand that the USACE does not regulate wetlands under Section 10, only the aquatic or open waters component of bay habitat, and that there is overlap between Section 10 jurisdiction and Section 404 jurisdiction. According to 33 CFR, Part 329.9, a waterbody that was once navigable in its natural or improved state retains its character as "navigable in law" even though it is not presently used for commerce because of changed conditions and/or the presence of obstructions. Historical Section 10 Waters may occur behind levees in areas that are not currently exposed to tidal or muted-tidal influence, and meet the following criteria: (1) the area is presently at or below the mean high water line; (2) the area was historically at or below mean high water in its "unobstructed, natural state"; and (3) there is no evidence that the area was ever above mean high water.

As mentioned above, Section 404 of the CWA authorizes the USACE to issue permits to regulate the discharge of dredged or fill material into Waters of the U.S. If a project also proposes to discharge dredged or fill material and/or introduce other potential obstructions in navigable Waters of the U.S., a Letter of Permission authorizing these impacts must be obtained from the USACE under Section 10 of the Rivers and Harbors Act.

Project Applicability: No current or historical Section 10 Waters are present within the project boundary. Therefore, a Letter of Permission from the USACE is not required.

3.1.3 Federal Endangered Species Act

The Federal Endangered Species Act (FESA) protects federally listed wildlife species from harm or "take", which is broadly defined as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in any such conduct." Take can also include habitat modification or degradation that directly results in death or injury of a listed wildlife species. An activity can be defined as "take" even if it is unintentional or accidental. Listed plant species are provided less protection than listed wildlife species. Listed plant species are legally protected from take under FESA only if they occur on federal lands.

The U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS) have jurisdiction over federally listed, threatened, and endangered species under FESA. The USFWS also maintains lists of proposed and candidate species. Species on these lists are not legally protected under FESA, but may become listed in the near future and are often included in their review of a project.

Project Applicability: No suitable habitat for any federally listed plant or animal species occurs on the project site. Thus, no federally listed species are reasonably expected to occur on the project site.

3.1.4 Magnuson-Stevens Fishery Conservation and Management Act

The Magnuson-Stevens Fishery Conservation and Management Act governs all fishery management activities that occur in federal waters within the United States' 200-nautical-mile limit. The Act establishes eight Regional Fishery Management Councils responsible for the preparation of fishery management plans (FMPs) to achieve

the optimum yield from U.S. fisheries in their regions. These councils, with assistance from NMFS, establish Essential Fish Habitat (EFH) in FMPs for all managed species. Federal agencies that fund, permit, or implement activities that may adversely affect EFH are required to consult with NMFS regarding potential adverse effects of their actions on EFH, and respond in writing to recommendations by NMFS.

Project Applicability: No EFH is present on the project site.

3.1.5 Federal Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA), 16 U.S.C. Section703, prohibits killing, possessing, or trading of migratory birds except in accordance with regulations prescribed by the Secretary of the Interior. The MBTA protects whole birds, parts of birds, and bird eggs and nests; and prohibits the possession of all nests of protected bird species whether they are active or inactive. An active nest is defined as having eggs or young, as described by the Department of the Interior in its April 16, 2003 Migratory Bird Permit Memorandum. Nest starts (nests that are under construction and do not yet contain eggs) are not protected from destruction.

Project Applicability: All native bird species that occur on the project site are protected under the MBTA.

3.2 State

3.2.1 Porter-Cologne Water Quality Control Act

The SWRCB works in coordination with the nine RWQCBs to preserve, protect, enhance, and restore water quality. Each RWQCB makes decisions related to water quality for its region, and may approve, with or without conditions, or deny projects that could affect Waters of the State. Their authority comes from the CWA and the State's Porter-Cologne Water Quality Control Act (Porter-Cologne). Porter-Cologne broadly defines Waters of the State as "any surface water or groundwater, including saline waters, within the boundaries of the state." Because Porter-Cologne applies to any water, whereas the CWA applies only to certain waters, California's jurisdictional reach overlaps and may exceed the boundaries of Waters of the U.S. For example, Water Quality Order No. 2004-0004-DWQ states that "shallow" waters of the State include headwaters, wetlands, and riparian areas. Moreover, the San Francisco Bay Region RWQCB's Assistant Executive Director, has stated that, in practice, the RWQCBs claim jurisdiction over riparian areas. Where riparian habitat is not present, such as may be the case at headwaters, jurisdiction is taken to the top of bank.

Pursuant to the CWA, projects that are regulated by the USACE must also obtain a Section 401 Water Quality Certification permit from the RWQCB. This certification ensures that the proposed project will uphold state water quality standards. Because California's jurisdiction to regulate its water resources is much broader than that of the federal government, proposed impacts on Waters of the State require Water Quality Certification even if the area occurs outside of USACE jurisdiction. Moreover, the RWQCB may impose mitigation requirements even if the USACE does not. Under the Porter-Cologne, the SWRCB and the nine regional boards also have the responsibility of granting CWA National Pollutant Discharge Elimination System (NPDES)

permits and Waste Discharge Requirements for certain point-source and non-point discharges to waters. These regulations limit impacts on aquatic and riparian habitats from a variety of urban sources.

Project Applicability: No aquatic, wetland, or riparian habitats are present within or immediately adjacent to the project boundary. Therefore, a Section 401 permit or Waste Discharge Requirement from the RWQCB would not be required for the project.

3.2.2 California Endangered Species Act

The California Endangered Species Act (CESA; California Fish and Game Code, Chapter 1.5, Sections 2050-2116) prohibits the take of any plant or animal listed or proposed for listing as rare (plants only), threatened, or endangered. In accordance with the CESA, the CDFW has jurisdiction over state-listed species (Fish and Game Code 2070). The CDFW regulates activities that may result in "take" of individuals (i.e., "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill"). Habitat degradation or modification is not expressly included in the definition of "take" under the California Fish and Game Code. The CDFW, however, has interpreted "take" to include the "killing of a member of a species which is the proximate result of habitat modification."

Project Applicability: No suitable habitat for any state listed plant or animal species occurs on the project site, and thus no state listed species are expected to occur on the project site.

3.2.3 California Environmental Quality Act

CEQA is a state law that requires state and local agencies to document and consider the environmental implications of their actions and to refrain from approving projects with significant environmental effects if there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects. CEQA requires the full disclosure of the environmental effects of agency actions, such as approval of a general plan update or the projects covered by that plan, on resources such as air quality, water quality, cultural resources, and biological resources. The State Resources Agency promulgated guidelines for implementing CEQA are known as the State CEQA Guidelines.

Section 15380(b) of the State CEQA Guidelines provides that a species not listed on the federal or state lists of protected species may be considered rare if the species can be shown to meet certain specified criteria. These criteria have been modeled after the definitions in FESA and CESA and the section of the California Fish and Game Code dealing with rare or endangered plants and animals. This section was included in the guidelines primarily to deal with situations in which a public agency is reviewing a project that may have a significant effect on a species that has not yet been listed by either the USFWS or CDFW or species that are locally or regionally rare.

The CDFW has produced three lists (amphibians and reptiles, birds, and mammals) of "species of special concern" that serve as "watch lists". Species on these lists are of limited distribution or the extent of their habitats has been reduced substantially, such that threat to their populations may be imminent. Thus, their

populations should be monitored. They may receive special attention during environmental review as potential rare species, but do not have specific statutory protection. All potentially rare or sensitive species, or habitats capable of supporting rare species, are considered for environmental review per CEQA Section 15380(b).

The CNPS, a non-governmental conservation organization, has developed CRPRs for plant species of concern in California in the Inventory of Rare and Endangered Plants (CNPS 2018). The CRPRs include lichens, vascular, and non-vascular plants, and are defined as follows:

- CRPR 1A Plants considered extinct.
- CRPR 1B Plants rare, threatened, or endangered in California and elsewhere.
- CRPR 2A Plants considered extinct in California but more common elsewhere.
- CRPR 2B Plants rare, threatened, or endangered in California but more common elsewhere.
- CRPR 3 Plants about which more information is needed - review list.
- CRPR 4 Plants of limited distribution-watch list.

The CRPRs are further described by the following threat code extensions:

- .1—seriously endangered in California;
- .2—fairly endangered in California;
- .3—not very endangered in California.

Although the CNPS is not a regulatory agency and plants on these lists have no formal regulatory protection, plants appearing as CRPR 1B or 2 are, in general, considered to meet CEQA's Section 15380 criteria, and adverse effects on these species may be considered significant. Impacts on plants that are listed by the CNPS as CRPR 3 or 4 are also considered during CEQA review, although because these species are typically not as rare as those of CRPR 1B or 2, impacts on them are less frequently considered significant.

Compliance with CEQA Guidelines Section 15065(a) requires consideration of natural communities of special concern, in addition to plant and wildlife species. Vegetation types of "special concern" are tracked in Rarefind (CNDDB 2019). Further, the CDFW ranks sensitive vegetation alliances based on their global (G) and state (S) rankings analogous to those provided in the CNDDB. Global rankings (G1–G5) of natural communities reflect the overall condition (rarity and endangerment) of a habitat throughout its range, whereas S rankings are a reflection of the condition of a habitat within California. If an alliance is marked as a G1–G3, all of the associations within it would also be of high priority. The CDFW provides the Vegetation Classification and Mapping Program's currently accepted list of vegetation alliances and associations (CDFW 2019).

Project Applicability: All potential impacts on biological resources will be considered during CEQA review of the project. This biological resources assessment evaluates these impacts to facilitate CEQA review of the project by the City of Menlo Park. Project impacts are discussed in Section 6 below.

