1. Introduction

Project Overview

The Sobrato Organization (Project Sponsor) is proposing to construct an approximately 249,500-gross-square-foot (gsf) office building and an approximately 324,000 gsf parking structure as part of the Commonwealth Building 3 Project (Project). The Project site is the existing Commonwealth Corporate Center property, which includes the Commonwealth Site at 162 and 164 Jefferson Drive and the Jefferson Site (also 164 Jefferson Drive). Two buildings (Buildings 1 and 2), currently occupied by Facebook (referred to by Facebook as Buildings 27 and 28), were constructed at the Project site as part of the Commonwealth Corporate Center Project. The Project would add a four-story office building (Building 3) and a four-story parking structure with 1,061 parking spaces to the Project site. The Project site would continue to be accessible from two driveways: the main access point at Commonwealth Drive in the southwest corner of the Project site and the secondary access point at Jefferson Drive in the northern portion of the Project site. In the eastern portion of the Commonwealth Site, a connection to a bicycle and pedestrian path, and/or public transit, along the Dumbarton Rail Corridor may be provided in the future. The Project site is within the ConnectMenlo study area and, therefore, within the scope of the programmatic ConnectMenlo EIR. As discussed in more detail below, in accordance with the requirements outlined in Section 15168 of the CEQA Guidelines, this Initial Study has been prepared to disclose the relevant impacts and mitigation measures covered in the ConnectMenlo EIR and discuss whether the Project is within the parameters of the ConnectMenlo EIR.

Purpose of This Initial Study

This Initial Study has been prepared by the Project's lead agency, the City of Menlo Park (City), in conformance with the provisions of the California Environmental Quality Act (CEQA) and 14 California Code of Regulations, Chapter 3 (CEQA Guidelines). The lead agency is the public agency with principal responsibility, generally, for carrying out or approving a project. Environmental checklists, as included in this Initial Study, are to be completed for all projects that are subject to environmental review under CEQA. The information, analysis, and conclusions contained in the environmental checklist form the basis for deciding whether an environmental impact report (EIR), a negative declaration, or a mitigated negative declaration should be prepared. Where only certain topic areas warrant analysis in an EIR, the document is referred to as a Focused EIR.

The Project site is within the ConnectMenlo study area. ConnectMenlo, which updated the City General Plan Land Use and Circulation Elements and rezoned land in the M-2 Area, now referred to as the Bayfront Area, was approved on November 29, 2016. It serves as the City's comprehensive and long-range guide to land use and infrastructure development. ConnectMenlo's Land Use Element identified an allowable increase in net new development potential of up to 2.3 million gsf for non-residential uses, up to 4,500 residential units, and up to 400 hotel rooms.

Because the City General Plan is a long-range planning document, the ConnectMenlo EIR was prepared as a Program EIR, pursuant to CEQA Guidelines Section 15168. Once a Program EIR has been certified, subsequent activities within the program must be evaluated to determine whether additional CEQA review is needed. However, if the Program EIR addresses a program's effects in adequate detail, subsequent

activities could be found to be within the Program EIR's scope, and additional environmental review may not be required, unless one of the thresholds for subsequent environmental review is met (CEQA Guidelines Section 15168[c]). When a Program EIR is relied on for subsequent activities, the lead agency must incorporate feasible mitigation measures into subsequent activities as well as the alternatives developed in the Program EIR (CEQA Guidelines Section 15168[c][3]). If a subsequent activity would have effects that are not within the scope of a Program EIR, the lead agency must prepare a new Initial Study, leading to a negative declaration, a mitigated negative declaration, or an EIR (CEQA Guidelines Section 15168[c][1]). Because the Project's location and development parameters are consistent with ConnectMenlo, the ConnectMenlo Program EIR serves as the environmental analysis for the Project (e.g., is incorporated by reference pursuant to Sections 15150, 15130, and 15183), except for areas identified in this Initial Study.

Section 15168(d) of the CEQA Guidelines provides for simplifying the preparation of environmental documents by incorporating by reference analyses and discussions. Where an EIR has been prepared or certified for a program or plan, the environmental review for a later activity consistent with the program or plan should be limited to effects that were not analyzed as significant in the prior EIR or that are susceptible to substantial reduction or avoidance (CEQA Guidelines Section 15152[d]). By tiering from the ConnectMenlo EIR, the environmental analysis for this Project relies on the EIR for the following:

- A discussion of general background and setting information for environmental topic areas,
- Overall growth-related issues,
- Issues that were evaluated in detail in the ConnectMenlo EIR for which there is no significant new information or change in circumstances that would require further analysis,
- Assessment of cumulative impacts, and
- Mitigation measures adopted and incorporated into the ConnectMenlo EIR.

This Initial Study has been prepared to evaluate the potential environmental impacts of the Project and determine what level of additional environmental review is appropriate. In accordance with the requirements outlined in Section 15168 of the CEQA Guidelines, this Initial Study has been prepared to disclose the relevant impacts and mitigation measures covered in the ConnectMenlo EIR and discuss whether the Project is within the parameters of the ConnectMenlo EIR. Based on the findings in this Initial Study, a Focused EIR will be prepared for impacts that need further discussion and/or mitigation beyond that provided in the ConnectMenlo EIR. This is discussed in more detail in Chapter 3, *Environmental Checklist*.

Project Information

1. **Project Title:**

   Commonwealth: Building 3 Project

2. **Lead Agency Name and Address:**

   City of Menlo Park
   Community Development Department
   701 Laurel Street
   Menlo Park, CA 94025

3. **Contact Person and Phone Number:**

   Tom Smith, Senior Planner – (650) 330-6730

4. **Project Location:**

   162 and 164 Jefferson Drive, Menlo Park, CA 94025

5. **Project Sponsor's Name and Address:**

   The Sobrato Organization
   10600 North De Anza Boulevard
   Cupertino, CA 95014

6. **General Plan Designation:**

   Office-Bonus (O-B)

7. **Description of Project:**

   Please refer to Chapter 2, *Project Description*.

8. **Surrounding Land Uses and Setting:**

   The Project site, which is composed of the Commonwealth Site and the Jefferson Site in Menlo Park, is bounded by Jefferson Drive and office buildings to the north, the currently inactive Dumbarton Rail Corridor to the southeast, US 101 to the south, and an Exponent building to the west. Office, life science, and research and development uses are located immediately adjacent to the Project site in all directions. Neighborhoods in Menlo Park are south (across the Dumbarton Rail Corridor and US 101) of the Project site. To the southeast, across the Dumbarton Rail Corridor, are recreational and public facility uses associated with Kelly Park and the Onetta Harris Community Center.

9. **Other Public Agencies Whose Approval May Be Required (e.g., permits, financing approval, participation agreement), Potential Responsible Agencies, and Trustee Agencies:**

   - Bay Area Air Quality Management District
   - California Department of Transportation
   - Regional Water Quality Control Board, San Francisco Bay Region/San Mateo Countywide Water Pollution Prevention Program
   - San Mateo County Transportation Authority
   - Menlo Park Fire Protection District
   - San Mateo County Environmental Health Division
   - West Bay Sanitary District
   - Native American Heritage Commission

10. **Have California Native American tribes that are traditionally and culturally affiliated with the Project area requested consultation, pursuant to Public Resources Code Section 21080.3.1? If so, has consultation begun?**

    The Native American Heritage Commission (NAHC) was contacted on March 18, 2019, to identify any areas of concern within the Project area. The NAHC responded on March 21, 2019, stating that a search of its Sacred Land File failed to indicate the presence of Native American cultural resources in the immediate Project area. The NAHC provided a list of six Native American contacts who might have information that would be pertinent to the Project or concerns regarding the proposed actions. A letter explaining the Project, along with a map of the Project area, was sent on March 27 and 29, 2019, to all six contacts listed by the NAHC. The letter also solicited responses from each of the contacts, should they have any questions, comments, or concerns regarding the Project.

    Letters were sent to the following contacts:

    - Tony Cerda, chairperson – Coastanoan Rumsen Carmel Tribe
    - Andrew Galvan – The Ohlone Indian Tribe
    - Ann Marie Sayers, chairperson – Indian Canyon Mutsun Band of Coastanoan
    - Irenne Zwierlein, chairperson – Amah Mutsun Tribal Band of Mission San Juan Bautista
    - Valentin Lopez, chairperson- Amah Mutsun Tribal Band
    - Charlie Nijmeh, chairperson- Muwekma Ohlone Indian Tribe of the San Francisco Bay Area

    Follow-up phone calls were made on April 24, 2019, to all six individuals listed above. Although Mr. Cerda, Ms. Nijmeh, Mr. Galvan, and Mr. Lopez were not reached, a detailed phone message was left, along with a request for a return call. To date, no responses have been received. When contacted, Ms. Zwierlein stated that the Project area is known to be very sensitive for Native American resources, including burials. She requested that an archaeological monitor be onsite during all ground-disturbing activities; if Native American resources are encountered, she requested that a Native American monitor be onsite as well. Ms. Sayers had similar sentiments, stating that the area is known to be sensitive and requesting that both an archaeological and Native American monitor be onsite during all ground-disturbing activities. Should any burials be encountered, Ms. Sayers requested that they be repatriated as close as possible to where they were discovered.

2. Project Description

The Sobrato Organization (Project Sponsor) is proposing to construct an approximately 249,500-gross-square-foot (gsf) office building and an approximately 324,000 gsf parking structure as part of the Commonwealth: Building 3 Project (Project). The Project site is the existing Commonwealth Corporate Center property, which includes the Commonwealth Site at 162 and 164 Jefferson Drive and the Jefferson Site (also at 164 Jefferson Drive).[1] Two buildings (Buildings 1 and 2), currently occupied by Facebook (referred to by Facebook as Buildings 27 and 28), were constructed at the Project site as part of the Commonwealth Corporate Center Project. The Project would add a four-story office building (Building 3) and a four-story parking structure with 1,061 parking spaces to the Project site. The Project site would continue to be accessible from two driveways: the main access point at Commonwealth Drive in the southwest corner of the Project site and the secondary access point at Jefferson Drive in the northern portion of the Project site. In the eastern portion of the Commonwealth Site, a connection to a bicycle and pedestrian path in the Dumbarton Rail Corridor may be provided in the future.

Project Location and Setting

Project Location

As shown in Figure 2-1, the Project site, which is north of US 101 in Menlo Park, is bounded by Jefferson Drive and office buildings to the north, the currently inactive Dumbarton Rail Corridor to the southeast, US 101 to the south, and an Exponent building to the west.[2] Southeast of the Dumbarton Rail Corridor is Kelly Park. Farther north, beyond the Project site, is State Route (SR) 84, tidal mudflats and marshes along San Francisco Bay, the Don Edwards San Francisco Bay National Wildlife Refuge, and Ravenswood Slough. Neighborhoods in East Palo Alto are approximately 1 mile southeast of the Project site; the Belle Haven neighborhood of Menlo Park is south of the Project site, across the Dumbarton Rail Corridor. The Belle Haven neighborhood contains a mix of uses, including churches, Menlo Park Fire Station No. 77, single-family residences, multi-family residential units, and institutional buildings. The Belle Haven neighborhood's institutional and park uses include Beechwood School, Belle Haven Elementary School, the Belle Haven Pool, Belle Haven Youth Center, Onetta Harris Community Center, Menlo Park Senior Center, the Belle Haven Branch Library, the Boys and Girls Club, Hamilton Park, and Kelly Park. The Sequoia Union High School District is constructing a new high school at 150 Jefferson Drive, which is approximately 200 feet west of the Project site (the Jefferson Site). TIDE Academy will open in August 2019 to the first founding ninth grade class.[3]

---

1 Consistent with the previous environmental impact report (EIR) prepared for Buildings 1 and 2, the Project site referenced in this document includes both the Commonwealth Site and the Jefferson Site, including the existing Buildings 1 and 2 as well as the proposed Building 3 and proposed parking structure. The description of the Commonwealth Site and the Jefferson Site has been updated in this document to reflect the Tentative Parcel Map for the three-lot subdivision approved as part of the previous EIR.

2 For the purposes of this analysis, true northeast is Project north, and US 101 runs in an east–west direction.

3 Sequoia Unified High School District. "TIDE Academy." Available: www.tideacademy.org/index.html. Accessed April 4, 2019.

Regional highways that provide access to the Project site include US 101, directly to the south, and SR 84 to the north. The Menlo Park Caltrain station is approximately 2 miles south of the Project site, providing weekday service from San Francisco to Gilroy and weekend service from San Francisco to San José.

Project Site Setting

The Commonwealth Corporate Center, which is the Project site, includes the Commonwealth Site and the Jefferson Site, which total approximately 13.3 acres (578,500 square feet [sf]). The existing floor area ratio (FAR) at the Project site is 45 percent. New and mature trees are scattered throughout the Project site, which has approximately 866 parking spaces in surface lots. Approximately 2,080 employees currently work at the Commonwealth Corporate Center.[4]

Commonwealth Site

The 12.1-acre Commonwealth Site is south of the Jefferson Site. The Commonwealth Site includes assessor's parcel numbers (APNs) 055-243-300, 055-243-310, and a portion of 055-243-999. The four-story Buildings 1 and 2, both located on the Commonwealth Site, were constructed in 2015; both are currently leased by Facebook. Building 1 is referred to as Facebook Building 27, and Building 2 is referred to as Facebook Building 28. Each building is approximately 67 feet tall, with an area of approximately 129,960 gsf and a footprint of approximately 34,540 gsf. Together, the two buildings have a total floor area of approximately 259,920 gsf. Buildings 1 and 2 are surrounded by surface parking, landscaping, pedestrian paths, and water features. A courtyard with café tables and chairs is located between the two buildings; a bocce court and wood deck are north of Building 2. The Commonwealth Site also includes approximately 779 surface parking spaces. The Commonwealth Site is accessible from Commonwealth Drive and Jefferson Drive through a private access road that connects the two streets. The Commonwealth Site is relatively flat and lies at an elevation of 6.7 to 11.9 feet above mean sea level.

Jefferson Site

The 1.2-acre Jefferson Site, which includes a portion of APN 055-243-999, is north of the Commonwealth Site. The Jefferson Site is currently occupied by a surface parking lot with approximately 87 parking spaces and landscaping. The Jefferson Site is relatively flat and lies at an elevation of 6.6 to 7.4 feet above mean sea level. The site is accessible from two driveways along the private access road that connects Commonwealth Drive and Jefferson Drive.

Zoning

The Project site was zoned M-2(X), General Industrial, which permitted office and industrial uses such as warehousing, manufacturing, printing, and assembling as well as a maximum building height in excess of 35 feet. In 2016, the site's zoning was changed to Office-Bonus (O-B) as part of the City of Menlo Park (City) General Plan and M-2 Area Zoning Update (ConnectMenlo). The updated zoning created three new zoning districts (Office, Residential-Mixed Use, and Life Science) and established standards for new projects, including restrictions regarding use, height, density (up to 45 percent FAR for office uses), sustainability, circulation, and open space. Under the new zoning standards, bonus density is permitted (up to a FAR of 100 percent for office uses with increased height) in exchange for providing community amenities selected from a list of potential options identified through community outreach and adopted by resolution of the Menlo Park City Council.

[4] Based on a load factor of one employee per 125 sf.

Figure 2-1
Project Location
Commonwealth Building 3

[this page left blank intentionally]

Project Characteristics

Land Use and Zoning

The Project site was rezoned O-B in 2016 through the ConnectMenlo process. At the base level, the maximum height and average height for the onsite buildings are both 35 feet, while the maximum FAR is 45 percent. At the bonus level, the City Zoning Ordinance allows a FAR of up to 100 percent (plus 25 percent for commercial use) and a 110-foot maximum height in exchange for community amenities. The Project would have a combined FAR of 88 percent, and the maximum height of the proposed building would be approximately 69 feet. Across the entire Project site (including the existing buildings), the average building height would be 59.9 feet. Therefore, the Project would require the Project Sponsor to provide community amenities in exchange for bonus-level development. These benefits would be selected from a list of potential options identified through community outreach and adopted by resolution of the Menlo Park City Council.

The Project Sponsor would construct a new building of approximately 249,500 gsf. When combined with the existing buildings at the Project site, the Project would result in three office buildings at the site with a combined floor area of approximately 509,420 gsf and a FAR of 88 percent. Table 2-1, below, compares the proposed development with O-B zoning, both the base level and bonus level. Because the Project site includes two existing office buildings (Buildings 1 and 2), the existing and proposed office buildings are included in the calculations. Although the new building would need to comply with the design standards of the O-B zoning district, the existing buildings would not because they would remain as is and would be part of the baseline conditions.

Table 2-1. Zoning Requirements

	O Zoning Requirements (Base Level)	O-B Zoning Requirements (Bonus Level)	Proposed Development[a]
Site Area	25,000 sf (min) 100 feet x 100 feet (max)	25,000 sf (min) 100 feet x 100 feet (max)	578,500 sf
Floor Area Ratio	45% (+10% commercial)	100% (+25% commercial)	88%
Maximum Height	35 feet	110 feet	69 feet[b]
Height[c]	35 feet	67.5 feet	59.9 feet
Open Space	173,540 sf min (30% of total site area)	173,500 sf min (30% of total site area)	235,866 sf (40.7%)
Public Open Space	86,770 sf min (50% of open space area)	86,750 sf min (50% of open space area)	128,533 (54.5%)

Source: The Sobrato Organization and Arc Tec, Inc., 2018; Menlo Park Municipal Code Section 16.43.050.

Notes:

a. The proposed development encompasses the entire Project site, which includes the proposed building and the existing buildings. The building area total does not include the parking structure.

b. Maximum building height refers to the proposed building (not the existing onsite buildings).

c. Height is defined as the average height of all buildings on one site where a maximum height cannot be exceeded. Maximum height does not include roof-mounted equipment and utilities.

Proposed Development

The Project Sponsor would develop the Commonwealth Site with an approximately 249,500 gsf office building (Building 3) that would accommodate approximately 1,996 employees.[5] Building 3 would be north of existing Buildings 1 and 2, in the northern portion of the Commonwealth Site, and oriented in an east–west direction. The main entry to Building 3 would be along the northern frontage, the side closest to Jefferson Drive. However, a building entry would also be provided on all other building frontages. The proposed Building 3 would have four levels with a maximum height of 69 feet, as measured to the top of the parapet. Pedestrian access to the proposed parking structure from Building 3 would be provided via a pedestrian walkway. Building 3 would be surrounded by surface parking, the proposed parking structure, landscaping, and pedestrian paths. Patios with café tables and chairs would be situated in and around Building 3, providing a social space for the Project. Building 3 and the parking structure would replace most of the existing surface parking lot. Figure 2-2 depicts the proposed site plan, and Table 2-2 summarizes the proposed building area by level.

Table 2-2. Building 3 Proposed Building Area

	Building Area (gsf)
Level 1	64,076
Level 2	63,147
Level 3	63,147
Level 4	59,130
Total	***249,500***
Source: The Sobrato Organization and Arc Tec, Inc., 2018.	

The Project Sponsor would also construct an approximately 324,000 gsf parking structure east of Buildings 2 and 3 in the Commonwealth Site, with access provided via an internal street east of the two buildings. The proposed parking structure would have four levels and a maximum height of 48 feet. The parking structure would be east of Building 3 in the eastern portion of the Commonwealth Site; the parking structure would replace the majority of an existing surface parking lot.

In addition to the proposed Building 3 and parking structure at the Commonwealth Site, the Jefferson Site would be converted from an existing surface parking lot to a community park that would be privately owned but publicly accessible (referred to in this document as Jefferson Park). Jefferson Park would be accessible via paseo connections to Jefferson Drive and the Commonwealth site. A further description of the proposed uses at the Jefferson Site is provided below.

Site Access, Circulation, and Parking

Vehicular Access and Circulation. The Commonwealth Site would be accessible from two driveways, with the main access point at Commonwealth Drive in the southwest corner of the Project site and the secondary access point at Jefferson Drive adjacent to the Jefferson Site. The internal street network that surrounds the Commonwealth Site would provide access to the surface parking and the proposed parking structure. Entrances to the parking structure would be provided along the internal street east of Buildings 2 and 3. A loading dock would be provided on the east side of Building 3.

[5] Based on a load factor of one employee per 125 sf.

Graphics ... 00081.18 (5-26-2019)

Figure 2-2
Proposed Site Plan
Commonwealth Building 3

[this page left blank intentionally]

Emergency Access. Emergency access to the Project site would be provided from both access points on Commonwealth Drive and Jefferson Drive. Emergency vehicles would enter the site at Commonwealth Drive and continue along the northern portion of the site, adjacent to the proposed building, then travel around the building to exit at Jefferson Drive. Fire access to the proposed parking structure would be at both the northern and southern ends. Fire hydrants and fire department connections would be located along the emergency access route in the vicinity of the proposed buildings.

Bicycle and Pedestrian Circulation. Pedestrian walkways would be included between the proposed building and parking structure and the existing buildings. Several walkways with enhanced paving at crosswalks would traverse the Project site in east–west and north–south directions, leading from the proposed building to the parking structure. In addition, new bicycle and pedestrian connections would be established to connect the Project site to neighboring parcels. A secondary public path connection would be constructed north of Building 3, and paseo connections would be constructed north and west of the building. New paths would also be established around the parking structure, one of which would connect to a future City bicycle/pedestrian path.

In addition to the existing onsite bicycle parking (26 Class II bicycle racks and 24 Class I spaces in Building 1), the Project would include 16 onsite bicycle rack spaces (Class II spaces), which would be placed at convenient and well-lit locations near the main entrance to Building 3; 40 protected storage enclosure spaces (Class I spaces) would also be provided, for a total of 106 bicycle parking spaces. A bicycle storage room would be provided in Building 3 for both visitor and long-term bicycle parking.

Parking. The current Project site includes 866 surface parking spaces. Development of the Project would remove the majority of the existing parking spaces in order to construct Building 3, the parking structure, and Jefferson Park. However, these parking spaces would be replaced, and additional spaces would be provided to accommodate the increase in building area. Onsite parking would include the 215 surface parking spaces located along the perimeter of the Commonwealth Site and 1,061 spaces in the proposed parking structure. In total, 1,276 parking spaces would be provided at the Project site, including 24 Americans with Disabilities Act–compliant spaces among the surface parking and parking structure spaces. At the Jefferson Site, 23 parking spaces would be reserved for use by the new high school (TIDE Academy) during school hours only; the spaces would be available for the general public after school hours. These spaces are not included under the parking ratio of 2.5 spaces per 1,000 gsf proposed for the entire Project site. Table 2-3 summarizes the proposed parking at the Project site. The proposed parking would serve all of the buildings at the Project site.

TDM Program

The existing Buildings 1 and 2 are currently served by a Transportation Demand Management (TDM) program. TDM programs provide information regarding services, incentives, facilities, and actions to reduce the number of single-occupant vehicle trips. The proposed TDM program for the Project would be independent of the existing TDM program for Buildings 1 and 2 because new zoning regulations require a 20 percent trip reduction. The proposed TDM program would encourage the use of public transportation and other forms of alternative transportation. The Project site is currently served by the M3-Marsh Road Shuttle, which is a free shuttle service with timed connections to many of the a.m. and p.m. peak-hour trains at the Menlo Park Caltrain station in both the northbound and southbound directions. The existing shuttle service includes a stop at 149 Commonwealth Drive, less than 100 feet from the Project site. In order to encourage employees to use Caltrain and the Marsh Road Shuttle, subsidized transit passes, such as a Caltrain Go Pass, would be provided to new employees at the Project site. The Caltrain Go Pass is an

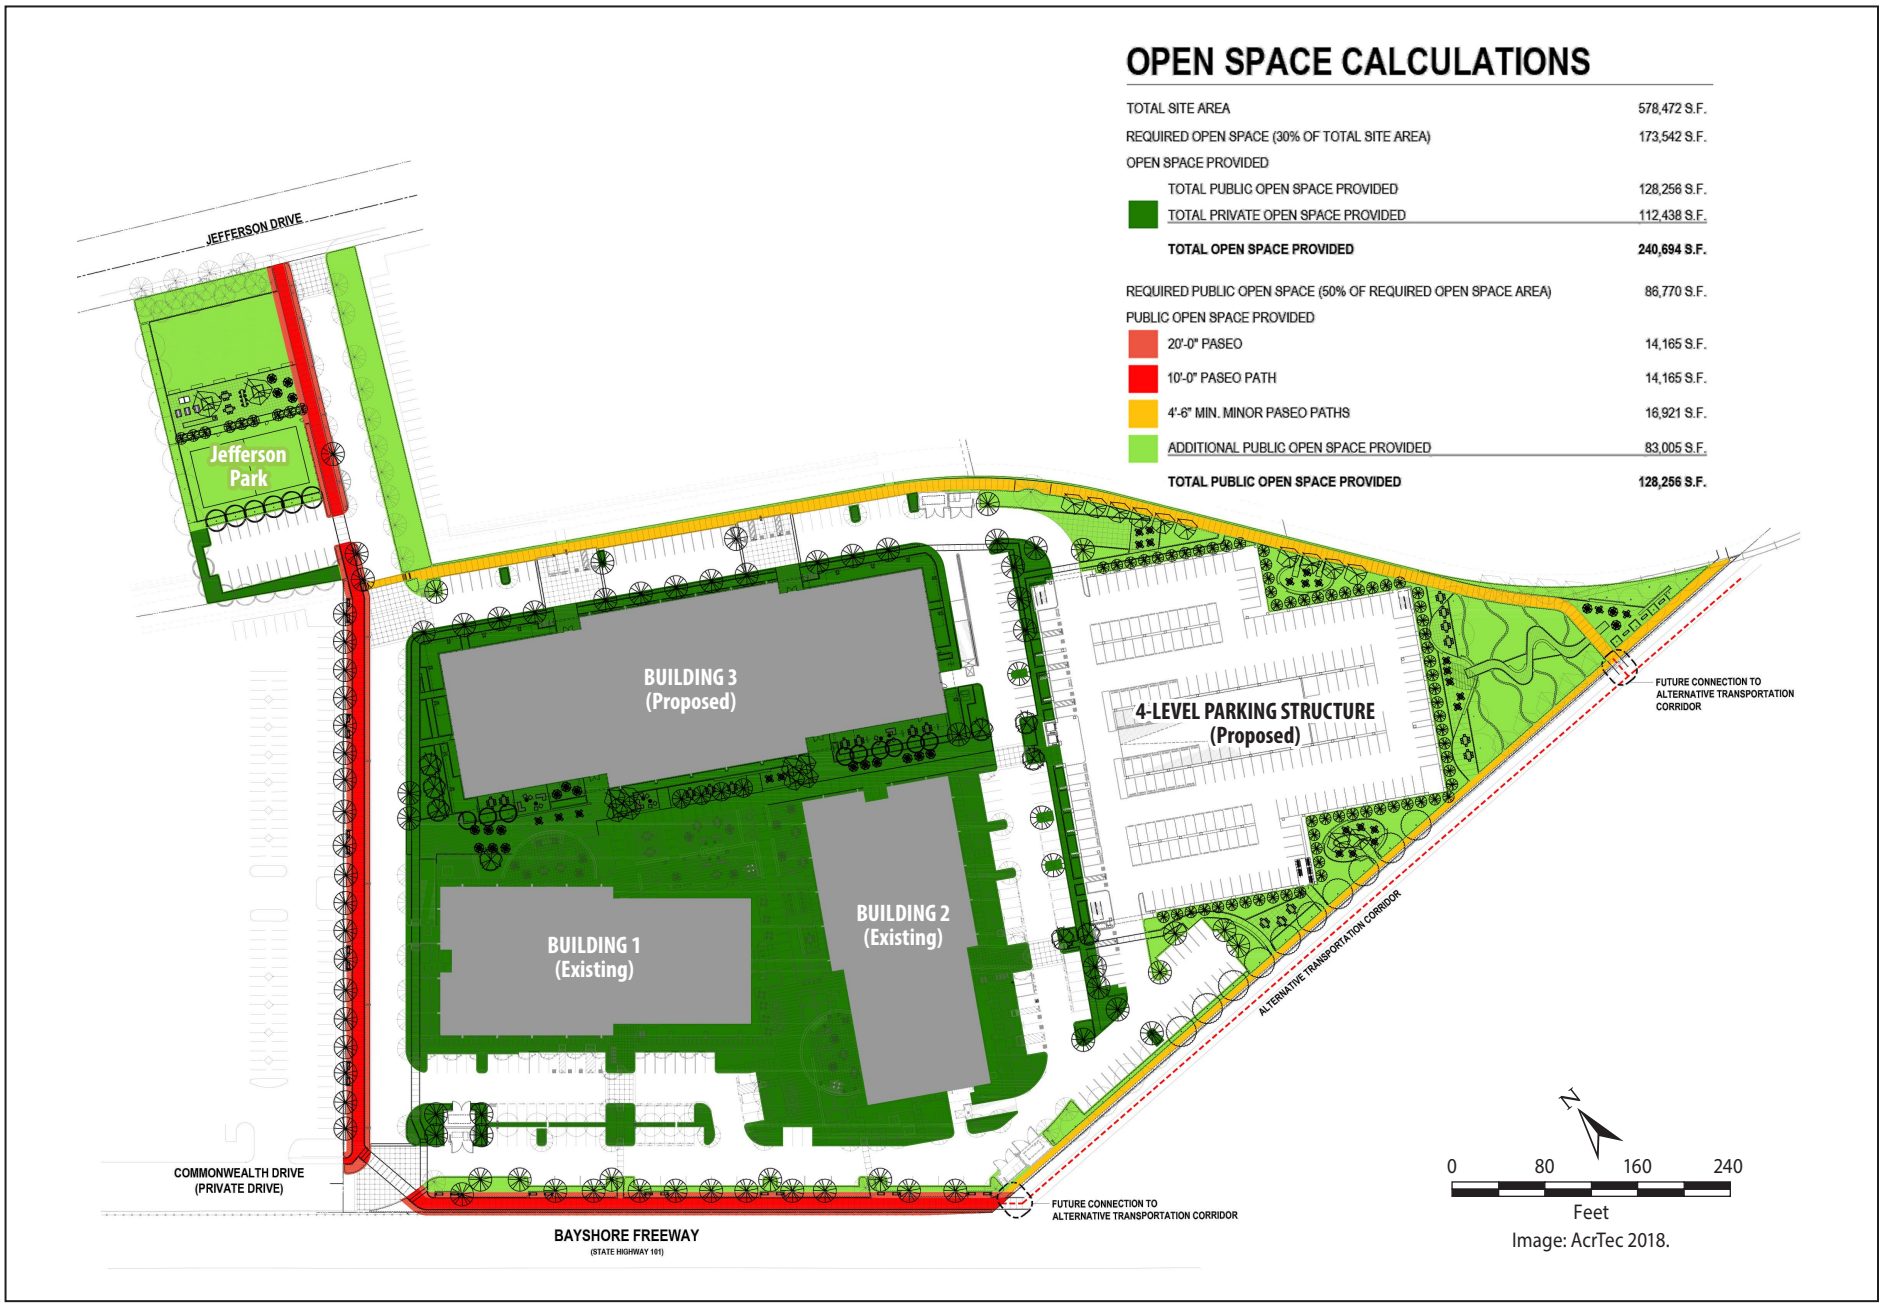
Notes:

a. Reserved for the high school during school hours only. After school, the spaces would be accessible by the public.

employer-sponsored annual pass that offers unlimited rides on Caltrain through all zones, 7 days per week. Carpooling and vanpool programs would also be encouraged through free ride-matching services, carpool incentive programs, vanpool formation incentives, vanpool seat subsidies, and vanpool participant rebates. Emergency ride-home programs would be offered to employees. In addition, the proposed TDM program would include bicycle storage, showers and changing rooms, and other onsite amenities to encourage the use of other modes of transportation.

Landscaping

The proposed landscaping plan and open space areas are depicted in Figure 2-3. Landscaping would be provided around the perimeter of Building 3 and the parking structure as well as along the western and southern edges of the Project site. After implementation of the Project, approximately 128,533 sf of public open space and 107,333 sf of private open space would be provided at the Project site, totaling approximately 235,866 sf of open space (including existing open space). A 0.2-mile-long and 20-foot-wide paseo, available to bicyclists and pedestrians, would be constructed along the eastern boundary of the Jefferson Site. The paseo would continue south to the southwest border of the Project site at Commonwealth Drive, then extend east along the edge of the southern parcel adjacent to US 101. From there, a pedestrian path would continue north, looping around the Project site. The path would be along the private access road that connects Commonwealth Drive and Jefferson Drive.



Graphics ... 00081.18 [5 (3-27-2019)

Figure 2-3
Proposed Open Space Areas
Commonwealth Building 3

[this page left blank intentionally]

The public open space in the eastern portion of the Commonwealth Site would provide access to a connection to a bicycle and pedestrian path, and/or public transit, along the Dumbarton Rail Corridor that may be provided in the future. This area, located behind the proposed parking structure, would include additional plazas, seating areas with tables and chairs, seat walls, a large trellis, and a wooden boardwalk through an area with native plantings. The existing stormwater treatment area with native grasses and flowers would remain. The private open spaces proposed as part of the Project would be between and around Buildings 1, 2, and 3, within patios and courtyards featuring tables, chairs, a seat wall, trees, and access to the existing bocce court. In addition, outdoor balconies on the third and fourth floors of Building 3 would be provided as private open space. The public open space adjacent to the street and paseo frontages as well as the boundaries of the Commonwealth Site would be landscaped with trees and California native vegetation. This vegetation would help screen the proposed building and parking structure from the adjacent streets.

As discussed above, the Project would include construction of Jefferson Park, which would be publicly accessible via paseo connections to Jefferson Drive and the Commonwealth Site. Final design of the park would be determined by the City and community feedback during the entitlement process. However, in compliance with the City Zoning Ordinance, Chapter 16. 44. 120(4)(A), publicly accessible open space should include paseos, plazas, forecourts, entryways, outdoor dining areas, site furnishing, art, and/or landscaping.

A privately owned and publicly accessible park would be provided along Jefferson Drive. This "parklet" would be roughly 32,000 square feet (0.73 acre) in size, including a small parking lot. Directly adjacent to Jefferson Drive is an existing 2,800 sf stormwater treatment area; this area is planted with trees and grasses that would remain. The final design of this park would be determined through a process involving City and community feedback. Potential features could include a multi-use sports court, a flexible lawn area for games and other activities, and an area with accent pavers that would provide space for games and a mix of lounge and dining seating. Additional features could include a playground or other amenities. Parking spaces within the park would be separated and accented by shade trees, grasses, shrubs, and ground cover. A 10-foot-wide paseo would run along the eastern edge of the park, providing a connection to the rest of the site and beyond. The intent is for the park to be used by the adjacent TIDE Academy for physical education classes and parking, with spaces for approximately 20 to 24 staff members, as discussed above. During non-school hours, the park and parking would be available to the public.

There are currently 507 trees at the Project site. Of those, one tree qualifies as a heritage tree under the City of Menlo Park's Heritage Tree Ordinance.[6] As part of the Project, 304 trees would be removed; however, none of the trees that would be removed would be heritage trees. The remaining 202 trees would not be removed under the Project. In total, after Project construction, 417 trees would be located at the Project site, including the existing trees that would remain and the replacement trees.

The Project site is covered with approximately 431,697 sf of impervious surfaces (74.6 percent). Implementation of the Project would reduce the amount of impervious surfaces. Paved areas would cover approximately 393,155 sf (68 percent) of the site. Landscaped areas would provide 185,297 sf (32 percent) of pervious surfaces. Hardscape at the Project site would include concrete paving, decomposed granite paving, and concrete pavers. Stormwater treatment areas would be located around the northern, eastern, and southern borders of the Project site to limit stormwater runoff. These biotreatment areas would be open, level vegetated areas that would allow runoff to be

[6] City of Menlo Park. 2010. *Menlo Park Municipal Code*. Section 16.46.030(7). December 14, 2010.

distributed evenly across the area. They would be designed to treat runoff by filtering raw runoff through the soil media in the treatment area. These biotreatment areas would trap particulate pollutants (suspended solids and trace metals) and promote infiltration.

Building and Sustainability Features

The design of Building 3 would be similar to the design of Buildings 1 and 2. The core architectural form of the proposed building would be a four-story rectangular structure with a low-tint glass façade. From the core rectangular form, smaller rectangular forms would project outward, spanning the second and third floors at all four corners of the building and creating recesses at the first and fourth floors of each corner. At the center of the front and rear elevations of the building, an additional rectangular projection, two stories in height, would extend outward from the core rectangular form. All of the projecting rectangular elements would have façades with gray tinted glass, differentiating them from the low-tint glass of the core façade. Narrow columns, wrapped with aluminum panels, would extend slightly beyond the projecting rectangular forms and be spaced equidistantly around all four sides of the building. The columns would support a thin louvered metal canopy, running around the entire building above the fourth-floor façade. Along the front and rear elevations, horizontally oriented beams covered with darker QUARTZ-ZINC® metal panels would wrap across the front of the rectangular projections at the center of the elevations from the first to third floors. Balconies would be incorporated at the fourth floor on each elevation and also at the third floor on the front and rear elevations. Building elevations for Building 3 are shown in Figure 2-4.

The proposed four-story orthogonal parking structure would step in as it extends to the east, creating relief along the property. Along the rearmost wall of the proposed parking structure, a mesh screen with a large graphic would obscure views of parked vehicles and structural elements within Kelly Park and other surrounding areas. Through the use of an aluminum composite canopy along the top of the central portion of the west elevation (the elevation facing the proposed and existing office buildings), the design of the proposed parking structure would reflect the design of the proposed office building. The parking structure would be constructed almost entirely of concrete that would be painted in off-white and gray hues. On the portions of each elevation not concealed by painted concrete walls, the interior floors of the parking structure would be open to the exterior, with cable guard rails along the outer edges of each level. Building elevations for the parking structure are shown in Figure 2-5.

In the O-B zoning district, projects are required to meet green and sustainable building regulations. The proposed building would be required to meet 100 percent of its energy demand through a combination of onsite energy generation, the purchase of 100 percent renewable electricity, and/or the purchase of certified renewable energy credits. In addition, as currently proposed, Building 3 would be designed to meet Leadership in Energy and Environmental Design (LEED) Gold Building Design and Construction (BD+C) standards. The Project would meet the City's requirements regarding charging spaces for electric vehicles (EVs). The Project would also incorporate a bird-friendly design through its placement of the building and use of low-tint exterior glazing. Other green building requirements would be met through efficient water use and waste management planning. Details regarding how the proposed building would meet the green and sustainable building requirements would be provided as Project plans and materials are further developed.

Utilities

Onsite utilities would include energy (electricity and gas), domestic water, wastewater, and storm drain facilities. All onsite utilities would be designed in accordance with applicable codes and current engineering practices. Utilities that are currently provided at the Project site would be extended to accommodate the proposed building and parking structure.

Energy. The Project would meet 100 percent of its energy demand (electricity and gas), consistent with the requirements of Menlo Park Municipal Code Section 16.44.130, through the purchase of 100 percent renewable electricity from Peninsula Clean Energy. In addition, Pacific Gas and Electric Company would provide gas and electrical power for proposed facilities as needed. Existing electrical and gas lines in the vicinity of the Project site would continue to serve the site but may be upgraded, if necessary, for the Project. A proposed diesel emergency generator would be located at grade in the northern portion of the Project site (north of Building 3) in a solid enclosure. Line of sight to the generator would be blocked on all sides.

Domestic Water. Onsite water lines would connect to the Menlo Park Municipal Water District. The Project would comply with the City's water use regulations by using ultra low-flow fixtures within the building. Flow rates for the selected fixtures would be equal to or less than the 2016 CALGreen flow rates for commercial fixtures.

Wastewater. The sanitary sewer system in this area of Menlo Park is owned and operated by the West Bay Sanitation District. The proposed buildings would connect to the wastewater system from an 8-inch sanitary sewer main at Jefferson Drive. Wastewater from the Project site would ultimately be discharged to the South Bayside Systems Authority pump station in Redwood City.

Storm Drainage. Stormwater collected at the Project site would continue to be conveyed in a piped system to the existing 36-inch storm drain in Jefferson Drive**.** The drainage system would consist of a combination of existing and new onsite storm drains. This system would collect runoff from roofs and hardscape areas and convey it to an existing pump that discharges stormwater to biotreatment ponds for treatment in accordance with Provision C.3 Municipal Regional Permit requirements. For larger storm events, excess flows would be conveyed directly to Jefferson Drive through a pipe system.

Project Construction

The proposed construction methods are considered conceptual and subject to review and approval by the City. For the purposes of this environmental document, the analysis considers the construction plan described below.

Construction Schedule and Phasing

The Project would consist of two construction phases, which may occur at the same time or overlap. Phase 1 would involve construction of the parking structure, which would be 324,000 gsf. Phase 2 would involve construction of the office building, which would be 249,500 gsf. It is anticipated that Phase 1 would have a duration of 18 to 20 months, and Phase 2 would have a duration of 17 to 19 months. The parking structure is expected to be operational by mid- to late 2021; the expected occupancy date for the office building is early 2023. In total, the construction period is expected to last approximately 37 months.

Standard construction work hours would be 8:00 a.m. to 6:00 p.m. Monday through Friday. However, work could start early, at 7:00 a.m., or finish late, at 6:00 p.m. In addition, construction on Saturdays (8:00 a.m. to 5:00 p.m.) could occur. Construction activities taking place between 7:00 a.m. and 8:00 a.m. would be regulated by the daytime limits of the City Noise Ordinance of the Menlo Park Municipal Code, which limits noise to 60 A-weighted decibels at the nearest residential property line. Construction activities taking place between 8:00 a.m. and 6:00 p.m. would be regulated by the construction activities section of the City Noise Ordinance (Title 8.06.040[a]).

Equipment and Staging

Typical equipment would be used during Project construction, including concrete/industrial saws, excavators, dozers, tractors, loaders, backhoes, graders, cranes, forklifts, welders, boom lifts, aerial lifts, scissor lifts, pavers, rollers, and tractors. Potential construction laydown and staging areas would be at the Jefferson Site prior to construction of the proposed Jefferson Park and surface parking area.

Spoils, Debris, and Materials

The Project would require soil excavation and tree removal. Project excavation depths would vary from 3 to 7 feet. As such, the maximum excavation depth would be 7 feet below mean sea level. The proposed excavation would consist of approximately 6,350 cubic yards of excavated material. About 2,500 cubic yards of the excavated material would be exported offsite, and about 3,850 cubic yards would be used as backfill material or grading material in landscaped areas within the Project site. As such, construction of the Project would require disposal of exported materials at a permitted landfill. All soil and debris, including contaminated soil, would be off-hauled to the Dumbarton Quarry or a similar appropriate facility. The haul trucks would access the site from US 101/SR 84. The number of truck trips required to dispose of demolished materials and excavated soil would be approximately five per day.

Project Approvals

City Approvals

The following City discretionary approvals would be required prior to development at the Project site:

- **Conditional Development Permit (CDP) Amendment**. The Project Sponsor would need an amended and restated CDP to incorporate Building 3, bonus level development and the O zoning district regulations into the approved CDP for Buildings 1 and 2 under the previous M-2(X) zoning for the site. The CDP amendment would also permit the proposed diesel generator and a waiver regarding two of the bird-friendly design guidelines, as further described in the Biological Resources section of this Initial Study. In addition, as discussed in more detail below, the CDP amendment would require the Project mitigation measures, as outlined in the Biological Resources Assessment (BRA) prepared for the Project (Appendix A), to reduce potential impacts on white-tailed kite and tree-nesting raptors.
- **Architectural Control,** per Menlo Park Municipal Code Chapter 16.68. The applicant would be required to obtain architectural control review and approval of the specific building design from City Council.

- **Below-Market-Rate Housing Agreement.** A Below-Market-Rate Housing Agreement would be required for payment of in-lieu fees associated with the City's Below-Market-Rate Housing Program.
- **Environmental Review.** This would include release of the Initial Study and certification of the environmental impact report (EIR), with approval of a mitigation monitoring and reporting program (MMRP) for the Project and statement of overriding considerations to the extent the EIR discloses any potentially significant impacts that cannot be mitigated to less-than-significant levels. In addition, the Project would be required to comply with the MMRP for ConnectMenlo as part of the Project.

As part of the Project review process conducted by the City, a fiscal impact analysis will be prepared, and an appraisal will identify the value of the community amenity.

Approvals by Responsible Agencies

Reviews and approvals by other agencies that may be needed for the Project to proceed are also identified. Some of these agencies will need to approve certain parts of the Project prior to full implementation, but their approval is not required for EIR certification.

- **Bay Area Air Quality Management District** – Permits for onsite generators, boilers, and other utility equipment.
- **California Department of Transportation** – Review of traffic circulation effects and consultation on potential traffic improvements that may affect state highway facilities, ramps, and intersections.
- **California Regional Water Quality Control Board/San Mateo Countywide Water Pollution Prevention Program** – Approval of National Pollutant Discharge Elimination System permit for stormwater discharge.
- **San Mateo County Transportation Authority** – Review of potential effects on public transit.
- **Menlo Park Fire Protection District** – Approval of proposed fire prevention systems, onsite generators, and emergency vehicle access.
- **San Mateo County Environmental Health Division** – Review of food service functions and onsite generators.
- **West Bay Sanitary District** – Approval of wastewater hookups.
- **Native American Heritage Commission**

[page intentionally left blank]

3. Environmental Checklist

Environmental Factors Potentially Affected

The environmental factors checked below could be affected by the Commonwealth: Building 3 Project (Project), involving at least one impact that is a "potentially significant impact," as indicated by the checklists on the following pages.

☐ Aesthetics	☐ Agricultural and Forestry	☒ Air Quality
☐ Biological Resources	☒ Cultural Resources	☐ Geology/Soils
☒ Greenhouse Gas Emissions	☐ Hazards and Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use/Planning	☐ Mineral Resources	☒ Noise
☒ Population/Housing*	☐ Public Services	☐ Recreation
☒ Transportation	☒ Tribal Cultural Resources	☒ Utilities/Service Systems
☐ Mandatory Findings	☐ Energy	☐ Wildfire**

* Impacts related to population/housing are not expected to result in potentially significant impacts but are checked here to indicate that further analysis in the environmental impact report (EIR) is required.

** An analysis of wildfire is required only if the Project site is in or near state responsibility areas or lands that have been classified as Very High Fire Hazard Severity Zones. Because the Project site is urbanized and not in one of these areas, an analysis of this topic is not included in this document.

Determination

On the basis of this initial evaluation:

☐ I find that the Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that, although the Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Project have been made by or agreed to by the Project Sponsor. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☒ I find that the Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document, pursuant to applicable legal standards, and 2) has been addressed by mitigation measures, based on the earlier analysis, as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that, although the Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, pursuant to applicable standards, and (b) have been avoided or mitigated, pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the Project, nothing further is required.

Signature	Date
Printed Name	For

Organization of This Chapter

Each California Environmental Quality Act (CEQA) topic or environmental issue in this chapter is given its own section, with each containing the subsections listed below.

- **Setting** – The Setting describes existing baseline conditions, including environmental context and background. For the topics to be analyzed in the Focused EIR, a Setting section is not provided in this document.
- **General Plan Goals and Policies** – The City of Menlo Park General Plan contains general goals, policies, and programs that require local planning and development decisions to consider impacts on each environmental issue. The applicable goals and policies are listed in each section, with the exception of the topics to be analyzed in the Focused EIR.
- **Environmental Checklist and Discussion** – The impact discussion identifies standards of significance and evaluates how the Project would affect baseline conditions. Each checklist item includes a summary of the analysis in the City of Menlo Park General Plan and M-2 Area Zoning Update (ConnectMenlo) EIR, discusses the specific impacts induced by the Project, and concludes with a comparison of the Project to the findings in the ConnectMenlo EIR. However, if a checklist item is determined to result in no impact, then a Project-specific discussion is not needed and, therefore, not included.

Evaluation of Environmental Impacts

This section identifies the environmental impacts of the Project by answering questions from Appendix G of the CEQA Guidelines, the Environmental Checklist form. The analysis in this document considers all phases of Project planning, construction, implementation, and operation. Pursuant to Section 15063(d) of the CEQA Guidelines, this document identifies the environmental setting and discusses the environmental effects of the Project. For each impact identified, a level of significance is determined using the following classifications:

- **Potentially Significant Impact** is appropriate if there is substantial evidence that an effect is significant or the established threshold has been exceeded. If there are one or more "potentially significant impact" entries when the determination is made, then an EIR may be required. These topics will require further analysis in the Focused EIR.
- **Less-than-Significant Impact** applies when the Project would affect, or be affected by, the environment, but based on sources cited in the report, the impact would not have an adverse effect and would not exceed the established thresholds.
- **No Impact** denotes situations in which there is no adverse effect on the environment. Referenced sources show that the impact does not apply to the Project.
- **Not a CEQA Impact** applies to impacts related to the environment that affect the Project. Pursuant to the recent California Supreme Court decision in California Building Industry Association (CBIA) vs. Bay Area Air Quality Management District (BAAQMD), CEQA does not require an analysis of how existing environmental conditions would affect a Project's residents or users, unless the Project would exacerbate those conditions. Therefore, when discussing impacts of the environment on the Project, the analysis will first determine if there is potential for the Project to exacerbate the issue. If evidence indicates it would not, then the analysis will conclude by stating such. If it would exacerbate the issue, then evidence is provided to determine if the exacerbation would or would not be significant.

I. Aesthetics	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Except as provided in Public Resources Code Section 21099, would the Project:					
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☐	☒
c) Conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒	☐
d) Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	☐	☐	☐	☒	☐

Setting

Regional Visual Context

Menlo Park is a 19-square-mile municipality situated approximately 30 miles south of San Francisco and 20 miles north of San José on the San Francisco Peninsula (Peninsula). Menlo Park is one of more than a dozen cities on the flatter portions of the western margin of San Francisco Bay (Bay), east of the San Andreas Fault Zone. It is surrounded by the municipalities of Redwood City to the northwest, Atherton to the west, Palo Alto and Stanford University to the southeast, and East Palo Alto to the east. The Bay is north of Menlo Park.

Urban development within the region is largely concentrated between the Bay and the Interstate 280 (I-280) corridor. In general, the Peninsula is developed with low-density uses within distinct neighborhoods that include commercial, retail, and residential buildings. Larger-scale development, such as office parks and industrial buildings, tends to be located between the Bay and US 101. Some high-rise office, apartment, and hospital buildings are located between US 101 and I-280; however, these buildings are concentrated mainly along the US 101 and El Camino Real corridors.

The Bay and its natural features are key visual components in the eastern and northern portions of Menlo Park. The Santa Cruz Mountains, which run the length of the Peninsula and form a barrier between the Pacific Ocean and the Bay, are visible from the majority of Menlo Park as well as adjacent cities, especially north and east of US 101. The visible portion of the mountain range is Skyline Ridge, which rises more than 2,400 feet. The ridge is approximately 15 miles south of the site for the Project.

Project Vicinity Visual Context

The Project site is in an area known as the Bayfront Area.[7] The Bayfront Area has been historically defined by light industrial/office use; however, under recent planning updates, multi-family housing is currently permitted in some parts of the Bayfront Area. The road network in the Bayfront Area includes

[7] According to the City General Plan and ConnectMenlo EIR.

US 101, divided arterial roads (e.g., Willow Road, Bayfront Expressway, Marsh Road), and local streets, which vary in width (many are without sidewalks). The local streets are laid out in an ad-hoc pattern to serve groups of parcels and do not appear as a single coherent network. Building placement and landscaping vary, but buildings are usually surrounded by parking or other paved areas on all sides; siting and landscaping do not fit a consistent pattern. Almost all buildings have flat roofs, many are rectangular in form, and most have metal or cementitious exterior wall materials. In general, buildings in the Bayfront Area range from one to three stories in height. The contrast between the differing land uses and the natural setting of the Bay to the north provides limited unity and inconsistent visual patterns.

The Bayfront Area is relatively flat, with limited long-range views, due, in part, to the prevalence of buildings that block views of the surroundings. In addition, mature trees and vegetation provide visual separation and screening between existing buildings and along streets. Visual resources to the north, such as the Bay, the hilly open space at Bedwell Bayfront Park (Bayfront Park), the salt marshes, Don Edwards San Francisco Bay National Wildlife Refuge (Refuge), and Dumbarton Bridge, are generally not visible from the majority of vantage points in the vicinity of the Project; these resources are visible only from areas immediately adjacent to Bayfront Expressway. No scenic resources, such as rock outcroppings, cliffs, or knolls, are present in the Project vicinity, although mature trees are present throughout the area.

The ConnectMenlo EIR described the Bayfront Area as seven distinct subareas for the purpose of describing general characteristics and development patterns that currently exist throughout the area. The Project site is within the "Marsh Road to Chilco Street" subarea, which consists of a number of businesses in a suburban office park setting bounded by US 101, Bayfront Expressway, Marsh Road, and Chilco Street. This area is characterized by large, primarily rectangular blocks with one- or two-story tilt-up buildings, which are typified by utilitarian architecture, minimal windows, and large ground-floor plates on expansive parcels. The buildings are generally located in the center of the parcel and surrounded by surface parking. Parcels with street frontage include scattered landscaping and abut other parcels with rows of parking or landscaping strips; these parcels usually lack sidewalks. The maximum height of Menlo Gateway will not exceed 120 feet; newer development is typically two or three stories, with mirrored or transparent glass on the upper floors.

Project Site Visual Context

The Commonwealth Corporate Center (i.e., the Project site) includes the Commonwealth Site and the Jefferson Site, which total approximately 13.3 acres (578,500 square feet [sf]). Both young and mature trees are scattered throughout the relatively flat Project site, which also has approximately 866 parking spaces in surface lots. Existing conditions at the Project site are shown in Figure 3.1-1.

Commonwealth Site. The 12.1-acre Commonwealth Site is south of the Jefferson Site. The four-story Buildings 1 and 2, both located on the Commonwealth Site, were constructed in 2015; both are currently leased by Facebook. Each building is approximately 67 feet tall, with an area of approximately 129,960 gross square feet (gsf) and a footprint of approximately 34,540 gsf. Together, the two buildings have a total floor area of approximately 259,920 gsf. A courtyard with café tables and chairs is located between the two buildings; a bocce court and wood deck are north of Building 2. The Commonwealth Site also includes approximately 779 surface parking spaces. The Commonwealth Site is accessible from Commonwealth Drive and Jefferson Drive through a private access road that connects the two streets.

Graphics ... 00081.18 [5] (3-27-2019)

Figure 3.1-1
Existing Conditions at the Project Site
Commonwealth Building 3

[this page left blank intentionally]

Landscaping is currently found throughout the Project site, providing shade for the surface parking lots, supporting stormwater treatment, and encouraging active use of outdoor areas. The Project site includes bamboo clusters, a variety of trees, water features, pedestrian paving, lighting, tree grates, curved and raised seat walls, lounging steps, and café tables and chairs. Stormwater treatment areas are located throughout the Project site to limit stormwater runoff. The two existing buildings include modern architectural detailing on the exteriors, reflecting a design similar to that of neighboring multi-story office buildings. Figures 3.1-1a and 3.1-1b show the existing buildings and surface parking areas at the Commonwealth Site.

Jefferson Site. The 1.2-acre Jefferson Site is north of the Commonwealth Site. The Jefferson Site is currently occupied by a surface parking lot with approximately 87 parking spaces and accessory landscaping. The Jefferson Site is accessible from two driveways along the private access road that connects Commonwealth Drive and Jefferson Drive. Figure 3.1-1c shows the Jefferson Site, facing south toward Building 1.

Scenic Corridors/Vistas and Onsite Visibility

Scenic Corridors/Vistas. Scenic corridors are considered an enclosed landscape area and viewed as a single entity that includes the total field of vision visible from a specific point, or series of points, along a linear transportation route. Public view corridors are areas in which short-range, medium-range, and long-range views are available from publicly accessible viewpoints, such as streets. The Bayfront Area is on the flatter portions of the western margin of the Bay, which limit scenic vistas within Menlo Park and this specific area. Because of the flat nature of the study area, the majority of Menlo Park, particularly in the Bayfront Area, is afforded views of the Santa Cruz Mountains. Scenic resources also include the Bay itself and its natural features (e.g., the salt ponds and Bayfront Park, as viewed from the eastern and northern portions of Menlo Park). Per the ConnectMenlo EIR, Menlo Park has no designated scenic corridors or scenic vistas; however, the section of I-280 within the ConnectMenlo study area is a designated scenic highway per the California Scenic Highways Program.[8] In addition, the ConnectMenlo EIR considers views to the Santa Cruz Mountains, the Bay, and San Francisquito Creek and the foothills within Menlo Park to be scenic vistas.

Public View Corridors. Although portions of the Project site are visible from public streets, the Project site is not visible in its entirety from a single ground-level vantage point because of its large size, flat topography, and surrounding low-rise buildings. However, there are public vantage points with views toward the Project site, including US 101, Kelly Park, the Belle Haven neighborhood, and the Suburban Park-Lorelei Manor-Flood Park Triangle neighborhood.

The Project site is visible from both northbound and southbound US 101, which is a four-lane freeway in each direction. From the northbound direction, the Commonwealth Site becomes briefly visible after the Dumbarton Rail Corridor. However, the site is above the grade of the freeway and separated by a vegetated slope, dense trees and shrubs, and fencing. The lower levels of the onsite buildings are visible only through breaks in the vegetation and are not prominent features. From the southbound direction, after the Marsh Road overcrossing, the Commonwealth Site appears northeast of the freeway, within the context of the existing urban development pattern. Although substantial portions of the two buildings are blocked from view by mature trees, the buildings are still visible to passing vehicles. The Jefferson Site is not visible from either direction on US 101. In addition, no background views are available from this segment of US 101.

[8] California Department of Transportation. 2018. *California Scenic Highway Mapping System, San Mateo County.* Available: http://www.dot.ca.gov/hq/LandArch/16_livability/scenic_highways/. Accessed: July 4, 2018.

Kelly Park is located at 100 Terminal Avenue in the Belle Haven neighborhood. Although the Dumbarton Rail Corridor provides a physical barrier between the Project site and Kelly Park, existing buildings are visible from the park (looking west), behind the trees planted along the perimeter of the park. Because limited development abuts the Dumbarton Rail Corridor, there are views of the Commonwealth Site from select locations in the Kelly Park area, particularly the soccer field. However, the orientation of the streets in the Belle Haven neighborhood does not allow for direct views of built features at the Commonwealth Site from residential locations.

US 101 separates the Project site from residential areas to the south. However, the Project site is directly across US 101 from the Suburban Park-Lorelei Manor-Flood Park Triangle neighborhood. Currently, ground-level views are blocked by dense foreground and middle-ground vegetation and residential development. However, the upper levels of Building 1 at the Project site are visible from Hedge Road. Because of the surrounding residential units and flat topography, no background views are visible.

Onsite Visibility. Because of the relatively flat topography of the Project site and vicinity, as well as the prevalence of buildings and vegetation, views from locations at grade are largely restricted. Views at the Project site consist mainly of the existing onsite surface parking lots, Buildings 1 and 2, perimeter landscaping, and immediately adjacent buildings and power lines. Facing east, views outside of the Project site include the tracks along the Dumbarton Rail Corridor, vegetation surrounding Kelly Park, and lighting for the park's tennis courts and athletic fields (Figure 3.1-1d). Views facing south encompass US 101 and the Dumbarton Rail Corridor overcrossing. Views of the salt ponds, marshes, Refuge, and Bay are obstructed from pedestrian-level viewpoints. Background views from certain locations on the Project site (looking south) include mainly obstructed, highly channelized views of the Santa Cruz Mountains.

Currently, a dense vegetative barrier, which is predominantly outside the property line, is present along the perimeter of the Project site (to the north, south, and west), providing a visual buffer between the site and the adjacent streets, US 101, and the nearby office and industrial developments. Mature vegetation is found east of the Dumbarton Rail Corridor, buffering Kelly Park and the Belle Haven neighborhood and obstructing most views of the Project site from adjacent areas.

Light and Glare

Light pollution refers to all forms of unwanted light in the night sky, including glare, light trespass or spill on adjacent sensitive receptors, sky glow, and over-lighting. Views of the night sky are an important part of the natural environment. Excessive light and glare can be visually disruptive to humans and nocturnal animal species. Although there is considerable development in Menlo Park, commercial development is concentrated in the downtown area and intersections along major arterials; industrial uses are concentrated in the Bayfront Area, including the vicinity of the Project site. Light pollution in most of Menlo Park is minimal and restricted primarily to areas with lighting along major streets and freeways and areas where nighttime illumination within commercial and industrial buildings is visible.

Because of the urbanized nature of the Project site and the surrounding area, a significant amount of ambient nighttime lighting currently exists, affecting views of the nighttime sky. Exterior nighttime lighting includes lights on vehicles, lights within onsite circulation areas and parking lots, security lighting, and interior illumination for onsite buildings. Some interior lighting is visible to motorists along US 101 and in the surrounding neighborhoods, but interior lighting on the lower floors is screened by perimeter vegetation.

General Plan Goals and Policies

The City of Menlo Park (City) General Plan (specifically the Land Use Element and the Open Space/Conservation Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts on aesthetics. The following City General Plan goals and policies would serve to reduce impacts on the visual quality and character in the Bayfront Area: Goal LU-1, Policy LU-1.1, Goal LU-4, Policy LU-4.3, Policy LU-4.5, Goal LU-6, Policy LU-6.2, Policy LU-6.8, Goal OSC-1, Policy OSC-1.11, Policy OSC-1.13, and Policy OSC-1.15.

Environmental Checklist and Discussion

a. Have a substantial adverse effect on a scenic vista? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AES-1 (pages 4.1-8 to 4.1-14) and determined to be less than significant because no publicly accessible views of scenic resources would be blocked or obstructed by increasing height limits in the Bayfront Area. Similar views would continue to be visible between buildings and over lower-intensity areas. No mitigation measures were required.

Conclusion

The physical conditions, as they relate to scenic vistas, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Because of the relatively flat topography of the Project site and vicinity, as well as the prevalence of existing buildings and vegetation, views from locations at grade are largely restricted. Although the Project would result in additional height, bulk, and massing from the proposed building, which would interrupt existing highly channelized views of the Santa Cruz Mountains from the Project site, this area is not considered a scenic vista. The Project site is not viewed from scenic vistas, resulting in ***no impact***. No further study is required.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AES-2 (pages 4.1-14 to 4.1-15). The EIR determined that impacts would be less than significant because none of the potential new development would be within the I-280 viewshed. No mitigation measures were required.

Conclusion

The physical conditions, as they relate to scenic resources adjacent to a scenic highway, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the

ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project site is not adjacent to, or visible from, a state scenic highway. Therefore, ***no impact*** would occur, and no further study is required.

c. Conflict with applicable zoning and other regulations governing scenic quality? (Less than Significant)

Analysis in the ConnectMenlo EIR

As discussed above, the following City General Plan goals and policies would serve to reduce impacts on visual quality and character in the Bayfront Area: Goal LU-1, Policy LU-1.1, Goal LU-4, Policy LU-4.3, Policy LU-4.5, Goal LU-6, Policy LU-6.2, Policy LU-6.8, Goal OSC-1, Policy OSC-1.11, Policy OSC-1.13, and Policy OSC-1.15. These policies encourage orderly development and land use patterns, promote high-quality architectural design, and protect and enhance the scenic qualities of Menlo Park.

Consistency with applicable zoning and other regulations was analyzed in the ConnectMenlo EIR as Impact LU-2 (pages 4.9-14 to 4.9-23) and determined to be less than significant with mitigation incorporated (as discussed in more detail in Section XI, Land Use and Planning). In addition, this checklist item related to aesthetics was analyzed in the ConnectMenlo EIR as Impact AES-3 (pages 4.1-15 to 4.1-16). The EIR concluded that the impacts would be less than significant. Although more intense development with taller and larger buildings could occur in the Bayfront Area, future development would not result in a substantial change to the existing visual character of the Bayfront Area or its surroundings. No mitigation measures were required.

Project-Specific Discussion

For purposes of this analysis, a conflict with applicable zoning and other regulations governing scenic quality would occur if the Project were to introduce a new visible element that would be inconsistent with the overall scenic quality, scale, and character of surrounding development. The development would also need to be consistent with City General Plan policies, the City Zoning Ordinance, and the Menlo Park Municipal Code. The analysis considers the degree of contrast between proposed features and the existing features that represent the area's aesthetic image, in addition to the degree to which the Project would contribute to the area's aesthetic value.

Construction

As described above, the Project site is not considered visually sensitive because of its urbanized surroundings with industrial, office, and warehouse buildings. Project construction would include demolition, excavation, and construction activities on the Project site. These construction activities, which would occur over an approximately 37-month period, would temporarily degrade the existing visual character of the Project site and the surrounding area. Construction materials and equipment would be staged entirely onsite, at the Jefferson Site, prior to construction of the proposed Jefferson Park and surface parking area. Construction fencing and existing landscaping would provide visual screening. Although construction would be visible from public view corridors along Jefferson Drive, this is not a heavily traveled road. Regardless, visual degradation associated with construction would be short term and temporary and would not conflict with applicable zoning and other regulations governing scenic quality.

Operation

The design of Building 3 would be similar to the design of Buildings 1 and 2. The core architectural form of the proposed building would be a four-story rectangular structure with a low-tint glass façade. From the core rectangular form, smaller rectangular forms would project outward, spanning the second and third floors at all four corners of the building and creating recesses at the first and fourth floors of each corner. At the center of the front and rear elevations of the building, an additional rectangular projection, two stories in height, would extend outward from the core rectangular form. All of the projecting rectangular elements would have façades with gray tinted glass, differentiating them from the low-tint glass of the core façade. Balconies would be incorporated at the fourth floor on each elevation and also at the third floor on the front and rear elevations.

The proposed four-story orthogonal parking structure would step in as it extends to the east, creating relief along the property. Along the rearmost wall of the proposed parking structure, a mesh screen with a large graphic would obscure views of parked vehicles and structural elements within Kelly Park and other surrounding areas. Through the use of an aluminum composite canopy along the top of the central portion of the west elevation (the elevation facing the proposed and existing office buildings), the design of the proposed parking structure would reflect the design of the proposed office building. The parking structure would be constructed almost entirely of concrete that would be painted in tan and gray hues. On the portions of each elevation not concealed by painted concrete walls, the interior floors of the parking structure would be open to the exterior, with cable guard rails along the outer edges of each level.

Landscaping would be provided around the perimeter of Building 3 and the parking structure as well as along the western and southern edges of the Project site. After implementation of the Project, approximately 128,533 sf of public open space and 107,333 sf of private open space would be provided at the Project site, totaling approximately 235,866 sf of open space, including existing open space. A 0.2-mile-long, 20-foot-wide paseo for bicyclists and pedestrians would be constructed along the eastern boundary of the Jefferson Site. The paseo would continue south to the southwest border of the Project site at Commonwealth Drive, then extend east along the edge of the southern parcel adjacent to US 101. From there, a pedestrian path would continue north, looping around the Project site. The path would be along the private access road that connects Commonwealth Drive and Jefferson Drive.

As discussed above, the area surrounding the Project site is an urbanized area with office parks, warehouses, and expansive surface parking lots. It is not a visually significant area. Because of flat topography and distance, the Project site is not visible from most public areas in the vicinity. As shown in Figure 3.1-2a, the existing Building 2 is visible from US 101. With implementation of the Project, Building 3 and the parking structure would also be visible. However, the height of Building 3 would be similar to that of Buildings 1 and 2. It would be mostly blocked from view by Buildings 1 and 2 because it would be in the northern portion of the Commonwealth Site, away from US 101. In addition, the parking structure, which would be shorter than the onsite office buildings, would be visible only through the existing dense perimeter vegetation. US 101 is not a designated scenic route, and motorists only have fleeting views of the Project site because of the permitted speed. In addition, motorists typically direct their attention to the freeway ahead, rather than views from the freeway.

As shown in Figure 3.1-2b, views from Kelly Park (facing west) consist of the park's playing field and onsite lighting in the foreground and the existing Building 2 in the middle-ground view. Perimeter vegetation and fencing obstruct the majority of ground-level views, including the surface parking lot.

With implementation of the Project, the proposed Building 3 would appear to be the same height as existing Building 2. Furthermore, the proposed building would increase the massing and bulk at the Project site. The proposed parking structure would be in front of the office buildings, blocking views of the lower levels. Although the Project would change current visual conditions as seen from Kelly Park, the structures would be consistent with existing development at the Project site and partially screened by existing and proposed landscaping.

Building 3 would be visible from select locations within the Suburban Park-Lorelei Manor-Flood Park Triangle neighborhood but mostly blocked by the existing Building 2. As described above, US 101 separates the Project site from this neighborhood; because of the flat topography, the existing buildings on the Project site are not visible from most public viewpoints. However, it is anticipated that Building 3 would be partially visible beyond Building 2, over the few residential rooftops seen from Hedge Road and the backyards of the residential properties along the road. Because of the proposed height, it is unlikely that the proposed parking structure would be visible from Hedge Road. Although Building 3 would be partially visible to a limited number of residents, it would not substantially alter the existing visual character of the area or obstruct any valued view corridors.

As described, the Project would result in new building height, bulk, and massing at the Project site. However, the Project site is already developed with two existing buildings of similar height, bulk, and design as the proposed structures. Therefore, the Project would be compatible with the existing visual character and quality of its surroundings. The Project would construct two new structures that would represent a continuation of the existing pattern of office development and reflect a similar design and landscape. Implementation of the Project would not substantially change the visual character of the Project site or significantly alter the quality of the surrounding areas because of the perimeter vegetation, trees, and flat topography.

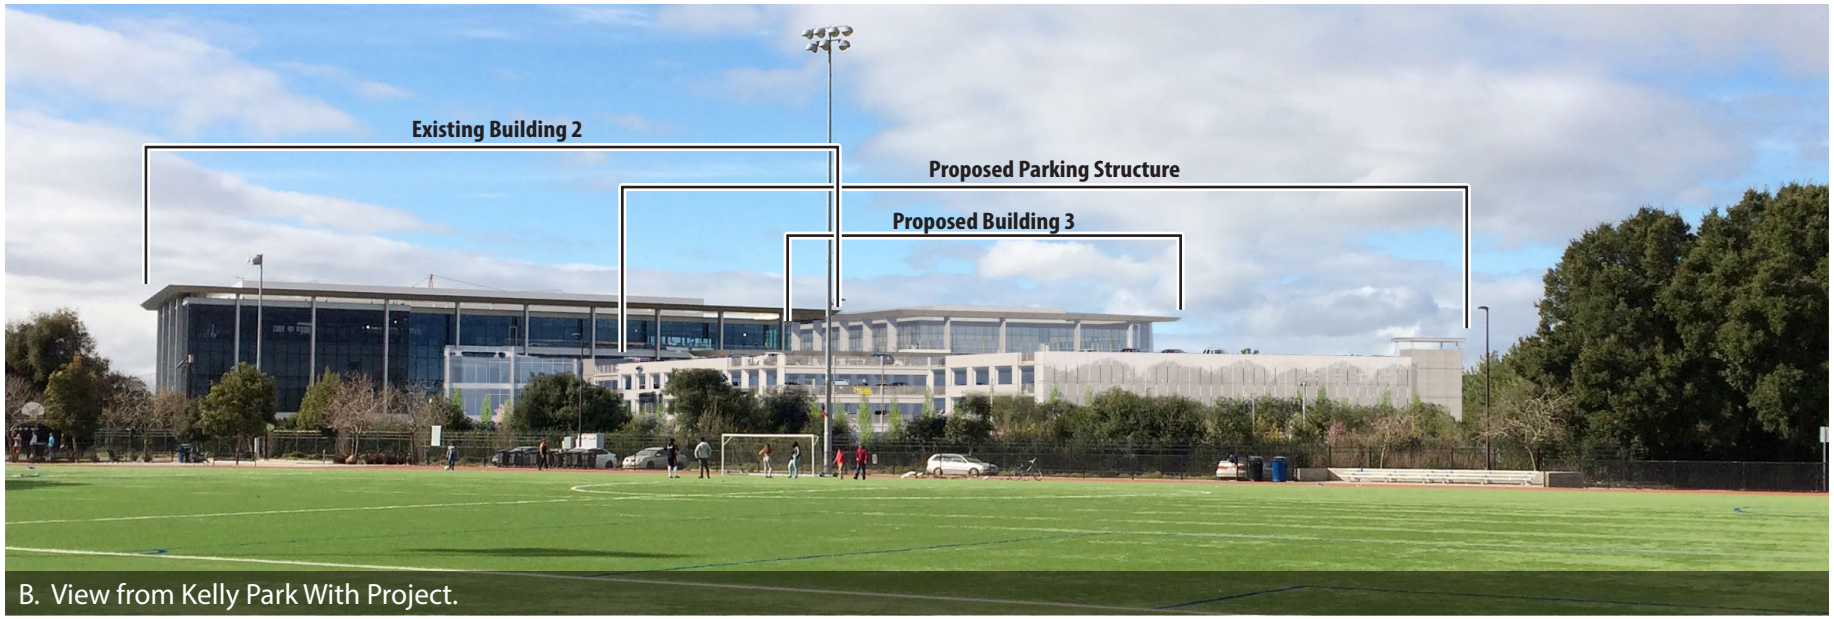
Conclusion

The physical conditions, as they relate to visual character, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would be subject to the City's architectural control process, in accordance with Section 16.68.020 of the City Zoning Ordinance, and required to comply with applicable design standards, as outlined in the City Zoning Ordinance. In addition, City General Plan goals and policies, as listed above, would serve to minimize potential adverse impacts on aesthetic resources. Impacts would be ***less than significant***. No further study is required.

d. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area? (Less than Significant)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AES-4 (pages 4.1-16 to 4.1-17). Impacts would be less than significant because new development would be required to comply with general best management practices and City General Plan policies. No mitigation measures were required.



Graphics ... 00081.18 IS (3-27-2019)

Figure 3.1-2
Views of Project Site With Proposed Buildings
Commonwealth Building 3

[this page left blank intentionally]

Project-Specific Discussion

Building, parking lot, and security lighting is currently present throughout the Project site. Proposed development at the Project site would result in increased nighttime lighting from vehicles, interior circulation areas, the parking structure, the new office building, Jefferson Park, and security features. Lighting would continue to be provided throughout the Project site by roadway/driveway lights, area lights, bollards, and in-ground lights. The proposed lighting at the Project site would be visible from US 101, Jefferson Drive, and other area streets, resulting in a potential nuisance or distraction for motorists. However, some of the lights would be screened by onsite vegetation. In addition, because of the urbanized nature of the surrounding area, a significant amount of ambient nighttime lighting currently exists, thereby affecting views of the nighttime sky. The lighting performance standards set by the U.S. Green Building Council under the LEED program pertain to lighting specifications, shielding techniques, automatic lighting controls, and light pollution. Although building surfaces could be reflective, glare would be minimized through Project design.

Conclusion

The physical conditions, as they relate to light and glare, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Compared with existing conditions at the site, the Project would result in increased light and glare, which would adversely affect daytime and nighttime views. However, the Project would be subject to the City's architectural control process, in accordance with Section 16.68.020 of the City Zoning Ordinance, and required to comply with applicable design standards, as outlined in the City Zoning Ordinance. This review would ensure that the proposed design, construction materials, and lighting would be consistent with area practices and proposed lighting would be directed downward so as not to spill over on adjacent properties, resulting in ***less-than-significant*** impacts. No further study is required.

[page intentionally left blank]

II. Agricultural and Forestry Resources	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
In determining whether impacts on agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland.					
Would the Project:					
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?	☐	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use or conflict with a Williamson Act contract?	☐	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☐	☒
d) Result in the loss of forestland or conversion of forestland to non-forest use?	☐	☐	☐	☐	☒
e) Involve other changes in the existing environment that, because of their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forestland to non-forest use?	☐	☐	☐	☐	☒

Setting

The Project site does not contain Farmland, nor is it adjacent to any Farmland. The site is considered Urban and Built-Up Land (i.e., land that is occupied by structures with a building density of at least one unit to 1.5 acres).[9] In addition, the Project site is not currently protected under the Williamson Act or zoned for agricultural uses.[10] The Project site is zoned Office Bonus (O-B), which does not allow for agricultural uses.

[9] California Department of Conservation. 2018. *2016 Farmland Mapping and Monitoring Program*. Available ftp://ftp.consrv.ca.gov/pub/dlrp/FMMP/pdf/2016/smt16.pdf. Accessed: June 18, 2018.

[10] California Department of Conservation. 2012. *San Mateo County Williamson Act, FY 2006/2007.* Last revised: 2012. Available: ftp://ftp.consrv.ca.gov/pub/dlrp/wa/SanMateo_06_07_WA.pdf. Accessed: April 25, 2018.

There are currently 507 trees on the Project site. However, these are not considered to be forestry resources, per the definitions of Public Resources Code (PRC) Section 12220(g); timberland, as defined by PRC Section 4526; or timberland zoned Timberland Production, per Government Code Section 51104(g). According to the Open Space/Conservation Element of the City General Plan, Menlo Park includes several natural community types, including oak woodlands. However, per the Existing Vegetation map in the City General Plan, the Project site is in an Urban area.[11] No changes are proposed to the number of trees on the southern portion of the Project site.

Environmental Checklist and Discussion

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (page 6-1); it was determined that it would result in no impact. No mitigation measures were recommended.

Conclusion

According to the 2010 Farmland Mapping and Monitoring Program from the California Department of Conservation, the Project site is in an area that is designated as Urban and Built-Up Land,[12] which is not considered Farmland. The physical conditions, as they relate to Farmland, have not changed in the ConnectMenlo EIR study area since preparation of the EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. ***No impact*** would occur, and no further study is needed.

b. Conflict with existing zoning for agricultural use or conflict with a Williamson Act contract?

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (page 6-1); it was determined that it would also result in no impact. No mitigation measures were recommended.

Conclusion

The Project site is not zoned for agricultural use or under a Williamson Act contract. The Project involves the construction of facilities for office uses within an area that is already developed with two office buildings, landscaping, and surface parking lots. Construction of the Project would not result in the conversion of Farmland to a nonagricultural use. The physical conditions, as they relate to agricultural resources, have not changed in the ConnectMenlo EIR study area since preparation of the EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects

[11] City of Menlo Park. 2013. *City of Menlo Park General Plan*. Open Space/Conservation, Noise, and Safety Elements. May 21.

[12] California Department of Conservation. 2018. *2016 Farmland Mapping and Monitoring Program*. Available ftp://ftp.consrv.ca.gov/pub/dlrp/FMMP/pdf/2016/smt16.pdf. Accessed: June 18, 2018.

than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. As such, the Project would have ***no impact*** on agricultural resources. No further study is needed.

c–e. Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g)); result in the loss of forestland or conversion of forestland to non-forest use; or involve other changes in the existing environment that, because of their location or nature, could result in the conversion of Farmland to nonagricultural use or conversion of forestland to nonforest use? (No Impact)

Analysis in the ConnectMenlo EIR

These checklist items were analyzed in the ConnectMenlo EIR (page 6-1); it was determined that ConnectMenlo would also result in no impact on forestlands. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to the conversion of Farmland or forestland, have not changed in the ConnectMenlo EIR study area since preparation of the EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project site is not used to grow trees for commercial lumber or other forest products; therefore, the Project site is not considered timberland. Per PRC Section 12220(g), forestland is defined as land that can support a 10 percent native tree cover of any species. As such, the Project site is not considered forestland and is currently undeveloped. The Project site is also not used for timberland production and would not convert farmland or forestland. As such, the Project would not conflict with existing zoning for forestland or timberland. ***No impact*** would occur, and no further study is needed.

[page intentionally left blank]

III. Air Quality	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
When available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the Project:					
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase in any criteria pollutant for which the project region is a nonattainment area for an applicable federal or state ambient air quality standard?	☒	☐	☐	☐	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☐	☐	☒

Setting

As discussed in more detail, below, this topic will be analyzed further in the Focused EIR for the Project. Therefore, the setting is not discussed in this document but will be provided instead in the Focused EIR.

General Plan Goals and Policies

General Plan goals and policies related to air quality will be outlined and discussed in the Focused EIR.

Environmental Checklist and Discussion

a. Conflict with or obstruct implementation of the applicable air quality plan? (Less than Significant)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AQ-1 (pages 4.2-21 through 4.2-35) and determined to result in less-than-significant impacts. ConnectMenlo was expected to reduce vehicle miles traveled (VMT) per service population citywide, even though, overall, the plan would result in an exceedance of Association of Bay Area Governments (ABAG) projections. It was further determined that the policies identified in ConnectMenlo would not hinder implementation of the Clean Air Plan, which is the relevant Air Quality Management Plan for the Project. Impacts were found to be less than significant, and no mitigation measures were recommended.

Project-Specific Discussion

The small number of employees and residents in Menlo Park generated by the Project would be within the growth projections anticipated through implementation of ConnectMenlo. The Project would be required to adhere to relevant ConnectMenlo policies, develop a TDM program to reduce VMT, comply with the City's Green Building requirements and achieve the prescribed level of LEED certification, comply with zoning that requires electric vehicle chargers, comply with clean energy requirements, and adhere to a zero-waste management plan.

The Project would also be required to comply with goals, policies, and programs to minimize adverse impacts on air quality, including those in the Open Space/Conservation, Noise and Safety, and Circulation Elements. Overall, compliance with the goals, policies, and programs discussed above would ensure that the Project would not hinder implementation of the Clean Air Plan.