3.2.4 California Fish and Game Code

Ephemeral and intermittent streams, rivers, creeks, dry washes, sloughs, blue line streams on USGS maps, and watercourses with subsurface flows fall under CDFW jurisdiction. Canals, aqueducts, irrigation ditches, and other means of water conveyance may also be considered streams if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife. A *stream* is defined in Title 14, California Code of Regulations Section 1.72, as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and that supports fish and other aquatic life. This includes watercourses having surface or subsurface flow that supports or has supported riparian vegetation." Using this definition, CDFW extends its jurisdiction to encompass riparian habitats that function as a part of a watercourse. California Fish and Game Code Section 2786 defines *riparian habitat* as "lands which contain habitat which grows close to and which depends upon soil moisture from a nearby freshwater source." The lateral extent of a stream and associated riparian habitat that would fall under the jurisdiction of CDFW can be measured in several ways, depending on the particular situation and the type of fish or wildlife at risk. At minimum, CDFW would claim jurisdiction over a stream's bed and bank. In areas that lack a vegetated riparian corridor, CDFW jurisdiction would be the same as USACE jurisdiction. Where riparian habitat is present, the outer edge of riparian vegetation is generally used as the line of demarcation between riparian and upland habitats.

Pursuant to California Fish and Game Code Section 1603, CDFW regulates any project proposed by any person that will "substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the department, or use any material from the streambeds." California Fish and Game Code Section 1602 requires an entity to notify CDFW of any proposed activity that may modify a river, stream, or lake. If CDFW determines that proposed activities may substantially adversely affect fish and wildlife resources, a Lake and Streambed Alteration Agreement (LSAA) must be prepared. The LSAA sets reasonable conditions necessary to protect fish and wildlife, and must comply with CEQA. The applicant may then proceed with the activity in accordance with the final LSAA.

Certain sections of the California Fish and Game Code describe regulations pertaining to protection of certain wildlife species. For example, Code Section 2000 prohibits take of any bird, mammal, fish, reptile, or amphibian except as provided by other sections of the code.

The California Fish and Game Code Sections 3503, 3513, and 3800 (and other sections and subsections) protect native birds, including their nests and eggs, from all forms of take. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered "take" by the CDFW. Raptors (i.e., eagles, hawks, and owls) and their nests are specifically protected in California under Code Section 3503.5. Section 3503.5 states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto."

Bats and other non-game mammals are protected by California Fish and Game Code Section 4150, which states that all non-game mammals or parts thereof may not be taken or possessed except as provided otherwise in the

code or in accordance with regulations adopted by the commission. Activities resulting in mortality of non-game mammals (e.g., destruction of an occupied nonbreeding bat roost, resulting in the death of bats), or disturbance that causes the loss of a maternity colony of bats (resulting in the death of young), may be considered "take" by the CDFW.

Project Applicability: No aquatic or riparian habitats are present within or immediately adjacent to the project boundary. Therefore, a California Fish and Game Code Section 1603 Lake and Stream Alteration Agreement from CDFW would not be required for the project. Most native bird, mammal, and other wildlife species that occur on the project site and in the immediate vicinity are protected by the California Fish and Game Code.

3.3 Local

3.3.1 Menlo Park Municipal Code

The City of Menlo Park Municipal Code contains all ordinances for Menlo Park. Title 16, Zoning, includes regulations relevant to biological resources on the project site as discussed below.

Bird-Friendly Design. Chapter 16.44.130 (6) requires all new construction, regardless of size, to implement the following bird-friendly design measures:

A. No more than ten percent (10%) of façade surface area shall have non-bird-friendly glazing.
B. Bird-friendly glazing includes, but is not limited to, opaque glass, covering the outside surface of clear glass with patterns, paned glass with fenestration, frit or etching patterns, and external screens over nonreflective glass. Highly reflective glass is not permitted.
C. Occupancy sensors or other switch control devices shall be installed on nonemergency lights and shall be programmed to shut off during nonwork hours and between ten (10) p.m. and sunrise.
D. Placement of buildings shall avoid the potential funneling of flight paths towards a building façade.
E. Glass skyways or walkways, freestanding (see-through) glass walls and handrails, and transparent building corners shall not be allowed.
F. Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with green roofs.
G. Use of rodenticides shall not be allowed.
H. A project may receive a waiver from one (1) or more of the items listed in subsections (6)(A) to (F) of this section, subject to the submittal of a site-specific evaluation from a qualified biologist and review and approval by the planning commission. (Ord. 1025 § 3 (part), 2016).

Project Applicability: Bird-friendly design will be incorporated into the project design as required by the City of Menlo Park Municipal Code.

Landscape Design Plan. Chapter 12.44.090(1)(G) states that the use of invasive and/or noxious plant species is strongly discouraged. Invasive species are defined as those plants not historically found in California that

spread outside cultivated areas and can damage environmental or economic resources. A noxious weed refers to any weed designated by the weed control regulations in the Weed Control Act and identified on a regional district noxious weed control list.

Project Applicability: No invasive and/or noxious plant species will be used in the project's landscape design plan.

Heritage Trees. Chapter 13.24, Heritage Trees, establishes regulations for the preservation of heritage trees, defined as:

- Trees of historical significance, special character or community benefit, specifically designated by resolution of the City Council;
- An oak tree (*Quercus* spp.), which is native to California and has a trunk with a circumference of 31.4 inches (diameter of 10 inches) or more, measured at 54 inches above natural grade; and
- All trees other than oaks, which have a trunk with a circumference of 47.1 inches (diameter of 15 inches) or more, measured 54 inches above natural grade, with the exception of trees that are less than 12 ft in height, which will be exempt from this section.

To protect heritage trees, Section 13.24.025 requires that a tree protection plan prepared by a certified arborist be submitted for any work performed within a tree protection zone, which is an area ten times the diameter of the tree. Furthermore, all tree protection plans should be reviewed and approved by the Director of Community Development or his or her designee prior to issuance of any permit for grading or construction.

The removal of heritage trees or pruning of more than one-fourth of the branches or roots within a 12-month period requires a permit from the City's Director of Public Works or his or her designee and payment of a fee. The Director of Public Works may issue a permit when the removal or major pruning of a heritage tree is reasonable based on a number of criteria, including condition of the tree, need for removal to accommodate proposed improvements, the ecological and long-term value of the tree, and feasible alternatives that would allow for tree preservation.

Project Applicability: One tree that qualifies as a heritage tree is present on the project site. This tree would not be removed as part of the proposed project.

3.3.2 Menlo Park General Plan

The City of Menlo Park General Plan includes goals, policies, and programs relevant to the environmental factors potentially affected by the proposed project, including the following:

- *Goal LU-4:* Promote the development and retention of business uses that provide goods or services needed by the community that generate benefits to the City, and avoid or minimize potential environmental and traffic impacts.

- *Policy LU-4.5: Business Uses and Environmental Impacts.* Allow modifications to business operations and structures that promote revenue-generating uses for which potential environmental impacts can be mitigated.

- *Goal LU-6:* Preserve open-space lands for recreation; protect natural resources and air and water quality; and protect and enhance scenic qualities.
    - *Policy LU-6.5: Open Space Retention.* Maximize the retention of open space on larger tracts (e.g., portions of the St. Patrick's Seminary site) through means such as rezoning consistent with existing uses, clustered development, acquisition of a permanent open space easement, and/or transfer of development rights.
    - *Policy LU 6.6: Public Bay Access.* Protect and support public access to the Bay for the scenic enjoyment of open water, sloughs, and marshes, including restoration efforts, and completion of the Bay Trail.
    - *Policy LU-6.7: Habitat Preservation.* Collaborate with neighboring jurisdictions to preserve and enhance the Bay, shoreline, San Francisquito Creek, and other wildlife habitat and ecologically fragile areas to the maximum extent possible.
    - *Policy LU-6.8: Landscaping in Development.* Encourage extensive and appropriate landscaping in public and private development to maintain the City's tree canopy and to promote sustainability and healthy living, particularly through increased trees and water-efficient landscaping in large parking areas and in the public right-of-way.
    - *Policy LU-6.11. Baylands Preservation.* Allow development near the Bay only in already developed areas.
        - *Program LU-6.D: Design for Birds.* Require new buildings to employ façade, window, and lighting design features that make them visible to birds as physical barriers and eliminate conditions that create confusing reflections to birds.

- Goal OSC1: Maintain, Protect, and Enhance Open Space and Natural Resources.
    - *Policy OSC1.1: Natural Resources Integration with Other Uses.* Protect Menlo Park's natural environment and integrate creeks, utility corridors, and other significant natural and scenic features into development plans.
    - *Policy OSC1.2: Habitat for Open Space and Conservation Purposes.* Preserve, protect, maintain, and enhance water, water-related areas, plant and wildlife habitat for open space and conservation purposes.
    - *Policy OSC1.3: Sensitive Habitats.* Require new development on or near sensitive habitats to provide baseline assessments prepared by qualified biologists, and specify requirements relative to the baseline assessments.
    - *Policy OSC1.4: Habitat Enhancement.* Require new development to minimize the disturbance of natural habitats and vegetation, and require revegetation of disturbed natural habitat areas with native or non-invasive naturalized species.

- *Policy OSC1.5: Invasive, Non-Native Plant Species*. Avoid the use of invasive, non-native species, as identified on the lists of invasive plants maintained at the California Invasive Plant Inventory and United States Department of Agriculture invasive and noxious weeds database, or other authoritative sources, in landscaping on public property.
- *Policy OSC1.15: Heritage Trees*. Protect Heritage Trees, including during construction activities through enforcement of the Heritage Tree Ordinance (Chapter 13.24 of the Municipal Code).

Project Applicability: The project is located within the Menlo Park General Plan area and would conform to all applicable requirements.

Section 4. Environmental Setting

4.1 General Project Area Description

The 13.3-ac project site is located in Menlo Park in San Mateo County. It is located within the *Palo Alto*, *California* 7.5-minute USGS quadrangle. A review of historical aerial photographs indicates that land use on the project site was largely agricultural in 1948. By 1991, commercial development and associated surface parking lots occupied most of the site. The project site is surrounded by development, including U.S. Highway 101 to the south with dense residential development beyond the highway and commercial office space to the north and west. Further north (approximately 1,200 feet [ft] north of Jefferson Drive) is Pond R5S of the Don Edwards San Francisco Bay NWR.

The project site is relatively flat with elevations ranging from approximately 7 to 14 ft above sea level. It is underlain by two soil types, Urban land and Urban land-Orthents, reclaimed complex, 0 to 2 percent slopes (NRCS 2019). The Urban land-Orthents, reclaimed complex map unit is generally associated with former tidal flats and marshes and the Urban land map unit is a description for human-made soils and land, typically developed and covered by paving and structures, consisting of heterogeneous fills of unknown origin (ICF International 2014).

4.2 Biotic Habitats

A reconnaissance-level survey identified one habitat type/land use on the project site: developed/landscaped (13.3 ac) (Figure 3). This habitat is described in detail below.

4.2.1 Developed/Landscaped

Photo 1. Developed/landscaped habitat on the project site.

Vegetation. The majority of the project site and the surrounding area are occupied by developed/landscaped land uses (Photo 1) that include office buildings, parking lots, mulched and irrigated areas, and plantings of ornamental trees and shrubs. Landscaping includes primarily non-native species, including relatively small trees such as plum (*Prunus* sp.), Brisbane box (*Lophostemon confertus*), holly oak (*Quercus ilex*), and strawberry (*Arbutus unedo*). In addition, two landscaped bioretention basins occur on the eastern edge of the project site. The basins are vegetated by planted spreading rush (*Juncus patens*). Each basin is drained by a storm water grate located in the lowest part of the basin (Photo 2).

Ecological Consultants

Figure 3. Biotic Habitats and Impacts
Commonwealth Corporate Center Building 3
Biological Resources Assessment (3562-04)
May 2019

Wildlife. The wildlife most often associated with developed/landscaped areas are those tolerant of periodic human disturbances, including introduced species such as the European starling (*Sturnus vulgaris*), rock pigeon (*Columba livia*), house mouse (*Mus musculus*), Norway rat (*Rattus norvegicus*), and black rat (*Rattus rattus*). Numerous common, native species are also able to utilize these habitats, especially the landscaped areas, including the western fence lizard (*Sceloporus occidentalis*), California ground squirrel (*Otospermophilus beecheyi*), and a variety of birds. Although a number of bird species will use landscaped areas, they typically do so in low numbers. The existing landscaping on the project site provides low-quality habitat for most native birds found in the region owing to the predominance of non-native species; the absence of well-layered vegetation (e.g., with ground cover, shrub, and canopy tree layers in the same areas) throughout most of the site; the limited extent of the vegetated habitat areas and preponderance of asphalt; and the amount of human disturbance by vehicular traffic and occupants of buildings on and adjacent to the site. Non-native vegetation supports fewer of the resources required by native birds than native vegetation, and the structural simplicity of the vegetation on the project site further limits resources available to birds (Anderson et al. 1977, Mills, et al. 1989). In general, the site does not represent high-quality habitat that would support particularly large concentrations of native birds. Further, due to the absence of high-quality native habitat, more sensitive or rarer bird species are not expected to occur on the project site. Rather, the bird species that are present consist predominantly of regionally abundant species that are adapted to urban conditions, such as the native mourning dove (*Zenaida macroura*), bushtit (*Psaltriparus minimus*), Anna's hummingbird (*Calypte anna*), dark-eyed junco (*Junco hyemalis*), American crow (*Corvus brachyrhynchos*), California scrub-jay (*Aphelocoma californica*), and house finch (*Haemorhous mexicanus*), as well as the non-native rock pigeon (*Columba livia*), house sparrow (*Passer domesticus*), and European starling. These species may occur on the site year-round and breed on or near the site.

Photo 2. Bioretention basin located on the eastern edge of the project site.

An examination of trees on the project site detected no large cavities that might provide suitable bat roosting habitat. Therefore, large roosting or maternity colonies of bats are not expected to occur on the project site. Similarly, a focused survey of the project site detected no evidence (i.e., old nests) of raptors having previously nested on the site.

Section 5. Special-Status Species and Sensitive Habitats

CEQA requires assessment of the effects of a project on species that are protected by state, federal, or local governments as "threatened, rare, or endangered"; such species are typically described as "special-status species". For the purpose of the environmental review of the project, special-status species have been defined as described below. Impacts on these species are regulated by some of the federal, state, and local laws and ordinances described in Section 3.0 above.

For purposes of this analysis, "special-status" plants are considered plant species that are:

- Listed under FESA as threatened, endangered, proposed threatened, proposed endangered, or a candidate species.
- Listed under CESA as threatened, endangered, rare, or a candidate species.
- Listed by the CNPS as CRPR 1A, 1B, 2, 3, or 4.

For purposes of this analysis, "special-status" animals are considered animal species that are:

- Listed under FESA as threatened, endangered, proposed threatened, proposed endangered, or a candidate species.
- Listed under CESA as threatened, endangered, or a candidate threatened or endangered species.
- Designated by the CDFW as a California species of special concern.
- Listed in the California Fish and Game Code as fully protected species (fully protected birds are provided in Section 3511, mammals in Section 4700, reptiles and amphibians in Section 5050, and fish in Section 5515).

Information concerning threatened, endangered, and other special-status species that potentially occur on the project site was collected from several sources and reviewed by H. T. Harvey & Associates biologists as described in Section 2.1 above. Figure 4 depicts CNDDB records of special-status plant species in the general vicinity of the project site and Figure 5 depicts CNDDB records of special-status animal species. These generalized maps show areas where special-status species are known to occur or have occurred historically.

5.1 Special-Status Plant Species

The CNPS (2019) and CNDDB (2019) identify 89 special-status plant species as potentially occurring in at least one of the nine USGS quadrangles containing or surrounding the project site for CRPR 1 or 2 species, or in San Mateo County for CRPR 3 and 4 species. All of those potentially occurring special-status plant species were determined to be absent from the project site for at least one of the following reasons: (1) lack of suitable habitat types; (2) absence of specific microhabitat or edaphic requirements, such as serpentine soils; (3)

the elevation range of the species is outside of the range on the project site; and/or (4) the species is considered extirpated from the project vicinity. Appendix B lists these plants along with the basis for the determination of absence.

5.2 Special-Status Animal Species

The legal status and likelihood of occurrence on the project site of special-status animal species known to occur, or potentially occurring, in the project vicinity are presented in Table 1. Most of the special-status species listed in Table 1 are not expected to occur on the project site because it lacks suitable habitat, is outside the known range of the species, and/or is isolated from the nearest known extant populations by development or otherwise unsuitable habitat. Animal species not expected to occur on the project site for these reasons include the green sturgeon (*Acipenser medirostris*), Central California coast steelhead (*Oncorhynchus mykiss*), California tiger salamander (*Ambystoma californiense*), California red-legged frog (*Rana draytonii*), western pond turtle (*Actinemys marmorata*), San Francisco garter snake (*Thamnophis sirtalis tetrataenia*), California Ridgway's rail (*Rallus obsoletus obsoletus*), California black rail (*Laterallus jamaicensis coturniculus*), western snowy plover (*Charadrius alexandrinus nivosus*), California least tern (*Sterna antillarum browni*), black skimmer (*Rynchops niger*), burrowing owl (*Athene cunicularia*), northern harrier (*Circus cyaneus*), white-tailed kite (*Elanus leucurus*), loggerhead shrike (*Lanius ludovicianus*), salt marsh harvest mouse (*Reithrodontomys raviventris*), salt marsh wandering shrew (*Sorex vagrans halicoetes*), and American badger (*Taxidea taxus*). Although some of these species, such as the western snowy plover, salt marsh harvest mouse, and salt marsh wandering shrew, may occur in wetland habitats in the NWR to the north of the project boundary, they are absent from the project site itself, and the proposed development footprint is well removed from suitable habitat for these species.

The pallid bat (*Antrozous pallidus*) may forage over the project site on rare occasions, but it is not expected to reside or breed on the project site, to occur in large numbers, or otherwise to make substantial use of the project site.

5.3 Sensitive Natural Communities, Habitats, and Vegetation Alliances

Natural communities have been considered part of the Natural Heritage Conservation triad, along with plants and animals of conservation significance, since the state inception of the Natural Heritage Program in 1979. The CDFW determines the level of rarity and imperilment of vegetation types, and tracks sensitive communities in its Rarefind database (CNDDB 2018). Global rankings (G) of natural communities reflect the overall condition (rarity and endangerment) of a habitat throughout its range, whereas state (S) rankings are a reflection of the condition of a habitat within California. Natural communities are defined using NatureServe's standard heritage program methodology as follows (Faber-Langendoen et al. 2012):

G1/S1: Critically imperiled

G2/S2: Imperiled

Table 1. Special-Status Animal Species, Their Status, and Potential Occurrence on the Project Site

Name	*Status	Habitat	Potential for Occurrence on the Project Site
Federal or State Endangered, Rare, or Threatened Species			
Green sturgeon (*Acipenser medirostris*)	FT, CSSC	Spawns in large river systems such as the Sacramento River; forages in nearshore oceanic waters, bays, and estuaries.	**Absent.** No suitable aquatic habitat is present on the project site. Green sturgeon may forage infrequently, and in low numbers in Flood Slough, approximately 0.5 mi northwest of the project site; however, there is no aquatic connection between the slough and the project site. Determined to be absent.
Central California Coast steelhead (*Oncorhynchus mykiss*)	FT	Cool streams with suitable spawning habitat and conditions allowing migration between spawning and marine habitats.	**Absent.** No suitable aquatic habitat is present on the project site. Steelhead may forage in Flood Slough, approximately 0.5 mi northwest of the project site; however, there is no aquatic connection between the slough and the project site. Determined to be absent.
California tiger salamander (*Ambystoma californiense*)	FT, ST	Vernal or temporary pools in annual grasslands or open woodlands.	**Absent.** No suitable habitat is present on the project site. Further, populations have largely been extirpated from San Mateo County due to habitat loss, and the species is now considered absent from the majority of the project vicinity, including the project site. The closest occurrence in the project vicinity is at Lake Lagunita on the Stanford campus, which is approximately 3.8 mi south of the project site (CNDDB 2019). Determined to be absent.
San Francisco garter snake (*Thamnophis sirtalis tetrataenia*)	FE, SE	Prefer densely vegetated freshwater habitats. May use upland burrows for aestivation.	**Absent.** No suitable habitat is present on the project site. Furthermore, the project vicinity is outside of the known range of the species. Determined to be absent.
California red-legged frog (*Rana draytonii*)	FT, CSSC	Streams, freshwater pools, and ponds with emergent or overhanging vegetation.	**Absent.** No suitable habitat is present on the project site. Further, this species has been extirpated from the majority of the project vicinity, due to development, the alteration of hydrology of its aquatic habitats, and the introduction of non-native predators such as non-native fishes and bullfrogs (*Lithobates catesbeianus*). The most recent record of the species in the project vicinity is from 2016 near Bear Gulch reservoir, approximately 4.2 mi to the southwest of the project site (CNDDB 2019). Determined to be absent.