Conclusion

The physical conditions, as they relate to consistency with the Clean Air Plan, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. In addition, the Project would not hinder implementation of the Clean Air Plan for the reasons discussed above. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would result in a ***less-than-significant*** impact, and no further study is needed.

b. Result in a cumulatively considerable net increase in any criteria pollutant for which the project region is a nonattainment area for an applicable federal or state ambient air quality standard? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AQ-2 (pages 4.2-35 through 4.2-42) and determined to result in significant and unavoidable impacts for both construction and operational emissions, even with implementation of mitigation measures. Despite the conclusion of significant and unavoidable, as discussed below, ConnectMenlo Mitigation Measures AQ-2a, AQ-2b1, and AQ-2b2 require additional analysis.

Conclusion

Although the physical conditions have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR, the ConnectMenlo EIR requires that additional technical analysis be performed. This analysis could identify impacts that were not previously disclosed. Specifically, the Focused EIR will demonstrate compliance with the following ConnectMenlo Mitigation Measures: AQ-2a (preparation of a technical assessment evaluating potential operational impacts), AQ-2b1 (compliance with the air district's basic control measures for reducing construction-related emissions), and AQ-2b2 (preparation of a technical assessment evaluating construction-related impacts). Therefore, this topic requires ***further environmental review*** in the Focused EIR.

c. Expose sensitive receptors to substantial pollutant concentrations? (Topic to Be Analyzed in Focused EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AQ-3 (pages 4.2-43 through 4.2-50) and determined to result in less-than-significant impacts with implementation of mitigation measures. ConnectMenlo Mitigation Measure AQ-3a requires additional analysis.

Conclusion

Although the physical conditions have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR, the ConnectMenlo EIR requires that additional technical analysis be performed. This analysis could identify impacts that were not previously disclosed. Specifically, the Focused EIR will demonstrate compliance with Mitigation Measure AQ-3a, which requires preparation of a health risk assessment for a project within 1,000 feet of a sensitive land use. Therefore, this topic requires ***further environmental review*** in the Focused EIR.

d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact AQ-4 (pages 4.2-51 through 4.2-52) and determined to result in less-than-significant impacts. No mitigation measures were recommended. As discussed in the ConnectMenlo EIR, the Land Use Element would require planning and development decisions to consider the creation of objectionable odors.

Conclusion

The physical conditions, as they relate to creating objectionable odors, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. In addition, the Project would not result in land uses that would create objectionable odors because the Project site would be infill development in an existing office park setting. The Project would result in ***no impact***, and no further study is needed.

[page intentionally left blank]

IV. Biological Resources	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands, including, but not limited to, marshes, vernal pools, coastal wetlands, through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒	☐
f) Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☐	☒

Setting

Methods

ICF reviewed the following sources to identify existing biological resources near the Project site:

- Biological resources section of the ConnectMenlo EIR
- *Commonwealth Corporate Center Building 3 Biological Resources Assessment* prepared by H. T. Harvey & Associates[13]

ICF biologist Matt Ricketts collected preliminary information on biological resources at the Project site on April 24, 2018. Observations were made by walking across the Project site and around the site while recording field notes on plants, animals, and habitat features (e.g., ornamental trees with old stick nests). Additional information on biological resources can be found in the biological resources assessment prepared by H. T. Harvey & Associates,[14] attached to this Initial Study as Appendix A. The report was informed by reconnaissance-level surveys of the Project site by H. T. Harvey & Associates plant ecologist Matthew Mosher on January 29, 2019, and wildlife ecologist Ginger Bolen on February 8, 2019.

Topography and Soils

The Project site is relatively flat, with an elevation of approximately 7 to 14 feet above mean sea level. The Natural Resources Conservation Service has mapped soils on the site as Urban Land–Orthents (reclaimed complex, 0 to 2 percent slopes). This soil type is generally associated with former tidal flats as well as salt marshes, which occurred at this location prior to urban development.

Land Cover

The entire Project site has been modified for human use and does not support any natural plant communities. It is dominated by urban land cover (i.e., buildings, paved parking lots, ornamental landscaping). Landscaping includes primarily nonnative tree species such as plum (*Prunus* sp.), Brisbane box (*Laphostemon confertus*), holly oak (*Quercus ilex*), and strawberry (*Arbutus unedo*). In addition, two landscaped bioretention basins occur on the eastern edge of the site. The basins are vegetated with spreading rush (*Juncus patens*). Each basin is drained by a stormwater gate, which is located at the lowest part of the basin.

Wildlife Habitat

The Project site provides habitat (i.e., "the resources and conditions present in an area that produce occupancy…by a given organism")[15] for common wildlife species that have successfully adapted to high disturbance levels, ornamental vegetation, and abundant food sources (e.g., food waste in trash cans, seeds and flowers produced by ornamental plants), which are characteristic of urban landscapes. Wildlife species observed by ICF and/or H. T. Harvey biologists during reconnaissance surveys included mourning dove (*Zenaida macroura*), Anna's hummingbird (*Calypte anna*), California scrub-jay

[13] H. T. Harvey & Associates. 2019. *Commonwealth Corporate Center Building 3 Biological Resources Assessment.* Prepared for The Sobrato Organization, Cupertino, CA. February 5.

[14] Ibid.

[15] Hall, L. S., P. R. Krausman, and M. L. Morrison. 1997. The Habitat Concept and a Plea for Standard Terminology. In *Wildlife Society Bulletin* 25:173–182.

(*Aphelocoma californica*), American crow (*Corvus brachyrhynchos*), dark-eyed junco (*Junco hyemalis*), house finch (*Haemorhous mexicanus*), and lesser goldfinch (*Spinus psaltria*). No active bird nests were observed during surveys, but the ornamental trees provide potential nesting habitat for crows, finches, hummingbirds, and other urban nesting birds, such as Cooper's hawk (*Accipiter cooperi*), red-shouldered hawk (*Buteo lineatus*), northern mockingbird (*Mimus polyglottos*), and American robin (*Turdus migratorius*). Small burrowing mammals such as California ground squirrel (*Spermophilus beecheyi*) were observed in low numbers. Other generalist mammal species that are expected to occur on the Project site include raccoon (*Procyon lotor*), Virginia opossum (*Didelphis virginiana*), roof rat (*Rattus rattus*), Norway rat (*Rattus norvegicus*), feral and domestic cats (*Felis catus*), and striped skunk (*Mephitis mephitis*). Common urban-adapted amphibians or reptiles that may occur include Sierran treefrog (*Pseudacris sierra*) and western fence lizard (*Sceloporus occidentalis*). H. T. Harvey ecologists closely examined trees for large cavities that could provide roosting habitat for bats or evidence of previous nesting by raptors (e.g., old stick nests) but observed neither.

Wetlands and Non-Wetland Waters of the United States

The Project site is built on Bay fill and therefore located on the historic saltwater or brackish marshes that were filled in the 1960s to create more land for development. Although such Bay fill lands can sometimes revert to wetland conditions, the existing Project site is paved, landscaped, or otherwise graded; therefore, no wetlands or non-wetland waters of the United States are present. No evidence of wetlands or non-wetland waters of the United States was observed during the April 24, 2018, or January 2019 reconnaissance surveys.

Special-Status Species

For the purposes of this Initial Study, *special-status species* are those with one or more of the following characteristics:

- Species that are listed, proposed for listing, or candidates for possible future listing as threatened or endangered under the federal Endangered Species Act (ESA) of 1973, as amended.
- Species that are listed or proposed for listing as threatened or endangered under the California Endangered Species Act (CESA) of 1984, as amended.
- Species that are designated by the California Department of Fish and Wildlife (CDFW) as Species of Special Concern (SSC).
- Species that are designated as Fully Protected under Sections 3511 (birds), 4700 (mammals), and 5050 (reptiles and amphibians) of the California Fish and Game Code.
- Species that meet the definitions of rare or endangered under CEQA (Section 15380).

No special-status plant species are expected to occur on the Project site. The site lacks natural plant communities where these species could occur because it is entirely developed. There are no serpentine soils or other microhabitats to which such species have adapted. Special-status plants known to occur or potentially occurring in the Project vicinity and evaluated for this analysis are listed in Appendix B of the H. T. Harvey & Associates biological resources assessment.[16]

[16] H. T. Harvey & Associates. 2019. *Commonwealth Corporate Center Building 3 Biological Resources Assessment*. Prepared for The Sobrato Organization, Cupertino, CA. February 5.

With the exception of pallid bat (*Antrozous pallidus*), a California SSC that may, on rare occasions, forage over the parking lot, and tree-nesting raptors (identified as special-status species by the ConnectMenlo EIR), no special-status animal species are expected to occur on the Project site. Most species covered in the H. T. Harvey & Associates report are not expected to occur because the Project site lacks habitat, is outside their known range, and/or is isolated from the nearest known population by urban development. Although some of these species, such as western snowy plover (*Charadrius alexandrinus nivosus*), California Ridgway's rail (*Rallus obsoletus obsoletus*), salt marsh harvest mouse (*Reithrodontomys raviventris*), and salt marsh wandering shrew (*Sorex vagrans halicoetes*), are known to occur in tidal marsh or salt pond habitat of the Don Edwards San Francisco Bay National Wildlife Refuge, approximately 2 miles to the north and east, these habitats are isolated from the Project site by urban development. Tree-nesting raptors that may nest in the ornamental trees near the site include red-shouldered hawk and Cooper's hawk.

Sensitive Natural Communities

Sensitive or natural communities (vegetation types) have limited distribution statewide or within a county or region. The CDFW's Vegetation Classification and Mapping Program (VegCAMP) works to classify and map the vegetation of California and determine the rarity of vegetation types. The current version of the CDFW VegCAMP List of Vegetation Alliances and Associations (or Natural Communities List)[17] indicates which vegetation types are currently considered to be sensitive.

The California Natural Diversity Database (CNDDB) identifies three sensitive natural communities within the nine U.S. Geological Survey quadrangles containing or surrounding the Project site: serpentine bunchgrass grassland, northern coastal salt marsh, and valley oak woodland. None of these communities are present on or adjacent to the Project site. As mentioned above, the entire site has been developed, and all traces of natural communities were removed when the area was filled for urban development in the early 20th century.

Wildlife Corridors

For the purposes of this Initial Study, a wildlife corridor is defined as "any space, usually linear in shape, that improves the ability of organisms to move among patches of wildlife habitat that join two or more larger areas of wildlife habitat."[18] Corridors can be viewed over broad spatial scales, from those connecting continents (e.g., Isthmus of Panama) to structures crossing canals or roads. Most wildlife corridors analyzed within the context of land use planning, including those in this Initial Study, are moderate in scale and used to facilitate regional wildlife movement among habitat patches and through human-dominated landscapes.

The Project site is not within or adjacent to any wildlife corridors. As described in the ConnectMenlo EIR, most urbanized portions of Menlo Park preclude dispersal and movement by terrestrial wildlife, with the exception of unchannelized creeks (e.g., San Francisquito Creek), unobstructed ridgelines, and the shoreline of San Francisco Bay. None of these features occur on or adjacent to the Project site.

General Plan Goals and Policies

The City's General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that would require local planning and development decisions to consider impacts on biological resources. The following City General Plan goals, policies, and programs would serve to minimize potential adverse impacts on biological resources: Goal LU-4, Policy LU-4.5, Goal LU-6, Policy LU-6.8, Policy LU-6.11, Program LU-6.D, Goal OSC-1, Policy OSC-1.1, Policy OSC-1.3, Policy OSC-1.4, Policy OSC-1.5, Policy OSC-1.11, Policy OSC-1.12, Policy OSC-1.13, and Policy OSC-1.15.

Environmental Checklist and Discussion

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-1 (pages 4.3-19 to 4.3-23); it was determined that it would result in a potentially significant impact on sensitive habitats from future projects. The ConnectMenlo EIR found that City General Plan goals, policies, and programs, as well as bird-safe design regulations for the Bayfront Area, would minimize impacts. In addition, implementation of ConnectMenlo Mitigation Measure BIO-1 would reduce the impact to less than significant by requiring project applicants to prepare and submit a project-specific BRA if a project occurs on or adjacent to a parcel containing natural habitat. Mitigation Measure BIO-1 would require any mitigation measures identified in the project-specific BRA to be incorporated as components of the proposed project and subsequent building permit, subject to review and approval by the Community Development Department and appropriate regulatory and resource agencies. For the Project, H. T. Harvey & Associates prepared a BRA in accordance with Mitigation Measure BIO-1, as discussed in more detail below.

Project-Specific Discussion

With the exception of pallid bat and tree-nesting raptors, no special-status species are expected to occur onsite because of the Project site's urban setting and consequent lack of the natural communities to which these species are adapted. Most special-status species in the vicinity are associated with the extensive tidal marshes or salt pond complexes adjacent to San Francisco Bay. Although such habitat occurs within 2 miles of the Project site, the distributions of these species are limited by specific environmental requirements (e.g., moisture, salinity, topography, soil types, vegetation structure) that do not occur in the urban environment. The ornamental trees provide nesting habitat for tree-nesting raptors such as Cooper's hawk and red-shouldered hawk. These common species have not been identified as candidate, sensitive, or special-status species by the U.S. Fish and Wildlife Service or CDFW but are tree-nesting raptors and therefore considered special-status species by a local plan (i.e., ConnectMenlo EIR).

If the Project is implemented during the nesting season (February 1 to September 14), tree and shrub removal could result in direct mortality of adult or young birds, the destruction of active nests, and/or a disturbance for nesting adults, causing nest abandonment and/or loss of reproductive effort. Native bird species are protected by both state (California Fish and Game Code

Sections 3503 and 3513) and federal (Migratory Bird Treaty Act [MBTA] of 1918) laws. To ensure that any disturbance of nesting birds that results in the abandonment of active nests or litters or the loss of active nests through vegetation or structure removal would be a ***less-than-significant*** impact, the BRA identifies the mitigation measures below, which would be incorporated as components of the Conditional Development Permit for the Project.

MITIGATION MEASURES. The Project would implement the following Project mitigation measures, as outlined in the BRA prepared for the Project (Appendix A), to reduce potential impacts on white-tailed kite and tree-nesting raptors.

BR-1: *Nesting Bird Avoidance.* To the extent feasible, construction activities (or at least the commencement of such activities) shall be scheduled to avoid the nesting season. If construction activities are scheduled to take place outside the nesting season, all impacts on nesting birds protected under the MBTA and California Fish and Game Code shall be avoided. The nesting season for most birds in San Mateo County extends from February 1 through August 31.

BR-2: *Preconstruction/Pre-disturbance Surveys*. If it is not possible to schedule construction activities between September 1 and January 31, preconstruction surveys for nesting birds shall be conducted by a qualified ornithologist to ensure that no nests will be disturbed during project implementation. These surveys shall be conducted no more than 7 days prior to the initiation of construction activities. During this survey, the ornithologist shall inspect all trees and other potential nesting substrates (e.g., trees, shrubs, ruderal grasslands, buildings) in and immediately adjacent to the impact areas for nests.

BR-3: *Active Nest Buffers*. If an active nest is found close to work areas that are to be disturbed by construction activities, the qualified ornithologist shall determine the extent of the construction-free buffer zone to be established around the nest (typically 300 feet for raptors and 100 feet for other species) to ensure that no nests of species that are protected by the MBTA and California Fish and Game Code are disturbed during project implementation.

BR-4: *Inhibition of Nesting.* If construction activities will not be initiated until after the start of the nesting season, all potential nesting substrates (e.g., bushes, trees, grasses, other vegetation) that are scheduled to be removed by the project shall be removed prior to the start of the nesting season (i.e., before February 1). This will preclude the initiation of nests in such vegetation and prevent potential delay of the Project because of the presence of active nests in these substrates.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Because the Project site contains mature (albeit nonnative) trees that could support active nests of common birds that are protected under the MBTA, a BRA was prepared in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR (included in Appendix A of this document and summarized here). Mitigation measures are included in the BRA to reduce impacts on nesting birds. Therefore, the Conditional Development Permit for the Project would

implement Project Mitigation Measures BR-1 through BR-4 to avoid such impacts. Mitigation measures that would be incorporated as components of the Project are included in the BRA (BR-1 through BR-4) to reduce impacts on nesting birds. Impacts on special-status species as a result of the Project would be ***less than significant,*** and no further study is needed.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-2 (pages 4.3-24 to 4.3-25), which found that, without preparation of project-specific assessments for future projects on or near sensitive habitats, impacts on sensitive natural communities would be potentially significant. The ConnectMenlo EIR found that implementation of Mitigation Measure BIO-1 (completion of a BRA) would reduce the impact to less than significant by requiring project-specific assessment of biological resources.

Conclusion

A BRA was prepared for the Project in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR (Appendix A). There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project site does not contain any riparian habitat or sensitive natural communities. Therefore, the Project would have ***no impact*** on these resources, and no further study is needed.

c. Have a substantial adverse effect on state or federally protected wetlands, including, but not limited to, marshes, vernal pools, coastal wetlands, through direct removal, filling, hydrological interruption, or other means? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-3 (pages 4.3-25 and 4.3-26). The ConnectMenlo EIR found that direct and indirect impacts on wetland habitat could occur if adequate controls are not implemented. Without the preparation of project-specific assessments for future projects on or near wetlands, impacts could be potentially significant. The ConnectMenlo EIR found that implementation of Mitigation Measure BIO-1 (completion of a BRA) would reduce the impact to less than significant by requiring project-specific assessment of biological resources.

Project-Specific Discussion

No wetlands occur on or immediately adjacent to the Project Site. Therefore, the Project would result in no direct impacts on jurisdictional wetlands. Although no direct impacts would occur, development of the project site has the potential to cause indirect impacts on nearby wetlands or water quality within those wetlands, based on the site's runoff patterns. Indirect impacts on wetlands and jurisdictional other waters include an increase in the potential for sedimentation due to construction grading and ground disturbance, an increase in the potential for erosion due to increased runoff volumes generated by impervious surfaces, and an increase in the potential for

water quality degradation due to increased levels of non-point pollutants. Water quality degradation may occur even if wetlands are not in the immediate vicinity. However, as discussed in Section X, *Hydrology and Water Quality*, compliance with state requirements under the National Pollutant Discharge Elimination System (NPDES) Construction General Permit and the Regional Water Quality Control Board– (RWQCB-) required stormwater pollution prevention plan (SWPPP) to control the discharge of stormwater pollutants during construction, as well as post-construction measures and design features required by the Municipal Regional Permit, would reduce the project's potential impact on water quality.

Conclusion

A BRA was prepared for the Project in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR (Appendix A). There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project site does not contain any wetlands or non-wetland waters of the United States that are subject to U.S. Army Corps of Engineers jurisdiction under Section 404 of the Clean Water Act, and no such features are present adjacent to the site. However, indirect impacts on nearby wetlands or non-wetland waters could occur from site runoff. Compliance with the above-mentioned state stormwater controls would reduce potential impacts to a ***less-than-significant*** level. Therefore, no further study is needed.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species, or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-4 (page 4.3-26). The ConnectMenlo EIR found that a project-specific assessment would be necessary to determine whether any important wildlife movement corridors are present on undeveloped lands where development is proposed. Without preparation of project-specific assessments for future projects on or near sensitive habitats, impacts in the ConnectMenlo EIR study area would be considered potentially significant. The ConnectMenlo EIR found that implementation of Mitigation Measure BIO-1 would reduce the impact to less than significant by requiring project-specific assessment of biological resources.

Project-Specific Discussion

The Project site is not within or adjacent to any wildlife corridors. Therefore, the Project would have ***no impact*** on this resource. However, trees on the site provide nesting habitat for native resident and migratory birds that are protected under the MBTA and California Fish and Game Code. If the Project is implemented during the nesting season (February 1 to September 14), tree and shrub removal could result in direct mortality of adult or young birds, the destruction of active nests, and/or disturbance of nesting adults, causing nest abandonment and/or loss of reproductive effort. To ensure that any disturbance of nesting birds that results in the abandonment of active nests or litters or the loss of active nests through vegetation or structure removal would be a ***less-than-significant*** impact on native wildlife nursery sites (i.e., bird nests), the BRA identifies the mitigation measures below, which would be incorporated as components of the Project.

MITIGATION MEASURES. Per ConnectMenlo Mitigation Measure BIO-1, a BRA (Appendix A) has been prepared for the Project. Based on the recommendations in the BRA, the Project would incorporate BR-1 through BR-4, as included above, as components of the Project.

Conclusion

The physical conditions, as they relate to local policies or ordinances for protecting biological resources, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. As explained above, a BRA was prepared in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR. The BRA (Appendix A) recommends mitigation measures to reduce impacts on native wildlife nursery sites. As required by Mitigation Measure BIO-1, Mitigation Measures BR-1 to BR-4, as included above, consistent with the BRA, are incorporated as components of the Project. Impacts would be ***less than significant***, and no further study is needed.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-5 (page 4.3-27); it was determined that it would result in a less-than-significant impact. The ConnectMenlo EIR found that, with adherence to City General Plan goals, policies, and programs, as well as the City Municipal Code, the impact would be less than significant.

Project-Specific Discussion

The Project is subject to the City's Heritage Tree Ordinance, codified in Chapter 13.24 of the City Municipal Code.[19] As required by the ordinance, tree surveys shall be conducted by an International Society of Arboriculture–certified arborist, and a tree report and map shall be prepared to show the locations of all pertinent trees prior to initiation of construction activities. Any work performed within an area 10 times the diameter of the tree (i.e., the tree protection zone) shall require submittal of a tree protection plan prepared by a certified arborist for review and approval by the Community Development Director or his/her designee prior to issuance of any permit for grading or construction. Removal of heritage trees requires an appropriate permit from the Director of Public Works or his/her designee and payment of a fee. Only one of the 507 trees on the site meets the City's definition of a heritage tree; it is not proposed for removal.

The Project would also be subject to Chapter 16.43.140 (6) of the City Municipal Code, which concerns bird-friendly design guidelines for new buildings. The Project would construct a new building with a height of approximately 69 feet and a low-tint glass façade, along with a multi-level parking structure. Glass windows and building façades can result in bird injury or mortality because birds do not perceive glass as an obstruction. They may collide with glass that reflects the sky or vegetation or glass that is transparent, which allows birds to perceive an unobstructed flight route to vegetation inside the building. Most bird/window collisions occur within the first 60 feet of the ground.[20]

[19] City of Menlo Park Municipal Code, Section 13.024.10.

[20] City of San Francisco. 2011. *Standards for Bird-safe Buildings*. San Francisco Planning Commission. July 14. Available: http://default.sfplanning.org/publications_reports/bird_safe_bldgs/Standards%20for%20Bird%20Safe%20Buildings%20-%2011-30-11.pdf. Accessed: June 20, 2018.

Vegetation in the vicinity of the Project site is limited to nonnative ornamental trees and shrubs. It lacks the structural diversity that typically attracts large numbers of native birds. Species with the greatest potential to collide with new buildings are primarily the common, urban-adapted passerines that currently use the site. The Project is within the primary "bird collision zone" (i.e., within 0 to 60 feet of the ground); therefore, it would be subject to the zoning regulations set forth in Chapter 16.43.140 (6) of the City Municipal Code (Bird-Friendly Design Requirements). H. T. Harvey & Associates conducted an analysis of the Project's compliance with the City's six bird-friendly design standards and concluded that the Project complies with all but two of the standards.[21] The analysis for these two standards is summarized below.

Design Standard 1. *No more than 10 percent of façade surfaces shall have non-bird-friendly glazing.* Building 3 would include extensive glazing over more than 10 percent of the façade, including within 60 feet of the ground. Because this glazing would not be treated (i.e., "non-bird friendly"), the building would not meet the standard. However, as indicated in the BRA, the overall architectural design of the building, as well as the bird-safe glazing treatment on balcony railings, would be enough to avoid significant impacts on native birds. Although occasional collisions between birds and the glass façade of the proposed building may occur, the frequency of such collisions is expected to be low for several reasons. The number of birds expected to occur in the Project vicinity is expected to be low because of the relatively low habitat quality of the ornamental landscaping. There are no areas of dense native vegetation or large water features that would attract large congregations of birds. In addition, glass balcony railings would be treated with bird-safe glazing. Finally, the façade would be "broken up" by solid, opaque horizontal and vertical elements, thereby making them more visible to flying birds and less likely to be mistaken for the sky or vegetation.

Design Standard 4. *Glass skywalks or walkways, freestanding (see-through) glass walls and handrails, and transparent building corners shall not be allowed.* Building 3 would not meet this standard because it would include glass corners on all sides of the building and all floors; it would also include freestanding glass handrails on the perimeter of the fourth-floor balcony. However, the glass used for the handrails would be treated with a frit pattern that would make the railings more visible to birds. Even in the absence of such treatment, however, the frequency of bird collisions is expected to be low for the reasons cited above. In addition, most collisions would involve regionally abundant, urban-adapted bird species and therefore would not result in the loss of a substantial portion of any species' Bay Area population (i.e., would not cause any population to drop below self-sustaining levels). Therefore, the elimination of glass corners or glass handrails would not be expected to significantly reduce the number of future bird collisions.

Conclusion

The physical conditions, as they relate to local policies or ordinances for protecting biological resources, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would not meet two of the City's six bird-friendly design standards or the requirements of ConnectMenlo Mitigation Measure BIO-1, which requires

[21] H. T. Harvey & Associates. 2019. *Commonwealth Corporate Center Building 3 Biological Resources Assessment*. Prepared for The Sobrato Organization, Cupertino, CA. February 5.

compliance with bird-friendly designs. However, the site-specific evaluation contemplated by Section 16.43.140(6)(H) concludes that other aspects of the building's design, as well as the frequency of bird collisions, which is expected to be low, would make these deviations acceptable and avoid significant impacts related to bird strikes. Section 16.43.140(6)(H) allows the Planning Commission to grant a waiver regarding the two bird-friendly design standards that would not be met by the Project but would be included as part of the Project Conditional Development Permit. In addition, because the Project would not remove heritage trees, and the Project would not cause a significant number of birds to collide with windows, this impact would be considered ***less than significant***, and no further study is needed.

f. Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact BIO-6 (pages 4.3-27 to 4.3-28); it was determined that it would result in a potentially significant impact because of potential conflicts with the Stanford Habitat Conservation Plan (HCP). Implementation of ConnectMenlo Mitigation Measure BIO-6 (requiring implementation of Mitigation Measure BIO-1) would reduce impacts to less than significant.

Conclusion

The Project site is not within a geographic area covered by an adopted HCP or natural community conservation plan. The closest such plan is the Stanford HCP for an area in the Matadero/Deer Creek and San Francisquito Creek watersheds, approximately 6 miles to the south. A BRA was prepared for the Project in accordance with Mitigation Measure BIO-1 in the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Because the Project site is not covered by an HCP, the Project would have ***no impact*** on the provisions of an adopted HCP, natural community conservation plan, or other approved local, regional, or state HCP. No further study is needed.

b) Cause a substantial adverse change in the significance of an archaeological resource, pursuant to Section 15064.5?	☒	☐	☐	☐	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☒	☐	☐	☐	☐

Setting

Historic Resources

The Project site and immediate vicinity, which are near San Francisco Bay in present-day Menlo Park, remained largely undeveloped until the 1950s. At that time, the Project site was among 200 acres acquired by developer David Bohannon for construction of Bohannon Industrial Office Park. By 1958, buildings, including large-scale industrial facilities, were present within the current boundaries of the Commonwealth Site, and over the following decade, the surrounding industrial office park was developed with roadways and additional office and manufacturing facilities.

The properties at 160 Jefferson Drive (assessor's parcel number [APN] 055-243-040) and 165 Jefferson Drive (APN 055-242-090), two rectangular-plan office and warehouse buildings that currently stand adjacent to the Jefferson Site, were both constructed during the first half of the 1960s. The structure at 160 Jefferson Drive, which is west-adjacent to the Jefferson Site, was built circa 1962 to 1963 to house Lacar Enterprises, Inc., a household goods company. The structure at 165 Jefferson Drive, located north-adjacent to the Jefferson Site, was constructed circa 1963 to 1965 to house the Wells Lamont Corporation, a glove manufacturer. By 1980, Bohannon Industrial Office Park was predominantly built out. The 1950s-era buildings within the Commonwealth Site were replaced by the current Buildings 1 and 2 in 2015; a building on the Jefferson Site was also demolished at that time and replaced with a surface parking lot.

Because the structures at 160 Jefferson Drive and 165 Jefferson Drive are more than 50 years old and located adjacent to the Project site, they were evaluated for listing in the California Register of Historical Resources (CRHR). Neither building has previously been evaluated for CRHR listing or otherwise considered for historical resource status for the purposes of CEQA review. The structures at 160 Jefferson Drive and 165 Jefferson Drive were recorded during an intensive-level historical resources survey on March 6, 2018, and documented on Department of Parks and Recreation (DPR) 523A (Primary Record) and 523B (Building, Structure, Object) forms. The DPR forms also document the buildings' evaluations of CRHR eligibility. The DPR forms are included in Appendix B of this Initial Study. The CRHR evaluations concluded that neither historic-age building adjacent to the Project site meets the

eligibility criteria for CRHR listing. As a result, the structures at 160 Jefferson Drive and 165 Jefferson Drive do not qualify as historical resources under CEQA. A summary of the evaluation of 160 Jefferson Drive and 165 Jefferson Drive under CRHR Criteria 1 through 4 is provided below.

- *Criterion 1*: The buildings are unremarkable in the context of mid-20th-century suburban industrial office park development, and no tenants contributed significantly to the economic growth of Menlo Park or the San Francisco Peninsula at large.
- *Criterion 2*: No individuals who were closely associated with 160 Jefferson Drive or 165 Jefferson Drive have made significant contributions to local, state, or national history.
- *Criterion 3*: The two buildings are utilitarian-style industrial and office buildings that lack architectural distinction and association with a known significant architect.
- *Criterion 4*: Neither building appears likely to yield important historical information not otherwise captured in the historic record.

Archaeological and Native American Resources

As discussed in more detail, below, this topic will be analyzed further in the Focused EIR for the Project. Therefore, the setting is not discussed in this document but will be provided instead in the Focused EIR.

General Plan Goals and Policies

The City General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts on cultural resources. The following City General Plan goals, policies, and programs would serve to minimize impacts on cultural resources: Goal LU-7, Policy LU-7.8, Policy OSC-3, Policy OSC-3.1, Policy OSC-3.2, Policy OSC-3.3, Policy OSC-3.4, Policy OSC-3.4, Policy OSC-3.5, and Policy OSC-3.6.

Environmental Checklist and Discussion

a. Cause a substantial adverse change in the significance of a historical resource, pursuant to Section 15064.5? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact CULT-1 (pages 4.4-12 to 4.9-15) and determined to have a significant impact on historic resources if it would lead to demolition or alteration with the potential to change the historic fabric or setting of historic architectural resources. Mitigation Measure CULT-1 (page 4.4-15) requires an individual project that is proposed on or adjacent to a site with a building that is more than 50 years old to prepare a site-specific evaluation. However, the ConnectMenlo EIR did not identify any historic resources within the vicinity of the Project site.

Project-Specific Discussion

The Project site contains no historic-age buildings; Buildings 1 and 2 were constructed in 2015. Two historic-age buildings located adjacent to the Project site, 160 Jefferson Drive and 165 Jefferson Drive, were constructed during the first half of the 1960s and, therefore, have reached the age at which they could qualify as eligible for listing in the CRHR. The evaluation of

both buildings, as well as their ineligibility for CRHR listing, is documented on the DPR 523A and 523B forms included as Appendix B of this document and summarized previously. The Project site does not contain, and is not adjacent to, any historical resources for the purposes of CEQA.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant impacts than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific impacts as a result of the Project. Redevelopment of the Project site would not alter the significance of a historic resource, as defined in Section 15064.5 of the CEQA Guidelines. Therefore, the Project would have ***no impact*** on historic resources.

b. Cause a substantial adverse change in the significance of an archaeological resource, pursuant to Section 15064.5? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact CULT-2 (pages 4.4-16 to 4.9-18) and determined to be less than significant with implementation of Mitigation Measures CULT-2a and CULT-2b. Mitigation Measure CULT-2a would be applied if archaeological resources are found during construction. In addition, per Mitigation Measure CULT-2b, Native America tribes would need to be consulted.

Project-Specific Discussion

One precontact archaeological resource was identified within the Project site during literature review at the Northwest Information Center. Specifically, this resource, which was identified from monitoring efforts for the Commonwealth Corporate Center Project in 2015, is beneath the existing Building 2.[22] Because additional cultural studies have not been conducted in any portion of the Project site, it is unknown whether the Project site contains additional cultural resources. Given the presence of a precontact archaeological resource within the Project site, as well as three precontact archaeological resources in the project vicinity, the Project site has a high degree of sensitivity for containing as-yet undocumented prehistoric archaeological resources.

No formal Native American resources were identified during consultation with California Native American tribes or during the search of the NAHC Sacred Lands File. However, the area was identified as very sensitive for Native American resources. Two California Native American tribal representatives requested that both archaeological and Native American monitors be present during all ground-disturbing activities. In addition, one precontact archaeological resource has been identified within the Project site; such archaeological sites are often considered tribal cultural resources.

Compliance with federal, state, and local laws and regulations, including applicable ConnectMenlo EIR mitigation measures as well as City General Plan goals and policies, would protect unrecorded archaeological deposits at the Project site by ensuring early detection of potential conflicts between development and resources. In addition, compliance would prevent

[22] Garlinghouse, T. 2015. Site record for P-41-002415 (CA-SMA-425). On file at the Northwest Information Center, Rohnert Park, CA.

or minimize impairment of the archaeological deposits' ability to convey their significance through excavation or preservation. However, the Project could disturb unidentified subsurface materials that have the potential to contain prehistoric archaeological resources.

Conclusion

In order to reduce potential impacts that could occur if unidentified resources are discovered during Project construction, the Project would incorporate Mitigation Measure CULT-2a from the ConnectMenlo EIR. However, because of precontact archaeological resource at the Project site, further study is required. ConnectMenlo EIR Mitigation Measure CULT-2b (consultation with Native American tribes) has been implemented as part of this environmental review. Although no archaeological resources were identified during consultation with Native American tribes, the area was determined to be very sensitive for Native American resources. Two California Native American tribal representatives requested that all ground-disturbing activities be monitored by both archaeological and Native American monitors. Therefore, additional mitigation measures, beyond those in the ConnectMenlo EIR, may be required to reduce impacts on undiscovered archaeological resources at the Project site. This topic requires ***further environmental review*** in the Focused EIR

c. Disturb any human remains, including those interred outside of formal cemeteries? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact CULT-4 (page 4.4-20) and determined to be less than significant with implementation of Mitigation Measure CULT-4. This mitigation measure would provide guidance if human remains are encountered during ground disturbance.

Project-Specific Discussion

As discussed above, one precontact archaeological resource was identified within the Project footprint in 2015. Discovery of this precontact material, as well as the identification of similar resources in the general vicinity, suggests that the area has increased potential for containing as-yet undocumented archaeological deposits, including human remains. Buried deposits may be eligible for listing in the CRHR.

Conclusion

The Project would incorporate Mitigation Measure CULT-4, which provides guidance regarding the treatment of human remains encountered during ground disturbance. However, because of the sensitivity of the Project site, as discussed above, this topic requires ***further environmental review*** in the Focused EIR.

VI. Energy	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☐	☒	☐

Setting

Electricity

Grid electricity and natural gas service in Menlo Park is provided by Pacific Gas & Electric (PG&E). PG&E is a publicly traded utility company that generates, purchases, and transmits energy under contract with the California Public Utilities Commission. PG&E's service territory is 70,000 square miles in area, roughly extending north to south from Eureka to Bakersfield and east to west from the Sierra Nevada to the Pacific Ocean. PG&E's electricity distribution system consists of 106,681 circuit miles of electric distribution lines and 18,466 circuit miles of interconnected transmission lines.[23] PG&E electricity is generated by a combination of sources, such as coal-fired power plants, nuclear power plants, and hydro-electric dams as well as newer sources of energy such as wind turbines and photovoltaic plants, or "solar farms." "The grid," or bulk electric grid, is a network of high-voltage transmission lines that link power plants with the PG&E system. The distribution system, comprising lower-voltage secondary lines, is at the street and neighborhood level and consists of overhead or underground distribution lines, transformers, and individual service "drops" that connect to the individual customer. The existing electrical system in the area consists of overhead and underground facilities.

On January 26, 2016, the Menlo Park City Council approved a motion to join Peninsula Clean Energy (PCE) to receive additional renewable power. PCE is part of a Community Choice Energy (CCE) program, a locally controlled community organization that enables local residents and businesses to have a choice as to where their energy comes from. CCE programs allow local governments to pool the electricity demands of their communities, purchase power with higher renewable content, and reinvest in local infrastructure. Currently, PG&E delivers the power, maintains the lines, and bills customers, but the power is purchased by the CCE program from renewable energy sources such as solar, wind, hydroelectric, geothermal, and biomass.[24]

[24] Peninsula Clean Energy. 2015. *Community Guide*. Available: www.peninsulacleanenergy.com/wp-content/uploads/2015/10/PCE_community_guide_v2_web.pdf. Accessed: April 3, 2019.

Natural Gas

PG&E's natural gas (methane) pipe delivery system includes 42,000 miles of distribution pipelines and 6,700 miles of transmission pipelines. Gas delivered by PG&E originates in gas fields in California, the Southwest, the Rocky Mountains, and Canada. Transportation pipelines send natural gas from fields and storage facilities in large pipes under high pressure. The smaller distribution pipelines deliver gas to individual businesses or residences.

PG&E gas transmission pipeline systems serve approximately 15 million energy customers in California. The system is operated under an inspection and monitoring program in real time on a 24-hour basis, with leak inspections, surveys, and patrols taking place along the pipelines.[25] A new program, the Pipeline 2020 program, aims to modernize critical pipeline infrastructure, expand the use of automatic or remotely operated shut-off valves, catalyze development of next-generation inspection technologies, develop industry-leading best practices, and enhance public safety partnerships with local communities, public officials, and first responders.

The PG&E gas transmission pipeline nearest the Project site runs primarily along US 101 until Second Avenue, where it continues north along Broadway in Redwood City. Distribution gas pipelines are located throughout the Bayfront Area.

General Plan Goals and Policies

The City General Plan (specifically the Land Use Element, Open Space/Conservation Element, and the Circulation Element) contains general goals, policies, and programs that would require sustainable development and energy efficiency. The following City General Plan goals, policies, and programs would serve to minimize potential adverse risks specifically associated with wasteful, inefficient, or unnecessary consumption of energy resources: Goal LU-4, Policy LU-4.5, Goal LU-6, Goal LU-7, Policy LU-7.1, Policy LU-7.9, Program LU-7.A, Program LU-7.C, Program LU-7.D, Program LU-7.E, Goal OSC-4, Policy OSC-4.1, Policy OSC-4.2, Policy OSC-4.3, Policy OSC-4.4, Policy OSC-4.5, Goal CIRC-1, Policy CIRC-2.11, Goal CIRC-5, Policy CIRC-5.1, Goal CIRC-6, Policy CIRC-6.1, and Policy CIRC-6.3.

Environmental Checklist and Discussion

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact UTIL-13 (pages 4.14-76 to 4.14-81) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

The Project site would continue to be served by PG&E (natural gas) and PCE (electricity). The Project would result in a long-term increase in energy demand associated with operation of lighting and space heating/cooling units in the added building space as well as vehicle travel. In addition,

[25] Pacific Gas & Electric. n.d. *Learn about the PG&E Natural Gas System.* Accessed: https://www.pge.com/en_US/safety/how-the-system-works/natural-gas-system-overview/natural-gas-system-overview.page. Accessed: April 4, 2019.

construction activities associated with the Project would require the use of energy (e.g., electricity and fuel) for various purposes, such as operation of construction equipment and tools as well as excavation, grading, demolition, and construction vehicle travel.

Construction. The installation of new or expanded gas lines on the Project site would require excavation, trenching, soil movement, and other activities that are typical during construction of development projects. These construction impacts are discussed in detail in the appropriate topical sections of this Initial Study as part of the assessment of overall Project impacts. In addition, although construction related to the new or relocated gas and electric lines could result in short-term construction-related environmental effects (e.g., noise, dust, traffic, temporary service interruption), the work would comply with City and PG&E regulations as well as standard conditions for new construction related to infrastructure improvements. Also, any such work would be subject to compliance with applicable regulations and standard conditions of approval for the Project, including City permits/review for construction (e.g., grading permits, private development review, encroachment permits).

Construction vehicles would consume fuel. However, EPA adopted the Heavy-Duty National Program to establish fuel efficiency and greenhouse gas emissions standards in the heavy-duty highway vehicle sector, which includes combination tractors (semi-trucks), heavy-duty pickup trucks and vans, and vocational vehicles (including buses and refuse or utility trucks). These standards include targets for gallons of fuel consumed per mile beginning in model year 2014. Although construction activities would require a commitment of energy sources, the efficiency standards would further the goal of conserving energy in the context of Project development.[26]

Operation. In the O-B zoning district, projects are required to meet green and sustainable building regulations. The proposed Building 3 would be required to meet 100 percent of its energy demand through a combination of onsite energy generation, the purchase of 100 percent renewable electricity, and/or the purchase of certified renewable energy credits. In addition, as currently proposed, Building 3 would be designed to meet LEED Gold BD+C standards. The Project would comply with City requirements for EV parking stalls. The Project would also incorporate a bird-friendly design through its placement of the building and use of low-tint exterior glazing. Other green building requirements would be met through efficient water use, placement of new structures 24 inches above the Federal Emergency Management Agency base flood elevation to account for sea-level rise, and waste management planning. Details regarding how the proposed building would meet the green and sustainable building requirements would be provided as Project plans and materials are further developed.

As an infill development, the Project furthers the objectives of energy conservation related to transportation by focusing activities in areas of existing infrastructure and services. The proposed TDM program for the Project would be independent of the existing TDM program for Buildings 1 and 2 because new zoning regulations require a 20 percent trip reduction. The proposed TDM program would encourage the use of public transportation and other forms of alternative transportation. The Project site is currently served by the M3-Marsh Road Shuttle, which is a free shuttle service with timed connections to many of the a.m. and p.m. peak-hour trains at the Menlo Park Caltrain station in both the northbound and southbound directions. The existing shuttle service includes a stop at 149

[26] U.S. Environmental Protection Agency. n.d. *Regulations for Greenhouse Gas Emissions from Commercial Trucks and Buses.* Available: www.epa.gov/regulations-emissions-vehicles-and-engines/regulations-greenhouse-gas-emissions-commercial-trucks. Accessed: April 4, 2019.

Commonwealth Drive, less than 100 feet from the Project site. In order to encourage employees to use Caltrain and the Marsh Road Shuttle, subsidized transit passes, such as a Caltrain Go Pass, would be provided to new employees at the Project site. The Caltrain Go Pass is an employer-sponsored annual pass that offers unlimited rides on Caltrain through all zones, 7 days per week. Carpooling and vanpool programs would also be encouraged through free ride-matching services, carpool incentive programs, vanpool formation incentives, vanpool seat subsidies, and vanpool participant rebates. Emergency ride-home programs would also be offered to employees. In addition, the proposed TDM program would include bicycle storage, showers and changing rooms, and other onsite amenities to encourage the use of other modes of transportation. Implementation of the proposed TDM program would reduce energy impacts from transportation.

The Project would be within the 70,000-square-mile PG&E service territory for electricity and natural gas generation, transmission, and distribution. In addition, PCE would provide renewable power to the Project site. Because of the Project's size and location within an urban development, buildout of the Project would not significantly increase energy demands within the service territory and would not require new energy supply facilities. In addition, energy projections of energy providers within the state anticipate growth from development such as the Project.

Conclusion

The physical conditions, as they relate to the wasteful, inefficient, or unnecessary consumption of energy resources, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Accordingly, the Project would result in ***less-than-significant*** impacts with respect wasteful, inefficient, or unnecessary consumption of energy resources. No further study is needed.

b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact UTIL-13 (pages 4.14-76 to 4.14-81) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

The Project would be required to be constructed using energy efficient modern building materials and construction practices, in accordance with the CALGreen Building Code and Chapter 12.18 of the Menlo Park Municipal Code, which contains the Green Building Ordinance. The new buildings also would use new modern appliances and equipment, in accordance with the 2006 Appliance Efficiency Regulations (Title 20, California Code of Regulations Sections 1601 through 1608). Under these requirements, the Project would use recycled construction materials, environmentally sustainable building materials, building designs that reduce the amount of energy used in building heating and cooling systems compared with conventionally built structures, and landscaping that incorporates water-efficient irrigation systems, all of which would conserve energy. In addition, the Land Use Element, Circulation Elements, and the Open Space/Conservation of the City General Plan contain goals, policies, and programs that would require local planning and development decisions to

consider impacts on energy resources. The Project would adhere to the City General Plan goals, policies, and programs, as listed above, which would serve to increase energy conservation and minimize potential impacts associated with energy use.

The Project, as part of the City's project approval process, would be required to comply with existing regulations, including City General Plan policies and zoning regulations that have been prepared to promote energy conservation and efficiency by implementing sustainable building practices and reducing automobile dependency. The City, throughout the buildout horizon, would implement General Plan programs that require development of a greenhouse gas standard for development projects and coordination with appropriate agencies to agree on long-term Peninsula transit service. Furthermore, continued implementation of the City's Climate Action Plan, compliance with the CALGreen Building Code, and other applicable state and local energy efficiency measures, would result in energy conservation and savings.

Conclusion

The physical conditions, as they relate to conflicting with a state or local plan for renewable energy and energy efficiency, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would result in ***less-than-significant*** impacts related to conflicting with a state or local plan for renewable energy and energy efficiency; mitigation measures would not be required for construction or operation of the Project. No further study is needed.

Setting

Regional Geology

The Project site is on the western margin of San Francisco Bay in the Santa Clara Valley, a broad, sediment-filled basin bounded on the west by the Santa Cruz Mountains and on the northeast by the Diablo Range. The Project site is underlain by Holocene-age fine-grained alluvium,[27] which, in turn, is underlain by Holocene and Pleistocene alluvial and basin deposits, undivided.[28] Fine-grained alluvium is generally described as unconsolidated, poorly sorted plastic organic clay and silty clay in poorly drained interfluvial basins, usually at the margins of tidal marshlands.

Regional Seismicity

Faults

The San Francisco Bay Area is one of the most active seismic regions in the United States. Within the Bay Area, three faults belong to the San Andreas fault system, the San Andreas, Hayward, and Calaveras faults. Trending in a northwest direction, the faults generate about 12 earthquakes each century and are large enough to cause major structural damage. Seismologic and geologic experts conclude that there is a 72 percent probability for at least one large earthquake of magnitude 6.7 or greater in the San Francisco Bay Area before 2044.[29] Table 3.6-1 lists the regional faults, their distance and direction from the Project site, and each fault's probability of producing one or more earthquakes of magnitude 6.7 or greater before 2044. However, no known fault crosses the Project site.[30]

Ground Shaking

Because the Project site is in a seismically active area, strong to very strong ground shaking can be expected to occur at the site over the life of the Project.[31,32] Such ground shaking could cause negligible damage in buildings of good design and construction, slight damage in well-built ordinary structures, and considerable damage in poorly built structures.[33]

Site Geology, Topography, and Groundwater

The Project site is relatively level, with an elevation that ranges from 11 to 14 feet above mean sea level. The site is underlain by alluvial deposits, consisting of medium stiff to hard clay, clay with sand, and sandy clay, along with interbedded layers of loose to dense sand and gravel with varying amounts of fines to the maximum depth explored.[34]

Groundwater was encountered during soil boring at 10.5 feet below the existing ground surface.[35] Depths to groundwater can vary seasonally, because of landscaping, and locally across a geography.

Landslides and Erosion

Because the site topography is flat, there is little likelihood of landslides. Furthermore, according to the California Seismic Hazard Zonation Program, the Project site is not in an area that is susceptible to landslides.[36] Soils at the Project site are Urban land-Orthents, reclaimed complex, 0 to 2 percent slopes.[37] These soils are not rated for erosion susceptibility.

Liquefaction and Seismically Induced Ground Failure

Liquefaction is a process in which loose sand and silt behave like a liquid when shaken by an earthquake. The soil can lose its ability to support structures.[38] According to the California Seismic Hazard Zonation Program, the Project site is in an area that is potentially susceptible to earthquake-induced liquefaction.[39] In addition, according to the U.S. Geological Survey, the site is in an area with moderate to very high susceptibility to liquefaction.[40] Furthermore, site-specific exploration showed that layers of medium-dense sand with varying amounts of clay and silt, from several inches to 6 feet thick, were encountered below the groundwater level (6 to 45 feet below the ground surface), indicating a potential risk of seismically induced liquefaction.[41]

Lateral spreading is liquefaction-related ground failure that involves horizontal (or lateral) movement of relatively flat or gently sloping soil deposits toward a free or open face, such as an excavation site, channel, or body of water.[42] Typically, lateral spreading is associated with liquefaction involving one or more subsurface layers near the bottom of an exposed slope. Because failures tend to propagate as block failures, it is difficult to determine where the first tension crack will form.

The Project site does not include a streambank or other open face, nor is there any historical documentation of lateral spreading at the Project site.

Settlement, Subsidence, and Expansive Soil

Loose to medium-dense unsaturated sandy soils can settle during strong seismic shaking. Liquefaction intensifies this trend. Seismically induced settlement and differential settlement as a result of liquefaction could occur at the Project site.

Expansive soils undergo volume changes associated with changes in moisture content. When wetted, expansive soils tend to swell, then shrink when dried. According to the geotechnical report prepared for the Project, near-surface soils at the Project site are moderately to highly expansive.[43]

Paleontological Resources

Paleontological resources, or fossils, are any evidence of past life, including the remains, traces, or imprints of once-living organisms that are now preserved in rocks and sediments. These provide information about the history of life on Earth and date back billions of years. According to the Society of

Vertebrate Paleontology,[44] significant paleontological resources include identifiable vertebrate fossils, large or small, as well as uncommon invertebrate, plant, and trace fossils. Fossils are nonrenewable paleontological resources that are afforded protection by federal, state, and local environmental laws and regulations. The potential of a particular area to produce a valuable paleontological resource depends on the geologic age and origin of the underlying rocks.

The natural geology of the Project area comprises Holocene- (less than 10,000 years ago) and Pleistocene-age alluvium.[45] These geologic deposits underlie artificial fill or disturbed soil in the developed areas of Menlo Park. A summary of each geologic unit is provided below.

- **Artificial Fill** – Artificial fill is a mixture of sand, silt, and gravel that is often used to prepare areas for urban development or fill in or replace low-lying areas and wetlands. Artificial fill is sourced from natural geologic deposits, then excavated, reworked, and transported to another location. Any fossils recovered from artificial fill would not constitute significant fossil records that could contribute to scientific or natural history because stratigraphic information would be lost through handling.[46] Artificial fill would, therefore, not contain significant paleontological resources. Artificial fill has no potential with respect to containing paleontological resources.
- **Holocene Fine-Grained Alluvium (Qaf)** – Holocene fine-grained alluvium is an unconsolidated, poorly sorted plastic organic clay or silty clay that is found in basins, usually at the margins of tidal marshlands. It is generally less than 15 feet thick and underlain by older deposits; in the Project area, it is underlain by Holocene and Pleistocene alluvial and basin deposits, undivided. Holocene-age (less than 10,000 years ago) deposits are considered too young to have fossilized remains of organisms (fossilization processes take place thousands or millions of years). These alluvial deposits contain vertebrate and invertebrate fossils of extant modern taxa,[47] which are generally not considered significant paleontological resources. Holocene fine-grained alluvium has low potential with respect to containing paleontological resources.
- **Holocene and Pleistocene Alluvial and Basin Deposits, Undivided (Qu)** – Holocene and Pleistocene alluvial and basin deposits, undivided, are generally not present at the ground surface.[48] Because of their age, there is some potential for them to contain paleontological resources. The University of California Museum of Paleontology (2018) has records of fossil discoveries in inland San Mateo County from Pleistocene deposits of unspecified geologic formation. These include species of moose, horse, camel, mammoth, and bison. Holocene and Pleistocene alluvial and basin deposits, undivided, have high potential with respect to containing paleontological resources.

General Plan Goals and Policies

The City's General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that would require local planning and development decisions to consider impacts related to strong seismic ground shaking, seismically related ground failure (including liquefaction), and landslides. The following City General Plan goals, policies, and programs would serve to minimize potential adverse risks associated specifically with strong seismic ground shaking, seismically related ground failure, liquefaction, and landslides: Goal LU-4, Policy LU-4.5, Goal S-1, Policy S-1.1, Policy S-1.3, Policy S-1.5, Policy S-1.7, Policy S-1.13, Policy S-1.14, Program S-1.D, and Program S-1.H.

Environmental Checklist and Discussion

The California Supreme Court concluded in its *CBIA v. BAAQMD* decision that "CEQA generally does not require an analysis of how existing environmental conditions will affect a project's future users or residents." With this ruling, CEQA no longer considers the impact of the environment on a project, such as the impact of existing seismic hazards on new project receptors, to be an impact that requires consideration under CEQA, unless the project would exacerbate an existing environmental hazard.

The Project would not change existing seismic hazards and, therefore, would not exacerbate existing hazards related to surface fault rupture and seismic ground shaking. As such, the following discussions of seismic hazards related to surface fault rupture and seismic ground shaking are provided for informational purposes only.

a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. (Not a CEQA Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-1 (pages 4.5-9 to 4.5-11) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above, no known fault crosses the Project site. The closest known fault is the Monte Vista-Shannon fault, approximately 8 miles southwest of the Project site. Therefore, the risk of surface fault rupture is low. Regardless, the Project site is in a seismically active area. Although it is unlikely, future faulting may occur in areas where active faults were not previously known to exist. However, the risk of surface fault rupture from unknown faults is considered to be low. Furthermore, the Project would comply with the requirements of the current California Building Standards Code to withstand forces associated with the maximum credible earthquake. The California Building Standards Code sets standards for excavation, grading, construction earthwork, fill embankments, foundation investigations, liquefaction potential, and soil strength loss. Furthermore, ConnectMenlo policies and programs would apply to the Project.

Policy S-1.13 requires site-specific geologic or geotechnical studies for construction in areas with potential land instability; Program S-1D requires potential geologic, seismic, and soil problems to be thoroughly investigated during the earliest stages of the design process; and Program S-1H requires a seismic risk analysis and adequate construction standards to be enforced. The Project would comply with California Building Standards Code requirements and implement the recommendations provided in the site-specific geotechnical report.

Conclusion

The physical conditions, as they relate to the exposure of people to an earthquake fault rupture, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. No further study is needed.

(ii) Strong seismic ground shaking? (Not a CEQA Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-1 (pages 4.5-9 to 4.5-11) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above under *Regional Seismicity*, the Project is in a seismically active area and surrounded by numerous faults. A list of faults of regional significance is provided in Table 3.6-1. Seismically induced ground shaking at the Project site would depend on a number of factors, as follows:

- Size of the earthquake (magnitude)
- Distance from the Project site to the fault rupture source
- Directivity (focusing of earthquake energy along the fault in the direction of the rupture)
- Subsurface conditions

Given the Project site's proximity to the Monte Vista-Shannon fault (approximately 8 miles), the North San Andreas-Peninsula fault (approximately 11 miles), and other faults that are capable of producing a large earthquake, the potential exists for a large earthquake to induce strong to very strong ground shaking at the site during the life of the Project. It is likely that the Project site will experience strong to very strong ground shaking during the life of the Project, as discussed above under *Ground Shaking*.

The Project would be designed and constructed to meet standards set forth by the California Building Standards Code. These standards are intended to reduce major structural damage and loss of life in the event of an earthquake. The seismic performance goals generally expect some property damage to be incurred in a moderate to large earthquake, but the damage would generally be reparable and not life-threatening. Furthermore, ConnectMenlo Policy S-1.13 requires site-specific geologic or geotechnical studies for construction in areas with potential land instability; Program S-1D requires potential geologic, seismic, and soil problems to be thoroughly investigated during the earliest stages of the design process; and

Program S-1H requires a seismic risk analysis and adequate construction standards to be enforced. Adherence to these recommendations would address and mitigate geologic hazards in accordance with the specifications of California Geological Survey Special Publication 117, Guidelines for Evaluating and Mitigating Seismic Hazards, and the requirements of the Seismic Hazards Mapping Act.

Conclusion

The physical conditions, as they relate to the exposure of people to strong seismic ground shaking, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. No further study needed.

(iii) Seismically related ground failure, including liquefaction? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-1 (pages 4.5-9 to 4.5-11) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above, the Project site has moderate to very high susceptibility to seismically induced liquefaction. According to data obtained from the geotechnical report, potentially liquefiable layers occur below the ground surface. Therefore, it is possible that seismically induced liquefaction could cause some loss of bearing strength, which would be exacerbated by the load exerted by the structure built on the susceptible soil. This loss of bearing strength could result in seismically induced settlement and differential settlement.

To reduce impacts from liquefiable soils, the Project would be designed and constructed to meet or exceed standards set forth by the City of Menlo Park as well as the current California Building Standards Code. Furthermore, ConnectMenlo Policy S-1.13 requires site-specific geologic or geotechnical studies for construction in areas with potential land instability; Program S-1D requires potential geologic, seismic, and soil problems to be thoroughly investigated during the earliest stages of the design process; and Program S-1H requires a seismic risk analysis and adequate construction standards to be enforced.

Conclusion

The physical conditions, as they relate to the exposure of people to seismically related ground failure, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Because the Project would comply with City of Menlo Park requirements and the California Building Standards Code, and implement recommendations provided in the site-specific geotechnical report, this impact would be ***less than significant***. No mitigation is required, and no further study is needed.

(iv) Landslides? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-1 (pages 4.5-9 to 4.5-11) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to the exposure of people to landslides, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. No substantial new information has been presented that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. As discussed above, the Project site is nearly level and not located in a zone with any potential for landslides. Project construction would not cause landslides or exacerbate existing susceptibility to landslides, resulting in ***no impact***. No further study is needed.

b. Result in substantial soil erosion or the loss of topsoil? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-2 (page 4.5-11) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

Construction. Soils at the Project site are Urban land-Orthents, meaning that they are not native topsoil. Removing them for construction would not result in a loss of topsoil. Soils at the Project site are not rated for erosion. Construction of the Project would include demolition, excavation, and grading, which could result in accelerated erosion during construction. Excavation would generate approximately 6,350 cubic yards of excavated material. The removal of concrete and asphalt would expose previously sheltered soils to the elements as well as construction activities on the site, which could accelerate erosion rates. However, as described in Section X, *Hydrology and Water Quality*, all construction activities would comply with the NPDES Construction General Permit, which contains standards to ensure that water quality is not degraded. As part of this permit, standard erosion control measures and best management practices (BMPs) would be identified in a SWPPP and implemented during construction to reduce sedimentation in waterways and any loss of topsoil. The SWPPP and BMPs would minimize erosion and runoff during construction. These BMPs could include, but would not be limited to, using drainage swales or lined ditches to control stormwater flow and protecting storm drain inlets (with gravel bags or catch basin inserts).

Operation. The Project would reduce the impervious area at the Project site from 431,697 square feet to 393,155 square feet. To manage potential erosion, the Project would comply with the NPDES General Construction Permit, San Francisco Bay Municipal Separate Storm Sewer System Permit Provision C.3, and San Mateo Countywide Water Pollution Prevention Program C.3 Stormwater Technical Guidance. In addition, the Project would implement a SWPPP, stormwater biotreatment areas, and other erosion measures.

Conclusion

The physical conditions, as they relate to soil erosion or loss of topsoil, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would result in ***less-than-significant*** impacts related to soil erosion and loss of topsoil; mitigation measures would not be required for construction or operation of the Project. No further study is needed.

c. Be located on a geologic unit or soil that is unstable or that would become unstable as a result of the project and potentially result in an onsite or offsite landslide, lateral spreading, subsidence, liquefaction, or collapse? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-3 (pages 4.5-12 to 4.5-13) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As stated above, groundwater at the Project site is relatively shallow (encountered at a depth of approximately 10.5 feet below the ground surface). Therefore, excavation deeper than 10.5 feet is likely to encounter groundwater and require dewatering to avoid substantial water inflow at the excavation during construction. Excavation is anticipated not to exceed 7 feet below the ground surface. Therefore, the likelihood of encountering groundwater is relatively minor. However, because groundwater levels can vary, depending on season, weather, and nearby landscaping practices, it is possible that groundwater could be encountered at levels higher than the maximum depth of excavation. If this should occur, dewatering would be required. Dewatering could result in settlement beneath adjacent structures, including buildings, sidewalks, streets, and utilities. In addition, during Project operation, groundwater could exert hydrostatic pressure on subsurface parking or basement levels; permanent dewatering could be required to relieve this pressure. Section X, *Hydrology and Water Quality*, discusses water quality requirements for dewatering.

There is no historical documentation of lateral spreading at the Project site. Furthermore, the Project would be constructed on a vacant parcel that does not include a streambank or open face. Therefore, the risk of lateral spreading is low. Settlement as a result of liquefaction is anticipated to be up to 1 inch, and because the liquefiable layers below ground surface are discontinuous, differential settlement is anticipated to be up to 1 inch over 30 feet during an earthquake.[49] Static settlement as a result of consolidation is anticipated to be approximately 0.5 to 1.25 inch, and differential settlement between adjacent footings, typically 20 feet apart, is anticipated not to exceed 0.5 inch.[50]

To reduce impacts from groundwater and weak soils, the Project would be designed and constructed to meet or exceed standards set forth by the City of Menlo Park as well as the current California Building Standards Code. Furthermore, ConnectMenlo Policy S-1.13 requires site-specific geologic or geotechnical studies for construction in areas with potential land instability;

[49] Langan Engineering and Environmental Services, Inc. 2019. *Geotechnical Investigation Commonwealth – Building 3.* Menlo Park, CA. Prepared for The Sobrato Organization, Cupertino, CA.

[50] Ibid.

Program S-1D requires potential geologic, seismic, and soil problems to be thoroughly investigated during the earliest stages of the design process; and Program S-1H requires a seismic risk analysis and adequate construction standards to be enforced.

Conclusion

The physical conditions, as they relate to unstable geologic units or soil, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Because the Project would comply with City of Menlo Park requirements and the California Building Standards Code, and implement recommendations provided in the site-specific geotechnical report, this impact would be ***less than significant***. No further study is needed.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994),[51] creating substantial direct or indirect risks to life or property? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-4 (page 4.5-13) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As stated above, moderately to highly expansive soil occurs at the Project site. Structures and flatwork supported on expansive soil could experience cyclic seasonal heave and settlement as the soil expands and contracts through wetting and drying cycles. If structures are not properly designed, the cyclic expansion and contraction can undermine structural stability. To reduce impacts from expansive soils, the Project would be designed and constructed to meet or exceed standards set forth by the City of Menlo Park as well as the current California Building Standards Code. Furthermore, ConnectMenlo Policy S-1.13 requires site-specific geologic or geotechnical studies for construction in areas with potential land instability; Program S-1D requires potential geologic, seismic, and soil problems to be thoroughly investigated during the earliest stages of the design process; and Program S-1H requires a seismic risk analysis and adequate construction standards to be enforced.

Conclusion

The physical conditions, as they relate to expansive soils, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Because the Project would comply with City of Menlo Park grading requirements and California Building Standards Code requirements, and implement recommendations provided in the site-specific geotechnical report, this impact would be ***less than significant***. No further study is needed.

[51] Note that the CEQA Guidelines specifically reference this version of the Uniform Building Code.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems in areas where sewers are not available for the disposal of wastewater? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact GEO-5 (pages 4.5-13 to 4.5-14) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to septic tanks, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would not require the use of septic tanks or alternative wastewater disposal systems. Wastewater would be discharged into the existing public sanitary sewer system in the study area, which is serviced by the West Bay Sanitary District and Silicon Valley Clean Water. The West Bay Sanitary District provides and maintains the sanitary sewer system in Menlo Park; wastewater is conveyed to an advanced two-stage biological treatment facility operated by Silicon Valley Clean Water prior to discharge to San Francisco Bay. Therefore, the Project would result in ***no impacts*** related to septic tanks. No further study is needed.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was discussed in the ConnectMenlo EIR as Impact CULT-3 (pages 4.4-18 to 4.4-20) and determined to be less than significant with implementation of Mitigation Measure CULT-3. This mitigation measure would temporarily halt ground-disturbing activities if unique paleontological resources are discovered.

Project-Specific Discussion

Project excavation would extend through the Holocene fine-grained alluvium deposit and into the Holocene and Pleistocene alluvial and basin deposits, undivided, up to a depth of 7 feet. The Holocene and Pleistocene alluvial and basin deposits, undivided, as discussed above, are sensitive with respect to paleontological resources. In areas where excavation would disturb deposits that are sensitive for paleontological resources, the potential exists for disturbance, damage, or the loss of paleontological resources.

The Project would incorporate ConnectMenlo EIR Mitigation Measure CULT-3 as a component of the Conditional Development Permit for the Project. In the event that fossils or fossil-bearing deposits are discovered during ground-disturbing activities anywhere in Menlo Park, excavations within a 50-foot radius of the find shall be temporarily halted or diverted. Ground disturbance work shall cease until a City-approved qualified paleontologist determines whether the resource requires further study.

Conclusion

The physical conditions, as they relate to paleontological resources, have not changed in the ConnectMenlo study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Conditional Development Permit for the Project would incorporate Mitigation Measure CULT-3, which would require any ground disturbance to be halted or diverted if fossils or fossil-bearing deposits are discovered during ground-disturbing activities. Therefore, the Project's impact on paleontological resources would be ***less than significant***. No further study is needed.

[page intentionally left blank]

VIII. Greenhouse Gas Emissions	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐	☐
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐	☐

Setting

As discussed in more detail below, this topic will be analyzed further in the Focused EIR for the Project. Therefore, the setting is not discussed in this document but will be provided instead in the Focused EIR.

General Plan Goals and Policies

General Plan goals and policies related to greenhouse gases will be outlined and discussed in the Focused EIR.

Environmental Checklist and Discussion

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (pages 4.6.28 through 4.6-35) and determined to result in significant and unavoidable impacts, despite the implementation of mitigation measures.

Conclusion

Although the physical conditions have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR, there are aspects of the Project that were not evaluated in the ConnectMenlo EIR. Specifically, the trips generated by the Project may not be consistent with, and could be greater than, what was evaluated in the ConnectMenlo EIR. Therefore, impacts could result that were not previously disclosed. This topic requires ***further environmental review*** in the Focused EIR.

b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (pages 4.6.36 through 4.6-45) and determined to result in significant and unavoidable impacts, despite the implementation of mitigation measures.

Conclusion

Although the physical conditions have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR, there are aspects of the Project that were not evaluated in the ConnectMenlo EIR. Specifically, the trips generated by the Project may not be consistent with, and could be greater than, what was evaluated in the ConnectMenlo EIR. Therefore, impacts could result that were not previously disclosed. This topic requires ***further environmental review*** in the Focused EIR.

IX. Hazards and Hazardous Materials	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Create a significant hazard for the public or environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒	☐
b) Create a significant hazard for the public or environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒	☐
c) Emit hazardous emissions or involve handling hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school?	☐	☐	☐	☒	☐
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard for the public or the environment?	☐	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☐	☒

Setting

Hazardous Materials

A hazardous material is any substance that, because of its quantity, concentration, or physical or chemical properties, may pose a hazard to human health and the environment. Under California Code of Regulations (CCR) Title 22, the term "hazardous substance" refers to both hazardous materials and hazardous wastes. Both of these are classified according to four properties: (1) toxicity, (2) ignitability, (3) corrosiveness, and (4) reactivity (CCR Title 22, Chapter 11, Article 3). A hazardous material is defined in CCR Title 22 as:

> [a] substance, or combination of substances, that, because of its quantity, concentration, or physical, chemical, or infectious characteristics may either (1) cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness or (2) pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported, or disposed of or otherwise managed (CCR Title 22 Section 66260.10).

Exposure to hazardous materials in various forms can cause death, serious injury, long-lasting health effects, or damage to buildings, homes, and other property. Hazards to human health and the environment can occur during production, storage, transport, use, or disposal of hazardous materials.

A Phase I Environmental Site Assessment was performed for the Project by PES Environmental, Inc.[52] According to its review of the property, the lot where the Project site is located was formerly three separate parcels (151 Commonwealth Drive, 164 Jefferson Drive, and a railroad easement) that were combined to make one property with two addresses, 162 and 164 Jefferson Drive. The former 151 Commonwealth Drive property was undeveloped or in agricultural use until a distillery and portions of a tank farm were constructed in the late 1950s. In the 1970s, the main building and tank farm were expanded. The buildings remained unchanged until all buildings were removed in 2015. The former 164 Jefferson Drive property was undeveloped or in agricultural use until sometime between 1902 and 1943 when trees for an unidentified use were planted. The trees were removed by 1958, and in 1975, a building for multi-tenant commercial use was constructed. This building was also removed in 2015. An industrial spur railroad line was constructed on the former railroad easement in 1957. The line appears to have been unused after the 1990s; the tracks were removed at an unknown date. Current buildings at the Project site were constructed in 2015, along with surrounding parking lots.

Current conditions indicate that two pad-mounted electrical transformers are located at the Project site.[53] At the time of the site inspection, they were not observed to be leaking, and no staining was observed in the vicinity of the transformers. No fluorescent light fixtures were observed in the buildings, and no review for asbestos-containing materials (ACMs) was conducted. However, based on the date of construction of buildings at the site (2015), the likelihood of ACMs being present at the property is very low. Surveys indicate that radon levels are most likely below the U.S. Environmental Protection Agency (EPA) action level. No review for lead-based paint (LBP) was conducted; however, based on the date of construction of buildings at the site, the likelihood of LBP being present at the property is very low. No concerns were identified regarding the disposal of solid waste. No hazardous material use and storage was observed at the site. No evidence of historical or current underground storage tanks (USTs) was observed during the site inspection. Two above-ground storage tanks (ASTs) associated with the two

[52] PES Environmental, Inc. 2019. *Phase I Environmental Site Assessment, 162 and 164 Jefferson Avenue, Menlo Park, California*. Prepared for The Sobrato Organization, Mountain View, CA. February.

[53] Ibid.

site generators were observed. No leaking or staining was observed, however, at the time of site inspection. Four spill kits were located next to each AST. Two backup generators were observed at the property, each attached to an AST, as described previously. The generators were in excellent condition at the time of inspection.

A review of regulatory agency databases revealed a historical recognized environmental condition (HREC)[54] and two controlled recognized environmental conditions (CRECs)[55] at the Project site.[56]

- The HREC is a result of a Chemlawn spill at the former 164 Jefferson Drive property, prior to the company vacating the property. The spill occurred at an interior mixing tank. Chemlawn removed the concrete where the spill occurred, sampled the soil beneath the concrete, and repoured the slab. The case was closed by the San Mateo County Environmental Health Department (SMCEHD) in 1996.
- One of the CRECs is associated with petroleum hydrocarbon–contaminated soil associated with a former UST (removed in 1988). The contaminated soil remains in place. However, because it is beneath a recently poured parking lot along the northeastern property boundary, there is no significant environmental concern as long as the contaminants are not further disturbed before they degrade naturally.
- The other CREC is related to volatile organic compound (VOC) concentrations that were above regulatory limits. The VOCs were identified in groundwater beneath the northern corner of the property in the 1990s; soil gas was identified in the same vicinity in 2011. Current VOC concentrations are unknown, and the source has not been identified. However, the VOCs in the soil gas appear to be limited in extent, in an area approximately 250 feet from the existing buildings.

Several properties within a 0.5-mile search radius are recorded in environmental databases as having reported releases of hazardous materials or documented environmental contamination. However, given their location and/or current contamination conditions, none of these sites has the potential to adversely affect the Project site.[57]

Table 3.9-1 shows only the upgradient properties, including address, distance from Project site, direction from Project site, database, and, where available, notes about the release.

[54] A historical recognized environmental condition is a past release of hazardous substances or petroleum products that occurred in connection with a property but has been addressed to the satisfaction of the applicable regulatory authority, or meets the unrestricted use criteria established by the regulatory authority, without subjecting the property to any required controls.

[55] A controlled recognized environmental condition is the presence or likely presence of any hazardous substance or petroleum product in, on, or at a property that has been released to the environment; appears to have been released to the environment because of indicative conditions; or may pose a material threat of future release to the environment but has been addressed to the satisfaction of the applicable regulatory authority, with the substance allowed to remain in place subject to implementation of required controls (e.g., property use restrictions, activity/use limitations, institutional controls, or engineering controls).

Source: PES Environmental, Inc., 2019.
LUST = leaking underground storage tank

In addition to the database review, soil and groundwater samples were tested in 1987, prior to development of the current Phase I Environmental Site Assessment, for contaminants as due diligence for a property transfer.[58] Results indicated the presence of VOCs in groundwater collected from wells installed for the purpose of testing, although no use of VOCs had been recorded on the property, as discussed above. The upgradient source of contamination has not been identified. Furthermore, as discussed above, at the Commonwealth property, residual petroleum hydrocarbon–affected soil was identified in an excavation for a 10,000-gallon UST that was used to store diesel at the site. When the regulatory case was closed in 2011, it was estimated that approximately 150 cubic yards of petroleum hydrocarbon–affected soil remained in the subsurface around the former UST location; this soil could be encountered during future site demolition and/or grading activities. Site closure activities in 2011 emptied the subsurface spill containment tank, then left the tank and associated tanks and infrastructure in place. The SMCEHD issued a "no further action" determination on November 8, 2011, while noting that changes in the use of the site may require further site characterization and mitigation.

Proximity to Schools

TIDE Academy is currently under construction at 150 Jefferson Drive, which is approximately 200 feet (0.04 mile) west of the Jefferson Site and 500 feet (0.09 mile) northwest of the Commonwealth Site. TIDE Academy will be part of the Sequoia Unified High School District and open in August 2019 for the 2019–2020 school year.

Proximity to Airports and Airstrips

The closest airport to the Project site, Palo Alto Airport, a general aviation field that is owned and operated by the City of Palo Alto, is approximately 3 miles from the Project site.[59] Accordingly, the Project site is not within 2 miles of an airport.

Wildland Fires

According to the California Department of Forestry and Fire Protection's (CAL FIRE's) Fire and Resource Assessment Program, the Project is within a Non-Very High Fire Hazard Severity Zone (Non-VHFHSZ) of the Local Responsibility Area.[60] Therefore, the risk of wildfire at the Project site is very low.

General Plan Goals and Policies

The City General Plan (specifically the Land Use Element, Safety Element, and Circulation Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts related hazardous materials. The following City General Plan goals, policies, and programs would serve to minimize potential adverse risks associated with the routine transport, use, or disposal of hazardous materials: Goal LU-4, Policy LU-4.5, Policy LU-7.7, Goal S-1, Policy S-1.1, Policy S-1.3, Policy S-1.5, Policy S-1.5, Policy S-1.16, Policy S-1.18, Policy S-1.29, Policy S-1.30, Program S-1.J, and Policy CIRC-2.14.

Environmental Checklist and Discussion

a. Create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-1 (pages 4.7-18 to 4.7-21) and determined to result in a less-than-significant impact because future development, as part of the City's project approval process, would be required to comply with existing regulations, including City General Plan policies, that have been prepared to minimize impacts related to hazardous materials. No mitigation measures were recommended.

Project-Specific Discussion

Construction. The Project involves adding an approximately 249,500 gsf office building and an approximately 324,000 gsf parking structure to the existing buildings at the Project site. The Project proposes removal of dirt and trees and construction of the described office building and parking structure. In addition, the Project would convert an existing surface parking lot to a community park that would be privately owned but publicly accessible. Project construction would involve the routine transport, use, and disposal of hazardous materials, such as fuel, solvents, paints, oils, grease, and caulking, and comply with applicable regulations. Project construction would not involve the use of substances listed in 40 Code of Federal Regulations (CFR) 355, Appendix A, Extremely Hazardous Substances and Their Threshold Planning Quantities. Although small amounts of solvents, paints, oils, grease, and caulking would be transported, used, and disposed of during Project construction, these materials are commonly used in construction projects and not considered acutely hazardous. Therefore, they would not represent the transport, use, or disposal of acutely hazardous materials.

As documented above, contaminated soil is known to exist below the surface of the parking lot; therefore, the transport of spoils may result in the transport of hazardous materials in the form of soil contaminated with petroleum hydrocarbons. However, construction activity that disturbs 1 acre or more must obtain coverage under the state's Construction General Permit. Construction General Permit applicants are required to prepare a SWPPP and implement and maintain BMPs to avoid adverse construction-related effects (including hazardous materials releases) on the surrounding environment. Furthermore, hazardous materials would be required to be transported under California Department of Transportation (Caltrans) regulations. Because compliance with existing regulations is mandatory, the Project is not expected to create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials.

Operation. The Project would use hazardous materials that are typical of office use (e.g., cleaning products, building maintenance products, diesel fuel for the emergency generator, fertilizers, and pesticides used in landscaping). However, none of these products is expected to be generated or stored in large quantities. Any transport of these materials would be subject to Caltrans regulations. Furthermore, the SMCEHD regulates hazardous materials under its Certified Unified Program Agency (CUPA) and related Unified Programs, which are enforced by the Menlo Park Fire Protection District.

As shown in Table 3.9-1, above, the Project site is within 0.5 mile of upgradient sites with known hazardous materials releases. However, the site-specific Phase I Environmental Site Assessment analysis concluded that none of these sites posed a risk for the Project site.

Conclusion

The physical conditions, as they relate to transport, use, or disposal of hazardous materials, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Because compliance with existing regulations is mandatory, the Project is not expected to create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials. The impact during construction and operation would be ***less than significant,*** and no further study is needed.

b. Create a significant hazard for the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-2 (pages 4.7-21 to 4.7-23) and determined to result in a less-than-significant impact because future development, as part of the City's project approval process, would be required to comply with existing regulations, including City General Plan policies that have been prepared to minimize impacts related to accidents and spills of hazardous materials. No mitigation measures were recommended.

Project-Specific Discussion

Construction. As mentioned above under Topic IX(a), construction-related hazardous materials would be used during construction of the Project, including fuel, solvents, paints, oils, grease, etc., and would not include substances listed in 40 CFR 355, Appendix A, Extremely Hazardous Substances and Their Threshold Planning Quantities. It is possible that any of these substances could be released during construction activities. However, compliance with federal, state, and local regulations, in combination with temporary construction BMPs (as part of the Construction General Permit requirements), would ensure that all hazardous materials would be used, stored, and disposed properly, which would minimize potential impacts related to a hazardous materials release during construction of the Project. No releases are anticipated from excavation because no contamination has been identified at the Project site.

Operation. As mentioned above, the Project would use hazardous materials that are typical of office use (e.g., cleaning products, building maintenance products, fertilizers and pesticides used in landscaping). It is possible that any of these materials could be released into the environment. SMCEHD regulates waste generated by biotechnology through its Medical Waste Program and other hazardous materials through its Hazardous Materials Business Plan Program. Both programs regulate the use, storage, and disposal of their respective materials. Enforcement is overseen by the Menlo Park Fire Protection District. Compliance with federal, state, and local regulations would ensure that all hazardous materials would be used, stored, and disposed properly, which would minimize potential impacts related to a hazardous materials release during Project operation.

Conclusion

The physical conditions, as they relate to transport, use, or disposal of hazardous materials, have not changed substantially in the ConnectMenlo EIR study area since the preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would not result in an accidental release of hazardous materials during construction or operation. Therefore, the impact would be ***less than significant*** and no further study is needed.

c. Emit hazardous emissions or involve handling hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-3 (pages 4.7-23 to 4.7-24) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As described above, TIDE Academy is approximately 0.04 mile west of the Jefferson Site and 0.09 mile northwest of the Commonwealth Site. This school, which is part of the Sequoia Union High School District, will be operational in August 2019.

Construction. Although the Project would involve hazardous materials that are typical of a construction project, the Project would comply with federal, state, and local regulations. In addition, any potential construction-related hazardous releases would be from commonly used materials, such as fuels, solvents, and paints, and would not include substances listed in 40 CFR 355, Appendix A, Extremely Hazardous Substances and Their Threshold Planning Quantities. Any such spills would be localized and immediately contained and cleaned in accordance with the requirements of the Project-specific SWPPP.

Operation. As discussed above, it is anticipated that the Project would use hazardous materials typical of office use (e.g., cleaning products, building maintenance products, fertilizers and pesticides used in landscaping). Use, storage, and disposal would be regulated by the SMCEHD and the Menlo Park Fire Protection District. Compliance with federal, state, and local regulations would ensure that all hazardous materials would be used, stored, and disposed of properly, which would minimize potential impacts related to a hazardous materials release during Project operation.

Conclusion

The physical conditions, as they relate to hazards near schools, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would comply with all federal, state, and local regulations. The impact on schools due to hazardous substances would be ***less than significant***. No further study is needed.

d. Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard for the public or the environment? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-4 (pages 4.7-24 to 4.7-26). It was determined that future development could occur on sites with known hazardous materials and, as a result, create a significant hazard for the public or the environment, resulting in a potentially significant impact. The ConnectMenlo EIR found that implementation of Mitigation Measures HAZ-4a and HAZ-4b, together with compliance with applicable laws and regulations regarding cleanup and reuse of a listed hazardous material site, would ensure that impacts with respect to development on sites with known hazardous materials would be less than significant.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. As explained above, the Project site is not on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Therefore, no mitigation is required to contain potential releases of hazardous materials present at such sites during Project construction. There would be ***no impact,*** and no further study is needed.

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, result in a safety hazard or excessive noise for people residing or working in the project area? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-5 (page 4.7-27) and determined to result in no impact because the study area would not be subject to any airport safety hazards, and implementation of ConnectMenlo would not have an adverse effect on aviation safety or flight patterns. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to hazards associated with an airport, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project is not within 2 miles of an airport. Accordingly, the Project would not be subject to restrictions related to airport safety hazards. There would be ***no impact***, and no further study is needed.

f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-7 (pages 4.7-27 to 4.7-29) and determined to result in a less-than-significant impact. The ConnectMenlo EIR found that future development, as part of the City's project approval process, would be required to comply with existing regulations. No mitigation measures were recommended.