Name	*Status	Habitat	Potential for Occurrence on the Project Site
California Ridgway's rail (*Rallus obsoletus obsoletus*)	FE, SE, SP	Salt marshes characterized by large expanses of saltmarsh cordgrass (*Spartina* spp.) or pickleweed (*Salicornia* spp.), with well-developed tidal channels.	**Absent.** The species is known to occur on Greco Island approximately 1.1 mi northwest of the project site, as well as the Palo Alto Baylands and the Ravenswood Open Space Preserve located approximately 2.1 mi east of the project site. However, no salt marsh habitat is present on or adjacent to the project site. Determined to be absent.
California black rail (*Laterallus jamaicensis coturniculus*)	ST, SP	Breeds in fresh, brackish, and tidal salt marsh.	**Absent.** This species occurs in the project vicinity primarily as a scarce winter visitor, with individuals recently recorded as close as the Palo Alto Baylands approximately 2.5 mi east of the project site (CNDDB 2019). However, no suitable nesting or foraging habitat for the California black rail is present on or immediately adjacent to the project site. Determined to be absent.
Western snowy plover (*Charadrius alexandrinus nivosus*)	FT, CSSC	Sandy beaches on marine and estuarine shores and salt pans in Bay saline managed ponds.	**Absent.** Although western snowy plovers are known to nest in salt panne habitat 0.4 mi to the north in the NWR's Ravenswood complex (CNDDB 2019), no suitable nesting or foraging habitat is present on or immediately adjacent to the project site. Determined to be absent.
California least tern (*Sterna antillarum browni*)	FE, SE, SP	Nests along the coast on bare or sparsely vegetated, flat substrates. In the South Bay, nests in salt pans and on an old airport runway. Forages for fish in open waters.	**Absent**. Suitable nesting habitat for the California least tern is not present on the project site. Least terns have been recorded in the project vicinity during the post-breeding season, and have been known to forage in the Redwood City salt ponds, approximately 0.6 mi northwest of the project site (CNDDB 2019). Least terns have also been known to forage infrequently along the shores of the Palo Alto Baylands Preserve, located approximately 2.5 mi east of the project site. However, they are not expected to forage on the project site due to the lack of any open water habitats supporting fish. Determined to be absent.
Salt marsh harvest mouse (*Reithrodontomys raviventris*)	FE, SE, SP	Salt marsh habitat dominated by common pickleweed or alkali bulrush.	**Absent.** The species has been recorded in salt marsh habitat in the project vicinity, including on the NWR to the north of the project site (CNDDB 2019). However, no suitable habitat is present on the project site. Determined to be absent.
California Species of Special Concern			

Name	*Status	Habitat	Potential for Occurrence on the Project Site
Western pond turtle (*Actinemys marmorata*)	CSSC	Permanent or nearly permanent water in a variety of habitats.	**Absent.** No suitable aquatic habitat is present on or adjacent to the project site. Determined to be absent.
Northern harrier (*Circus cyaneus*)	CSSC (nesting)	Nests in marshes and moist fields, forages over open areas.	**Absent.** No suitable habitat is present on or adjacent to the project site. Determined to be absent.
Black skimmer (*Rynchops niger*)	CSSC (nesting)	Nests on sparsely vegetated beaches, isolated islands, and levees.	**Absent.** No suitable nesting or foraging habitat is present on or adjacent to the project site. Determined to be absent.
Burrowing owl (*Athene cunicularia*)	CSSC	Nests and roosts in open grasslands and ruderal habitats with suitable burrows, usually those made by California ground squirrels (*Spermophilus beecheyi*).	**Absent.** No nesting burrowing owls are known to occur in the surrounding project vicinity (CNDDB 2019), and no suitable burrowing owl roosting or nesting habitat (i.e., open grasslands with ground squirrel burrows) is present on the project site. Determined to be absent.
Loggerhead shrike (*Lanius ludovicianus*)	CSSC (nesting)	Nests in tall shrubs and dense trees; forages in grasslands, marshes, and ruderal habitats.	**Absent.** No suitable breeding or foraging habitat is present on the project site. Determined to be absent.
San Francisco common yellowthroat (*Geothlypis trichas sinuosa*)	CSSC	Nests in herbaceous vegetation, usually in wetlands or moist floodplains.	**Absent.** The San Francisco common yellowthroat breeds commonly in wetlands found to the northwest and northeast of the project site, but no suitable habitat is present on the project site. Determined to be absent.
Alameda song sparrow (*Melospiza melodia pusillula*)	CSSC	Nests in salt marsh, primarily in marsh gumplant and cordgrass along channels.	**Absent.** Song sparrows breed commonly in wetlands found to the northwest and northeast of the project site, but no suitable habitat is present on the project site. Determined to be absent
Salt marsh wandering shrew (*Sorex vagrans halicoetes*)	CSSC	Medium to high marsh 6 to 8 ft above sea level with abundant driftwood and common pickleweed.	**Absent.** Suitable pickleweed-dominated salt marsh habitat is present in the project vicinity, including on the NWR to the north of the project site (CNDDB 2019). However, no suitable habitat is present on the project site. Determined to be absent.

Name	*Status	Habitat	Potential for Occurrence on the Project Site
Pallid bat (*Antrozous pallidus*)	CSSC	Forages over many habitats; roosts in caves, rock outcrops, buildings, and hollow trees.	**Absent.** Historically, pallid bats were likely present in a number of locations throughout the project vicinity, but their populations have declined in recent decades. This species has been extirpated as a breeder from urban areas close to the Bay, as is the case in the project vicinity. No suitable roosting habitat is present on the project site or the surrounding area and no known maternity colonies are present on or adjacent to the project site.
American badger (*Taxidea taxus*)	CSSC	Burrows in grasslands and occasionally in infrequently disked agricultural areas.	**Absent.** Badgers are not known to occur in the project vicinity due to the lack of extensive grasslands and agricultural areas with friable soils, needed for digging burrows. No suitable habitat is present on the project site. Determined to be absent.
California Fully Protected Species			
White-tailed kite (*Elanus leucurus*)	SP	Nests in trees and forages in extensive grasslands or marshes.	**Absent**. Suitable nesting and foraging habitat is not present on the project site. Determined to be absent.

SPECIAL-STATUS SPECIES CODE DESIGNATIONS

FE = Federally listed Endangered
FT = Federally listed Threatened
FC = Federal Candidate for listing
SE = State listed Endangered
ST = State listed Threatened
SC = State Candidate for listing
CSSC = California Species of Special Concern
SP = State Fully Protected Species

G3/S3: Vulnerable.

G4/S4: Apparently secure

G5/S4: Secure

In addition to tracking sensitive natural communities, the CDFW also ranks vegetation alliances, defined by repeating patterns of plants across a landscape that reflect climate, soil, water, disturbance, and other environmental factors (Sawyer et al. 2009). If an alliance is marked G1-G3, all of the vegetation associations within it will also be of high priority (CDFW 2018). The CDFW provides the Vegetation Classification and Mapping Program's (VegCAMP) currently accepted list of vegetation alliances and associations (CDFW 2019).

Impacts on CDFW sensitive natural communities, vegetation alliances/associations, or any such community identified in local or regional plans, policies, and regulations, must be considered and evaluated under CEQA (Title 14, Division 6, Chapter 3, Appendix G of the California Code of Regulations). Furthermore, aquatic, wetland and riparian habitats are also protected under applicable federal, state, or local regulations, and are generally subject to regulation, protection, or consideration by the USACE, RWQCB, CDFW, and/or the USFWS.

5.3.1 CDFW Sensitive Habitats

A query of sensitive habitats in Rarefind (CNDDB 2018) identified three sensitive habitats as occurring within the nine USGS quadrangles containing or surrounding the project site: serpentine bunchgrass grassland (Rank G2/S2.2), valley oak woodland (G3/S2.1), and northern coastal salt marsh (Rank G3/S3.2). Serpentine bunchgrass occurs only on serpentine soils, which do not occur on the project site. Valley oak woodland is characterized by valley oak (*Quercus lobata*) as the dominant or co-dominant species in the tree canopy. While some valley oak individuals do occur in the project vicinity, they are ornamental plantings along buildings and roadways, and thus do not constitute this sensitive habitat type. The last sensitive habitat type, northern coastal salt marsh, is described by Holland (1986) as occurring along sheltered inland margins of bays, often co-dominated by pickleweed (*Salicornia* spp.), cordgrass (*Spartina* spp.), and sometimes saltgrass (*Distichlis spicata*). None of these species was noted on the project site, thus this habitat type is also absent.

5.3.2 CDFW Sensitive Vegetation Alliances

CDFW Sensitive alliances are not present on the project site (CDFW 2019).

5.3.3 Sensitive Habitats (Waters of the U.S./State)

As described above, the reconnaissance survey of the project site did not identify any wetlands or other waters that would fall under the jurisdiction of the USACE (waters of the U.S.), or under the jurisdiction of the RWQCB or CDFW (waters of the State) on the project site.