Project-Specific Discussion

The Project would construct a new structure on a lot that currently contains other structures. Emergency access to the Project site would be provided from Commonwealth Drive and Jefferson Drive. Emergency vehicles would enter the site at Commonwealth Drive, then continue along the northern portion of the site, adjacent to the proposed building. Emergency vehicles would travel around the building and exit at Jefferson Drive. Fire access to the proposed parking structure would be at both the northern and southern ends of the site. The Project would comply with Safety Element Policy S-1.29, which requires that high-occupancy structures provide adequate access and clearance for fire equipment, fire suppression personnel, and evacuation.

Conclusion

The physical conditions, as they relate to impacts to emergency response and emergency evacuation, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would not conflict with an adopted emergency response or evacuation plan, resulting in a ***less-than-significant*** impact. No further study is needed.

g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HAZ-8 (pages 4.7-29 to 4.7-30) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to wildfire hazards, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project site and surrounding vicinity are generally developed; areas that are not developed are generally marshland. As discussed above, the Project site is within a Non-VHFHSZ of the Local Responsibility Area.[61] Accordingly, implementation of the Project would not result, either directly or indirectly, in the exposure of people or structures to significant loss, injury, or death involving wildland fires. There would be ***no impact***, and no further study is needed.

[61] California Department of Forestry and Fire. 2008. *San Mateo County FHSZ Map: Local Responsibility Area.* Available: http://frap.fire.ca.gov/webdata/maps/san_mateo/fhszl_map.41.pdf. Accessed: March 30, 2018.

X. Hydrology and Water Quality	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface water or groundwater quality?	☐	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would:					
(i) Result in substantial erosion or siltation onsite or offsite;	☐	☐	☐	☒	☐
(ii) Substantially increase the rate or amount of surface runoff in a manner that would result in flooding onsite or offsite;	☐	☐	☐	☒	☐
(iii) Create or contribute water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☐	☒	☐
iv) Impede or redirect floodflows?	☐	☐	☐	☒	☐
d) In a flood hazard, tsunami, or seiche zone, risk release of pollutants due to project inundation?	☐	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☐	☒	☐

Setting

Surface Hydrology

The Project site is within the alluvial fan of the lower San Francisquito Creek watershed. The headwaters of the watershed are in the Santa Cruz Mountains, above Menlo Park; these waters eventually flow into southwest San Francisco Bay. Tidal mudflats and marshes in the Bay, the Refuge, Ravenswood Slough, and the salt ponds (some of which are within the Refuge) are across Bayfront Expressway and to the north. The Project site is less than 1 mile inland from the Refuge and Lower San Francisco Bay. Water typically flows from southwest to northeast through natural creeks and streams as well as channelized waterways. Major surface waters in the Project vicinity include Atherton Channel (also known as Atherton Creek) to the west, Westpoint and Flood Slough to the north, Ravenswood Slough to the northeast, San Francisquito Creek to the southeast, and Lower San Francisco Bay to the north.

Atherton Channel is an alternating earthen-lined/concrete-lined channel that carries flows from the upper reaches of Atherton Creek to Westpoint Slough. Westpoint Slough is less than 1 mile north of the Project site and one of several sloughs that run through the salt ponds and salt marshes north of Bayfront Expressway. It drains into Lower San Francisco Bay. Ravenswood Slough, a wetland feature that flows into the Bay, is approximately 1 mile northeast of the Project site. Levees are located throughout the salt ponds. San Francisquito Creek, approximately 2 miles southeast of the Project site, is a natural channel that flows into the Bay and serves as a boundary between San Mateo and Santa Clara Counties.

The Project site, which covers approximately 13.3 acres (578,500 square feet), is within the most northerly drainage area of Menlo Park. The Project site drains to a municipal storm drain system that outfalls to Redwood Creek and ultimately to San Francisco Bay. Currently, the total surface area of the Project site is approximately 74.6 percent impervious (approximately 431,697 square feet). The Project site includes the Commonwealth Site and the Jefferson Site, consisting of two buildings (Buildings 1 and 2, referred to by Facebook as Buildings 27 and 28), with surface parking on the Commonwealth Site and the Jefferson Site.

Currently, the site is served by a combination of existing and new onsite storm drain systems. The system collects runoff from the parking, roof, and hardscape areas and conveys it to a pump. The pump is sized to discharge water at an appropriate flow rate to biotreatment ponds for stormwater treatment. The balance of the runoff is discharged directly to Jefferson Drive from a system of pipes. Runoff is conveyed to the existing 36-inch storm drain in Jefferson Drive.[62]

Onsite drainage is captured by area drains and landscaped areas. New and mature trees, as well as landscaping, are scattered throughout the Project site. The Commonwealth Site includes a stormwater treatment area with native grasses and flowers. Directly adjacent to Jefferson Drive is a 2,800-square-foot stormwater treatment area with trees and grasses.

Water Quality

Water quality in a typical surface water body is influenced by processes and activities that take place within the watershed. The quality of the stormwater runoff from the Project site and surrounding development is typical of urban watersheds where water quality is affected primarily by discharges from both point and nonpoint sources, including winter storms, overland flows, exposed soils, roofs,

[62] Kier & Wright Civil Engineers & Surveyors. 2018. *Stormwater Report, Commonwealth Building 3, 162 & 164 Jefferson Drive Menlo Park, California.* February 28.

parking lots, and streets. Water quality in the Project vicinity is affected directly by stormwater runoff from adjacent streets and properties, which deliver fertilizers; pesticides; automobile/traffic-related pollutants (e.g., oil, grease, metals); sediment, with associated attached pollutants from soil erosion; trash; and other pollutants.

Constituents or pollutants in stormwater runoff vary with surrounding land uses, impervious surface area, and topography as well as with the intensity and frequency of rainfall or irrigation. The Project site is within in a developed area of Menlo Park, and the majority of the ground surface is covered by pavement (roads and parking lots) or structures (office and commercial buildings). Street surfaces are the primary sources of pollutants in stormwater runoff in urban areas.

Common sources of stormwater pollution in urban areas include construction sites; parking lots; large landscaped areas, with associated fertilizers and pesticides; and household and industrial sites. Grading and earthmoving activities associated with new construction can accelerate soil erosion. Grease, oil, hydrocarbons, and metals deposited by vehicles and heavy equipment can accumulate on streets and paved parking lots and be carried into storm drains by runoff. Table 3.10-1 shows 303(d)-listed impairments, known as total maximum daily loads (TMDLs), for the Lower San Francisco Bay region, based on the 2014/2016 California Integrated Report, and completed action plans to restore clean water.[63]

Table 3.10-1. Overview of Water Quality Impairments for Lower San Francisco Bay

Listed Impairments Per 2014/2016 303(d) List	Potential Sources	EPA TMDL Completion
Chlordane	Source unknown	Est. 2013[a]

Groundwater

The Project site is within the San Mateo subbasin of the larger Santa Clara Valley groundwater basin (Department of Water Resources Basin Number 2-9.03). A relatively shallow aquifer overlies confined and semi-confined aquifers near the margins of the Bay, with most wells drawing from deeper deposits. The direction of groundwater flow is generally to the east and north.

[63] State Water Resources Control Board. 2018. *2014/2016 California Integrated Report* (Clean Water Act Section 303(d) List/305(b) Report). Last updated: 2018. Available: https://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2014_2016.shtml. Accessed: March 15, 2019.

Recharge of the subbasin occurs through infiltration into streambeds as well as the infiltration of precipitation on the valley floor. Groundwater recharge increases from the hilly western to the flatter eastern portions of Menlo Park and decreases with increasing depth. Limited groundwater pumping in the basin has resulted in relatively stable groundwater levels over the past 40 years. The San Mateo subbasin is currently full; however, historical data indicate that the basin responds rapidly to increased pumping.[64] Groundwater levels in the vicinity of the Project site were estimated from pore pressure dissipation test data at depths of about 10 to 11 feet below the current grades, corresponding to elevations of 1 to 2 feet below mean sea level.[65]

In general, groundwater quality in the Santa Clara Valley groundwater basin is good. Throughout most of the basin, groundwater quality is suitable for most urban and agricultural uses, with the exception of a few local impairments. The primary constituents of concern are total dissolved solids, nitrate, boron, and organic compounds. Water from public supply wells meets state and federal drinking water standards without treatment. Although a designated beneficial use identified for the Santa Clara Valley groundwater basin includes the municipal and domestic water supply, groundwater beneath the Project site itself is not considered to be a source of drinking water because of elevated salinity levels.

One closed leaking underground storage tank (LUST) cleanup site is on the Project site, and other closed cleanup sites are within 0.5 mile of the Project site. In addition, two open cleanup sites are less than 0.5 mile northwest of the Project site. Potential contaminants of concern include arsenic, benzene, dichloroethene, diesel, gasoline, total petroleum hydrocarbons, trichloroethylene, vinyl chloride, and volatile organic compounds. Refer to Section IX, *Hazards and Hazardous Materials,* for more information on LUST cases in the Project area.

Flooding

The Project site is not within the Federal Emergency Management Agency (FEMA) 100-year floodplain (Figure 3.10-1). The majority of the Project site is within Flood Zone X (unshaded), areas of minimal flood hazard, and outside the 500-year flood zone. The northwest corner of the Project site is within Zone X (shaded), areas of moderate flood hazard; these are usually areas between the limits of the 100-year and 500-year flood. The Zone X (shaded) designation is also used for base floodplains with lesser hazards, such as 100-year levee protection, or shallow flood areas with average depths of less than 1 foot or drainage areas of less than 1 square mile. Areas within the 500-year flood-hazard area are subject to a 500-year flood, which means that, in any given year, the risk of flooding is 0.2 percent. FEMA initiated the California Coastal Analysis and Mapping Program, under which the San Francisco Bay Area Coastal Study was conducted. The data are still preliminary; therefore, this analysis considers impacts from the current effective FEMA Flood Insurance Rate Maps.

Sea-Level Rise

Projected sea-level rise, an effect of climate change, is expected to increase the number of areas that experience coastal flooding along the Bay in the future. Coastal and low-lying areas, such as the Project site, are particularly vulnerable to future sea-level rise. More specifically, sea-level rise is a concern for

[64] Stanford Water in the West. 2017. *San Mateo Plain Groundwater Subbasin: A Local Case Study.* April 26.

Figure 3.10-1
FEMA Flood Zones within the Project Area

[this page left blank intentionally]

the future, particularly in combination with storm events and coastal flooding. A scenario with 100-year high tides, taking into account sea-level rise over a 50- or 100-year horizon, would dramatically increase the risk of flooding in the Project vicinity.

The Project site is in an area that is subject to future inundation as a result of sea-level rise. Sea-level rise, in combination with daily tides, could result in more substantial inundation at the upper end of the ranges for sea-level rise by mid-century and at the end of the century, ranging from 24 to 66 inches. High-tide events, combined with the effects of sea-level rise, would produce the greatest inundation and damage from flooding. The Bayfront Area is within the inundation zone with projected sea-level rise of 24 inches coupled with a 100-year storm surge. Projected 24-inch sea-level rise coupled with a 100-year storm surge would result in total sea-level rise of 66 inches, and 66-inch sea-level rise coupled with a 100-year storm surge would result in total sea-level rise of 108 inches. The area of the 66-inch sea-level rise coupled with the 100-year storm surge would increase, as would the inundation depth in the Bayfront Area.

General Plan Goals and Policies

The City General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that would require local planning and development decisions to consider impacts on hydrology and water quality. The following City General Plan goals, policies, and programs would serve to minimize potential adverse impacts related to water quality, groundwater resources, flooding, levee/dam break, sea-level rise, seiche, tsunami, and mudflows: Goal LU-4, Policy LU-4.5, Goal LU-6, Policy LU-6.11, Goal LU-7, Policy LU-7.7, Program LU-7.H, Goal OSC-5, Policy OSC-5.1, Goal S-1, Policy S-1.5, Policy S-1.10, Program S-1.10, Program S-1.D, Policy S-23, Policy S-1.26, Policy S-1.27, and Policy S-1.28.

Environmental Checklist and Discussion

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface water or groundwater quality? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-1 (pages 4.8-27 to 4.8-29) and determined to have a less-than-significant impact on water quality because of compliance with existing federal, state, and local regulations, including City General Plan goals, policies, and design standards. No mitigation measures were recommended. In addition, this topic was also analyzed in the ConnectMenlo EIR as Impact HYDRO-6 (page 4.8-35) and determined to have a less-than-significant impact on water quality through compliance with existing federal, state, and local regulations as well as City General Plan policies that minimize impacts related to water supply. No mitigation measures were recommended.

Project-Specific Discussion

Construction. Project construction would have the potential to temporary increase sediment loads in Lower San Francisco Bay and affect surface water quality. Other pollutants, such as nutrients, trace metals, and hydrocarbons, can attach to sediment and be transported to downstream locations; they can also degrade water quality. However, the Project would be required to comply with existing federal, state, and local regulations, including City General Plan goals, policies, and design standards.

A Project SWPPP would be developed and implemented in compliance with the Construction General Permit, local stormwater ordinances, and other related requirements. Construction BMPs for the Project would control and prevent the discharge of pollutants, including waste from pavement cutting, paint, concrete, petroleum products, chemicals, wastewater, sediments, and non-stormwater discharges, to storm drains and watercourses. In addition, construction materials and wastes would be stored, handled, and disposed of properly to prevent contact with stormwater. Earthmoving and clearing activities would be performed during dry weather only to minimize any mobilization of sediment. Temporary erosion controls would be implemented to stabilize disturbed areas until permanent erosion controls are established.

Project excavation depths would vary from 3 to 7 feet below mean sea level. Construction dewatering in areas with shallow groundwater could be required during soil excavation and tree removal. Because contaminated sites are within 0.5 mile of the Project site, groundwater may have been contaminated by other properties. Therefore, impacts related to groundwater contamination are considered potentially significant and will require mitigation to protect human health and the environment. Coverage under the Construction General Permit typically includes dewatering activities, as authorized non-stormwater discharges, provided that dischargers prove that the quality of the water is adequate and not likely to affect beneficial uses. Because groundwater at the site may be contaminated, the San Francisco Bay RWQCB would need to be notified if dewatering occurs. Furthermore, the contractor may be subject to dewatering requirements in addition to the requirements outlined in the Construction General Permit, including discharge sampling and reporting.

Construction activities could result in short-term surface and groundwater quality impacts, such as sediment loads that exceed water quality objectives or chemical spills that flow into storm drains or groundwater aquifers, if proper minimization measures are not implemented. However, a Project SWPPP would be developed and implemented in compliance with the Construction General Permit, local stormwater ordinances, and other related requirements. Because dewatering may involve potentially contaminated groundwater, construction dewatering treatment would be implemented, if necessary. Dewatering treatment would be necessary if groundwater is encountered during excavation, if dewatering is necessary to complete the Project, or if the water produced during dewatering is discharged to any storm drain or surface water body.

If dewatering activities require discharges to the storm drain system or other water bodies, the water shall be pumped to a tank and tested for water quality using grab samples and sent to a certified laboratory for analysis. If it is found that the water does not meet water quality standards, it shall either be treated as necessary prior to discharge so that all applicable water quality objectives (as noted in the San Francisco Bay Basin (Region 2) Water Quality Control Plan [Basin Plan]) are met or hauled offsite instead for treatment and disposal at an appropriate waste treatment facility that is permitted to receive such water. Water treatment methods shall be selected that remove the maximum amount of contaminants from the groundwater and represent the best available technology that is economically achievable. Implemented methods may include the retention of dewatering effluent until particulate matter has settled before it is discharged, the use of infiltration areas, filtration, or other means. The contractor shall perform routine inspections of the construction area to verify that the water quality control measures are properly implemented and maintained, conduct visual observations of the water (i.e., check for odors, discoloration, an oily sheen on groundwater), and perform other sampling and reporting activities prior to discharge. The final selection of water quality control measures shall be submitted in a report to the San Francisco Bay RWQCB for approval prior to construction. If the results from the

groundwater laboratory do not meet water quality standards and the identified water treatment measures cannot ensure that treatment meets all standards for receiving water quality, then the water shall be hauled offsite instead for treatment and disposal at an appropriate waste treatment facility that is permitted to receive such water.

Operation. The Project would include a four-story office building (Building 3), a four-story parking structure, surface level parking, and a new open space area. Implementation of the Project would reduce the amount of total impervious surfaces by approximately 38,542 square feet. Paved areas would cover approximately 393,155 square feet of impervious surfaces, or approximately 68 percent of the Project site. Hardscape at the Project site would include concrete paving, decomposed granite paving, and concrete pavers. Landscaped areas would provide 185,297 square feet of pervious surfaces, covering approximately 32 percent of the Project site.

Operation of new facilities could increase levels of pollutants (e.g., trash, oil, grease, pesticides) and introduce those pollutants into storm drains. Because the Project would create and replace more than 10,000 square feet of impervious surface, the Project would be regulated by Provision C.3 of the Municipal Regional Permit. To meet San Mateo Countywide Water Pollution Prevention Program C.3 stormwater requirements, the Project would be required to treat runoff from all impervious areas. Stormwater treatment areas would be located around the northern, eastern, and southern borders of the Project site to limit stormwater runoff. These biotreatment areas would be open, level vegetated areas that would allow runoff to be distributed evenly across the area. They would be designed to treat runoff by filtering raw runoff through the soil media in the treatment area. Biotreatment areas would trap particulate pollutants (suspended solids and trace metals) and promote infiltration. In addition, the existing stormwater treatment areas on the Commonwealth Site and directly adjacent to Jefferson Drive would remain.

The Project site would be drained by a combination of existing and new onsite storm drain system facilities. The system would ultimately convey runoff to biotreatment ponds for stormwater treatment to capture and treat runoff from the newly created or replaced impervious area. The new development would have a larger landscaped area, which would result in a net decrease in the amount of runoff leaving the site. The Project Sponsor would be required develop and implement a final Stormwater Management Plan (SWMP), with the goal of reducing the discharge of pollutants to the maximum extent practicable.

Routine maintenance activities would be implemented for the biotreatment pond to prevent sediment buildup and clogging, which reduce pollutant removal efficiency and can lead to biotreatment area failure. Maintenance tasks would include inspecting the biotreatment area to ensure proper drainage between storms and removing obstructions, debris, and trash from the biotreatment area. Further, the Project Sponsor would be required to enter into a Stormwater Operations and Maintenance Agreement with the City for maintenance of the stormwater treatment facilities. In addition, the Project would implement BMPs, both during and after construction, to minimize or prevent pollutant discharges and runoff. The Project would comply with the General Construction Permit; San Francisco Bay Municipal Separate Storm Sewer System Permit, Provision C.3; and San Mateo Countywide Water Pollution Prevention Program C.3 Stormwater Technical Guidance; and would implement a SWPPP and other erosion and pollution control measures.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Project implementation, including the construction of new buildings and associated changes in development intensities as a result of the Project, would not result in adverse effects on water quality. Construction and operational impacts on water quality would be ***less than significant***, and no further study is needed.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-2 (pages 4.8-30 to 4.8-32) and determined to have a less-than-significant impact on groundwater supply and/or recharge through compliance with existing federal, state, and local regulations, including City General Plan policies. No mitigation measures were recommended.

Project-Specific Discussion

Implementation of the Project would reduce the amount of impervious surfaces. Landscaped areas would provide 185,297 square feet of pervious surfaces (32 percent of the Project site). Landscaping would be provided around the perimeter of Building 3 and the parking structure as well as along the western and southern edges of the Project site. Public open space would be landscaped with trees and native vegetation. Biotreatment areas would be open, level vegetated areas that would allow runoff to be distributed evenly across the area, allowing runoff to infiltrate the soil media in the treatment area. In addition, the existing stormwater treatment area on the Commonwealth Site, which contains native grasses and flowers, and the existing 2,800-square foot stormwater treatment area directly adjacent to Jefferson Drive, which contains trees and grasses, would remain. These landscape features would allow groundwater recharge and increase recharge capabilities within the Project site. Therefore, the Project would not interfere with groundwater recharge.

Although dewatering may be necessary during Project construction, the groundwater beneath the Project site is not used for municipal water supply purposes. Should dewatering occur, it would be conducted on a one-time or temporary basis during the construction phase and would not result in a loss of water that would deplete groundwater supplies. In addition, the water supply for construction activities (e.g., dust control, concrete mixing, material washing) would come from nearby hydrants and existing surface supplies for the site and/or be trucked to the site.

The Project would not substantially deplete groundwater supplies because it would not increase groundwater demand. New and existing landscape features and treatment facilities would collect stormwater and slowly release it at a controlled rate, allowing for increased groundwater infiltration. Trees and native grasses would stabilize native soils, and new landscaped areas would slow the flow of water, allowing it to percolate into the ground and underlying aquifers and thus provide benefits related to groundwater recharge. The Project would not impede sustainable groundwater management of the basin.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Project construction and operational impacts on groundwater supplies and recharge would be ***less than significant.*** No further study is needed.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would:

(i) Result in substantial erosion or siltation onsite or offsite? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-3 (pages 4.8-32 and 4.8-33) and determined to have a less-than-significant impact on erosion and siltation because of regulatory requirements (e.g., BMPs, erosion control plans, SWPPPs) and compliance with the City Municipal Code and City General Plan policies. No mitigation measures were recommended.

Project-Specific Discussion

Project construction activities would temporarily alter existing drainage patterns and could result in temporary onsite erosion and siltation. However, the Project would implement a SWPPP to minimize the potential for erosion and sedimentation in nearby storm drains. Preparation and implementation of the SWPPP would reduce the potential for substantial erosion or siltation onsite or offsite or a substantial increase in the rate or amount of runoff. The Project would be in compliance with existing NPDES permits and the City Municipal Code for construction and stormwater management (Chapter 7.42).

Project improvements would include a four-story building, a four-story parking structure, surface parking, landscape areas, a community park, and pedestrian paths. The Project site would be drained by a combination of existing and new onsite storm drain system facilities. The system would collect runoff from the parking, roof, and hardscape areas and convey it to a pump. The pump would be sized to discharge the water at an appropriate flow rate to biotreatment ponds for stormwater treatment. The balance of the runoff not directed to the pond would discharge directly to the existing 36-inch storm drain in Jefferson Drive from a system of pipes. Only minor onsite grade changes would be required. As a result, the proposed improvements would not alter offsite drainage patterns. New stormwater conveyance and management facilities would be designed per City drainage guidelines. Because runoff from the Project site does not flow through a hardened channel or enclosed pipe before draining into a waterway in an exempt area, the Project would not be required to incorporate hydromodification measures. In addition, construction of the Project would not involve work within surface waters and thus would not alter the course of an existing stream or river because these features do not exist onsite.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result

of the Project. The Project would be consistent with the City General Plan and comply with the City Municipal Code. The Project would not alter the existing drainage pattern of the site in a manner that would result in substantial erosion or siltation. Impacts would be ***less than significant.*** No further study is needed.

(ii) Substantially increase the rate or amount of surface runoff in a manner that would result in flooding onsite or offsite? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-4 (pages 4.8-33 and 4.8-34) and determined to have a less-than-significant impact on onsite or offsite flooding through compliance with City stormwater measures from the City Municipal Code, compliance with the C.3 provisions of the Municipal Regional Permit, and adherence to City General Plan policies. No mitigation measures were recommended.

Project-Specific Discussion

The Project site would be drained by a combination of existing and new storm drain system facilities. The system would convey runoff to a pump that would be sized to discharge the water at an appropriate flow rate to biotreatment ponds for stormwater treatment. The balance of the runoff would discharge directly to Jefferson Drive from a system of pipes. In addition, the Project would increase the amount of landscaped and pervious area compared with existing conditions, thereby reducing the amount of impervious surface areas, which would result in a net decrease in the amount of runoff and floodwater leaving the Project site.

The Project site is not within the 100-year floodplain, and there is no base flood elevation for the site. However, the building design accounts for flooding and/or sea-level rise. To meet the requirements of the Hazard Mitigation and Sea-Level Rise Resiliency requirements of the O zoning district, the building would be required to be 24 inches above the existing grade. Therefore, the first-floor elevation of the proposed Building 3 would be raised 24 inches above the existing grade to an elevation of 12.5 feet.

Because only minor onsite grade changes would be required, the anticipated improvements would not alter offsite drainage patterns so as to increase the rate or amount of surface runoff in a manner that would result in flooding onsite or offsite. In addition, the City of Menlo Park, which has adopted more stringent requirements than the C.3 provisions, specifies that post-development stormwater volumes must not exceed the pre-development volumes of projects that increase the amount of net new impervious surface, regardless of whether a project is regulated or not. Therefore, an increase in stormwater flows in the existing or planned storm drain system would not occur, and flooding during storm events would not be worsened.

Each new development or redevelopment project within Menlo Park would be required, as part of the CEQA process or entitlement process, if exempt from CEQA, to demonstrate that stormwater runoff from the site would not result in an exceedance of the capacity of the existing or future storm drain system, meaning that other developments in the area could not negatively affect storm system capacity. In addition, implementation of low-impact development design guidelines and an engineering review of drainage calculations and development plans by the Menlo Park Public Works Department would further ensure that no significant increases in peak flow rates or runoff volumes would occur. The grading and drainage plans for the Project would be reviewed by the City to ensure that onsite drainage and low-impact development features

would be adequate with respect to preventing onsite or offsite flooding. Future citywide improvements, subject to funding, include designing a storm drain system to address flooding along Middlefield Road from San Francisquito Creek to Ravenswood Avenue. These improvements may improve known and existing storm drain capacity issues near the Project site.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would not alter the existing drainage pattern of the site in a manner that would result in a substantial increase in runoff that would result in flooding. The Project would comply with the City Municipal Code and City General Plan. Impacts would be ***less than significant.*** No further study is needed.

(iii) Create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-5 (page 4.8-34) and determined to have a less-than-significant impact on stormwater drainage systems because future development would be required to provide onsite infiltration for stormwater runoff, consistent with the City General Plan and City Municipal Code. No mitigation measures were recommended.

Project-Specific Discussion

Existing development in Menlo Park, as well as new development, as part of ConnectMenlo, occurs on parcels in the Bayfront Area that have already been covered with impervious surfaces. The City has stringent stormwater requirements that exceed the C.3 provisions of the Municipal Regional Permit. For example, post-development stormwater volumes must not exceed the pre-development volumes of projects that increase the amount of net new impervious surface, regardless of whether a project is regulated or not. In addition, the Project design would include stormwater treatment facilities to treat runoff from impervious surface areas. The Project would reduce the impervious surface area and result in a net decrease in the amount of runoff and associated pollutants leaving the site. In addition, the existing stormwater treatment areas on the Commonwealth Site and the existing 2,800-square-foot stormwater treatment area directly adjacent to Jefferson Drive would remain. The Project site would include biotreatment areas throughout the site. The proposed overflow pipe at the manhole pump for each biotreatment area is a couple of feet higher than the treatment volume to prevent it from functioning until the treatment flow has been stored. Flows from all proposed impervious areas, both replaced and new areas, would be directed to a pump, which would be sized to discharge runoff to biotreatment areas for stormwater treatment.

Implementation of the biotreatment areas would meet C.3 requirements as well as City requirements. These areas would capture and treat runoff from all newly created and replaced impervious areas. Maintenance guidelines and tasks related to operation and the efficient removal

of pollutants are provided in the stormwater report.[66] The biotreatment would be open, level vegetated areas that allow runoff to be distributed evenly across the area. They are designed to treat runoff by filtering raw runoff through the soil media in the treatment area. The Project would have a larger pervious area, which would result in a net decrease in the amount of runoff and associated pollutants leaving the site. The balance of the runoff not directed to biotreatment areas would discharge to the municipal storm drain system that outfalls to Redwood Creek and ultimately San Francisco Bay. In addition, landscaped and open space areas, which would be landscaped with trees, grasses, shrubs, ground cover, and native vegetation, would filter pollutants through a substrate of sandy loam. Plant materials associated with landscaping would treat stormwater runoff through biological uptake and reduce pollutant discharges.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would not create or contribute runoff water that would exceed the capacity of stormwater drainage systems or provide additional sources of polluted runoff. The impact would be ***less than significant,*** and no further study is needed.

(iv) Impede or redirect floodflows? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact HYDRO-8 (page 4.8-38) and determined to have a less-than-significant impact with respect to flood hazards through compliance with federal and City Municipal Code requirements as well as adherence to City General Plan policies. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above, the Project site is not within a 100-year flood hazard area. The majority of the Project site is within Flood Zone X (unshaded), areas of minimal flood hazard, and outside the 500-year flood level. The northwest corner of the Project site is within Zone X (shaded), areas of moderate flood hazard; these are areas between the limits of the 100-year and 500-year flood. Because the City participates in the National Flood Insurance Program, it must ensure that the Project meets federal standards for flood protection. Chapter 12.42 of the City Municipal Code contains methods and provisions for preventing flood damage.

Although the Project site is not within the 100-year floodplain, the building would be designed to account for flooding and/or sea-level rise due to proximity to the Bay. As described above, the proposed Building 3 would be 24 inches above the existing grade, at an elevation of 12.5 feet.

Only minor onsite grade changes in disturbed soil areas would be required. However, the Project may redirect floodwaters. Biotreatment areas and landscaped areas would increase onsite infiltration and minimize the potential for overland floodflows. The Project would not impede floodflows or exacerbate the frequency or severity of flooding.

[66] Kier & Wright Civil Engineers & Surveyors. 2018. *Stormwater Report, Commonwealth Building 3, 162 & 164 Jefferson Drive Menlo Park, California.* February 28.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would comply with the City Municipal Code, City General Plan, FEMA requirements, and Engineering Division requirements, including preparation of a floodwater flow analysis. The Project would not exacerbate flooding or cause flooding to occur in areas that would not be subject to flooding without the Project. The Project would not impede or redirect floodflows offsite within a 100-year flood hazard area. Therefore, impacts would be ***less than significant,*** and no further study is needed.

d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to Project inundation? (Less than Significant)

Analysis in the ConnectMenlo EIR

The topic of inundation by tsunami or seiche was analyzed in the ConnectMenlo EIR as Impact HYDRO-10 (pages 4.8-43 and 4.8-44). It was determined that impacts on future developments related to flooding from tsunamis and seiches would be less than significant through compliance with existing regulations, including City General Plan policies. No mitigation measures were recommended.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project site is not subject to flooding from tsunami or seiche. According to the California Tsunami Inundation Map for Emergency Planning (Redwood Point Quadrangle/Palo Alto Quadrangle), the Project site is not within a tsunami inundation area.[67] However, the salt ponds adjacent to the Bay and portions of Westpoint, Flood, and Ravenswood Sloughs, approximately 1 mile north of the Project site, are within designated tsunami inundation areas.

Seiche occurs in an enclosed or partially enclosed body of water, such as a lake or reservoir. There are no large bodies of fresh water, such as reservoirs or lakes, in the Project vicinity. In addition, the Bay is a large and open body of water with no immediate risk of seiche. Large waves generated in the Pacific Ocean undergo considerable refraction and diffraction upon passing through the Golden Gate, resulting in greatly reduced heights when they reach the Project site. Therefore, there is no risk of seiche affecting the Project site, and no further analysis is required. In the event of a flood hazard, to reduce the risk of a pollutant release, the Project would comply with the requirements of local water quality programs and associated municipal stormwater-related NPDES permits (e.g., municipal separate storm sewer system permit, Municipal Regional Permit) as well as City General Plan policies to manage flood risk and water quality. Compliance with these requirements would minimize risks related to a release of pollutants due to Project inundation in a flood hazard, tsunami, or seiche zone. The Project would not release pollutants as a result of inundation by flood, tsunami, or seiche. Therefore, impacts would be ***less than significant,*** and no further study is needed.

[67] California Emergency Management Agency, University of Southern California, California Geological Survey. 2009. *Tsunamic Inundation Map for Emergency Planning*. State of California, County of San Mateo. Redwood Point Quadrangle/Palo Alto Quadrangle. June 15.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR (Section 4.8, *Hydrology*) and determined to have a less-than-significant impact with respect to conflicting with or obstructing implementation of a water quality control plan. The ConnectMenlo EIR did not analyze whether the project would conflict with or obstruct implementation of a sustainable groundwater management plan, as this is a new/revised topic for consideration. However, the ConnectMenlo EIR did conclude that development under the General Plan would result in less-than-significant impacts with respect to substantially depleting groundwater supplies or substantially interfering with groundwater recharge such that the local groundwater table would be lowered.

Project-Specific Discussion

Project implementation would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. The Project would result in an increase in pervious area, which would increase capacity for groundwater recharge and decrease the amount of pollutants leaving the Project site because of the new and existing biotreatment areas. The Project Sponsor would comply with the appropriate water quality objectives for the region. Commonly practiced BMPs would be implemented to control construction site runoff and reduce discharges of pollutants (i.e., stormwater and other nonpoint-source runoff) to storm drain systems. As part of compliance with permit requirements during ground-disturbing or construction activities, implementation of water quality control measures and BMPs would ensure that water quality standards would be achieved, including water quality objectives that protect designated beneficial uses of surface water and groundwater, as defined in the Basin Plan. The NPDES Construction General Permit also requires stormwater discharges not to contain pollutants that cause or contribute to an exceedance of any applicable water quality objectives or water quality standards, including designated beneficial uses. In addition, City General Plan policies protect groundwater recharge areas and groundwater resources, as required by a sustainable groundwater management plan. According to the ConnectMenlo General Plan, the City of Menlo Park is not required to prepare a groundwater sustainability plan, and a groundwater sustainability agency has not yet been established for the groundwater basin in San Mateo County that underlies the Project area.

Conclusion

There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR with respect to violating water quality standards or depleting groundwater supplies; therefore, there would be no new specific effects as a result of the Project. The Project would comply with the Construction General Permit, City General Plan, and surface water and groundwater quality objectives, as defined by the Basin Plan. It would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Therefore, impacts would be ***less than significant,*** and no further study is needed.

XI. Land Use and Planning	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Physically divide an established community?	☐	☐	☐	☒	☐
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒	☐

Setting

Existing Land Uses

Project Site Vicinity

The Project site is in Menlo Park, which encompasses an area of about 19 square miles, including nearly 12 square miles of San Francisco Bay and wetlands. The approximately 7-square-mile urbanized portion of Menlo Park is virtually built out. The Project site is north of US 101 in Menlo Park (as shown in Chapter 2, *Project Description,* Figure 2-1). Specifically, the site is bound by Jefferson Drive and office buildings to the north, the currently inactive Dumbarton Rail Corridor to the southeast, US 101 to the south, and an Exponent building to the west. Southeast of the Dumbarton Rail Corridor is Kelly Park. Farther north, beyond the Project site, is State Route (SR) 84, tidal mudflats and marshes along the Bay, Don Edwards San Francisco Bay National Wildlife Refuge, and Ravenswood Slough.

The Belle Haven neighborhood of Menlo Park is south of the Project site, across the Dumbarton Rail Corridor. The Belle Haven neighborhood contains a mix of uses, including churches, Menlo Park Fire Station No. 77, single-family residences, multi-family residential units, and institutional buildings. The Belle Haven neighborhood's institutional and park uses include Beechwood School, Belle Haven Elementary School, the Belle Haven Pool, Belle Haven Youth Center, Onetta Harris Community Center, Menlo Park Senior Center, the Belle Haven Branch Library, the Boys and Girls Club, Hamilton Park, and Kelly Park. The Sequoia Union High School District is constructing a new high school at 150 Jefferson Drive, which is approximately 300 feet west of the Project site. US 101 separates the Project site from residential areas to the south. However, the Project site is directly across from the Suburban Park-Lorelei Manor-Flood Park Triangle neighborhood.

Project Site

The approximately 13.3-acres Project site encompasses the Commonwealth Site (12.1-acres) and the Jefferson Site (1.2-acres). The Commonwealth Site is just south of the Jefferson Site and includes assessor's parcel numbers (APNs) 055-243-300, 055-243-310, and a portion of 055-243-999. The

Commonwealth Site encompasses Buildings 1 and 2 (Facebook Buildings 27 and 28, respectively), a bocce court, wooden deck, courtyard with café tables and chairs, and 779 surface parking spaces. Each building provides approximately 129,960 gsf of office space and is currently leased by Facebook. Buildings 1 and 2 were constructed in 2015 and would not be affected by the Project. The Jefferson Site includes a portion of APN 055-243-999 and is currently occupied by surface parking with approximately 87 parking spaces and landscaping.

Existing Land Use Designations and Zoning

The site was historically zoned General Industrial (M-2[X]), which permitted office and general industrial uses, such as warehousing, manufacturing, printing, and assembling, as well as maximum building heights in excess of 35 feet. In 2016, the site's zoning was changed to Office-Bonus (O-B) as part of ConnectMenlo. The updated zoning established standards for new projects, including Transportation Demand Management (TDM) program requirements and restrictions regarding height, density, land use, sustainability, circulation, and open space. At the base level, the maximum height and average height are 35 feet, while the maximum floor area ratio (FAR) is 45 percent. Under the new zoning standards, bonus density is permitted (up to a FAR of 100 percent for office uses with an increased height of up to 110 feet) in exchange for providing community amenities selected from a list of potential options identified through community outreach and adopted by resolution of the Menlo Park City Council.

General Plan Goals and Policies

The City's General Plan is a legal document and required by state law. It serves as the City's direction for development and land use. All development in Menlo Park must conform to the land use designations outlined in the City General Plan. Goals, policies, and programs contained in the Land Use Element of the City General Plan provide guidance on how land use designations should be developed to contribute to the overall character of Menlo Park. The following City General Plan goals and policies would serve to promote cohesive neighborhoods and ensure consistency with applicable plans: Goal LU-1, Policy LU-1.1, Goal LU-4, Policy LU-4.5, Goal LU-6, Policy LU-6.7, Policy LU-6.11, Goal CIRC-1, Policy CIRC-1.8, Goal CIRC-2, Policy CIRC-2.7, Policy CIRC-2.11, Program CIRC-2.G, Program CIRC-2.H, Policy CIRC-2.14, Goal OSC-5, Policy OCS-5.1, Goal S-1, Policy S-1.26, and Policy S-1.27.

Environmental Checklist and Discussion

a. Physically divide an established community? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact LU-1 (pages 4.9-11 to 4.9-13) and determined to be less than significant because potential improvements would not include new major roadways or other physical features through parcels or communities that would create new barriers in the study area, which includes the Project site. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above, established communities in the Project vicinity include the Belle Haven neighborhood to the east and the Suburban Park-Lorelei Manor-Flood Park Triangle neighborhood to the south. The Project site includes the existing Commonwealth Corporate Center; the Project would add buildings to a site that is already developed with an office campus. In addition, the Project site is

north of the Dumbarton Rail Corridor, in an area that is characterized by light-industrial and office uses. Although the proposed development would result in additional buildings, development would be in an area with identical uses and physically separated from nearby neighborhoods by the Dumbarton Rail Corridor and US 101. Therefore, implementation of the Project would not exacerbate existing barriers or create a new physical barrier that would divide the community.

Conclusion

The physical conditions, as they relate to the division of an established community, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. In addition, because the proposed building would be compatible with existing onsite buildings and would not add, change, or exacerbate barriers, the Project would not divide existing nearby communities, resulting in ***less-than-significant*** impacts. No further study is needed.

b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact LU-2 (pages 4.9-14 to 4.9-23) and determined to be less than significant with mitigation incorporated. Mitigation Measure LU-2 from the ConnectMenlo EIR requires that future development demonstrate consistency with the applicable goals, policies, and programs in the City General Plan and the supporting zoning standards. The analysis below demonstrates consistency with the City General Plan through implementation of Mitigation Measure LU-2.

Project-Specific Discussion

Consistency with ConnectMenlo

Adoption of ConnectMenlo resulted in updated land use designations, zoning, goals, and policies for Menlo Park. ConnectMenlo established an approach to land use that was based on an overall objective of supporting the character and quality of life enjoyed in residential and commercial neighborhoods as well as embracing opportunities for creating new live/work/play environments. ConnectMenlo was designed to encourage commercial uses that would serve existing neighborhoods, retain and attract businesses citywide, and make Menlo Park a leader in sustainable development through conservation of resources and alternative energy use.

ConnectMenlo includes nine guiding principles, listed below in bold, for maintaining and enhancing the quality of life in Menlo Park. The Project would help to support these guiding principles.

- **Citywide equity.** To develop at the bonus level, the Project would have to provide community amenities. The Project would promote citywide equity by providing community amenities selected from a list of potential options identified through community outreach and adopted by the Menlo Park City Council. These community amenities would be implemented by the Project Sponsor as part of the Project.

- **Healthy community.** The Project would recognize and promote a healthy community by implementing a TDM program that provides alternatives to single-occupancy automobile travel to and from the Project site. The Project would encourage access to public transit and bicycling as alternatives to vehicular use, which would help to reduce air pollutants. Proposed landscaping around the perimeter of the Project site, including the proposed Jefferson Park, would add to the appearance of the property, which the City considers important for a healthy community. Jefferson Park and the perimeter trail would also provide opportunities for recreation, which would promote a healthy community. The Project's sustainability features are discussed further below.

- **Competitive and innovative business destination**. The Project would develop the site with an approximately 249,500 gsf building that would be designed to attract high-tech and other employers to Menlo Park, contribute to the City's tax and job base, and provide flexible space for employers to expand. This would contribute to Menlo Park's competitive and innovative business environment.

- **Corporate contribution.** The Project would contribute to the Menlo Park by providing community amenities, as discussed above. A Project objective is to provide community benefits through the community benefits process of the O-B zoning district to benefit the Belle Haven community.

- **Youth support and education excellence**. The Project would be designed to attract high-tech and other employers to Menlo Park. This would increase the number of jobs in Menlo Park and could provide opportunities for youth employment and education through opportunities such as internships. The Jefferson Site would also include 24 parking spaces that would be reserved for use by the new high school at 150 Jefferson Drive. In addition, the proposed Jefferson Park could be used by the adjacent high school for physical education classes, providing additional youth support in the community.

- **Great transportation options.** The Project would include a TDM program that would encourage access to public transit, carpooling, and bicycling as alternatives to single-occupancy automobile travel. The TDM program would require the Project to provide safe and convenient transportation options to and from the Project site. To implement this, the TDM program would include such features as bicycle storage, showers/changing rooms, and subsidized transit passes. Carpooling and vanpool programs would also be encouraged through free ride-matching services, carpool incentive programs, vanpool formation incentives, vanpool seat subsidies, and vanpool participant rebates. Emergency ride-home programs would be offered to employees.

- **Complete neighborhoods and commercial corridors.** The Project site is not in an existing residential neighborhood or along a vibrant commercial corridor. Therefore, the Project would not affect the existing residential character of Menlo Park. The Project would construct a new office building and parking structure on an existing office campus and create a more complete facility by fully utilizing the land.

- **Accessible open space and recreation.** The Project would provide 128,533 sf of publicly accessible open space and 107,333 sf of private open space, totaling approximately 235,866 sf of open space. The private open space would be between and around Buildings 1, 2, and 3, within patios and courtyards featuring tables, chairs, a seat wall, trees, access to an existing bocce court, and outdoor balconies on the third and fourth floors of Building 3. The public open space would be in the form of a 0.2-mile-long and 20-foot-wide paseo along the eastern boundary of the Jefferson

Site; the privately owned, publicly accessible Jefferson Park; and a plaza and garden on the eastern portion of the parking structure. Final designs for Jefferson Park would be determined by the City and community feedback. The plaza would include seating areas with tables and chairs, seat walls, a large trellis, and a wooden boardwalk through an area with native plantings. Therefore, this Project would provide convenient access to new public open space areas.

- **Sustainable environmental planning.** In the O-B zoning district, projects are required to meet green and sustainable building regulations. The proposed office building would be required to meet 100 percent of its energy demand through a combination of onsite energy generation, the purchase of 100 percent renewable electricity, and/or the purchase of certified renewable energy credits. In addition, as currently proposed, Building 3 would be designed to meet LEED Gold BD+C standards. The Project would meet the City's requirements for EV charging spaces. The Project would also incorporate a bird-friendly design through its placement of the building and use of low-tint exterior glazing. Other green building requirements would be met through efficient water use, placement of new structures 24 inches above the Federal Emergency Management Agency base flood elevation to account for sea-level rise, and waste management planning. As such, the Project would promote green building and help the City continue to be a leader in sustainable environmental planning.

In addition to the above guiding principles, ConnectMenlo includes goals and policies related to land use that guide physical development of Menlo Park. The following goals and policies are applicable to the Project:

- **Goal LU-1**: Promote the orderly development of Menlo Park and its surrounding area.
- **Goal LU-4**: Promote and encourage existing and new business to be successful and attract entrepreneurship and emerging technologies for providing goods, services, amenities, local job opportunities, and tax revenue for the community while avoiding or minimizing potential environmental and traffic impacts.
- **Policy LU-4.1: Priority Commercial Development.** Encourage emerging technology and entrepreneurship and prioritize commercial development that provides fiscal benefits to Menlo Park, local job opportunities, and/or goods or services needed by the community.
- **Policy LU-4.3: Mixed-Use and Nonresidential Development.** Limit parking, traffic, and other impacts of mixed-use and nonresidential development on adjacent uses and promote high-quality architectural design and effective transportation options.
- **Policy LU-4.4: Community Amenities.** Require mixed-use and nonresidential development of a certain minimum scale to support and contribute to programs that benefit the community and Menlo Park, including education, transit, transportation infra-structure, sustainability, neighborhood-serving amenities, child care, housing, job training, and meaningful employment for Menlo Park youth and adults.
- **Policy LU-4.5: Business Uses and Environmental Impacts.** Allow modifications to business operations and structures that promote revenue-generating uses for which potential environmental impacts can be mitigated.
- **Policy LU-6.2: Open Space in New Development.** Require new nonresidential, mixed-use, and multiple dwelling development of a certain minimum scale to provide ample open space in the form of plazas, greens, community gardens, and parks whose frequent use is encouraged through thoughtful placement and design.

- **Policy LU-6.9: Bicycle and Pedestrian Facilities.** Provide well-designed bicycle and pedestrian facilities for safe and convenient multi-modal activity through the use of access easements along linear parks or paseos.
- **Policy LU-6.11: Baylands Preservation**. Allow development near the Bay only in already-developed areas.
- **Goal LU-7**: Promote the implementation and maintenance of sustainable development, facilities, and services to meet the needs of Menlo Park's residents, businesses, workers, and visitors.
- **Goal CIRC-1**: Provide and maintain a safe, efficient, attractive, user-friendly circulation system that promotes a healthy, safe, and active community and quality of life throughout Menlo Park.
- **Policy CIRC-1.8: Pedestrian Safety**. Maintain and create a connected network of safe sidewalks and walkways within the public right of way, ensuring that appropriate facilities, traffic control, and street lighting are provided for pedestrian safety and convenience, including for sensitive populations.
- **Goal CIRC-2**: Increase accessibility for and use of streets by, bicyclists, pedestrians, and transit riders.
- **Policy CIRC-2.7: Walking and Biking.** Provide for the safe, efficient, and equitable use of streets by bicyclists and pedestrians through appropriate roadway design and maintenance, effective traffic law enforcement, and implementation of the City's Transportation Master Plan (following completion; until such time, the Comprehensive Bicycle Development Plan, Sidewalk Master Plan, and the El Camino Real/Downtown Specific Plan represent the City's proposed bicycling and walking networks).
- **Policy CIRC-2.11: Design of New Development**. Require new development to incorporate a design that prioritizes safe bicycle and pedestrian travel and accommodates senior citizens, people with mobility challenges, and children.
- **Policy CIRC-2.14: Impacts of New Development**. Require new development to mitigate its impacts on the safety (e.g., collision rates) and efficiency (e.g., vehicle miles traveled per service population or other efficiency metric) of the circulation system. New development should minimize cut-through and high-speed vehicle traffic on residential streets; minimize the number of vehicle trips; provide appropriate bicycle, pedestrian, transit connections, amenities, and improvements in proportion with the scale of proposed projects; and facilitate appropriate or adequate response times and access for emergency vehicles.
- **Goal OSC-5**: Ensure healthy air and water quality.
- **Policy OSC-5.1: Air and Water Quality Standards**. Continue to apply standards and policies established by the Bay Area Air Quality Management District, San Mateo Countywide Water Pollution Prevention Program, and City of Menlo Park Climate Action Plan through the California Environmental Quality Act process and other means as applicable.
- **Goal S-1**: Ensure a safe community.
- **Policy S-1.26: Erosion and Sediment Control**. Continue to require the use of best management practices for erosion and sediment control measures with proposed development in compliance with applicable regional regulations.

- **Policy S-1.27: Regional Water Quality Control Board Requirements**. Enforce stormwater pollution prevention practices and appropriate watershed management plans in the RWQCB general National Pollutant Discharge Elimination System requirements, the San Mateo County Water Pollution Prevention Program, and the City's Stormwater Management Program. Revise, as necessary, City plans so they integrate water quality and watershed protection with water supply, flood control, habitat protection, groundwater recharge, and other sustainable development principles and policies.

The Project would be consistent with the land use, circulation, open space, and safety goals, policies, and programs from ConnectMenlo because it would be designed in accordance with the goals, policies, and programs. The Project's proposed use would be consistent with land use and zoning designations, ensuring orderly development and consistent land use patterns across Menlo Park. The proposed building would be designed to attract high-tech and other employers to Menlo Park by providing flexible space for employers to expand, which would encourage commercial development with innovative local job opportunities that provide a fiscal benefit to the City.

The Project would provide open space, including 128,533 sf of publicly accessible open space, and construct bicycle lanes and pedestrian paths throughout the Project site and around the perimeter of the proposed Building 3. In addition, there would be 40 Class I protected storage enclosure spaces for long-term parking and 16 Class II bicycle rack spaces near the entrance to Building 3. Furthermore, a bicycle storage room would be provided in Building 3 for both visitor and long-term bicycle parking. The Project would also seek LEED Gold BD+C certification, which would provide community benefits, as identified through community outreach, and adhere to all air and water quality standards and requirements. Therefore, the Project would not conflict with any goals, policies, or programs.

The Project would have a combined FAR of 88 percent, and the maximum height of the proposed building would be approximately 69 feet. Across the entire Project site, including the existing buildings, the average building height would be 59.9 feet. Because these numbers are above the base level of development, both the proposed FAR and height would be permitted through the bonus-level development provisions in the zoning ordinance. Table 3.11-1 compares allowed development under LS zoning for both the base level and bonus level as well as the development proposed under the Project. As summarized in Table 3.11-1, with implementation of bonus-level development, the Project would be consistent with the FAR, height, and densities permitted at the Project site.

Compatibility with Existing Land Uses

As described above, the Project site is in the O-B zoning district. This designation provides for new office uses, along with light industrial and research and development (R&D) uses and personal services. The Project would develop the site with an approximately 249,500 gsf building and 324,000 gsf parking structure. This proposed use is consistent with the land use designation. Overall, the land uses proposed at the Project site are consistent with existing land uses. The emphasis on office uses is compatible with the character of surrounding neighborhoods, and the increased FAR and densities support the community's objective to encourage development of underutilized parcels.

Table 3.11-1. Allowed and Proposed Development at the Project Site

	O Zoning Requirements (Base Level)	O-B Zoning Requirements (Bonus Level)	Proposed Development[a]
Site Area	25,000 sf (min) 100 feet x 100 feet (max)	25,000 sf (min) 100 feet x 100 feet (max)	578,500 sf
Floor Area Ratio	45% (+10% commercial)	100% (+25% commercial)	88%
Maximum Height	35 feet	110 feet	69 feet[b]
Height[c]	35 feet	67.5 feet	59.9 feet
Open Space	173,540 sf min (30% of total site area)	173,500 sf min (30% of total site area)	235,866 (40.7%)
Public Open Space	86,770 sf min (50% of open space area)	86,750 sf min (50% of open space area)	128,533 (54.5%)

Source: The Sobrato Organization and Arc Tec, Inc., 2018; City of Menlo Park Municipal Code Section 16.43.050.

Notes:

d. The proposed development encompasses the entire Project site, which includes the proposed building and the existing buildings. The building area total does not include the parking structure.

e. Maximum building height refers to the proposed building (not the existing onsite buildings).

f. Height is defined as the average height of all buildings on one site where a maximum height cannot be exceeded. Maximum height does not include roof-mounted equipment and utilities.

Conclusion

The physical conditions, as they relate to land use plans and policies, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The analysis above applied ConnectMenlo Mitigation Measure LU-2 by demonstrating consistency with the City General Plan; therefore, no further mitigation is required. The change in intensities and densities as a result of the Project would not, in itself, result in sustainable adverse effects on the compatibility of surrounding land uses, and the impacts would be ***less than significant***. No further study is required.

XII. Mineral Resources	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☐	☒
b) Result in the loss of availability of a locally important mineral resource recovery site, as delineated in a local general plan, specific plan, or other land use plan?	☐	☐	☐	☐	☒

Setting

The Surface Mining and Reclamation Act of 1975 is state legislation that protects Mineral Resource Zones (MRZs). Part of the purpose of the act is to classify mineral resources in the state and transmit the information to local governments, which regulate land use in each region of the state. Local governments are responsible for designating lands that contain regionally significant mineral resources in local general plans to ensure resource conservation in areas with intensive competing land uses. The law has resulted in the preparation of mineral land classification maps, which delineate MRZs 1 through 4 for aggregate resources (sand, gravel, and stone).

There are no known mineral resources within the vicinity of the Project site. The California Geological Survey (CGS) Mineral Resource Zones and Resource Sectors map classifies the Project site as MRZ-1,[68] an area "where adequate information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their presence."[69]

Environmental Checklist and Discussion

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (page 6-2); it was determined that it would result in no impact. No mitigation measures were recommended.

[68] California Geological Survey. 1987. *Special Report 146 – Mineral Land Classification: Aggregate Materials in the San Francisco-Monterey Bay Area, Part II: Classification of Aggregate Resource Areas, South San Francisco Bay Production-Consumption Region.* Palo Alto quadrangle, Plate 2.40. Available: ftp://ftp.consrv.ca.gov/pub/dmg/pubs/sr/SR_146-2/SR-146_Plate_2.40.pdf. Accessed: June 18, 2018.

[69] California Geological Survey. 1987. *Special Report 146 – Mineral Land Classification: Aggregate Materials in the San Francisco-Monterey Bay Area, Part II: Classification of Aggregate Resource Areas, South San Francisco Bay Production-Consumption Region.* Available: ftp://ftp.consrv.ca.gov/pub/dmg/pubs/sr/SR_146-2/SR_146-2_Text.pdf. Accessed: June 18, 2018.

Conclusion

There are no known mineral resources at the Project site, as indicated by the CGS MRZ. The Project site is not delineated as a locally important mineral resource by the CGS or on any County or City land use plan. Although there is limited information about the mineral resource potential of the Project site, the site and vicinity have been developed for uses related to research and development and office uses, which are incompatible with mineral extraction. The physical conditions, as they relate to mineral resources, have not changed in Menlo Park since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. ***No impact*** would occur, and no further study is needed.

b. Result in the loss of availability of a locally important mineral resource recovery site, as delineated in a local general plan, specific plan, or other land use plan? (No Impact)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR (page 6-2); it was determined that it would result in no impact. No mitigation measures were recommended.

Conclusion

As stated above, the Project site is not delineated as a locally important mineral resource site by the County or City. The physical conditions, as they relate to mineral resources, have not changed in Menlo Park since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. ***No impact*** would occur, and no further study is needed.

XIII. Noise	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in a local general plan or noise ordinance or applicable standards of other agencies?	☒	☐	☐	☐	☐
b) Generate excessive ground-borne vibration or ground-borne noise levels?	☐	☐	☐	☒	☐
c) For a project in the vicinity of a private airstrip or an airport land use plan area or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☐	☒

Setting

Ambient Noise Levels

As discussed in more detail below, this topic will be analyzed further in the Focused EIR. Therefore, the setting is not discussed in this document but will be provided instead in the Focused EIR.

Overview of Ground-borne Vibration

Ground-borne vibration is an oscillatory motion of the soil with respect to the equilibrium position. It can be quantified in terms of velocity or acceleration. Variations in geology and distance result in different vibration levels, including different frequencies and displacements. In all cases, vibration amplitudes decrease with increased distance.

Operation of heavy construction equipment, particularly pile-driving equipment and other impact devices (e.g., pavement breakers), creates seismic waves that radiate along the surface of and downward into the ground. These surface waves can be felt as ground vibration. Vibration from the operation of this type of equipment can result in effects that range from annoyance for people to damage for structures. Perceptible ground-borne vibration is generally limited to areas within a few hundred feet of construction activities. As seismic waves travel outward from a vibration source, they cause rock and soil particles to oscillate. The actual distance that these particles move is usually only a few ten-thousandths to a few thousandths of an inch. The rate or velocity (in inches per second) at which these particles move is the commonly accepted descriptor of vibration amplitude, referred to as peak particle velocity (PPV). Table 3.13-1 summarizes typical vibration levels generated by construction equipment at a reference distance of 25 feet, and other distances.

Table 3.13-1. Vibration Source Levels for Construction Equipment

Equipment	PPV at 25 Feet	PPV at 50 Feet	PPV at 75 Feet	PPV at 100 Feet	PPV at 175 Feet
Pile driver (sonic/vibratory)	0.734	0.2595	0.1413	0.0918	0.0396
Hoe ram	0.089	0.0315	0.0171	0.0111	0.0048
Large bulldozer	0.089	0.0315	0.0171	0.0111	0.0048
Loaded truck	0.076	0.0269	0.0146	0.0095	0.0041
Jackhammer	0.035	0.0124	0.0067	0.0044	0.0019
Small bulldozer	0.003	0.0011	0.0006	0.0004	0.0002

Source: Federal Transit Administration. 2018. *Transit Noise and Vibration Impact Assessment.* FTA-VA-90-1003-06. Office of Planning and Environment. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf Accessed: February 26, 2018.

Tables 3.13-2 and 3.13-3 summarize the guidelines developed by the California Department of Transportation for damage and annoyance potential from the transient and continuous vibration that is usually associated with construction activity. The activities that are typical of continuous vibration include the use of excavation equipment, static compaction equipment, tracked vehicles, vehicles on a highway, vibratory pile drivers, pile-extraction equipment, and vibratory compaction equipment.

Table 3.13-2. Vibration Damage Potential Threshold Criteria Guidelines

	Maximum PPV (in/sec)	
Structure and Condition	Transient Sources[a]	Continuous/Frequent Intermittent Sources[b]
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5

a. Transient sources create a single, isolated vibration event (e.g., blasting or drop balls).

b. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

Table 3.13-3. Vibration Annoyance Potential Criteria Guidelines

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources[a]	Continuous/Frequent Intermittent Sources[b]
Barely perceptible	0.04	0.01
Distinctly perceptible	0.25	0.04
Strongly perceptible	0.9	0.10
Severe	2.0	0.4

Source: California Department of Transportation. 2013. *Technical Noise Supplement to the Traffic Noise Analysis Protocol*. September. Available: http://www.dot.ca.gov/hq/env/noise/pub/TeNS_Sept_2013A.pdf. Accessed: February 26, 2019.

Notes:

a. Transient sources create a single, isolated vibration event (e.g., blasting or drop balls).

b. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

General Plan Goals and Policies

The City's General Plan (specifically the Land Use Element and the Noise Element) contains general goals, policies, and programs that require local planning and development decisions to consider noise impacts. The following City General Plan goals, policies, and programs would serve to minimize potential adverse impacts related to noise: Goal LU-4, Policy LU-4.5, Goal N-1, Policy N-1.1, Policy N-1.2, Policy N-1.4, Policy N-1.6, Policy N-1.7, Policy N-1.8, Policy N-1.9, Policy N-1.10, and Policy N-1.D.

Environmental Checklist and Discussion

a. Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in a local general plan or noise ordinance or applicable standards of other agencies? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

Construction and operational noise effects were analyzed in the ConnectMenlo EIR as Impact NOISE-1 (pages 4.10-19 to 4.10-24) and determined to be less than significant with application of mitigation measures as well as compliance with City General Plan goals and policies. Projects that would result in the development of sensitive land uses, which the Project would not, must maintain an indoor day-night level of 45 A-weighted decibels or less, as required by ConnectMenlo EIR Mitigation Measure NOISE-1a and existing regulations. Projects that could expose existing sensitive receptors to excessive noise must comply with ConnectMenlo EIR Mitigation Measures NOISE-1b and NOISE-1c to minimize both operational noise and construction-related noise. The topic of potential traffic noise effects was discussed in the ConnectMenlo EIR under Impact NOISE-3 (pages 4.10-29 to 4.10-36). It was determined that implementation of ConnectMenlo would not result in a substantial permanent increase in ambient noise on any of the identified roadway segments. No mitigation measures were recommended.

Project-Specific Discussion

Construction. Project construction would have the potential to generate noise. The standard construction work hours proposed for the Project are 7:00 a.m. to 6:00 p.m. Monday through Friday and Saturday from 8:00 a.m. to 5:00 p.m. Some of these hours are outside the normal construction hours provided in the City Municipal Code, which states that construction equipment is exempt from normal noise restrictions and includes special provisions for construction noise generated during the daytime hours of 8:00 a.m. to 6:00 p.m., Monday through Friday. To determine if construction would result in noise impacts, particularly during non-exempt hours, construction noise modeling will be conducted for the Focused EIR.

Operations – Traffic. Potential traffic noise impacts from plan development were analyzed in the ConnectMenlo EIR; however, the Project could result in increased traffic noise at certain locations due to changes in roadway configuration and the potential for an increased number of vehicle trips compared with the number assumed in the ConnectMenlo EIR transportation analysis. Therefore, this topic will be analyzed in the Focused EIR.

Operations – Other Operational Noise Sources. Other potential sources of Project-related operational noise include mechanical equipment, such as heating, ventilation, and air-conditioning (HVAC) equipment or emergency generators, and loading docks. The ConnectMenlo EIR states that stationary noise sources, as well as landscaping and maintenance activities, shall comply with Chapter 8.06, Noise, of the City Municipal Code. Compliance with the mitigation measure would ensure compliance with Chapter 8.06 of the City Municipal Code. The Focused EIR will conduct a detailed analysis of impacts from other operational noise sources.

Conclusion

Physical conditions, as they relate to population growth, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. However, because of the expanded construction work hours required for the Project, construction noise impacts will require further analysis. With regard to traffic noise impacts, although potential traffic noise impacts from plan development were analyzed in the ConnectMenlo EIR, the Project could result in increased traffic noise at certain locations. This is because of different roadway configurations compared with what was considered in the ConnectMenlo EIR as well as the possibility of an increased number of vehicle trips compared with the number assumed in the ConnectMenlo EIR transportation analysis. In addition, other operational noise impacts will be evaluated. Therefore, this topic will be the subject of ***further environmental review*** in the Focused EIR.

b. Generation of excessive ground-borne vibration or ground-borne noise levels? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact NOISE-2 (pages 4.10-25 to 4.10-29). The impact was determined to be potentially significant. With implementation of Mitigation Measures NOISE-2a and NOISE-2b, this impact would be reduced to a less-than-significant level. The analysis concluded that, overall, vibration impacts related to construction would be short term, temporary, and generally restricted to areas in the immediate vicinity of construction activity. However, because project-specific information was not available, the analysis did not quantify construction-related vibration impacts on sensitive receptors. Implementation of Mitigation Measure NOISE-2a would reduce construction-related vibration impacts to a less-than-significant level through

preparation of a vibration analysis to assess vibration levels and use of alternate construction techniques to reduce vibration, if necessary. Specifically, according to Mitigation Measure NOISE-2a from the ConnectMenlo EIR, vibration levels must be limited to 0.126 PPV in/sec at the nearest workshop,[70] 0.063 PPV in/sec at the nearest office, and 0.032 PPV in/sec at the nearest residence during daytime hours and 0.016 PPV in/sec at the nearest residence during nighttime hours. Regarding long-term construction impacts, ConnectMenlo requires projects to comply with Mitigation Measure NOISE-2b, which requires the City to implement best management practices as part of a project's approval process.

Project-Specific Discussion

Although pile driving would not be required for the Project, construction would require the use of other equipment that may generate vibration. The piece of equipment proposed for Project construction that would generate the greatest vibration level is a bulldozer.

According to Table 4.10-10 of the ConnectMenlo EIR, as well as the Federal Transit Administration's Transit Noise and Vibration Impact Assessment (2006), a large bulldozer could generate a vibration level of approximately 0.089 PPV in/sec at a distance of 25 feet.[71] During Project construction, a large bulldozer could operate at a distance of approximately 80 feet from adjacent buildings located north of the Project site. At that distance, vibration from a large bulldozer would be approximately 0.016 PPV in/sec.[72] This is below the "distinctly perceptible" threshold of 0.04 PPV in/sec shown in Table 3.13-3 (and in Table 4.10-3 of the ConnectMenlo EIR). It is also below the applicable damage thresholds for the different building types, as shown in Table 3.13-2, above, and Table 4.10-4 of the ConnectMenlo EIR, which includes thresholds for damage, based on building materials used in building construction. At the nearest residences and the under-construction TIDE Academy, which would both be approximately 400 feet away from where Project vibration-generating construction would occur, vibration from a large bulldozer would be reduced to less than 0.001 PPV in/sec. This is below all of the perceptibility thresholds and building damage thresholds defined above and in the ConnectMenlo EIR.

Based on the above analysis, Project-generated construction vibration would not be expected to exceed the aforementioned standard thresholds. However, according to ConnectMenlo EIR Mitigation Measure NOISE-2a, a project-specific vibration analysis shall be conducted to ensure that project construction vibration levels do not exceed the levels defined in this mitigation measure. Specifically, according to ConnectMenlo EIR Mitigation Measure NOISE-2a, vibration levels must be limited to 0.126 PPV in/sec at the nearest workshop, 0.063 PPV in/sec at the nearest office, and 0.032 PPV in/sec at the nearest residence during daytime hours and 0.016 PPV in/sec at the nearest residence during nighttime hours.

The modeled vibration level at the nearest offsite building north of the Project site (0.016 PPV in/sec at 80 feet, as described above) would be below the allowable level described in Mitigation Measure

[70] The term "workshop" is used in the ConnectMenlo EIR to categorize industrial-type land uses that may be conducting manufacturing activities.

[71] Note that the ConnectMenlo EIR presented PPV vibration values for construction equipment in Table 4.10-10 but incorrectly labeled them as RMS vibration values. The vibration limits in Mitigation Measure NOISE-2a are also incorrectly labeled as RMS values when they are actually PPV values. Therefore, PPV is used as the unit of measure for this analysis.

[72] Federal Transit Administration. 2006. *Transit Noise and Vibration Impact Assessment*. FTA-VA-90-1003-06. Office of Planning and Environment. Available: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/FTA_Noise_and_Vibration_Manual.pdf. Accessed: July 10, 2018.

NOISE-2a for a "workshop" (0.126 PPV in/sec) or "office" (0.063 PPV in/sec). As also described above, at a distance of 400 feet (the approximate distance from Project construction areas to the nearest residence and new high school), vibration from a large bulldozer would be less than 0.001 PPV in/sec. Therefore, Project construction vibration would be well below the daytime allowable level of 0.032 PPV in/sec and the nighttime allowable level of 0.016 PPV in/sec for residential land uses.

Conclusion

The physical conditions, as they relate to Project-specific vibration impacts, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Impacts from construction vibration would be ***less than significant***, and no mitigation measures would be required. No further analysis is required.

c. For a project located in the vicinity of a private airstrip or an airport land use plan area or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels? (No Impact)

Analysis in the ConnectMenlo EIR

This topic was discussed in the ConnectMenlo EIR as Impact NOISE-5 (page 4.10-38) and Impact NOISE-6 (page 4.10-38) and determined to result in no impact.

Conclusion

The physical conditions, as they relate to the Project's adjacency to a private airstrip, public airport, or public use airport, have not changed in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project, which is within the ConnectMenlo study area, would result in ***no impact***. No further analysis is required.

XIV. Population and Housing	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	☒	☐	☐	☐	☐
b) Displace a substantial number of existing people or housing units, necessitating the construction of replacement housing elsewhere?	☒	☐	☐	☐	☐

Setting

As discussed in more detail, below, this topic will be analyzed further in the Focused EIR. Therefore, the setting is not discussed in this document but will be provided instead in the Focused EIR.

General Plan Goals and Policies

General Plan goals and policies related to population and housing will be outlined and discussed in the Focused EIR.

Environmental Checklist and Discussion

a. Induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact POP-1 (pages 4.11-5 to 4.11-18) and determined to be less than significant. Within the ConnectMenlo EIR study area, new growth would occur incrementally over a period of approximately 24 years, and future development would be guided by policy framework. No mitigation measures were recommended.

Project-Specific Discussion

The Project includes construction of a 249,500 gsf office building (Building 3) that would accommodate approximately 1,996 employees.[73] Although the Project would not result in onsite residential population increases, the new employees could generate households within Menlo Park and the region. Using the average of 1.88 workers per work household in San Mateo County, the Project would generate approximately 1,062 new households. On average,

[73] Based on a load factor of one employee per 125 sf.

approximately 6.2 percent of Menlo Park's workforce also resides in the Menlo Park,[74] which would result in up to 66 new households. With an average persons-per-household ratio of 2.88, the Project could generate up to 190 new residents within Menlo Park.[75] This represents a fraction of a percent of the total population of Menlo Park and is within the anticipated growth considered in the ConnectMenlo EIR.

Conclusion

The physical conditions, as they relate to population growth, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. However, as a result of the 2017 *City of East Palo Alto v. City of Menlo Park* settlement agreement, the Focused EIR will evaluate population growth in more detail. In particular, a Housing Needs Assessment (HNA) will be prepared for the Project. Therefore, this topic ***requires further environmental review*** in the Focused EIR.

b. Displace a substantial number of existing people or housing units, necessitating the construction of replacement housing elsewhere? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact POP-2 (pages 4.11-18 to 4.11-20) and Impact POP-3 (page 4.11-20) and determined to be less than significant. Within the ConnectMenlo EIR study area, new growth would occur incrementally over a period of approximately 24 years, and existing policies would ensure that adequate housing would remain and that the potential for any displacement of existing people or housing would be limited. No mitigation measures were recommended.

Conclusion

The physical conditions, as they relate to displacement of housing units, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. In addition, the Project site does not include housing units. However, as a result of the 2017 *City of East Palo Alto v. City of Menlo Park* settlement agreement, the Focused EIR will evaluate this topic in more detail. In particular, an HNA will be prepared for the Project. This topic ***requires further environmental review*** in the Focused EIR.

XV. Public Services	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:					
Fire protection?	☐	☐	☐	☒	☐
Police protection?	☐	☐	☐	☒	☐
Schools?	☐	☐	☐	☒	☐
Parks?	☐	☐	☐	☒	☐
Other public facilities?	☐	☐	☐	☒	☐

Setting

Fire Protection

Fire protection services in the Project area are provided by the Menlo Park Fire Protection District (MPFPD). The MPFPD service boundary covers 30 square miles and includes Menlo Park, Atherton, and East Palo Alto plus some unincorporated areas in San Mateo County.[76] Seven MPFPD fire stations serve an estimated population of approximately 100,000. The MPFPD responds to approximately 9,000 emergencies per year and is part of the greater San Mateo County boundary-drop plan (i.e., the closest apparatus responds to each call, regardless of the department).[77] The adopted performance standard for response times establishes a goal that would have the first-response unit arrive on the scene of all Code 3 emergencies within 7 minutes, starting from the time of the call to the dispatch center, 90 percent of the time. The goal of the MPFPD's multi-unit response units is to arrive on scene within 11 minutes from the time of the call to the dispatch center. The MPFPD's average response times in 2013 and 2014 were under the currently adopted 7-minute standard for first-response units.[78]

The MPFPD is organized into five Fire District Divisions as follows: Administrative Services, Human Resources, Fire Prevention, Operations, and Support Services. As of 2018, the MPFPD is budgeted for approximately 136 full-time-equivalent (FTE) employees. Of these, 99 FTE employees provide direct fire services, while the other 37 staff members handle daily administrative tasks related to financial services, maintenance of the MPFPD's fleet of vehicles, emergency preparedness, and the management of citizen volunteers in the Community Emergency Response Team program.[79] This equates to a ratio of approximately one firefighter per 1,000 people in the service population.

[78] Menlo Park Fire Protection District. 2015. *Standards of Cover Assessment, Volume 1, Executive Summary.* June 16. Available: https://evogov.s3.amazonaws.com/media/6/media/22312.pdf. Accessed: April 18, 2018.

[79] Menlo Park Fire Protection District. 2018. *Proposed Budget, 2018–2019*. Available: https://evogov.s3.amazonaws.com/media/6/media/130940.pdf. Accessed: July 16, 2018.

Fire Station 77, at 1467 Chilco Street, serves the Belle Haven area of Menlo Park, including the Project site. Station 77 is manned by three firefighting personnel (one captain and two firefighters) and two shop personnel (one fleet manager and one mechanic). Operating out of Station 77 is Engine 77, a 2001 Pierce Saber unit, as well as an air boat, urban search and rescue vehicles, and various utility vehicles owned by the MPFPD.[80] The MPFPD anticipates rebuilding or renovating its 4,400 sf facility to address new development and the intensification of existing land uses in East Palo Alto and east Menlo Park.[81] Renovation of the existing facility would be subject to its own CEQA review, if applicable.

Police Protection

Police services in the vicinity of the Project site are provided by the Menlo Park Police Department (MPPD). The MPPD's current service population is approximately 42,000.[82] The MPPD is headed by a chief of police who oversees two divisions, the Patrol Operations Division and Special Operations Division. From 2017 to 2018, the Patrol Services Division handled more than 39,000 calls for service. MPPD staffing includes two police administrators, 46 patrol operations employees, and 29 special operations specialists, for a total of 77 FTE employees. With upcoming approved hires (in the 2018–2019 budget), the MPPD will increase the allocation of sworn officers from 48 to 54.[83] Once fully implemented, Menlo Park will have a ratio of 1.29 officers per 1,000 people in the service population.

One police station, located at City Hall, covers the entire service area. The MPPD also operates a recently renovated police substation and neighborhood service center north of US 101 in the Belle Haven neighborhood. The Belle Haven Neighborhood Service Center and Substation houses the MPPD's Code Enforcement Office and Community Safety Police Officer. MPPD officers use the substation to make calls as well as interview and/or process suspects, victims, or witnesses. In addition, the substation serves as a place for the community to meet with police officers or gather.[84]

Currently, the MPPD divides its service area into three beats. However, as the budget for 2018–2019 is implemented, a new beat, Beat 4, will be activated, which will divide the current Beat 3 into two beats. This will allow officers who are assigned to the Belle Haven neighborhood to remain in that area and address specific needs within that neighborhood (Beat 3); other officers will be assigned to the rest of the Bayfront Area (Beat 4), mainly north of the Dumbarton Rail Corridor.[85] Once this is implemented, the Project site will be covered by Beat 4.

Schools

Four elementary/middle school districts and one high school district are within the boundaries of Menlo Park: Menlo Park City School District (CSD), Ravenswood CSD, Las Lomitas School District, Redwood CSD, and Sequoia Union High School District (SUHSD). However, the portion of Menlo Park that includes

---

82 Per the ConnectMenlo EIR, the service population for the MPPD is calculated by taking the total population and adding 0.33 of all employees within Menlo Park.

83 City of Menlo Park. *Proposed Budget, Fiscal Year 2018–2019.* Available: https://www.menlopark.org/proposedbudget. Accessed: July 16, 2018.

85 City of Menlo Park. *Proposed Budget, Fiscal Year 2018–2019.* Available: https://www.menlopark.org/proposedbudget. Accessed: July 16, 2018.

Las Lomitas School District, which is generally bounded by Alameda de las Pulgas to the north and Interstate 280 to the south, is built out, with no substantial potential for new housing units. Therefore, this school district is not analyzed further in this section because the Project would not induce the construction of new housing in this area and generate new students.

Menlo Park City School District. The Menlo Park CSD serves parts of Menlo Park, Atherton, and unincorporated areas of San Mateo County. The Menlo Park CSD operates three elementary schools (Encinal School, Laurel School, and Oak Knoll School) and one middle school (Hillview Middle School). In 2017, total student enrollment at the four schools was 2,984, with approximately 322 FTE staff members.[86] The Menlo Park CSD maintains a student-teacher ratio of 17.4 students per teacher.[87]

The three elementary schools currently exceed capacity; however, Hillview Middle School has additional capacity available.[88] To accommodate growth, the Laurel School Upper Campus was constructed; it opened on October 17, 2016, to 300 third- through fifth-grade students.[89] The Menlo Park CSD is required to accommodate students within its boundaries. When a school is at capacity, students can attend another school in the district. If all classes are at capacity, then the Menlo Park CSD may increase the class size or open new classrooms. The Menlo Park CSD currently uses the following student generation rates: 0.18 student per single-family unit and 0.44 student per multi-family unit.[90]

Ravenswood City School District. The Ravenswood CSD serves northern Menlo Park and East Palo Alto. The district operates two elementary schools, two middle schools, four academies, one charter school, and one development center. Two Ravenswood CSD schools are within Menlo Park, Belle Haven Elementary School and Willow Oaks Elementary School. The reported student enrollment for the 2016–2017 school year (the most recent data available) was 3,853, with 206 teachers, resulting in a student-teacher ratio of approximately 18.7 students per teacher. Enrollment at Ravenswood City Elementary, in East Palo Alto, over the 2016–2017 school year was lower than it has been in the past few years.[91] Furthermore, it is anticipated that the Ravenswood CSD will experience low to no growth in the near future.[92] The Ravenswood CSD's student generation rate is 0.39 student per single-family unit and 0.56 student per multi-family unit.[93]

Redwood City School District. The Redwood CSD serves elementary and middle school students in Redwood City and portions of San Carlos, Menlo Park, Atherton, and Woodside. Redwood CSD includes 16 schools, serving approximately 7,700 students. Of the more than 900 employees,

approximately 400 are teachers, resulting in a student-teacher ratio of approximately 19.3 students per teacher.[94] The Redwood CSD's student generation rates for elementary schools are 0.36 student for single-family detached units, 0.18 student for single-family attached units, and 0.10 student for multi-family units. The Redwood CSD's student generation rates for middle schools are 0.10 student for single-family detached units, 0.06 student for single-family attached units, and 0.04 student for multi-family units.[95]

Sequoia Union High School District. The SUHSD operates four comprehensive high schools, one alternative high school, and additional programs. The SUHSD serves Atherton, East Palo Alto, San Carlos, Woodside, Belmont, Portola Valley, portions of unincorporated San Mateo County, and Menlo Park, and enrollment is steadily increasing.[96] Among these schools, Menlo-Atherton High School serves students residing in Menlo Park. In 2016–2017, total student enrollment at the high schools was approximately 9,911, with approximately 553 teachers, resulting in a student-teacher ratio of approximately 17.9 students per teacher.[97] There are current plans to build a high school in at 150 Jefferson Drive (approximately 200 feet west of the Project site) to accommodate enrollment growth. TIDE Academy will open in August 2019 to the first founding ninth grade class. The SUHSD student generation rate is 0.2 student per housing unit.[98]

Parks

The Menlo Park Community Services Department is responsible for providing recreational and cultural programs for residents of Menlo Park. Its facilities include 13 parks, three community centers, two public pools, three child care centers, two gymnasiums, and one gymnastics center. Included in the park and recreational areas are tennis courts, softball diamonds, picnic areas, dog parks, playgrounds, swimming pools, gymnastics centers, a skate park, a shared-use performing arts center, soccer fields, and open space.[99] An adopted City General Plan policy (Policy OSC-2.4) calls for maintaining a ratio of 5 acres of developed parkland per 1,000 residents. Currently, Menlo Park has an estimated population of approximately 33,319.[100] The City provides 244.96 acres of parkland for its residents, a ratio of 7.35 acres[101] of parkland per 1,000 residents.[102] Therefore, the City currently exceeds its goals.

100 U.S. Census Bureau. 2016. *American Fact Finder, American Community Survey Demographic and Housing Estimates* (2012–2016 American Community Survey 5-year Estimates, ID DP05). Available: https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_16_5YR_DP05&prodType=table. Accessed: July 13, 2018.

101 Note that this is slightly different from the ratio included in the ConnectMenlo EIR because of the increase in population since release of the ConnectMenlo EIR.

102 A total of 244.96 acres divided by 33,319 (existing population as of 2016 [33,319]/1,000) = 7.35 acres per 1,000 residents.

Libraries

Menlo Park has two libraries, Menlo Park Library on Alma Street and the Belle Haven Community Library on Ivy Drive. In total, the libraries have approximately 37,800 gsf of space and approximately 14 FTE staff members. Operating as a department of the City of Menlo Park, the municipal libraries have approximately 23,600 registered borrowers and circulate 677,846 books and multi-media resources, including digital content.[103]

General Plan Goals and Policies

The City's General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts on public services. The following City General Plan goals, policies, and programs would serve to minimize potential adverse impacts on public services: Goal LU-1, Policy LU-1.1, Goal LU-4, Policy LU-4.5, Program LU-4.C, Goal LU-6, Policy LU-6.2, Goal LU-7, Policy LU-7.7, Goal CIRC-1, Policy CIRC-2.14, Goal CIRC-3, Goal S-1, Policy S-1.5, Policy S-1.29, Policy S-30, Policy S-1.38, Goal OSC-2, Policy OSC-2.1, Policy OSC-2.4, and Policy OSC-2.6.