5.4 Non-Native and Invasive Species

The entire project site consists of developed and maintained landscaped areas which have not been planted with non-native invasive plant species. Thus, no non-native invasive plant species occur on the project site.

Section 6. Impacts and Mitigation Measures

The State CEQA Guidelines provide direction for evaluating the impacts of projects on biological resources and determining which impacts will be significant. CEQA defines a "significant effect on the environment" as "a substantial adverse change in the physical conditions which exist in the area affected by the proposed project." Under State CEQA Guidelines Section 15065, a project's impacts on biological resources are deemed significant if the project would:

- "substantially reduce the habitat of a fish or wildlife species"
- "cause a fish or wildlife population to drop below self-sustaining levels"
- "threaten to eliminate a plant or animal community"
- "reduce the number or restrict the range of a rare or endangered plant or animal"

In addition to the Section 15065 criteria that trigger mandatory findings of significance, Appendix G of State CEQA Guidelines provides a checklist of other potential impacts to consider when analyzing the significance of project effects. The impacts listed in Appendix G may or may not be significant, depending on the level of the impact. For biological resources, these impacts include whether the project would:

A. "have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service"

B. "have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service"

C. "have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act"

D. "interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites"

E. "conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance"

F. "conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan"

The impact assessment below is structured based on the six significance criteria (A-F) listed above.

6.1 Impacts on Special-Status Species: Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS (No Impact)

No special-status species occur on the project site, which does not support suitable habitat for any such species. Therefore, the project will not impact special-status species.

6.2 Impacts on Sensitive Communities: Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service (No Impact)

6.2.1 Impacts on Riparian Habitat or Other Sensitive Natural Communities (No Impact)

No riparian habitats or other sensitive natural communities are present on or immediately adjacent to the project site, and thus none will be impacted by the project.

6.2.2 Impacts Caused by Non-Native and Invasive Species (No Impact)

The entire site is developed or landscaped and regularly maintained, and no non-native or invasive species were observed. Further, no invasive and/or noxious plant species will be used in the project's landscape design plan. Thus, development will cause no impact on the spread of non-native and invasive plant species.

6.3 Impacts on Wetlands: Have a substantial adverse effect on state or federally protected wetlands as defined by Section 404 of the Clean Water Act (Less than Significant)

No wetlands occur on, or immediately adjacent to, the project site. Thus, the project would result in no direct impacts on jurisdictional wetlands. Development of the project site is unlikely to cause indirect impacts on nearby wetlands or water quality within those wetlands, as site runoff is directed into storm drains and bioretention basins.

Additionally, Construction projects in California causing land disturbances that are equal to 1 ac or greater must comply with State requirements to control the discharge of stormwater pollutants under the NPDES *General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities* (Construction General Permit; Water Board Order No. 2009-0009-DWQ). Prior to the start of construction/demolition, a Notice of Intent must be filed with the State Water Board describing the project. A Storm Water Pollution Prevention Plan (SWPPP) must be developed and maintained during the project and it must include the use of Best Management Practices (BMPs) to protect water quality until the site is stabilized. Standard permit conditions under the Construction General Permit require that the applicant utilize various measures including the following: on-site sediment control BMPs, damp street sweeping, temporary cover of disturbed land surfaces

to control erosion during construction, and utilization of stabilized construction entrances and/or wash racks, among other factors.

Finally, in many Bay Area counties, including San Mateo County, projects must also comply with the *California Regional Water Quality Control Board, San Francisco Bay Region, Municipal Regional Stormwater NPDES Permit* (MRP) (Water Board Order No. R2-2015-0049). This MRP requires that all projects implement BMPs and incorporate Low Impact Development practices into the design to prevent stormwater runoff pollution, promote infiltration, and hold/slow down the volume of water coming from a site after construction has been completed. In order to meet these permit and policy requirements, projects must incorporate the use of green roofs, impervious surfaces, tree planters, grassy swales, bioretention and/or detention basins, among other factors.

Compliance with state requirements to control the discharge of stormwater pollutants during construction under the NPDES Construction General Permit and the RWQCB required SWPPP, and post-construction measures and design features required by the MRP would reduce the project's potential impact on water quality to a less-than-significant level.

6.4 **Impacts on Wildlife Movement:** Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites (Less than Significant)

For many species, the landscape is a mosaic of suitable and unsuitable habitat types. Environmental corridors are segments of land that provide a link between these different habitats while also providing cover. Development that fragments natural habitats (i.e., breaks them into smaller, disjunct pieces) can have a twofold impact on wildlife: first, as habitat patches become smaller they are unable to support as many individuals (patch size), and second, the area between habitat patches may be unsuitable for wildlife species to traverse (connectivity).

All proposed project activities are located within an already developed footprint that is surrounded by existing development. Therefore, the project would not result in fragmentation of natural habitats. Although species moving across the site would face new impediments to movement (i.e., Building 3 and the parking structure), following project construction, common, urban-adapted wildlife would continue to be able to move in an east-west direction across the site via existing strips of landscaped or ruderal vegetation separating the project site from existing development to the north and U.S. Highway 101 and the Dumbarton Rail Corridor to the south. Thus, any wildlife species that currently move east-west through the project site would continue to be able to do so by going around the new structures on either the north or south side. Therefore, the project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors in the site vicinity.

Construction disturbance during the avian breeding season (February 1 through August 31, for most species) could result in the incidental loss of eggs or nestlings, either directly through the destruction or disturbance of active nests or indirectly by causing the abandonment of nests. Due to the absence of sensitive habitats from the project site, the habitats on the project site support only regionally common, urban-adapted breeding birds and support only a very small proportion of these species' regional populations. In addition, many birds are expected to continue to nest and forage on the project site after project construction is completed. These birds are habituated to disturbance related to the existing technology park, and the project incorporates trees, shrubs, and forbs into the landscape design, which will provide some food and structural resources for the common, urban-adapted birds of the area, as well as for migrants that may use the area during spring and fall migration. Therefore, project impacts on nesting and foraging birds that use the site, due to habitat impacts or disturbance of nesting birds, would not rise to the CEQA standard of having a substantial adverse effect, and these impacts would not constitute a significant impact on these species or their habitats under CEQA. However, all native bird species are protected from direct take by federal and state statutes (see Sections 3.1.5 and 3.2.4). Therefore, we recommend that the following measures be implemented to ensure that project activities comply with the MBTA and California Fish and Game Code:

Measure 1. Avoidance. To the extent feasible, construction activities should be scheduled to avoid the nesting season. If construction activities are scheduled to take place outside the nesting season, all impacts on nesting birds protected under the MBTA and California Fish and Game Code will be avoided. The nesting season for most birds in San Mateo County extends from February 1 through August 31.

Measure 2. Preconstruction/Pre-disturbance Surveys. If it is not possible to schedule construction activities between September 1 and January 31 then preconstruction surveys for nesting birds should be conducted by a qualified ornithologist to ensure that no nests will be disturbed during project implementation. We recommend that these surveys be conducted no more than seven days prior to the initiation of construction activities. During this survey, the ornithologist will inspect all trees and other potential nesting habitats (e.g., trees, shrubs, California annual grasslands, buildings) in and immediately adjacent to the impact areas for nests.

Measure 3. Buffers. If an active nest is found sufficiently close to work areas to be disturbed by these activities, the ornithologist will determine the extent of a construction-free buffer zone to be established around the nest (typically 300 ft for raptors and 100 ft for other species), to ensure that no nests of species protected by the MBTA and California Fish and Game Code will be disturbed during project implementation.

Measure 4. Inhibition of Nesting. If construction activities will not be initiated until after the start of the nesting season, all potential nesting substrates (e.g., bushes, trees, grasses, and other vegetation) that are scheduled to be removed by the project may be removed prior to the start of the nesting season (e.g., prior to February 1). This will preclude the initiation of nests in this vegetation, and prevent the potential delay of the project due to the presence of active nests in these substrates.

6.5 Impacts due to Conflicts with Local Policies: Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (Less than Significant)

6.5.1 Impacts Related to Compliance with Municipal Code Chapter 13.24, Heritage Trees (No Impact)

Per City of Menlo Park Municipal Code Chapter 13.24, Heritage Trees, permits from the City's Director of Public Works or his or her designee and payment of a fee are required for the removal of any trees which meet the definition of heritage tree, as defined in Section 3.3.1 above. It is anticipated that 304 trees on the project site are to be removed during project construction activities. Of these, none qualify as heritage trees. Therefore, the project would result in no impact related to conflict with local policies or ordinances protecting heritage trees.

6.5.2 Impacts Related to Compliance with Municipal Code Chapter 16.44.130 (6), Bird Safe Design (Less than Significant)

Development of the proposed project would include the construction of a new four-story office building and a five-level (four above grade and one below grade) parking structure. Glass windows and building façades can result in injury or mortality of birds due to collisions with these surfaces. Because birds do not perceive glass as an obstruction the way humans do, they may collide with glass when the sky or vegetation is reflected in glass (e.g., they see the glass as sky or vegetated areas); when transparent windows allow birds to perceive an unobstructed flight route through the glass (such as at corners); and when the combination of transparent glass and interior vegetation (such as in planted atria) results in attempts by birds to fly through glass to reach that vegetation.

The majority of avian collisions with buildings occur within the first 60 ft of the ground (City of San Francisco 2011), where birds spend the majority of their time engaged in foraging, territorial defense, nesting, and roosting activities, and where vegetation is most likely to be reflected in glazed surfaces. However, very tall buildings (e.g., buildings 500 ft or more high) may pose a threat to birds that are migrating through the area, particularly to nocturnal migrants that may not see the buildings or that may be attracted to lights on the buildings.