Environmental Checklist and Discussion

a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:

Fire Protection

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-1 (pages 4.12-8 to 4.12-12). With respect to the need for remodeled or expanded fire protection facilities in order to maintain acceptable service ratios, response times, or other performance standards, the impacts were determined to be less than significant. No mitigation measures were recommended.

Project-Specific Discussion

Because of the increase in employment at the Project site, it is anticipated that the Project would increase the daytime population by approximately 1,996 people. According to MPFPD standards, each employee would be equal to 0.58 resident.[104] This equates to approximately 1,158 people added to the service population. In addition, as stated in Section XIV, *Population and Housing*, the Project could induce up to 200 new Menlo Park residents. If there were no increase in existing MPFPD staffing, then the ratio of one firefighter per 1,000 residents would decrease slightly with implementation of the Project. However, no additional equipment would be needed to serve the proposed building at the Project site because similarly sized buildings are already served by the MPFPD.

[103] City of Menlo Park. 2016. *Menlo Park Library Strategic Plan, 2016–2020.* Available: https://menlopark.org/DocumentCenter/View/15808/Library-Strategic-Plan-2016-2020?bidId=. Accessed: July 17, 2018.

[104] Menlo Park Fire Protection District. 2016. *Menlo Park Fire Protection District Emergency Services and Fire Protection Impact Fee Nexus Study, 2015.* Available: https://evogov.s3.amazonaws.com/media/6/media/49065.pdf. Accessed: April 18, 2018.

The Project would be required to comply with all applicable MPFPD codes and regulations as well as standards related to fire hydrants (e.g., fire-flow requirements, spacing requirements), the design of driveway turnaround and access points, and other fire code requirements. For example, the MPFPD Fire Prevention Code, Section 903.2, requires automatic fire sprinkler protection for commercial occupancies of more than 5,000 gsf if the building is 40 feet or taller.

Conclusion

The physical conditions, as they relate to fire services, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would not result in substantial adverse environmental impacts associated with the provision of new or physically altered fire and emergency service facilities in order to maintain acceptable service ratios, response times, or other performance objectives. Fire service impacts as a result of the Project would be ***less than significant***. No further study is needed.

Police Protection

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-3 (pages 4.12-15 to 4.12-18) and determined to result in a less-than-significant impact. The MPPD indicated in the ConnectMenlo EIR that it can address issues related to maintaining adequate response times for the proposed development through staffing rather than facility expansion. No mitigation measures were recommended.

Project-Specific Discussion

The Project could affect the MPPD by intensifying site activity and adding new employees, visitors, and residents. Specifically, the Project would increase the number of employees at the Project site by 1,996 people. When calculating the service population, the MPPD considers employees who work in Menlo Park as one-third of a resident, resulting in approximately 665 additional daytime residents. In addition, the Project could induce up to 200 permanent residents to relocate to Menlo Park. If there were no increase in existing MPPD staffing, then the ratio of 1.1 officers per 1,000 service population would decrease slightly with implementation of the Project.[105] The added daytime and permanent residents would result in a decrease in the ratio of officers to residents. Police surveillance in the Project area would continue, including routine patrols and responses to calls for assistance. The Project would not require the MPPD to expand its current service boundary to include the Project site because it is already within Beat 4.

Conclusion

The physical conditions, as they relate to police services, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial

[105] City of Menlo Park. 2017. *Staff Report: Agenda Item K-1 Police*. Available: https://www.menlopark.org/DocumentCenter/ View/13411/K1---4th-Police-Unit?bidId=. Accessed: March 22, 2019.

importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Based on current service levels and the service levels expected to occur under the Project, it is not expected that new police facilities would need to be constructed, resulting in ***less-than-significant*** impacts. No further study is needed.

Schools

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-8 (pages 4.12-35 to 4.12-41) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

As previously stated, four elementary/middle school districts and one high school district serve Menlo Park. However, Las Lomitas School District would not be affected by the indirect population increases associated with the Project and, therefore, is not considered in this analysis. The Project would consist of R&D uses; it would not construct residential units that would generate school-age students for the local school districts. However, as stated in Section XIV, *Population and Housing*, the Project would indirectly induce housing demand by increasing employment within Menlo Park. Specifically, it is estimated that up to 66 new Menlo Park households would be generated by the Project. Assuming the most conservative student generation rate for the school districts that serve Menlo Park (0.56 student per multi-family unit), the Project could generate up to 37 new students. It is currently unknown which district would enroll these students; they would most likely be distributed throughout the districts. Therefore, the addition of the Project-generated students would be minimal, and the districts would most likely be able to accommodate the students.

Residential and non-residential development, including the Project, is subject to Senate Bill (SB) 50 school impact fees (established by the Leroy F. Greene School Facilities Act of 1998). As a result of wide-ranging changes in the financing of school facilities, including the passage of state school facilities bonds, which are intended to provide a major source of financing for new school facilities, Section 65996 of the State Government Code states that the payment of the school impact fees established by SB 50, which may be required from a developer by any state or local agency, is deemed to constitute full and complete mitigation for school impacts from development. In addition, new residential development that may indirectly result from the increase in employment and generate students would be subject to separate CEQA review as well as residential school impact fees, which would be higher than the non-residential school impact fees.

Conclusion

The physical conditions, as they relate to schools, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Because the Project would not generate a substantial number of new students or trigger the need for new school facilities, impacts related to schools would be ***less than significant***. No further study is needed.

Parks

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impacts PS-5 and PS-6 (pages 4.12-23 to 4.12-26) and determined to result in a less-than-significant impact. The document noted that future development would be required to comply with existing regulations to minimize impacts related to park and recreational services and facilities. No mitigation measures were recommended.

Project-Specific Discussion

The Project would generate new employees in Menlo Park, which could increase park use in Menlo Park. However, the Project would provide open space for the new onsite employees, including walking and biking paths, plazas, and seating areas. In addition, the Project would include construction of Jefferson Park, which would be publicly accessible from paseo connections to Jefferson Drive and the Commonwealth Site. Final design of the park would be determined by the City and community feedback during the entitlement process. This "parklet" would be roughly 32,000 square feet (0.73 acre) in size, including a small parking lot. Potential features could include a multi-use sports court, a flexible lawn area for games and other activities, and an area with accent pavers that would provide space for games and a mix of lounge and dining seating. Additional features could include a playground or other amenities. A 10-foot-wide paseo would run along the eastern edge of the park, providing a connection to the rest of the site and beyond. The intent is for the park to be used by the adjacent high school for physical education classes and parking, with spaces for approximately 20 to 24 staff members. During non-school hours, the park and parking would be available to the public.

Given the availability of City and regional parks, plus the proposed open space, employee growth related to development under the Project is not anticipated to increase the use of parks and recreational resources such that substantial physical deterioration would occur. Refer to Section XVI, *Recreation*, for additional analysis.

Conclusion

The physical conditions, as they relate to parks, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. As such, the impact of the Project on existing park and recreational resources would be ***less than significant***. Please refer to Section XVI, *Recreation*, for additional analysis of impacts on parks. No further study is needed.

Libraries

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-10 (pages 4.12-44 to 4.12-46) and determined to result in a less-than-significant impact. The EIR stated that future development would be required to comply with existing regulations to minimize impacts related to library services. No mitigation measures were recommended.

Project-Specific Discussion

As discussed above, the City's libraries offer a range of resources for the community. The Project is expected to increase the population in Menlo Park by adding up to 200 new residents. In addition, other potential employees who live in San Mateo County could use the library. Given that the library currently serves approximately 23,600 registered borrowers, this increase in the potential number of patrons is minimal. It is expected that the existing libraries in Menlo Park would be able to accommodate the increase in the number of residents in the area due to the Project.

Analysis in the ConnectMenlo EIR

The physical conditions, as they relate to libraries, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project is not expected to trigger the need for new or expanded library facilities. Therefore, impacts would be ***less than significant***. No further study is needed.

[page intentionally left blank]

XVI. Recreation	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of a facility would occur or be accelerated?	☐	☐	☐	☒	☐
b) Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	☐	☐	☐	☒	☐

Setting

The Menlo Park Community Services Department is responsible for providing recreational and cultural programs for the residents of Menlo Park. Its facilities include 13 parks, three community centers, two public pools, three child care centers, two gymnasiums, and one gymnastics center. Included in the park and recreational areas are tennis courts, softball diamonds, picnic areas, dog parks, playgrounds, swimming pools, gymnastics centers, a skate park, a shared-use performing arts center, soccer fields, and open space.[106] An adopted City General Plan policy (Policy OSC-2.4) calls for a ratio of 5 acres of developed parkland per 1,000 residents. Currently, Menlo Park has an estimated population of approximately 33,319.[107] The City provides 244.96 acres of parkland for its residents, a ratio of 7.35 acres[108] of parkland per 1,000 residents.[109] Therefore, the City currently exceeds its goals.

General Plan Goals and Policies

The City's General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts on recreational resources. The following City General Plan goals, policies, and programs would serve to minimize potential adverse impacts on recreational resources: Goal LU-4, Policy LU-4.5, Goal LU-6, Policy LU-6.2, Goal OSC-2, Policy OSC-2.1, Policy OSC-2.4, and Policy OSC-2.6.

[106] City of Menlo Park Community Services Department. 2018. *Community Services Department*. Available: https://www.menlopark.org/212/Community-Services. Accessed: April 23, 2018.

[107] U.S. Census Bureau. 2016. *American Fact Finder, American Community Survey Demographic and Housing Estimates* (2012–2016 American Community Survey 5-year Estimates, ID DP05). Available: https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_16_5YR_DP05&prodType=table. Accessed: July 13, 2018.

[108] Note that this is slightly different from the ratio included in the ConnectMenlo EIR because of the increase in Menlo Park's population since release of the ConnectMenlo EIR.

[109] A total of 244.96 acres divided by 33,319 (existing population as of 2016) = 7.35 acres per 1,000 residents.

Environmental Checklist and Discussion

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of a facility would occur or be accelerated? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-6 (pages 4.12-24 to 4.12-26) and determined to result in a less-than-significant impact with respect to physical deterioration of park facilities. The document noted that future development would be required to comply with existing regulations to minimize impacts related to park and recreational services and facilities. No mitigation measures were recommended.

Project-Specific Discussion

The Project would generate approximately 1,996 new employees at the Project site. These employees could use nearby parks as well as other parks and open space resources throughout Menlo Park. Development would add approximately 128,533 sf of public open space and approximately 107,333 sf of private open space. A 0.2-mile-long and 20-foot-wide paseo, available to bicyclists and pedestrians, would be constructed along the eastern boundary of the Jefferson Site and throughout the Commonwealth Site. Proposed private open spaces would be located between and around Buildings 1, 2, and 3, within patios and courtyards featuring tables, chairs, a seat wall, trees, and access to an existing bocce court. In addition, outdoor balconies on the third and fourth floors of Building 3 would be provided as private open spaces. The private open spaces would be used by existing and new onsite employees.

The Project would include construction of Jefferson Park, which would be publicly accessible from paseo connections to Jefferson Drive and the Commonwealth Site. Final design of the park would be determined by the City and community feedback during the entitlement process. This "parklet" would be roughly 32,000 sf (0.73 acre) in size, including a small parking lot. Potential features could include a multi-use sports court, a flexible lawn area for games and other activities, and an area with accent pavers that would provide space for games and a mix of lounge and dining seating. Additional features could include a playground or other amenities. A 10-foot-wide paseo would run along the eastern edge of the park, providing a connection to the rest of the site and beyond. The intent is for the park to be used by the adjacent high school for physical education classes and parking, with spaces for approximately 20 to 24 staff members. During non-school hours, the park and parking would be available to the public.

Because the Project would generate approximately 1,996 new employees, up to 200 new residents could be induced to move to Menlo Park. However, new residents could use parks and open space resources throughout Menlo Park, including the proposed Jefferson Park. As explained above, the Menlo Park Community Services Department currently exceeds its goal of 5 acres of parkland per 1,000 residents. The approximately 200 new residents in Menlo Park would not substantially change the existing ratio, and the City would still exceed its goal. Given the availability of City-maintained parks, population growth is not anticipated to increase the use of recreational resources to a degree that would result in substantial physical deterioration.

Conclusion

The physical conditions, as they relate to neighborhood and regional parks, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. An increase in the number of employees and the residential population would not exacerbate existing capacity issues because any increased use of recreational facilities would be spread out among several parks and recreational facilities in the area, including the facilities proposed as part of the Project. The Project would not trigger a need for the construction or expansion of parks or other recreational facilities. Therefore, the impact of the Project on existing park and recreational resources would be ***less than significant***. No further study is needed.

b. Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact PS-6 (pages 4.12-23 to 4.12-24) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Effects of the Project

The Project would not include new or expanded Menlo Park Community Services Department park facilities. However, as discussed above, the Project would include open spaces and construction of a new publicly accessible, privately maintained park (Jefferson Park). Although the addition of open space alone would most likely not result in a significant impact, the addition of open space has been analyzed throughout this document in context with the rest of the Project.

Conclusion

The physical conditions, as they relate to park and recreational facilities, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Construction of private open space and Jefferson Park would not have an adverse physical effect on the environment and therefore would result in ***less-than-significant*** impacts. No further study is needed.

[page intentionally left blank]

XVII. Transportation	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☒	☐	☐	☐	☐
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3(b)?	☒	☐	☐	☐	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐	☐
d) Result in inadequate emergency access?	☒	☐	☐	☐	☐

Setting

As discussed in more detail, below, this topic will be analyzed further in the Focused EIR. Therefore, the setting is not discussed in this document but will be provided instead in the Focused EIR.

General Plan Goals and Policies

Goals and policies related to transportation and traffic will be discussed in the Focused EIR.

Environmental Checklist and Discussion

a. Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed in the ConnectMenlo EIR as Impact TRANS-1 (pages 4.13-56 to 3.13-74). Development under ConnectMenlo was determined to result in significant and unavoidable impacts on roadway segments and study intersections, even with implementation of Mitigation Measures TRANS-1a (pages 4.13-62 and 4.13-63) and TRANS-1b (pages 4.13-70 to 4.13-72) from the ConnectMenlo EIR. However, adding travel lanes (as recommended in Mitigation Measure TRANS-1a) could require an additional right of way that is not under the jurisdiction of the City. In addition, although implementation of Mitigation Measure TRANS-1b would secure a funding mechanism for future roadway and infrastructure improvements, the City cannot guarantee improvements at any roadway segment or intersection. In addition, this topic was analyzed in the ConnectMenlo EIR as Impact TRANS-6 (pages 3.13-81 to 3.13-89); it was determined that impacts would be significant and unavoidable, even with implementation of Mitigation Measures TRANS-6a through TRANS-6c. Implementation of these mitigation measures cannot be guaranteed.

Project-Specific Discussion

Although the Project is within the development projections envisioned in the ConnectMenlo EIR, this topic requires further environmental review in the Focused EIR. The transportation mitigation measures for the ConnectMenlo EIR anticipated that any project proposed prior to adoption of a Transportation Master Plan and updated Transportation Impact Fee, including the Project, would need to conduct a project-specific Transportation Impact Assessment (TIA) to determine the impacts and necessary transportation mitigation to be funded by that project. The requirement to conduct a project-specific TIA was also part of the settlement agreement in the 2017 *City of East Palo Alto v. City of Menlo Park* case. Therefore, the Focused EIR will include analysis of 31 intersections and two future intersections, as follows:

1. Marsh Road and Bayfront Expressway (State)
2. Marsh Road and Independence Drive (State)
3. Marsh Road and US 101 northbound off-ramp (State)
4. Marsh Road and US 101 southbound off-ramp (State)
5. Marsh Road and Scott Drive (Menlo Park)
6. Marsh Road and Bay Road (Menlo Park)
7. Marsh Road and Middlefield Road (Atherton)
8. Independence Drive and Constitution Drive (Menlo Park)
9. Chrysler Drive and Bayfront Expressway (State)
10. Chrysler Drive and Constitution Drive (Menlo Park)
11. Chrysler Drive and Jefferson Drive (Menlo Park)
12. Chrysler Drive and Independence Drive (Menlo Park)
13. Chilco Street and Bayfront Expressway (State)
14. Chilco Street and Constitution Drive (Menlo Park)
15. Willow Road and Bayfront Expressway (State)
16. Willow Road and Hamilton Avenue (State)
17. Willow Road and Ivy Drive (State)
18. Willow Road and O'Brien Drive (State)
19. Willow Road and Newbridge Street (State)
20. Willow Road and Bay Road (State)
21. Willow Road and Durham Street (Menlo Park)
22. Willow Road and Coleman Avenue (Menlo Park)
23. Willow Road and Gilbert Avenue (Menlo Park)

24. Willow Road and Middlefield Road (Menlo Park)
25. University and Bayfront Expressway (State)
26. Middlefield Road and Ravenswood Avenue (Menlo Park)
27. Middlefield Road and Ringwood Avenue (Menlo Park)
28. Marsh Road and Florence Street-Bohannon Drive (Menlo Park)
29. Willow Road and US 101 northbound ramps (future only)
30. Willow Road and US 101 southbound ramps (future only)
31. Bay Road and Ringwood Avenue (Menlo Park)

Conclusion

An analysis of the Project's consistency with relevant adopted policies, plans, and programs will be presented in the Focused EIR. This topic requires ***further environmental review*** in the Focused EIR.

b. Conflict or be inconsistent with CEQA Guidelines section 15064.3(b)? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

VMT was analyzed in the ConnectMenlo EIR as TRANS-1b (pages 4.13-70 to 4.13-72). It was determined that ConnectMenlo would not exceed the existing VMT threshold of significance, resulting in less-than-significant impacts with respect to VMT.

Conclusion

The transportation mitigation measures for the ConnectMenlo EIR anticipated that any project proposed prior to adoption of a Transportation Master Plan and updated Transportation Impact Fee, including the Project, would need to conduct a project-specific TIA to determine the impacts and the necessary transportation mitigation to be funded by that project. The requirement to conduct a project-specific TIA was also part of the settlement agreement in the 2017 *City of East Palo Alto v. City of Menlo Park* case. Therefore, this topic requires ***further environmental review*** in the Focused EIR.

c. Substantially increase hazards because due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact TRANS-4 (page 4.13-77 to 4.13-79) and determined to have less-than-significant impacts because the zoning update includes design standards that require street improvements, and projects are required to be designed in accordance with these City standards. No mitigation measures were recommended.

Project-Specific Discussion

Although the Project would add vehicles at nearby intersections, the Project would not result in physical changes to the study intersections. Therefore, because design features at the intersections would not be altered as a result of the Project, collision rates are not expected to increase, and no additional hazards would occur.

The Commonwealth Site would be accessible from two driveways, with the main access point at Commonwealth Drive in the southwest corner of the Project site and the secondary access point at Jefferson Drive adjacent to the Jefferson Site. The internal street network that surrounds the Commonwealth Site would provide access to the surface parking and the proposed parking structure. Entrances to the parking structure would be provided along the internal street east of Buildings 2 and 3. A loading dock would be provided on the east side of Building 3.

Conclusion

The requirement to conduct a project-specific TIA was part of the settlement agreement in the 2017 *City of East Palo Alto v. City of Menlo Park* case. Therefore, this topic requires ***further environmental review*** in the Focused EIR.

d. Result in inadequate emergency access? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact TRANS-5 (page 4.13-79 to 4.13-81) and determined to have less-than-significant impacts because the City would implement General Plan programs that would require continued coordination between the MPPD and MPFPD. In addition, proposed zoning would help to minimize traffic congestion. No mitigation measures were recommended.

Project-Specific Discussion

The Project does not include any characteristics (e.g., permanent road closures or roadway modifications) that would physically impair or otherwise interfere with emergency response or evacuation in the Project vicinity. Emergency access to the Project site would be provided from both access points on Commonwealth Drive and Jefferson Drive. Emergency vehicles would enter the site at Commonwealth Drive and continue along the northern portion of the site, adjacent to the proposed building, then travel around the building to exit at Jefferson Drive. Fire access to the proposed parking structure would be at both the northern and southern ends.

Conclusion

The requirement to conduct a project-specific TIA was part of the settlement agreement in the 2017 *City of East Palo Alto v. City of Menlo Park* case. Therefore, this topic requires ***further environmental review*** in the Focused EIR.

XVIII. Tribal Cultural Resources	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe and that is:					
a) Listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources, as defined in Public Resources Code Section 5020.1(k)?	☒	☐	☐	☐	☐
b) Determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☒	☐	☐	☐	☐

Setting

As discussed in more detail, below, this topic will be analyzed further in the Focused EIR for the Project. Therefore, the setting is not discussed in this document but will be provided instead in the Focused EIR.

Environmental Checklist and Discussion

Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe and that is:

a. Listed or eligible for listing in the California Register of Historical Resources or in a local register of historical resources, as defined in Public Resources Code Section 5020.1(k)? (Topics to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

Tribal cultural resources, as defined by Public Resources Code Section 21074, were analyzed in the ConnectMenlo EIR as Impact CULT-1 (pages 4.4-12 to 4.9-15). Impacts were determined to be less than significant with implementation of Mitigation Measures CULT-2a, CULT-2b, and CULT-4 from the ConnectMenlo EIR.

Project-Specific Discussion

A search of the Sacred Lands File did not identify any tribal cultural resources in the Project area. Although no formal tribal cultural resources were identified as a result of consultation with the Native Americans the NAHC listed as geographically affiliated with the region, the area was identified as very sensitive for Native American resources by two representatives. In addition, one previously recorded precontact site was identified within with the Project footprint. CA-SMA-425 was identified during archaeological monitoring for the Commonwealth Corporate Center Project in 2015. The site is located beneath the existing Building 2. This resource is believed to be the last vestige of a much larger site because of the heavily disturbed nature of the Project area. Building 2 would not be augmented as part of the current Project, and this resource would not be disturbed during any Project-related activities. However, although no Project-related ground disturbance would occur in the vicinity of this resource, the potential always exists for additional as-yet undocumented tribal cultural resources to be encountered during Project demolition or construction work, as discussed in more detail in Section V, *Cultural Resources*. Buried deposits may be eligible for listing in the CRHR.

Conclusion

The Project would implement ConnectMenlo EIR Mitigation Measure CULT-2a if a potentially significant subsurface cultural resource is encountered during ground-disturbing activities. The Project would also implement ConnectMenlo EIR Mitigation Measure CULT-4 if human remains are encountered at the Project site. Although no archaeological resources were identified during consultation with Native American tribes, the area was identified as sensitive for Native American resources. Therefore, this topic requires ***further environmental review*** in the Focused EIR.

b. Determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? (Topics to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR as Impact CULT-5 (page 4.4-21). Impacts were determined to be less than significant with implementation of Mitigation Measures CULT-2a, CULT-2b, and CULT-4.

Effects of the Project

As stated above, although no tribal cultural resources were identified within the Project site during consultation with California Native American tribes, the area was determined to be very sensitive for Native American resources. In addition, one precontact archaeological resource was identified during a cultural resources review. Although this resource would not be affected by Project-related activities, the potential still exists for encountering as-yet undocumented resources that could be considered significant by California Native American tribes during Project-related construction activities.

Conclusion

Implementation of ConnectMenlo EIR Mitigation Measures CULT-2a and CULT-4 and Project Mitigation Measure CR-1 would reduce impacts. However, because of the sensitivity of the Project site, this topic requires ***further environmental review*** in the Focused EIR.

XIX. Utilities and Service Systems	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
Would the Project:					
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☒	☐	☐	☐	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☒	☐	☐	☐	☐

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒	☐

Setting

Water Supply

As discussed in more detail below, the water supply will be analyzed further in the Focused EIR. Therefore, the setting for the water supply is not discussed in this document but will be provided instead in the Focused EIR.

Wastewater Collection and Treatment

As discussed in more detail below, wastewater collection and treatment will be analyzed further in the Focused EIR. Therefore, the setting for wastewater is not discussed in this document but will be provided instead in the Focused EIR.

Stormwater

The Project site, which covers approximately 13.3 acres (578,500 sf), is located in the northernmost drainage area of Menlo Park. The Project site drains to a municipal storm drain system that outfalls to Redwood Creek and, ultimately, to San Francisco Bay. Currently, the total surface area of the Project

site is approximately 74.6 percent impervious (approximately 431,697 sf). The Project site includes the Commonwealth Site and the Jefferson Site, consisting of two buildings (Buildings 1 and 2, referred to by Facebook as Buildings 27 and 28) and surface parking on the Commonwealth Site and the Jefferson Site.

Currently, the Project site is served by a combination of existing and new onsite storm drain systems. The system collects runoff from the parking, roof, and hardscape areas and conveys it to a pump. The pump is sized to discharge the water at an appropriate flow rate to biotreatment ponds for stormwater treatment. The balance of the runoff that is not directed to the pond is discharged directly to Jefferson Drive from a systems of pipes. Runoff is conveyed from the systems of pipes to an existing 36-inch storm drain in Jefferson Drive.[110]

Onsite drainage is captured by area drains and landscaped areas. New and mature trees, as well as landscaping, are scattered throughout the Project site. The Commonwealth Site includes a stormwater treatment area with native grasses and flowers. Directly adjacent to Jefferson Drive is a 2,800 sf stormwater treatment area with trees and grasses.

Solid Waste

Recology Incorporated provides solid waste collection and conveyance service for Menlo Park. Collected recyclables, organics, and garbage are conveyed to the Shoreway Environmental Center (Shoreway) in San Carlos for processing and shipment. Shoreway is owned by RethinkWaste (former South Bayside Waste Management Authority), a joint powers authority that comprises 12 public agencies, including the City of Menlo Park. As of January 1, 2011, Shoreway has been operated by South Bay Recycling under a 10-year contract with RethinkWaste. The primary goal of RethinkWaste is to provide cost-effective waste reduction, recycling, and solid waste programs to member agencies through franchised services and the services of other recyclers to divert 50 percent (minimum) of the waste stream from landfills, as mandated by California state law (AB 939).[111]

Shoreway facilities consist of a transfer station, a materials recovery facility, a public recycling center, an environmental education center, Recology offices, and South Bay Recycling offices. Shoreway serves as a regional solid waste and recycling facility for the receipt, handling, and transfer of refuse, recyclables and organic materials collected from the RethinkWaste service area (southern and central San Mateo County). Shoreway is separately permitted by the California State Integrated Waste Management Board to receive 3,000 tons per day of solid waste and recyclables.[112]

In 2016 (the most recent year available), the RethinkWaste service area (San Mateo County) produced approximately 86,573 tons of commercial solid waste, 34,024 tons of multi-family waste, and 60,256 tons of residential waste. Overall, the service area experienced a 50 percent diversion rate by recycling and composting waste materials. Menlo Park had a slightly higher diversion rate than the county average, with approximately 58 percent of waste diverted from the landfill.[113] In 2016, Menlo

[110] Kier & Wright Civil Engineers & Surveyors. 2018. *Stormwater Report, Commonwealth Building 3, 162 & 164 Jefferson Drive, Menlo Park, California. February* 28.

[111] RethinkWaste. 2018. *About Us.* Last revised: 2018. Available: http://www.rethinkwaste.org/about/about-us. Accessed: June, 18, 2018.

[113] Recology San Mateo County. 2017. *Annual Report to the SBWMA for Year 2016.* Available: https://rethinkwaste.org/uploads/media_items/recology-annual-report-2016.original.pdf. Accessed: July 20, 2018.

Park's per capita solid waste disposal rate for residents was 5.1 pounds per day (ppd); the target per capita disposal rate for residents is 7.5 ppd. Menlo Park's per capita solid waste disposal rate for employees in 2016 was 4.5 ppd; the California Department of Resources Recycling and Recovery (CalRecycle) target per capita disposal rate for employees is 9.2 ppd.[114]

Materials not composted or recycled at Shoreway are sent to several different landfills in the area, with most going to the Ox Mountain Landfill (also known as Corinda Los Trancos Landfill) near Half Moon Bay. This landfill is expected to remain operational until 2034 and has a permitted throughput capacity of 3,598 tons per day.[115] In 2017, approximately 32,617 tons of waste from Menlo Park was disposed of in landfills, with approximately 25,523 tons going to the Ox Mountain Landfill.[116]

Natural Gas

PG&E's natural gas (methane) pipe delivery system includes 42,000 miles of distribution pipelines and 6,700 miles of transmission pipelines. Gas delivered by PG&E originates in gas fields in California, the Southwest, the Rocky Mountains, and Canada. Transportation pipelines send natural gas from fields and storage facilities in large pipes under high pressure. Smaller distribution pipelines deliver gas to individual businesses and residences. PG&E's gas transmission pipeline systems serve approximately 15 million energy customers in California. The system is operated under an inspection and monitoring program in real time on a 24-hour basis, with leak inspections, surveys, and patrols taking place along the pipelines.[117] The PG&E gas transmission pipeline nearest the Project site runs primarily along US 101 until Second Avenue, where it continues north along Broadway in Redwood City. Distribution gas pipelines are located throughout the Bayfront Area.

Telecommunications

There are numerous telecommunications providers in Menlo Park that offer DSL, wireless, cable, fiber, and cooper services, including AT&T, XFINITY from Comcast, MegaPath, and CenturyLink Business, to residents and businesses in Menlo Park. The Project site receives services from XFINITY.[118] Underground conduits and overhead cables are present throughout the vicinity of the Project site.

General Plan Goals and Policies

The City General Plan (specifically the Land Use Element, Open Space/Conservation Element, Noise Element, and Safety Element) contains general goals, policies, and programs that require local planning and development decisions to consider impacts on utilities. The following City General Plan goals, policies, and programs would serve to minimize potential adverse impacts on public stormwater and solid waste: Goal LU-4, Policy LU-4.5, Goal LU-6, Policy LU-6.11, Goal LU-7, Policy

LU-7.1, Policy LUS-7.5, Goal OSC-4, Policy OSC-4.2, Policy OSC-4.6, Policy OSC-4.7, Policy OSC-4.8, Goal S-1, Policy S-1.26, and Policy S-1.27. Goals and policies related to water and wastewater will be discussed in the Focused EIR.

Environmental Checklist and Discussion

a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or stormwater drainage, natural gas, or telecommunications facilities, the construction of which could cause significant environmental effects? (Topic to Be Analyzed in Focused EIR)

Analysis in the ConnectMenlo EIR

These topics were analyzed in the ConnectMenlo EIR under Impacts UTIL-2 (pages 4.14-28 and 4.14-29), UTIL-4 (pages 4.14-36 to 4.14-38), UTIL-5 (pages 4.14-38 to 4.14-41), UTIL-11 (pages 4.14-64 to 4.14-66), and UTIL-13 (pages 4.14-76 to 4.18-81) and determined to result in a less-than-significant impact. It is expected that the City will implement General Plan programs that require expansion of the Menlo Park Municipal Water District's conservation programs and future development to employ green building best practices. No mitigation measures were recommended. The ConnectMenlo EIR does not discuss impacts on telecommunication facilities.

Project-Specific Discussion

Water and Wastewater. Operation of the Project is not anticipated to result in the construction or expansion of new water or wastewater treatment facilities. However, it is unknown at this time how much water the Project would demand and, in turn, how much wastewater the Project would generate. A Water Supply Assessment (WSA) for the Project would need to be conducted and analyzed in the Focused EIR.

Stormwater. Operation of the Project would result in the construction or expansion of new stormwater facilities but would not cause significant environmental effects. Implementation of the Project would reduce the amount of impervious surface by 38,542 sf, or 6.6 percent of the Project site. Paved areas would cover approximately 393,155 sf of impervious surfaces, or approximately 68 percent of the Project site. Hardscape at the Project site would include concrete paving, decomposed granite paving, and concrete pavers. Landscaped areas would provide 185,297 sf of pervious surfaces, covering approximately 32 percent of the Project site. Because the Project would create and replace more than 10,000 sf of impervious surface, the Project would be regulated by provision C.3 of the Municipal Regional Permit. To meet San Mateo Countywide Water Pollution Prevention Program C.3 stormwater requirements, the Project would be required to treat runoff from all impervious areas. The Project site would be drained by a combination of existing and new onsite storm drain system facilities. However, the Project would reduce the amount of impervious surfaces, thereby funneling less stormwater to these new onsite facilities. The system would ultimately convey runoff to biotreatment ponds for stormwater treatment to capture and treat runoff from the newly created or replaced impervious areas. The new development would have a larger landscaped area, which would result in a net decrease in the amount of runoff leaving the site. The Project Sponsor would be required develop and implement a final Stormwater Management Plan, with the goal of reducing the discharge of pollutants to the maximum extent practicable.

The existing stormwater treatment areas on the Commonwealth Site and the existing 2,800 sf stormwater treatment area directly adjacent to Jefferson Drive would remain. The Project would provide biotreatment areas throughout the site. The overflow pipe at the manhole pump for each biotreatment area would be a couple of feet higher than the treatment volume to prevent the overflow pipe from functioning until the treatment flow has been stored. Flows from all proposed impervious areas, both replaced and new areas, would be directed to a pump that would be sized to discharge runoff to biotreatment areas for stormwater treatment.

Natural Gas. During operation, the Project would meet 100 percent of its energy demand (electricity and gas), consistent with the requirements of City Municipal Code Section 16.44.130, through the purchase of 100 percent renewable electricity from Peninsula Clean Energy. As needed, PG&E would provide gas and electrical power for the proposed facilities. Existing electricity and gas lines in the vicinity of the Project site would continue to serve the Project and may be upgraded, if necessary.

The installation of new or expanded gas lines on the Project site would require excavation, trenching, soil movement, and other activities that are typical during construction of development projects. However, these construction impacts are discussed in detail in the appropriate topical sections of this Initial Study as part of the assessment of overall Project impacts. In addition, although construction related to the new or relocated gas and electric lines could result in short-term environmental effects (e.g., noise, dust, traffic, temporary service interruption), the work would comply with City and PG&E regulations as well as standard conditions for new construction related to infrastructure improvements. For example, these regulations and conditions would require new gas line construction, or expansion of existing lines, to include best management practices (e.g., require construction areas to minimize dust generation, limit construction noise to daytime hours to limit impacts on sensitive receptors, use modern equipment to limit emissions). Also, any such work would be subject to compliance with applicable regulations and standard conditions of approval for the Project, including City permits/review for construction (e.g., grading permits, private development review, encroachment permits). It is anticipated that no offsite natural gas facilities would need to be constructed or expanded as a result of the Project.

Telecommunications. Telecommunications lines may need to be extended or relocated as a result of the Project. The installation of new or expanded telecommunication lines on the Project site would require excavation, trenching, soil movement, and other activities that are typical during construction of development projects. These construction impacts are discussed in the appropriate topical sections of this Initial Study as part of the assessment of overall Project impacts. However, no offsite telecommunications facilities would need to be constructed or expanded as a result of the Project.

Conclusion

The physical conditions, as they relate to water, wastewater treatment facilities, stormwater, natural gas, and telecommunications, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project could require construction or expansion of stormwater drainage, natural gas, or telecommunication

lines and features on the Project site but would not lead to significant environmental impacts beyond the construction impacts discussed throughout this document. Impacts would be less than significant. However, because further studies are needed to determine water and wastewater impacts, this topic requires ***further environmental review*** in the Focused EIR.

b. Have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. (Topic to Be Analyzed in Focused EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR under UTIL-1 (pages 4.14-24 to 4.14-27) and determined to result in a less-than-significant impact. Future development under ConnectMenlo would be required to comply with existing regulations, including City General Plan policies and zoning requirements, to minimize impacts related to water supplies. No mitigation measures were recommended.

Project-Specific Discussion

Existing water supplies should be available to serve the Project; it is not expected that new or expanded entitlements would be needed during normal, dry, and multiple dry years. However, it is unknown at this time how much water the Project would require. A WSA for the Project would need to be conducted.

Conclusion

The physical conditions, as they relate to water supplies, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. Regardless, a WSA would be prepared to determine whether the Project can be supplied with water from existing entitlements and resources. The WSA would distinguish between normal and multi-year drought conditions. The Project would be required to have an onsite water recycling system to offset potable water demand, which would be reflected in the WSA. Given that the amount of water demand from the Project is unknown, the impacts are also unknown. Since the release of ConnectMenlo EIR, the City has prepared a Water System Master Plan, which identifies a fire-flow issue in the area of the Project site. In addition to preparation of a WSA, a water system analysis would be prepared for the Project and included in the EIR. The EIR would assess delivery of water to the site with regard to fire flow. Because further studies are needed to determine water and wastewater impacts, this topic requires ***further environmental review*** in the EIR.

c. Result in a determination by the wastewater treatment provider that serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments? (Topic to Be Analyzed in Focused EIR)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR (pages 4.14-43 to 4.14-45) and determined to result in a less-than-significant impact. Future development is expected to tie in to existing collection facilities. The installation of extension lines would comply with applicable sewer permits, which require projects to reduce impacts on service capacity. In addition, projects would be required to comply with existing regulations that promote water conservation and minimize impacts related to wastewater generation. No mitigation measures were recommended.

Project-Specific Discussion

The Project is not expected to exceed the existing capacity of wastewater treatment facilities or the infrastructure that serves the area. However, it is unknown at this time how much water the Project would demand and, in turn, how much wastewater the Project would generate. A WSA for the Project would need to be conducted.

Conclusion

The physical conditions, as they relate to wastewater treatment facilities, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. However, because further studies are needed to determine water and, in turn, wastewater impacts, this topic requires ***further environmental review*** in the Focused EIR.

d. Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR under Impact UTIL-8 (pages 4.14-52 to 4.14-55) and determined to result in a less-than-significant impact. Future development would be required to comply with existing regulations to minimize impacts related to solid waste disposal and attain solid waste reduction goals. No mitigation measures were recommended.

Project-Specific Discussion

The California Integrated Waste Management Act of 1989 (AB 939) requires municipalities to adopt an integrated waste management plan to establish objectives, policies, and programs related to waste disposal, management, source reduction, and recycling. In addition, Senate Bill 1383, passed in 2016, established a target that calls for a 50 percent reduction in organic waste by 2020 and 75 percent by 2025. The City of San Mateo and the City of Menlo Park have been working to meet these standards. As noted above, in 2016, San Mateo County experienced a 50 percent diversion rate by recycling and composting waste materials. Menlo Park had a slightly higher diversion rate than the county average, with approximately 58 percent of waste diverted from the landfill.[119]

Construction of the Project would generate waste but would remain within state and local standards. The proposed excavation would result in the export of approximately 2,500 cubic yards of material offsite. All soil and debris, including contaminated soil, would be off-hauled to the Dumbarton Quarry or a similar appropriate facility. The Project would be required to comply with the City's Construction and Demolition Recycling Ordinance, which requires salvaging or recycling of at least 60 percent of construction-related solid waste. Therefore, construction of the Project is not expected to have an impact on existing landfills.

[119] Recology San Mateo County. 2017. *Annual Report to the SBWMA for Year 2016.* Available: https://rethinkwaste.org/uploads/media_items/recology-annual-report-2016.original.pdf. Accessed: July 20, 2018.

Operation of the Project would result in the generation of solid waste beyond existing conditions but would continue to meet state and local standards for solid waste and recycling. The Project would generate approximately 1,996 new employees at the Project site and up to 190 residents who could live in Menlo Park. As discussed above, the disposal rate per business employee in Menlo Park was 4.5 ppd. Assuming 1,996 employees, the Project could generate approximately 8,982 ppd of waste. In addition, Menlo Park's disposal rate per resident was 5.1 ppd. Assuming up to 190 new residents as a result of the Project, Project-induced residential waste would be approximately 969 ppd. Combined, this would result in approximately 5 tons per day. This waste generated at the Project site would be collected by Recology San Mateo and hauled to Shoreway. Shoreway is permitted to receive 3,000 tons of refuse per day. Once collected and sorted at Shoreway, solid waste is transported to Ox Mountain, which is permitted to receive 3,598 tons per day. Solid waste generated by operation of the Project would represent approximately 0.17 percent and 0.14 percent of the permitted capacity of Shoreway and Ox Mountain, respectively. As such, Shoreway and the Ox Mountain would have sufficient capacity to serve the Project.

Conclusion

The physical conditions, as they relate to landfills, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. The Project would be served by a landfill with sufficient permitted capacity to accommodate its solid waste disposal needs. In addition, the Project is within the growth projections of the ConnectMenlo EIR and, as such, would not result in impacts that were not already evaluated. The Project would not generate solid waste in excess of state or local standards or in excess of the capacity of local infrastructure or otherwise impair the attainment of solid waste reduction goals. Impacts would be ***less than significant***, and no further study is needed.

e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste? (Less than Significant)

Analysis in the ConnectMenlo EIR

This topic was analyzed in the ConnectMenlo EIR under Impact UTIL-9 (pages 4.14-55 and 4.14-56) and determined to result in a less-than-significant impact. No mitigation measures were recommended.

Project-Specific Discussion

Construction and operation of the Project would comply with all applicable statutes and regulations related to solid waste. State law (AB 341 and AB 939) requires businesses to recycle and cities to divert 50 percent of their solid waste from landfills. The Project would adhere to these laws. In addition, the Project would be required to adhere to the City's Construction and Demolition Recycling Ordinance.

Conclusion

The physical conditions, as they relate to solid waste statutes and regulations, have not changed substantially in the ConnectMenlo EIR study area since preparation of the ConnectMenlo EIR. There is no substantial change in the ConnectMenlo project, change in circumstances, or new information of substantial importance that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Implementation of the Project would have a ***less-than-significant*** impact with regard to compliance with solid waste-related management and reduction statutes and regulations. No further study is needed.

[page intentionally left blank]

XX. Mandatory Findings of Significance	Further Evaluation Needed in EIR	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less-than-Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐	☐
b) Does the project have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐	☐
c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐	☐

Environmental Checklist and Discussion

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory? (Topic to Be Analyzed in the Focused EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed throughout the ConnectMenlo EIR, which considered impacts associated with biological resources and cultural resources. Any impacts were mitigated in the ConnectMenlo EIR under the respective EIR topics. Therefore, mitigation was applied to the Project, as discussed in Sections IV and Section V of this document.

Project-Specific Discussion

Construction of the Project would result in short-term impacts on biological resources. However, mitigation measures have been identified that would reduce the significant impacts to less-than-significant levels. The Project would not substantially reduce a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal

community, or reduce the number of rare plants or animals. The Project could adversely affect biological resources if special-status species (white-tailed kite and tree-nesting raptors) are found during construction activities. However, the BRA prepared in compliance with ConnectMenlo EIR Mitigation Measure BIO-1 identified Mitigation Measures BR-1 through BR-4, which would be incorporated into the Project to reduce potential impacts on white-tailed kit and tree-nesting raptors to less than significant.

As described in Section V, there are no historic resources at the Project site or in the surrounding area that would be affected by the Project. No buildings would be demolished as a result of the Project. However, the Project could adversely affect cultural resources during construction if buried artifacts or remains are discovered. Implementation of ConnectMenlo EIR Mitigation Measures CULT-2a, CULT-2b, and CULT-4, would help reduce impacts on archaeological resources, tribal cultural resources, and human remains. Regardless, since the Project site is in an archaeologically sensitive area and could disturb unidentified subsurface materials that have the potential to contain prehistoric archaeological resources, this topic requires further environmental review in the Focused EIR.

Conclusion

The physical conditions, as they relate to degradation of the physical environment, have not changed substantially in the ConnectMenlo area since preparation of the ConnectMenlo EIR. No substantial new information has been presented that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. Impacts on biological resources have been analyzed in this document and determined to be less than significant. However, impacts related to archaeological resources, tribal cultural resources, and human remains require ***further environmental review*** in the Focused EIR.

b. Does the project have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.) (Topic to Be Analyzed in Focused EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed throughout the ConnectMenlo EIR, which considered cumulative impacts. Any impacts were mitigated in the ConnectMenlo EIR under the respective EIR topics. Therefore, mitigation was applied to the Project, as needed.

Project-Specific Discussion

As described throughout this document, the Project would result in several potentially significant project-level impacts. However, mitigation measures have been identified that would reduce these impacts to less than significant. Furthermore, all development projects are guided by the goals and polices identified in the City General Plan and regulations in the City Municipal Code. Therefore, compliance with applicable land use and environmental regulations would ensure that environmental effects associated with the Project would not combine with the effects of reasonably foreseeable future development in Menlo Park and cause cumulatively significant impacts. However, the Project could result in cumulative impacts related to traffic, air quality, and greenhouse gases. In addition, although it is not anticipated, the Project could result in cumulative impacts related to cultural/tribal resources, population, water supply, wastewater treatment, and noise; these topics will be analyzed in greater detail (including cumulative analysis). Further study in the Focused EIR is needed.

Conclusion

No substantial new information has been presented that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; therefore, there would be no new specific effects as a result of the Project. However, cumulative conditions related to traffic, air quality, greenhouse gases, cultural/tribal resources, population, water supply, wastewater treatment, and operational and construction noise will be subject to ***further environmental review*** in the Focused EIR.

c. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly? (Topic to Be Analyzed in Focused EIR)

Analysis in the ConnectMenlo EIR

This checklist item was analyzed throughout the ConnectMenlo EIR, which considered impacts associated with adverse effects on human beings. Any impacts were mitigated in the ConnectMenlo EIR under the respective EIR topics. Therefore, mitigation was applied to the Project, as discussed in Section I through Section XIX.

Project-Specific Discussion

As identified in this document, the Project would generally not directly or indirectly cause adverse effects on human beings with implementation of mitigation measures. Impacts that could affect the human environment, such as those related to aesthetics, agriculture, geology and soils, hazardous materials, hydrology, land use, minerals, public services, and recreation, would be less than significant. As identified in this document, the Project could have impacts related to biological resources and hydrology; however, these impacts would be addressed through implementation of the ConnectMenlo EIR mitigation measures as part of the Project. Regardless, traffic, air quality, and greenhouse gas impacts as a result of the Project could have a substantial adverse effect on human beings. In addition, although not expected to result in adverse impacts, cultural/tribal resources, population, water supplies, wastewater facilities, and noise will require further review.

Conclusion

The physical conditions, as they relate to degradation of the physical environment, have not changed substantially in the ConnectMenlo area since preparation of the ConnectMenlo EIR. For most topics, no substantial new information has been presented that shows more significant effects than those originally analyzed in the ConnectMenlo EIR; there would be no new specific effects as a result of the Project. However, ***further environmental review*** is required in the Focused EIR related to traffic, air quality, greenhouse gases, cultural/tribal resources, population, water supply, wastewater treatment, and operational and construction noise.

Section 1. Introduction

This report describes the biological resources present in and adjacent to the proposed Commonwealth Corporate Center Building 3 project, as well as the potential impacts of the proposed project and measures necessary to reduce impacts to less-than-significant levels under the California Environmental Quality Act (CEQA). This report was prepared to facilitate CEQA review of the project by the City of Menlo Park. In addition, this report contains the information needed to satisfy Mitigation Measure BIO-1 from the ConnectMenlo General Plan Environmental Impact Report (EIR) (PlaceWorks 2016), which requires preparation of a biological resources assessment.

1.1 Project Description

The 13.3-acre (ac) project site is located at 162-164 Jefferson Drive in Menlo Park, California (Figures 1 and 2). Office and research and development buildings are located north and west of the project site. To the south, the site is bounded by U.S. Highway 101. Kelly Park is located southeast of the project site, across the inactive Dumbarton Rail Corridor. Currently, the project site is occupied by two, four-story office buildings, each approximately 129,960 square feet (ft^2) in size, and surface parking lots.

The proposed project entails the development of a new four-story, 249,500 ft^2 office building, a four-level parking structure, a loading dock, and a trash enclosure as well as installation of landscaping. The proposed office building would be located to the north of the existing buildings on a portion of the project site currently used for surface parking. The proposed parking structure would be located on the eastern half of the parcel, also on a portion of the site currently used for surface parking. Construction would require the demolition of existing surface parking lots, landscaping, and an existing trash enclosure. The total existing and proposed office development on the parcel would be approximately 509,420 ft^2.

Section 2. Methods

2.1 Background Review

Prior to conducting field work, H. T. Harvey & Associates ecologists reviewed the project plans and description provided by the project applicant in January 2019; aerial images (Google Inc. 2019); a U.S. Geological Survey (USGS) topographic map; the California Department of Fish and Wildlife's (CDFW's) California Natural Diversity Database (CNDDB 2019); and other relevant scientific literature and technical databases. Previous reports prepared for the project vicinity were also reviewed, including the Commonwealth Corporate Center Project Final EIR (ICF International 2014); the Facebook Campus Expansion Project EIR (ICF International 2016); the Final EIR for the ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update for the City of Menlo Park (PlaceWorks 2016); the Endangered Species Assessment for the Menlo Gateway Project (H. T. Harvey & Associates 2016); the Commonwealth Building 3 Project – Avian Collision Risk Assessment (H. T. Harvey & Associates 2018); and the Comprehensive Conservation Plan and Environmental Assessment for the Don Edwards San Francisco Bay National Wildlife Refuge (NWR) (USFWS 2012). In addition, for plants, we reviewed all species on current California Native Plant Society (CNPS) California Rare Plant Rank (CRPR) 1A, 1B, 2A, and 2B lists occurring in the *Palo Alto, California* 7.5-minute USGS quadrangle and surrounding eight quadrangles (*Woodside, San Mateo, Redwood Point, Newark, Mountain View, Cupertino, Mindego Hill,* and *La Honda, California*). Quadrangle-level results are not maintained for CRPR 3 and 4 species, so we also conducted a search of the CNPS Inventory records for these species occurring in San Mateo County (CNPS 2019). In addition, we queried the CNDDB (2019) for natural communities of special concern that occur in the project region. For the purposes of this report, the "project vicinity" encompasses a 5-mile (mi) radius surrounding the project site.

2.2 Site Visits

Reconnaissance-level field surveys of the project site were conducted on January 29, 2019 by H. T. Harvey & Associates plant ecologist Matthew Mosher, B.S., and on February 8, 2019 by H. T. Harvey & Associates senior wildlife ecologist Ginger Bolen, Ph.D. The purpose of these surveys was to provide a project-specific impact assessment for the proposed project as described above. Specifically, the surveys were conducted to (1) assess existing biotic habitats and general plant and wildlife communities on the project site, (2) assess the potential for the project to impact special-status species and/or their habitats, and (3) identify potential jurisdictional habitats, such as Waters of the U.S./State and riparian habitat.

Section 3. Regulatory Setting

Biological resources on the project site are regulated by a number of federal, state, and local laws and ordinances, as described below.

3.1 Federal

3.1.1 Clean Water Act

The Clean Water Act (CWA) functions to maintain and restore the physical, chemical, and biological integrity of Waters of the U.S., which include, but are not limited to, tributaries to traditionally navigable waters currently or historically used for interstate or foreign commerce, and adjacent wetlands. Historically, in non-tidal waters, U.S. Army Corp of Engineers (USACE) jurisdiction extends to the ordinary high water (OHW) mark, which is defined in Title 33, Code of Federal Regulations (CFR), Part 328.3 If there are wetlands adjacent to channelized features, the limits of USACE jurisdiction extend beyond the OHW mark to the outer edges of the wetlands. Wetlands that are not adjacent to Waters of the U.S. are termed "isolated wetlands" and, depending on the circumstances, may be subject to USACE jurisdiction. In tidal waters, USACE jurisdiction extends to the landward extent of vegetation associated with salt or brackish water or the high tide line. The high tide line is defined in 33 CFR Part 328.3 as "the line of intersection of the land with the water's surface at the maximum height reached by a rising tide." If there are wetlands adjacent to channelized features, the limits of USACE jurisdiction extend beyond the OHW mark or high tide line to the outer edges of the wetlands.

Construction activities within jurisdictional waters are regulated by the USACE. The placement of fill into such waters must comply with permit requirements of the USACE. No USACE permit will be effective in the absence of Section 401 Water Quality Certification. The State Water Resources Control Board (SWRCB) is the state agency (together with the Regional Water Quality Control Boards [RWQCBs] charged with implementing water quality certification in California.

Project Applicability: The project site does not support wetland or aquatic habitats. Therefore, a permit from the USACE would not be required for the project.

3.1.2 Rivers and Harbors Act

Section 10 of the Rivers and Harbors Act of 1899 prohibits the creation of any obstruction to the navigable capacity of Waters of the U.S., including discharge of fill and the building of any wharfs, piers, jetties, and other structures without Congressional approval or authorization by the Chief of Engineers and Secretary of the Army (33 U.S.C. 403).

Navigable Waters of the U.S., which are defined in 33 CFR, Part 329.4, include all waters subject to the ebb and flow of the tide, and/or those which are presently or have historically been used to transport commerce.

The shoreward jurisdictional limit of tidal waters is further defined in 33 CFR, Part 329.12 as "the line on the shore reached by the plane of the mean (average) high water." It is important to understand that the USACE does not regulate wetlands under Section 10, only the aquatic or open waters component of bay habitat, and that there is overlap between Section 10 jurisdiction and Section 404 jurisdiction. According to 33 CFR, Part 329.9, a waterbody that was once navigable in its natural or improved state retains its character as "navigable in law" even though it is not presently used for commerce because of changed conditions and/or the presence of obstructions. Historical Section 10 Waters may occur behind levees in areas that are not currently exposed to tidal or muted-tidal influence, and meet the following criteria: (1) the area is presently at or below the mean high water line; (2) the area was historically at or below mean high water in its "unobstructed, natural state"; and (3) there is no evidence that the area was ever above mean high water.

As mentioned above, Section 404 of the CWA authorizes the USACE to issue permits to regulate the discharge of dredged or fill material into Waters of the U.S. If a project also proposes to discharge dredged or fill material and/or introduce other potential obstructions in navigable Waters of the U.S., a Letter of Permission authorizing these impacts must be obtained from the USACE under Section 10 of the Rivers and Harbors Act.

Project Applicability: No current or historical Section 10 Waters are present within the project boundary. Therefore, a Letter of Permission from the USACE is not required.

3.1.3 Federal Endangered Species Act

The Federal Endangered Species Act (FESA) protects federally listed wildlife species from harm or "take", which is broadly defined as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in any such conduct." Take can also include habitat modification or degradation that directly results in death or injury of a listed wildlife species. An activity can be defined as "take" even if it is unintentional or accidental. Listed plant species are provided less protection than listed wildlife species. Listed plant species are legally protected from take under FESA only if they occur on federal lands.

The U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS) have jurisdiction over federally listed, threatened, and endangered species under FESA. The USFWS also maintains lists of proposed and candidate species. Species on these lists are not legally protected under FESA, but may become listed in the near future and are often included in their review of a project.

Project Applicability: No suitable habitat for any federally listed plant or animal species occurs on the project site. Thus, no federally listed species are reasonably expected to occur on the project site.

3.1.4 Magnuson-Stevens Fishery Conservation and Management Act

The Magnuson-Stevens Fishery Conservation and Management Act governs all fishery management activities that occur in federal waters within the United States' 200-nautical-mile limit. The Act establishes eight Regional Fishery Management Councils responsible for the preparation of fishery management plans (FMPs) to achieve

the optimum yield from U.S. fisheries in their regions. These councils, with assistance from NMFS, establish Essential Fish Habitat (EFH) in FMPs for all managed species. Federal agencies that fund, permit, or implement activities that may adversely affect EFH are required to consult with NMFS regarding potential adverse effects of their actions on EFH, and respond in writing to recommendations by NMFS.

Project Applicability: No EFH is present on the project site.

3.1.5 Federal Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA), 16 U.S.C. Section703, prohibits killing, possessing, or trading of migratory birds except in accordance with regulations prescribed by the Secretary of the Interior. The MBTA protects whole birds, parts of birds, and bird eggs and nests; and prohibits the possession of all nests of protected bird species whether they are active or inactive. An active nest is defined as having eggs or young, as described by the Department of the Interior in its April 16, 2003 Migratory Bird Permit Memorandum. Nest starts (nests that are under construction and do not yet contain eggs) are not protected from destruction.

Project Applicability: All native bird species that occur on the project site are protected under the MBTA.

3.2 State

3.2.1 Porter-Cologne Water Quality Control Act

The SWRCB works in coordination with the nine RWQCBs to preserve, protect, enhance, and restore water quality. Each RWQCB makes decisions related to water quality for its region, and may approve, with or without conditions, or deny projects that could affect Waters of the State. Their authority comes from the CWA and the State's Porter-Cologne Water Quality Control Act (Porter-Cologne). Porter-Cologne broadly defines Waters of the State as "any surface water or groundwater, including saline waters, within the boundaries of the state." Because Porter-Cologne applies to any water, whereas the CWA applies only to certain waters, California's jurisdictional reach overlaps and may exceed the boundaries of Waters of the U.S. For example, Water Quality Order No. 2004-0004-DWQ states that "shallow" waters of the State include headwaters, wetlands, and riparian areas. Moreover, the San Francisco Bay Region RWQCB's Assistant Executive Director, has stated that, in practice, the RWQCBs claim jurisdiction over riparian areas. Where riparian habitat is not present, such as may be the case at headwaters, jurisdiction is taken to the top of bank.

Pursuant to the CWA, projects that are regulated by the USACE must also obtain a Section 401 Water Quality Certification permit from the RWQCB. This certification ensures that the proposed project will uphold state water quality standards. Because California's jurisdiction to regulate its water resources is much broader than that of the federal government, proposed impacts on Waters of the State require Water Quality Certification even if the area occurs outside of USACE jurisdiction. Moreover, the RWQCB may impose mitigation requirements even if the USACE does not. Under the Porter-Cologne, the SWRCB and the nine regional boards also have the responsibility of granting CWA National Pollutant Discharge Elimination System (NPDES)

permits and Waste Discharge Requirements for certain point-source and non-point discharges to waters. These regulations limit impacts on aquatic and riparian habitats from a variety of urban sources.

Project Applicability: No aquatic, wetland, or riparian habitats are present within or immediately adjacent to the project boundary. Therefore, a Section 401 permit or Waste Discharge Requirement from the RWQCB would not be required for the project.

3.2.2 California Endangered Species Act

The California Endangered Species Act (CESA; California Fish and Game Code, Chapter 1.5, Sections 2050-2116) prohibits the take of any plant or animal listed or proposed for listing as rare (plants only), threatened, or endangered. In accordance with the CESA, the CDFW has jurisdiction over state-listed species (Fish and Game Code 2070). The CDFW regulates activities that may result in "take" of individuals (i.e., "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill"). Habitat degradation or modification is not expressly included in the definition of "take" under the California Fish and Game Code. The CDFW, however, has interpreted "take" to include the "killing of a member of a species which is the proximate result of habitat modification."

Project Applicability: No suitable habitat for any state listed plant or animal species occurs on the project site, and thus no state listed species are expected to occur on the project site.

3.2.3 California Environmental Quality Act

CEQA is a state law that requires state and local agencies to document and consider the environmental implications of their actions and to refrain from approving projects with significant environmental effects if there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects. CEQA requires the full disclosure of the environmental effects of agency actions, such as approval of a general plan update or the projects covered by that plan, on resources such as air quality, water quality, cultural resources, and biological resources. The State Resources Agency promulgated guidelines for implementing CEQA are known as the State CEQA Guidelines.

Section 15380(b) of the State CEQA Guidelines provides that a species not listed on the federal or state lists of protected species may be considered rare if the species can be shown to meet certain specified criteria. These criteria have been modeled after the definitions in FESA and CESA and the section of the California Fish and Game Code dealing with rare or endangered plants and animals. This section was included in the guidelines primarily to deal with situations in which a public agency is reviewing a project that may have a significant effect on a species that has not yet been listed by either the USFWS or CDFW or species that are locally or regionally rare.

The CDFW has produced three lists (amphibians and reptiles, birds, and mammals) of "species of special concern" that serve as "watch lists". Species on these lists are of limited distribution or the extent of their habitats has been reduced substantially, such that threat to their populations may be imminent. Thus, their

populations should be monitored. They may receive special attention during environmental review as potential rare species, but do not have specific statutory protection. All potentially rare or sensitive species, or habitats capable of supporting rare species, are considered for environmental review per CEQA Section 15380(b).

The CNPS, a non-governmental conservation organization, has developed CRPRs for plant species of concern in California in the Inventory of Rare and Endangered Plants (CNPS 2018). The CRPRs include lichens, vascular, and non-vascular plants, and are defined as follows:

- CRPR 1A Plants considered extinct.
- CRPR 1B Plants rare, threatened, or endangered in California and elsewhere.
- CRPR 2A Plants considered extinct in California but more common elsewhere.
- CRPR 2B Plants rare, threatened, or endangered in California but more common elsewhere.
- CRPR 3 Plants about which more information is needed - review list.
- CRPR 4 Plants of limited distribution-watch list.

The CRPRs are further described by the following threat code extensions:

- .1—seriously endangered in California;
- .2—fairly endangered in California;
- .3—not very endangered in California.

Although the CNPS is not a regulatory agency and plants on these lists have no formal regulatory protection, plants appearing as CRPR 1B or 2 are, in general, considered to meet CEQA's Section 15380 criteria, and adverse effects on these species may be considered significant. Impacts on plants that are listed by the CNPS as CRPR 3 or 4 are also considered during CEQA review, although because these species are typically not as rare as those of CRPR 1B or 2, impacts on them are less frequently considered significant.

Compliance with CEQA Guidelines Section 15065(a) requires consideration of natural communities of special concern, in addition to plant and wildlife species. Vegetation types of "special concern" are tracked in Rarefind (CNDDB 2019). Further, the CDFW ranks sensitive vegetation alliances based on their global (G) and state (S) rankings analogous to those provided in the CNDDB. Global rankings (G1–G5) of natural communities reflect the overall condition (rarity and endangerment) of a habitat throughout its range, whereas S rankings are a reflection of the condition of a habitat within California. If an alliance is marked as a G1–G3, all of the associations within it would also be of high priority. The CDFW provides the Vegetation Classification and Mapping Program's currently accepted list of vegetation alliances and associations (CDFW 2019).

Project Applicability: All potential impacts on biological resources will be considered during CEQA review of the project. This biological resources assessment evaluates these impacts to facilitate CEQA review of the project by the City of Menlo Park. Project impacts are discussed in Section 6 below.

3.2.4 California Fish and Game Code

Ephemeral and intermittent streams, rivers, creeks, dry washes, sloughs, blue line streams on USGS maps, and watercourses with subsurface flows fall under CDFW jurisdiction. Canals, aqueducts, irrigation ditches, and other means of water conveyance may also be considered streams if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife. A *stream* is defined in Title 14, California Code of Regulations Section 1.72, as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and that supports fish and other aquatic life. This includes watercourses having surface or subsurface flow that supports or has supported riparian vegetation." Using this definition, CDFW extends its jurisdiction to encompass riparian habitats that function as a part of a watercourse. California Fish and Game Code Section 2786 defines *riparian habitat* as "lands which contain habitat which grows close to and which depends upon soil moisture from a nearby freshwater source." The lateral extent of a stream and associated riparian habitat that would fall under the jurisdiction of CDFW can be measured in several ways, depending on the particular situation and the type of fish or wildlife at risk. At minimum, CDFW would claim jurisdiction over a stream's bed and bank. In areas that lack a vegetated riparian corridor, CDFW jurisdiction would be the same as USACE jurisdiction. Where riparian habitat is present, the outer edge of riparian vegetation is generally used as the line of demarcation between riparian and upland habitats.

Pursuant to California Fish and Game Code Section 1603, CDFW regulates any project proposed by any person that will "substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the department, or use any material from the streambeds." California Fish and Game Code Section 1602 requires an entity to notify CDFW of any proposed activity that may modify a river, stream, or lake. If CDFW determines that proposed activities may substantially adversely affect fish and wildlife resources, a Lake and Streambed Alteration Agreement (LSAA) must be prepared. The LSAA sets reasonable conditions necessary to protect fish and wildlife, and must comply with CEQA. The applicant may then proceed with the activity in accordance with the final LSAA.

Certain sections of the California Fish and Game Code describe regulations pertaining to protection of certain wildlife species. For example, Code Section 2000 prohibits take of any bird, mammal, fish, reptile, or amphibian except as provided by other sections of the code.

The California Fish and Game Code Sections 3503, 3513, and 3800 (and other sections and subsections) protect native birds, including their nests and eggs, from all forms of take. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered "take" by the CDFW. Raptors (i.e., eagles, hawks, and owls) and their nests are specifically protected in California under Code Section 3503.5. Section 3503.5 states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto."

Bats and other non-game mammals are protected by California Fish and Game Code Section 4150, which states that all non-game mammals or parts thereof may not be taken or possessed except as provided otherwise in the

code or in accordance with regulations adopted by the commission. Activities resulting in mortality of non-game mammals (e.g., destruction of an occupied nonbreeding bat roost, resulting in the death of bats), or disturbance that causes the loss of a maternity colony of bats (resulting in the death of young), may be considered "take" by the CDFW.

Project Applicability: No aquatic or riparian habitats are present within or immediately adjacent to the project boundary. Therefore, a California Fish and Game Code Section 1603 Lake and Stream Alteration Agreement from CDFW would not be required for the project. Most native bird, mammal, and other wildlife species that occur on the project site and in the immediate vicinity are protected by the California Fish and Game Code.

3.3 Local

3.3.1 Menlo Park Municipal Code

The City of Menlo Park Municipal Code contains all ordinances for Menlo Park. Title 16, Zoning, includes regulations relevant to biological resources on the project site as discussed below.

Bird-Friendly Design. Chapter 16.44.130 (6) requires all new construction, regardless of size, to implement the following bird-friendly design measures:

A. No more than ten percent (10%) of façade surface area shall have non-bird-friendly glazing.
B. Bird-friendly glazing includes, but is not limited to, opaque glass, covering the outside surface of clear glass with patterns, paned glass with fenestration, frit or etching patterns, and external screens over nonreflective glass. Highly reflective glass is not permitted.
C. Occupancy sensors or other switch control devices shall be installed on nonemergency lights and shall be programmed to shut off during nonwork hours and between ten (10) p.m. and sunrise.
D. Placement of buildings shall avoid the potential funneling of flight paths towards a building façade.
E. Glass skyways or walkways, freestanding (see-through) glass walls and handrails, and transparent building corners shall not be allowed.
F. Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with green roofs.
G. Use of rodenticides shall not be allowed.
H. A project may receive a waiver from one (1) or more of the items listed in subsections (6)(A) to (F) of this section, subject to the submittal of a site-specific evaluation from a qualified biologist and review and approval by the planning commission. (Ord. 1025 § 3 (part), 2016).

Project Applicability: Bird-friendly design will be incorporated into the project design as required by the City of Menlo Park Municipal Code.

Landscape Design Plan. Chapter 12.44.090(1)(G) states that the use of invasive and/or noxious plant species is strongly discouraged. Invasive species are defined as those plants not historically found in California that

spread outside cultivated areas and can damage environmental or economic resources. A noxious weed refers to any weed designated by the weed control regulations in the Weed Control Act and identified on a regional district noxious weed control list.

Project Applicability: No invasive and/or noxious plant species will be used in the project's landscape design plan.

Heritage Trees. Chapter 13.24, Heritage Trees, establishes regulations for the preservation of heritage trees, defined as:

- Trees of historical significance, special character or community benefit, specifically designated by resolution of the City Council;
- An oak tree (*Quercus* spp.), which is native to California and has a trunk with a circumference of 31.4 inches (diameter of 10 inches) or more, measured at 54 inches above natural grade; and
- All trees other than oaks, which have a trunk with a circumference of 47.1 inches (diameter of 15 inches) or more, measured 54 inches above natural grade, with the exception of trees that are less than 12 ft in height, which will be exempt from this section.

To protect heritage trees, Section 13.24.025 requires that a tree protection plan prepared by a certified arborist be submitted for any work performed within a tree protection zone, which is an area ten times the diameter of the tree. Furthermore, all tree protection plans should be reviewed and approved by the Director of Community Development or his or her designee prior to issuance of any permit for grading or construction.

The removal of heritage trees or pruning of more than one-fourth of the branches or roots within a 12-month period requires a permit from the City's Director of Public Works or his or her designee and payment of a fee. The Director of Public Works may issue a permit when the removal or major pruning of a heritage tree is reasonable based on a number of criteria, including condition of the tree, need for removal to accommodate proposed improvements, the ecological and long-term value of the tree, and feasible alternatives that would allow for tree preservation.

Project Applicability: One tree that qualifies as a heritage tree is present on the project site. This tree would not be removed as part of the proposed project.

3.3.2 Menlo Park General Plan

The City of Menlo Park General Plan includes goals, policies, and programs relevant to the environmental factors potentially affected by the proposed project, including the following:

- *Goal LU-4:* Promote the development and retention of business uses that provide goods or services needed by the community that generate benefits to the City, and avoid or minimize potential environmental and traffic impacts.

- *Policy LU-4.5: Business Uses and Environmental Impacts.* Allow modifications to business operations and structures that promote revenue-generating uses for which potential environmental impacts can be mitigated.

- *Goal LU-6:* Preserve open-space lands for recreation; protect natural resources and air and water quality; and protect and enhance scenic qualities.
    - *Policy LU-6.5: Open Space Retention.* Maximize the retention of open space on larger tracts (e.g., portions of the St. Patrick's Seminary site) through means such as rezoning consistent with existing uses, clustered development, acquisition of a permanent open space easement, and/or transfer of development rights.
    - *Policy LU 6.6: Public Bay Access.* Protect and support public access to the Bay for the scenic enjoyment of open water, sloughs, and marshes, including restoration efforts, and completion of the Bay Trail.
    - *Policy LU-6.7: Habitat Preservation.* Collaborate with neighboring jurisdictions to preserve and enhance the Bay, shoreline, San Francisquito Creek, and other wildlife habitat and ecologically fragile areas to the maximum extent possible.
    - *Policy LU-6.8: Landscaping in Development.* Encourage extensive and appropriate landscaping in public and private development to maintain the City's tree canopy and to promote sustainability and healthy living, particularly through increased trees and water-efficient landscaping in large parking areas and in the public right-of-way.
    - *Policy LU-6.11. Baylands Preservation.* Allow development near the Bay only in already developed areas.
        - *Program LU-6.D: Design for Birds.* Require new buildings to employ façade, window, and lighting design features that make them visible to birds as physical barriers and eliminate conditions that create confusing reflections to birds.

- Goal OSC1: Maintain, Protect, and Enhance Open Space and Natural Resources.
    - *Policy OSC1.1: Natural Resources Integration with Other Uses.* Protect Menlo Park's natural environment and integrate creeks, utility corridors, and other significant natural and scenic features into development plans.
    - *Policy OSC1.2: Habitat for Open Space and Conservation Purposes.* Preserve, protect, maintain, and enhance water, water-related areas, plant and wildlife habitat for open space and conservation purposes.
    - *Policy OSC1.3: Sensitive Habitats.* Require new development on or near sensitive habitats to provide baseline assessments prepared by qualified biologists, and specify requirements relative to the baseline assessments.
    - *Policy OSC1.4: Habitat Enhancement.* Require new development to minimize the disturbance of natural habitats and vegetation, and require revegetation of disturbed natural habitat areas with native or non-invasive naturalized species.

- *Policy OSC1.5: Invasive, Non-Native Plant Species*. Avoid the use of invasive, non-native species, as identified on the lists of invasive plants maintained at the California Invasive Plant Inventory and United States Department of Agriculture invasive and noxious weeds database, or other authoritative sources, in landscaping on public property.
- *Policy OSC1.15: Heritage Trees*. Protect Heritage Trees, including during construction activities through enforcement of the Heritage Tree Ordinance (Chapter 13.24 of the Municipal Code).

Project Applicability: The project is located within the Menlo Park General Plan area and would conform to all applicable requirements.

Section 4. Environmental Setting

4.1 General Project Area Description

The 13.3-ac project site is located in Menlo Park in San Mateo County. It is located within the *Palo Alto*, *California* 7.5-minute USGS quadrangle. A review of historical aerial photographs indicates that land use on the project site was largely agricultural in 1948. By 1991, commercial development and associated surface parking lots occupied most of the site. The project site is surrounded by development, including U.S. Highway 101 to the south with dense residential development beyond the highway and commercial office space to the north and west. Further north (approximately 1,200 feet [ft] north of Jefferson Drive) is Pond R5S of the Don Edwards San Francisco Bay NWR.

The project site is relatively flat with elevations ranging from approximately 7 to 14 ft above sea level. It is underlain by two soil types, Urban land and Urban land-Orthents, reclaimed complex, 0 to 2 percent slopes (NRCS 2019). The Urban land-Orthents, reclaimed complex map unit is generally associated with former tidal flats and marshes and the Urban land map unit is a description for human-made soils and land, typically developed and covered by paving and structures, consisting of heterogeneous fills of unknown origin (ICF International 2014).

4.2 Biotic Habitats

A reconnaissance-level survey identified one habitat type/land use on the project site: developed/landscaped (13.3 ac) (Figure 3). This habitat is described in detail below.

4.2.1 Developed/Landscaped

Photo 1. Developed/landscaped habitat on the project site.

Vegetation. The majority of the project site and the surrounding area are occupied by developed/landscaped land uses (Photo 1) that include office buildings, parking lots, mulched and irrigated areas, and plantings of ornamental trees and shrubs. Landscaping includes primarily non-native species, including relatively small trees such as plum (*Prunus* sp.), Brisbane box (*Lophostemon confertus*), holly oak (*Quercus ilex*), and strawberry (*Arbutus unedo*). In addition, two landscaped bioretention basins occur on the eastern edge of the project site. The basins are vegetated by planted spreading rush (*Juncus patens*). Each basin is drained by a storm water grate located in the lowest part of the basin (Photo 2).

Ecological Consultants

Figure 3. Biotic Habitats and Impacts
Commonwealth Corporate Center Building 3
Biological Resources Assessment (3562-04)
May 2019

Wildlife. The wildlife most often associated with developed/landscaped areas are those tolerant of periodic human disturbances, including introduced species such as the European starling (*Sturnus vulgaris*), rock pigeon (*Columba livia*), house mouse (*Mus musculus*), Norway rat (*Rattus norvegicus*), and black rat (*Rattus rattus*). Numerous common, native species are also able to utilize these habitats, especially the landscaped areas, including the western fence lizard (*Sceloporus occidentalis*), California ground squirrel (*Otospermophilus beecheyi*), and a variety of birds. Although a number of bird species will use landscaped areas, they typically do so in low numbers. The existing landscaping on the project site provides low-quality habitat for most native birds found in the region owing to the predominance of non-native species; the absence of well-layered vegetation (e.g., with ground cover, shrub, and canopy tree layers in the same areas) throughout most of the site; the limited extent of the vegetated habitat areas and preponderance of asphalt; and the amount of human disturbance by vehicular traffic and occupants of buildings on and adjacent to the site. Non-native vegetation supports fewer of the resources required by native birds than native vegetation, and the structural simplicity of the vegetation on the project site further limits resources available to birds (Anderson et al. 1977, Mills, et al. 1989). In general, the site does not represent high-quality habitat that would support particularly large concentrations of native birds. Further, due to the absence of high-quality native habitat, more sensitive or rarer bird species are not expected to occur on the project site. Rather, the bird species that are present consist predominantly of regionally abundant species that are adapted to urban conditions, such as the native mourning dove (*Zenaida macroura*), bushtit (*Psaltriparus minimus*), Anna's hummingbird (*Calypte anna*), dark-eyed junco (*Junco hyemalis*), American crow (*Corvus brachyrhynchos*), California scrub-jay (*Aphelocoma californica*), and house finch (*Haemorhous mexicanus*), as well as the non-native rock pigeon (*Columba livia*), house sparrow (*Passer domesticus*), and European starling. These species may occur on the site year-round and breed on or near the site.

Photo 2. Bioretention basin located on the eastern edge of the project site.

An examination of trees on the project site detected no large cavities that might provide suitable bat roosting habitat. Therefore, large roosting or maternity colonies of bats are not expected to occur on the project site. Similarly, a focused survey of the project site detected no evidence (i.e., old nests) of raptors having previously nested on the site.

Section 5. Special-Status Species and Sensitive Habitats

CEQA requires assessment of the effects of a project on species that are protected by state, federal, or local governments as "threatened, rare, or endangered"; such species are typically described as "special-status species". For the purpose of the environmental review of the project, special-status species have been defined as described below. Impacts on these species are regulated by some of the federal, state, and local laws and ordinances described in Section 3.0 above.

For purposes of this analysis, "special-status" plants are considered plant species that are:

- Listed under FESA as threatened, endangered, proposed threatened, proposed endangered, or a candidate species.
- Listed under CESA as threatened, endangered, rare, or a candidate species.
- Listed by the CNPS as CRPR 1A, 1B, 2, 3, or 4.

For purposes of this analysis, "special-status" animals are considered animal species that are:

- Listed under FESA as threatened, endangered, proposed threatened, proposed endangered, or a candidate species.
- Listed under CESA as threatened, endangered, or a candidate threatened or endangered species.
- Designated by the CDFW as a California species of special concern.
- Listed in the California Fish and Game Code as fully protected species (fully protected birds are provided in Section 3511, mammals in Section 4700, reptiles and amphibians in Section 5050, and fish in Section 5515).

Information concerning threatened, endangered, and other special-status species that potentially occur on the project site was collected from several sources and reviewed by H. T. Harvey & Associates biologists as described in Section 2.1 above. Figure 4 depicts CNDDB records of special-status plant species in the general vicinity of the project site and Figure 5 depicts CNDDB records of special-status animal species. These generalized maps show areas where special-status species are known to occur or have occurred historically.

5.1 Special-Status Plant Species

The CNPS (2019) and CNDDB (2019) identify 89 special-status plant species as potentially occurring in at least one of the nine USGS quadrangles containing or surrounding the project site for CRPR 1 or 2 species, or in San Mateo County for CRPR 3 and 4 species. All of those potentially occurring special-status plant species were determined to be absent from the project site for at least one of the following reasons: (1) lack of suitable habitat types; (2) absence of specific microhabitat or edaphic requirements, such as serpentine soils; (3)

the elevation range of the species is outside of the range on the project site; and/or (4) the species is considered extirpated from the project vicinity. Appendix B lists these plants along with the basis for the determination of absence.

5.2 Special-Status Animal Species

The legal status and likelihood of occurrence on the project site of special-status animal species known to occur, or potentially occurring, in the project vicinity are presented in Table 1. Most of the special-status species listed in Table 1 are not expected to occur on the project site because it lacks suitable habitat, is outside the known range of the species, and/or is isolated from the nearest known extant populations by development or otherwise unsuitable habitat. Animal species not expected to occur on the project site for these reasons include the green sturgeon (*Acipenser medirostris*), Central California coast steelhead (*Oncorhynchus mykiss*), California tiger salamander (*Ambystoma californiense*), California red-legged frog (*Rana draytonii*), western pond turtle (*Actinemys marmorata*), San Francisco garter snake (*Thamnophis sirtalis tetrataenia*), California Ridgway's rail (*Rallus obsoletus obsoletus*), California black rail (*Laterallus jamaicensis coturniculus*), western snowy plover (*Charadrius alexandrinus nivosus*), California least tern (*Sterna antillarum browni*), black skimmer (*Rynchops niger*), burrowing owl (*Athene cunicularia*), northern harrier (*Circus cyaneus*), white-tailed kite (*Elanus leucurus*), loggerhead shrike (*Lanius ludovicianus*), salt marsh harvest mouse (*Reithrodontomys raviventris*), salt marsh wandering shrew (*Sorex vagrans halicoetes*), and American badger (*Taxidea taxus*). Although some of these species, such as the western snowy plover, salt marsh harvest mouse, and salt marsh wandering shrew, may occur in wetland habitats in the NWR to the north of the project boundary, they are absent from the project site itself, and the proposed development footprint is well removed from suitable habitat for these species.

The pallid bat (*Antrozous pallidus*) may forage over the project site on rare occasions, but it is not expected to reside or breed on the project site, to occur in large numbers, or otherwise to make substantial use of the project site.

5.3 Sensitive Natural Communities, Habitats, and Vegetation Alliances

Natural communities have been considered part of the Natural Heritage Conservation triad, along with plants and animals of conservation significance, since the state inception of the Natural Heritage Program in 1979. The CDFW determines the level of rarity and imperilment of vegetation types, and tracks sensitive communities in its Rarefind database (CNDDB 2018). Global rankings (G) of natural communities reflect the overall condition (rarity and endangerment) of a habitat throughout its range, whereas state (S) rankings are a reflection of the condition of a habitat within California. Natural communities are defined using NatureServe's standard heritage program methodology as follows (Faber-Langendoen et al. 2012):

G1/S1: Critically imperiled

G2/S2: Imperiled

Table 1. Special-Status Animal Species, Their Status, and Potential Occurrence on the Project Site

Name	*Status	Habitat	Potential for Occurrence on the Project Site
Federal or State Endangered, Rare, or Threatened Species			
Green sturgeon (*Acipenser medirostris*)	FT, CSSC	Spawns in large river systems such as the Sacramento River; forages in nearshore oceanic waters, bays, and estuaries.	**Absent.** No suitable aquatic habitat is present on the project site. Green sturgeon may forage infrequently, and in low numbers in Flood Slough, approximately 0.5 mi northwest of the project site; however, there is no aquatic connection between the slough and the project site. Determined to be absent.
Central California Coast steelhead (*Oncorhynchus mykiss*)	FT	Cool streams with suitable spawning habitat and conditions allowing migration between spawning and marine habitats.	**Absent.** No suitable aquatic habitat is present on the project site. Steelhead may forage in Flood Slough, approximately 0.5 mi northwest of the project site; however, there is no aquatic connection between the slough and the project site. Determined to be absent.
California tiger salamander (*Ambystoma californiense*)	FT, ST	Vernal or temporary pools in annual grasslands or open woodlands.	**Absent.** No suitable habitat is present on the project site. Further, populations have largely been extirpated from San Mateo County due to habitat loss, and the species is now considered absent from the majority of the project vicinity, including the project site. The closest occurrence in the project vicinity is at Lake Lagunita on the Stanford campus, which is approximately 3.8 mi south of the project site (CNDDB 2019). Determined to be absent.
San Francisco garter snake (*Thamnophis sirtalis tetrataenia*)	FE, SE	Prefer densely vegetated freshwater habitats. May use upland burrows for aestivation.	**Absent.** No suitable habitat is present on the project site. Furthermore, the project vicinity is outside of the known range of the species. Determined to be absent.
California red-legged frog (*Rana draytonii*)	FT, CSSC	Streams, freshwater pools, and ponds with emergent or overhanging vegetation.	**Absent.** No suitable habitat is present on the project site. Further, this species has been extirpated from the majority of the project vicinity, due to development, the alteration of hydrology of its aquatic habitats, and the introduction of non-native predators such as non-native fishes and bullfrogs (*Lithobates catesbeianus*). The most recent record of the species in the project vicinity is from 2016 near Bear Gulch reservoir, approximately 4.2 mi to the southwest of the project site (CNDDB 2019). Determined to be absent.