Currently, terrestrial land uses and habitat conditions in and adjacent to the project site consist primarily of developed and landscaped uses such as buildings, parking lots, and roads. Vegetation in these areas is limited in extent, and consists primarily of non-native landscaped trees and shrubs. As described in Section 4.2.1 above, although a number of bird species will use such vegetation, they typically do so in low numbers because non-native vegetation supports fewer of the resources required by native birds than native vegetation, and the structural simplicity of the vegetation (without well-developed ground cover, understory, and canopy layers) further limits resources available to birds. In addition, although numerous waterbirds are known to congregate at the NWR to the north of the project site; because the area surrounding the project site on all sides is heavily urbanized and contains no habitats of high value to estuarine birds using the NWR, we do not expect large numbers of waterbirds to be flying over the project site at altitudes low enough for bird-strike mortality to

occur. The bird species with the greatest potential to collide with any buildings would consist primarily of the common, urban-adapted passerine species that currently use the project site, as these are the species that would spend the most time near the new buildings.

After project construction is completed, there will be a low risk of bird collisions with the façades of the proposed parking structure due to the absence of glass. Building 3 is expected to experience higher collision frequency due to the more extensive use of glass throughout the façades. However, the following factors will limit the frequency with which birds may collide with the façades of Building 3:

- Based on the architectural renderings, the windows will be recessed from the solid/opaque vertical and horizontal elements of the façades; as a result, birds will be better able to perceive the buildings as solid structures to be avoided than if the glass were the outermost features of the building. The shadows and reflections of the solid supports in the glass will further reinforce the perception that these buildings are solid structures to be avoided.
- Mullions between glass panes will help to break up the appearance of the glass.
- The reflectivity of the glass composing the façades will be low, reducing reflections of vegetation on the surface of the glass.
- The glass rail enclosing the balcony on the fourth floor of the building will be treated (e.g., with a frit pattern) to make the glass more conspicuous to birds, thereby meeting bird-safe design guidelines. Further, the balcony behind the rail will be narrow, and no plants or other features that might otherwise attract birds to fly toward the balconies will be present. As a result, there is little expectation that birds will try to approach the building in such a way that they might collide with the glass rail.
- No landscaping will be installed on the roof, and the rooftop windscreen will be composed of a metal panel rather than glass, increasing its visibility to birds that may be flying over the building.
- An aluminum composite metal canopy and louvers will extend out horizontally from the fourth-floor roof, reducing the reflection of the sky in the glazing of the upper floors.
- As described above, bird use of the project site is expected to be relatively low, which will limit the number of birds present in the vicinity of Building 3.

Although the frequency of collisions with the façades of Buildings 3 is expected to be somewhat higher than the frequency of collisions with the proposed parking structure, the overall frequency of bird collisions with the façades of Buildings 3 is expected to be low, and collisions are not expected to result in the loss of a substantial proportion of any native species' South Bay (or even Menlo Park) populations because bird use of the project vicinity is expected to be relatively low, which will limit the number of birds present in the vicinity.

There is some potential for bird strikes to occur with any part of the buildings at night, when birds may be less able to perceive the presence of the buildings (especially in bad weather). However, large-scale collision events involving nocturnal migrants such as those that have been documented at high-rise buildings in the East and Midwest have not been documented in the West. The project does not propose any very bright spotlights or other lighting that will be pointed upward or outward and that may serve to attract or confuse birds. Furthermore, it is worth noting that the composition of the buildings' surfaces (e.g., presence or absence of

glass, or whether the glass includes bird-safe treatments) will have no influence on whether nocturnal migrants collide with the buildings if they are unable to perceive the buildings due to darkness in the first place. Finally, nocturnally migrating birds typically fly 500 ft or more above ground level, and thus well above the proposed buildings.

As described in Section 3.3.1 above, the City of Menlo Park's Bird-Friendly Design Guidelines (Ordinance No. 1024) require the project design to comply with six bird-friendly design standards for new construction, although the City may waive the bird-friendly design requirements based on a site-specific evaluation from a qualified biologist and review and approval by the Planning Commission. Below, we analyze the proposed project's compliance with these six standards.

1. *No more than 10% of façade surface area shall have non-bird-friendly glazing.*

   Building 3 – The Commonwealth Building 3 project includes extensive glazing (i.e., well over 10%) on the façades of Building 3, including within 60 feet of the ground (i.e., the area with the greatest risk of avian collisions). Because this glazing is not proposed to be treated (i.e., "bird-friendly"), the current project design does not comply with this standard. However, the assessment herein, which is based on the Commonwealth Building 3 Project – Avian Collision Risk Assessment (H. T. Harvey & Associates 2018) constitutes an analysis by a qualified biologist indicating whether construction of the project would pose a collision hazard to birds in the absence of the use of treated glazing on the building façades. It is our opinion that the overall architectural design of the building, as well as bird-safe glazing treatment on balcony railings, in lieu of more extensive bird-safe glazing treatment should be sufficient to avoid any significant impacts under CEQA from bird collisions with the buildings' façades.

   We expect that occasional collisions between birds and the glass façades of the proposed building would occur after the building is constructed. However, we expect the frequency of bird collisions to be low. We base this conclusion on (1) the relatively low numbers of birds expected to occur in the project vicinity, (2) the absence of any features such as dense, native vegetation or water features that might otherwise attract birds to the vicinity, (3) the bird-safe glazing treatment that would be applied to the glass railings, and (4) the appearance of the façades, which are well broken-up by solid, opaque horizontal and vertical elements, thus making the façades more conspicuous and less likely to be mistaken for the sky or vegetation.

   The overall frequency of bird collisions would be low, and because the majority of collisions would involve regionally abundant, urban-adapted bird species, these collisions would not result in the loss of a substantial proportion of any species' Bay-area populations or any Bay-area bird community. Therefore, given the relatively low number of collisions expected to occur, in combination with the other bird-collision mitigating design features noted above, we do not expect the addition of more bird-safe glazing treatment to the project design to result in a substantial reduction in the number of collisions on this project.

   Parking Structure – Glazing is absent from the parking structure. Thus, the proposed parking structure is in compliance with this design standard.

2. *Occupancy sensors or other switch control devices shall be installed on non-emergency lights and shall be programmed to shut off during non-work hours and between 10:00 p.m. and sunrise.*

   Occupancy sensors for light control would be installed on all non-emergency lights within the new office buildings and parking garages on the project site. These lights would be programmed to shut off during non-work hours and between 10:00 p.m. and sunrise. Thus, the indoor lighting for the project is in compliance with this design standard.

3. *Placement of buildings shall avoid the potential funneling of flight paths towards a building façade.*

   The proposed new building and parking structure would not funnel open space that is attractive to birds toward the faces of buildings. The proposed landscaped vegetation on the site would be planted along sidewalks and in areas of open space throughout the site. No features of the proposed building design or landscaping would funnel birds towards a building façade. Thus, it is our opinion that the project design complies with this standard.

4. *Glass skywalks or walkways, freestanding (see-through) glass walls and handrails, and transparent building corners shall not be allowed.*

   Building 3 includes glass corners on all sides of the building and at all floor levels. In addition, freestanding glass handrails are located on the perimeter of the fourth-floor balcony. Thus, the project design does not comply with this standard. However, the glass used for these railings would be treated (e.g., with a frit pattern) to make the glass more conspicuous to birds. Even in the absence of such glazing treatment, though, we expect the frequency of bird collisions to be low due to the relatively low numbers of birds expected to occur in the project vicinity and the absence of any features such as dense, native vegetation or water features that might otherwise attract birds to the vicinity. Because the majority of collisions will involve regionally abundant, urban-adapted bird species, these collisions would not result in the loss of a substantial proportion of any species' Bay-area populations or any Bay-area bird community. Therefore, given the relatively low number of collisions expected to occur, we do not expect the elimination of glass corners and glass handrails to result in a substantial reduction in the number of collisions on this project.

5. *Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with roof decks, patios, and green roofs.*

   Based on the architectural renderings in the project plan set, an aluminum parapet cap would wrap around the building at the level of the fourth-floor roof. Thus, no windows extend all the way to the top of the building. In addition, a metal canopy and louvers extend out horizontally from the level of the fourth-floor roof. Shadows and reflections from the overhang would prevent glazing near the roofline from appearing as unbroken panes of glass and would break up the reflection of the sky within the glass. Therefore, in our opinion, the project design complies with this guideline.

6. *Use of rodenticides shall not be allowed.*

The project would comply with the City's prohibition on the use of rodenticides.

Therefore, in our opinion, the overall architectural design of the project, as well as bird-safe glazing treatment on balcony railings, in lieu of more extensive bird-safe glazing treatment is sufficient to avoid any significant impacts under CEQA from bird collisions with the buildings' façades.

6.5.3 Impacts Related to Compliance with General Plan Policy OSC1.3, Sensitive Habitats (No Impact)

General Plan Policy OSC1.3, Sensitive Habitats, requires new development on or near sensitive habitats to (1) provide a baseline assessment prepared by qualified biologists and specify requirements relative to the baseline assessments, (2) consult with appropriate regulatory and resource agencies, (3) incorporate appropriate avoidance and minimization measures, and (4) obtain necessary permits/authorizations. Further, Mitigation Measure BIO-1 of the ConnectMenlo EIR (PlaceWorks 2016) specifies that the required biological resources assessment must address a number of specific requirements. The following summarizes the project's compliance with the requirements of General Plan Policy OSC1.3 and Mitigation Measure BIO-1.

- The baseline biological resources report is required to provide a determination on whether any sensitive biological resources, including jurisdictional wetlands and waters, essential habitat for special-status species, and sensitive natural communities, are present on the site or on any adjacent undeveloped lands that could be affected by the project and lands of the NWR. In compliance with this requirement, Section 4.2 of this report describes the biotic habitat types present on the project site. Sections 5.1 and 5.2 discuss the potential for these habitats to support special-status plants and animals and analyze the potential for special-status species to occur on the project site or close enough to be impacted by proposed project activities. No plant or animal species listed as threatened or endangered by the USFWS or CDFW are expected to occur on the project site. Further, no animal species designated as a species of special concern is expected to breed on the project site; and no plant species with a CRPR rating are present.

  Section 5.3 addresses the presence of sensitive habitats in the project vicinity and analyzes the potential for the project to result in impacts on such habitats. No habitats under the jurisdiction of the USFWS, CDFW, or RWQCB were determined to be present on the project site.

- The baseline biological resources report is required to incorporate guidance from relevant regional conservation plans related to determining the potential presence or absence of sensitive biological resources. As described above, Sections 5.1 and 5.2 analyze the potential for special-status plant or animal species to occur on the project site. This analysis incorporates information from the NWR Comprehensive Conservation Plan and Environmental Assessment (USFWS 2012), which includes a discussion of all the special-status species potentially occurring on the NWR.

- The baseline biological resources report is required to include an evaluation of the potential effects of the project on sensitive biological resources. The potential for the proposed project to result in significant impacts on sensitive biological resources is analyzed in Section 6 of this report. This analysis takes into consideration the habitat types present on the project site (Section 4.2), the potential for special-status species to be present on the project site (Sections 5.1 and 5.2), and the proximity of the project site to sensitive habitats (Section 5.3). Based on the analysis, it is determined that the project would not result in significant impacts on any special-status plant or animal species. In addition, the project would not result in impacts on sensitive habitats under the jurisdiction of the USFWS, RWQCB, or CDFW.

- The baseline biological resources report is required to include avoidance, minimization, and mitigation measures for adverse impacts. Section 6 identified no potentially significance impacts under CEQA. Thus, no avoidance, minimization, or mitigation measures are needed to reduce potentially significant impacts under CEQA. However, all native bird species are protected from direct take by federal and state statutes (see Sections 3.1.5 and 3.2.4). Therefore, recommended avoidance and minimization measures are provided in Chapter 6 to ensure that project activities comply with the MBTA and California Fish and Game Code.

- Per Mitigation Measure BIO-1, if sensitive biological resources are determined to be present on the project site or may be present on any adjacent parcel containing natural habitat, coordination with the appropriate regulatory and resource agencies must occur. However, based on the analyses contained herein, the project would not result in impacts on sensitive habitats under the jurisdiction of the USACE, RWQCB, or CDFW. Further, the project would not result in impacts on plant or animal species listed as threatened or endangered by the USFWS or CDFW. Thus, coordination with regulatory resource agencies regarding impacts on biological resources is not expected to be warranted. Nevertheless, resources agencies would be provided the opportunity to comment on the proposed project as part of the CEQA process for the project.

- Per Mitigation Measure BIO-1, where jurisdictional waters or federally and/or state listed special-status species would be affected by the project, appropriate authorizations shall be obtained by the project applicant. As described above, the project is not expected to result in impacts on sensitive habitats under the jurisdiction of the USACE, RWQCB, or CDFW. Further, the project would not result in impacts on plant or animal species listed as threatened or endangered by the USFWS or CDFW.

Thus, provided this project successfully incorporates the measures described in this biological assessment, the project will not conflict with General Plan Policy OSC1.3. This biological resources assessment represents compliance with ConnectMenlo EIR Mitigation Measure BIO-1 by providing all the information required by that mitigation measure for a biological resources assessment.

6.6 Impact due to Conflicts with an Adopted Habitat Conservation Plan: Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan (No Impact)

The project site is not located within an area covered by an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Therefore, the project would not conflict with any such documents.

6.7 Cumulative Impacts

Cumulative impacts arise due to the linking of impacts from past, current, and reasonably foreseeable future projects in the region. Future development activities in the City of Menlo Park will result in impacts on the same habitat types and species that will be affected by the proposed project. The proposed project, in combination with other projects in the area and other activities that impact the species that are affected by this project, could contribute to cumulative effects on special-status species. Other projects in the area include office/retail/commercial development, mixed use, and residential projects that could adversely affect these species, as well as restoration projects (e.g., the South Bay Salt Pond Restoration Project Phase 2, SAFER Bay Project) that will benefit these species.

The cumulative impact on biological resources resulting from the project in combination with other projects in the project area and larger region would be dependent on the relative magnitude of adverse effects of these projects on biological resources compared to the relative benefit of impact avoidance and minimization efforts prescribed by planning documents, CEQA mitigation measures, and permit requirements for each project; compensatory mitigation and proactive conservation measures associated with each project. In the absence of such avoidance, minimization, compensatory mitigation, and conservation measures, cumulatively significant impacts on biological resources would occur.

However, the Menlo Park General Plan contains conservation measures that would benefit biological resources, as well as measures to avoid, minimize, and mitigate impacts on these resources. Further, the project would implement a number of measures to reduce impacts on both common and special-status species, as described above. Thus, the project would not contribute to substantial cumulative effects on biological resources.

Appendix A. Special-Status Plants Considered

Common Name	Scientific Name	Suitable Habitat Absent	Edaphic Conditions Absent	Outside Elevation Range	Extirpated from Project Vicinity
alkali milk-vetch	Astragalus tener var. tener	x	x		
Anderson's manzanita	Arctostaphylos andersonii	x		x	
arcuate bush-mallow	Malacothamnus arcuatus	x		x	
bay buckwheat	Eriogonum umbellatum var. bahiiforme	x	x	x	
Ben Lomond buckwheat	Eriogonum nudum var. decurrens	x		x	
bent-flowered fiddleneck	Amsinckia lunaris	x			
Brewer's calandrinia	Calandrinia breweri	x		x	
Brewer's clarkia	Clarkia breweri	x	x	x	
bristly leptosiphon	Leptosiphon acicularis	x		x	
California androsace	Androsace elongata ssp. acuta	x		x	
California seablite	Suaeda californica	x			
caper-fruited tropidocarpum	Tropidocarpum capparideum	x	x		
chaparral ragwort	Senecio aphanactis	x		x	
Choris' popcornflower	Plagiobothrys chorisianus var. chorisianus	x			
clay buckwheat	Eriogonum argillosum	x	x	x	
clustered lady's-slipper	Cypripedium fasciculatum	x	x	x	
coast iris	Iris longipetala	x			
coast lily	Lilium maritimum	x			
coastal marsh milk-vetch	Astragalus pycnostachyus var. pycnostachyus	x			
Congdon's tarplant	Centromadia parryi ssp. congdonii	x	x		
Contra Costa goldfields	Lasthenia conjugens	x	x		
cotula navarretia	Navarretia cotulifolia	x	x		
Crystal Springs fountain thistle	Cirsium fontinale var. fontinale	x	x	x	
Crystal Springs lessingia	Lessingia arachnoidea	x	x	x	
Davidson's bush-mallow	Malacothamnus davidsonii	x		x	
Delta woolly-marbles	Psilocarphus brevissimus var. multiflorus	x		x	
Dudley's lousewort	Pedicularis dudleyi	x		x	
dusky-fruited malacothrix	Malacothrix phaeocarpa	x		x	
elongate copper moss	Mielichhoferia elongata	x	x		
fragrant fritillary	Fritillaria liliacea	x	X		
Franciscan onion	Allium peninsulare var. franciscanum	x		x	
Gairdner's yampah	Perideridia gairdneri ssp. gairdneri	x			
hairless popcornflower	Plagiobothrys glaber			x	x
Hickman's popcornflower	Plagiobothrys chorisianus var. hickmanii	x		x	

Common Name	Scientific Name	Suitable Habitat Absent	Edaphic Conditions Absent	Outside Elevation Range	Extirpated from Project Vicinity
Hillsborough chocolate lily	Fritillaria biflora var. ineziana	x	x	x	
Hoover's button-celery	Eryngium aristulatum var. hooveri	x			
Howell's onion	Allium howellii var. howellii	x		x	
Jepson's coyote-thistle	Eryngium jepsonii	x			
Jepson's woolly sunflower	Eriophyllum jepsonii	x		x	
Kings Mountain manzanita	Arctostaphylos regismontana	x	x	x	
large-flowered leptosiphon	Leptosiphon grandiflorus	x			
legenere	Legenere limosa	x			
Loma Prieta hoita	Hoita strobilina	x	x	x	
long-styled sand-spurrey	Spergularia macrotheca var. longistyla	x			
lost thistle	Cirsium praeteriens				x
maple-leaved checkerbloom	Sidalcea malachroides	x			
Marin western flax	Hesperolinon congestum	x	x		
Methuselah's beard lichen	Usnea longissima	x		x	
Mexican mosquito fern	Azolla microphylla	x		x	
Michael's rein orchid	Piperia michaelii	x			
minute pocket moss	Fissidens pauperculus	x		x	
Montara manzanita	Arctostaphylos montaraensis	x		x	
Mt. Diablo cottonweed	Micropus amphibolus	x		x	
narrow-petaled rein orchid	Piperia leptopetala	x		x	
Oakland star-tulip	Calochortus umbellatus	x	x	x	
Oregon polemonium	Polemonium carneum	x			
Patterson's navarretia	Navarretia paradoxiclara	x	x	x	
phlox-leaf serpentine bedstraw	Galium andrewsii ssp. gatense	x	x	x	
pincushion navarretia	Navarretia myersii ssp. myersii	x		x	
Point Reyes salty bird's-beak	Chloropyron maritimum ssp. palustre	x			
round-headed Chinese-houses	Collinsia corymbosa	x			
round-leaved filaree	California macrophylla	x		x	
saline clover	Trifolium hydrophilum	x			
San Antonio Hills monardella	Monardella antonina ssp. antonina	x		x	
San Francisco Bay spineflower	Chorizanthe cuspidata var. cuspidata	x			
San Francisco campion	Silene verecunda ssp. verecunda	x		x	
San Francisco collinsia	Collinsia multicolor	x		x	
San Francisco owl's-clover	Triphysaria floribunda	x		x	
San Francisco wallflower	Erysimum franciscanum	x			
San Joaquin spearscale	Extriplex joaquinana	x			
San Mateo thorn-mint	Acanthomintha duttonii	x	x	x	
San Mateo woolly sunflower	Eriophyllum latilobum	x		x	