Name	*Status	Habitat	Potential for Occurrence on the Project Site
California Ridgway's rail (*Rallus obsoletus obsoletus*)	FE, SE, SP	Salt marshes characterized by large expanses of saltmarsh cordgrass (*Spartina* spp.) or pickleweed (*Salicornia* spp.), with well-developed tidal channels.	**Absent.** The species is known to occur on Greco Island approximately 1.1 mi northwest of the project site, as well as the Palo Alto Baylands and the Ravenswood Open Space Preserve located approximately 2.1 mi east of the project site. However, no salt marsh habitat is present on or adjacent to the project site. Determined to be absent.
California black rail (*Laterallus jamaicensis coturniculus*)	ST, SP	Breeds in fresh, brackish, and tidal salt marsh.	**Absent.** This species occurs in the project vicinity primarily as a scarce winter visitor, with individuals recently recorded as close as the Palo Alto Baylands approximately 2.5 mi east of the project site (CNDDB 2019). However, no suitable nesting or foraging habitat for the California black rail is present on or immediately adjacent to the project site. Determined to be absent.
Western snowy plover (*Charadrius alexandrinus nivosus*)	FT, CSSC	Sandy beaches on marine and estuarine shores and salt pans in Bay saline managed ponds.	**Absent.** Although western snowy plovers are known to nest in salt panne habitat 0.4 mi to the north in the NWR's Ravenswood complex (CNDDB 2019), no suitable nesting or foraging habitat is present on or immediately adjacent to the project site. Determined to be absent.
California least tern (*Sterna antillarum browni*)	FE, SE, SP	Nests along the coast on bare or sparsely vegetated, flat substrates. In the South Bay, nests in salt pans and on an old airport runway. Forages for fish in open waters.	**Absent**. Suitable nesting habitat for the California least tern is not present on the project site. Least terns have been recorded in the project vicinity during the post-breeding season, and have been known to forage in the Redwood City salt ponds, approximately 0.6 mi northwest of the project site (CNDDB 2019). Least terns have also been known to forage infrequently along the shores of the Palo Alto Baylands Preserve, located approximately 2.5 mi east of the project site. However, they are not expected to forage on the project site due to the lack of any open water habitats supporting fish. Determined to be absent.
Salt marsh harvest mouse (*Reithrodontomys raviventris*)	FE, SE, SP	Salt marsh habitat dominated by common pickleweed or alkali bulrush.	**Absent.** The species has been recorded in salt marsh habitat in the project vicinity, including on the NWR to the north of the project site (CNDDB 2019). However, no suitable habitat is present on the project site. Determined to be absent.
California Species of Special Concern			

Name	*Status	Habitat	Potential for Occurrence on the Project Site
Western pond turtle (*Actinemys marmorata*)	CSSC	Permanent or nearly permanent water in a variety of habitats.	**Absent.** No suitable aquatic habitat is present on or adjacent to the project site. Determined to be absent.
Northern harrier (*Circus cyaneus*)	CSSC (nesting)	Nests in marshes and moist fields, forages over open areas.	**Absent.** No suitable habitat is present on or adjacent to the project site. Determined to be absent.
Black skimmer (*Rynchops niger*)	CSSC (nesting)	Nests on sparsely vegetated beaches, isolated islands, and levees.	**Absent.** No suitable nesting or foraging habitat is present on or adjacent to the project site. Determined to be absent.
Burrowing owl (*Athene cunicularia*)	CSSC	Nests and roosts in open grasslands and ruderal habitats with suitable burrows, usually those made by California ground squirrels (*Spermophilus beecheyi*).	**Absent.** No nesting burrowing owls are known to occur in the surrounding project vicinity (CNDDB 2019), and no suitable burrowing owl roosting or nesting habitat (i.e., open grasslands with ground squirrel burrows) is present on the project site. Determined to be absent.
Loggerhead shrike (*Lanius ludovicianus*)	CSSC (nesting)	Nests in tall shrubs and dense trees; forages in grasslands, marshes, and ruderal habitats.	**Absent.** No suitable breeding or foraging habitat is present on the project site. Determined to be absent.
San Francisco common yellowthroat (*Geothlypis trichas sinuosa*)	CSSC	Nests in herbaceous vegetation, usually in wetlands or moist floodplains.	**Absent.** The San Francisco common yellowthroat breeds commonly in wetlands found to the northwest and northeast of the project site, but no suitable habitat is present on the project site. Determined to be absent.
Alameda song sparrow (*Melospiza melodia pusillula*)	CSSC	Nests in salt marsh, primarily in marsh gumplant and cordgrass along channels.	**Absent.** Song sparrows breed commonly in wetlands found to the northwest and northeast of the project site, but no suitable habitat is present on the project site. Determined to be absent
Salt marsh wandering shrew (*Sorex vagrans halicoetes*)	CSSC	Medium to high marsh 6 to 8 ft above sea level with abundant driftwood and common pickleweed.	**Absent.** Suitable pickleweed-dominated salt marsh habitat is present in the project vicinity, including on the NWR to the north of the project site (CNDDB 2019). However, no suitable habitat is present on the project site. Determined to be absent.

Name	*Status	Habitat	Potential for Occurrence on the Project Site
Pallid bat (*Antrozous pallidus*)	CSSC	Forages over many habitats; roosts in caves, rock outcrops, buildings, and hollow trees.	**Absent.** Historically, pallid bats were likely present in a number of locations throughout the project vicinity, but their populations have declined in recent decades. This species has been extirpated as a breeder from urban areas close to the Bay, as is the case in the project vicinity. No suitable roosting habitat is present on the project site or the surrounding area and no known maternity colonies are present on or adjacent to the project site.
American badger (*Taxidea taxus*)	CSSC	Burrows in grasslands and occasionally in infrequently disked agricultural areas.	**Absent.** Badgers are not known to occur in the project vicinity due to the lack of extensive grasslands and agricultural areas with friable soils, needed for digging burrows. No suitable habitat is present on the project site. Determined to be absent.
California Fully Protected Species			
White-tailed kite (*Elanus leucurus*)	SP	Nests in trees and forages in extensive grasslands or marshes.	**Absent**. Suitable nesting and foraging habitat is not present on the project site. Determined to be absent.

SPECIAL-STATUS SPECIES CODE DESIGNATIONS

FE = Federally listed Endangered
FT = Federally listed Threatened
FC = Federal Candidate for listing
SE = State listed Endangered
ST = State listed Threatened
SC = State Candidate for listing
CSSC = California Species of Special Concern
SP = State Fully Protected Species

G3/S3: Vulnerable.

G4/S4: Apparently secure

G5/S4: Secure

In addition to tracking sensitive natural communities, the CDFW also ranks vegetation alliances, defined by repeating patterns of plants across a landscape that reflect climate, soil, water, disturbance, and other environmental factors (Sawyer et al. 2009). If an alliance is marked G1-G3, all of the vegetation associations within it will also be of high priority (CDFW 2018). The CDFW provides the Vegetation Classification and Mapping Program's (VegCAMP) currently accepted list of vegetation alliances and associations (CDFW 2019).

Impacts on CDFW sensitive natural communities, vegetation alliances/associations, or any such community identified in local or regional plans, policies, and regulations, must be considered and evaluated under CEQA (Title 14, Division 6, Chapter 3, Appendix G of the California Code of Regulations). Furthermore, aquatic, wetland and riparian habitats are also protected under applicable federal, state, or local regulations, and are generally subject to regulation, protection, or consideration by the USACE, RWQCB, CDFW, and/or the USFWS.

5.3.1 CDFW Sensitive Habitats

A query of sensitive habitats in Rarefind (CNDDB 2018) identified three sensitive habitats as occurring within the nine USGS quadrangles containing or surrounding the project site: serpentine bunchgrass grassland (Rank G2/S2.2), valley oak woodland (G3/S2.1), and northern coastal salt marsh (Rank G3/S3.2). Serpentine bunchgrass occurs only on serpentine soils, which do not occur on the project site. Valley oak woodland is characterized by valley oak (*Quercus lobata*) as the dominant or co-dominant species in the tree canopy. While some valley oak individuals do occur in the project vicinity, they are ornamental plantings along buildings and roadways, and thus do not constitute this sensitive habitat type. The last sensitive habitat type, northern coastal salt marsh, is described by Holland (1986) as occurring along sheltered inland margins of bays, often co-dominated by pickleweed (*Salicornia* spp.), cordgrass (*Spartina* spp.), and sometimes saltgrass (*Distichlis spicata*). None of these species was noted on the project site, thus this habitat type is also absent.

5.3.2 CDFW Sensitive Vegetation Alliances

CDFW Sensitive alliances are not present on the project site (CDFW 2019).

5.3.3 Sensitive Habitats (Waters of the U.S./State)

As described above, the reconnaissance survey of the project site did not identify any wetlands or other waters that would fall under the jurisdiction of the USACE (waters of the U.S.), or under the jurisdiction of the RWQCB or CDFW (waters of the State) on the project site.

5.4 Non-Native and Invasive Species

The entire project site consists of developed and maintained landscaped areas which have not been planted with non-native invasive plant species. Thus, no non-native invasive plant species occur on the project site.

Section 6. Impacts and Mitigation Measures

The State CEQA Guidelines provide direction for evaluating the impacts of projects on biological resources and determining which impacts will be significant. CEQA defines a "significant effect on the environment" as "a substantial adverse change in the physical conditions which exist in the area affected by the proposed project." Under State CEQA Guidelines Section 15065, a project's impacts on biological resources are deemed significant if the project would:

- "substantially reduce the habitat of a fish or wildlife species"
- "cause a fish or wildlife population to drop below self-sustaining levels"
- "threaten to eliminate a plant or animal community"
- "reduce the number or restrict the range of a rare or endangered plant or animal"

In addition to the Section 15065 criteria that trigger mandatory findings of significance, Appendix G of State CEQA Guidelines provides a checklist of other potential impacts to consider when analyzing the significance of project effects. The impacts listed in Appendix G may or may not be significant, depending on the level of the impact. For biological resources, these impacts include whether the project would:

A. "have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service"

B. "have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service"

C. "have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act"

D. "interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites"

E. "conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance"

F. "conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan"

The impact assessment below is structured based on the six significance criteria (A-F) listed above.

6.1 Impacts on Special-Status Species: Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS (No Impact)

No special-status species occur on the project site, which does not support suitable habitat for any such species. Therefore, the project will not impact special-status species.

6.2 Impacts on Sensitive Communities: Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service (No Impact)

6.2.1 Impacts on Riparian Habitat or Other Sensitive Natural Communities (No Impact)

No riparian habitats or other sensitive natural communities are present on or immediately adjacent to the project site, and thus none will be impacted by the project.

6.2.2 Impacts Caused by Non-Native and Invasive Species (No Impact)

The entire site is developed or landscaped and regularly maintained, and no non-native or invasive species were observed. Further, no invasive and/or noxious plant species will be used in the project's landscape design plan. Thus, development will cause no impact on the spread of non-native and invasive plant species.

6.3 Impacts on Wetlands: Have a substantial adverse effect on state or federally protected wetlands as defined by Section 404 of the Clean Water Act (Less than Significant)

No wetlands occur on, or immediately adjacent to, the project site. Thus, the project would result in no direct impacts on jurisdictional wetlands. Development of the project site is unlikely to cause indirect impacts on nearby wetlands or water quality within those wetlands, as site runoff is directed into storm drains and bioretention basins.

Additionally, Construction projects in California causing land disturbances that are equal to 1 ac or greater must comply with State requirements to control the discharge of stormwater pollutants under the NPDES *General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities* (Construction General Permit; Water Board Order No. 2009-0009-DWQ). Prior to the start of construction/demolition, a Notice of Intent must be filed with the State Water Board describing the project. A Storm Water Pollution Prevention Plan (SWPPP) must be developed and maintained during the project and it must include the use of Best Management Practices (BMPs) to protect water quality until the site is stabilized. Standard permit conditions under the Construction General Permit require that the applicant utilize various measures including the following: on-site sediment control BMPs, damp street sweeping, temporary cover of disturbed land surfaces

to control erosion during construction, and utilization of stabilized construction entrances and/or wash racks, among other factors.

Finally, in many Bay Area counties, including San Mateo County, projects must also comply with the *California Regional Water Quality Control Board, San Francisco Bay Region, Municipal Regional Stormwater NPDES Permit* (MRP) (Water Board Order No. R2-2015-0049). This MRP requires that all projects implement BMPs and incorporate Low Impact Development practices into the design to prevent stormwater runoff pollution, promote infiltration, and hold/slow down the volume of water coming from a site after construction has been completed. In order to meet these permit and policy requirements, projects must incorporate the use of green roofs, impervious surfaces, tree planters, grassy swales, bioretention and/or detention basins, among other factors.

Compliance with state requirements to control the discharge of stormwater pollutants during construction under the NPDES Construction General Permit and the RWQCB required SWPPP, and post-construction measures and design features required by the MRP would reduce the project's potential impact on water quality to a less-than-significant level.

6.4 **Impacts on Wildlife Movement:** Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites (Less than Significant)

For many species, the landscape is a mosaic of suitable and unsuitable habitat types. Environmental corridors are segments of land that provide a link between these different habitats while also providing cover. Development that fragments natural habitats (i.e., breaks them into smaller, disjunct pieces) can have a twofold impact on wildlife: first, as habitat patches become smaller they are unable to support as many individuals (patch size), and second, the area between habitat patches may be unsuitable for wildlife species to traverse (connectivity).

All proposed project activities are located within an already developed footprint that is surrounded by existing development. Therefore, the project would not result in fragmentation of natural habitats. Although species moving across the site would face new impediments to movement (i.e., Building 3 and the parking structure), following project construction, common, urban-adapted wildlife would continue to be able to move in an east-west direction across the site via existing strips of landscaped or ruderal vegetation separating the project site from existing development to the north and U.S. Highway 101 and the Dumbarton Rail Corridor to the south. Thus, any wildlife species that currently move east-west through the project site would continue to be able to do so by going around the new structures on either the north or south side. Therefore, the project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors in the site vicinity.

Construction disturbance during the avian breeding season (February 1 through August 31, for most species) could result in the incidental loss of eggs or nestlings, either directly through the destruction or disturbance of active nests or indirectly by causing the abandonment of nests. Due to the absence of sensitive habitats from the project site, the habitats on the project site support only regionally common, urban-adapted breeding birds and support only a very small proportion of these species' regional populations. In addition, many birds are expected to continue to nest and forage on the project site after project construction is completed. These birds are habituated to disturbance related to the existing technology park, and the project incorporates trees, shrubs, and forbs into the landscape design, which will provide some food and structural resources for the common, urban-adapted birds of the area, as well as for migrants that may use the area during spring and fall migration. Therefore, project impacts on nesting and foraging birds that use the site, due to habitat impacts or disturbance of nesting birds, would not rise to the CEQA standard of having a substantial adverse effect, and these impacts would not constitute a significant impact on these species or their habitats under CEQA. However, all native bird species are protected from direct take by federal and state statutes (see Sections 3.1.5 and 3.2.4). Therefore, we recommend that the following measures be implemented to ensure that project activities comply with the MBTA and California Fish and Game Code:

Measure 1. Avoidance. To the extent feasible, construction activities should be scheduled to avoid the nesting season. If construction activities are scheduled to take place outside the nesting season, all impacts on nesting birds protected under the MBTA and California Fish and Game Code will be avoided. The nesting season for most birds in San Mateo County extends from February 1 through August 31.

Measure 2. Preconstruction/Pre-disturbance Surveys. If it is not possible to schedule construction activities between September 1 and January 31 then preconstruction surveys for nesting birds should be conducted by a qualified ornithologist to ensure that no nests will be disturbed during project implementation. We recommend that these surveys be conducted no more than seven days prior to the initiation of construction activities. During this survey, the ornithologist will inspect all trees and other potential nesting habitats (e.g., trees, shrubs, California annual grasslands, buildings) in and immediately adjacent to the impact areas for nests.

Measure 3. Buffers. If an active nest is found sufficiently close to work areas to be disturbed by these activities, the ornithologist will determine the extent of a construction-free buffer zone to be established around the nest (typically 300 ft for raptors and 100 ft for other species), to ensure that no nests of species protected by the MBTA and California Fish and Game Code will be disturbed during project implementation.

Measure 4. Inhibition of Nesting. If construction activities will not be initiated until after the start of the nesting season, all potential nesting substrates (e.g., bushes, trees, grasses, and other vegetation) that are scheduled to be removed by the project may be removed prior to the start of the nesting season (e.g., prior to February 1). This will preclude the initiation of nests in this vegetation, and prevent the potential delay of the project due to the presence of active nests in these substrates.

6.5 Impacts due to Conflicts with Local Policies: Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (Less than Significant)

6.5.1 Impacts Related to Compliance with Municipal Code Chapter 13.24, Heritage Trees (No Impact)

Per City of Menlo Park Municipal Code Chapter 13.24, Heritage Trees, permits from the City's Director of Public Works or his or her designee and payment of a fee are required for the removal of any trees which meet the definition of heritage tree, as defined in Section 3.3.1 above. It is anticipated that 304 trees on the project site are to be removed during project construction activities. Of these, none qualify as heritage trees. Therefore, the project would result in no impact related to conflict with local policies or ordinances protecting heritage trees.

6.5.2 Impacts Related to Compliance with Municipal Code Chapter 16.44.130 (6), Bird Safe Design (Less than Significant)

Development of the proposed project would include the construction of a new four-story office building and a five-level (four above grade and one below grade) parking structure. Glass windows and building façades can result in injury or mortality of birds due to collisions with these surfaces. Because birds do not perceive glass as an obstruction the way humans do, they may collide with glass when the sky or vegetation is reflected in glass (e.g., they see the glass as sky or vegetated areas); when transparent windows allow birds to perceive an unobstructed flight route through the glass (such as at corners); and when the combination of transparent glass and interior vegetation (such as in planted atria) results in attempts by birds to fly through glass to reach that vegetation.

The majority of avian collisions with buildings occur within the first 60 ft of the ground (City of San Francisco 2011), where birds spend the majority of their time engaged in foraging, territorial defense, nesting, and roosting activities, and where vegetation is most likely to be reflected in glazed surfaces. However, very tall buildings (e.g., buildings 500 ft or more high) may pose a threat to birds that are migrating through the area, particularly to nocturnal migrants that may not see the buildings or that may be attracted to lights on the buildings.

Currently, terrestrial land uses and habitat conditions in and adjacent to the project site consist primarily of developed and landscaped uses such as buildings, parking lots, and roads. Vegetation in these areas is limited in extent, and consists primarily of non-native landscaped trees and shrubs. As described in Section 4.2.1 above, although a number of bird species will use such vegetation, they typically do so in low numbers because non-native vegetation supports fewer of the resources required by native birds than native vegetation, and the structural simplicity of the vegetation (without well-developed ground cover, understory, and canopy layers) further limits resources available to birds. In addition, although numerous waterbirds are known to congregate at the NWR to the north of the project site; because the area surrounding the project site on all sides is heavily urbanized and contains no habitats of high value to estuarine birds using the NWR, we do not expect large numbers of waterbirds to be flying over the project site at altitudes low enough for bird-strike mortality to

occur. The bird species with the greatest potential to collide with any buildings would consist primarily of the common, urban-adapted passerine species that currently use the project site, as these are the species that would spend the most time near the new buildings.

After project construction is completed, there will be a low risk of bird collisions with the façades of the proposed parking structure due to the absence of glass. Building 3 is expected to experience higher collision frequency due to the more extensive use of glass throughout the façades. However, the following factors will limit the frequency with which birds may collide with the façades of Building 3:

- Based on the architectural renderings, the windows will be recessed from the solid/opaque vertical and horizontal elements of the façades; as a result, birds will be better able to perceive the buildings as solid structures to be avoided than if the glass were the outermost features of the building. The shadows and reflections of the solid supports in the glass will further reinforce the perception that these buildings are solid structures to be avoided.
- Mullions between glass panes will help to break up the appearance of the glass.
- The reflectivity of the glass composing the façades will be low, reducing reflections of vegetation on the surface of the glass.
- The glass rail enclosing the balcony on the fourth floor of the building will be treated (e.g., with a frit pattern) to make the glass more conspicuous to birds, thereby meeting bird-safe design guidelines. Further, the balcony behind the rail will be narrow, and no plants or other features that might otherwise attract birds to fly toward the balconies will be present. As a result, there is little expectation that birds will try to approach the building in such a way that they might collide with the glass rail.
- No landscaping will be installed on the roof, and the rooftop windscreen will be composed of a metal panel rather than glass, increasing its visibility to birds that may be flying over the building.
- An aluminum composite metal canopy and louvers will extend out horizontally from the fourth-floor roof, reducing the reflection of the sky in the glazing of the upper floors.
- As described above, bird use of the project site is expected to be relatively low, which will limit the number of birds present in the vicinity of Building 3.

Although the frequency of collisions with the façades of Buildings 3 is expected to be somewhat higher than the frequency of collisions with the proposed parking structure, the overall frequency of bird collisions with the façades of Buildings 3 is expected to be low, and collisions are not expected to result in the loss of a substantial proportion of any native species' South Bay (or even Menlo Park) populations because bird use of the project vicinity is expected to be relatively low, which will limit the number of birds present in the vicinity.

There is some potential for bird strikes to occur with any part of the buildings at night, when birds may be less able to perceive the presence of the buildings (especially in bad weather). However, large-scale collision events involving nocturnal migrants such as those that have been documented at high-rise buildings in the East and Midwest have not been documented in the West. The project does not propose any very bright spotlights or other lighting that will be pointed upward or outward and that may serve to attract or confuse birds. Furthermore, it is worth noting that the composition of the buildings' surfaces (e.g., presence or absence of

glass, or whether the glass includes bird-safe treatments) will have no influence on whether nocturnal migrants collide with the buildings if they are unable to perceive the buildings due to darkness in the first place. Finally, nocturnally migrating birds typically fly 500 ft or more above ground level, and thus well above the proposed buildings.

As described in Section 3.3.1 above, the City of Menlo Park's Bird-Friendly Design Guidelines (Ordinance No. 1024) require the project design to comply with six bird-friendly design standards for new construction, although the City may waive the bird-friendly design requirements based on a site-specific evaluation from a qualified biologist and review and approval by the Planning Commission. Below, we analyze the proposed project's compliance with these six standards.

1. *No more than 10% of façade surface area shall have non-bird-friendly glazing.*

   Building 3 – The Commonwealth Building 3 project includes extensive glazing (i.e., well over 10%) on the façades of Building 3, including within 60 feet of the ground (i.e., the area with the greatest risk of avian collisions). Because this glazing is not proposed to be treated (i.e., "bird-friendly"), the current project design does not comply with this standard. However, the assessment herein, which is based on the Commonwealth Building 3 Project – Avian Collision Risk Assessment (H. T. Harvey & Associates 2018) constitutes an analysis by a qualified biologist indicating whether construction of the project would pose a collision hazard to birds in the absence of the use of treated glazing on the building façades. It is our opinion that the overall architectural design of the building, as well as bird-safe glazing treatment on balcony railings, in lieu of more extensive bird-safe glazing treatment should be sufficient to avoid any significant impacts under CEQA from bird collisions with the buildings' façades.

   We expect that occasional collisions between birds and the glass façades of the proposed building would occur after the building is constructed. However, we expect the frequency of bird collisions to be low. We base this conclusion on (1) the relatively low numbers of birds expected to occur in the project vicinity, (2) the absence of any features such as dense, native vegetation or water features that might otherwise attract birds to the vicinity, (3) the bird-safe glazing treatment that would be applied to the glass railings, and (4) the appearance of the façades, which are well broken-up by solid, opaque horizontal and vertical elements, thus making the façades more conspicuous and less likely to be mistaken for the sky or vegetation.

   The overall frequency of bird collisions would be low, and because the majority of collisions would involve regionally abundant, urban-adapted bird species, these collisions would not result in the loss of a substantial proportion of any species' Bay-area populations or any Bay-area bird community. Therefore, given the relatively low number of collisions expected to occur, in combination with the other bird-collision mitigating design features noted above, we do not expect the addition of more bird-safe glazing treatment to the project design to result in a substantial reduction in the number of collisions on this project.

   Parking Structure – Glazing is absent from the parking structure. Thus, the proposed parking structure is in compliance with this design standard.

2. *Occupancy sensors or other switch control devices shall be installed on non-emergency lights and shall be programmed to shut off during non-work hours and between 10:00 p.m. and sunrise.*

   Occupancy sensors for light control would be installed on all non-emergency lights within the new office buildings and parking garages on the project site. These lights would be programmed to shut off during non-work hours and between 10:00 p.m. and sunrise. Thus, the indoor lighting for the project is in compliance with this design standard.

3. *Placement of buildings shall avoid the potential funneling of flight paths towards a building façade.*

   The proposed new building and parking structure would not funnel open space that is attractive to birds toward the faces of buildings. The proposed landscaped vegetation on the site would be planted along sidewalks and in areas of open space throughout the site. No features of the proposed building design or landscaping would funnel birds towards a building façade. Thus, it is our opinion that the project design complies with this standard.

4. *Glass skywalks or walkways, freestanding (see-through) glass walls and handrails, and transparent building corners shall not be allowed.*

   Building 3 includes glass corners on all sides of the building and at all floor levels. In addition, freestanding glass handrails are located on the perimeter of the fourth-floor balcony. Thus, the project design does not comply with this standard. However, the glass used for these railings would be treated (e.g., with a frit pattern) to make the glass more conspicuous to birds. Even in the absence of such glazing treatment, though, we expect the frequency of bird collisions to be low due to the relatively low numbers of birds expected to occur in the project vicinity and the absence of any features such as dense, native vegetation or water features that might otherwise attract birds to the vicinity. Because the majority of collisions will involve regionally abundant, urban-adapted bird species, these collisions would not result in the loss of a substantial proportion of any species' Bay-area populations or any Bay-area bird community. Therefore, given the relatively low number of collisions expected to occur, we do not expect the elimination of glass corners and glass handrails to result in a substantial reduction in the number of collisions on this project.

5. *Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with roof decks, patios, and green roofs.*

   Based on the architectural renderings in the project plan set, an aluminum parapet cap would wrap around the building at the level of the fourth-floor roof. Thus, no windows extend all the way to the top of the building. In addition, a metal canopy and louvers extend out horizontally from the level of the fourth-floor roof. Shadows and reflections from the overhang would prevent glazing near the roofline from appearing as unbroken panes of glass and would break up the reflection of the sky within the glass. Therefore, in our opinion, the project design complies with this guideline.

6. *Use of rodenticides shall not be allowed.*

The project would comply with the City's prohibition on the use of rodenticides.

Therefore, in our opinion, the overall architectural design of the project, as well as bird-safe glazing treatment on balcony railings, in lieu of more extensive bird-safe glazing treatment is sufficient to avoid any significant impacts under CEQA from bird collisions with the buildings' façades.

6.5.3 Impacts Related to Compliance with General Plan Policy OSC1.3, Sensitive Habitats (No Impact)

General Plan Policy OSC1.3, Sensitive Habitats, requires new development on or near sensitive habitats to (1) provide a baseline assessment prepared by qualified biologists and specify requirements relative to the baseline assessments, (2) consult with appropriate regulatory and resource agencies, (3) incorporate appropriate avoidance and minimization measures, and (4) obtain necessary permits/authorizations. Further, Mitigation Measure BIO-1 of the ConnectMenlo EIR (PlaceWorks 2016) specifies that the required biological resources assessment must address a number of specific requirements. The following summarizes the project's compliance with the requirements of General Plan Policy OSC1.3 and Mitigation Measure BIO-1.

- The baseline biological resources report is required to provide a determination on whether any sensitive biological resources, including jurisdictional wetlands and waters, essential habitat for special-status species, and sensitive natural communities, are present on the site or on any adjacent undeveloped lands that could be affected by the project and lands of the NWR. In compliance with this requirement, Section 4.2 of this report describes the biotic habitat types present on the project site. Sections 5.1 and 5.2 discuss the potential for these habitats to support special-status plants and animals and analyze the potential for special-status species to occur on the project site or close enough to be impacted by proposed project activities. No plant or animal species listed as threatened or endangered by the USFWS or CDFW are expected to occur on the project site. Further, no animal species designated as a species of special concern is expected to breed on the project site; and no plant species with a CRPR rating are present.

  Section 5.3 addresses the presence of sensitive habitats in the project vicinity and analyzes the potential for the project to result in impacts on such habitats. No habitats under the jurisdiction of the USFWS, CDFW, or RWQCB were determined to be present on the project site.

- The baseline biological resources report is required to incorporate guidance from relevant regional conservation plans related to determining the potential presence or absence of sensitive biological resources. As described above, Sections 5.1 and 5.2 analyze the potential for special-status plant or animal species to occur on the project site. This analysis incorporates information from the NWR Comprehensive Conservation Plan and Environmental Assessment (USFWS 2012), which includes a discussion of all the special-status species potentially occurring on the NWR.

- The baseline biological resources report is required to include an evaluation of the potential effects of the project on sensitive biological resources. The potential for the proposed project to result in significant impacts on sensitive biological resources is analyzed in Section 6 of this report. This analysis takes into consideration the habitat types present on the project site (Section 4.2), the potential for special-status species to be present on the project site (Sections 5.1 and 5.2), and the proximity of the project site to sensitive habitats (Section 5.3). Based on the analysis, it is determined that the project would not result in significant impacts on any special-status plant or animal species. In addition, the project would not result in impacts on sensitive habitats under the jurisdiction of the USFWS, RWQCB, or CDFW.

- The baseline biological resources report is required to include avoidance, minimization, and mitigation measures for adverse impacts. Section 6 identified no potentially significance impacts under CEQA. Thus, no avoidance, minimization, or mitigation measures are needed to reduce potentially significant impacts under CEQA. However, all native bird species are protected from direct take by federal and state statutes (see Sections 3.1.5 and 3.2.4). Therefore, recommended avoidance and minimization measures are provided in Chapter 6 to ensure that project activities comply with the MBTA and California Fish and Game Code.

- Per Mitigation Measure BIO-1, if sensitive biological resources are determined to be present on the project site or may be present on any adjacent parcel containing natural habitat, coordination with the appropriate regulatory and resource agencies must occur. However, based on the analyses contained herein, the project would not result in impacts on sensitive habitats under the jurisdiction of the USACE, RWQCB, or CDFW. Further, the project would not result in impacts on plant or animal species listed as threatened or endangered by the USFWS or CDFW. Thus, coordination with regulatory resource agencies regarding impacts on biological resources is not expected to be warranted. Nevertheless, resources agencies would be provided the opportunity to comment on the proposed project as part of the CEQA process for the project.

- Per Mitigation Measure BIO-1, where jurisdictional waters or federally and/or state listed special-status species would be affected by the project, appropriate authorizations shall be obtained by the project applicant. As described above, the project is not expected to result in impacts on sensitive habitats under the jurisdiction of the USACE, RWQCB, or CDFW. Further, the project would not result in impacts on plant or animal species listed as threatened or endangered by the USFWS or CDFW.

Thus, provided this project successfully incorporates the measures described in this biological assessment, the project will not conflict with General Plan Policy OSC1.3. This biological resources assessment represents compliance with ConnectMenlo EIR Mitigation Measure BIO-1 by providing all the information required by that mitigation measure for a biological resources assessment.

6.6 Impact due to Conflicts with an Adopted Habitat Conservation Plan: Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan (No Impact)

The project site is not located within an area covered by an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Therefore, the project would not conflict with any such documents.

6.7 Cumulative Impacts

Cumulative impacts arise due to the linking of impacts from past, current, and reasonably foreseeable future projects in the region. Future development activities in the City of Menlo Park will result in impacts on the same habitat types and species that will be affected by the proposed project. The proposed project, in combination with other projects in the area and other activities that impact the species that are affected by this project, could contribute to cumulative effects on special-status species. Other projects in the area include office/retail/commercial development, mixed use, and residential projects that could adversely affect these species, as well as restoration projects (e.g., the South Bay Salt Pond Restoration Project Phase 2, SAFER Bay Project) that will benefit these species.

The cumulative impact on biological resources resulting from the project in combination with other projects in the project area and larger region would be dependent on the relative magnitude of adverse effects of these projects on biological resources compared to the relative benefit of impact avoidance and minimization efforts prescribed by planning documents, CEQA mitigation measures, and permit requirements for each project; compensatory mitigation and proactive conservation measures associated with each project. In the absence of such avoidance, minimization, compensatory mitigation, and conservation measures, cumulatively significant impacts on biological resources would occur.

However, the Menlo Park General Plan contains conservation measures that would benefit biological resources, as well as measures to avoid, minimize, and mitigate impacts on these resources. Further, the project would implement a number of measures to reduce impacts on both common and special-status species, as described above. Thus, the project would not contribute to substantial cumulative effects on biological resources.

Appendix A. Special-Status Plants Considered

Common Name	Scientific Name	Suitable Habitat Absent	Edaphic Conditions Absent	Outside Elevation Range	Extirpated from Project Vicinity
alkali milk-vetch	Astragalus tener var. tener	x	x		
Anderson's manzanita	Arctostaphylos andersonii	x		x	
arcuate bush-mallow	Malacothamnus arcuatus	x		x	
bay buckwheat	Eriogonum umbellatum var. bahiiforme	x	x	x	
Ben Lomond buckwheat	Eriogonum nudum var. decurrens	x		x	
bent-flowered fiddleneck	Amsinckia lunaris	x			
Brewer's calandrinia	Calandrinia breweri	x		x	
Brewer's clarkia	Clarkia breweri	x	x	x	
bristly leptosiphon	Leptosiphon acicularis	x		x	
California androsace	Androsace elongata ssp. acuta	x		x	
California seablite	Suaeda californica	x			
caper-fruited tropidocarpum	Tropidocarpum capparideum	x	x		
chaparral ragwort	Senecio aphanactis	x		x	
Choris' popcornflower	Plagiobothrys chorisianus var. chorisianus	x			
clay buckwheat	Eriogonum argillosum	x	x	x	
clustered lady's-slipper	Cypripedium fasciculatum	x	x	x	
coast iris	Iris longipetala	x			
coast lily	Lilium maritimum	x			
coastal marsh milk-vetch	Astragalus pycnostachyus var. pycnostachyus	x			
Congdon's tarplant	Centromadia parryi ssp. congdonii	x	x		
Contra Costa goldfields	Lasthenia conjugens	x	x		
cotula navarretia	Navarretia cotulifolia	x	x		
Crystal Springs fountain thistle	Cirsium fontinale var. fontinale	x	x	x	
Crystal Springs lessingia	Lessingia arachnoidea	x	x	x	
Davidson's bush-mallow	Malacothamnus davidsonii	x		x	
Delta woolly-marbles	Psilocarphus brevissimus var. multiflorus	x		x	
Dudley's lousewort	Pedicularis dudleyi	x		x	
dusky-fruited malacothrix	Malacothrix phaeocarpa	x		x	
elongate copper moss	Mielichhoferia elongata	x	x		
fragrant fritillary	Fritillaria liliacea	x	X		
Franciscan onion	Allium peninsulare var. franciscanum	x		x	
Gairdner's yampah	Perideridia gairdneri ssp. gairdneri	x			
hairless popcornflower	Plagiobothrys glaber			x	x

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

160 Jefferson Drive is a one-story-with-mezzanine, utilitarian-style light industrial building located within the Bohannon Industrial Office Park adjacent to U.S. Route 101 in Menlo Park. The generally T-shaped building does not entirely fill its square lot as it is set back 20 feet from the public sidewalk along Jefferson Drive. The T plan is formed by a north projection, containing offices, attached to a rear warehouse volume. A landscaped lawn occupies the remainder of the lot. The building is constructed of concrete, features exposed concrete exterior walls, and is capped with a flat roof with a subtle crenellated parapet.

The north (primary) façade (**Figures 1 and 2**) faces Jefferson Drive and is eight bays wide. The central six bays are located at the front administrative projection and are composed of a series of ground-floor aluminum-frame windows. The majority of the bays contain pairings of windows separated by a wood mullion. The primary entrance is located east of center and features a recessed, fully glazed single door and glazed sidelite. Within the recessed primary entrance is an adjacent utility access door. The window and door openings are vertically oriented and terminate below the roofline. However, above the first story the openings are infilled with plywood. The outermost two bays at the primary façade are at the warehouse volume and are set back from the predominant façade plane. These bays contain raised loading bays with overhead rolling doors. Asphalt-paved drives provide vehicular access to the loading bays from Jefferson Drive. (See continuation sheet.)

B1. Historic Name: Unknown
B2. Common Name: 160 Jefferson Drive
B3. Original Use: Warehouse and Administrative Office Building B4. Present Use: Warehouse and Administrative Office Building
***B5. Architectural Style:** Vernacular Industrial
***B6. Construction History:** (Construction date, alteration, and date of alterations)

A 1962 site plan for 160 Jefferson Drive, submitted to the City of Menlo Park prior to the building's construction and currently held by the City of Menlo Park Building Division, indicates the building was intended for office and warehouse use. Lacar Industries, the building's first tenant, was identified on the 1962 site plan and was listed in the 1963 city directory at this address, the first year during which 160 Jefferson Drive was listed. Therefore, 160 Jefferson Drive appears to have been built between 1962 and 1963. The original building permit has not been located, and the building's architect is unknown. In 1973, tenant Poolmaster obtained a permit, although it is unclear what scope of work occurred at this time. Some plumbing and electrical work occurred in 1977, and the following year an illegal duct was removed from the building's heater. The permit record indicates that a loading dock was added to 160 Jefferson Drive in 1991, designed by Keith L. Dacosta, AIA, but the exact location of the loading dock was not specified by the permit. In 1996 interior changes were made along with seismic retrofitting; and in 1997, the roof was replaced. Visual inspection indicates that window openings at the primary façade were infilled above the first story. However, building permits were not located to date this alteration to the building.

Historic Context: Menlo Park and Bohannon Industrial Office Park
In the 1850s, Irish immigrants Dennis Oliver and Daniel McGlynn bought 1,700 acres bordering County Road (today known as El Camino Real) on the San Francisco Peninsula. Oliver and McGlynn gave Menlo Park its name when they established Menlough, a series of local farms named after their ancestral community. Both Oliver and McGlynn constructed a gate bearing the name "Menlo Park." This gate symbolized the community until 1922, when it was destroyed as the result of a car accident.

A few years following Oliver and McGlynn's settlement, Menlo Park became a desirable vacation destination for San Francisco's upper class. Palatial houses were constructed on large parcels in the burgeoning community. El Camino Real served as a major thoroughfare and historic downtown Menlo Park ultimately developed along this route. Completion of the Southern Pacific Railroad through Menlo Park in 1863, and its connection with San Jose one year later, exponentially increased Menlo Park's accessibility to city-dwellers seeking leisure in a rural environment. By 1874, Menlo Park incorporated in response to its rapid growth and infrastructure challenges. When initially incorporated (the first of its two incorporations), Menlo Park included the land that would later be known as Atherton (Placeworks 2016).

***P3a. Description (continued):**

The east and west façades are generally the same in composition and have limited fenestration. The east façade contains two bays located at the front projection (**Figure 3**). These bays contain two-over-two aluminum-frame windows at the first and second stories that appear to be original and are separated by plywood spandrel panels. Wooden mullions frame the ground-floor windows only. These vertical pairings appear to reflect the original arrangement of windows at the primary façade, which have been partially infilled. The west façade's ground floor contains two bays at the front façade that are identical in arrangement and plywood infilling as those windows at the primary façade (**Figure 4**). A narrow walkway on a raised foundation runs adjacent to the east façade's projection. The south façade is mostly inaccessible to pedestrians (**Figure 5**). The center of the south façade has an overhead roll-up vehicular entry.

***B10. Significance (continued):**

Through the late-19th and early-20th centuries, Menlo Park underwent several transformative events. Stanford University opened in 1891 to the south of Menlo Park, dramatically altering Menlo Park and the San Francisco Peninsula. A new local economy formed as Stanford fostered its research and academic profile. Additionally, Menlo Park was chosen as the location for Camp Fremont, a military training ground for World War I that brought in thousands of temporary inhabitants; Menlo Park's population of fewer than 2,000 people increased to approximately 40,000 during World War I. Camp Fremont closed following the end of World War I and later became the Veterans Medical Center. Numerous new businesses opened, and city improvements were undertaken during the camp's operations. These improvements remained after the camp's closure to serve the growing city (Placeworks 2016).

In 1923, Atherton voted to secede from Menlo Park. When Menlo Park incorporated for the second time in 1927, Atherton was excluded. — During the subsequent decades, Menlo Park developed from a small town to an important part of the increasingly urbanized San Francisco Peninsula region. Menlo Park's population rose from 2,414 residents in 1930 to 26,836 by 1970 (Placeworks 2016).

In the 1920s and 1930s Menlo Park's transportation infrastructure began to expand outward from downtown with the growth of its residential neighborhoods. By the late 1930s, El Camino Real expanded into four lanes, which caused the demolition, relocation, or closure of several Menlo Park businesses and structures. Simultaneously, the Belle Haven neighborhood, approximately four miles north of downtown Menlo Park and adjacent to San Francisco Bay, was developed by David D. Bohannon with two-bedroom homes priced for as little as $2,950. Belle Haven was Menlo Park's only major housing development managed locally during the Great Depression, and was fully developed in the 1950s (Placeworks 2016). Old Bayshore Highway provided a connection between San Jose and San Francisco starting in 1937, partially following the current path of U.S. Route 101 through the Peninsula. Without a center divider, the four-lane highway was the location of a high number of fatal accidents and obtained the nickname "Bloody Bayshore" (Palo Alto History.org 2018). After decades of political pressure to stop future fatalities, construction of the new Bayshore Highway began in 1947 to replace the Old Bayshore Highway. According to a history of the Bayshore Highway's construction, "Freeway development processed in segments as funding to acquire property abutting established highway alignments became available. Early disconnected segments of freeways followed an overall plan that were to be integrated into a regional system. The Bayshore Freeway, originally constructed as a highway along the bay side of the peninsula […] began its transition to a freeway in 1947 with the construction of a short section between Burlingame and San Mateo" (State of California Department of Transportation Environmental Program 2003). The new Bayshore Highway is now part of U.S. Route 101, a 1,540-mile highway first built in 1926 that connects Olympia, Washington and Los Angeles, California.

Development of the entire San Francisco Peninsula continued during the mid-twentieth century, and Menlo Park became a de facto suburb of San Francisco. During this period, Menlo Park became a major technology hub both regionally and globally. The Stanford Research Institute was established in 1946 (known as SRI International by 1970), and remains headquartered in Menlo Park as of the completion of this record. By the late 1950s, a white-collar industrial development market sprouted throughout many of the nation's suburbs, including Menlo Park. Office and industrial parks—originally separate land uses—began to intertwine in the mid-1960s. By 1968, the development of industrial office parks steadily increased throughout the country when the Urban Land Institute (ULI), a real estate industry and development research organization, published the first planned unit development (PUD) ordinance relating to office parks (Mozingo 2011:179). PUDs had originally assisted residential suburban development through subdivision of land. An office park PUD thus enabled developers to subdivide their land for commercial land uses (Mozingo 2011:156). Soon, office parks began to develop in and around suburban developments across the country.

Bohannon Industrial Office Park is an early example of such industrial development in Menlo Park in the 1950s, when many industrial office parks developed across the U.S. Developer David D. Bohannon opened the 200-acre park in 1954, located adjacent to his previous suburban development Belle Haven and immediately south of the recently constructed new Bayshore Highway. Bohannon began his career in Peninsula real estate development much earlier, in 1928. He developed thousands of residential properties throughout San Mateo, Alameda, and Santa Clara Counties prior to developing Bohannon Industrial Office Park. His first commercial development projects include San Mateo's Hillsdale Shopping Center and Bohannon Industrial Office Park in 1954, and San Lorenzo Village Shopping Center (Bohannon 2016).

Bohannon Industrial Office Park's first tenant was Johnson and Johnson, whose plant opened on October 25, 1954 (*The Times* 1957:25). By 1957, the industrial park had six large-scale industrial plants with two additional national drug companies, Parke Davis and Upjohn, scheduled for future development (*The Times* 1957:25). However, a 1960 aerial photograph indicates that little was actually developed in the area surrounding the future site of 160 Jefferson Drive by this time (Nationwide Environmental Title Research). The subject building was constructed c.1962-1963 to provide administrative and warehouse space to Lacar Enterprises, Inc., a household goods company. By 1968, lots surrounding the subject building had been developed with industrial buildings that were mostly larger than 160 Jefferson Drive but maintained similar rectangular building footprints, perhaps indicating an increase in larger scaled industrial-office tenants moving into the park (Nationwide Environmental Title Research). Following ULI's development trend of incorporating office zoning within industrial parks, in 1969 Bohannon Industrial Office Park began offering buildings that were exclusively for office use (Mozingo 2011:179).

Beginning in the 1980s, the rapid expansion of the technology sector increased Menlo Park's popularity and housing costs. Today Menlo Park remains a highly-sought-after residential community. Facebook continues to expand as a principal economic presence in the city, while Silicon Valley, the region that includes northwest Santa Clara county and southern portions of the San Francisco Peninsula, houses numerous major employers in the information technology industry.

Ownership and Occupant History

The building's first owner was not identified through deed research at the County of San Mateo Clerk-Recorder office but is assumed to be the Bohannon Organization, the developer of the surrounding industrial office park. Tom Lowenstein obtained ownership of 160 Jefferson beginning in 1977, and members of the Lowenstein family retained the building until selling it to Exponent Incorporated—an engineering and scientific consulting firm—in 2016.

During most of the building's history, it was occupied by a series of corporate retailers. From 1963 to 1967, household goods company Lacar Enterprises Inc. occupied 160 Jefferson Drive. A newspaper article reveals that Lacar began business in 1947 in Belmont, originally as a wheelbarrow manufacturer, and by 1970 the company merged with F.E. Baker & Sons, Inc. to form Bacar Incorporated (*The Times* 1970b:35). From 1976 to 1982, the building housed three tenants: Poolmaster Incorporated, Lee-N-Carol Pool Stores, and Bay Area Firescreen Supply. Poolmaster, founded in 1958, continues its business today and is headquartered in Sacramento (Poolmaster 2018). Lee-N-Carol Pools operated in San Carlos in the early 1970s, before it leased 160 Jefferson Drive (*The Times* 1970a:11). No information was uncovered regarding Bay Area Firescreen Supply or Pacific Mailing Corporation. More recently, from 2000 to 2010, Krawinkler Luth & Associates, a structural engineering firm, has leased the building.

The known occupants of 160 Jefferson Drive, based on available Menlo Park City Directories and Criss Cross Directories, is summarized in the table below:

Year	Details
1963-1967	Lacar Enterprises Inc. (household goods)
1968-1975	Unknown
1976-82	Poolmaster Incorporated Lee-N-Carol Pool Stores Bay Area Firescreen Supply
1983-1989	Unknown
1990	Pacific Mailing Corporation
1991-1996	Unknown
2000-2010	Krawinkler Luth & Associates
2010-2018	Unknown

The known owners of 160 Jefferson Drive, based on available deed records held by the County of San Mateo Clerk-Recorder and building permits held by the City of Menlo Park Building Department, are summarized in the table below:

Year	Details
1962-1976	Unknown
1977-1997	Tom Lowenstein (building permits)
1998	Margit Lowenstein and Tom Lowenstein
1999-2015	Lowenstein
2016	Arm J. Lowenstein
2016	Exponent Incorporated

National Register of Historic Places/California Register of Historical Resources Evaluation of 160 Jefferson Drive

160 Jefferson Drive is not currently listed in nor previously found eligible for listing in the National Register of Historic Places (NRHP) or California Register of Historical Resources (CRHR). The following provides an evaluation of 160 Jefferson Drive under NRHP Criteria A-D/CRHR Criteria 1-4:

CRITERIA A/1 (Events):

160 Jefferson Drive is not associated with any event(s) of historical significance. The building is a typical product of mid-twentieth-century suburban industrial office park development in Menlo Park. While the broader Bohannon Industrial Office Park may be an early example of this type of development, the subject building was constructed nearly a decade after the Bohannon Industrial Office Park opened and is a typical example of a suburban industrial office park building. Research conducted on the building's owners and occupants did not reveal that the building fostered early or remarkable business growth for any of its tenants, or for Menlo Park at large. Most of the building's tenants had established their businesses elsewhere before occupying 160 Jefferson Drive, and none appear to have gone on to make substantial contributions to the local or regional economy. The building's tenants were not associated with any broad patterns of local or regional history or with the cultural heritage of California or the United States. Therefore, the building at 160 Jefferson Drive is not significant under NRHP/CRHR Criteria A/1.

CRITERIA B/2 (Person):

160 Jefferson Drive is not associated with any person(s) of historical significance. While David D. Bohannon was a prolific Peninsula developer, the Bohannon Industrial Office Park was not his first development project; he previously developed thousands of residential properties and continued to develop commercial and industrial office parks during much of the twentieth century. The subject building at 160 Jefferson Drive is one of numerous facilities constructed in the Bohannon Industrial Office Park and is not directly associated with Bohannon, but rather is loosely connected to the developer's career. Furthermore, longtime building owner Tom Lowenstein was not found to be important to local, California, or national history. Research on the other known owners and tenants of 160 Jefferson Drive does not indicate that any of these individuals would be considered significant in local, state, or national history for any achievements associated with the building. Therefore, 160 Jefferson Drive is not significant under NRHP/CRHR Criteria B/2.

CRITERIA C/3 (Design/Construction):

160 Jefferson Drive is an unremarkable, utilitarian style industrial and office building. While the architect/builder responsible for the design and construction of the building has not been identified, the relatively basic design and construction methods are expected for a suburban industrial and office development of the 1960s and do not appear to represent the work of a master. The industrial office building is representative of a common building type constructed in various locations in Menlo Park and throughout the South Bay during the 1960s. Considering the office building's relatively simple massing and designs, the property at 160 Jefferson Drive does not embody the distinctive characteristics of a type, period, region, or method of construction and is not significant under NRHP/CRHR Criteria C/3.

CRITERIA D/4 (Information Potential):

The subject property does not appear to be a source, or likely source, of important historical information not already captured in the historic record. Therefore, it is not significant under NRHP/CRHR Criteria D/4.

Conclusion:
Based on an evaluation of the building under NRHP Criteria A-D/CRHR Criteria 1-4, 160 Jefferson Drive is ineligible for individual listing in the NRHP and CRHR. The property is therefore not a historical resource for the purposes of the California Environmental Quality Act (CEQA) in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

165 Jefferson Drive in a two-story, tilt-up concrete, utilitarian style light-industrial building located within the Bohannon Industrial Office Park, between U.S. Route 101 and the California 84 freeway in Menlo Park. The rectangular-plan building does not entirely fill its lot and is set back approximately 30 feet from the public sidewalk along Jefferson Drive. The building is constructed of concrete and is capped with a flat roof. A section of the roof is raised near the east façade of the building. The south (primary) façade (**Figures 1 and 2**) faces Jefferson Drive and is divided into seven structural bays by concrete columns. Fenestration at this façade is concentrated at the building's primary entrance in the furthest west bay (**Figures 3**). An aluminum frame window assembly and aluminum transoms encase the primary entrance, which has a single fully glazed door. A panel of pebbledash concrete surmounts primary entrance. An arbor in front of the primary entrance supports vegetation. The remaining bays at the south façade feature smooth concrete.

The west (**Figure 4**) and east (**Figure 5**) façades each face adjacent paved parking lots and feature similar designs. Both façades are clad in concrete with limited fenestration, are divided into eight structural bays, and have projecting loading docks near their centers. Excavated ramps lead to both loading docks, which sit on an exposed foundation. The building's concrete foundation is exposed adjacent to each ramp. The west façade's loading dock is an enclosed shed clad in corrugated metal with a flat roof. The east façade's loading dock is composed of a projecting canopy roof supported by metal posts. The north façade is divided into nine structural bays and does not feature any openings.

B1. Historic Name: The Wells Lamont Building
B2. Common Name: 165 Jefferson Drive
B3. Original Use: Warehouse and Administrative Office Building B4. Present Use: Warehouse and Administrative Office Building
***B5. Architectural Style:** Vernacular Industrial
***B6. Construction History:** (Construction date, alteration, and date of alterations)

The original building permit for 165 Jefferson Street was not located at the Menlo Park Building Division. However, a foundation investigation report and architectural plans dated 1963 indicate that construction of the building began that year and identify the architect as Simpson, Stratta & Associates. Constructed was completed by 1965, the first year that an occupant was listed at 165 Jefferson Drive in available city directories. According to the permit record, exterior parking was added in 1980, and the following year the interior was remodeled, involving the demolition and construction of partition walls. Additional interior remodeling and alterations took place in 1984. Building permits indicate that by 2000 the building underwent seismic upgrades, and a seismic roof diaphragm was installed in 2002. These seismic upgrades do not appear to have resulted in any visible changes to the exterior of the building but did involve seismic upgrades to the roof. Tenant improvements occurred in 2007 along with the addition of a high roof and roll-up doors, as well as the use of Exterior Insulation and Finish Systems (EIFS) for exterior cladding at the walls of the raised roof area.

Historic Context: Menlo Park and Bohannon Industrial Office Park

In the 1850s, Irish immigrants Dennis Oliver and Daniel McGlynn bought 1,700 acres bordering County Road (today known as El Camino Real) on the San Francisco Peninsula. Oliver and McGlynn gave Menlo Park its name when they established Menlough, a series of local farms named after their ancestral community. Both Oliver and McGlynn constructed a gate bearing the name "Menlo Park." This gate symbolized the community until 1922, when it was destroyed as the result of a car accident.

A few years following Oliver and McGlynn's settlement, Menlo Park became a desirable vacation destination for San Francisco's upper class. Palatial houses were constructed on large parcels in the burgeoning community. El Camino Real served as a major thoroughfare, and historic downtown Menlo Park ultimately developed along this route. Completion of the Southern Pacific Railroad through Menlo Park in 1863, and its connection with San Jose one year later, exponentially increased Menlo Park's accessibility to city-dwellers seeking leisure in a rural environment. By 1874, Menlo Park incorporated in response to its rapid growth and infrastructure challenges. When initially incorporated (the first of its two incorporations), Menlo Park included the land that would later be known as Atherton (Placeworks 2016).

***B10. Significance (continued):**

Through the late 19th and early 20th centuries, Menlo Park underwent several transformative events. Stanford University opened in 1891 to the south of Menlo Park, dramatically altering Menlo Park and the San Francisco Peninsula. A new local economy formed as Stanford fostered its research and academic profile. Additionally, Menlo Park was chosen as the location for Camp Fremont, a military training ground for World War I that brought in thousands of temporary inhabitants; Menlo Park's population of fewer than 2,000 people increased to approximately 40,000 during World War I. Camp Fremont closed following the end of World War I and later became the Veterans Medical Center. Numerous new businesses opened, and city improvements were undertaken during the camp's operations. These improvements remained after the camp's closure to serve the growing city (Placeworks 2016).

In 1923, Atherton voted to secede from Menlo Park. When Menlo Park incorporated for the second time in 1927, Atherton was excluded. During the subsequent decades, Menlo Park developed from a small town to an important part of the increasingly urbanized San Francisco Peninsula region. Menlo Park's population rose from 2,414 residents in 1930 to 26,836 by 1970 (Placeworks 2016).

In the 1920s and 1930s Menlo Park's transportation infrastructure began to expand outward from downtown with the growth of its residential neighborhoods. By the late 1930s, El Camino Real expanded into four lanes, which caused the demolition, relocation, or closure of several Menlo Park businesses and structures. Simultaneously, the Belle Haven neighborhood, approximately four miles north of downtown Menlo Park and adjacent to San Francisco Bay, was developed by David D. Bohannon with two-bedroom homes priced for as little as $2,950. Belle Haven was Menlo Park's only major housing development managed locally during the Great Depression, and was fully developed in the 1950s (Placeworks 2016). Old Bayshore Highway provided a connection between San Jose and San Francisco starting in 1937, partially following the current path of U.S. Route 101 through the Peninsula. Without a center divider, the four-lane highway was the location of a high number of fatal accidents and obtained the nickname "Bloody Bayshore" (Palo Alto History.org 2018). After decades of political pressure to stop future fatalities, construction of the new Bayshore Highway began in 1947 to replace the Old Bayshore Highway. According to a history of the Bayshore Highway's construction, "Freeway development processed in segments as funding to acquire property abutting established highway alignments became available. Early disconnected segments of freeways followed an overall plan that were to be integrated into a regional system. The Bayshore Freeway, originally constructed as a highway along the bay side of the peninsula […] began its transition to a freeway in 1947 with the construction of a short section between Burlingame and San Mateo" (State of California Department of Transportation Environmental Program 2003). The new Bayshore Highway is now part of U.S. Route 101, a 1,540-mile highway first built in 1926 that connects Olympia, Washington and Los Angeles, California.

Development of the entire San Francisco Peninsula continued during the mid-twentieth century, and Menlo Park became a de facto suburb of San Francisco. During this period, Menlo Park became a major technology hub, both regionally and globally. The Stanford Research Institute was established in 1946 (known as SRI International by 1970), and remains headquartered in Menlo Park as of the completion of this record. By the late 1950s, a white-collar industrial development market sprouted throughout many of the nation's suburbs, including Menlo Park. Office and industrial parks—originally separate land uses—began to intertwine in the mid-1960s. By 1968, the development of industrial office parks steadily increased throughout the country when the Urban Land Institute (ULI), a real estate industry and development research organization, published the first planned unit development (PUD) ordinance relating to office parks (Mozingo 2011:179). PUDs had originally assisted residential suburban development through subdivision of land. An office park PUD thus enabled developers to subdivide their land for commercial land uses (Mozingo 2011:156). Soon, office parks began to develop in and around suburban developments across the country.

Bohannon Industrial Office Park is an early example of such industrial development in Menlo Park in the 1950s, when many industrial office parks developed across the U.S. Developer David D. Bohannon opened the 200-acre park in 1954, located adjacent to his previous suburban development Belle Haven and immediately south of the recently constructed new Bayshore Highway. Bohannon began his career in Peninsula real estate development much earlier, in 1928. He developed thousands of residential properties throughout San Mateo, Alameda, and Santa Clara Counties prior to developing Bohannon Industrial Office Park. His first commercial development projects include San Mateo's Hillsdale Shopping Center and Bohannon Industrial Office Park in 1954, and San Lorenzo Village Shopping Center (Bohannon 2016).

Bohannon Industrial Office Park's first tenant was Johnson and Johnson, whose plant opened on October 25, 1954 (*The Times* 1957:25). By 1957, the industrial park had six large-scale industrial plants with two additional national drug companies, Parke Davis and Upjohn, scheduled for future development (*The Times* 1957:25). However, a 1960 aerial photograph indicates that little was actually developed in the area surrounding the future site of 165 Jefferson Drive by this time (Nationwide Environmental Title Research 2018). The subject building was constructed c.1963-1965 to provide administrative and warehouse space to Wells Lamont Corporation, a glove manufacturer based in Minneapolis. By 1968, lots surrounding the subject building had been developed with industrial buildings that were mostly larger than 165 Jefferson Drive but maintained similar rectangular building footprints, perhaps indicating an increase in larger scaled industrial-office tenants moving into the park (Nationwide Environmental Title Research 2018). Following ULI's development trend of incorporating office zoning within industrial parks, in 1969 Bohannon Industrial Office Park began offering buildings that were exclusively for office use (Mozingo 2011:179).

Beginning in the 1980s, the rapid expansion of the technology sector increased Menlo Park's popularity and housing costs. Today Menlo Park remains a highly sought after residential community. Facebook continues to expand as a major economic presence in the city, while Silicon Valley, the region that includes northwest Santa Clara county and southern portions of the San Francisco Peninsula, houses numerous major employers in the information technology industry.

Ownership and Occupant History

The building at 165 Jefferson Drive was constructed for David D. Bohannon, who has maintained ownership since. In 2011, the property was sold to the Frances B. Nelson, Robert L. Webster, and David E. Bohannon Trusts.

From 1965 to 1967, Wells Lamont Corporation operated out of 165 Jefferson Drive. Wells Lamont was and continues to be a high-quality glove manufacture company, which began in 1907 as the Wells Glove Company in South Dakota and later moved headquarters to Minneapolis (Wells Lamont 2015). The building's tenants are not listed in Criss-Cross Directories for most of the building's history. These directories indicate that Raychem wholesale company occupied 165 Jefferson Drive in 1977. Today, Raychem Corporation is a global producer of industrial electronic parts and components, which aids aerospace, construction, medical, automotive, telecommunications, and consumer electronic industries (Funding Universe 2018). From 1978 to 2009, the building's tenants are unknown as Criss-Cross directories did not list the building's address. Theme Part Productions, an event and props company, moved into 165 Jefferson Drive in 2010 and continues its operations there today.

The known occupants of 165 Jefferson Drive, based on available Menlo Park City Directories and Criss Cross Directories, are summarized in the table below:

Year	Details
1965-1967	Wells Lamont Corp (gloves)
1977	Raychem (wholesale)
2010-Present	Theme Party Productions

The known owners of 165 Jefferson Drive, based on available deed records held by the County of San Mateo Clerk-Recorder and building permits held by the City of Menlo Park Building Department, are summarized in the table below:

Year	Details
1963-2011	David D. Bohannon/Bohannon Development Organization
2000	Ophelia Bohannon (criss-cross directory 2000)
2011-present	Frances B. Nelson (trust), Robert L. Webster (trust), and David E. Bohannon (trust)

Architect: Simpson, Stratta & Associates

Based in San Francisco, Simpson, Stratta & Associates designed and engineered numerous buildings for corporate office parks in the Bay Area in the mid-to-late 1960s. Research did not uncover extensive information on the personnel involved in the firm or its body of work, and the firm is not mentioned in the *San Francisco Modern Architecture and Landscape Design 1935-1970 Historic Context Statement* (San Francisco Planning Department 2010). Available newspaper articles indicate that Simpson, Stratta & Associates was regionally active, and that its projects included the Fairchild Semiconductor Division Planting Facility in Mountain View, the Memorex Corporation Research Facility Building IV in Santa Clara County, and a building with office-warehouse units in the South San Francisco Industrial Park. The Memorex complex, consisting of corporate offices and warehouses, is considered to be Silicon Valley's first corporate campus and one of the first in the nation (Cruz 2013). The building designed by Simpson, Stratta & Associates in the South San Francisco Industrial Park was constructed as a condominium-style industrial building in which some of the building's units could be purchased by industrial companies. The condominium concept for industrial buildings was considered innovative for its time; however, this concept was credited to Utah Construction & Mining Company, who led development efforts in the park (*The Times San Mateo* 1965: 31). In 1975, Simpson, Stratta & Associates also designed a manufacturing plant for Digital Telephone Systems in Ignacio, Novato, in Marin County (*Daily Independent Journal* 1974: 35).Generally, Simpson, Stratta & Associates designed utilitarian style light industrial buildings with little to no ornament.

National Register of Historic Places/California Register of Historical Resources Evaluation of 165 Jefferson Drive

165 Jefferson Drive is not currently listed in, and has not been found eligible for listing in, the National Register of Historic Places (NRHP) or California Register of Historical Resources (CRHR). The following provides an evaluation of 165 Jefferson Drive under NRHP Criteria A-D/CRHR Criteria 1-4:

CRITERIA A/1 (Events):

165 Jefferson Drive is not associated with any event(s) of historical significance. The building is a typical product of mid-twentieth-century suburban industrial office park development in Menlo Park. While the broader Bohannon Industrial Office Park may be an early and somewhat notable example of this type of development, the subject building was constructed nearly a decade after the Bohannon Industrial Office Park opened and is a typical example of a suburban industrial office park building. While Bohannon Development Organization was the first and only long-term owner of 165 Jefferson Drive, the building is not directly associated with any potential significance of the Bohannon Industrial Office Park. Research conducted on the building's owners and occupants did not reveal that the building fostered early or remarkable business growth for any of its tenants, or for Menlo Park at large. The building's original tenant, the Wells Lamont Corporation, had established its business elsewhere and does not appear to have located its headquarters at 165 Jefferson Drive; none of the known tenants appears to have gone on to make substantial contributions to the local or regional economy. The building's tenants are not associated with any broad patterns of local or regional history or with the cultural heritage of California or the United States. Therefore, the building at 165 Jefferson Drive is not significant under NRHP/CRHR Criteria A/1.

CRITERIA B/2 (Person):

165 Jefferson Drive is not associated with any person(s) of historical significance. While David D. Bohannon was a prolific Peninsula developer, the Bohannon Industrial Office Park was not his first development project; he previously developed thousands of residential properties and continued to develop commercial and industrial office parks during much of the twentieth century. Additionally, the building at 165 Jefferson Drive was only loosely connected to the developer's career. Although Bohannon owned the building at 165 Jefferson Drive, his ownership and any associations with the building at 165 Jefferson Drive are not important to local, California or national history. A review of the other known owners and tenants of 165 Jefferson Drive does not indicate that any of these individuals would be considered significant in local, state, or national history for work associated with the building. Additional building tenants from the late 1960s to 2009 have not been identified. However, as a modest industrial office building located within an industrial office park in Menlo Park, the building at 165 Jefferson Drive is not the type of resource apt to represent the work or other activities for which a historically significant individual is primarily known. Therefore, 165 Jefferson Drive is not significant under NRHP/CRHR Criteria B/2.

CRITERIA C/3 (Design/Construction):

165 Jefferson Drive is an unremarkable utilitarian style industrial and office building designed by the San Francisco architecture and engineering firm of Simpson, Stratta & Associates. Simpson, Stratta & Associates designed numerous Bay Area industrial offices in the mid-to-late 1960s that articulate a generally Modernist style: 165 Jefferson Drive's exposed structural elements on the primary façade reference the basic tenets of Midcentury Modern architectural design, and the building also rejects any form of ornament or classical historicism and instead emphasizes its materials, utilitarian aesthetic, and box-like massing. However, the use of the basic characteristics of the Midcentury Modern architectural style for the design of a relatively modest industrial building was not innovative at the time of 165 Jefferson Drive's construction, and the building is an unremarkable example of a type of building that appears to have been commonplace in the South Bay in the mid-1960s. Research did not conclude that Simpson, Stratta & Associates appears to be a master architectural designer, as much of their work reflected the popular Modernist-indebted styles of the era without appearing to have made groundbreaking contributions to the field of architectural design. Furthermore, 165 Jefferson Drive appears to have been a minor and unexceptional project within the firm's body of work. Considering the building's undistinguished Modernist design, 165 Jefferson Drive does not embody the distinctive characteristics of a type, period, region, or method of construction to the extent necessary to be considered significant under NRHP/CRHR Criteria C/3.

CRITERIA D/4 (Information Potential):

The subject property does not appear to be a source, or likely source, of important historical information not already captured in the historic record. Therefore, it is not significant under NRHP/CRHR Criteria D/4.

Conclusion

Based on an evaluation of the building under NRHP Criteria A-D and CRHR Criteria 1-4, 165 Jefferson Drive is ineligible for individual listing in the NRHP and CRHR. The property is therefore not a historical resource for the purposes of the California Environmental Quality Act (CEQA) in accordance with Section 15064.5(a)(2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the California Public Resources Code.

Notice of Preparation (NOP) and Public Comments Received

NOTICE OF PREPARATION ENVIRONMENTAL IMPACT REPORT COMMONWEALTH: BUILDING 3 PROJECT CITY OF MENLO PARK

Date: May 24, 2019

To: State Clearinghouse
State Responsible Agencies
State Trustee Agencies
Other Public Agencies
Interested Organizations

From: Tom Smith
Senior Planner
City of Menlo Park
701 Laurel Street
Menlo Park, CA 94025

Subject: **Notice of Preparation (NOP) of the Initial Study and Environmental Impact Report for the Commonwealth: Building 3 Project**

Lead Agency: City of Menlo Park, Planning Division

Project Title: Commonwealth: Building 3 Project

Project Area: City of Menlo Park

Notice is hereby given that the City of Menlo Park (City) will be the lead agency and will prepare a focused environmental impact report (EIR) for the Commonwealth: Building 3 (Project). An Initial Study has been prepared along with this Notice of Preparation (NOP), which scopes out several environmental topics from further review. The focused EIR will address potential physical environmental effects of the Project that have not been scoped out, as outlined in the California Environmental Quality Act (CEQA). The City is requesting comments on the scope and content of this focused EIR.

A scoping session will be held as part of the Planning Commission meeting on **June 3, 2019,** at **7:00 p.m.** at the Menlo Park City Council Chambers, located at 701 Laurel Street, Menlo Park, CA 94025. The scoping session, which is part of the focused EIR scoping process, is the time when the City solicits input from the public and agencies on specific topics they believe should be addressed in the environmental analysis.

Written comments on the scope of the focused EIR may also be sent to:

Tom Smith, Senior Planner
City of Menlo Park
Community Development Department, Planning Division
701 Laurel Street
Menlo Park, CA 94025
tasmith@menlopark.org
Phone: 650.330.6730

Comments on the NOP are due no later than the close of the NOP review period (5:00 p.m. on Friday, **June 28, 2019).** Note that the typical 30-day review period has been extended to account for the Memorial Day holiday. However, we would appreciate your response at the earliest possible date. Please send your written comments to Tom Smith at the address shown above or by email to tasmith@menlopark.org with "Commonwealth: Building 3 EIR" as the subject. Public agencies that provide comments are asked to include a contact person for the agency.

The Initial Study is available online at: https://www.menlopark.org/1552/CEQA-documents. Hardcopies are also available for review at:

- Menlo Park Library (800 Alma Street, Menlo Park, CA 94025)
- Belle Haven Branch Library (413 Ivy Drive, Menlo Park, CA 94025)
- Community Development Department, Civic Center (701 Laurel Street, Menlo Park, CA 94025)

PROJECT LOCATION AND EXISTING CONDITIONS: The Project site is located north of US 101 in the City of Menlo Park (as shown in Figure 1). The Project site, which is composed of the Commonwealth Site and the Jefferson Site, is bounded by Jefferson Drive and office buildings to the north, the currently inactive Dumbarton Rail Corridor to the southeast, US 101 to the south, and an Exponent building to the west. Office, life science, and research and development uses are located immediately adjacent to the Project site in all directions. Neighborhoods in Menlo Park are south (across the Dumbarton Rail Corridor and US 101) of the Project site. To the southeast, across the Dumbarton Rail Corridor, are recreation and public facilities uses associated with Kelly Park and the Onetta Harris Community Center.

The Commonwealth Corporate Center, which is the Project site, totals approximately 13.3 acres (578,500 square feet [sf]) with an existing floor area ratio (FAR) of 45 percent. The Commonwealth Site includes assessor's parcel numbers (APNs) 055-243-300, 055-243-310, and a portion of 055-243-999. The four-story Buildings 1 and 2, both located on the Commonwealth Site, were constructed in 2015. Each building is approximately 67 feet tall, with an area of approximately 129,960 gross square feet (gsf) and a footprint of approximately 34,540 gsf. Together, the two buildings have a total floor area of approximately 259,920 gsf. Buildings 1 and 2 are surrounded by surface parking, landscaping, pedestrian paths, and water features. A courtyard with café tables and chairs is located between the two buildings; a bocce court and wood deck is north of Building 2. The Commonwealth Site also includes approximately 779 surface parking spaces. The 1.2-acre Jefferson Site, which includes a portion of APN 055-243-999, is north of the Commonwealth Site. The Jefferson Site is currently occupied by a surface parking lot with approximately 87 parking spaces and landscaping.

PROJECT DESCRIPTION: The Sobrato Organization (Project Sponsor) is proposing to construct an approximately 249,500-gsf office building (Building 3) and an approximately 324,000 gsf parking structure as part of the Commonwealth: Building 3 Project (Project). Building 3 and the parking structure would replace most of the existing surface parking lot. Building 3 would be north of existing Buildings 1 and 2, in the northern portion of the Commonwealth Site, and would have a maximum height of 69 feet (four stories), as measured to the top of the parapet. Building 3 would be surrounded by surface parking, the proposed parking structure, landscaping, and pedestrian paths. Patios with café tables and chairs would be situated in and around Building 3, providing a social space for the Project. When combined with the existing buildings at the Project site, the Project would result in three office buildings with a combined floor area of approximately 509,420 gsf and a FAR of 88 percent.

The Project Sponsor would also construct an approximately 324,000 gsf parking structure east of Buildings 2 and 3 at the Commonwealth Site, with access provided via an internal street east of the two buildings. The proposed parking structure would have four levels and a maximum height of 48 feet. The parking structure would be east of Building 3 in the eastern portion of the Commonwealth Site. In total, 1,061 parking spaces would be provided in the four-story parking structure.

In addition to the proposed Building 3 and parking structure at the Commonwealth Site, the Jefferson Site would be converted from an existing surface parking lot to a community park (Jefferson Park) that would be privately owned but publicly accessible. Jefferson Park would be accessible via paseo connections to Jefferson Drive and the Commonwealth site. This "parklet" would be roughly 32,000 square feet (0.73 acre) in size, including a small parking lot. The final design of this park would be determined through a process involving City and community feedback. Potential features could include a multi-use sports court, a flexible lawn area for games and other activities, and an area with accent pavers that would provide space for games and a mix of lounge and dining seating. Additional features could include a playground or other amenities. Parking spaces within the park would be separated and accented by shade trees, grasses, shrubs, and ground cover. The intent is for the park to be used by the adjacent TIDE Academy for physical education classes and parking, with spaces for approximately 20 to 24 staff members. During non-school hours, the park and parking would be available to the public.

This Project is proposing bonus level development, although the proposed community amenity has not yet been identified.

PROJECT APPROVALS: The following City discretionary approvals would be required prior to development at the Project site:

- Conditional Development Permit Amendment
- Architectural Control
- Below-Market-Rate Housing Agreement
- Environmental Review

In addition, as part of the Project review process conducted by the City, a Fiscal Impact Analysis will be prepared as well as an appraisal to identify the necessary value of the community amenity.

RESPONSIBLE AGENCIES: The agencies listed below are expected to review the draft focused EIR to evaluate the Project:

- Bay Area Air Quality Management District
- California Department of Transportation
- California Regional Water Quality Control Board/San Mateo Countywide Water Pollution Prevention Program
- San Mateo County Transportation Authority
- Menlo Park Fire Protection District
- San Mateo County Environmental Health Division
- West Bay Sanitary District
- Native American Heritage Commission

INTRODUCTION TO EIR: The Project site is within the ConnectMenlo study area. ConnectMenlo, which updated the City's General Plan Land Use and Circulation Elements and rezoned land in the M-2 Area (now referred to as the Bayfront Area), was approved on November 29, 2016. Because the City's General Plan is a long-range planning document, the ConnectMenlo EIR was prepared as a program EIR, pursuant to CEQA Guidelines Section 15168. Section 15168(c)(1) of the CEQA Guidelines provides that if a later activity that would have effects that were not examined in the program EIR, a new initial study would need to be prepared. Section 15168(d) of the CEQA Guidelines provides information for simplifying the preparation of environmental documents by incorporating by reference analyses and discussions, as well as mitigation measures.

An Initial Study for the Project, which is available for review online, at the City libraries, and at the Community Development Department (as listed above), has been prepared to evaluate the potential environmental impacts of the Project and determine what level of additional environmental review is appropriate. In accordance with the requirements outlined in Section 15168(c) of the CEQA Guidelines, the Initial Study has been prepared to disclose the relevant impacts and mitigation measures covered in the ConnectMenlo EIR and discuss whether the Project is within the parameters of the ConnectMenlo EIR. Based on the findings in the Initial Study, a focused EIR will be prepared for impacts that need further discussion and/or mitigation beyond that provided in the ConnectMenlo EIR. The focused EIR for the Project will be prepared and processed in accordance with CEQA and the CEQA Guidelines.

PROBABLE ENVIRONMENTAL EFFECTS: Based on the conclusions in the Initial Study, the following topics will be scoped out of the EIR: agriculture, aesthetics, biological resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use, mineral resources, public services, and recreation. Therefore, the focused EIR will analyze whether the Project would have a significant environmental impact in the following areas:

- Air quality
- Cultural resources
- Greenhouse gas emissions
- Noise
- Population and housing
- Transportation and traffic
- Tribal cultural resources
- Utilities (water supply)

ALTERNATIVES: Based on the significance conclusions determined in the focused EIR, alternatives to the Project will be analyzed to reduce identified impacts. Section 15126.6(e) of the CEQA Guidelines requires the evaluation of a No-Project Alternative. Other alternatives may be considered during preparation of the EIR and will comply with the CEQA Guidelines, which call for a "range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project." The focused EIR will also analyze a Reduced Intensity Alternative, along with any other feasible alternatives that are proposed during the scoping process.

EIR PROCESS: Following the close of the NOP comment period, a draft focused EIR will be prepared that will consider all NOP comments. In accordance with CEQA Guidelines Section 15105(a), the draft focused EIR will be released for public review and comment for a required 45-day review period. Following the close of the 45-day public review period, the City will prepare a final EIR, which will include responses to all substantive comments received on the draft focused EIR. The draft focused EIR and final EIR and will be considered by the Planning Commission and City Council in making the decision to certify the EIR and approve or deny the Project.

Project Location

<u>Commonwealth Building 3 Project EIR</u>
Planning Commission NOP Scoping Hearing
6/3/2019

Commissioner Decardy

- Project needs bird-friendly waiver for potential for bird collisions. Is this consistent with the Municipal Code?
- Need to explain natural gas versus electricity.
    - Consider an all electric and no natural gas project as an alternative.
- Need to define the term "significant new information" in the Initial Study, as compared to the information in the ConnectMenlo EIR. New information has been provided since ConnectMenlo was approved in 2016.
- Project should include no net gain in VMT or no net gain in parking. Or provide an analysis of this in Alternatives.
- Analyze cumulative impacts for Air Quality. Highly localized air quality impacts from US 101 to paseos and school use of the park. Consider in the air quality analysis.
- Keep parking ratios low and look at a wider array of parking options.

Commissioner Strehl

- Provide more information about existing employees versus proposed employees in the entire M-2 area.
- Concerned about adding more employees and not additional housing. Would result in more traffic impacts.

Pamela Jones – Member of Public

- How can we do an EIR with outdated information? ConnectMenlo used 2007 CEQA Guidelines.
- This project must do a housing study.
- An air quality analysis should be provided for nearest residential sensitive receptors. Environmental justice for air quality sensitive receptors.
- Requests information about traffic and mitigations.
- Requests more information about the M-2 area and wants joint session with City Council and Planning Commission on the topic.

City of East Palo Alto

Office of the City Manager

June 27, 2019

Thomas Smith, Senior Planner
Community Development Department
City of Menlo Park
701 Lauren Street
Menlo Park, CA 94025

Subject: Notice of Preparation of the Initial Study and Environmental Impact Report for the Commonwealth: Building 3 Project

Dear Mr. Smith:

This letter is provided in response to the Notice of Preparation (NOP) of the Initial Study and Environmental Impact Report for the Commonwealth: Building 3 Project. I want to emphasize that East Palo Alto values its relationship with Menlo Park, and we hope to continue to work cooperatively on the many issues common to both of our communities.

Traffic

First, East Palo Alto is a city that is severely impacted by regional cut through traffic.
To adequately analyze the potential impact of the proposed project, please add the following intersections to the Transportation Impact Analysis (TIA):

1. University Avenue and State Highway 84/Bayfront Expressway
2. University Avenue and Adams Drive
3. University Avenue and O'Brien Drive
4. University Avenue and Kavanaugh Drive
5. University Avenue and Purdue Avenue
6. University Avenue and Bay Road
7. University Avenue and Willow Road
8. University Avenue and Runnymede Street
9. University Avenue and Bell Street
10. University Avenue and Donohoe Street
11. University Avenue/Highway 101 Southbound on-off ramp
12. University Avenue and Woodland Avenue
13. Donohoe Street and Cooley Avenue

2415 University Ave.
East Palo Alto, CA 94303
Phone: (650) 853-3100
Fax: (650) 853-3115
www.cityofepa.org
cmoffice@cityofepa.org

14. Donohoe Street and Capital (Northbound Highway 101 off ramp)
15. East Bayshore Road and Holland Street
16. Saratoga Avenue and Newbridge Street
17. University Avenue and the Highway 101 Northbound Ramp
18. East Bayshore Road and Pulgas Avenue

Settlement Agreement

Pursuant to Section 2.6 of the Menlo Park General Plan Settlement Agreement, when the preparation of an EIR is required, concurrent with the preparation of the EIR, Menlo Park will conduct a Housing Needs Assessment (HNA). The scope of the HNA, to the extent possible, shall include an analysis of the multiplier effect for indirect and induced employment by the development project and its relationship to the regional housing needs market and displacement. The DEIR should be consistent with all relevant terms of the Settlement Agreement.

Jobs/Housing Ratio

The City of East Palo Alto provides a significant amount of housing stock in Silicon Valley. East Palo Alto has more housing units than jobs, the lowest market rate prices in the region, and approximately 30% (or 2,405 of 7,759 units) of the total housing units are currently registered (non exempt) in the Rent Stabilization Program. East Palo Alto is an island of affordable housing surrounded by several of the most expensive housing markets in the nation. The City is concerned that the proposed development may exacerbate the existing housing crisis in East Palo Alto by displacing current residents and/or creating a need for the City to provide additional units without sufficient resources to adequately address the need.

The Initial Study states that the developer would be required to either build below market rate units or pay in-lieu fees associated with Menlo Park's Below Market Rate Housing Program. The City of East Palo Alto would prefer that the developer build and deliver below market rate units concurrently to the office project. This approach would likely result in the development of much needed affordable housing units to the region in a more efficient manner than using in-lieu fees.

Please provide an analysis of how the project will impact the jobs-housing ratio in Menlo Park, and analyze or provide the following information and analysis with regard to the impact on housing and the potential displacement of East Palo Alto residents:

- The net number of new market rate and affordable units permitted and constructed in the last 10 years in Menlo Park.
- An analysis of where it is anticipated that the new employees will live, based on zip code level data.

If you have any questions, you may call me at (650) 853-3100 or reach me by email at: scharpentier@cityofepa.org.

Yours truly,

Sean Charpentier
Assistant City Manager
scharpentier@cityofepa.org

Re: Response of Sequoia Union High School District to Notice of Preparation of the Initial Study and Environmental Impact Report for the Commonwealth: Building 3 Project

Dear Mr. Smith:

This office represents Sequoia Union High School District ("District"). On behalf of the District, we are hereby submitting comments regarding the Notice of Preparation of the Initial Study and Environmental Impact Report for the Commonwealth: Building 3 Project ("NOP") regarding the focused environmental impact report ("EIR") that the City of Menlo Park ("City") plans to prepare for the Commonwealth: Building 3 Project, located at 162-164 Jefferson Drive, Menlo Park ("Project"). Specifically, this letter responds to the City's invitation to submit comments on the proposed scope and content of the focused EIR. The District has previously submitted written comments highlighting some of the District's concerns regarding the Project on August 30, 2018, which comments are reiterated and incorporated herein by this reference.

According to the NOP, the Sobrato Organization ("Sobrato") is the sponsor of the Project, and the Project would become part of the 13.3 acre Commonwealth Corporate Center (the "Site"). A portion of the Site is located approximately 200 feet east of the District's new TIDE Academy, which is also located on Jefferson Drive. The Site currently houses two four-story office buildings constructed in 2015 (Buildings 1 and 2), and 779 surface parking spaces. Sobrato now proposes to construct an approximately 249,500 square foot (sf) office building (Building 3) on the Site, and an approximately 324,000 sf parking structure as part of the Project. Building 3 would have a maximum height of 69 feet (four stories) and, when combined with Buildings 1 and 2, would occupy a combined floor area of approximately 509,420 sf. The proposed parking structure would be four stories, and would provide 1,061 parking spaces. Building 3 will remove the majority of the existing parking spaces on the Site.

In addition to the proposed Building 3 and parking structure at the Site, the NOP provides that Sobrato intends to convert an approximately 32,000 sf portion of the Site from a parking lot to a

community park (Jefferson Park) that would be privately owned but publicly accessible. The stated intent of this park would be for use by the District's TIDE Academy for physical education classes and parking, with spaces for approximately 20 to 24 staff members.

While the District sincerely appreciates Sobrato's collaboration and stated willingness to convert a portion of the Site into a park for District use, **the District remains concerned that Sobrato has not yet taken any concrete steps to formalize this intended conversion**.

The District therefore submits these comments in order to preserve its concerns regarding the proposed scope and content of the focused EIR. Below are specific scoping requests for the EIR, which the City must address in the focused EIR to adequately evaluate the potential environmental impacts of the Project on the District.

Transportation/Circulation/Traffic Analysis

1. **Describe the existing and the anticipated vehicular traffic and student pedestrian movement patterns to and from school sites, including consideration of bus routes.**

2. **Assess the impact(s) of increased vehicular movement and volumes, including potential conflicts with school pedestrian movement, school transportation, and busing activities.**

3. **Estimate travel demand and trip generation, trip distribution and trip assignment by including consideration of school sites and home-to-school travel.**

4. **Assess cumulative impacts on schools and the community in general resulting from increased vehicular movement and volumes expected from additional development already approved or pending.**

5. **Discuss the direct, indirect, and cumulative impacts on the circulation and traffic patterns in the community as a result of traffic generated by the transportation needs of students to and from the Project and schools throughout the District during the Project build-out.**

6. **Assess the impacts on the routes and safety of students traveling to school by vehicle, bus, walking, and bicycles.**

The District has significant concerns about the traffic, transportation, and circulation impacts that the Project may have on the District, including the District's staff, parents, and students that attend the TIDE Academy. The foregoing categories of information are critical for determining the extent of those impacts on the District.

Any environmental analysis related to the proposed Project must address potential effects related to traffic, noise, air quality, and any other issues affecting schools. (Pub. Resources Code, §§ 21000, *et seq.*; Cal. Code Regs., tit. 14, §§ 15000, *et seq.*; *Chawanakee Unified School District v. County of Madera, et al.,* (2011) 196 Cal.App.4th 1016.) Additionally, specifically related to traffic, there must also be an analysis of safety issues related to traffic impacts, such as reduced pedestrian safety, particularly as to students walking or bicycling to and from TIDE Academy; potentially reduced response times for emergency services and first responders traveling to TIDE Academy; and increased potential for accidents due to gridlock during school drop-off and pick up hours. (See, Journal of Planning Education and Research, "Planning for Safe Schools: Impacts of School Siting and Surrounding Environments on Traffic Safety," November 2015, Chia-Yuan Yu and Xuemei Zhu, pg. 8 [Study of traffic accidents near Austin, Texas schools found that "[a] higher percentage of commercial uses was associated with more motorist and pedestrian crashes" around schools].)

As discussed, the District's TIDE Academy is located on the same road as a portion of the Site, approximately 200 feet east of the proposed Project. The Project Site's neighborhood is one of the most heavily traversed areas in the City of Menlo Park. The Project Site is bordered by Bayfront Expressway (State Route 84) on the north, the Dumbarton rail corridor on the east, U.S. Highway 101 on the south, and Marsh Road on the west. Marsh Road is an arterial or collector roadway that connects major activity centers in Menlo Park, Atherton, and Redwood City. Further, the Project Site is located in the Bayfront Area of Menlo Park that has experienced a drastic impact in traffic over the last ten to fifteen years as the City has continued to approve of newer, corporate campuses and mixed biotechnology, commercial, office, and residential land uses. The City's 2016 General Plan Update calls for an increase of 4.7 million square feet of non-residential office space, 850 hotel rooms, 5,430 residential units, 13,960 residents, and 20,150 employees, all within the Bayfront Area.[1] The General Plan Update Draft EIR concluded that the General Plan Update would result in significant and unavoidable impacts to roadway segments and increase peak hour delays at intersections from increased traffic, even after the mitigation measures called for in the General Plan Update are implemented (if ever).[2]

Adding to the District's concerns regarding traffic surrounding the Project site and the TIDE Academy are the number of development projects that have recently been approved by the City and/or completed in the area, including Buildings 1 and 2 on the Site, the Facebook Campus Project at former 1601 Willow Road and 312 and 313 Constitution Drive (78.9 acres of mixed use development), and the Menlo Gateway Project at 100-190 Independence Drive (cafe/restaurant, health club, 230-room hotel, three office and research and development buildings, and three parking structures covering 15.9 acres). There are several other projects that are being considered by the City, including the Facebook Campus Expansion Projects at 301-309 Constitution Drive, the Menlo Uptown Project at 141 Jefferson Drive and 180-186 Constitution

---

[1] Menlo Park Small High School Project Final EIR (October 6, 2016), p. 2-12; ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update (June 1, 2016), Table 3-2.

[2] Menlo Park Small High School Project Final EIR (October 6, 2016), pp. 2-15 – 2-16; ConnectMenlo: General Plan Land Use & Circulation Elements and M-2 Area Zoning Update (June 1, 2016), p. 4.13-73.

Drive (483 multi-family dwelling units), and the 111 Independence Drive Project (106 multi-family dwelling units), all of which promise to drastically increase traffic in the neighborhood. **Given the magnitude of development being considered and approved in this area, the District maintains that a focused EIR is inappropriate and in conflict with the letter and spirit of CEQA**.

Construction of the Project will severely exacerbate the already stifling traffic in the neighborhood and the safety issues posed thereby. In addition to drawing approximately 1,996 new officer workers,[3] visitors, and emergency vehicles into the area, as currently planned, the Project Site will have a vehicular access point very near the District's vehicular access point for the TIDE Academy along Jefferson Drive. This will inevitably lead to congestion along Jefferson Drive as employees and visitors to the additional commercial space will drive along the same narrow, two-lane road to access and leave the new office space on a daily basis.

The traffic and safety impacts posed by the Project, combined with all the other City-approved development in the area, will severely impact the safety and convenience of TIDE Academy students who walk or bike to school. To mitigate the impacts of increased traffic in the Project site neighborhood in implementing the District's TIDE Academy project, the District committed to develop and implement a Travel Demand Management Plan. Through this Plan, the District is to encourage the use of student walking, biking, and other alternative means of student transport to school.[4] To mitigate the impacts of conflicts and/or dangerous interactions between pedestrians, bicyclists, and vehicles, the District agreed to prepare a "Safe Routes to School Map" that identifies facilities such as traffic lights, crosswalks, and demarcated bikeways that promote safe routes to school.[5] The Project would undermine the District's abilities to implement its transportation and safety mitigation measures for the TIDE Academy, endangering students, parents, and visitors to the school.

We urge the City thoroughly to address and analyze each of the above listed items through its EIR, and implement extensive and thoughtful mitigation measures.

Noise

7. **Identify any noise sources and volumes which may affect school facilities, classrooms and outdoor school areas.**

It is expected that noise from construction and operation of the Project will cause impacts on the District's educational program at the TIDE Academy. Request No. 7 is intended to clarify that the EIR's consideration of noise issues take into account all of the various ways in which noise may impact schools, including increases in noise levels in the immediate vicinity of TIDE Academy.

---

[3] Initial Study, Commonwealth: Building 3 Project (May 2019), p. 3-101.
[4] Menlo Park Small High School Project Draft EIR (July 8, 2016), p. S-4

[5] Menlo Park Small High School Project Draft EIR (July 8, 2016), p. S-6

Population

8. Describe historical, current, and future population projections for the District.

The City's Initial Study acknowledges that, "[a]lthough the Project would not result in onsite residential population increases, the new employees could generate households within Menlo Park and the region. Using the average of 1.88 workers per work household in San Mateo County, the Project would generate approximately 1,062 new households."[6]

The District, therefore, specifically requests that historical, current, and future population projections for the District be addressed in the EIR. Population growth or shrinkage is a primary consideration in determining the impact that development may have on a school district, as a booming population can directly impact the District and its provision of educational services, largely because of resulting school overcrowding, while a district with declining enrollment may depend on new development to avoid school closure or program cuts. Overcrowding can constitute a significant impact within the meaning of the California Environmental Quality Act ("CEQA"). (See, Cal.Code Regs., tit.14, §§ 15064(e).) This is particularly true where the overcrowding results in unsafe conditions, decreased quality of education, the need for new bus routes, and a need for new school construction. The same can hold true for potential school closures or program cuts resulting from a declining population.

Housing

9. Describe the type and number of anticipated dwelling units indirectly resulting from the Project.

10. Describe the average square footage for anticipated dwelling units, broken down by type of unit, indirectly resulting from the Project.

11. Estimate the amount of development fees to be generated by development in accordance with implementation of the Project.

The foregoing categories of information are critical for determining the extent of both physical and fiscal impacts on the District caused by increased population growth. California school districts are dependent on developer fees authorized by the provisions of Government Code Sections 65995, *et seq.*, and Education Code sections 17620, *et seq.*, for financing new school facilities and maintenance of existing facilities. The developer fees mandated by Section 65995 provide the District the bulk of its local share of financing for facilities needs related to development.

---

[6] Initial Study, Commonwealth: Building 3 Project (May 2019), p. 3-101.

The adequacy of the statutory development fees to offset the impact of new development on local school districts can be determined only if the types of housing and average square footage can be taken into consideration. For instance, larger homes often generate approximately the same number of students as smaller homes. At the same time, however, a larger home will generate a greater statutory development fee, better providing for facilities to house the student being generated. It is for these reasons that the Government Code now requires a school district to seek – and presumably to receive – such square footage information from local planning departments. (Gov. Code § 65995.5(c)(3).)

While the foregoing funding considerations are fiscal issues, they translate directly into physical, environmental impacts, in that inadequate funding for new school construction can result in overcrowding of existing facilities. Furthermore, fiscal and social considerations are relevant to an EIR, particularly when they either contribute to or result from physical impacts. (Pub. Resources Code § 21001(g); Cal.Code Regs., tit.14, §§ 15021(b), 15131(a)-(c), 15142 & 15382.)

Phasing of development is also a crucial consideration in determining the extent of impact on schools. The timing of the development will determine when new students are expected to be generated, and therefore is an important consideration particularly when considering the cumulative impact of a project in conjunction with other approved or pending development.

Conclusion

As discussed in the District's letter sent to the City regarding the Project on August 30, 2018, the District is not anti-development. However, the needs of the District must be appropriately considered in the environmental review process for all proposed new development that will impact the District, such as the Project. The District is hopeful that its continued collaboration with Sobrato and the City will yield solutions that alleviate the impacts caused by Sobrato's Project, and is prepared to provide any information necessary to assist the City in preparation of the EIR and in addressing each of the comment and scope/content issues set forth above.

We request that all notices and copies of documentation with regard to this Project be mailed both to the District directly, and also to our legal counsel's attention as follows:

Menlo Park, CA 94025

Subject: Commonwealth: Building 3 EIR

Dear Mr. Smith:

Per the request in your *Notice of Preparation of the Initial Study and Environmental Impact Report for the Commonwealth: Building 3 Project*, Exponent respectfully submits the following comments for consideration by the City of Menlo Park (City).

Exponent believes that the proposed development will negatively impact neighboring businesses already affected by the substantial development throughout the Bohannon Business Park. We strongly encourage the City to consider public safety, transportation, and traffic concerns as top priorities during the City's review of this proposed development project.

Doubling office space at 162-164 Jefferson Drive and adding a public park, to the Bohannon Business Park that is already stressed by transportation and traffic challenges, will create additional serious traffic and public safety issues. Currently there are several "crossing guards" needed to help control traffic and help with public safety, including bicycles and pedestrians. These serious challenges are magnified given that there is no public transit supporting the area, the area does not adequately accommodate student parking for TIDE Academy, and, the current traffic system is not designed to accommodate the waves of traffic resulting from TIDE Academy's schedule and volume. Thus, it is very important that the traffic impact analysis consider at least the following major challenges associated with the cumulative traffic impact in the immediate area from the:

- occupants planned for the 250,000 square feet of office space at Building 3

- proposed community college's use of the TIDE Academy's site (evenings, weekends)
- completion of all phases of the voter approved Menlo Park Gateway project
- additional load from the proposed eight-story apartment building with 105 dwelling units at 111 Independence Drive.

Exponent believes that public parks are beneficial to the residential and business community when the City provides oversight to ensure public safety at the park and at neighboring businesses. Thus, if the City decides to proceed with the development of the site Exponent requests that the City implement operating procedures and oversight that will insure that businesses in the area are not adversely impacted and no increased liability is brought upon those businesses.

In closing, for almost 30 years Exponent has been safely operating in Menlo Park at 149 Commonwealth Drive and 160 Jefferson Drive. We have made substantial investments to accommodate our engineering and scientific testing at these locations. Any changes forced upon our operations due to this proposed development being located next door would have a detrimental impact on our business.

If you have any questions, feel free to contact me via telephone at (650) 688-7154 or via email at schlenker@exponent.com.

Regards,

Richard L. Schlenker

Trees were removed from the west side of Hwy 101 by PG&E due to an underground gas transmission line, so any trees planted near this section of 101 (between Willow and Marsh) needs to be on the east side.

Best,

Julie

Tom Smith, Senior Planner
City of Menlo Park
Community Development Department
701 Laurel Street
Menlo Park, CA 94025

Dear Tom,
Re: Initial Study EIR for 162-164 Jefferson Drive

Unfortunately, I just learned about this project and so I only have the time for very general input that mostly pertains to process improvement suggestions.

I've conducted my own analysis of the City of Menlo Park's General Plan compared to the general criteria included in State law, along with an evaluation of the degree to which the MP General Plan complies with the State's Guidelines for General Plans. **My conclusion is that the ConnectMenlo exercise represented an illegal substitution for State General Plan requirements.** Unfortunately, the Statue of Limitations is short (about 30 days) and it's too late to legally challenge the ConnectMenlo zoning decisions. However, I will point out that Council and the public were told that the ConnectMenlo exercise "will comply with State Law." I don't believe that it did.

By the City's own admission, the goal of ConnectMenlo's was to maximize revenue from a small area, roughly 5% of the City's overall size. This was despite the serious environmental impacts that would further erode the already declining quality of life in the area due to traffic congestion, housing displacement, lowered air quality, etc. Significant environmental impacts were declared necessary and unavoidable.

I do not consider the public engagement process a robust and inclusive one either. First, it was designed to get the zoning changes completed as quickly as possible, preferably in two years. David Bohannon, a major property owner in the area, had a seat on the ConnectMenlo Advisory Committee. The residents participating mostly lived in District 1, a lower-income community that started as a red-lined one, because residents living outside the area were told that the ConnectMenlo zoning ordinances would not apply elsewhere. Thus, the exercise did not receive adequate and inclusive examination by the general public. Most of us also had no idea that a low-income residential community -- that started as a redlined community -- was located near all the development.

Fortunately, Senate Bill 1000 Environmental Justice took effect in 2018. This law is designed to protect communities, such as the Belle Haven, from disproportionately bearing the brunt of serious environmental injustice.

For many reasons, the time is right for the City to start thinking about ways to lessen the negative impact of Connect Menlo. The recent moratorium proposal and discussion have raised grave concerns about ConnectMenlo's flaws. In short, it has benefited developers and supplied revenue to the City's operating budget (of which 65% goes to support the Staff organization). However, residents have mostly not seen value.

Other comments:

Need for Process Improvements

- The Public Noticing Policy needs updating. First, developments in District 1 need the entire notices in Spanish, not just one sentence. The notices should also go into the Almanac, given the limited availability of the Daily News in District one. There are other problems. A push notice should also be sent out to everyone who signed up to receive updates in Belle Haven.
- At the Notify Me page, can you add a way for the public to sign up to receive all EIR-related notices? I would like to receive notices for all EIRs, no matter their stage.
- The public needs more transparency into the overall EIR process, and to know at what phase each particular EIR document is within that process. I suggest a chart at the City's website, using clear and consistent terms. Then, I would more clearly label each EIR document as to what phase it is in.
- For this document, I am not sure exactly where it falls within the overall EIR. Are we at the beginning stage (i.e. the Notice of Preparation Stage) or what?

Broken Bonus-Level Development/Community Amenity Process

- This project wants to develop at the bonus level "although the proposed community amenity has not yet been identified." This is a major red flag. Projects should not move forward without a predetermined community amenity. The Fiscal Impact Analysis should be conducted at the beginning stage of the EIR process. Waiting until later gives a project too much momentum. As you likely know, the residents in District 1 are mostly still waiting for amenities they thought they would get years ago. There is too much "wiggle-room" in this process. Developers need to be held accountable and these documents need to more explicitly protect the residents' interests.
- The Zoning ordinances include a list of Community Amenities for the Office (O), Life Sciences (OLS) and Residential Mixed Use (R-MU) zoning Districts. These projects should be given a monetary value and then each development project should pick one for its proposed amenity. Once an amenity was selected, it should no longer be available.

- The Bonus-Level/Community Amenity process needs fixing. Other problems include that developers are proposing their own amenities and/or making cash payments. Instead of this broken, and often opaque, process we need transparency and accountability. .

162-164 Jefferson Drive

- The project proposes to tear down buildings put up in 2015. Those torn-down buildings will wind up in a land fill. Can the developer instead try to find a way to expand on the existing building?
- Mitigation Measures. We need more transparency into how these are tracked and reported for each major development project.
- Improved public engagement process is needed. This is a more explicit requirement in the State's General Plan Guidelines and it's a major element in the SB1000 Implementation Guidelines.

Cordially,

Lynne Bramlett

Commonwealth Building 3 – Transportation Impact Analysis

INTRODUCTION

This Transportation Impact Analysis (TIA) presents the analysis methodology and findings of the existing and future transportation and circulation for the Commonwealth Building 3 Project (Project) area. The Project site is located within the Commonwealth Corporate Center in the area east of US101 and between Commonwealth Drive and Jefferson Drive in Menlo Park. The Project would be located north of the existing Buildings 1 and 2 in the northern portion of the Commonwealth site and the proposed garage would be to the east of Buildings 2 and 3. The Project would be accessible from two driveways including the access point at Commonwealth Drive in the southwest corner of the Commonwealth Site and the secondary access point at Jefferson Drive.

For purposes of disclosing potential transportation impacts, projects in the City of Menlo Park use the City's current TIA Guidelines to ensure compliance with both State and local requirements.[1] Up until July 1, 2020, the City's TIA Guidelines used roadway congestion or level of service (LOS) as the primary study metric for planning and environmental review purposes. However, Senate Bill (SB) 743 required the Governor's Office of Planning and Research (OPR) to establish a new metric for identifying and mitigating transportation impacts under the California Environmental Quality Act (CEQA) in an effort to meet the State's goals to reduce GHG emissions, encourage infill development, and improve public health through more active transportation. CEQA Section 21099(b)(2) states that upon certification of the revised guidelines for determining transportation impacts pursuant to CEQA section 21099(b)(1), automobile delay, as described solely by LOS or similar measures of vehicular capacity or traffic congestion, shall not be considered a significant impact on the environment under CEQA. OPR identified vehicle miles traveled (VMT) as the required CEQA transportation metric for determining potentially significant environmental impacts.[2] In December 2018, the California Natural Resources Agency certified and adopted the CEQA Guidelines update package, including the section implementing SB 743 (CEQA Guidelines Section 15064.3). OPR developed a *Technical Advisory on Evaluating Transportation Impacts in CEQA,* which contains OPR's technical recommendations regarding assessment of VMT, thresholds of significance, and mitigation measures.[3] As of July 1, 2020, VMT (not LOS) is the only legally acceptable threshold for transportation-related environmental impacts pursuant to CEQA.

Adoption of a local VMT threshold requires City Council approval and on June 23, 2020, the City Council of Menlo Park approved local VMT thresholds for incorporation into the updated TIA Guidelines and subsequently updated those VMT thresholds on January 11, 2022.[4] The VMT thresholds adopted in June 2020 that were in place at the time of the Notice of Preparation for the EIR were used in this analysis. The

3 California Office of Planning and Research. 2018. *Technical Advisory on Evaluating Transportation Impacts in CEQA.* Website: opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf (accessed February 7, 2019). December 18.

4 Menlo Park, City of. 2022. *City Council Meeting Agenda*. https://beta.menlopark.org/files/sharedassets/public/agendas-and-minutes/city-council/2022-meetings/agendas/20220111-city-council-agenda-packet.pdf#page=229 (accessed May 13, 2022). January 11.

City Council retained the requirement that the TIA also analyze LOS for local planning purposes. Therefore, the TIA includes both an assessment of VMT impacts using local VMT thresholds included in the updated TIA Guidelines for purposes of determining potentially significant environmental impacts pursuant to CEQA and a summary of the LOS analysis for assessment of local congestion for planning purposes.

PROJECT DESCRIPTION

The proposed Project would develop a 249,500 square foot 4-story office building and a parking structure with four above-grade levels as well as one partial below-grade level. Development of the Project would remove the majority of the existing 866 surface parking spaces to construct Building 3, the parking structure, and Jefferson Park. After implementation of the Project, there would be 1,531 vehicle parking spaces onsite (191 surface parking spaces and 1,340 spaces in the proposed parking structure). This parking total does not include the additional 23 parking stalls for Jefferson Park use. A total of 106 bicycle parking spaces will be available including 46 existing bike parking spaces (24 Class I spaces in Building 1 and 22 Class II bicycle racks), an additional 45 secured bike spaces will be included in the garage, and 15 onsite bike lockers.

Access to the office space would be via two access points including a driveway at Commonwealth Drive in the southwest corner of the Project site and an entry point at Jefferson Drive in the northern part of the Project site. Access to the parking structure would be east of the proposed Building 3. Pedestrian access to the proposed development would be provided via a pedestrian walkway at Jefferson Drive. A connection to a bicycle and pedestrian path along the Dumbarton Rail Corridor may be provided in the future. Emergency access is provided via a service fire lane on both Commonwealth Drive and Jefferson Drive.

Transportation Demand Management Plan

The proposed Project would implement a TDM plan in an effort to reduce Project-generated vehicle trips and encourage travel by other modes.[5] The TDM Plan includes the following measures:

- Commute trip reduction program including a transportation coordinator, online kiosk information center, new tenant employee information packet and kick-off event, and trip planning resources, Try Transit Program, 511 Carpool Calculator, and certified participation in Commute.org or Transportation Management Association (TMA).
- Subsidized transit passes, such as the GoPass, and pre-tax transportation benefits such as the Clipper Direct program, will be provided to employees as well and an annual shuttle fee will be paid to support increasing shuttle service;
- Bicycle facilities including secure and convenient bicycle storage and parking, bike rack parking spaces in well-lit areas, and showers and changing rooms, and bicycle resources, such as bicycle maps, free bike buddy matching, and links to bicycle organizations.
- Pedestrian facilities throughout the Commonwealth development, including convenient direct pedestrian access to the surrounding street network as well as clearly defined, well-lit, and continuous walkways through the site;

[5] ICF *2019. Commonwealth: Building 3 Project Initial Study.*

- Preferential carpool parking, guaranteed ride home program, carpooling and vanpooling programs through ride-matching services, carpool incentive programs, preferential carpool parking, vanpool formation incentives, vanpool seat subsidies, and vanpool participant rebates.
- Provision of on-site amenities, telecommuting infrastructure, and alternative work schedule infrastructure.

Project Trip Generation

The vehicle trip generation estimates for the proposed office space were calculated using the trip generation rates from the most recent ITE Trip Generation Manual (10th Edition, 2018).[6] The land use category for General Office Building (ITE Code 710) was applied for this analysis.

Consistent with the Menlo Park TIA Guidelines,[7] vehicle trip reductions were taken to account for the proposed TDM Plan. A 20 percent reduction was applied to account for the proposed TDM Plan which would comply with City Ordinance 1026 and achieve the required minimum of 20 percent reduction of daily and peak hour vehicle trips.[8]

As shown in Table 1, application of the vehicle trip generation rates, assumptions, and trip reductions would result in a net Project-generated increase in the number of daily and a.m. and p.m. peak hour vehicle trips. The Project would generate 4,298 net new daily vehicle trips, 333 net new a.m. peak hour vehicle trips (276 inbound trips and 57 outbound trips) and 450 net new p.m. peak hour vehicle trips (90 inbound trips and 360 outbound trips). The vehicle trip generation estimates used in this analysis have been approved by the City of Menlo Park.

Table 1: Vehicle Trip Generation Estimates

Land Use (ITE Code)	Size	Daily Trips	AM Peak Hour Trips			PM Peak Hour Trips		
			In	Out	Total	In	Out	Total
General Office Building (710)	1,996 employees	5,373	345	71	416	112	450	562
TDM Plan Reduction	-20%	-1,075	-69	-14	-83	-22	-90	-112
Net New Vehicle Trips		**4,298**	**276**	**57**	**333**	**90**	**360**	**450**

Source: ITE Trip Generation Manual, 10th Edition (2018)
Notes: The trip generation estimates apply the fitted curve equation for the peak hour of adjacent street traffic and assumes a load factor of 1 employee per 125 square feet with 249,500 square feet of office space.

Project Trip Distribution

Project-generated vehicle traffic was distributed to the surrounding roadway network based on travel surveys and existing traffic patterns. Project-added traffic volumes at the study intersections are included in Attachment 1.

EXISTING TRANSPORTATION AND CIRCULATION SYSTEM

This section describes the existing transportation conditions, including the roadway network, bicycle facilities, pedestrian facilities, and transit service, within the study area.

Roadway Network

Primary arterials, minor arterials, collectors, and local streets run through the Project area. In this transportation analysis, US 101 and all streets parallel are defined as running north to south. Conversely, Marsh Road and all streets parallel are defined as running east to west. Descriptions of roadways in the Project area are provided below.

Bayshore Freeway (US 101) is an eight-lane freeway running west of the Project site with a posted 65 mile per hour (mph) speed limit in the vicinity of the Project site. US 101 runs north-south through California, Oregon, and Washington and is a major regional freeway on the San Francisco Bay Peninsula connecting Menlo Park with cities in the San Francisco Peninsula from San José to San Francisco. There is one high occupancy vehicle (HOV) lane in both directions within the City of Menlo Park. Express lanes were opened from the San Mateo County/Santa Clara County line to Redwood City in February 2022. Express lanes operate from 5 a.m. to 8 p.m. Monday through Friday and remain open to all vehicles during other times. Two interchanges serve Menlo Park at Willow Road and Marsh Road.

Bayfront Expressway (SR 84) is a six-lane east-west Expressway that connects the San Francisco Peninsula to the east via the Dumbarton Bridge. Within Menlo Park, it connects Marsh Road with the Dumbarton Bridge. On-street parking is not permitted on Bayfront Expressway. From Marsh Road to Chilco Street, the speed limit is 45 mph. South of Chilco Street, the speed limit is 50 mph.

University Avenue (SR 109) is an east-west four-lane arterial from Bayfront Expressway to the railroad tracks and a four-lane local road west of the railroad tracks. Between US 101 and Bayfront Expressway, University Avenue is owned by the California Department of Transportation (Caltrans) and has a speed limit of 35 mph west of Purdue Avenue. East of O'Brien Drive, University Avenue (SR 109) has a speed limit of 25 mph. University Avenue serves residential and commercial areas east of US 101 and mainly residential areas west of US 101. On-street parking is not permitted on University Avenue. Bicycle lanes are provided on University Avenue between Bayfront Expressway and Middlefield Road, except for a gap in the bicycle lanes where University Avenue approaches and crosses US 101.

Willow Road (SR 114) is an east-west four-lane boulevard that connects Bayfront Expressway with US 101 and Middlefield Road. On-street parking is not permitted, and the speed limit is 40 mph with a portion of Willow Road between the US 101 interchange and Newbridge Street limited to 35 mph. Between Middlefield Road and US 101, Willow Road is a two-lane mixed-use avenue with bicycle lanes, on-street parking permitted in some sections, and the posted speed limit is 25 mph. West of US 101, Willow Road generally serves residential areas.

Bay Road is a two-lane roadway that runs north-south, west of US 101 between Marsh Road and Willow Road. Bay Road is classified as a neighborhood collector and has a posted speed limit of 30 mph. Bay Road predominantly provides access to residential land uses and notably connects to Flood Park. There are bicycle lanes on both sides of the street and on-street parking is not permitted.

Chilco Street is a two-lane east-west mixed-use collector street between Bayfront Expressway and Hamilton Avenue and a neighborhood collector between Hamilton Avenue and Newbridge Street. On-street parking is permitted in some sections of Chilco Street. Posted speed limits vary depending on adjacent land uses, including 25 mph in the Belle Haven neighborhood and 30 mph when the road is parallel to the railroad tracks between Constitution Drive and Terminal Avenue.

Chrysler Drive is an east-west two-lane mixed-use collector street. On-street parking is generally permitted south of Constitution Drive. The speed limit on Chrysler Drive is 25 mph with one lane of travel in each direction west of Constitution Drive and two eastbound lanes and one westbound lane between Constitution Drive and Bayfront Expressway.

Commonwealth Drive is a north-south roadway classified as a local access roadway and has a posted speed limit of 25 mph. This roadway has one lane of travel in each direction and provides direct access to the Project side. On-street parking is permitted, no bicycle facilities are provided, and a sidewalk is provided on the east side of the roadway.

Constitution Drive is a two-lane north-south mixed-use collector street between Independence Drive and Chilco Street. Constitution Drive has a posted speed limit of 30 mph, and on-street parking is permitted on some portions of Constitution Drive.

Florence Street-Bohannon Drive extends north and connects Bay Road with Marsh Road, while Bohannon Drive extends southeast and connects to Scott Drive. Both run approximately parallel to the railroad tracks. Florence Street is a two-lane local access roadway with a third reversible turn lane and a posted speed limit of 25 mph. This roadway is located outside of Menlo Park in the City of Redwood City's jurisdiction. On-street parking spaces are present on the west side of Florence Street and is also permitted between 17th Street and Marsh Road. Florence Street provides access to commercial destinations on the west side of the roadway and residences on the east side. Bohannon Drive is a two-lane local access street in Menlo Park that primarily serves industrial and office land uses. On-street parking is primarily permitted on the south side of the roadway.

Hamilton Avenue is a two-lane neighborhood collector that runs in a north-south direction between Willow Road and Chilco Street. On-street parking is permitted on both sides of the roadway, and the posted speed limit is 25 mph. Adjacent land uses are a mix of residential, office, civic, religious, hotel, green space, and commercial. Between Chilco Street and Market Place, Hamilton Avenue is a bicycle boulevard with a vehicle travel lane in each direction, primarily providing access to single-family residences. Class III bicycle facilities are proposed throughout Hamilton Avenue.

Independence Drive is a two-lane north-south roadway classified as a mixed-use collector between Constitution Drive and Chrysler Drive. An eastward extension of Independence Drive connects to Marsh Road. The speed limit is 25 mph, and on-street parking is permitted in some areas.

Jefferson Drive is a two-lane mixed-use collector street connecting Chrysler Drive and Constitution Drive and provides direct access to the Project site. The speed limit is 25 mph and no on-street parking is permitted on either side of the roadway.

Marsh Road is a roadway with a posted speed limit of 35 mph in Menlo Park. Between US 101 and Bayfront Expressway, Marsh Road is a thoroughfare with three lanes in each direction. From US 101 to Bay Road, Marsh Road is classified as a mixed-use collector. No on-street parking is permitted between US 101 and Bayfront Expressway.

Middlefield Road is a north-south mixed-use avenue with a posted speed limit of 35 mph. Middlefield Road has one lane in each direction north of Ringwood Avenue and two lanes in each direction south of Ringwood Avenue. Near Marsh Road, Middlefield Road has one lane in each direction. On-street parking is not permitted on Middlefield Road. Middlefield Road provides access mainly to residential, office, and school uses.

Scott Drive is a two-lane local access roadway that connects to Marsh Road and Bohannon Drive. Scott Drive runs north-south in parallel and adjacent to the US 101 southbound on-ramp at Marsh Road. Scott Drive has on-street parking permitted on the west side of the roadway. The speed limit is not posted but assumed to be 25 mph. Scott Drive primarily provides access to office parks and buildings.

Bicycle Facilities

The City's existing bicycle facilities are classified according to the State's system of classification as identified in the Menlo Park General Plan Circulation Element:

- Class I (bike path) – A Class I bicycle facility is completely separated from vehicles on a paved right-of-way and is commonly known as a bike path.
    - Multi-use Pathway – A Multi-use Pathway is a Class I bicycle facility that allows both bicyclists and pedestrians to use the facility.
- Class II (bike lane) – A Class II bicycle facility is a striped and stenciled lane on an existing right-of-way shared with vehicles and is commonly known as a bike lane.
- Class III (bike route) – A Class III bicycle facility is identified through signage and/or pavement markings called "sharrows" indicating that bicyclists and drivers share the same travel lane and is commonly referred to as a bike route.
- Class IV (protected bike lane) – A Class IV bicycle facility is a striped lane with a vertical and physical separation, such as parking or bollards, from the vehicle travel lane and is commonly referred to as a protected bike lane.

Figure 1 shows the existing bicycle facilities in the area. As shown in Figure 1, the San Francisco Bay Trail, a Class I facility (multi-use pathway), runs along Bayfront Expressway between Haven Avenue and the Dumbarton Bridge. The path provides connections to the East Bay, East Palo Alto, and Redwood City.

Class II facilities (bike lanes) are provided on Chrysler Drive between Bayfront Expressway and Constitution Drive; on Constitution Drive between Chilco Street and Chrysler Drive; on Chilco Street from Bayfront Expressway to Constitution Drive; on Florence Street from Bay Road to Marsh Road; on Willow Road between Bayfront Expressway and Alma Street; on Bay Road between Marsh Road and Van Buren Avenue; on University Avenue between Donahoe Street and Bayfront Expressway and between Fulton Street and Woodland Avenue; on Middlefield Road between Marsh Road and Willow Road; and on Ringwood Avenue between Middlefield Road and Bay Road connecting to the bicycle and pedestrian bridge across US 101.

Class III facilities (bike routes) are provided on Independence Drive between Chrysler Drive and Constitution Drive; on Chrysler Drive between Independence Drive and Constitution Drive; on Hamilton Avenue between Market Place and Chilco Street; and on Chilco Street between the railroad tracks and Newbridge Street. Class IV facilities (protected bike lanes) are provided on the east and west sides of Chilco Street between Bayfront Expressway and the railroad tracks that run parallel to Chilco Street.

Pedestrian Facilities

Pedestrian facilities include sidewalks, crosswalks, curb ramps, curb extensions, and various streetscape amenities such as lighting and benches. Figure 2 presents the sidewalk facilities in the Project vicinity. In general, the network of sidewalks, crosswalks, and curb ramps are limited and discontinuous in the vicinity of the Project site. There are currently sidewalks on the Project site's Jefferson Drive frontage and along the east side of Commonwealth Drive. Sidewalks are provided on both sides of Chrysler Drive from Jefferson Drive to Commonwealth Drive and Constitution Drive to Bayfront Expressway and on the south side of Chrysler Drive from Jefferson Drive to Constitution Drive. Sidewalks are also present on the west side of Independence Drive between Constitution Drive and Chrysler Drive.

In addition to the sidewalk gaps and lack of marked crosswalks and curb ramps on the Project block, the surrounding high-volume and high-speed roadways (US 101 and Bayfront Expressway) limit pedestrian access to the Project site. Marked pedestrian crossings along Bayfront Expressway are limited. There are three pedestrian crossings located at the Marsh Road and Haven Road intersection, Chrysler Drive, and Chilco Street, connecting the Project area to the Class 1 path parallel to Bayfront Expressway. Figure 2 shows the existing pedestrian facilities in the area.

Transit Service and Facilities

Figure 3 shows the existing transit and shuttle services in the area.[9] The Menlo Park Shuttle, a free shuttle service provided by the City of Menlo Park, connects to the Menlo Park Caltrain Station.

San Mateo County Transit District (SamTrans) provides local and regional bus service, Caltrain provides commuter rail service, and Alameda-Contra Costa County Transit District (AC Transit) provides bus service between Menlo Park from the Union City Bay Area Rapid Transit (BART) Station.

The City operates three free shuttles on weekdays in the Project area to connect the Menlo Park Station with employment centers on the eastern side of the City.[10] Line M3 travels along Marsh Road to the Project site, and Lines M2 and M4 run on Willow Road. Line M2 turns from Willow Road onto Ivy Drive and terminates near Chilco Street, and Line M4 runs in a loop onto O'Brien Drive before terminating at the Menlo Park Station. Line M2 runs approximately once per hour from 6:00 a.m. to 4:00 p.m. Line M3 and Line M4's schedules are synchronized with the Caltrain schedule and run from approximately 7:00 a.m. to 10:30 a.m. and 3:00 p.m. to 6:30 p.m.

Caltrain Local and Express trains stop at the Menlo Park Station located east of El Camino Real (SR 82) at Santa Cruz Avenue.[11] From Menlo Park Station, the Project site can be reached by transferring to SamTrans Routes 296 and 85 or the City of Menlo Park Shuttles. Four northbound trains and six southbound trains stop at Menlo Park between 7:00 a.m. and 9:00 a.m. Six northbound trains and three southbound trains stop at Menlo Park between 4:00 p.m. and 6:00 p.m. As a commuter train service, headways vary from 15 minutes to 40 minutes in the peak periods. On Saturdays, a total of 24 trains stop at the Menlo Park Station. On Sundays, 20 trains stop at Menlo Park Station.

---

[9] Routes, timetables, and maps used to inform these sections do not reflect service changes due to COVID-19. These services are anticipated to return to pre-pandemic conditions as stay-at-home orders and social distancing requirements are lifted.

SamTrans operates the following five bus routes within the study area:[12]

- **Route 270** stops at the Redwood City Transit Center and Kaiser Hospital and travels along Bay Road onto Marsh Road before continuing along Haven Road/Bayshore Road within the Project area. Transfers can be made to SamTrans Routes ECR, 274, 275, 270, 276, 278, 296, and 398 and to Caltrain at the Redwood City Station. Route 270 operates with one-hour headways on weekdays between about 6:00 a.m. and 7:00 p.m.

- **Route 281** connects Menlo Park, East Palo Alto, and Palo Alto and stops at Kelly Park, Onetta Harris Community Center, and Stanford Shopping Center. Transfers can be made to SamTrans Routes ECR, 280, 296, the Dumbarton Express, Caltrain at the Palo Alto Station, Stanford University shuttle Marguerite, and Santa Clara VTA. On weekdays, it operates with 20-minute headways in the a.m. and p.m. peak hours and runs every 30 minutes to one hour outside of peak periods. On Saturdays, headways are 30 minutes, and on Sundays, headways are 40 minutes.

- **Route 296** serves Redwood City, Atherton, Menlo Park, and East Palo Alto and stops at the Caltrain Stations in Redwood City, Menlo Park, and Palo Alto. In the Project area, Route 296 travels along Middlefield Road, onto Willow Road, and continues on Bay Road. Transfers can be made to SamTrans Routes ECR, 270, 274, 275, 276, 278, 280, 281, 286, and 398 and to Caltrain. On weekdays, the route operates with 20-minute headways, and on weekends the route operates approximately every 30 minutes.

- **Route 397** provides all-nighter service from Downtown San Francisco to Palo Alto every day. In Menlo Park, the route travels along Middlefield Road, and transfers can be made to Caltrain, Amtrak, Santa Clara VTA, BART, AC Transit, Muni, and Golden Gate Transit. Three northbound buses depart Palo Alto once per hour between 12:45 a.m. and 2:45 a.m., and four southbound buses depart San Francisco once per hour between 1:00 a.m. and 4:00 a.m.

- **Route ECR** runs along the El Camino Real from Daly City to Palo Alto. During the a.m. and p.m. peak hours and in the midday, the route operates with 15-minute headways. In nighttime hours, the route operates with 30-minute headways. On weekends, Route ECR runs every 20 to 30 minutes. Connections are provided to BART and Caltrain, including at the Menlo Park Station.

Seven SamTrans routes provide limited service to schools on weekdays in the study area. Each route runs one bus in the a.m. drop-off period and the p.m. pick-up period, with the exception of Route 79 that runs two buses in the a.m. period and two buses in the p.m. period and Route 80 that runs only one bus in the p.m. period. The a.m. drop-off period is approximately 7:00 a.m. to 9:00 a.m., and the p.m. pick-up period is approximately 3:00 p.m. to 4:00 p.m. Buses reflect regularly scheduled early release days (on Wednesday, Thursday, or both days) from 1:00 p.m. to 3:00 p.m. These routes are described below:

- **Route 79** serves the Kennedy School in Redwood City and terminates at the edge of Menlo Park's city boundaries west of the Project site. Transfers can be made to SamTrans Routes ECR, 275, and 276, and buses run to reflect early release day on Thursday.

[12] San Mateo County Transit District (SamTrans). 2020. Schedules & Maps. Website: www.samtrans.com/schedulesandmaps.html (accessed September 28, 2020).

- **Route 80** serves Oak Knoll School and Hillview Middle School in Menlo Park. Transfers can be made to SamTrans Routes 82, 83, 84, and 286, and buses run to reflect early release day on Thursday.
- **Route 82** and **Route 83** both serve Hillview Middle School. Transfers can be made to Caltrain at the Menlo Park Station and to SamTrans Routes 80, 82, 83, 84, 88, 286, and 296, and buses run to reflect early release day on Wednesday and Thursday.
- **Route 84** serves Hillview Middle School. Transfers can be made to Caltrain at the Atherton Station (on weekends only) and Menlo Park Station and to SamTrans Route 296, and buses run to reflect early release day on Wednesday and Thursday.
- **Route 88** serves Encinal Elementary School. Transfers can be made to SamTrans Routes 82, 83, 84, 286, and 296, and buses run to reflect early release day on Thursday.
- **Route 286** operates only during a.m. and p.m. peak hours and provides service to Menlo-Atherton High School, Corte Madera School, and the Menlo Park Caltrain Station. Transfers can be made to SamTrans Routes 80, 82, 83, 84, 85, 87, 296, and ECR and to Caltrain at the Menlo Park Station, and buses run to reflect early release day on Wednesday and Thursday.

AC Transit operates the following two bus transit routes in the study area:[13]

- **Line "U"** serves Stanford University, Palo Alto, Newark, the Centerville District, and Fremont. Within the Project area, the route runs on Willow Road and US 101. The route connects with several other routes in Fremont, Newark, and Palo Alto. The route stops at the Stanford Oval, Ardenwood Park & Ride facility, Fremont/Amtrak Centerville train station, and Fremont BART station. The U Line operates about every 30 minutes between 6:00 a.m. and 9:00 a.m. and 3:00 p.m. and 6:00 p.m.
- **Dumbarton Express (DB, DB1)**, which is administered by AC Transit, connects Palo Alto, East Palo Alto, Menlo Park, and Union City in the East Bay. In the Project area, the routes travel along University Avenue, US 101, and Willow Road onto SR 84. The stop closest to the Project site is at Willow Road and Hamilton Avenue. The Dumbarton Express operates between approximately 5:00 a.m. and 8:00 p.m. in the westbound direction and between approximately 6:00 a.m. and 9:00 p.m. in the eastbound direction. From 5:00 a.m. to 9:00 a.m. and 4:00 p.m. to 8:00 p.m., the bus arrives about every 20 minutes.

VEHICLE MILES TRAVELED (VMT) ANALYSIS

For purposes of disclosing potential transportation impacts, projects in the City of Menlo Park use the City's current TIA Guidelines to ensure compliance with both State and local requirements.[14] Up until July 1, 2020, the City's TIA Guidelines used roadway congestion or level of service (LOS) as the primary study metric. However, Senate Bill (SB) 743 required California Office of Planning and Research (OPR) to establish a new metric for identifying and mitigating transportation impacts within the California Environmental Quality Act (CEQA) in an effort to meet the State's goals to reduce greenhouse gas (GHG) emissions, encourage infill development, and improve public health through more active transportation. OPR identified vehicle miles traveled (VMT) as the required transportation metric and beginning July 1, 2020, VMT (not LOS) is the legally required threshold for transportation impacts pursuant to CEQA. Adoption of a local VMT threshold requires City Council approval and on June 23, 2020, the Menlo Park City Council approved the VMT thresholds for incorporation into the updated TIA Guidelines and subsequently updated those VMT thresholds on January 11, 2022.[15] The VMT thresholds adopted in June 2020 that were in place at the time of the Notice of Preparation for the EIR were used in this analysis for purposes of determining potentially significant environmental impacts. Consistent with the OPR *Technical Advisory on Evaluating Transportation Impacts in CEQA,*[16] *a project's cumulative impacts are based on an assessment of whether the "incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects."* A project that falls below an efficiency-based threshold that is aligned with long-term environmental goals and relevant plans would have no cumulative impact distinct from the project impact.

Vehicle miles traveled per person (or per capita) is a measurement of the amount and distance that a resident, employee, or visitor drives, accounting for the number of passengers within a vehicle. Many interdependent factors affect the amount and distance a person might drive. In particular, the built environment affects how many places a person can access within a given distance, time, and cost, using different ways of travels (e.g., private vehicle, public transit, bicycling, walking, etc.). Typically, low-density development located at great distances from other land uses and in areas with few options for ways of travel provides less access than a location with high density, mix of land uses, and numerous ways of travel. Therefore, low-density development without a diverse mix of land uses and a lack of transportation options typically generates more VMT compared to a similarly sized development located in an area with a greater mix of uses and transportation options. Additionally, land uses that reflect a more balanced jobs-housing ratio result in lower per capita VMT. The adoption of VMT as the new CEQA transportation metric is intended to encourage complimentary infill developments in areas traditionally dominated by one single land use (e.g., a residential project in an area dominated by office buildings), which could potentially reduce VMT, and infill development in transit-rich areas.

The proposed Project is located within the Bayfront Area of Menlo Park. The majority of the Bayfront Area is made up of the City's industrial and business park land uses and includes the City's entire existing M-2 (General Industrial) Zoning district, along with some high-density residential land uses. The Bayfront Area contains major regional transportation links, including US 101, Bayfront Expressway, Willow Road, and University Avenue, all of which are heavily utilized corridors that are challenging to cross and act as barriers for biking and walking. The 2016 General Plan update to the Land Use and Circulation Elements and corresponding rezoning of land in the Bayfront Area (referred to as ConnectMenlo) was designed to change

[15] Menlo Park, City of. 2022. *City Council Meeting Agenda*. https://beta.menlopark.org/files/sharedassets/public/agendas-and-minutes/city-council/2022-meetings/agendas/20220111-city-council-agenda-packet.pdf#page=229 (accessed May 13, 2022). January 11.

[16] California Office of Planning and Research. 2018, op. cit.

the land use and circulation patterns in the Bayfront Area to create a built environment that supports live/work/play with increased density and diversity of uses and a street network that supports safe and sustainable travel. Vehicle miles traveled estimates are sensitive to changes in land use and in general, land uses that reflect a more balanced jobs-housing ratio result in lower per capita VMT. Therefore, implementation of the land use and transportation changes described in ConnectMenlo would reduce the vehicle miles traveled within the Bayfront Area compared to existing conditions. The expected reduction in VMT per capita identified in the ConnectMenlo EIR[17] is due to the planned addition of housing in a jobs-rich area, which results in trip-making behavior, travel characteristics, and resulting trip lengths.

The proposed Project is one of the first office projects proposed in the Bayfront Area since the rezoning of the Project site from M-2 (General Industrial) to O-B (Office Bonus) in late 2016. As a result, the Project VMT is being estimated using the City's 2020 travel demand model. A travel demand model is a transportation planning analytical tool that utilizes land use information, travel behavior and other transportation related data to forecast various traffic statistics such as trip generation, trip distribution and trip length. The model is used to estimate average daily VMT within the City's transportation analysis zones (TAZs) and to determine VMT thresholds for residential and commercial land uses that are identified in the City's TIA Guidelines.

The Menlo Park travel demand model encompasses the nine Bay Area counties divided into thousands of TAZs. Each TAZ is comprised of several streets, neighborhoods, or city blocks depending on the geographical features and surrounding land uses. There are approximately 80 TAZs within the boundaries of Menlo Park. As such, when adding or subtracting a project from a TAZ, the internal interactions within the model would impact the entire TAZ as well as surrounding TAZs.

As described above, the new CEQA transportation metric of VMT is intended to encourage complementary infill developments that could potentially reduce VMT to at or below an established significance threshold for commercial and residential uses. City of Menlo Park VMT significance thresholds for individual land uses were established by totaling the VMT by population for that land use in each TAZ for a desired area in the travel demand model. Only TAZs that contain that land use are included in the evaluation. For this project analysis, there are existing office uses within the Project's TAZ and the existing VMT per employee for the TAZ includes a calculation for office uses specifically.

Table 2 shows the existing average daily VMT per employee for employees within the City of Menlo Park and the City's VMT threshold which is 15 percent below this average. Values in Table 2 are used to evaluate Project-specific VMT impacts.

Table 2. Average Regional Daily Vehicle Miles Traveled per Employee

Land Use	Citywide Average	VMT Threshold (15 Percent Below Citywide Average)
Employment (per employee)	14.9	12.6

Vehicle Miles Traveled Analysis

This section discusses the proposed Project's potential impacts related to VMT. As discussed in more detail below, implementation of the Project would not exceed an applicable VMT threshold of significance and this impact would be ***less than significant with mitigation*** **(LTS/M)**.

The following VMT thresholds adopted in June 2020 that were in place at the time of the Notice of Preparation for the EIR were used in this analysis for purposes of determining potentially significant environmental impacts. :

- A residential-type project would exceed the existing regional household VMT per capita minus 15 percent.
- An office-type project would exceed the existing citywide VMT per employee minus 15 percent.
- For mixed-use projects, components are analyzed independently against the appropriate threshold.

Because the proposed Project would be an office development, VMT per employee would be the metric used to evaluate potential impacts related to VMT. VMT per employee is an efficiency metric, not an absolute numerical value (such as total VMT on a road network). Efficiency metrics provide measurements in terms of rates or ratios. As such, VMT per employee applies to the proposed Project without regard to the VMT generated by the previously existing land uses, and VMT metrics cannot be summed across developments or land use types because they employ a denominator (per capita or per employee) and relate to a specific TAZ or other geographic area.

Table 3 shows the citywide average daily VMT per employee, the VMT threshold (15 percent below citywide average), and the existing conditions for TAZ 3069, the TAZ in which the Project site is located.

Table 3. Existing Vehicle Miles Traveled per Employee Threshold

Land Use	Citywide Average	VMT Threshold (15 Percent Below Citywide Average)	Project Transportation Analysis Zone (TAZ 3069)
Employment (per employee)	14.9	12.6	16.7

Source: Menlo Park Travel Demand Model (2020)

As shown in Table 3, the average daily VMT per employee for office land uses within the Project site's TAZ is 16.7, which is above the threshold of significance of 12.6. The VMT reported for the Project site's TAZ does not account for the Project's proposed TDM plan. Without any TDM measures, the Project's office use may cause substantial additional VMT. The TDM plan would need to achieve a minimum 24.6 percent reduction[18] in vehicle miles traveled to reduce the Project' potential impacts to less than significant levels, which is above the 20 percent reduction in vehicle trips required by the Zoning Ordinance. Proposed TDM measures and estimated vehicle trip and vehicle miles traveled reductions are summarized in Table 4.

[18] The percent VMT reduction requirement is calculated as 1 minus the VMT per employee threshold, or existing citywide VMT per employee minus 15 percent, divided by the VMT per employee within the Project TAZ and multiplied by 100. The calculation is: (1 – 12.6 / 16.7) * 100 = 24.6 percent

Table 4. Proposed Project TDM Measures and Estimated VMT Reduction

TDM Measure (CAPCOA ID)[1]	Range of Vehicle Miles Traveled Reduction[2]	Applied VMT Reduction[3]
Implement Commute Trip Reduction Program (T-6)[4]	Up to 26.0%	16.5%
Implement Subsidized or Discounted Transit Program (T-9)[5]	Up to 5.5%	5.5%
Provide Ridesharing Program (T-8)[6]	Up to 8.0%	8.0%
Provide End-of-Trip Bicycle Facilities (T-10)[7]	Up to 4.4%%	4.4%
Pedestrian Network Improvements (T-18)[8]	Up to 6.4%	3.0%
Total VMT Reduction	**--**	**37.4%**

Source: Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (California Air Pollution Control Officers Association, December 2021).

Notes:

1 CAPCOA ID references the strategy as identified in the CAPCOA report.

2 Range of vehicle miles traveled reduction obtained from CAPCOA.

3 Vehicle miles traveled reduction rate determined based on the estimated level of adoption and aggressiveness of implementation of a given strategy and account for the implementation of other TDM program elements so as not to overestimate vehicle miles traveled reduction for the overall program. Consistent with CAPCOA, the adjustment factor from vehicle trips to VMT is 1. This assumes that all vehicle trips will average out to typical trip length. Thus, it can be assumed that a percentage reduction in vehicle trips will equal the same percentage reduction in VMT.

4 Commute Trip Reduction Program. The vehicle miles traveled reduction rate selected is based on the anticipated effectiveness of the commute reduction strategies being promoted and the assumption that 100% of employees are eligible with 63% utilization. Commute trip reduction marketing elements include: on-site amenities, transit information, on-site transportation kiosk, and programs to support carpooling and commute alternatives.

5 Subsidized Transit. The vehicle miles traveled reduction rate selected is based on the assumption that 100% of employees are eligible and the transit subsidy would cover 100% of the cost of a monthly transit pass.

6 Provide Ridesharing Program. The vehicle miles traveled reduction rate selected assumes 100% eligibility and classifies the project site's location as "urban".

7 End-of-Trip Bicycle Facilities. The Project will include long and short-term bicycle parking and a bike repair station along with other supporting facilities and amenities including showers and lockers.

8 Pedestrian Network Improvements. The Project will complete and connect the pedestrian network with new sidewalks and street trees and a pedestrian plaza with internal circulation around the apartment and office buildings and increase the length of pathways on the site.

As shown in Table 4, implementation of the TDM plan would result in an estimated reduction of approximately 37.4 percent of the VMT generated by the proposed office use. The applied VMT reduction rate for the proposed Project is based on the anticipated level of adoption and aggressiveness of implementation of a given strategy. The range of effectiveness for VMT reductions identified for each measure is based on information included in the California Air Pollution Control Officers Association (CAPCOA), Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health Equity (CAPCOA report).[19] The quantification methods provided in the CAPCOA report are based on an extensive literature review and are appropriate for use in this project-level analysis. The selection of the applied VMT reduction rate is also informed by the TDM Encyclopedia, published by the Victoria Transport Policy Institute, was also reviewed.

[19] California Air Pollution Control Officers Association. 2021. *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health Equity.* Available online at https://www.caleemod.com/documents/handbook/full_handbook.pdf (accessed April 4, 2022). December.

Given that the TDM plan would need to achieve a 24.6 percent reduction in VMT per employee, which exceeds the 20 percent reduction in VMT required by the Zoning Ordinance[20], and given that the effectiveness of the proposed TDM measures in the TDM plan cannot be precisely predicted (but are supported by substantial evidence), it is beneficial to have a suite of TDM measures. Accordingly, although the proposed TDM plan would achieve reductions far in excess of the reductions required to have a less than significant impact, additional TDM measures would be required to ensure that this impact would be reduced to a less-than-significant with mitigation (LTS/M) level. Together with the proposed TDM plan, such measures would need to achieve a minimum of 24.6 percent reduction in VMT per employee. These additional measures could include, but are not limited to:

- Limit or eliminate parking supply
- Charge employees for parking or provide parking cash-out program
- Increase shuttle service and frequency
- Provide car-sharing, bike-sharing, or ride-sharing program
- Subsidize people who walk or bike to work

The TDM plan must be guaranteed to achieve the intended reduction over the life of the development, as evidenced by annual reporting provided to the satisfaction of the City's Director of Public Works or designee . TDM measures must be replaced by appropriate substitute measures or augmented by additional measures if the intended trip reduction is not achieved in any reporting year.

As shown in Table 5, further reductions to VMT could be achieved with implementation of additional measures, such as by pricing workplace parking or providing employee parking cashout. For these reasons, with implementation of the TDM plan and the potential to adopt additional measures proven to reduce VMT, the VMT generated by the proposed project's office use would result in a less than **significant with mitigation (LTS/M)** impact.

[20] Implementation of the TDM plan would replace a minimum of 20 percent of the project-generated vehicle trips by increasing walking, cycling, transit use, and telecommuting. However, due to limitations in research and data, the effect of this mode shift on reducing trip lengths cannot be calculated. Therefore, the analysis assumes the reduction in VMT would be equivalent to the reduction in vehicle trips. In other words, the average vehicle trip length would not change.

Table 5. TDM Measures for Office Uses

TDM Measure (CAPCOA ID)[1]	Range of Vehicle Miles Traveled Reduction[2]	Applied VMT Reduction[3]
Proposed TDM Plan		
Implement Commute Trip Reduction Program (T-6)[4]	Up to 26.0%	16.5%
Implement Subsidized or Discounted Transit Program (T-9)[5]	Up to 5.5%	5.5%
Provide Ridesharing Program (T-8)[6]	Up to 8.0%	8.0%
Provide End-of-Trip Bicycle Facilities (T-10)[7]	Up to 4.4%%	4.4%
Pedestrian Network Improvements (T-18)[8]	Up to 6.4%	3.0%
Total VMT Reduction (Proposed TDM Plan)	**--**	**37.4%**
Additional TDM Measures		
Price Workplace Parking (T-12)[9]	Up to 20.0%	20%
Employee Parking Cashout (T-13)[9]	Up to 12.0%	12%
Increase Shuttle Service Frequency (T-26)[9]	Up to 11.3%	--
Total VMT Reduction (Additional Measures)	**--**	**32.0%**

Source: Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (California Air Pollution Control Officers Association, December 2021).

Notes:

[1] CAPCOA ID references the strategy as identified in the CAPCOA report.

[2] Range of vehicle miles traveled reduction obtained from CAPCOA.

[3] Vehicle miles traveled reduction rate determined based on the estimated level of adoption and aggressiveness of implementation of a given strategy and account for the implementation of other TDM program elements so as not to overestimate vehicle miles traveled reduction for the overall program. Consistent with CAPCOA, the adjustment factor from vehicle trips to VMT is 1. This assumes that all vehicle trips will average out to typical trip length. Thus, it can be assumed that a percentage reduction in vehicle trips will equal the same percentage reduction in VMT.

[4] Commute Trip Reduction Program. The vehicle miles traveled reduction rate selected is based on the anticipated effectiveness of the commute reduction strategies being promoted and the assumption that 100% of employees are eligible with 63% utilization. Commute trip reduction marketing elements include: on-site amenities, transit information, on-site transportation kiosk, and programs to support carpooling and commute alternatives.

[5] Subsidized Transit. The vehicle miles traveled reduction rate selected is based on the assumption that 100% of employees are eligible and the transit subsidy would cover 100% of the cost of a monthly transit pass.

[6] Provide Ridesharing Program. The vehicle miles traveled reduction rate selected assumes 100% eligibility and classifies the project site's location as "urban".

[7] End-of-Trip Bicycle Facilities. The Project will include long and short-term bicycle parking and a bike repair station along with other supporting facilities and amenities including showers and lockers.

[8] Pedestrian Network Improvements. The Project will complete and connect the pedestrian network with new sidewalks and street trees and a pedestrian plaza with internal circulation around the buildings and increase the length of pathways on the site.

[9] Effectiveness of these measures depends on level of implementation. For purposes of this example we have assumed the applicant would optimize the price of parking to achieve maximum VMT reductions and we have assumed 100% eligibility for employee parking cashout. The efficacy of shuttle service frequency would depend on the level of service increase and ridership achieved.

LEVEL OF SERVICE ANALYSIS

This section presents the analysis scope, methodology, and findings for the existing and future level of service (LOS) of the study intersections and roadway segments. The future results also reflect the expected operating conditions of the intersections and roadways with the proposed Project. The recommended improvements identified in this section are for a local compliance purpose and they are not CEQA required mitigation measures.

As stated above, LOS is no longer a CEQA threshold. However, the City's TIA Guidelines require that the TIA also analyzes LOS as a local metric. The LOS analysis would determine whether the Project-generated traffic would cause an intersection LOS to exceed the City's LOS thresholds or cause either the average delay or average critical delay to exceed the City's intersection delay thresholds under near term and cumulative conditions. The LOS and delay thresholds vary depending on the street classifications as well as whether the intersection is on a State route or not. The City's TIA Guidelines further require an analysis of the Project in relation to relevant policies of the Circulation Element and consideration of specific measures to address noncompliance with local policies which may occur as a result of the addition of Project traffic. This analysis is prepared to determine if there are potential measures that could bring the Project into conformance with Circulation Policy 3.4 (strive to maintain LOS D at all City controlled intersections).

Scope of Analysis

The analysis scope and methodology, data collection methods, and study locations are described in this section. The analysis scope presented in this chapter and all methodologies herein were reviewed and approved by the City of Menlo Park.

Analysis Scenarios

Transportation conditions were evaluated in this study for the following five scenarios:

- **Existing Conditions** – This scenario represents the current transportation network and traffic conditions. Existing turning movement counts collected in March 2019 were obtained from City staff and grown by one percent to represent growth from 2019 to 2020 when the analysis was conducted.[21] Signal timing information was obtained from the City.
- **Near Term (2025) Conditions** – This scenario represents the transportation network and traffic conditions at the time of expected occupancy of the Project but does not include the Project. This scenario includes transportation network changes, background traffic, and traffic generated from approved development Projects in the area.
- **Near Term (2025) Plus Project Conditions** – This scenario represents Near Term (2025) Conditions with the addition of Project-generated traffic.
- **Cumulative (2040) Conditions** – This scenario represents the transportation network and traffic conditions over a longer-term horizon to account for the cumulative effects of transportation network changes as well as background growth and land use development within the Project area. This scenario

[21] The analysis relies on historical data with application of growth factors to estimate traffic volumes representing existing conditions because collection of new data was not recommended during the public health crisis, COVID-19. The COVID-19 pandemic has resulted in shelter-in-place orders across the Bay Area and travel demand is significantly reduced across all modes. Travel behaviors and travel patterns have also changed substantially as a result of multiple factors such as school closures, restrictions on business operations, and an increased amount of telecommuting.

assumes Conditions (2040) Conditions plus traffic generated from additional approved and reasonably foreseeable development Projects in the area. This scenario does not include the Project. Volumes used for this scenario were estimated using the citywide traffic model and adjusted to reflect cumulative growth and development in the area.

- **Cumulative (2040) Plus Project Conditions** – This scenario represents Cumulative (2040) Conditions with the addition of Project-generated traffic.

Study Intersections

Level of service was analyzed at 29 study intersections, which were selected in consultation with staff from City of Menlo Park and adjacent jurisdictions. The study locations are presented in Figure 4. The City of Menlo Park conducted traffic counts for the two peak periods, 7 AM to 9 AM and 4 PM to 6 PM, in March 2019[22]. The peak hours at each location were identified in these counts and used in the operations analysis.

The study intersections and associated jurisdiction are listed below.

1. Marsh Road and Bayfront Expressway/Haven Avenue (Local Approaches to State)
2. Marsh Road and US-101 NB Off-Ramp (State)
3. Marsh Road and US-101 SB Off-Ramp (State)
4. Marsh Road and Scott Drive (Menlo Park)
5. Marsh Road and Bay Road (Menlo Park)
6. Marsh Road and Middlefield Road (Atherton)
7. Chrysler Drive and Bayfront Expressway (Local Approaches to State)
8. Chrysler Drive and Constitution Drive (Menlo Park)
9. Chrysler Drive and Jefferson Drive (Menlo Park)
10. Chrysler Drive and Independence Drive (Menlo Park)
11. Chilco Street and Bayfront Expressway (Local Approaches to State)
12. Chilco Street and Constitution Drive (Menlo Park)
13. Willow Road and Bayfront Expressway (State)
14. Willow Road and Hamilton Avenue (Local Approaches to State)
15. Willow Road and Ivy Drive (Local Approaches to State)
16. Willow Road and O'Brien Drive (Local Approaches to State)
17. Willow Road and Newbridge Street (Local Approaches to State)
18. Willow Road and Bay Road (Local Approaches to State)
19. Willow Road and Durham Street (Menlo Park)
20. Willow Road and Coleman Avenue (Menlo Park)
21. Willow Road and Gilbert Avenue (Menlo Park)
22. Willow Road and Middlefield Road (Menlo Park)
23. University and Bayfront Expressway (State)
24. Middlefield Road and Ravenswood Avenue (Menlo Park)
25. Middlefield Road and Ringwood Avenue (Menlo Park)
26. Marsh Road and Florence Street-Bohannon Drive (Menlo Park)
27. Willow Road and US-101 NB Ramps (State)
28. Willow Road and US-101 SB Ramps (State)
29. Bay Road and Ringwood Avenue (Menlo Park)

[22] The analysis relies on 2019 data with application of growth factors to estimate traffic volumes representing existing conditions because collection of new data was not recommended during the public health crisis, COVID-19.

Study Roadway Segments

Traffic operations for the study CMP segments were conducted by C/CAG through the CMP monitoring program. C/CAG performed a study for all CMP roadways for the two peak periods, 7 AM to 9 AM and 4 PM to 7 PM, in Spring of 2019. C/CAG calculated LOS for each peak period based on the methodologies in the Highway Capacity Manual (HCM) 1994 (Appendix F, San Mateo County Congestion Management Program 2019). The study CMP segments include 4 arterials and 5 freeway segments as listed below:

Arterials

1. Bayfront Expressway (SR 84): Bayshore Freeway (US 101) to Willow Road (SR 114)
2. Bayfront Expressway (SR 84): Willow Road (SR 114) to University Avenue (SR 109)
3. University Avenue (SR 109): Kavanaugh Drive to Bayfront Expressway (SR 84)
4. Willow Road (SR 114): Bayshore Freeway (US 101) to Bayfront Expressway (SR 84)

Freeways

5. Bayfront Expressway (SR 84): University Avenue (SR 109) to Alameda County Line
6. Bayshore Freeway (US 101): north of Marsh Road
7. Bayshore Freeway (US 101): Marsh Road to Willow Road (SR 114)
8. Bayshore Freeway (US 101): Willow Road (SR 114) to University Avenue (SR 109)
9. Bayshore Freeway (US 101): south of University Avenue (SR 109)

Level of Service Methodology

Although the law required the transition to vehicle miles traveled (VMT) as the metric for significance in environmental analysis, level of service (LOS) can still be considered for planning purposes and modifications to address deficiencies in compliance with the City's General Plan LOS standard may be achieved through conditions of approval. With the adoption of the updated TIA Guidelines the City Council indicated continued concern over roadway congestion and, alongside VMT, the TIA Guidelines continue to require analysis of LOS for planning purposes. Consistent with the City's TIA Guidelines, a LOS analysis was conducted to evaluate compliance with local policies.

Intersection Level of Service

Level of service describes the operating conditions experienced by motorists. LOS is a qualitative measure of the effect of several factors, including speed and travel time, traffic interruptions, freedom to maneuver, driving comfort, and convenience. LOS A through LOS F covers the entire range of traffic operations that might occur. Motorists using a facility that operates at LOS A experience very little delay, while those using a facility that operates at LOS F will experience long delays. These conditions are generally described in Table 6.

Table 6: General Level of Service Definitions

Level of Service	Description
A	**Free Flow or Insignificant Delays:** Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. Control delay at signalized intersections is minimal.
B	**Stable Operation or Minimal Delays:** The ability to maneuver within the traffic stream is only slightly restricted, and control delay at signalized intersections are not significant.
C	**Stable Operation or Acceptable Delays:** The ability to maneuver and change lanes is somewhat restricted, and average travel speeds may be about 50 percent of the free flow speed.
D	**Approaching Unstable or Tolerable Delays:** Small increases in flow may cause substantial increases in delay and decreases in travel speed.
E	**Unstable Operation or Significant Delays:** Significant delays may occur and average travel speeds may be 33 percent or less of the free flow speed.
F	**Forced Flow or Excessive Delays:** Congestion, high delays, and extensive queuing occur at critical signalized intersections with urban street flow at extremely low speeds.

Signalized Intersections

A signalized intersection analysis was conducted using the operational methodology outlined in the Highway Capacity Manual (HCM) (Transportation Research Board, Washington, D.C., 2016), as operationalized by Vistro 2020[23]. The HCM 6th Edition procedure calculates a weighted average stop delay in seconds per vehicle at an intersection and assigns a LOS designation based on the delay. Table 7 presents the relationship of average delay to level of service at signalized intersections.

Unsignalized Intersections

An unsignalized intersection analysis was also conducted using the operational methodology outlined in the HCM, as operationalized by Vistro 2020. Table 8 presents the relationship of average delay to level of service for unsignalized intersections.

[23] Vistro is a traffic engineering software allows creation of a transportation network model and applies industry standard methodologies to evaluate signalized and unsignalized intersections.

Table 7: Signalized Intersection Level of Service Definitions

Average Delay per Vehicle (Seconds)	Level of Service	Description of Traffic Conditions
≤10.0	A	Free flowing. Most vehicles do not have to stop.
>10.0 and ≤20.0	B	Minimal delays. Some vehicles have to stop, although waits are not bothersome.
>20.0 and ≤35.0	C	Acceptable delays. Significant numbers of vehicles have to stop because of steady, high traffic volumes. Still, many pass without stopping.
>35.0 and ≤55.0	D	Tolerable delays. Many vehicles have to stop. Drivers are aware of heavier traffic. Cars may have to wait through more than one red light. Queues begin to form, often on more than one approach.
>55.0 and ≤80.0	E	Significant delays. Cars may have to wait through more than one red light. Long queues form, sometimes on several approaches.
≤80.0	F	Excessive delays. Intersection is jammed. Many cars have to wait through more than one red light, or more than 60 seconds. Traffic may back up into "up-stream" intersections.

Source: *Highway Capacity Manual*, Transportation Research Board, Washington, D.C., 2016.

Table 8: Unsignalized Intersection Level of Service Definitions

Average Delay per Vehicle (Seconds)	Level of Service	Description of Traffic Conditions
≤10.0	A	Free flowing. Most vehicles do not have to stop.
>10.0 and ≤15.0	B	Minimal delays. Some vehicles have to stop, although waits are not bothersome.
>15.0 and ≤25.0	C	Acceptable delays. Significant numbers of vehicles have to stop because of steady, high traffic volumes. Still, many pass without stopping.
>25.0 and ≤35.0	D	Tolerable delays. Many vehicles have to stop. Drivers are aware of heavier traffic. Queues begin to form, often on more than one approach.
>35.0 and ≤50.0	E	Significant delays. Long queues form, sometimes on several approaches.
>50.0	F	Excessive delays. Intersection is jammed. Many cars have to wait more than 60 seconds. Traffic may back up into "up-stream" intersections.

Roadway Segment Level of Service

The City/County Association of Governments of San Mateo County (C/CAG) has adopted guidelines to evaluate the impacts of net new vehicle trips generated by new developments on the San Mateo County Congestion Management Program (CMP) network. These guidelines apply to all developments that generate 100 or more net new peak period vehicular trips on the CMP network and are subject to CEQA review. The proposed Project would generate more than 100 net new peak period vehicular trips. Therefore, roadway segment level of service analysis is required.

The study segments consist of freeways and arterials that are included in the San Mateo County Congestion Management Program. The CMP roadway system consists of four types of segments including freeways, multilane highways, two-lane highways, and arterials. The descriptions of the levels of service for freeways and arterials are shown in Table 9.

Table 9: LOS Descriptions for CMP Freeways and Arterials

Level of Service	CMP Roadway Type	
	Freeways	**Arterials**
A	Highest quality of service with free-flow condition and a high level of maneuverability.	Free-flow conditions with unimpeded maneuverability. Stopped delay at signalized intersection is minimal.
B	Free-flow condition, but with presence of other vehicles. Minor disruptions easily aborted.	Reasonably unimpeded operations with slightly restricted maneuverability. Stopped delays are not bothersome.
C	Stable operations, but minor disruptions cause significant local congestion.	Stable operations with somewhat more restrictions in making mid-block lane changes than LOS B. Motorists will experience appreciable tension while driving.
D	Borders on unstable flow with ability to maneuver severely restricted due to congestion	Approaching unstable operations where small increases in volume produce substantial increases in delay and decreases in speed.
E	Unstable operations at or near capacity. Disruptions cannot be dissipated and form bottlenecks.	Operations with significant intersection approach delays and low average speeds.
F	Forced or breakdown flow with bottlenecks forming at locations where demand exceeds capacity. Speeds may drop to zero.	Operations with extremely low speeds caused by intersection congestion, high delay, and adverse signal progression.

Source: Adapted from San Mateo County Congestion Management Program 2019 and Highway Capacity Manual, Special Report 2019.

CMP legislation requires use of LOS to measure roadway performance, while the recently adopted CEQA guidelines require VMT as the primary metric. The level of service evaluation for the CMP segments are based on volume-to-capacity (v/c) ratios for each direction of travel as recommended by C/CAG to analyze their CMP roadway system (Appendix B, San Mateo County Congestion Management Program 2019). The traffic volume for each segment is divided by the capacity of the segment. For freeway segments, the capacity is estimated as the number of lanes multiplied by 2,200 vehicles per hour per lane for 4-lane freeway segments and 2,300 vehicles per hour per lane for segments with 6 or more lanes. For arterials, the capacity is estimated based on a saturation flow rate of 1,900 vehicles per hour per lane and the assumption that the arterials would receive 60 percent of the green time, which the arterial capacity becomes 1,100 vehicles per hour per lane. The v/c for freeways and arterials is correlated to LOS based on the information in Table 10 and Table 11, respectively.

Table 10: CMP LOS Criteria for Freeways based on v/c Ratios

Level of Service	Maximum Volume-to-Capacity (v/c) Ratio	
	4-Lane Freeways (FFS = 65 mph)	6-Lane and 8-Lane Freeways (FFS = 65 mph)
A	0.295	0.283
B	0.473	0.457
C	0.704	0.673
D	0.887	0.849
E	1.000	1.000
F	Variable	Variable

Source: Adapted from Highway Capacity Manual, Special Report 209.
Note: FFS = Free-Flow Speed. Mph = miles per hour.

Table 11: CMP LOS Criteria for Arterials based on v/c Ratios

Level of Service	Volume-to-Capacity (v/c) Ratio
A	< 0.60
B	0.61 – 0.70
C	0.71 – 0.80
D	0.81 – 0.90
E	0.91 – 1.00
F	> 1.00

Source: Adapted from Highway Capacity Manual, Special Report 209.

Level of Service Policy Standard

The following plans, ordinances, or policies are applicable to determine planning consistency and whether decision makers can make the necessary findings to issue entitlements, but are not a CEQA impact:

City of Menlo Park Level of Service Policy

The City of Menlo Park General Plan strives to have all City-controlled signalized intersections maintained at level of service D or better during peak hours, except at the intersection of Ravenswood Avenue and Middlefield Road and the intersections along Willow Road from Middlefield Road to US101. This General Plan LOS Policy provides the City discretion to approve development projects that do not meet its preferred LOS standard.

Town of Atherton Level of Service Policy

The circulation element of the Town of Atherton General Plan 2019 provides minimum acceptable level of service standards for the Town facilities by roadway type, with LOS D for highways, LOS D for minor arterials, and LOS C for local roads.

One of the study intersections, Marsh Road and Middlefield Road, is located within the Town limit. Marsh Road and Middlefield Road are classified as part of the minor arterial system connecting between residential areas and other transportation facilities and serving as emergency and evacuation routes. The intersection of Marsh Road and Middlefield Road was analyzed based on the Town standard for minor arterial facility.

Caltrans Level of Service Policy

Prior to 2020, Caltrans established level of service standards at the transition between LOS C and LOS D on State facilities[24]. On May 20, 2020, Caltrans released a Vehicle Miles Travel-Focused Transportation Impact Study Guide that changes Caltrans' recommended transportation analysis metric to VMT rather than LOS[25]. According to that draft, "Caltrans' primary review focus for a land use project's impacts is now VMT" and Caltrans will focus on whether a local lead agency's CEQA analysis is consistent with OPR's Technical Advisory. For purposes of this study and consistency with past studies in Menlo Park, the City's LOS standard is also applied to State-controlled intersections while Caltrans LOS standard still applies to ramp intersections.

City/County Association of Governments of San Mateo County (C/CAG) Level of Service Policy

The LOS standards established by the City/County Association of Governments of San Mateo County (C/CAG) vary based on geographic differences to prevent the Congestion Management Program (CMP) facilities to operate at level of service worse than currently anticipated in San Mateo County CMP 2019. The CMP intersection level of service standards were set based on the following considerations:

- LOS F for the intersections operating at LOS F
- LOS E for the remaining intersections

C/CAG monitors four of the study intersections for compliance with their LOS standard, which are also under Caltrans' jurisdiction. These intersections include Marsh Road and Bayfront Expressway/Haven Avenue (Intersection #1), Chrysler Drive and Bayfront Expressway (Intersection #7), Willow Road and Bayfront Expressway (Intersection #13), and University and Bayfront Expressway (Intersection #23). Given that City or Caltrans' standards are more stringent than the C/CAG standard, the analysis based on City or Caltrans' level of service standards would be more conservative.

Menlo Park Transportation Impact Analysis Guidelines

Menlo Park Transportation Impact Analysis (TIA) Guidelines provide criteria for identifying the project impact that would warrant mitigation for intersections. The following are the TIA Guidelines standard for the City's intersections.

City arterial intersections – the intersections would be non-compliant with the TIA Guidelines standard if a project traffic would cause:

- Intersections operating at LOS D or better to operate at LOS E or F, OR
- Intersections operating at LOS D or better to increase average delay by more than 23 seconds, OR
- Intersections operating at LOS E or F to increase average delay of vehicles on all critical movements by more than 0.8 seconds.

[24] Caltrans's Guide for the Preparation of Traffic Impact Studies, December 2002.

[25] Caltrans's Vehicle Miles Traveled-Focused Transportation Impact Study Guide, May 20, 2020.

Local approaches to State-controlled intersections – the intersections would be non-compliant with the TIA Guidelines standard if a project traffic would cause:

- Intersections operating at LOS D or better to operate at LOS E or F, OR
- Intersections operating at LOS D or better to increase average delay by more than 23 seconds, OR
- Intersections operating at LOS E or F to increase delay of vehicles on the most critical movements by more than 0.8 seconds.