Common Name	Scientific Name	Suitable Habitat Absent	Edaphic Conditions Absent	Outside Elevation Range	Extirpated from Project Vicinity
Santa Clara red ribbons	Clarkia concinna ssp. automixa	x		x	
Santa Clara thorn-mint	Acanthomintha lanceolata	x		x	
Satan's goldenbush	Isocoma menziesii var. diabolica	x		x	
serpentine leptosiphon	Leptosiphon ambiguus	x		x	
short-leaved evax	Hesperevax sparsiflora var. brevifolia	x			
slender-leaved pondweed	Stuckenia filiformis ssp. alpina	x		x	
South Coast Range morning-glory	Calystegia collina ssp. venusta	x	x	x	
spring lessingia	Lessingia tenuis	x		x	
stinkbells	Fritillaria agrestis	x		x	
sylvan microseris	Microseris sylvatica	x	x	x	
Tracy's eriastrum	Eriastrum tracyi	x		x	
two-fork clover	Trifolium amoenum	x			
western leatherwood	Dirca occidentalis	x		x	
white-flowered rein orchid	Piperia candida	x		x	
white-rayed pentachaeta	Pentachaeta bellidiflora	x	x	x	
woodland woollythreads	Monolopia gracilens	x	x		
woolly-headed lessingia	Lessingia hololeuca	x		x	

Appendix 3.8-2

Special-Status Species Occurrences Tables

Table 1. Special-Status Animal Species Known to Occur or Having Potential to Occur in the Project Vicinity

Scientific and Common Name	Status	Habitat	Potential for Occurrence in the Project Vicinity
Federal or State Endangered, Rare, or Threatened Species			
Green Sturgeon (*Acipenser medirostris*)	FT, CSSC	Spawns in large river systems such as the Sacramento River; forages in nearshore oceanic waters, bays, and estuaries.	**Absent.** No suitable aquatic habitat is present on the Project site. Green sturgeon may forage infrequently, and in low numbers in Flood Slough, approximately 0.5 mi northwest of the Project site; however, there is no aquatic connection between the slough and the Project site.
Central California Coast steelhead (*Oncorhynchus mykiss*)	FT	Cool streams with suitable spawning habitat and conditions allowing migration between spawning and marine habitats.	**Absent.** No suitable aquatic habitat is present on the Project site. Steelhead may forage in Flood Slough, approximately 0.5 mi northwest of the Project site; however, there is no aquatic connection between the slough and the Project site.
California tiger salamander (*Ambystoma californiense*)	FT, ST	Vernal or temporary pools in annual grasslands or open woodlands.	**Absent.** No suitable habitat is present on the Project site. Further, populations have largely been extirpated from San Mateo County due to habitat loss, and the species is now considered absent from the majority of the Project vicinity, including the Project site. The closest occurrence in the Project vicinity is at Lake Lagunita on the Stanford campus, which is approximately 3.8mi south of the project site (CNDDB 2019).
San Francisco garter snake (*Thamnophis sirtalis tetrataenia*)	FE, SE	Prefers densely vegetated freshwater habitats. May use upland burrows for aetivation.	**Absent**. No suitable habitat is present in the Study Area. Furthermore, the Project vicinity is outside the known range of the species.
California red-legged frog (*Rana draytonii*)	FT, CSSC	Streams, freshwater pools, and ponds with emergent or overhanging vegetation.	**Absent**. No suitable habitat is present on the Project site. Further, this species has been extirpated from the majority of the Project vicinity, due to development, the alteration of hydrology of its aquatic habitats, and the introduction of non-native predators such as non-native fishes and bullfrogs (*Lithobates catesbeianus*). The most recent record of the species in the Project vicinity is from 2016 near Bear Gulch reservoir, approximately 4.2 mi to the southwest of the Project site (CNDDB 2019).

Scientific and Common Name	Status	Habitat	Potential for Occurrence in the Project Vicinity
California Ridgway's rail (*Rallus obsoletus obsoletus*)	FE, SE, SP	Salt marshes characterized by large expanses of saltmarsh cordgrass (*Spartina spp.*) or pickleweed (*Salicornia spp*.), with well-developed tidal channels.	**Absent.** The species is known to occur on Greco Island approximately 1.1 mi northwestof the Project site, as well as the Palo Alto Baylands and the Ravenswood Open Space Preserve located approximately 2.1 mi east of the Project site. However, no salt marsh habitat is present on or adjacent to the Project site.
California black rail (*Laterallus jamaicensis coturniculus*)	ST, SP	Breeds in fresh, brackish, and tidal salt marshes.	**Absent.** This species occurs in the Project vicinity primarily as a scarce winter visitor, with individuals recently recorded as close as the Palo Alto Baylands, approximately 2.5 mi east of the Project site (CNDDB 2019). However, no suitable nesting or foraging habitat for the California black rail is present on or immediately adjacent to the Project site.
Western snowy plover (*Charadrius alexandrinus nivosus*)	FT, CSSC	Sandy beaches on marine and estuarine shores and salt pannes in the Bay's saline-managed ponds.	**Absent**. Although western snowy plovers are known to nest in salt panne habitat 0.4 mi to the north in the NWR's Ravenswood complex (CNDDB 2019), no suitable nesting or foraging habitat is present on or immediately adjacent to the Project site.
California least tern (*Sternula antillarum browni*)	FE, SE, SP	Nests along the coast on bare or sparsely vegetated, flat substrates. In the South Bay, nests in salt pannes and on an old airport runway. Forages for fish in open waters.	**Absent**. Suitable nesting habitat for the California least tern is not present on the Project site. Least terns have been recorded in the project vicinity during the post-breeding season, and have been known to forage in the Redwood City salt ponds, approximately 0.6 mi northwest of the Project site (CNDDB 2019). Least terns have also been known to forage infrequently along the shores of the Palo Alto Baylands Preserve, located approximately 2.5 mi east of the Project site. However, they are not expected to forage on the Project site due to the lack of any open water habitats supporting fish.
Salt marsh harvest mouse (*Reithrodontomys raviventris*)	FE, SE, SP	Salt marsh habitat dominated by common pickleweed or alkali bulrush.	**Absent**. The species has been recorded in salt marsh habitat in the Project vicinity, including on the NWR to the north of the Project site (CNDDB 2019). However, no suitable habitat is present on the Project site.
California Species of Concern			
Western pond turtle (*Actinemys marmorata*)	CSSC	Permanent or nearly permanent water in a variety of habitats.	**Absent**. No suitable aquatic habitat is present on or adjacent to the Project site.

Scientific and Common Name	Status	Habitat	Potential for Occurrence in the Project Vicinity
Northern harrier (*Circus cyaneus*)	CSSC (nesting)	Nests in marshes and moist fields; forages over open areas.	**Absent**. No suitable habitat is present on or adjacent to the Project site.
Black skimmer (*Rynchops niger*)	CSSC (nesting)	Nests on sparsely vegetated beaches, isolated islands, and levees.	**Absent**. No suitable nesting or foraging habitat is present on or adjacent to the Project site.
Burrowing owl (*Athene cunicularia*)	CSSC	Nests and roosts in open grasslands and ruderal habitats with suitable burrows, usually those made by California ground squirrels (*Spermophilus beecheyi*).	**Absent**. No nesting burrowing owls are known to occur in the surrounding Project vicinity (CNDDB 2019), and no suitable burrowing owl roosting or nesting habitat (i.e., open grasslands with ground squirrel burrows) is present on the Project site.
Loggerhead shrike (*Lanius ludovicianus*)	CSSC (nesting)	Nests in tall shrubs and dense trees; forages in grasslands, marshes, and ruderal habitats.	**Absent**. No suitable breeding or foraging habitat is present on the Project site.
San Francisco common yellowthroat (*Geothlypis trichas sinuosa*)	CSSC	Nests in herbaceous vegetation, usually in wetlands or moist floodplains.	**Absent**. The San Francisco common yellowthroat breeds commonly in wetlands found to the northwest and northeast of the Project site, but no suitable habitat is present on the Project site.
Alameda song sparrow (Melospiza melodia pusillula)	CSSC	Nests in salt marsh, primarily in marsh gumplant and cordgrass along channels.	**Absent.** Song sparrows breed commonly in wetlands found to the northwest and northeast of the Project site, but no suitable habitat is present on the Project site.
Salt marsh wandering shrew (*Sorex vagrans halicoetes*)	CSSC	Medium to high marsh 6 to 8 feet above sea level with abundant driftwood and common pickleweed.	**Absent**. Suitable pickleweed-dominated salt marsh habitat is present in the Project vicinity, including on the NWR to the north of the Project site (CNDDB 2019). However, no suitable habitat is present on the Project site.
Pallid bat (Antrozous pallidus)	CSSC	Forages over many habitats; roosts in caves, rock outcrops, buildings, and hollow trees.	**Absent**. Historically, pallid bats were likely present in a number of locations throughout the Project vicinity, but their populations have declined in recent decades. This species has been extirpated as a breeder from urban areas close to the Bay, as is the case in the Project vicinity. No suitable roosting habitat is present on the Project site or the surrounding area and no known maternity colonies are present on or adjacent to the Project site.

Scientific and Common Name	Status	Habitat	Potential for Occurrence in the Project Vicinity
American badger (*Taxidea taxus*)	CSSC	Burrows in grasslands and occasionally in infrequently disked agricultural areas.	**Absent**. Badgers are not known to occur in the Project vicinity due to the lack of extensive grasslands and agricultural areas with friable soils, needed for digging burrows. No suitable habitat is present on the Project site.
California Fully Protected Species			
White-tailed kite (*Elanus leucurus*)	SP	Nests in trees; forages in extensive grasslands or marshes.	**Absent**. Suitable nesting and foraging habitat is not present on the project site.

Notes:

Special-Status Species Code Designations

FE = Federally Listed as Endangered
FT = Federally Listed as Threatened
SE = State Listed as Endangered
ST = State Listed as Threatened
SC = State Candidate for Listing
CSSC = California Species of Special Concern
SP = State Fully Protected Species