Other City Intersections (Collector and Local Streets) – the intersections would be non-compliant with the TIA Guidelines standard if a project traffic would cause:

- Intersections operating at LOS C or better to operate at LOS D, E, or F, OR
- Intersections operating at LOS C or better to increase average delay by more than 23 seconds, OR
- Intersections operating at LOS D or worse to increase average delay of vehicles on all critical movements by more than 0.8 seconds.

For the Town of Atherton, the intersections would be non-compliant with the threshold standard if a project traffic would cause the intersections operating at LOS D or better to operate at LOS E or F, or cause the intersection operating at LOS E or F to increase four seconds of average delay.

For the State-controlled intersections except for ramp intersections, the intersections would be non-compliant with the threshold standard if project traffic would cause the intersections operating at LOS D or better to operate at worse than LOS D , or cause the intersections operating at LOS D or worse to increase four seconds of average delay[26].

Table 12 shows the jurisdiction and corresponding General Plan LOS standard applied for each study intersection.

[3] Based on Caltrans LOS Policy.
[4] Based on Town of Atherton General Plan.
[5] Menlo Park General Plan LOS standard is applied to State-controlled intersection for consistency with the past studies in Menlo Park.
[6] Menlo Park General Plan does not specify LOS standard for this intersection. However, the City's General Plan LOS standard is applied for consistency with the past studies in Menlo Park.

Standard for Roadway Segments

The San Mateo County Congestion Management Program (CMP) system comprises of 53 roadway segments and 16 intersections. The CMP segments includes all State highways within the County in addition to Mission Street, Geneva Avenue, and Bayshore Boulevard. The CMP intersections are mostly along El Camino Real. The following are the criteria used for the CMP facilities that are operating at the adopted LOS standard by the City/County Association of Governments (C/CAG). A project would cause the CMP segments to be non-compliant with the C/CAG standard if:

- The project traffic increment causes the CMP freeway segments to operate at LOS that violates the adopted standard, OR
- The Cumulative Plus Project analysis would result in the CMP freeway segments to operate at LOS that violates the adopted standard, OR
- The project increases traffic demand on the CMP freeway segments by one percent or more of the segment capacity, OR
- The project traffic increment causes the CMP freeway segment v/c ratio to increase be one percent.

The following are the criteria used for the CMP facilities that are already not in compliance with the C/CAG standard. A project would cause the CMP segments to be non-compliant with the C/CAG standard if:

- The project increases traffic demand on the CMP freeway segments by one percent or more of the segment capacity, OR
- The project traffic increment causes the CMP freeway segment v/c ratio to increase be one percent.

The LOS standard for the study roadway segments is shown in Table 13 (San Mateo County Congestion Management Program 2019). These segments are included as part of the routes of regional significant, which have been monitored for their operational performance by C/CAG. The LOS standard adopted by C/CAG vary by roadway segment based on geographic differences.

Table 13: Level of Service Policy for the Study Roadway Segments

No.	Route	Segment	Roadway/ Facility Type	Level of Service Standard
1	Bayfront Expressway (SR 84)	Bayshore Freeway (US 101) - Willow Road (SR 114)	Arterial	D
2	Bayfront Expressway (SR 84)	Willow Road (SR 114) - University Avenue (SR 109)	Arterial	E

Existing Conditions

Intersection Level of Service

The turning movement volumes for the 29 study intersections were acquired from the City's database, which reflects the 2019 counts[27]. The turning movement volumes for the study intersections are provided in Attachment 1 and the existing lane configurations are provided in Attachment 2. The level of service results for the study intersections during the existing AM and PM peak hours are shown in Table 14. The Vistro analysis outputs are provided in Attachment 3.

Table 14: Existing Conditions Level of Service

No.	Intersection	Control	Peak Hour	Existing		Meet General Plan Standard?
				Delay	LOS	
1	Marsh Road & Bayfront Expressway/Haven Avenue (Local Approaches to State)	Signal	AM	**56.9**	**E**	No[3]
			PM	36.5	D	Yes[3]
2	Marsh Road & US-101 NB Off-Ramp (State)	Signal	AM	15.8	B	Yes[4]
			PM	13.3	B	Yes[4]
3	Marsh Road & US-101 SB Off-Ramp (State)	Signal	AM	19.0	B	Yes[4]
			PM	17.0	B	Yes[4]
4	Marsh Road & Scott Drive (Menlo Park)	Signal	AM	18.5	B	Yes[3]
			PM	15.3	B	Yes[3]

[27] The analysis relies on 2019 data with application of growth factors to estimate traffic volumes representing existing conditions because collection of new data was not recommended during the public health crisis, COVID-19.

Notes:
TWSC – Two-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
AWSC – All-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
Bold text – Indicates intersections operate at LOS not meeting LOS standard by jurisdiction.

1 This intersection does not meet signal warrant criteria under Existing Conditions during both peak hours.
2 This intersection meets signal warrant criteria under Existing Conditions during both peak hours.
3 Based on Menlo Park General Plan LOS Standard.
4 Based on Caltrans LOS Policy.
5 Based on Town of Atherton General Plan.
6 Menlo Park General Plan LOS standard is applied to State-controlled intersection for consistency with the past studies in Menlo Park.
7 Menlo Park General Plan does not specify LOS standard for this intersection. However, the City's General Plan LOS standard is applied for consistency with the past studies in Menlo Park.

The intersections listed below operate at a LOS not meeting the LOS standard established by the City of Menlo Park General Plan, Town of Atherton General Plan, or Caltrans LOS policy during one or both peak hours. All other study intersections operate in compliance with the LOS standard under Existing Conditions.

- Intersection #1, Marsh Road and Bayfront Expressway/Haven Avenue (Local Approaches to State): AM
- Intersection #10, Chrysler Drive and Independence Drive (Menlo Park): AM
- Intersection #12, Chilco Street and Constitution Drive (Menlo Park): AM and PM
- Intersection #13, Willow Road and Bayfront Expressway (State): AM and PM
- Intersection #14, Willow Road and Hamilton Avenue (Local Approaches to State): PM
- Intersection #17, Willow Road and Newbridge Street (Local Approaches to State): AM and PM
- Intersection #18, Willow Road and Bay Road (Local Approaches to State): AM and PM
- Intersection #19, Willow Road and Durham Street (Menlo Park): AM
- Intersection #20, Willow Road and Coleman Avenue (Menlo Park): AM and PM
- Intersection #21, Willow Road and Gilbert Avenue (Menlo Park): AM

- Intersection #22, Willow Road and Middlefield Road (Menlo Park): AM
- Intersection #23, University and Bayfront Expressway (State): PM
- Intersection #27, Willow Road and US-101 SB Ramps (State): AM
- Intersection #28, Willow Road and US-101 NB Ramps (State): AM and PM
- Intersection #29, Bay Road and Ringwood Avenue (Menlo Park): PM

Manual on Uniform Traffic Control Devices (MUTCD) peak hour signal warrant analysis was conducted at the unsignalized intersections. Two of the study intersections including the intersection of Chilco Street and Constitution Drive (Intersection #12) and the intersection of Bay Road and Ringwood Avenue (Intersection #29), which operate with all-way stop control under Existing Conditions, met the peak hour signal warrant during both the AM and PM peak hours. No other study unsignalized intersections met the peak hour signal warrant during either peak hour.

Roadway Segment Level of Service

The level of service results during the AM and PM peak hours for the study CMP segments shown in Table 15, were obtained from the 2019 Congestion Management Program for San Mateo County, which provides performance monitoring results for the CMP roadway system on a biennial basis. The average daily traffic (ADT) for the study segments were obtained from Caltrans's traffic data, which was available up to the year 2018 at the time of this study. Roadway segment level of service is provided in Attachment 4.

As shown in Table 15, the following segments are operating at level of service not compliant with the adopted LOS standard established by the City/County Association of Governments (C/CAG) under Existing Conditions.

- Segment #2, Bayfront Expressway (SR 84): Willow Road (SR 114) – University Avenue (SR 109).
- Segment #4, University Avenue (SR 109): Bayshore Freeway (US 101) – Bayfront Expressway (SR 84).

Table 15: Existing LOS for Study Roadway Segments

No.	Route	Segment	Level of Service Standard[1]	Directional Capacity (vph)[2]	ADT[3]	Existing Level of Service[4]	Existing v/c[5]
1	Bayfront Expressway (SR 84)	Bayshore Freeway (US 101) - Willow Road (SR 114)	D	3,300	46,000	C	0.8
2	Bayfront Expressway (SR 84)	Willow Road (SR 114) - University Avenue (SR 109)	E	3,300	72,000	**F**	**>1**
3	Bayfront Expressway (SR 84)	University Avenue (SR 109) - Alameda County Line	F	3,300	74,000	F	>1
4	University Avenue (SR 109)	Kavanaugh Drive - Bayfront Expressway (SR 84)	E	2,200	30,400	**F**	**>1**

Table 15: Existing LOS for Study Roadway Segments

No.	Route	Segment	Level of Service Standard[1]	Directional Capacity (vph)[2]	ADT[3]	Existing Level of Service[4]	Existing v/c[5]
5	Willow Road (SR 114)	Bayshore Freeway (US 101) - Bayfront Expressway (SR 84)	E	2,200	51,000	C	0.8
6	Bayshore Freeway (US 101)	North of Marsh Road	F	9,200	221,700	F	>1
7	Bayshore Freeway (US 101)	Marsh Road - Willow Road (SR 114)	F	9,200	202,200	F	>1
8	Bayshore Freeway (US 101)	Willow Road (SR 114) - University Avenue (SR 109)	F	9,200	215,600	F	>1
9	Bayshore Freeway (US 101)	South of University Avenue (SR 109)	F	9,200	219,700	F	>1

Source: San Mateo County Congestion Management Program 2019.
Notes:
vph – Vehicles per Hour.
ADT – Average Daily Traffic.
v/c – Volume-to-Capacity ratio.
Bold text – Indicates segments operate exceeds LOS standard.

[1] See details in Section "General Plan Level of Service Standards".

[2] Capacity is shown by direction. Freeway capacity = 2,300 vphpl for 6-lane segments, 2,200 vphpl for 4-lane segments. Arterial capacity is based on 60 percent green time of 1,900 vphpl or about 1,100 vphpl (Appendix B, San Mateo County Congestion Management Program 2019).

[3] 2018 Caltrans's ADT data, https://dot.ca.gov/programs/traffic-operations/census.

[4] San Mateo County Congestion Management Program 2019. The worse LOS is shown.

[5] Based on the worse v/c corresponding to the LOS as shown in in CMP legislation requires use of LOS to measure roadway performance, while the recently adopted CEQA guidelines require VMT as the primary metric. The level of service evaluation for the CMP segments are based on volume-to-capacity (v/c) ratios for each direction of travel as recommended by C/CAG to analyze their CMP roadway system (Appendix B, San Mateo County Congestion Management Program 2019). The traffic volume for each segment is divided by the capacity of the segment. For freeway segments, the capacity is estimated as the number of lanes multiplied by 2,200 vehicles per hour per lane for 4-lane freeway segments and 2,300 vehicles per hour per lane for segments with 6 or more lanes. For arterials, the capacity is estimated based on a saturation flow rate of 1,900 vehicles per hour per lane and the assumption that the arterials would receive 60 percent of the green time, which the arterial capacity becomes 1,100 vehicles per hour per lane. The v/c for freeways and arterials is correlated to LOS based on the information in Table 10 and Table 11, respectively.

Near Term (2025) Conditions

Near Term (2025) Conditions represent the transportation network and traffic conditions at the time of expected occupancy of the Project. This scenario includes transportation network changes, land use changes, and traffic generated from approved development projects in the area.

Programmed/Planned Transportation Facility Improvements

At the direction of the City of Menlo Park, the following programmed and planned improvements to study facilities were included in the Near Term (2025) Conditions analysis:

- **Chilco Street & Constitution Drive** was analyzed with a shared left/through/right lane in the northbound direction, a shared left/thru lane and right-turn lane in the southbound direction, a left turn lane and shared through/right lane in the eastbound direction, and with a left turn lane and shared through/right lane in the westbound direction. This intersection was evaluated with a signal in all future analysis scenarios.

The lane configurations under Near Term (2025) Conditions are provided in Attachment 2.

Additionally, Caltrain's Modernization Program is currently upgrading the Caltrain signal system for improved safety and performance and replacing diesel-powered trains with electric multiple-unit trains. Improvements are expected to finish prior to 2025 and result in improved frequency and speed of trains and increased ridership.

Development Projects

Approved development projects included in the Near Term (2025) Conditions analysis are detailed in Table 16. The Near Term scenario includes traffic that would be generated by these projects. The traffic volumes from approved projects were included in the Vistro analysis network. Additionally, a growth rate of one percent per year was applied to account for growth in regional traffic until the horizon year of 2025. The turning movement volumes under Near Term (2025) Conditions are provided in Attachment 1.

Table 16: Near Term (2025) Conditions Approved Projects

Project	Land Use	Size
Greenheart 1300 El Camino Real	Residential	183 units
	Office	203,000 square feet
	Retail/Personal Service	18,600 square feet
Menlo Gateway Constitution 100-155 Constitution Drive	Office	487,244 square feet
	Restaurant	7,420 square feet
Facebook Expansion Project 301-309 Constitution Drive	Office	450,400 square feet
	Hotel	200 rooms
Stanford 500 El Camino Real	Residential	215 units
	Office	143,900 square feet
	Retail	10,000 square feet
TIDE Academy 150 Jefferson Drive	High School	400 students
1275 El Camino Real	Residential	3 units
	Office	9,334 square feet
	Retail	589 square feet
1430 O'Brien Drive	Research & Development	46,608 square feet

Intersection Level of Service

Table 17 provides LOS results for the study intersections during the AM and PM peak hours under Near Term (2025) Conditions. The Vistro analysis outputs are provided in Attachment 3.

Table 17: Near Term (2025) Conditions Level of Service

No.	Intersection	Control	Peak Hour	Critical Approach[1]	Near Term		Meet General Plan Standard?
					Delay	LOS	
1	Marsh Road & Bayfront Expressway/Haven Avenue (Local Approaches to State)	Signal	AM	N/A	**59.7**	**E**	No[4]
				EB	**114.1**	**F**	
				WB	36.5	D	
			PM	N/A	37.4	D	Yes[4]
2	Marsh Road & US-101 NB Off-Ramp (State)	Signal	AM	N/A	25.3	C	Yes[5]

			PM	N/A	**59.9**	**F**	No[4]

Notes:
TWSC – Two-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
AWSC – All-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
Bold text – Indicates intersections/approaches operate at LOS not meeting LOS standard by jurisdiction.
N/A – Not applicable.

1 The "Critical Approach" information is only relevant where the Project would increase delay per the City's LOS policy.
2 This intersection does not meet signal warrant criteria under Near Term Conditions during both peak hours.
3 This intersection meets signal warrant criteria under Near Term Conditions during both peak hours.
4 Based on Menlo Park General Plan LOS Standard.
5 Based on Caltrans LOS Policy.
6 Based on Town of Atherton General Plan.
7 Menlo Park General Plan LOS standard is applied to State-controlled intersection for consistency with the past studies in Menlo Park.
8 Menlo Park General Plan does not specify LOS standard for this intersection. However, the City's General Plan LOS standard is applied for consistency with the past studies in Menlo Park.

The intersections listed below would operate at LOS exceeding the LOS standard established by the City of Menlo Park General Plan, Town of Atherton General Plan, or Caltrans LOS policy during one or both peak hours. All other study intersections would operate in compliance with the LOS standard under Near Term (2025) Conditions.

- Intersection #1, Marsh Road and Bayfront Expressway/Haven Avenue (Local Approaches to State): AM
- Intersection #6, Marsh Road and Middlefield Road (Atherton): AM
- Intersection #8, Chrysler Drive and Constitution Drive (Menlo Park): AM
- Intersection #10, Chrysler Drive and Independence Drive (Menlo Park): AM
- Intersection #13, Willow Road and Bayfront Expressway (State): AM and PM
- Intersection #14, Willow Road and Hamilton Avenue (Local Approaches to State): AM and PM
- Intersection #15, Willow Road and Ivy Drive (Local Approaches to State): AM and PM
- Intersection #16, Willow Road and O'Brien Drive (Local Approaches to State): AM and PM
- Intersection #17, Willow Road and Newbridge Street (Local Approaches to State): AM and PM
- Intersection #18, Willow Road and Bay Road (Local Approaches to State): AM and PM
- Intersection #19, Willow Road and Durham Street (Menlo Park): AM
- Intersection #20, Willow Road and Coleman Avenue (Menlo Park): AM and PM
- Intersection #21, Willow Road and Gilbert Avenue (Menlo Park): AM and PM
- Intersection #22, Willow Road and Middlefield Road (Menlo Park): AM
- Intersection #23, University and Bayfront Expressway (State): PM
- Intersection #24, Middlefield Road and Ravenswood Avenue (Menlo Park): AM
- Intersection #27, Willow Road and US-101 SB Ramps (State): AM
- Intersection #28, Willow Road and US-101 NB Ramps (State): AM and PM
- Intersection #29, Bay Road and Ringwood Avenue (Menlo Park): AM and PM

The intersection of Bay Road and Ringwood Avenue (Intersection #29), which operates with all-way stop control under Near Term (2025) Conditions, met the peak hour signal warrant during both the AM and PM peak hours. No other study unsignalized intersections met the peak hour signal warrant during either peak hour.

Roadway Segment Level of Service

For Near Term (2025) Conditions, average daily traffic volumes for the study Congestion Management Program (CMP) segments were estimated using a linear forecast based on Caltrans's historical traffic data between 2013 and 2018. For purposes of this analysis, the volume-to-capacity increase from 2018 to 2025 was estimated using Caltrans's peak hour volumes data and the segment capacity provided in Table 15. The 2025 volumes were based on a linear forecast using Caltrans's historical peak hour volumes while the 2018

volumes were based on the most recent published data at the time of this study. Caltrans's peak hour volumes represent both travel directions, thus, the peak travel direction could be identified using Caltrans's directional (D) factor data. The directional (D) factor was selected from the AM peak hour, which is considered the higher peak traffic volume for all of the study segments. Roadway segment level of service is provided in Attachment 4.

Table 18 shows the resulting v/c increase and LOS for the study CMP segments under Near Term (2025) Conditions. The LOS for Near Term (2025) Conditions were estimated by applying the v/c increment to the equivalent v/c for the Existing Conditions LOS in Table 15.

Table 18: Near Term (2025) Conditions for Study Roadway Segments

No.	Route	Segment	Level of Service Standard[1]	Near Term (2025) ADT[2]	Existing v/c	v/c Increase[3]	Level of Service[4]
1	Bayfront Expressway (SR 84)	Bayshore Freeway (US 101) - Willow Road (SR 114)	D	63,321	0.8	0.29	**F**
2	Bayfront Expressway (SR 84)	Willow Road (SR 114) - University Avenue (SR 109)	E	92,124	>1	0.29	**F**
3	Bayfront Expressway (SR 84)	University Avenue (SR 109) - Alameda County Line	F	88,434	>1	0.16	F
4	University Avenue (SR 109)	Kavanaugh Drive - Bayfront Expressway (SR 84)	E	34,860	>1	0.20	**F**
5	Willow Road (SR 114)	Bayshore Freeway (US 101) - Bayfront Expressway (SR 84)	E	64,071	0.8	0.32	**F**
6	Bayshore Freeway (US 101)	North of Marsh Road	F	233,009	>1	0.03	F
7	Bayshore Freeway (US 101)	Marsh Road - Willow Road (SR 114)	F	210,804	>1	0.02	F
8	Bayshore Freeway (US 101)	Willow Road (SR 114) - University Avenue (SR 109)	F	225,920	>1	0.02	F
9	Bayshore Freeway (US 101)	South of University Avenue (SR 109)	F	227,422	>1	0.01	F

Note: v/c – Volume-to-Capacity ratio. **Bold** text – Indicates segments operate exceeds LOS standard.

[1] See details in Section "General Plan Level of Service Standards".

[2] Near Term (2025) ADT is based on a linear forecast using Caltrans's ADT data between 2013-2018, https://dot.ca.gov/programs/traffic-operations/census.

[3] v/c increase is based on 2018 v/c and 2025 v/c. The 2018 v/c was calculated using 2018 peak hour volume and directional (D) factor data from Caltrans while 2025 v/c was calculated using a linear forecast for 2025 peak hour volume and D factor data from Caltrans.

[4] Estimated by applying the v/c increment to equivalent v/c for the Existing LOS from San Mateo County Congestion Management Program 2019. The worst LOS is shown.

The study CMP segments listed below would operate at level of service not compliant with the LOS standard established by the City/County Association of Governments (C/CAG) under Near Term (2025) Conditions. All other study CMP segments would operate in compliance with the LOS standard under Near Term (2025) Conditions.

- Segment #1, Bayfront Expressway (SR 84): Willow Road (SR 114) – University Avenue (SR 109).
- Segment #2, University Avenue (SR 109): Bayshore Freeway (US 101) – Bayfront Expressway (SR 84).
- Segment #4, University Avenue (SR 109): Bayshore Freeway (US 101) – Bayfront Expressway (SR 84).
- Segment #5, Willow Road (SR 114): Bayshore Freeway (US 101) – Bayfront Expressway (SR 84).

Near Term (2025) Plus Project Conditions

Intersection Level of Service

The following analysis is based on the City's TIA Guidelines for intersection level of service under Near Term (2025) Plus Project Conditions. The turning movement volumes under Near Term (2025) Plus Project Conditions are provided in Attachment 1 and the lane configurations are provided in Attachment 2. Table 19 provides LOS results for the study intersections during the AM and PM peak hours under Near Term (2025) Plus Project Conditions. The Vistro outputs are provided in Attachment 3.

Table 19: Near Term (2025) Plus Project Conditions Level of Service

No.	Intersection	Control	Peak Hour	Critical Approach[1]	Near Term		Near Term Plus Project		Meet General Plan Standard?	Meet Local Policy?
					Delay	LOS	Delay	LOS		
28	Willow Road & US-101 NB Ramps (State)	Signal	AM	N/A	**281.2**	**F**	**281.2**	**F**	No[6]	Yes
			PM	N/A	**243.5**	**F**	**246.4**	**F**	No[6]	Yes
29	Bay Road & Ringwood Avenue (Menlo Park)	AWSC[4]	AM	N/A	**29.1**	**D**	**29.1**	**D**	No[5]	Yes
			PM	N/A	**59.9**	**F**	**59.9**	**F**	No[5]	Yes

Notes:
TWSC – Two-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
AWSC – All-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
Bold text – Indicates intersections/approaches operate at LOS not meeting LOS standard by jurisdiction.
N/A – Not applicable.

1 The "Critical Approach" information is only relevant where the Project would increase delay per the LOS policy.
2 This intersection does not meet signal warrant criteria under Near Term Conditions during both peak hours and meet signal warrant criteria under Near Term Plus Project Conditions during PM peak hour.
3 This intersection does not meet signal warrant criteria under Near Term or Near Term Plus Project Conditions during both peak hours.
4 This intersection meets signal warrant criteria under Near Term and Near Term Plus Project Conditions during both peak hours.
5 Based on Menlo Park General Plan LOS Standard.
6 Based on Caltrans LOS Policy.
7 Based on Town of Atherton General Plan.
8 Menlo Park General Plan LOS standard is applied to State-controlled intersection for consistency with the past studies in Menlo Park.
9 Menlo Park General Plan does not specify LOS standard for this intersection. However, the City's General Plan LOS standard is applied for consistency with the past studies in Menlo Park.

The study intersections listed below would operate at LOS exceeding the LOS standard established by the City of Menlo Park General Plan, Town of Atherton General Plan, or Caltrans LOS policy during one or both peak hours. All other study intersections would operate in compliance with the LOS standard under Near Term (2025) Plus Project Conditions.

- Intersection #1, Marsh Road and Bayfront Expressway/Haven Avenue (Local Approaches to State): AM
- Intersection #6, Marsh Road and Middlefield Road (Atherton): AM
- Intersection #8, Chrysler Drive and Constitution Drive (Menlo Park): AM and PM
- Intersection #9, Chrysler Drive and Jefferson Drive (Menlo Park): AM and PM
- Intersection #10, Chrysler Drive and Independence Drive (Menlo Park): AM
- Intersection #12, Chilco Street and Constitution Drive (Menlo Park): PM
- Intersection #13, Willow Road and Bayfront Expressway (State): AM and PM
- Intersection #14, Willow Road and Hamilton Avenue (Local Approaches to State): AM and PM
- Intersection #15, Willow Road and Ivy Drive (Local Approaches to State): AM and PM
- Intersection #16, Willow Road and O'Brien Drive (Local Approaches to State): AM and PM

- Intersection #17, Willow Road and Newbridge Street (Local Approaches to State): AM and PM
- Intersection #18, Willow Road and Bay Road (Local Approaches to State): AM and PM
- Intersection #19, Willow Road and Durham Street (Menlo Park): AM
- Intersection #20, Willow Road and Coleman Avenue (Menlo Park): AM and PM
- Intersection #21, Willow Road and Gilbert Avenue (Menlo Park): AM and PM
- Intersection #22, Willow Road and Middlefield Road (Menlo Park): AM
- Intersection #23, University and Bayfront Expressway (State): PM
- Intersection #24, Middlefield Road and Ravenswood Avenue (Menlo Park): AM
- Intersection #27, Willow Road and US-101 SB Ramps (State): AM
- Intersection #28, Willow Road and US-101 NB Ramps (State): AM and PM
- Intersection #29, Bay Road and Ringwood Avenue (Menlo Park): AM and PM

Two of the unsignalized study intersections would meet the MUTCD peak hour signal warrant. The intersection of Chrysler Drive and Jefferson Drive (Intersection #9) would meet the signal warrant during the PM peak hour and the intersection of Bay Road and Ringwood Avenue (Intersection #29) would meet the signal warrant during both the AM and PM peak hours under Near Term (2025) Plus Project Conditions. The intersection of Chrysler Drive and Independence Drive (Intersection #10) would not meet peak hour signal warrant during either peak hour.

The proposed Project would cause fifteen of the study intersections to be non-compliant with local policy under Near Term (2025) Plus Project Conditions by causing the intersections to increase either average movement delay or critical movement delay exceeding the threshold established by the TIA Guidelines during at least one peak hour. The following are the recommended modifications to improve intersection operations to pre-Project conditions, or better and address the Project's share of non-compliant operation (see Table 20 on pages 56-58)

Chrysler Drive and Constitution Drive (Intersection #8)

Implementation of the proposed Project would cause the Chrysler Drive and Constitution Drive intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this City-controlled intersection to experience an increase in average critical movement delay of 0.8 seconds or greater during both peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to install a left-turn lane on westbound Chrysler Drive and convert the shared left/through/right lane to a shared through/right lane resulting in having one left-turn lane and one shared through/right lane in this direction. The excessive delays on southbound Constitution Drive would require an installation of right-turn lane and a conversion of the shared through/right lane to through lane resulting in having one left-turn lane, one through lane, and one right-turn lane. Northbound Constitution Drive would require an installation of a right-turn lane and a conversion of the shared left/through/right lane to a shared left/through lane resulting

in having one shared left/through lane and one right-turn lane. The recommended modification to lane configurations would require a widening of westbound Chrysler Drive and a widening of Constitution Drive on both sides of the intersection and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. While the improvements to the westbound approach are included in the City's TIF program, the improvements on the other approaches are beyond those in the TIF program. The Project is required to design and construct these improvements.

With implementation of these intersection modifications, the intersection would operate at LOS C during both AM and PM peak hours and would be in compliance with the City's level of service policy and the Project's share of the non-compliant operation would be addressed .

Chrysler Drive and Jefferson Drive (Intersection #9)

Implementation of the proposed Project would cause the Chrysler Drive and Jefferson Drive intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this City-controlled intersection to experience an increase in average delay of 23 seconds or greater during both peak hours.

The recommended modification to bring this intersection back to pre-Project conditions and operate in compliance with the City's level of service policy is to install a traffic signal and convert the shared left/right lane to one left-turn lane and one right-turn lane on northbound Jefferson Drive.

The installation of a traffic signal is consistent with the City's Transportation Master Plan, which identifies traffic signal installation as a future improvement at the intersection of Chrysler Drive and Jefferson Drive. No widening or additional right of way would be required. This improvement is in the City's TIF program and the Project is required to design and construct these improvements.

With implementation of these intersection modifications, the intersection would be in compliance with the City's level of service policy and the Project's share of the non-compliant operation would be addressed.

Chrysler Drive and Independence Drive (Intersection #10)

Implementation of the proposed Project would cause the Chrysler Drive and Independence Drive intersection to operate in non-compliance with the City's level of service policy under Near Term (2040) Plus Project Conditions. The Project would cause this City-controlled intersection to experience an increase in average critical movement delay of 0.8 seconds or greater during the AM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions and operate in compliance with the City's level of service policy is to install a traffic signal, consistent with the City's Transportation Master Plan, which identifies traffic signal installation as a future improvement at the intersection of Chrysler Drive and Independence Drive. No widening or additional right of way would be required. This improvement is in the City's TIF program and the Project is required to design and construct these improvements.

With implementation of these intersection modifications, the intersection would be in compliance with the City's level of service policy and the Project's share of the non-compliant operation would be addressed .

Chilco Street and Constitution Drive (Intersection #12)

Implementation of the proposed Project would cause the Chilco Street and Constitution Drive intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this City-controlled intersection to operate at worse than LOS D during the PM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions is to install one right-turn lane on westbound Chilco Street and convert the shared through/right lane to through lane. The lane configuration in this direction would be two left-turn lanes, one through lane, and one right-turn lane. The excessive delay on southbound Constitution Drive would require an installation of one left-turn lane and a conversion of the shared left/through lane into through lane resulting in having one left-turn lane, one through lane, and one right-turn lane in this direction. The recommended modifications would require a widening on westbound Chilco Street and southbound Constitution Drive to accommodate the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to design and construct these improvements.

With implementation of these intersection modifications, the intersection would operate at LOS C during the PM peak hour and would be in compliance with the City's level of service policy and the Project's share of the non-compliant operation would be addressed.

Willow Road and Bayfront Expressway (Intersection #13)

Implementation of the proposed Project would cause the Willow Road and Bayfront Expressway intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in average movement delay of four seconds or greater during both AM and PM peak hours.

The recommended modification to bring the intersection back to pre-Project conditions is to install one left-turn lane to eastbound Willow Road. The lane configuration in this direction would be two left-turn lanes, two through lanes, and three right-turn lanes. This modification would not be consistent with Bayfront Expressway Multimodal Corridor Project in the City's Transportation Master Plan and TIF, which includes installation of an additional eastbound right-turn lane. The Project is required to design and construct these improvements. Additionally, this is subject to approval by Caltrans, which cannot be guaranteed.

With implementation of these intersection modifications, the intersection would operate better than Near Term (2025) Conditions without the Project during both AM and PM peak hours and the Project's share of the non-compliant operation would be addressed.

Willow Road and Hamilton Avenue (Intersection #14)

Implementation of the proposed Project would cause the Willow Road and Hamilton Avenue intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to install one right-turn lane on eastbound Willow Road and convert the shared through/right lane to a through lane. The lane configuration in this direction would be one left-turn lanes, two through lanes, and one right-turn lane.

The recommended modifications would require a widening on eastbound Willow Road to accommodate the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to design and construct these improvements.

With implementation of these intersection modifications, the intersection would operate better than Near Term (2025) Conditions without the Project during both AM and PM peak hours and the Project's share of the non-compliant operation would be addressed. However, these improvements are subject to review and approval by Caltrans, which cannot be guaranteed.

Willow Road and Ivy Drive (Intersection #15)

Implementation of the proposed Project would cause the Willow Road and Ivy Drive intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to convert the existing right-turn lane on southbound Ivy Drive into a right-turn overlap. The modification does not require any widening on southbound Ivy Drive and it is consistent with Willow Road Corridor Improvement Project in the City's Transportation Master Plan and subject to approval by Caltrans, which cannot be guaranteed. The improvement is in the City's TIF program and the Project is required to design and construct these improvements.

With implementation of these intersection modifications, the intersection would operate better than Near Term (2025) Conditions without the Project during both AM and PM peak hours and the Project's share of the non-compliant operation would be addressed.

Willow Road and O'Brien Drive (Intersection #16)

Implementation of the proposed Project would cause the Willow Road and O'Brien Drive intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to restripe northbound O'Brien Drive to two left-turn lanes and one right-turn lane. The recommended modifications would require a widening on northbound O'Brien Drive to accommodate the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to design and construct these improvements.

With implementation of these intersection modifications, the intersection would operate better than Near Term (2025) Conditions without the Project during both AM and PM peak hours and the Project's share of the non-compliant operation would be addressed. However, these improvements are subject to approval by Caltrans, which cannot be guaranteed.

Willow Road and Newbridge Street (Intersection #17)

Implementation of the proposed Project would cause the Willow Road and Newbridge Street intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to modify the signal timing to a protected left-turn phasing operation on Newbridge Street, provide a leading left-turn phase on southbound Newbridge Street and a lagging left-turn phase on northbound Newbridge Street, and optimize signal timing. No widening or additional right of way would be required. The signal modification would be consistent with the recommended Willow Road Corridor Improvement Project in the City's Transportation Master Plan and subject to Caltrans' approval, which cannot be guaranteed. This improvement is in the City's TIF program and the Project is required to design and construct these improvements.

With implementation of these intersection modifications, the intersection would operate better than Near Term (2025) Conditions without the Project during both AM and PM peak hours and the Project's share of the non-compliant operation would be addressed.

Willow Road and Bay Road (Intersection #18)

Implementation of the proposed Project would cause the Willow Road and Bay Road intersection to operate in non-compliance with the TIA Guidelines under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to install one left-turn on southbound Bay Road resulting in two left-turn lanes and one right-turn lane in this direction. The recommended modification would require narrowing the existing median on Bay Road to accommodate the additional lane. No widening or additional right of way would be required. The modification would be consistent with the recommended Willow Road Corridor Improvement Project in the City's Transportation Master Plan and subject to Caltrans' approval, which is not guaranteed. This improvement is in the City's TIF program and the Project is required to design and construct these improvements.

With implementation of these intersection modifications, the intersection would operate better than Near Term (2025) Conditions without the Project during both AM and PM peak hours and the Project's share of the non-compliant operation would be addressed.

Willow Road and Durham Street (Intersection #19)

Implementation of the proposed Project would cause the Willow Road and Durham Street intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in average critical movement delay of 0.8 seconds or greater during the AM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions and operate in compliance with the TIA Guidelines is to install one right-turn lane on westbound Willow Road and restripe the shared through/right lane to through lane. The lane configuration in this direction would be one left-turn lane, one through lane, and one right-turn lane. The recommended modification would require a

widening on westbound Willow Road for the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. The Project is required to design and construct these improvements. The improvements on the other approaches are beyond those in the TIF program.

With implementation of these intersection modifications, the Project's share of the non-compliant operation would be addressed.

Willow Road and Coleman Avenue (Intersection #20)

Implementation of the proposed Project would cause the Willow Road and Coleman Avenue intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in average critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions and operate in compliance with the TIA Guidelines is to install one right-turn lane on westbound Willow Road and restripe the shared through/right lane to a through lane. The lane configuration in this direction would be one left-turn lane, one through lane, and one right-turn lane. The recommended modification would require a widening on westbound Willow Road for the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. The Project is required to design and construct these improvements. The improvements on the other approaches are beyond those in the TIF program.

With implementation of these intersection modifications, the Project's share of the non-compliant operation would be addressed.

Willow Road and Gilbert Avenue (Intersection #21)

Implementation of the proposed Project would cause the Willow Road and Gilbert Avenue intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in average critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification for this location to bring this intersection back to pre-Project conditions and operate in compliance with the TIA Guidelines is to install one right-turn lane on eastbound Willow Road and restripe the shared through/right lane to through lane. The lane configuration in this direction would be one left-turn lane, one through lane, and one right-turn lane. The recommended modification would require a widening on eastbound Willow Road for the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. The Project is required to design and construct these improvements. The improvements on the other approaches are beyond those in the TIF program.

With implementation of these intersection modifications, the Project's share of the non-compliant operation would be addressed.

Willow Road and Middlefield Road (Intersection #22)

Implementation of the proposed Project would cause the Willow Road and Middlefield Road intersection to operate in non-compliance with the City's level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in average critical movement delay of 0.8 seconds or greater during the AM peak hour.

The recommended modification for this location to bring this intersection back to pre-Project conditions is to modify the existing right-turn lane on westbound Willow Road to right-turn overlap, restripe northbound Middlefield Road to include one left-turn lane, one through lane, and one right-turn lane, and restripe southbound Middlefield Road to include two left-turn lanes, one through lane, one shared through/right lane and one right-turn lane. The traffic signal for northbound and southbound directions of Middlefield Road would be modified to include protected left-turn phasing. The recommended modification would require a widening and additional right of way on Middlefield Road. In addition, the recommended lane configurations for both northbound and southbound directions on Middlefield Road would also need a design to accommodate one bike lane in each direction. The recommended modifications include one additional southbound left-turn lane on Middlefield Road and would otherwise be consistent with Willow Road Corridor Improvement Project in the City's Transportation Master Plan. This improvement is in the City's TIF program and the Project is required to design and construct these improvements.

With implementation of these intersection modifications, the Project's share of the non-compliant operation would be addressed.

University Avenue and Bayfront Expressway (Intersection #23)

Implementation of the proposed Project would cause the University Avenue and Bayfront Expressway intersection to operate in non-compliance with Caltrans level of service policy under Near Term (2025) Plus Project Conditions. The Project would cause this intersection to experience an increase in average movement delay of four seconds or greater during the PM peak hour.

The recommended modification for this location to bring this intersection back to pre-Project conditions is to add a fourth through lane and its receiving lane on eastbound Bayfront Expressway to accommodate the excessive delay in this direction. The Project is required to design and construct these improvements. With implementation of these intersection modifications, the Project's share of the non-compliant operation would be addressed. The lane addition would require right-of-way acquisition. In addition, this intersection is located within Caltrans' jurisdiction, and would be subject to Caltrans' review and approval, which cannot be guaranteed.

Table 20 provides results for the intersection LOS operations with the improvements during the AM and PM peak hours under Near Term (2025) Plus Project Conditions. The Vistro outputs are provided in Attachment 3.

Table 20: Near Term (2025) Plus Project Conditions with Improvements Level of Service

Notes:
Bold text – Indicates intersections/approaches operate at LOS not meeting LOS standard by jurisdiction.
N/A – Not applicable.

[1] The "Critical Approach" information is only relevant where the Project would increase delay per the City's LOS policy.

[2] This intersection does not meet signal warrant criteria under Near Term Conditions during both peak hours and meet signal warrant criteria under Near Term Plus Project Conditions during PM peak hour.

[3] This intersection does not meet signal warrant criteria under Near Term or Near Term Plus Project Conditions during both peak hours.

[4] Based on Menlo Park General Plan LOS Standard.

[5] Menlo Park General Plan LOS standard is applied to State-controlled intersection for consistency with the past studies in Menlo Park.

[6] Menlo Park General Plan does not specify LOS standard for this intersection. However, the City's General Plan LOS standard is applied for consistency with the past studies in Menlo Park.

Roadway Segment Level of Service

For Near Term (2025) Plus Project Conditions, the Project vehicle trips for the study CMP[28] segments were identified from the Project trip distribution assigned to each route. A difference of the turning movement volumes at the adjacent intersections between Near Term (2025) and Near Term (2025) Plus Project Conditions indicates the amount of net-new vehicle traffic that the Project would add to the study CMP segments.

Table 21 shows the Project trips estimated in percent of the segment capacity that would be added to each of the study CMP segments.

Table 21: Near Term (2025) Plus Project Conditions for Study Roadway Segments

No.	Route	Segment	Near Term (2025) Level of Service	Net-New Project Vehicle Trips[1]	Percent of Capacity
1	Bayfront Expressway (SR 84)	Bayshore Freeway (US 101) - Willow Road (SR 114)	**F**	**222**	**6.7%**
2	Bayfront Expressway (SR 84)	Willow Road (SR 114) - University Avenue (SR 109)	**F**	**74**	**2.2%**
3	Bayfront Expressway (SR 84)	University Avenue (SR 109) – Alameda County Line	F	**58**	**1.8%**
4	University Avenue (SR 109)	Kavanaugh Drive - Bayfront Expressway (SR 84)	**F**	16	0.7%
5	Willow Road (SR 114)	Bayshore Freeway (US 101) - Bayfront Expressway (SR 84)	**F**	**25**	**1.1%**
6	Bayshore Freeway (US 101)	North of Marsh Road	F	**92**	**1.0%**
7	Bayshore Freeway (US 101)	Marsh Road - Willow Road (SR 114)	F	65	0.7%
8	Bayshore Freeway (US 101)	Willow Road (SR 114) - University Avenue (SR 109)	F	65	0.7%
9	Bayshore Freeway (US 101)	South of University Avenue (SR 109)	F	10	0.1%

Note:
Bold text – Indicates segments operate exceeds LOS standard or the new Project trips are more than one percent of the segment capacity.
[1] Peak direction for either the AM or PM peak hour.

The study CMP segments listed below would continue to operate at level of service not compliant with the LOS standard established by the City/County Association of Governments (C/CAG) with addition of the Project trips. All other study CMP segments would operate in compliance with the LOS standard under Near Term (2025) Plus Project Conditions.

- Segment #1, Bayfront Expressway (SR 84) between Bayshore Freeway (US 101) and Willow Road (SR 114).
- Segment #2, Bayfront Expressway (SR 84) between Willow Road (SR 114) and University Avenue (SR 109).
- Segment #4, University Avenue (SR 109) between Bayshore Freeway (US 101) and Bayfront Expressway (SR 84).
- Segment #5, Willow Road (SR 114) between Bayshore Freeway (US 101) and Bayfront Expressway (SR 84).

[28] CMP = Congestion Management Program, which is adopted by the City/County Association of Governments of San Mateo County (C/CAG).

The proposed Project would increase traffic volume by one or more than one percent of the roadway capacity and cause CMP impacts on five roadway segments under Near Term (2025) Plus Project Conditions.

Bayfront Expressway (SR 84) segment between Bayshore Freeway (US 101) and Willow Road (SR 114) (Segment #1)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the roadway capacity.

The roadway segment level of service operations could be improved by providing additional travel lanes, e.g. from six lanes to eight lanes, to increase its capacity for serving the additional trips. This would improve the level of service of the segment to the conditions similar to or better than without Project conditions. However, a roadway widening measure could cause induced travel demand following higher roadway capacity, air quality degradation, increases in noise from additional traffic, and reductions in transit use. The lane widening also requires Caltrans' review and approval. For these reasons, the modifications may not be feasible or desirable and further study and coordination is needed before recommending these modifications as a condition of approval. In addition, the City's Transportation Master Plan also identifies multimodal corridor project along Bayfront Expressway, which would include installation of a shoulder-running peak hour bus lane and a transit signal priority (TSP)[29] at the signalized intersections along the route. This improvement could encourage transit usage along the corridor. The part-time shoulder lane is in the City's TIF program and the Project is required to pay a traffic impact fee according to the City's current TIF schedule. Therefore, payment of the TIF program fee would partially address the Project's share of changes in segment delay as a result of Project traffic. In order to bring the roadway segment back to pre-project condition, measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #1 excluding the expected number of the Project trips that would shift to bus transit mode along Bayfront Expressway should be considered.

With implementation of travel lane modifications and/or TDM measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the segment would operate at or better than Near Term (2025) Conditions.

Bayfront Expressway (SR 84) segment between Willow Road (SR 114) and University Avenue (SR 109) (Segment #2)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the roadway capacity.

The roadway segment level of service operations could be improved by providing additional travel lanes, e.g. from six lanes to eight lanes, to increase its capacity for serving the additional trips. This would improve the level of service of the segment to the conditions similar to or better than without Project conditions. However, a roadway widening measure could cause induced travel demand following higher roadway capacity, air quality degradation, increases in noise from additional traffic, and reductions in transit use. The lane widening also requires Caltrans' approval. Thus, this measure is not recommended as a condition of approval. In addition, the City's Transportation Master Plan also identifies a multimodal corridor project along Bayfront Expressway, which would include installation of a shoulder-running peak hour bus lane and a TSP at signalized intersections along the route. This improvement could encourage transit usage along the corridor. The part-time shoulder lane is in the City's TIF program and the Project is required to pay a traffic

[29] Transit Signal Priority (TSP) is a tool to modify a traffic signal timing or phasing to accommodate approaching transit vehicles in order to improve both reliability and travel time of a transit system.

impact fee according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in segment delay as a result of Project traffic. In order for the roadway segment to operate at Near Term (2025) Conditions without the Project, measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #2 excluding the expected number of the Project trips that would shift to bus transit mode along Bayfront Expressway should be considered.

With implementation of travel lane modifications and/or TDM measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the segment would operate at or better than Near Term (2025) Conditions.

Bayfront Expressway (SR 84) segment between University Avenue (SR 109) and San Mateo County Line (Segment #3)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the roadway capacity.

The roadway segment level of service operations could be improved by providing additional travel lanes, e.g. from six lanes to eight lanes, to increase its capacity for serving the additional trips. This would improve the level of service of the segment to the conditions similar to or better than without Project conditions. However, a roadway widening measure could cause induced travel demand following higher roadway capacity, air quality degradation, increases in noise from additional traffic, and reductions in transit use. The lane widening also requires Caltrans' approval, thus, this measure is not recommended as a condition of approval. In addition, the City's Transportation Master Plan also identifies a multimodal corridor project along Bayfront Expressway, which would include installation of a shoulder-running peak hour bus lane and a TSP at signalized intersections along the route. This improvement could encourage transit usage along the corridor. The part-time shoulder lane is in the City's TIF program and the Project is required to pay a traffic impact fee according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in segment delay as a result of Project traffic. In order for the roadway segment to operate at Near Term (2025) Conditions without the Project, measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #3 excluding the expected number of the Project trips that would shift to bus transit mode along Bayfront Expressway should be considered.

With implementation of travel lane modifications and/or TDM measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the segment would operate at or better than Near Term (2025) Conditions.

Willow Road (SR 114) segment between Bayshore Freeway (US 101) and Bayfront Expressway (SR 84) (Segment #5)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the roadway capacity.

The roadway segment level of service operations could be improved by providing additional travel lanes, e.g. from four lanes to six lanes, to increase its capacity for serving the additional trips. This would improve the level of service of the segment to the conditions similar to or better than without Project conditions. However, a roadway widening measure could cause induced travel demand following higher roadway capacity, air quality degradation, increases in noise from additional traffic, and reductions in transit use. The lane widening also requires Caltrans' approval, thus, this measure is not recommended as a condition of

approval. In addition, the City's Transportation Master Plan also identifies corridor improvement project along Willow Road, which would include installation of eastbound one-way class IV separated bikeway between Hamilton Avenue and Bayshore Freeway (US 101) and a westbound one-way class IV separated bikeway between the Dumbarton Rail Corridor and Bayshore Freeway (US 101). This improvement could encourage bike usage along the corridor. The bikeway installation is in the City's TIF program and the Project is required to pay a traffic impact fee according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in segment delay as a result of Project traffic. In order for the roadway segment to operate at Near Term (2025) Conditions without the Project, measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #5 excluding the expected number of the Project trips that would shift to bicycle mode along Willow Road should be considered.

With implementation of travel lane modifications and/or TDM measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the segment would operate at Near Term (2025) Conditions.

Bayshore Freeway (US 101) segment North of Marsh Road (Segment #6)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the roadway capacity.

Caltrans, SMCTA, and C/CAG are constructing express lanes on Bayshore Freeway (US 101) between the San Mateo County/Santa Clara County line and I-380. The San Mateo 101 Express Lanes project is expected to open in 2025. This improvement would reduce traffic congestion and encourage carpooling and transit use along the corridor. In addition, the TDM program proposed by the Project would also reduce the net-new Project vehicle trips on this freeway segment. In order for the segment to operate at Near Term (2025) Conditions without the Project, measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #6 excluding the expected number of the Project trips that would shift to high occupancy vehicles along Bayshore Freeway should be considered.

With implementation of travel lane modifications and TDM measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the freeway segment would operate at or better than Near Term (2025) Conditions.

Cumulative (2040) Conditions

Cumulative (2040) Conditions represent the transportation network and traffic conditions over a longer-term horizon to account for the cumulative effects of transportation network changes as well as background growth and land use development within the Project area. Intersection geometry and signal changes are incorporated into this scenario and described in the Programmed/Planned Transportation Facility Improvements section. Development Projects included in the Cumulative (2040) Conditions analysis are detailed in the Development Projects section.

Programmed/Planned Transportation Facility Improvements

The programmed/planned transportation facility improvements affecting the study intersections are the same as those identified under Near Term (2025) Conditions. The lane configurations for Cumulative (2040) Conditions are provided in Attachment 2.

The following bicycle network improvements were identified in the Comprehensive Bicycle Development Plan[30] for streets near the Project site and are anticipated to be completed prior to 2040:

- Class II bike lanes are recommended on Marsh Road, which would connect to the existing bike path next to Bayfront Expressway. These proposed bike lanes would allow bicyclists to cross US 101 safely and access the bikeway network on the west side of the freeway.

- A Class I Connector Path is recommended on Independence Drive, which would connect the planned Class II bike lanes on Marsh Road and the existing Class II bike lanes on Constitution Drive. Because Independence Drive is one-way in the southbound direction off Marsh Road, a Class I off-street connection would allow bicyclists to travel counter-flow to traffic on this short one-way roadway segment. This bike path would provide bicyclists from the Project site with safer access to the proposed bike lanes on Marsh Road.

- A new bicycle and pedestrian bridge over the Atherton Channel is recommended to extend the bike lanes and sidewalks on Haven Avenue to Marsh Road.

The Marsh Road bike lanes and Independence Drive Connector Path are identified as long-term Projects. The Marsh Road bike lanes are also identified as proposed improvements in the San Mateo County Comprehensive Bicycle and Pedestrian Plan. The implementation timeline of these proposed improvements is unknown.

The following improvements for walking and biking are identified in the Transportation Master Plan [31]:

- The Haven Avenue Streetscape Project includes pedestrian crossing improvements to the Marsh Road-Haven Avenue-Bayfront Expressway intersection. Although this Project is not in the immediate vicinity of the Project site, it will improve the overall pedestrian network in the area east of US 101. The improvements include widened sidewalks, replacement of curb ramps to comply with Americans with Disabilities Act (ADA) standards, realigning with the existing crosswalk on the northwest (Haven Avenue) leg of the intersection, and improving the existing median to provide a crossing refuge island. Additionally, as adjacent land parcels are redeveloped, new sidewalks will be constructed on the street frontages, which will improve pedestrian facilities in the general vicinity of the Project.
- Improvements to bicycle safety on Marsh Road from Bay Road to Scott Drive and from Independence Drive to Scott Drive include adding bike lanes and constructing a bicycle and pedestrian bridge over US 101. Class II Bike Lanes are proposed along both sections of Marsh Road.
- Improvements to pedestrian safety on Constitution Drive from Chrysler Drive to Chilco Street and on Jefferson Drive from Chrysler Drive to Constitution Drive include construction of sidewalks on both sides of the roadways.
- Enhancements to pedestrian and bicycle crossing along Bayfront Expressway, including high visibility pedestrian crossings along Bayfront Expressway at Chrysler Drive, Chilco Street, and Willow Road. Construction of a bicycle and pedestrian bridge is proposed over Bayfront Expressway between Chilco Street and Willow Road.

[30] Menlo Park Comprehensive Bicycle Development Plan (2005). Accessed online on July 30, 2020.

[31] City of Menlo Park. 2017. City of Menlo Park Transportation Master Plan. https://menloparktmp.participate.online/Project-map. Accessed on July 31, 2020.

- Proposed multiuse pathways on Willow Road from Dumbarton Rail Corridor to Hamilton Avenue and at Facebook from Chilco Street to the proposed bicycle and pedestrian bridge over Bayfront Expressway.
- A new bicycle and pedestrian bridge over Bayfront Expressway, east of Chilco Street.

The following improvements to transit within the study area are identified in the Transportation Master Plan[32] and are anticipated to be completed prior to 2040:

- Allow buses to use existing right turn lane on Willow Road and O'Brien Drive for queue jump with transit signal priority (TSP) and implement peak hour left-turn restrictions at Willow Road and O'Brien Drive.
- Increase mobility along the Dumbarton Corridor by supporting the reactivation of the Dumbarton rail service between the East Bay and Peninsula.
- Install shoulder-running peak hour bus lane on Bayfront Expressway and install TSP at signalized intersections.
- Increase the number of people traveling on Bayfront Expressway by removing traffic signals and converting a travel lane to a managed (toll) lane for carpools and buses. Implement the corridor with improved mixed flow and managed lane connections, including grade separations with revised access at University Avenue, Willow Road, Chilco Street, Marsh Road, and Chrysler Drive.

Caltrain's Modernization Program and related infrastructure improvements on the Caltrain corridor will also accommodate the California High-Speed Rail service as early as 2025[33].

SamTrans completed the El Camino Corridor Bus Rapid Transit Phasing Study in 2014 and is evaluating options to improve transit service along El Camino Real[34]. Recommendations include consolidating existing bus service along El Camino Real to improve reliability and frequency of routes. SamTrans will continue to work from this study to evaluate long-term transit vision for El Camino Real. Although the Project is not in the immediate vicinity of the Project site, it will improve transit service in the transportation network south of the Project.

The implementation timeline of these proposed improvements is unknown. However, these are anticipated to be completed by 2040 and are therefore assumed in the Cumulative (2040) Conditions analysis.

Development Projects

The Cumulative (2040) Conditions scenario includes all approved Projects incorporated into the Near-Term Conditions analysis, plus the cumulative development identified in the environmental impact report (EIR). The Cumulative (2040) Conditions traffic volumes includes traffic from these development Projects and a growth rate of one percent per year was applied to account for growth in regional traffic until the horizon year of 2040. The turning movement volumes under Cumulative (2040) Conditions are provided in Attachment 1.

Notes:
TWSC – Two-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
AWSC – All-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
Bold text – Indicates intersections/approaches operate at LOS not meeting LOS standard by jurisdiction.
N/A – Not applicable.
[1] The "Critical Approach" information is only relevant where the Project would increase delay per the City's LOS policy standards.
[2] This intersection does not meet signal warrant criteria under Cumulative Conditions during both peak hours.
[3] This intersection meets signal warrant criteria under Cumulative Conditions during both peak hours.

[4] Based on Menlo Park General Plan LOS Standard.
[5] Based on Caltrans LOS Policy.
[6] Based on Town of Atherton General Plan.
[7] Menlo Park General Plan LOS standard is applied to State-controlled intersection for consistency with the past studies in Menlo Park.
[8] Menlo Park General Plan does not specify LOS standard for this intersection. However, the City's General Plan LOS standard is applied for consistency with the past studies in Menlo Park.

The intersections listed below would operate at LOS exceeding the LOS standard established by the City of Menlo Park General Plan, Town of Atherton General Plan, or Caltrans LOS policy during one or both peak hours. All other study intersections would operate in compliance with the LOS standard under Cumulative (2040) Conditions.

- Intersection #1, Marsh Road and Bayfront Expressway/Haven Avenue (Local Approaches to State): AM
- Intersection #3, Marsh Road and US-101 SB Off-Ramp (State): PM
- Intersection #6, Marsh Road and Middlefield Road (Atherton): AM
- Intersection #8, Chrysler Drive and Constitution Drive (Menlo Park): AM and PM
- Intersection #9, Chrysler Drive and Jefferson Drive (Menlo Park): AM and PM
- Intersection #10, Chrysler Drive and Independence Drive (Menlo Park): AM
- Intersection #12, Chilco Street and Constitution Drive (Menlo Park): AM and PM
- Intersection #13, Willow Road and Bayfront Expressway (State): AM and PM
- Intersection #14, Willow Road and Hamilton Avenue (Local Approaches to State): AM and PM
- Intersection #15, Willow Road and Ivy Drive (Local Approaches to State): AM and PM
- Intersection #16, Willow Road and O'Brien Drive (Local Approaches to State): AM and PM
- Intersection #17, Willow Road and Newbridge Street (Local Approaches to State): AM and PM
- Intersection #18, Willow Road and Bay Road (Local Approaches to State): AM and PM
- Intersection #19, Willow Road and Durham Street (Menlo Park): AM and PM
- Intersection #20, Willow Road and Coleman Avenue (Menlo Park): AM and PM
- Intersection #21, Willow Road and Gilbert Avenue (Menlo Park): AM and PM
- Intersection #22, Willow Road and Middlefield Road (Menlo Park): AM
- Intersection #23, University and Bayfront Expressway (State): AM and PM
- Intersection #24, Middlefield Road and Ravenswood Avenue (Menlo Park): AM

- Intersection #27, Willow Road and US-101 SB Ramps (State): AM and PM
- Intersection #28, Willow Road and US-101 NB Ramps (State): AM and PM
- Intersection #29, Bay Road and Ringwood Avenue (Menlo Park): AM and PM

Manual on Uniform Traffic Control Devices peak hour signal warrant analysis was conducted at the three unsignalized intersections. The intersection of Bay Road and Ringwood Avenue (Intersection #29), which operates with all-way stop control under Cumulative (2040) Conditions, met the peak hour signal warrant during both the AM and PM peak hours. No other study unsignalized intersections met the peak hour signal warrant during either peak hour.

Roadway Segment Level of Service

For Cumulative (2040) Conditions, average daily traffic volumes for the study CMP segments were estimated using a linear forecast based on Caltrans's historical traffic data between 2013 and 2018. For purposes of this analysis, the volume-to-capacity increase from 2018 to 2040 was estimated using Caltrans's peak hour volumes data and the segment capacity provided in Table 15. The 2040 volumes were based on a linear forecast using Caltrans's historical peak hour volumes while the 2018 volumes were based on the most recent published data at the time of this study. Caltrans's peak hour volumes represent both travel directions, thus, the peak travel direction could be identified using Caltrans's directional (D) factor data. The directional (D) factor was selected from the AM peak hour, which is considered the higher peak traffic volume for all of the study segments.

Table 23 shows the resulting v/c increase and LOS for the study CMP segments under Cumulative (2040) Conditions. Roadway segment level of service is provided in Attachment 4. The LOS for Cumulative (2040) Conditions were estimated by applying the v/c increment to the equivalent v/c for the Existing Conditions LOS in Table 15. The equivalent v/c ratios are based on the v/c-LOS criteria in Table 10 for freeways and Table 11 for arterials.

The study CMP segments listed below would operate at level of service not compliant with the LOS standard established by the City/County Association of Governments (C/CAG). All other study CMP segments would operate in compliance with the LOS standard under Cumulative (2040) Conditions.

- Segment #1, Bayfront Expressway (SR 84) between Willow Road (SR 114) and University Avenue (SR 109).
- Segment #2, University Avenue (SR 109) between Bayshore Freeway (US 101) and Bayfront Expressway (SR 84).
- Segment #4, University Avenue (SR 109) between Bayshore Freeway (US 101) and Bayfront Expressway (SR 84).
- Segment #5, Willow Road (SR 114) between Bayshore Freeway (US 101) and Bayfront Expressway (SR 84).

Table 23: Cumulative (2040) Conditions for Study Roadway Segments

No.	Route	Segment	Level of Service Standard[1]	Cumulative (2040) ADT[2]	Existing v/c	v/c Increase[3]	Level of Service[4]
1	Bayfront Expressway (SR 84)	Bayshore Freeway (US 101) - Willow Road (SR 114)	D	126,887	0.8	1.38	**F**
2	Bayfront Expressway (SR 84)	Willow Road (SR 114) - University Avenue (SR 109)	E	167,467	>1	1.44	**F**
3	Bayfront Expressway (SR 84)	University Avenue (SR 109) – Alameda County Line	F	143,360	>1	0.82	F
4	University Avenue (SR 109)	Kavanaugh Drive – Bayfront Expressway (SR 84)	E	66,180	>1	1.58	**F**
5	Willow Road (SR 114)	Bayshore Freeway (US 101) – Bayfront Expressway (SR 84)	E	115,500	0.8	1.57	**F**
6	Bayshore Freeway (US 101)	North of Marsh Road	F	270,140	>1	0.11	F
7	Bayshore Freeway (US 101)	Marsh Road – Willow Road (SR 114)	F	237,907	>1	0.06	F
8	Bayshore Freeway (US 101)	Willow Road (SR 114) – University Avenue (SR 109)	F	259,760	>1	0.06	F
9	Bayshore Freeway (US 101)	South of University Avenue (SR 109)	F	250,513	>1	0.01	F

Notes: v/c – Volume-to-Capacity ratio. **Bold** text – Indicates segments operate exceeds LOS standard.

[1] See details in Section "General Plan Level of Service Standards".

[2] Cumulative (2040) ADT is based on a linear forecast using Caltrans's ADT data between 2013-2018, https://dot.ca.gov/programs/traffic-operations/census.

[3] v/c increase is based on 2018 v/c and 2040 v/c. The 2018 v/c was calculated using 2018 peak hour volume and directional (D) factor data from Caltrans while 2040 v/c was calculated using a linear forecast for 2040 peak hour volume and D factor data from Caltrans.

[4] Estimated by applying the v/c increase to equivalent v/c for the Existing LOS from San Mateo County Congestion Management Program 2019. The worst LOS is shown.

Cumulative (2040) Plus Project Conditions

Intersection Level of Service

The following analysis is based on the City's level of service policy for intersection level of service under Cumulative (2040) Plus Project Conditions.

The turning movement volumes under Cumulative (2040) Plus Project Conditions are provided in Attachment 1 and the lane configurations are provided in Attachment 2.

Table 24 provides LOS results for the study intersections during the AM and PM peak hours under Cumulative (2040) Plus Project Conditions. The Vistro outputs are included in Attachment 3.

Table 24: Cumulative (2040) Plus Project Conditions Level of Service

Notes:
TWSC – Two-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
AWSC – All-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
Bold text – Indicates intersections/approaches operate at LOS not meeting LOS standard by jurisdiction.
N/A – Not applicable.

1 The "Critical Approach" information is only relevant where the Project would increase delay per the LOS policy standards.
2 This intersection does not meet signal warrant criteria under Cumulative Conditions during both peak hours and meets signal warrant criteria under Cumulative Plus Project Conditions during the PM peak hour.
3 This intersection does not meet signal warrant criteria under Cumulative Conditions during both peak hours and meets signal warrant criteria under Cumulative Plus Project Conditions during the AM peak hour.
4 This intersection meets signal warrant criteria under Cumulative and Cumulative Plus Project Conditions during both peak hours.
5 Based on Menlo Park General Plan LOS Standard.
6 Based on Caltrans LOS Policy.
7 Based on Town of Atherton General Plan.
8 Menlo Park General Plan LOS standard is applied to State-controlled intersection for consistency with the past studies in Menlo Park.
9 Menlo Park General Plan does not specify LOS standard for this intersection. However, the City's General Plan LOS standard is applied for consistency with the past studies in Menlo Park.

The study intersections listed below would operate at a LOS exceeding the LOS standard established by the City of Menlo Park General Plan, Town of Atherton General Plan, or Caltrans LOS policy during one or both peak hours. All other study intersections would operate in compliance with the LOS standard under Cumulative (2040) Plus Project Conditions.

- Intersection #1, Marsh Road and Bayfront Expressway/Haven Avenue (Local Approaches to State): AM
- Intersection #3, Marsh Road and US-101 SB Off-Ramp (State): AM and PM
- Intersection #6, Marsh Road and Middlefield Road (Atherton): AM
- Intersection #7, Chrysler Drive and Bayfront Expressway (Local Approaches to State): PM
- Intersection #8, Chrysler Drive and Constitution Drive (Menlo Park): AM and PM
- Intersection #9, Chrysler Drive and Jefferson Drive (Menlo Park): AM and PM
- Intersection #10, Chrysler Drive and Independence Drive (Menlo Park): AM
- Intersection #11, Chilco Street and Bayfront Expressway (Local Approaches to State): AM and PM
- Intersection #12, Chilco Street and Constitution Drive (Menlo Park): AM and PM
- Intersection #13, Willow Road and Bayfront Expressway (State): AM and PM
- Intersection #14, Willow Road and Hamilton Avenue (Local Approaches to State): AM and PM
- Intersection #15, Willow Road and Ivy Drive (Local Approaches to State): AM and PM
- Intersection #16, Willow Road and O'Brien Drive (Local Approaches to State): AM and PM
- Intersection #17, Willow Road and Newbridge Street (Local Approaches to State): AM and PM
- Intersection #18, Willow Road and Bay Road (Local Approaches to State): AM and PM
- Intersection #19, Willow Road and Durham Street (Menlo Park): AM and PM
- Intersection #20, Willow Road and Coleman Avenue (Menlo Park): AM and PM
- Intersection #21, Willow Road and Gilbert Avenue (Menlo Park): AM and PM
- Intersection #22, Willow Road and Middlefield Road (Menlo Park): AM
- Intersection #23, University and Bayfront Expressway (State): AM and PM
- Intersection #24, Middlefield Road and Ravenswood Avenue (Menlo Park): AM
- Intersection #27, Willow Road and US-101 SB Ramps (State): AM and PM
- Intersection #28, Willow Road and US-101 NB Ramps (State): AM and PM
- Intersection #29, Bay Road and Ringwood Avenue (Menlo Park): AM and PM

For the MUTCD peak hour signal warrant analysis, the intersection of Chrysler Drive and Jefferson Drive (Intersection #9) would meet the peak hour warrant during the PM peak hour and the intersection of Chrysler Drive and Independence Drive (Intersection #10) would meet the peak hour warrant during the AM peak hour. The intersection of Bay Road and Ringwood Avenue (Intersection #29) would meet the peak hour warrant during both AM and PM peak hours.

The proposed Project would cause nineteen of the study intersections to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions by causing the intersections to increase either average movement delay or critical movement delay exceeding the threshold established by the City's level of service policy during at least one peak hour. The following are recommended conditions of approval to improve intersection operations to pre-Project conditions, or better.

Marsh Road and Bayfront Expressway/Haven Avenue (Intersection #1)

Implementation of the proposed Project would cause the Marsh Road and Bayfront Expressway/Haven Avenue intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during the AM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions is to restripe the through lane on Haven Avenue to a shared through/right lane resulting in having one shared left/through lane, one shared through/right lane, and one right-turn lane. No widening or additional right of way would be required. This improvement is in the City's TIF program and the Project is required to pay traffic impact fees according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in intersection delay as a result of Project traffic. The modification is subject to Caltrans's review and approval. As such, the modification may not be feasible and further study and coordination is needed before recommending this as a condition of approval.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions and would be in compliance with the City's level of service policy by reducing the increase in the average critical movement delay at the intersection by such that the increase becomes less than 0.8 seconds during the AM peak hour.

Marsh Road and US-101 SB Off-Ramp (Intersection #3)

Implementation of the proposed Project would cause the Marsh Road and US-101 SB Off-Ramp intersection to operate in non-compliance with Caltrans's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in average movement delay of four seconds or greater during the AM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions is to install one right-turn lane, restripe the existing right-turn lane to a shared left/right lane on the off-ramp of US-101, and maintain the existing two left-turn lanes. The modifications would require a widening of the southbound off-ramp and addition of a receiving lane on eastbound Marsh Road and the project is required to develop a conceptual design and pay its fair share of the cost. With implementation of these intersection modifications, the intersection would be in compliance with LOS standard and the Project's share of the non-compliant operation would be addressed. However, the modifications would be subject to review and approval by Caltrans, which cannot be guaranteed.

Chrysler Drive and Bayfront Expressway (Intersection #7)

Implementation of the proposed Project would cause the Chrysler Drive and Bayfront Expressway intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in average movement delay of 23 seconds or greater during the PM peak hour.

The recommended modification is to convert the existing right-turn lane on Chrysler Drive to a shared left/right lane resulting in having two left-turn lanes and one shared left/right lane in this direction. The project is required to develop a conceptual design and pay its fair share of the cost. With implementation of these intersection modifications, the intersection would be in compliance with LOS standard and the Project's share of the non-compliant operation would be addressed. However, the intersection is located under Caltrans' jurisdiction, and the recommended modifications would be subject to approval by Caltrans, which cannot be guaranteed.

Chrysler Drive and Constitution Drive (Intersection #8)

Implementation of the proposed Project would cause the Chrysler Drive and Constitution Drive intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this City-controlled intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during the AM and PM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions is to implement the near-term modifications. Specifically, install a left-turn lane on westbound Chrysler Drive and convert the shared left/through/right to a shared through/right lane resulting in having one left-turn lane and one shared through/right lane in this direction. The excessive delays on southbound Constitution Drive would require an installation of a right-turn lane and a conversion of the shared through/right lane to a through lane resulting in having one left-turn lane, one through lane, and one right-turn lane. The northbound Constitution Drive would require an installation of a right-turn lane and a conversion of the shared left/through/right lane to a shared left/through lane resulting in having one shared left/through lane and one right-turn lane. The recommended modification to lane configurations would require a widening of westbound Chrysler Drive and a widening of Constitution Drive on both sides of the intersection and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. The Project is required to pay the TIF program fee according to the current TIF schedule. While the improvements to the westbound approach are included in the City's TIF program, the improvements on the other approaches are beyond those in the TIF program and payment of the TIF program fee would not entirely address the change to intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions and would be in compliance with the City's level of service policy and the Project's share of non-compliant would be partially addressed through payment of the applicable TIF program fee.

Chrysler Drive and Jefferson Drive (Intersection #9)

Implementation of the proposed Project would cause the Chrysler Drive and Jefferson Drive intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this City-controlled intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and the PM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions and operate in compliance with the City's level of service policy is to implement the near-term modifications. Specifically, install a traffic signal and convert the shared left/right lane to one left-turn lane and one right-turn lane on northbound Jefferson Drive to operate at level of service in compliance with the LOS standard.

The installation of a traffic signal is consistent with the City's Transportation Master Plan, which identifies traffic signal installation as a future improvement at the intersection of Chrysler Drive and Jefferson Drive. No widening or additional right of way would be required. This improvement is in the City's TIF program and the Project is required to pay traffic impact fees according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the intersection would be in compliance with the City's level of service policy and the Project's share of the non-compliant operation would be addressed through payment of the applicable TIF program fee.

Chrysler Drive and Independence Drive (Intersection #10)

Implementation of the proposed Project would cause the Chrysler Drive and Independence Drive intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this City-controlled intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during the AM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions and operate in compliance with the TIA Guidelines is to implement near-term modifications. Specifically, install a traffic signal, consistent with the City's Transportation Master Plan, which identifies traffic signal installation as a future improvement at the intersection of Chrysler Drive and Independence Drive. No widening or additional right of way would be required. This improvement is in the City's TIF program and the Project is required to pay traffic impact fees according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the intersection would be in compliance with the City's level of service policy and the Project's share of the non-compliant operation would be addressed through payment of the applicable TIF program fee.

Chilco Street and Bayfront Expressway (Intersection #11)

Implementation of the proposed Project would cause the Chilco Street and Bayfront Expressway intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to operate at LOS E or F during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions and operate in compliance with the City's level of service policy is to modify the center left-turn lane to a shared left/right lane on Chilco Street and re-design the existing shared bike lane. The lane configuration in this direction would be one left-turn lane, one shared left/right lane, and one right-turn lane. The project is required to develop a conceptual design and pay its fair share of the cost. With implementation of these intersection modifications, the intersection would be in compliance with the LOS standard and address the Project's share of the non-compliant operation. The intersection is located under Caltrans' jurisdiction, and the recommended modifications would be subject to approval by Caltrans, which cannot be guaranteed.

Chilco Street and Constitution Drive (Intersection #12)

Implementation of the proposed Project would cause the Chilco Street and Constitution Drive intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this City-controlled intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to implement near-term modifications. Specifically, install one right-turn lane on westbound Chilco Street and convert the shared through/right lane to a through lane. The lane configuration in this direction would be two left-turn lanes, one through lane, and one right-turn lane. The excessive delay on southbound Constitution Drive would require an installation of one left-turn lane and a conversion of the shared left/through lane into a through lane resulting in having one left-turn lane, one through lane, and one right-turn lane in this direction. The recommended modifications would require a widening on westbound Chilco Street and southbound Constitution Drive to accommodate the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to pay TIF program fee according to the current TIF schedule. However, the entirety of the required improvements are beyond those in the TIF program and payment of the TIF program fee would not entirely address the Project's share of change to intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions and would be in compliance with the City's level of service policy during both AM and PM peak hours and the Project's share of non-complaint operation would be partially addressed through payment of the applicable TIF program fee.

Willow Road and Bayfront Expressway (Intersection #13)

Implementation of the proposed Project would cause the Willow Road and Bayfront Expressway intersection to operate in non-compliance with Caltrans level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most movement delay of four seconds or greater during both AM and PM peak hours.

The recommended modification for this location to bring this intersection back to pre-Project conditions is to implement near-term modifications. Specifically, install one left-turn lane to eastbound Willow Road. The lane configuration in this direction would be two left-turn lanes, two through lanes, and three right-turn lanes. This modification would be consistent with Bayfront Expressway Multimodal Corridor Project in the City's Transportation Master Plan and subject to Caltrans' approval, which cannot be guaranteed. The improvement is in the City's TIF program and the Project is required to pay traffic impact fees according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions without the Project during both AM and PM peak hours and the Project's share of non-complaint operation would be addressed through payment of the applicable TIF program fee.

Willow Road and Hamilton Avenue (Intersection #14)

Implementation of the proposed Project would cause the Willow Road and Hamilton Avenue intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to implement near-term modifications to install one right-turn lane on eastbound Willow Road and converting the shared through/right lane to a through lane. In addition to these modifications, the cumulative recommendations include installing one right-turn lane on westbound Willow Road and converting the shared through/right lane to a through lane. The lane configuration for both eastbound and westbound Willow Road would be one left-turn lane, two through lanes, and one right-turn lane. The recommended modification would require a widening on both directions of Willow Road to accommodate the additional lanes and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to pay TIF program fee according to the current TIF schedule. However, the entirety of the required improvements are beyond those in the TIF program and payment of the TIF program fee would not entirely address the Project's share of change to intersection delay as a result of Project traffic. The project is required to develop a conceptual design and pay its fair share of the cost for improvements outside of the TIF program. The intersection is located under Caltrans' jurisdiction, and the recommended modifications would be subject to approval by Caltrans, which cannot be guaranteed.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions without the Project and would be in compliance with the City's level of service policy during the AM peak hour and the Project's share of non-complaint operation would be partially addressed through payment of the applicable TIF program fee.

Willow Road and Ivy Drive (Intersection #15)

Implementation of the proposed Project would cause the Willow Road and Ivy Drive intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to implement near-term modifications. Specifically, convert the existing right-turn lane on southbound Ivy Drive into right-turn overlap. The modification does not require any widening on southbound Ivy Drive and it is consistent with Willow Road Corridor Improvement Project in the City's Transportation Master Plan and subject to Caltrans' approval, which cannot be guaranteed. The improvement is in the City's TIF program and the Project is required to pay traffic impact fees according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions without the Project during both AM and PM peak hours and the Project's share of non-complaint operation would be addressed through payment of the applicable TIF program fee.

Willow Road and O'Brien Drive (Intersection #16)

Implementation of the proposed Project would cause the Willow Road and O'Brien Drive intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in average critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to restripe northbound O'Brien Drive to two left-turn lanes and one right-turn lane. The recommended modifications would require a widening on northbound O'Brien Drive to accommodate the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to pay TIF program fee according to the current TIF schedule. However, the entirety of the required improvements are beyond those in the TIF program and payment of the TIF program fee would not entirely address the Project's share of change to intersection delay as a result of Project traffic. The intersection is located under Caltrans' jurisdiction, and the recommended modifications would be subject to review and approval by Caltrans. As such, the modifications may not be feasible and further study and coordination is needed before recommending these modifications as conditions of approval.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions without the Project during both AM and PM peak hours and the Project's share of non-complaint operation would be partially addressed through payment of the applicable TIF program fee.

Willow Road and Newbridge Street (Intersection #17)

Implementation of the proposed Project would cause the Willow Road and Newbridge Street intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to implement near-term modifications. Specifically, to modify the signal timing to a protected left-turn phasing operation on Newbridge Street, provide a leading left-turn phase on southbound Newbridge Street and a lagging left-turn phase on northbound Newbridge Street, and optimize signal timing. The signal modification would be consistent with the recommended Willow Road Corridor Improvement Project in the City's Transportation Master Plan. In addition, the excessive delay on westbound Willow Road would require an installation of one right-turn lane and a conversion of the shared through/right lane to a through lane resulting in having one left-turn lane, three through lanes, and one right-turn lane in this direction. The recommended improvements would require a curb expansion for westbound Willow Road and would be subject to approval by Caltrans. Since this improvement is subject to Caltrans' approval its implementation cannot be guaranteed . Additionally, it would potentially require acquisition of additional right-of-way and may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to pay the TIF program fee according to the current TIF schedule. However, the entirety of the required improvements are beyond those in the TIF program and payment of the TIF program fee would not entirely address the Project's share of change to intersection delay as a result of Project traffic. The project is required to develop a conceptual design and pay its fair share of the cost for improvements outside of the TIF program.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions without the Project and would be in compliance with the City's level of service policy during both AM and PM peak hours and the Project's share of non-complaint operation would be partially addressed through payment of the applicable TIF program fee.

Willow Road and Bay Road (Intersection #18)

Implementation of the proposed Project would cause the Willow Road and Bay Road intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to implement near-term modifications. Specifically, install additional left-turn lane on southbound Bay Road resulting in having two left-turn lanes and one right-turn lane in this direction. The recommended modifications would require a narrowing of the existing median on Bay Road to accommodate the additional lane. No widening or additional right of way would be required. The modification would be consistent with the recommended Willow Road Corridor Improvement Project in the City's Transportation Master Plan and subject to Caltrans' approval, which cannot be guaranteed. A portion of these improvements are included in the City's TIF program and he Project is required to pay the TIF program fee according to the current TIF schedule. However, the entirety of the required improvements are beyond those in the TIF program and payment of the TIF program fee would not entirely address the Project's share of change to intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions without the Project and would be in compliance with the City's level of service policy during both AM and PM peak hours and the Project's share of non-complaint operation would be partially addressed through payment of the applicable TIF program fee.

Willow Road and Durham Street (Intersection #19)

Implementation of the proposed Project would cause the Willow Road and Durham Street intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions is to implement near-term modifications. Specifically, install one right-turn lane on westbound Willow Road and restripe the shared through/right lane to a through lane. The lane configuration in this direction would be one left-turn lane, one through lane, and one right-turn lane. The recommended modifications would require a widening on westbound Willow Road for the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to pay the TIF program fee according to the current TIF schedule. However, the entirety of the required improvements are beyond those in the TIF program and payment of the TIF program fee would not entirely address the Project's share of change to intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions without the Project and would be in compliance with the City's level of service policy during both AM and PM peak hours and the Project's share of non-complaint operation would be partially addressed through payment of the applicable TIF program fee.

Willow Road and Coleman Avenue (Intersection #20)

Implementation of the proposed Project would cause the Willow Road and Coleman Avenue intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions and operate in compliance with the TIA Guidelines is to implement near-term modifications. Specifically, install one right-turn lane on westbound Willow Road and restripe the shared through/right lane to a through lane. The lane configuration in this direction would be one left-turn lane, one through lane, and one right-turn lane.

The recommended modifications would require a widening on westbound Willow Road for the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to pay the TIF program fee according to the current TIF schedule. However, the entirety of the required improvements are beyond those in the TIF program and payment of the TIF program fee would not entirely address the Project's share of change to intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the Project's share of the non-compliant operation would be partially addressed through payment of the applicable TIF program fee.

Willow Road and Gilbert Avenue (Intersection #21)

Implementation of the proposed Project would cause the Willow Road and Gilbert Avenue intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during both AM and PM peak hours.

The recommended modification to bring this intersection back to pre-Project conditions and operate in compliance with the TIA Guidelines is to implement near-term modifications. Specifically, install one right-turn lane on eastbound Willow Road and restripe the shared through/right lane to a through lane. The lane configuration in this direction would be one left-turn lane, one through lane, and one right-turn lane. The recommended modifications would require a widening on eastbound Willow Road for the additional lane and would potentially require acquisition of additional right-of-way. This may require traffic signal modification if traffic signal poles need to be replaced due to the widening. A portion of these improvements are included in the City's TIF program and the Project is required to pay TIF program fee according to the current TIF schedule. However, the entirety of the required improvements are beyond those in the TIF program and payment of the TIF program fee would not entirely address the Project's share of change to intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the Project's share of the non-compliant operation would be partially addressed through payment of the applicable TIF program fee.

Willow Road and Middlefield Road (Intersection #22)

Implementation of the proposed Project would cause the Willow Road and Middlefield Road intersection to operate in non-compliance with the City's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most critical movement delay of 0.8 seconds or greater during the AM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions is to implement near-term modifications. Specifically, modify the existing right-turn lane on westbound Willow Road to a right-turn overlap, restripe northbound Middlefield Road to include one left-turn lane, one through lane, and one right-turn lane, and restripe southbound Middlefield Road to include two left-turn lanes, one through lane, one shared through/right lane and one right-turn lane. The traffic signal for northbound and southbound directions of Middlefield Road would be modified to include protected left-turn phasing. The recommended modification would require a widening and additional right of way on Middlefield Road. In addition, the recommended lane configurations for both northbound and southbound directions on Middlefield Road would also need a design to accommodate one bike lane in each direction. The recommended modifications would be consistent with Willow Road Corridor Improvement Project in the City's Transportation Master Plan. This improvement is in the City's TIF program and the Project is required to pay traffic impact fees according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in intersection delay as a result of Project traffic.

With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions without the Project and would be in compliance with the City's level of service policy during the AM peak hour, and the Project's share of the non-compliant operation would be addressed through payment of the applicable TIF program fee.

University Avenue and Bayfront Expressway (Intersection #23)

Implementation of the proposed Project would cause the University Avenue and Bayfront Expressway intersection to operate in non-compliance with Caltrans's level of service policy under Cumulative (2040) Plus Project Conditions. The Project would cause this intersection to experience an increase in the most movement delay of four seconds or greater during the AM peak hour.

The recommended modification to bring this intersection back to pre-Project conditions is to implement near-term modifications. Specifically, add fourth through lane and its receiving lane on eastbound Bayfront Expressway to accommodate the excessive delay in this direction. With implementation of these intersection modifications, the intersection would operate better than Cumulative (2040) Conditions without the Project and would be in compliance with the TIA Guidelines by reducing the increase in the average critical movement delay at the intersection by such that the increase becomes less than 0.8 seconds during the AM peak hour. The lane addition would require right-of-way acquisition. The intersection is also located under Caltrans' jurisdiction, and the recommended modifications would be subject to approval by Caltrans, which cannot be guaranteed.

Table 25 provides results for the intersection LOS operations with the improvements during the AM and PM peak hours under Cumulative (2040) Plus Project Conditions. The Vistro outputs are provided in Attachment 3.

Table 25: Cumulative (2040) Plus Project Conditions with Improvements Level of Service

No.	Intersection	Control	Peak Hour	Critical Approach[1]	Cumulative		Cumulative Plus Project		Cumulative Plus Project with Improvements		Meet General Plan Standard?
					Delay	LOS	Delay	LOS	Delay	LOS	
1	Marsh Road & Bayfront Expressway (Local Approaches to State)	Signal	AM	N/A	**99.8**	**F**	**101.8**	**F**	**78.2**	**E**	No[4]

Notes:
TWSC – Two-way stop-controlled. Delay and LOS for the worst movement is reported for unsignalized intersections.
Bold text – Indicates intersections/approaches operate at LOS not meeting LOS standard by jurisdiction.
N/A – Not applicable.

[1] The "Critical Approach" information is only relevant where the Project would increase delay per the LOS policy standards.
[2] This intersection does not meet signal warrant criteria under Cumulative Conditions during both peak hours and meets signal warrant criteria under Cumulative Plus Project Conditions during the PM peak hour.
[3] This intersection does not meet signal warrant criteria under Cumulative Conditions during both peak hours and meets signal warrant criteria under Cumulative Plus Project Conditions during the AM peak hour.
[4] Based on Menlo Park General Plan LOS Standard.
[5] Based on Caltrans LOS Policy.
[6] Menlo Park General Plan LOS standard is applied to State-controlled intersection for consistency with the past studies in Menlo Park.
[7] Menlo Park General Plan does not specify LOS standard for this intersection. However, the City's General Plan LOS standard is applied for consistency with the past studies in Menlo Park.

Roadway Segment Level of Service

For Cumulative Plus Project (2040) Conditions, the Project vehicle trips for the study CMP[35] segments were identified from the Project trip distribution assigned to each route. A difference of the turning movement volumes at the adjacent intersections between Cumulative (2040) and Cumulative (2040) Plus Project Conditions indicates the amount of net-new vehicle traffic that the Project would add to the study CMP segments. Table 26 shows the net new Project vehicle trips estimated in percent of the segment capacity that would be added to each of the study segments.

[35] CMP = Congestion Management Program, which is adopted by the City/County Association of Governments of San Mateo County (C/CAG)

Table 26: Cumulative (2040) Plus Project Conditions for Study Roadway Segments

No.	Route	Segment	Cumulative (2040) Level of Service	Net-New Project Vehicle Trips[1]	Percent of Capacity
1	Bayfront Expressway (SR 84)	Bayshore Freeway (US 101) - Willow Road (SR 114)	**F**	**222**	**6.7%**
2	Bayfront Expressway (SR 84)	Willow Road (SR 114) - University Avenue (SR 109)	**F**	**74**	**2.2%**
3	Bayfront Expressway (SR 84)	University Avenue (SR 109) – Alameda County Line	F	**58**	**1.8%**
4	University Avenue (SR 109)	Kavanaugh Drive - Bayfront Expressway (SR 84)	**F**	16	0.7%
5	Willow Road (SR 114)	Bayshore Freeway (US 101) - Bayfront Expressway (SR 84)	**F**	**25**	**1.1%**
6	Bayshore Freeway (US 101)	North of Marsh Road	F	**92**	**1.0%**
7	Bayshore Freeway (US 101)	Marsh Road - Willow Road (SR 114)	F	65	0.7%
8	Bayshore Freeway (US 101)	Willow Road (SR 114) - University Avenue (SR 109)	F	65	0.7%
9	Bayshore Freeway (US 101)	South of University Avenue (SR 109)	F	10	0.1%

Note:
Bold text – Indicates segments operate exceeds LOS standard or the new Project trips are more than one percent of the segment capacity.
[1] Peak direction for either the AM or PM peak hour.

The study CMP segments listed below would continue to operate at level of service not compliant with the LOS standard established by the City/County Association of Governments (C/CAG) with addition of the Project trips. All other study CMP segments would operate in compliance with the LOS standard under Cumulative (2040) Plus Project Conditions.

- Segment #1, Bayfront Expressway (SR 84) between Bayshore Freeway (US 101) and Willow Road (SR 114).
- Segment #2, Bayfront Expressway (SR 84) between Willow Road (SR 114) and University Avenue (SR 109).
- Segment #4, University Avenue (SR 109) between Bayshore Freeway (US 101) and Bayfront Expressway (SR 84).
- Segment #5, Willow Road (SR 114) between Bayshore Freeway (US 101) and Bayfront Expressway (SR 84).

The proposed Project would increase traffic volume by one or more than one percent of the roadway capacity and cause CMP impacts on five roadway segments under Cumulative (2040) Plus Project Conditions.

Bayfront Expressway (SR 84) segment between Bayshore Freeway (US 101) and Willow Road (SR 114) (Segment #1)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the roadway capacity.

The roadway segment level of service operations could be improved by providing additional travel lanes, e.g. from six lanes to eight lanes, to increase its capacity for serving the additional trips. This would improve the level of service of the segment to the conditions similar to or better than without Project conditions. However, a roadway widening measure could cause induced travel demand following higher roadway capacity, air quality degradation, increases in noise from additional traffic, and reductions in transit use. The lane widening also requires Caltrans' approval, thus, this measure is not recommended as a condition of approval. In addition, the City's Transportation Master Plan also identifies a multimodal corridor project along Bayfront Expressway, which would include installation of a shoulder-running peak hour bus lane and a TSP at signalized intersections along the route. This improvement could encourage transit usage along the corridor. The part-time shoulder lane is in the City's TIF program and the Project is required to pay a traffic impact fee according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in segment delay as a result of Project traffic. In order for the roadway segment to operate at the same LOS as under Cumulative (2040) Conditions without the Project, measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #1 excluding the expected number of the Project trips that would shift to bus transit mode along Bayfront Expressway should be considered.

With implementation of travel lane modifications and/or TDM measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the segment would operate at or better than Cumulative (2040) Conditions.

Bayfront Expressway (SR 84) segment between Willow Road (SR 114) and University Avenue (SR 109) (Segment #2)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the roadway capacity.

The roadway segment level of service operations could be improved by providing additional travel lanes, e.g. from six lanes to eight lanes, to increase its capacity for serving the additional trips. This would improve the level of service of the segment to the conditions similar to or better than without Project conditions. However, a roadway widening measure could cause induced travel demand following higher roadway capacity, air quality degradation, increases in noise from additional traffic, and reductions in transit use. The lane widening also requires Caltrans' approval, thus, this measure is not recommended as a condition of approval. In addition, the City's Transportation Master Plan also identifies a multimodal corridor project along Bayfront Expressway, which would include installation of a shoulder-running peak hour bus lane and a TSP at signalized intersections along the route. This improvement could encourage transit usage along the corridor. The part-time shoulder lane is in the City's TIF program and the Project is required to pay a traffic impact fee according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in segment delay as a result of Project traffic. In order for the roadway segment to operate at the same LOS as under Cumulative (2040) Conditions without the Project, measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #2 excluding the expected number of the Project trips that would shift to bus transit mode along Bayfront Expressway should be considered.

With implementation of travel lane modifications and/or TDM measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the segment would operate at or better than Cumulative (2040) Conditions.

Bayfront Expressway (SR 84) segment between University Avenue (SR 109) and San Mateo County Line (Segment #3)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the roadway capacity.

The roadway segment level of service operations could be improved by providing additional travel lanes, e.g. from six lanes to eight lanes, to increase its capacity for serving the additional trips. This would improve the level of service of the segment to the conditions similar to or better than without Project conditions. However, a roadway widening measure could cause induced travel demand following higher roadway capacity, air quality degradation, increases in noise from additional traffic, and reductions in transit use. The lane widening also require Caltrans' approval, thus, this measure is not recommended as a condition of approval. In addition, the City's Transportation Master Plan also identifies a multimodal corridor project along Bayfront Expressway, which would include installation of a shoulder-running peak hour bus lane and a TSP at signalized intersections along the route. This improvement could encourage transit usage along the corridor. The part-time shoulder lane is in the City's TIF program and the Project is required to pay a traffic impact fee according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in segment delay as a result of Project traffic. In order for the roadway segment to operate at the same LOS as under Cumulative (2040) Conditions without the Project, measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #3 excluding the expected number of the Project trips that would shift to bus transit mode along Bayfront Expressway should be considered.

With implementation of travel lane modifications and/or TDM measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the segment would operate at or better than Cumulative (2040) Conditions.

Willow Road (SR 114) segment between Bayshore Freeway (US 101) and Bayfront Expressway (SR 84) (Segment #5)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the roadway capacity.

The roadway segment level of service operations could be improved by providing additional travel lanes, e.g. from four lanes to six lanes, to increase its capacity for serving the additional trips. This would improve the level of service of the segment to the conditions similar to or better than without Project conditions. However, a roadway widening measure could cause induced travel demand following higher roadway capacity, air quality degradation, increases in noise from additional traffic, and reductions in transit use. The lane widening also require Caltrans' approval, thus, this measure is not recommended as a condition of approval. In addition, the City's Transportation Master Plan also identifies a corridor improvement project along Willow Road, which would include installation of an eastbound one-way class IV separated bikeway between Hamilton Avenue and Bayshore Freeway (US 101) and westbound one-way class IV separated bikeway between Dumbarton Rail Corridor and Bayshore Freeway (US 101). This improvement could encourage a bike usage along the corridor. The bikeway installation is in the City's TIF program and the Project is required to pay a traffic impact fee according to the City's current TIF schedule. Therefore, payment of the TIF program fee would address the Project's share of changes in segment delay as a result

of Project traffic. In order for the roadway segment to operate at the same LOS as under Cumulative (2040) Conditions without the Project, measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #5 excluding the expected number of the Project trips that would shift to bike mode along Willow Road should be considered.

With implementation of travel lane modifications and/or TDM measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the segment would operate at or better than Cumulative (2040) Conditions.

Bayshore Freeway (US 101) segment North of Marsh Road (Segment #6)

The proposed Project would cause this segment to experience an increase in traffic volume by one or more than one percent of the freeway capacity.

Caltrans, SMCTA, and C/CAG are constructing express lanes on Bayshore Freeway (US 101) between the San Mateo County/Santa Clara County line and I-380. The San Mateo 101 Express Lanes project is expected to open in 2025. This improvement would reduce traffic congestion and encourage carpooling and transit use along the corridor. In addition, the TDM program proposed by the Project would also reduce the net-new Project vehicle trips on this freeway segment. In order for the segment to operate at the same or better LOS than Cumulative (2040) Conditions without the Project, the measures that would reduce peak vehicle traffic demand for the amount not less than the net-new Project vehicle trips on Segment #6 excluding the expected number of the Project trips that would shift to high occupancy vehicles along Bayshore Freeway should be considered.

With implementation of travel lane modifications and measures to reduce the Project peak directional vehicle trips to one or less than one percent of the directional capacity, the freeway segment would operate at or better than Cumulative (2040) Conditions.

As stated above, level of service (LOS) is no longer a CEQA threshold. However, the City's TIA Guidelines require that the LOS is retained as a local metric in compliance with the City's General Plan. Actions to address LOS compliance would be incorporated as conditions of approval, but would not be CEQA-required mitigation measures. As such, the recommended modifications identified in the LOS analysis section would not be imposed as mitigations. However, decision makers will need to consider whether they are necessary to make the required findings. The implementation of the recommended conditions of approval would not result in substantial changes to VMT associated with the Project and would not result in secondary effects or contribute to impacts under CEQA. Additionally, as noted above, some of the intersection modifications identified may be undesirable because they would increase roadway capacity, require right-of-way acquisition, or require approval by a different jurisdiction.

1. Introduction and Project Description

Transportation Demand Management (TDM) is a combination of services, incentives, facilities, and actions that reduce single-occupant vehicle (SOV) trips to help relieve traffic congestion, parking demand, and air pollution problems. The purpose of TDM is to promote more efficient utilization of existing transportation facilities, and to ensure that new developments are designed to maximize the potential for sustainable transportation usage. This TDM Plan has been prepared for the proposed Building 3 at the Commonwealth Corporate Center on Jefferson Drive in Menlo Park, California, in order to plan and implement effective and appropriate TDM measures, based on the project's size, location, and land use.

Project Description

The Commonwealth Corporate Center site includes two recently constructed four-story office buildings, each with approximately 130,000 square feet. A TDM Plan was prepared in 2014 for these two office buildings, both of which are now occupied. The proposed project is a third office building on the site, which would include four stories and 249,500 square feet. The proposed project also includes a four-story parking structure, with one partial level below grade. The proposed site plan is shown on Figure 1.

The project site location and the surrounding study area are shown on Figure 2. The site includes a 10.1-acre parcel located on Commonwealth Drive and 1.77-acre and 1.17-acre parcels for the existing buildings on-site. The parcels are connected by a common boundary of approximately 80 feet where a roadway and pedestrian walkway provide access to the larger parcel from Jefferson Drive. Access is also provided from Commonwealth Drive, which terminates at the project driveway on the western corner of the site.

With the addition of the four-story parking structure, with one partial level below grade, the project site will include a total of 1,531 parking spaces to serve all three buildings. The proposed parking structure will provide 1,340 spaces, of which 10 will be accessible and 2 will be van accessible. A total of 191 at-grade parking spaces will also be provided, of which 11 will be accessible and 3 will be van accessible. In total, the project would provide 26 ADA parking spaces which includes 5 van accessible spaces. Of the 1,531 total parking spaces, 54 will be designated for vanpools, clean air vehicles, and electric vehicles, 100 will include electric vehicle (EV) charging stations, and an additional 67 spaces will be EV-capable to allow for future charging stations. The stalls with EV charging stations will include 2 that are accessible and 2 that are van accessible. The proposed project will add 15 Class I onsite bike lockers ,45 Class I protected storage spaces within the parking structure, and 22 short-term bike parking spaces. There are currently 24 Class I spaces and 26 Class 2 bike racks provided for the existing buildings. In total, the project will provide 132 bicycle parking spaces.

TDM Requirement

Menlo Park Requirement for Office District

The City of Menlo Park requires that all new projects in the Office zoning district prepare TDM plans that will reduce vehicle trips by 20% from standard trip generation rates (Menlo Park Municipal Code Section 16.43.100). This requirement was adopted in 2016, and so was not in place when the TDM Plan for Buildings 1 and 2 was prepared in 2014. This plan has been prepared with the goal of achieving at least a 20% reduction for Building 3 based on the trip generation estimates from the Environmental Impact Report (EIR) for Buildings 1 and 2 and draft EIR for Building 3.

Note that while information about the two existing buildings on site will be referenced and discussed, for the purpose of this TDM Plan, it is assumed that all measures are applicable to Building 3 only. Nonetheless, given all three buildings on site will share the same parking facilities and likely that employees who rideshare to the site together may work in different buildings, it is recommended that the program monitoring details be discussed between the applicant and the city, prior to project approval.

Since the Commonwealth Corporate Center will include a total of 509,420 square feet of office space (the sum of all three buildings), it is estimated to generate 1,022 AM peak hour trips and 1,104 PM peak hour trips, as shown in Table 1. These trip generation estimates were based on the estimated number of employees at the site, assuming five employees per 1,000 square feet for Buildings 1 and 2 and one employee per 125 square feet for Building 3.

The PM peak hour is generally the most congested time period of the day and is typically used as the basis for TDM reduction requirements. As shown in Table 1, in order to meet the City's 20% reduction requirement, at least 112 PM peak hour trips would need to be eliminated through implementation of the various TDM measures. Stated conversely, the three buildings combined would be required to generate no more than 992 PM peak hour trips.

Citywide Requirement

In addition to the City of Menlo Park's TDM requirement for the Office zoning district, the City adopted TDM Program Guidelines in 2015 that apply to the entire City. The citywide guidelines are based on the TDM guidelines prepared by the City/County Association of Governments of San Mateo County (C/CAG). The TDM Plan for Buildings 1 and 2 on the site was prepared in accordance with the C/CAG requirement that if a project generates 100 or more peak hour trips "local jurisdictions must ensure that the developer and/or tenants will reduce the demand for all new peak hour trips (including the first 100 trips) projected to be generated by the development." According to C/CAG's TDM Policy Update Approach (Updated September 2021), any new office project greater than 50,000 square feet that is anticipated to generate at least 500 average daily trips must complete a TDM Checklist and implement associated measures. C/CAG has developed a system of calculating vehicle trip reduction percentages for various TDM measures. This plan also tabulates the total trip reduction percentage that the proposed measures would receive, in accordance with the updated C/CAG methodology.

Table 1
Estimated Peak-Hour Trip Generation and Required TDM Reduction

Land Use	Size		Employees [1]	Daily Rate	Daily Trips	AM Peak Hour				PM Peak Hour			
						Peak Rate[2]	Trips In	Trips Out	Total Trips	Peak Rate[2]	Trips In	Trips Out	Total Trips
Office Space - Buildings 1 and 2	259,920	s.f.	1,300	2.95	3,839	0.47	533	73	606	0.42	92	450	542
Office Space - Building 3	249,500	s.f.	1,996	2.69	5,373	0.21	345	71	416	0.28	112	450	562
					9,212		878	144	1,022		204	900	1,104
20% Required Reduction					(1,075)		(69)	(15)	(83)		(22)	(90)	(112)
Maximum Permitted Trips With TDM Plan					8137		809	129	939		182	810	992

Notes:

[1] Number of employees is based on 5 employees per 1,000 square feet for Buildings 1&2 and 1 employee per 125 s.f. for Building 3.

[2] Trip rates for general office space (land use 710) are from Institute of Transportation Engineers' *Trip Generation Manual, 9th Edition*, 2012 for Buildings 1 and 2. Trip rates for general office space (land use 710) are from Institute of Transportation Engineers' Trip Generation Manual, 10th Edition, 2016 for Building 3. Rates are based on fitted curve equation for trips per employee.

Report Organization

The remainder of this report is divided into two chapters. Chapter 2 describes the transportation facilities and services in the vicinity of the project site. Chapter 3 presents the TDM measures that will be implemented for the Commonwealth Corporate Center, including the program for implementing and monitoring the TDM Plan.

2. Transportation Facilities and Services

Transportation facilities and services that support sustainable modes of transportation include commuter rail, buses and shuttle buses, bicycle facilities, pedestrian facilities, and high-occupancy vehicle (HOV) lanes. This chapter describes existing and planned facilities and services near the Commonwealth Corporate Center site. Information on nearby roadways are also included in order to provide a more comprehensive description of the nearby transportation network.

Roadway Network

Regional access to the project site is provided via US 101 and State Route 84.

US 101 is an eight-lane freeway that is adjacent to the southern boundary of the project site. It extends north through San Francisco and south through Gilroy. In Menlo Park, US 101 is eight lanes wide, including two express lanes, one in each direction. US 101 provides access to the project site via a full-access interchange at Marsh Road.

State Route 84 is known as Bayfront Expressway in the vicinity of the project site. Bayfront Expressway extends from Marsh Road to the Dumbarton Bridge and provides access to the East Bay. Bayfront Expressway is a six-lane divided roadway and is paralleled by a Class I bicycle/pedestrian path.

Local access to the site is provided via Marsh Road, Independence Drive, Chrysler Drive, Commonwealth Drive, and Jefferson Drive. These roadways are described below and shown in Figure 2 in the previous chapter.

Marsh Road begins at Middlefield Road and extends to Bayfront Expressway. It is a four-lane divided arterial and includes a full interchange at US 101.

Independence Drive provides access from Marsh Road to the office park where the project site is located. It is a two-lane local roadway and includes a sharp turn near its intersection with Marsh Road.

Chrysler Drive is a two-lane local roadway that is perpendicular to Independence Drive, Commonwealth Drive, and Jefferson Drive. It extends from Commonwealth Drive to Bayfront Expressway (SR 84).

Commonwealth Drive is a very short two-lane local roadway that provides direct access to the project site. It begins at Chrysler Drive and ends at the driveway to the Commonwealth Corporate Center.

Jefferson Drive is also a two-lane local roadway that provides direct access to the project site. It begins at Chrysler Drive and terminates at Constitution Drive.

Transit Services

Caltrain Commuter Rail

Caltrain provides commuter rail service between San Francisco and San Jose, with limited service to Gilroy during commute hours. The closest Caltrain station to the project site is the Menlo Park Station, located on Merrill Street between Oak Grove Avenue and Ravenswood Avenue, near El Camino Real.

The Menlo Park Station is located approximately 3.4 miles from the project site. This distance is not considered a reasonable walking distance, and, while it is a reasonable bicycling distance, US 101 provides a significant barrier to bicycle access to the site. The Menlo Park Caltrain station is located near the central business district of Menlo Park and includes 155 parking spaces. Daily and monthly parking permits may be purchased from three ticket vending machines available at this station. In addition, there are 8 bike racks and 50 spaces in a shared access bike storage shed available.

During the morning peak period from 6:00-10:00 AM, the Menlo Park Station is served by three limited-stop northbound trains and four local northbound trains, with headways between 24 and 36 minutes. In the southbound direction, there are nine trains during the AM peak period, of which four provide local-stop service and five provide limited-stop service. Headways in the southbound direction in the morning range from 19 to 36 minutes. The four local northbound trains and four local southbound trains that arrive between 6:34 and 9:38 AM are scheduled to provide timed transfers to four local shuttle services, described further below.

In the northbound direction during the afternoon peak period between 3:00 and 7:00 PM, the Menlo Park station is served by four local-stop trains and five limited-stop trains, with headways between 20 and 36 minutes. In the southbound direction, there are four local-stop and three limited-stop trains during the PM peak period, with headways ranging from 23 to 36 minutes. Timed transfers from local shuttles are provided to six trains that operate between 4:34 and 6:36 PM.

The next Caltrain stop to the north is the Redwood City station. Although it is located nearly 5 miles from the project site, it is accessible via SamTrans Route 270. The next Caltrain stop to the south is the Palo Alto station. Both the Redwood City and the Palo Alto stations are served by more baby bullet (express) trains than the Menlo Park station.

Marsh Road Shuttle

Primary access to the project site from the Menlo Park Caltrain station is provided by the Marsh Road Shuttle, which is a free shuttle service with timed connections to many of the AM and PM peak period trains in both the northbound and southbound directions. The shuttle operates in a loop through the Marsh Road business park. There are stops at 149 Commonwealth Drive and at 180 Jefferson Drive; both stops are less than 500 feet from the project site. Based on the schedule, the shuttle takes about 19 minutes to travel from the Caltrain station to the stop at 180 Jefferson Drive. In the afternoon, because the project site is one of the first stops in the loop, the shuttle takes about 32 minutes to travel from the Jefferson Avenue stop to the Caltrain station.

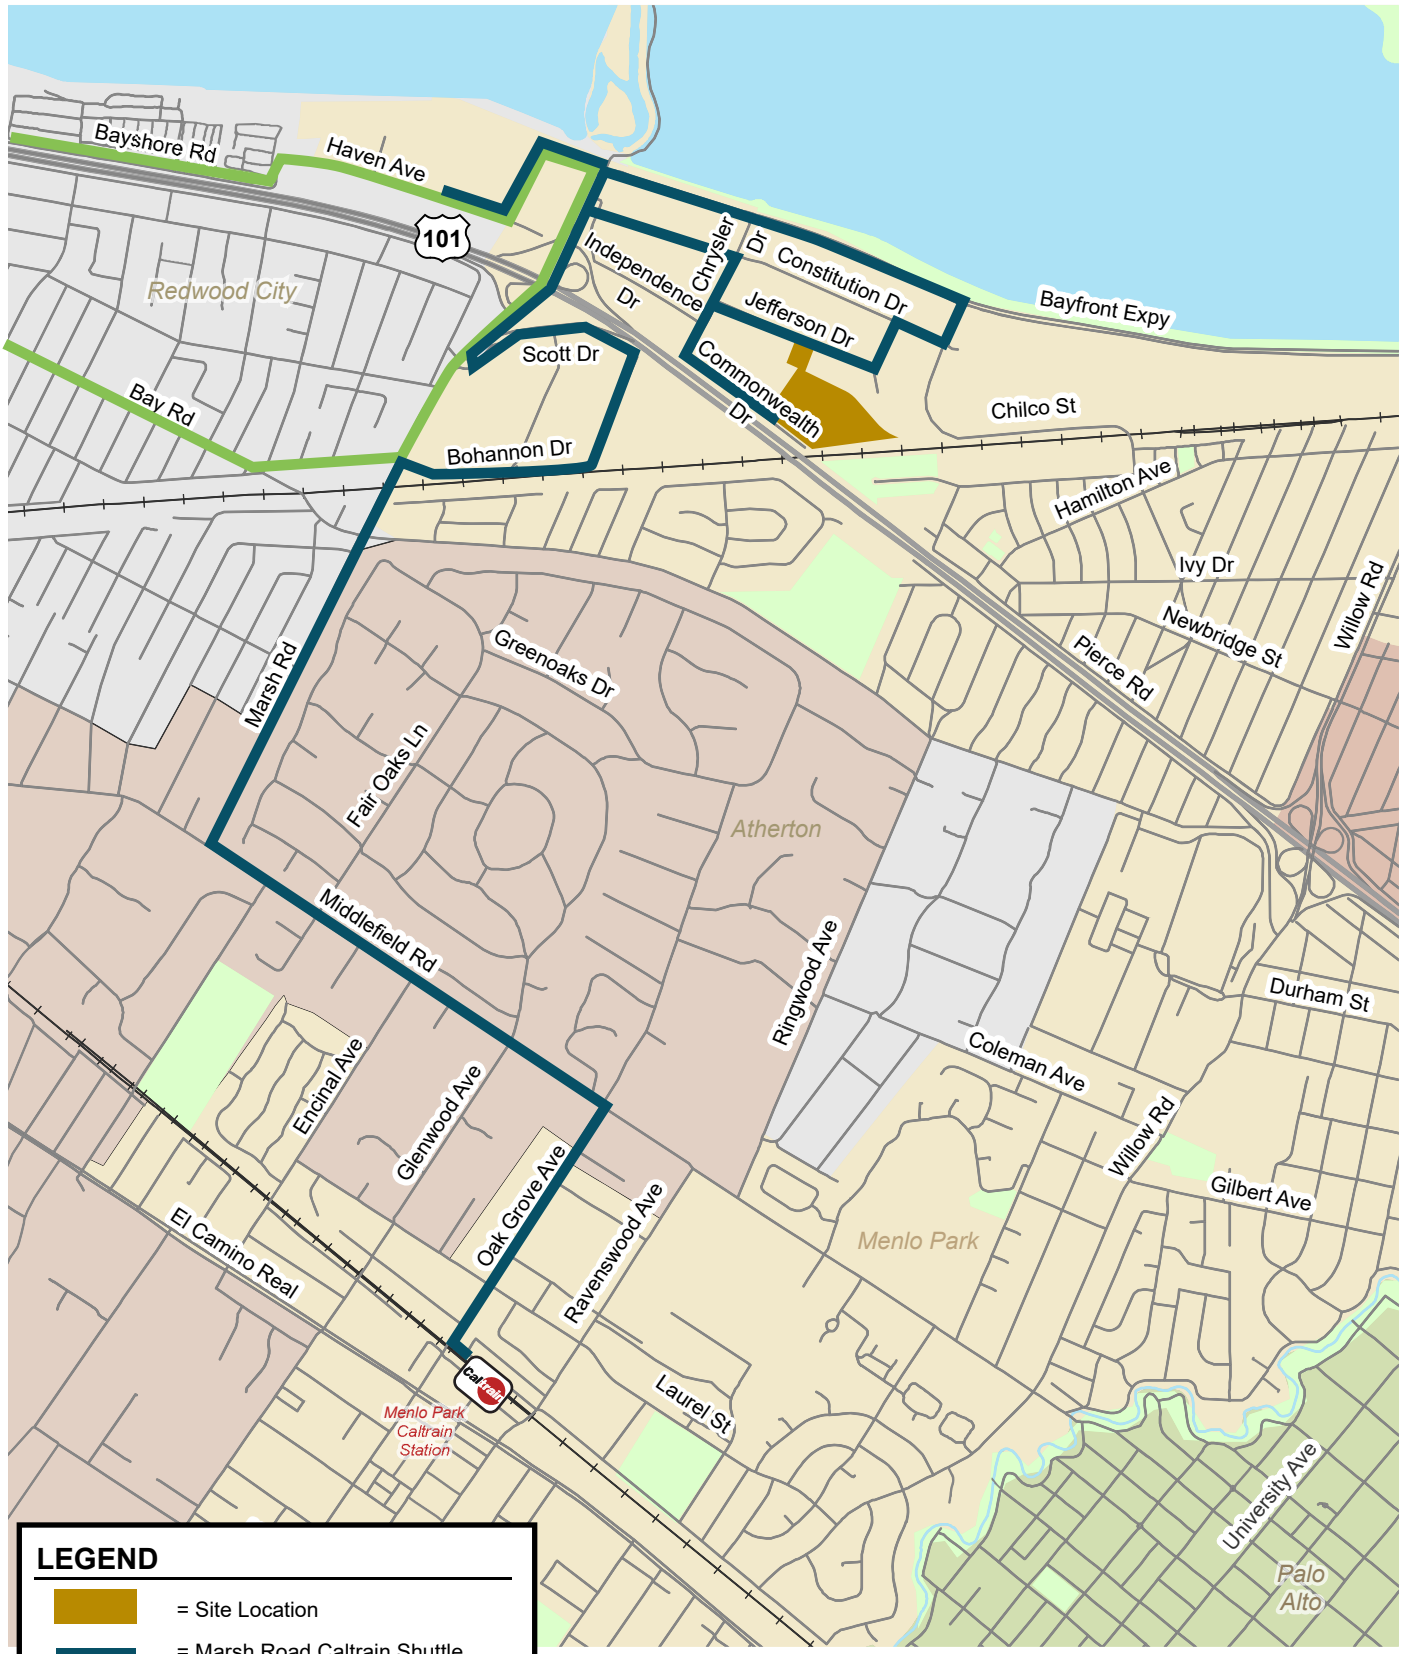

Figure 3
Existing Transit Services

In the morning, there are four shuttle trips between the Caltrain station and the Marsh Road office area that are timed to meet trains in both the northbound and southbound directions. For example, the shuttle run that departs the station at 7:41 AM is intended to collect Caltrain riders from the northbound train arriving at 7:34 and from the southbound train arriving at 7:36.

In the afternoon, there are three shuttle trips, which are designed to allow commuters to arrive at the station roughly 7-9 minutes before the next train's departure. For example, the shuttle that arrives at the station at 5:27 PM is intended to allow passengers to transfer to the 5:34 northbound train and the 5:36 southbound train. This scheduling provides a cushion for passengers to transfer to their train if there are traffic delays.

The Marsh Road Shuttle is funded jointly by the City of Menlo Park, the Bay Area Air Quality Management District (BAAQMD), the Peninsula Corridor Joint Powers Board (Caltrain), and the City/County Association of Governments of San Mateo County (C/CAG). The shuttle is free and open to everyone.

SamTrans Bus Service

SamTrans Route 270, the Redwood City Loop, provides service to the Marsh Road office area. A bus stop is located on Haven Avenue, approximately 0.8 miles from the project site. Route 270 operates in a loop between the Redwood City Caltrain Station, Redwood Plaza/City Hall, Kaiser Hospital, southbound along Broadway and Bay Road, across US 101 to the Marsh Road business park area, northbound along Bayshore Road, back across US 101 on Maple Street, and then returning to the Redwood City Caltrain Station. Route 270 operates with 60-minute headways on weekdays and Saturdays.

Bicycle Facilities

Bicycle facilities are an important component of the City of Menlo Park's transportation network. The City's bikeways are classified as Class I, Class II, or Class III facilities, as follows:

- Class I Bicycle Path – bike paths within exclusive right-of-way, sometimes shared with pedestrians
- Class II Bicycle Lane – bike lanes for bicycle use only that are striped within the paved area of roadways
- Class III Bicycle Route – bike routes are shared with motor vehicles on the street. Class III bikeways may also be defined by a wide curb lane and/or use of a shared use arrow stencil marking on the pavement, known as a "sharrow"

Bike Paths:

- Chilco Street between the Menlo Park Fire District Station No. 77 and Constitution Drive
- The Bay Trail along University Avenue north of Purdue Avenue
- Recreational trails at Bedwell Bayfront Park, Facebook along Hacker Way, and on the Bay Trail near Ravenswood Preserve

Bike Lanes:

- Haven Avenue between Sleepy Hollow Ln and Haven Court
- Chrysler Drive between Independence Drive and Bayfront Expressway
- Constitution Drive between Independence Drive and Chilco Street
- Chilco Street between Constitution Drive and Bayfront Expressway

- Willow Road between Bayfront Expressway and Bay Road south of US 101
- University Avenue between Donohoe Street and Bayfront Expressway
- Bay Road on the south side of US 101
- Jefferson Drive between Chrysler Drive and Constitution Drive

Bike Routes:

- Independence Drive between Constitution Drive and Chrysler Drive
- Market Place between Hamilton Avenue and Newbridge Street
- Ivy Drive between Market Place and Almanor Avenue
- Hamilton Avenue between Market Place and Chilco Street

The following improvements to the City's bicycle facilities have been proposed in its Transportation Master Plan:

- Class II bike lanes have been planned for Marsh Road, which would connect to the existing bike path next to Bayfront Expressway. These proposed bike lanes would allow bicyclists to cross US 101 safely and access the bikeway network on the west side of the freeway. The Marsh Road bike lanes also would connect to Haven Avenue, where a northbound route to Redwood City is also planned.

- The Haven Avenue Streetscape Project will provide new bicycle and pedestrian facilities to Haven Avenue, connecting the San Francisco Bay Trail, Marsh Road, and the neighborhood along Haven Avenue. The project includes Class II bicycle lanes on Haven Avenue and green treatments in vehicle-bicycle interaction zones. A new bicycle and pedestrian bridge over the Atherton Channel is also included in the project.

- The Willow Road/U.S. 101 Interchange Project was recently reconstructed to provide a wider bridge, with sidewalks and bike lanes in both directions, and protected bike paths on both sides. Until the bike improvements on the Marsh Road overcrossing (described above) are constructed, Willow Road will serve as a preferred route for cyclists crossing over Highway 101. From Willow Road, cyclists could use the Class I path next to the Bayfront Expressway or Chilco Street to access the business park where the project is located.

The Marsh Road bike lanes are identified as long-term projects. The Marsh Road bike lanes are also identified as proposed improvements in the San Mateo County Comprehensive Bicycle and Pedestrian Plan. It is not known when the proposed improvements will be constructed. Design work on the Haven Avenue Streetscape Project is complete, and the tentative construction start time is spring 2022. The Class II bike lanes on Haven Avenue between Haven Court and Sleepy Hollow Lane have already been constructed.

On the site of the Commonwealth Corporate Center itself, 20-foot wide paseos, 10-foot wide paseo paths, and 4- to 6-foot wide paths have been incorporated into the site plan. As shown on Figure 5, three 10-foot wide paths have been or will be constructed, as follows:

- On the western edge of the site, extending from the point where Commonwealth Drive terminates, a 10-foot path parallel to US 101 has been constructed.
- Another 10-foot path along the northern edge of the site adjacent to the adjoining parcel on Commonwealth Drive will be provided.
- Next to the roadway that leads into the site from Jefferson Drive, a third paseo and 10-foot path is provided, completing the connection between Jefferson Drive and Commonwealth Drive.

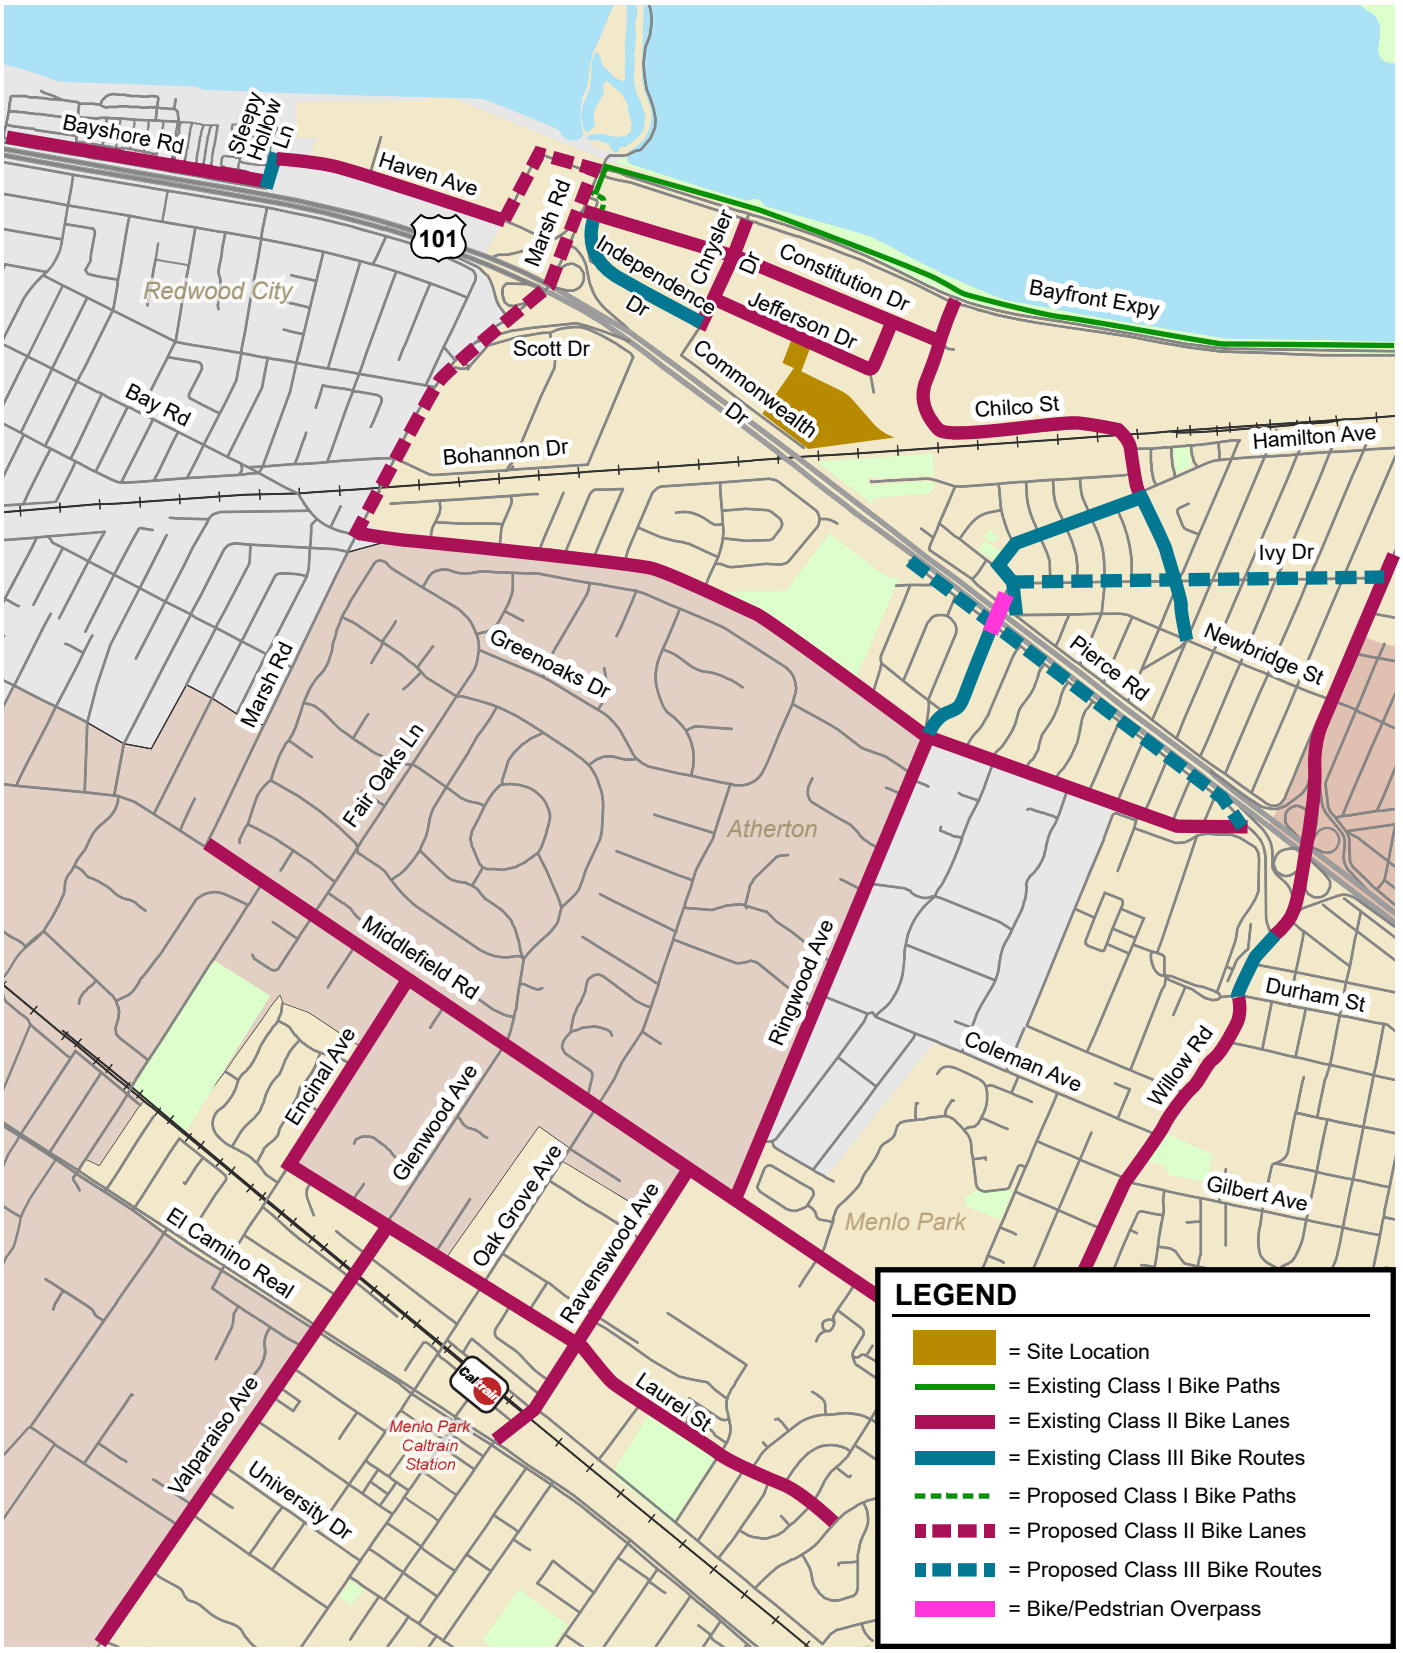

Figure 4
Existing and Proposed Bicycle Facilities

Figure 5
On-Site Bike and Pedestrian Paths

NORTH
Not to Scale

Additional paths will be constructed as part of the Building 3 project on the perimeter of the site and will provide a connection to a future path leading from the location where the site tapers to a point adjacent to the old railroad right-of-way.

Bike racks and lockers have also been provided to serve employees and visitors who bicycle to Buildings 1 and 2. As part of the proposed Building 3 project, additional short-term and long-term bicycle parking will be provided, as further described in Chapter 3.

Pedestrian Facilities

The project is located in an area of office, R&D, and light industrial buildings. The pedestrian facilities in the general vicinity of the Commonwealth Corporate Center project have improved over the last few years. Continuous sidewalks are present on one side of Jefferson Drive, Chrysler Drive, and Independence Drive. Sidewalks are present on the east side of Commonwealth Drive in front of the two large office buildings to the north of the project site.

On the site of the Commonwealth Corporate Center itself, walkways have been constructed to facilitate site circulation as part of the Buildings 1 and 2 project. As noted above, 10-foot paseo paths and pedestrian paths have been or will be provided along the edge of the site adjacent to US 101, the edge of the site next to the adjoining Commonwealth Drive parcel, and parallel to the roadway that leads from Jefferson Drive to the office buildings. Additional paths have been constructed along the edge of the site that abuts a railroad right-of-way and the edge of the site that adjoins the rear of the parcels with frontage on Jefferson Drive. Figure 5 shows the network of public paseos and paths throughout the site.

As described in the preceding section on bicycle facilities, the Haven Avenue Streetscape Project also includes enhanced pedestrian crossing improvements to the Marsh Road-Haven Avenue-Bayfront Expressway intersection. Although this project is not in the immediate vicinity of the project site, it will improve the overall pedestrian network in the area east of US 101. The improvements include widened sidewalks, replacement of curb ramps to comply with current ADA standards, realigning the existing crosswalk on the northwest (Haven Avenue) leg of the intersection, and improving the existing median to provide a crossing refuge island.

3. Proposed TDM Measures

As described in Chapter 1, this plan has been developed to meet both the requirements set forth in Sec.16.43.100 of the Menlo Park municipal code [1] for the office zoning district and the citywide TDM requirement set forth in the City of Menlo Park's TDM Guidelines,[2] which are based on the program developed by the City/County Association of Governments of San Mateo (C/CAG).

Based on C/CAG's *Draft Transportation Demand Management Policy Update Approach* updated September 1, 2021, and the *Implementation Guide* dated March 2021, any new office project greater than 50,000 square feet that is anticipated to generate at least 500 average daily trips (ADT) is subject to the TDM Policy and must complete a TDM Checklist and implement associated measures to mitigate traffic impacts. The proposed project would generate 5,373 net daily trips. Therefore, a TDM Checklist is required as a Condition of Approval for the project. The recommended vehicle trip reduction target for transit proximate large office projects is 33 points, which is equivalent to a 35% reduction. While the C/CAG goal is 33 trip reduction points, the project will be evaluated based on the City requirement for a 20% trip reduction. The project is considered transit proximate, which is described as a project located between 0.5 and 3 miles of high-quality transit. A high-quality transit area provides fixed route bus services with headways of 15 minutes or less during peak hours.

To accomplish the reduction goal, C/CAG provides a list of potential TDM measures. C/CAG identifies certain TDM measures that are required for all projects and additional measures that can be implemented to reach trip reduction goals. Each measure has an associated point value and reduction percentage. Based on the updated C/CAG TDM policy, the project must first fulfill all required measures prior to selecting a sufficient number of additional recommended measures to achieve the minimum 33 trip reduction points.

The TDM measures proposed for the Commonwealth Corporate Center are consistent with the measures outlined in C/CAG's TDM Guidelines. They include programs and services that promote sustainable modes of transportation and reduce the number of single-occupant vehicle trips generated by the project. Some of the proposed TDM measures are programs that would be created and implemented by tenants.

As noted in Chapter 1, this TDM Plan is intended to apply to Building 3. TDM measures that were included in the TDM Plan for Buildings 1 and 2 will remain for those buildings. Although the proposed

[1] City of Menlo Park Municipal Code, Section 16.43.100, "Transportation demand management." Adopted December 6, 2016.
[2] City of Menlo Park, "Transportation Demand Management (TDM) Program Guidelines," Adopted July 21, 2015.

project is comprised of only Building 3 and the parking structure, monitoring of the TDM program will include entire campus, since it will not be possible to distinguish between vehicles entering the site to go to Building 3 versus Buildings 1 and 2.

As shown in Table 2, the project will exceed the reduction goal of 33 points with the TDM measures included in this plan. Based on C/CAG numbers, the TDM Plan would achieve 38 points. Therefore, it is estimated that the TDM Plan will be successful in meeting Menlo Park's 20% peak hour trip reduction requirement for the Office district. C/CAG requires the following for large non-residential projects:

- Complete a follow-up TDM survey biennially for the first six (6) years after occupancy and triennially after the sixth year of occupancy.

Table 2 provides a summary of all the measures in the program for which the project can receive credit in accordance with the C/CAG TDM Guidelines. It should be noted that there are some measures included in this plan, such as site location or outdoor seating amenities, for which C/CAG does not provide trip credits.

In addition to this citywide requirement, there is a specific requirement for the Office zoning district that new construction involving 10,000 or more square feet of gross floor area "shall develop a TDM Plan necessary to reduce associated vehicle trips to at least twenty percent (20%) below standard generation rates for uses on the project site." As noted in Chapter 1, the 20% reduction requirement would be applied to the 562 PM peak-hour trip estimate shown in Table 1, such that the project would be allowed to generate no more than 992 PM peak-hour trips. The two transit-oriented elements shown in Table 2, the shuttle service to the Caltrain station and the Caltrain Go Pass program, will likely serve as key measures for achieving the 20% trip reduction goal, by facilitating a higher transit mode share.

Table 2
C/CAG Reductions for the Commonwealth Corporate Center TDM Program

Cateogry	Measure	Provided by Project (Y/N)	Point Value	Estimated Trip Reduction Percentage
Required TDM Measures (Transit Proximate)				
Parking Management for Ridesharing	Free/Preferential Parking for Carpools	Y	1	1.0%
TDM Management and Admin	TDM Coordinator/Contact Person	Y	1	0.5%
	Actively Participate in Commute.org, or Transportation Management Association (TMA) Equivalent	Y	13	16.5%
	Certified participation in Commute.org, or equivalent program such as TMA	Y	*2*	*4.0%*
	Commute assistance and ride-matching	Y	*4*	*1.0%*
	Shuttle Program/Shuttle Consortium/Fund Transit Service	Y	*5*	*10.0%*
	Guaranteed Ride Home	Y	*1*	*0.5%*
	Orientation, Education, Promotional Programs and/or Materials	Y	*1*	*1.0%*
Shuttles, Transit, and Ridesharing	Carpool or Vanpool Program	Y	3	2.0%
	Transit or Ridesharing Passes/Subsidies	Y	8	10.0%
	Pre-Tax Transportation Benefits	Y	3	1.0%
Active Transportation	Secure Bicycle Storage	Y	1	1.0%
	Showers, Lockers, and Changing Rooms for Cyclists	Y	2	2.0%
Site Design Initiatives	Design Streets to Encourage Bike/Ped Access	Y	1	1.0%
Required TDM Measures Total (Transit Proximate)			**33**	**35.0%**
Addtional TDM Measures (Transit Proximate)				
Employee Programs	Flex Time, Compressed Work Week, Telecommute	Y	5	5.0%
Additional TDM Measures Total (Transit Proximate)			**5**	**5.0%**
Required & Additional TDM Measures Total			**38**	**40.0%**

Transit Elements

Marsh Road Shuttle to Caltrain Station

As described in the preceding chapter, the Marsh Road Shuttle service operates between the project site and the Menlo Park Caltrain station during the peak commute periods. The current AM shuttle schedule is coordinated with the train schedule such that the shuttle departs after one southbound and one northbound train arrives at the station. Passengers from the first train must wait for the later trains to arrive at the station before the shuttle departs for the Marsh Road office area. Conversely, the PM shuttle service is scheduled to arrive at the Menlo Park station approximately seven minutes prior to the arrival of the next northbound train, thereby allowing the shuttle some leeway if there are traffic delays. Shuttle passengers planning to take the next southbound train must wait 2 minutes longer.

Provision of additional shuttle service would reduce passengers' transfer time by coordinating with the schedule of train trips for which one now has to wait for the shuttle to depart the Menlo Park station (in the morning) or wait for a train (in the afternoon). Based on the size of all three buildings, the Commonwealth Corporate Center will be required to pay an annual shuttle fee of $0.105 per square foot, for a total of $53,489. The City of Menlo Park will determine if and when sufficient funds are available to increase the Marsh Road Shuttle service. Future tenants can provide shuttles to waive the shuttle fee.

For the purpose of this report, the shuttle fee was equated to the 2019 cost of a 28-passenger shuttle van to calculate the potential increase in passenger round trips that may be funded by the project. In order to provide roundtrip service for a passenger, the shuttle must provide a trip in both the AM and PM peak hours. Based on cost data provided by City staff in 2019, the project's contribution of $53,489 would cover 117% of the annual cost of one AM and one PM shuttle run of a 28-passenger shuttle van. The additional shuttle runs that may be funded by the project will not only add to the capacity of the service, they will increase the convenience for many passengers by reducing the transfer time between Caltrain and the shuttle. Based on the C/CAG TDM Policy Update, shuttle service should be provided free of charge to employees and guests.

Subsidized Transit Passes

Subsidized transit passes are an extremely effective means of encouraging employees to use transit rather than drive to work. Transit passes allow employees to save money, as well as allowing them to avoid the stress of driving during commute periods. The Caltrain Go Pass program is an employer-sponsored annual pass that offers unlimited rides on Caltrain through all zones, seven days a week. The Go Pass is a small sticker affixed to an employee ID badge and must be purchased by the employer for all regular employees working more than 20 hours per week. Future tenants will be required to provide their employees with Go Passes. The Go Pass costs $342.00 per employee per year.

The C/CAG TDM Policy Update states that large non-residential projects must provide subsidized transit passes to employees equivalent to 30% of the value of their monthly fare or $50 monthly. In the event that the Go Pass program ends in the future, future tenants will be required to reimburse employees for passes/subsidies for any public transportation option, including but not limited to Caltrain, SamTrans, ridesharing platforms, or vanpool subscriptions. Regular employees working more than 20 hours per week would be eligible for this benefit. Payments would be provided on a reimbursement basis only to those employees who purchase transit passes.

Pre-tax Transportation Benefits

Allowing employees to exclude their transit expenses from their taxable income encourages the use of sustainable transportation modes. This benefit can be provided via the Clipper Direct program of the Clipper Card. The Clipper Card is an all-in-one transit card that can be used to pay for rides on all major Bay Area transit providers, including BART, Caltrain, and SamTrans. Anyone can obtain a Clipper Card and load cash value onto it online or at certain retail locations as a convenient way of paying for transit fares. The Clipper Direct program is a convenient way for employers to allow employees to pay for their transit fares on a Clipper Card with pre-tax dollars. According to the C/CAG TDM Policy Update, the Bay Area Air Quality Management District (BAAQMD) requires that employers with 50 or more employees within the air district offer the option for employees to participate in a pre-tax transit and parking benefits program.

Bicycle Amenities

Bicycle Parking

The existing buildings on site provide 24 Class I bicycle parking spaces and 26 Class II short-term bicycle parking spaces. The proposed project would construct an additional 15 on-site Class I bicycle lockers, 45 protected bicycle spaces, and 22 short-term bicycle parking spaces. In total, the site would provide 84 Class I bicycle parking spaces with a combination of lockers and storage rooms spaces within the office buildings and 48 Class II short-term bicycle parking spaces (bike racks), near entrances to the buildings.

The C/CAG TDM Policy Update references the CALGreen bicycle parking requirements, which state that projects should provide 5% of tenant-occupied parking spaces as long-term secure bicycle spaces and 5% of visitor parking spaces as short-term permanently anchored bike racks within 200 feet of the visitor's entrance. With a total of 1,531 tenant-occupied vehicle parking spaces, the project should provide 77 long-term secure bicycle spaces. Therefore, the project would meet the requirement.

Showers and Changing Rooms

The project will include shower facilities and four changing rooms on the first floor of Building 3. The building will include two women's changing rooms and two men's changing rooms. A total of ten shower stalls will be provided within the changing rooms in Building 3. These facilities will be available to all employees free of charge. The showers and changing rooms will encourage employees to walk or bicycle to the site.

Buildings 1 and 2 both provide one women's changing room and one men's changing room on their first floors, and each includes one standard and one accessible shower, for a total of eight shower stalls in Buildings 1 and 2. Thus, the site as a whole will provide 18 shower stalls. In addition, secure lockers that can be reserved for all-day use will be available in the changing rooms so that bicycle commuters can safely store their clothing, helmet, and other equipment during the workday.

Bicycle Resources

The following resources are available to bicycle commuters through 511.org:

- Free Bike Buddy matching
- Bicycle maps
- Bicycle safety tips
- Information about taking bikes on public transit
- Location and use of bike parking at transit stations

- Information on Bike to Work Day
- Tips on selecting a bike, commute gear, and clothing
- Links to bicycle organizations

Pedestrian Design Elements

The proposed site plan includes convenient direct pedestrian connections to Jefferson Drive and to Commonwealth Drive. A sidewalk adjacent to Jefferson Drive has been provided along the project's Jefferson Drive frontage. As was shown on Figure 5, public paseos and 10-foot wide paths provide a connection between Jefferson Drive and Commonwealth Drive, as well as to the old railroad right-of-way, which may be used as an alternative transportation corridor in the future. Along the remaining perimeter of the site, 4- to 6-foot wide paths will be provided. These public paseos will enhance the connectivity of pedestrian facilities in the area.

In addition, clearly defined walkways are incorporated within the campus to enable employees to walk between the three buildings on the site, to the parking area on the Jefferson Drive parcel, and to the parking structure. Clearly defined crosswalks will be provided between the parking structure and the office buildings.

The paths will provide safe, well-lit, accessible, and convenient access to the shuttle stops on both Commonwealth Drive and Jefferson Drive. As noted in the preceding chapter, sidewalks are already present along Commonwealth Drive in front of the neighboring office buildings, where one of the shuttle stops is located. In addition, the location of the buildings on the site will enhance pedestrian access to the Caltrain shuttle stops. The distance between the shuttle stops and the office buildings has been minimized by siting the buildings as close as possible to the two access points. The internal walkways and public paseos will minimize walking distances, provide a direct route to the shuttle stops on Commonwealth Drive and Jefferson Drive, and facilitate safe, convenient access by pedestrians.

Preferential Carpool Parking

The proposed project will include a total of 1,531 parking spaces, of which 191 will be at grade and 1,340 will be in the four-story, with one partial level below grade parking structure. The at-grade and garage parking will include 26 accessible parking spaces and 4 van accessible spaces.

Allowing carpool participants to park near the building entrances and requiring drive-alone commuters to park further away is a common TDM measure. Preferential parking spaces for carpools provide a prominent visual message to employees that alternative transportation is valued. If the spaces are under-utilized, they may be made available to single-occupant vehicles after peak commute times.

As shown in Figure 1, in accordance with LEED (Leadership in Energy and Environmental Design) and Cal Green requirements, 54 spaces (4% of the total 1,531 parking spaces provided) will be designated and reserved for clean air vehicles, carpools, and electric vehicles. An additional 100 spaces will include EV charging stations, and 67 spaces will be EV-capable to allow for future charging stations.

Carpool and Vanpool Programs

On-Site Ride Matching Assistance

The Transportation Coordinator will distribute a carpool/vanpool matching application to all employees as part of the welcome packets, described further below. The application will match employees who live in the same area who may be able to carpool or vanpool together. Some employees who may be reluctant to reach out to find carpool partners via online services may be more likely to fill out a form

that will be administered by their Transportation Coordinator. Furthermore, employees may be more likely to try ridesharing with a coworker than with an unknown person who lives nearby

Ride Matching Assistance

Merge

Merge is 511.org's free ridematching service that provides an interactive, on-demand system that helps commuters find carpools, vanpools or bicycle partners. The Transportation Coordinator, in conjunction with the future tenant(s) contacts(s), will promote the on-line 511 service to employees. This free carpool, vanpool, and bikepool ride matching service helps commuters find others with similar routes and travel patterns with whom they may share a ride. Registered users provide their commute information and get matched with other users. Participants are then able to contact a match to discuss schedules and see if the match is a good fit. The service also provides a list of existing car and vanpools in their residential area that may have vacancies. In addition, tenant(s) may provide private ride matching assistance to their employees to match co-workers making the same drive via 511 services.

Scoop

Scoop offers a fee-based ride matching service through an easy-to-use app. Scoop allows commuters to separate their AM and PM trips, to help accommodate unpredictable work schedules. Scoop also lets users schedule a trip as a driver or passenger, depending on their daily needs. Scoop identifies carpoolers who are heading the same direction and finds the most efficient carpool trip based on fastest route, nearby carpoolers, carpool lanes, and other factors. Payment for each trip is made through the app.

Ride matching assistance is also available through a number of peer-to-peer matching programs, such as Waze Carpool or Casual Carpool.

Carpool/Vanpool Incentives

Scoop Discounts for San Mateo County Carpools

C/CAG has developed the "Carpool in San Mateo County!" program, which provides a $2 incentive per person for each trip that begins or ends in San Mateo County. Drivers and riders can earn up to $4 per day when using the Scoop app to carpool. Drivers and riders using Scoop will automatically receive the $2 incentive per person during commute periods (5:30 a.m. – 10:00 a.m. and 3:30 p.m. – 8:00 p.m.), with a maximum of $4 per rider and driver each day.

STAR

Commute.org (formerly the Peninsula Traffic Congestion Relief Alliance) has established a program called STAR (Support, Track, and Reward). Residents and commuters who log their alternative to driving alone trips to or from San Mateo County are eligible to win a raffle prize ranging from giveaways to e-gift cards. The STAR platform also provides trip planning and carpool/vanpool matching.

STAR also hosts a rewards program where users can earn up to $100 when they carpool to or from work using the Scoop or Waze Carpool apps and automatically track their trips on STAR via the connected app option. Users are eligible for a $25 e-gift card reward after 10 days of carpooling, up to four times until funds are depleted. A similar rewards program exists for participants commuting via vanpool.

Merge

Merge rewards all carpools. Users can carpool using Merge, Scoop, Waze Carpool, Casual Carpool, or a personal contact. Users who log their carpool trips earn 10 points per trip and receive a $25 reward for every 250 points earned. Rewards are given as an e-gift card or donated to a nonprofit.

Guaranteed Ride Home Program

Commute.org has created the Guaranteed Ride Home (GRH) program that ensures that transit users, carpoolers, vanpoolers, walkers, and bicyclists will never be stranded at the office. The program reassures commuters who do not drive alone that they have timely and paid transportation (usually in the form of a taxi ride) to leave work in the event of a personal or family emergency, illness, or unexpected employment-related delay.

To qualify for the program, employees must commute to a workplace in San Mateo County and have an active STAR account. The GRH reimbursements are limited to $60 per trip up to four times per calendar year and are paid through PayPal or an e-gift card. The GRH trips must start at the participant's workplace. The purpose of the program is to encourage usage of alternative modes of transportation by guaranteeing employees that they will be able to leave work in the event of an emergency even if they don't have their own car at the office.

Site Location

TDM programs generally encourage infill development, rather than developing land that is located farther from existing infrastructure that would typically require longer commutes. The project site qualifies as an infill development.

On-Site Amenities

Provision of on-site amenities encourages people to stay on site during the workday, thus making it more likely that workers will leave their automobiles at home. The Commonwealth Corporate Center will include several outdoor seating areas with tables and chairs to encourage workers to eat lunch and enjoy time outdoors on site. Outdoor seating is located near the buildings and also at the eastern end of the site, behind the parking structure. In addition, the project will provide two public parks nearby.

Telecommuting

The proposed buildings will include fiber optic wiring to facilitate telecommuting. Telecommuting is an effective TDM strategy that enables employees to work from home or a neighborhood telecenter eliminating or reducing the number of commute trips to the project site. The building infrastructure will support a high level of telecommuting. Details regarding implementation of a telework program will be determined by the future tenant(s), which are unknown at this time.

Alternative Work Schedule Infrastructure

The Commonwealth Corporate Center will include the following infrastructure to support future tenant(s) that choose to implement an alternative work schedule:

- Heating, cooling, and ventilation systems will be available for extended schedules.
- Security services will be provided to support extended schedules.

- Access to buildings and parking facilities will be available to employees working outside of regular business hours.

The implementation of alternative work schedules will be determined by the future tenant(s), which are unknown at this time.

Transportation Resources

Transportation Coordinator

The Sobrato Organization or its tenant/lessee will designate an individual to serve as Transportation Coordinator for the Commonwealth Corporate Center. This individual will provide information on all aspects of the TDM program to employees and will conduct the Annual Commute Survey, among other duties. Contact information for the Transportation Coordinator will be provided to the City of Menlo Park Transportation Manager and will be updated when needed.

"Online Kiosk": An Online Information Center

Most TDM plans have traditionally included a requirement for a kiosk or bulletin board to be created in the workplace for posting information related to alternative travel modes. Experience often shows, however, that few employees look at these kiosks after an initial period of interest. This TDM Plan proposes to establish an "online kiosk" with similar information that an employee could access from their home, their desk at work, or anywhere else.

A key element of this TDM plan is to set up an attractive, up-to-date "online kiosk" with ALL of the site-specific information about the transportation resources available to employees. We envision a website which will include information about all the measures, services, and facilities discussed in this plan, including:

- A summary of Caltrain, the Marsh Road Shuttle, and SamTrans services and links to further information about their routes and schedules.
- A description of the Go Pass program, which is the subsidized Caltrain pass that will be provided to all employees.
- A local bikeways map and information about the bike parking available on site.
- Information about ridematching services (Scoop, Waze Carpool, and Merge) and the incentive programs available to carpools and vanpools.
- Information about the Guaranteed Ride Home program and how to use it. Information about services such as Uber, Lyft, and other on-demand transportation services will also be included.
- A link to the many other resources available in the Bay Area, such as Dadnab, 511.org, real-time traffic conditions, etc.

The building developer will have responsibility for contracting with someone to initially create the website so that it is up and running as soon as tenants move into Building 3. If, however, all three buildings are occupied by a single tenant, responsibility for establishing the website could be shifted to that tenant. More specific information can be added later to reflect any programs specific to certain employers. The Transportation Coordinator will be responsible for adding new information to the website (or providing it to the website designer) so that the "online kiosk" remains current and informative

New Tenant Employee Information Packet

The Transportation Coordinator will provide transportation information packets to all new tenants for distribution to employees commuting to the Commonwealth Corporate Center. This packet will include information about preferential parking programs, ride matching services, Caltrain schedules, the Marsh Road Caltrain shuttle schedule, Caltrain Go Passes, transit planning resources, and a bicycle map. In addition, the Transportation Coordinator will distribute a similar information packet to all new employees subsequently hired or transferred to the site.

Kick-Off Event

The most opportune time to change commute behavior from drive alone automobile usage is during relocation to a new employment site. Because a travel routine has not yet established, the commuter will be more receptive to trying an alternative mode and be more likely to commit to the alternative mode. The Transportation Coordinator will be responsible for hosting a commute alternative kick-off event/celebration upon 50 percent occupancy of Building 3 of Commonwealth Corporate Center. The event will highlight transit and trip-planning services, rideshare matching, and other commute opportunities at the site. Transportation service providers (such as SamTrans and Caltrain), ride match services (Merge and Scoop), and bicycle advocates (from the Silicon Valley Bicycle Coalition or local Menlo Park biking groups) will be invited to set-up exhibit booths. A similar event will be held upon 80 percent occupancy of Building 3 to reach out to new commuters to the site and increase awareness of the program.

Trip Planning Resources

511 Mobile

Many popular features from 511.org can be accessed using smart phones or mobile devices. With 511 Mobile, commuters can:

- Receive real-time transit departure predictions
- Check real-time traffic conditions on the live traffic map

Dadnab

Dadnab.com enables Bay Area commuters to get transit directions by text message. Users send a text message with their origin, destination, and optional departure or arrival time and Dadnab replies with a detailed itinerary listing what buses or trains to take, stop locations, and times.

511.org

There are many phone apps and websites that are available trip planning tools. 511.org provides a list of these resources, including Best Parking, California Road Report, City Mapper, Moovit, and NextBus.

Try Transit Program

Commute.org offers a Try Transit Program that provides a limited number of free transit tickets on SamTrans, Caltrain, or San Francisco Bay Ferry (SSF). The program is available to people over 18 years of age who live or work in San Mateo County and have not used public transportation to commute to work. The program is a one-time offer limited to one transit ticket per household.

511 Carpool Calculator

The 511 Carpool Calculator is a 511-sponsored online calculator that determines the cost of commuting by driving alone. Users input commute details such as the number of miles traveled to and from work, vehicle mileage, fuel cost, parking costs, and bridge tolls. The tool then calculates the solo commuting

costs and vehicle CO2 emissions and the potential savings by adding carpool partner(s). The Transportation Coordinator and/or tenant contacts will include links to this calculator in periodic management bulletins and email correspondence to employees.

Certified Participation in Commute.org or TMA

Commute.org is a joint powers agency in San Mateo County. Transportation Management Associations (TMA) are associations of businesses, property owners, tenants, and cities. Both organizations offer programs and services to give commuters alternatives to driving alone, including shuttles, guaranteed ride home, and rewards programs. The project will participate in one or more of Commute.org's programs or in a TMA if/when a TMA is established in the project area.

Program Monitoring and Reporting

Annual Commute Surveys

The purpose of the TDM Plan is to reduce daily, AM peak-hour, and PM peak-hour vehicle trips by at least 20%, thereby lessening the parking issues, traffic congestion, and vehicle emissions associated with the Commonwealth Corporate Center. Regular monitoring will ensure that the implemented TDM measures are effective and achieve that standard. The program will be evaluated annually to assess the actual level of trip reduction achieved at the site and to identify any adjustments to the program necessary to ensure the TDM measures are successful.

Annual commute surveys will be administered to measure the number of employees commuting by alternative modes. Employees who do not respond to the survey will be assumed to be driving alone. In addition to obtaining quantitative data on the mode split, the survey will provide qualitative data regarding employee perceptions of the alternative transportation programs. The survey results will measure the relative effectiveness of individual program components relative to other components and facilitate the design of possible program enhancements.

Annual Driveway Counts

In order to evaluate whether or not the project has met the 20% daily, AM peak-hour, and PM peak-hour trip reduction requirement, annual driveway counts will be conducted. A count of the number of vehicles entering and exiting the project's driveways on a typical weekday will be conducted annually by an independent third party to determine the number of vehicle trips being generated by the project. The counts will be conducted at the site's access points on a weekday that is not disclosed in advance. All vehicles entering and exiting the Commonwealth Corporate Center will be counted and the daily and peak-hour volume will be identified.

The driveway counts will be used to determine the actual trip generation of the entire Commonwealth Corporate Center. The Transportation Coordinator would provide the results of the driveway counts to the City of Menlo Park, along with a statement as to whether the 20% trip reduction goal was met.

Annual Reporting to City

The ordinance regarding the TDM requirement for the Office district states that the required trip reduction will be achieved "over the life of the development, as evidenced by annual reporting provided to the satisfaction of the City's Transportation Manager." The Transportation Coordinator will submit to the City of Menlo Park annual documentation to substantiate implementation of the TDM plan elements listed in Table 2, the results of the employee survey, and the results of the driveway counts. If the 20%

peak-hour trip reduction requirement has not been met, then the report will state what additional measures will be implemented in the coming year in order to achieve the City's requirement.

The City reserves the right to modify the monitoring and reporting processes yearly to address the latest needs and demands, if necessary.

Additional TDM Measures

If the results of the driveway count indicate that there are more than 992 PM peak-hour trips at the site, then additional TDM measures will be implemented in order to ensure that the 20% trip reduction requirement is met. The following measures are presented as potential supplemental measures. However, if the results of the employee surveys suggest other measures may be effective, then the measures considered most likely to further reduce single-occupant vehicle trips will be selected for implementation. Additional TDM measures will be implemented until the 20% trip reduction requirement has been met, as documented by driveway counts.

Car Sharing

One of the major impediments to using transit, bicycling, carpooling, or vanpooling to get to work is employees' need to use a car occasionally for personal or business purposes. Car sharing programs provide individuals with access to a vehicle when they need it at any time of day, so they do not need to drive a car of their own to work. A carsharing service (e.g., Zipcar or equivalent) could be established at the Commonwealth Corporate Center and parking spaces could be reserved for them. Having Zipcars located within the parking garage would provide quick and easy access to these cars for all employees on site who use an alternative mode for their commute free of charge, up to a specified annual maximum.

Financial Incentives for Biking or Walking to Work

As described above, Go Passes will be provided to all employees on site and numerous incentives are available to people who carpool or vanpool. In order to encourage employees to walk or bike to work, a financial incentive of at least $20 per month could be offered. Employees who walk or bike to work at least four days per week would be eligible for this incentive. Participants in this program would not be allowed to park in the parking structure on a daily basis. However, since there may be times when employees who primarily commute using alternative modes of transportation need to drive to work, employees who receive a financial incentive for biking or walking to work should be allowed to park in the garage on an occasional basis.

While most employees would not live within a reasonable walking distance from the project site, employees who live in the Belle Haven neighborhood would be within walking distance. Similarly, the lack of a bike lane on the Marsh Road overcrossing at U.S. 101 serves as a barrier to convenient bicycle access, but improved access is available via Willow Road. The Willow Road interchange project included a new wider bridge with bike lanes in both directions and protected bike paths on both sides of the overcrossing.

Parking Cash-Out Program

An alternative to financial incentives to those who bike or walk to work would be to establish a parking cash-out program that would be open to anyone who walks, bikes, takes transit, carpools or vanpools to work at least four days per week. Under such a program, employees who use an alternative mode would be offered a cash payment in return for not using the parking facilities on site. Carpool and vanpool drivers would be eligible, even though they park in the garage, if they document the members

of their carpool/vanpool. Transit riders would need to provide evidence that they actually take transit to and from work.

Appendix 3.2-1

Air Quality Analysis and Greenhouse Gas Modeling Files

Appendix 3.2-1: Air Quality and Greenhouse Gas Analysis Modeling Files

Unmitigated Construction AQ/GHG Emissions

Project Name: Commonwealth Building 3 Project
Project Size (acres): 4.950
Construction Days per week: 5

Land Uses	Amount	Unit
Parking Structure[1]	404,000	sf
Office Building[2]	249,500	sf
Jefferson Park[3]	27,500	sf
Jefferson Park Parking Lot[3]	6,500	sf

Dust Control[7]

Water Exposed Area	Reduction (%)	Truck Trips
Dust Control Reduction (Water 3x per day: 3.2-hr interval)	61%	6
Dust Control Reduction (Water 4x per day: 2.1-hr interval)	74%	8
Valued used in analysis	61%

Exterior -125	Exterior - 50
Paving - 20	Paving - 20

Is "Site Prep/Grading" inclusive of both the Site Preparation phase and the Grading / Excavation phase from the AQ Construction Data PDFs. If not, please provide data for the grading/excavation phase,

DCI: Yes, Site Prep/ Grading is inclusive of both Site Preparation & Grading/Excavation on the AQ Construction Data PDFs

4.5 Trips and VMT

The number of worker, vendor, and hauling trips and associated vehicle miles traveled (VMT) are used to determine both the exhaust emissions associated with on-road vehicle use and fugitive dust emissions.

Trips

Worker trips for all construction phases except building construction and architectural coating is based on 1.25 workers per equipment in that phase resulting in one roundtrip per worker. For building construction workers, the trip number is estimated using the trip generation rate from a survey conducted by SMAQMD. This has been reanalyzed and results in slightly different numbers than used by other programs and that was previously reported in some agency documents. The analysis and data supporting these values can be found in Appendix E. The land types selected for the project are grouped into four categories presented in the following table which also presents the associated SMAQMD trip generation rates.

Building Construction Worker and Vendor Trip Rates

Land Use SubType	Rate Metric	Worker Trip Rate	Vendor Trip Rate
Single Family	Daily Trips per DU*	0.36	0.1069
Multi-Family	Daily Trips per DU*	0.72	0.1069
Commercial/Retail	Daily Trips per 1000 sq. ft.	0.32	0.1639
Office/Industrial	Daily Trips per 1000 sq. ft.	0.42	0.1639

Source: SCAQMD's analysis of SMAQMD Building Construction Worker and Vendor trip rates found in Appendix E.

*DU = dwelling unit

Architectural coating worker trips are 20% of building construction phase trips. Vendor trips are only associated with building construction and is based on the land uses and trip rate indicated in the table above.

Haul trips are based on the amount of material that is demolished, imported or exported assuming a truck can handle 16 cubic yards of material. For phased trips, the truck is assumed to be full both ways. For non-phased trips, the truck is assumed to be empty one direction and thus results in more haul trips calculated.

1 acre 43560 ft

Asphalt

4.7 Architectural Coatings

Volatile organic compounds[13] (VOC) off-gassing emissions result from evaporation of solvents contained in surface coatings. The program calculates the VOC evaporative emissions from application of residential and non-residential surface coatings using the following equation:

$$E_{AC} = EF_{AC} \times F \cdot A_{paint}$$

Where:

E = emissions (lb VOC)

EF = emission factor (lb/sq. ft.)

A = building surface area (sq. ft.).

The program assumes the total surface for painting equals 2.7 times the floor square footage for residential and 2 times that for nonresidential square footage defined by the user[14]. All of the land use information provided by a metric other than square footage will be converted to square footage using the default conversions or user defined equivalence. Green area square footage of City Parks and Golf Courses, pool surface area square footage of Recreational Swimming Pools, and parking surface area square

[12] CARB. EMFAC2007 version 2.30 User's Guide. Available at: http://www.arb.ca.gov/msei/downloads/emfac2014/emfac2014-vol1-users-guide-052015.pdf
[13] This program will assume that all VOCs are represented by reactive organic gases (ROGs).
[14] The factors 2.7 and 2 are based on page A9-124 of SCAQMD's 1993 CEQA Guide.

footage are excluded from the floor square footage in calculating VOC emission due to architectural coatings.

F = fraction of surface area. The default values based on SCAQMD methods used in their coating rules are 75% for the interior surfaces and 25% for the exterior shell.

The emission factor (EF) is based on the VOC content of the surface coatings and is calculated estimated using the equation below:

$$EF_{AC} = C_{VOC} / 454(g/lb) \times 3.785(L/Gal) / 180(sqft)$$

Where:

EF = emission factor (lb/sq. ft.)

C = VOC content (g/L). This varies by location and year.

The emission factors for coating categories are calculated using the equation above based on default VOC content provided by the air districts or ARB's statewide limits if an air district did not provide VOC content[15].

CalEEMod also calculates the VOC emissions from the painting of stripes, handicap symbols, directional arrows and car space descriptions in parking lots. Please refer to Appendix E for the studies conducted to determine a default percent of parking lot square footage that is painted. The equation for striping emission is the same as that for E_{AC} above, but A_{paint} is:

$$A_{paint} = A_{PL} \times P\%$$

Where:

A_{PL} = Parking lot area (sq. ft.)

P% = Default percent of parking lot area that is painted (6%)

The VOC content limit for parking lot area is either provided by local air districts or based on the exterior coating VOC limit of the region where the project is located. If the user has more specific VOC content limit on the coating being applied the default can be overridden but the user is expected to explain and justify the change in the "Remarks" box at the bottom of the screen.

Regional Emissions Summary-Unmitigated

Mechanical or Explosive Dismemberment

Based on the MRI report, there is no AP-42 emission factor data available for this mechanical or explosive dismemberment. Thus, the emission factor for dismemberment and collapse of a structure is calculated using the following AP-42 equation for batch drop operations:

$$EF_D = k \times (0.0032) \times \frac{\left(\frac{U}{5}\right)^{1.3}}{\left(\frac{M}{2}\right)^{1.4}}$$

Where:

EF_D = emission factor (lb PM/ton of debris)

$EF_{D\text{-}PM10}$ = 0.0011 lb PM_{10}/ton of debris

$EF_{D\text{-}PM2.5}$ = 0.00017 lb $PM_{2.5}$/ton of debris

k = particle size multiplier. The AP-42 default value for PM_{10} is 0.35 and that for $PM_{2.5}$ is 0.053.

U = mean wind speed. The program selects the default mean wind speed based on the wind speed (m/s) provided on the project characteristics screen.

M = material moisture content. The program uses 2% as the default based on the MRI report.

The dust emissions are calculated by multiplying the above emission factors with the total weight of building waste using the following equation:

$$E_D = EF_D \times W$$

Where:

E_D = emissions (lb of PM)

EF_D = emission factor (lb of PM/ton of debris)

W = building waste (ton of debris)

[10] Midwest Research Institute. 1988. Gap Filling PM10 Emission Factors for Selected Open Area Dust Sources.

12 October 2017

Debris Loading

The dust emission factor of PM_{10} and $PM_{2.5}$ in pounds per ton building waste is estimated based on the measured total suspended particulates (TSP) emission factor using the following equation:

$$EF_L = k \times EF_{L-TSP}$$

Where:

EF_L = emission factor (lb/ton)

k = particle size multiplier. The AP-42 default value for PM_{10} is 0.35 and that for $PM_{2.5}$ is 0.053.

The default value for $EF_{L\text{-}TSP}$ is 0.058 lb/ton, the average of the two TSP factor (i.e. 0.053 and 0.063 lb/ton) measured from two tests of the filling of trucks with crushed limestone using a front-end loader.

The dust emissions from debris loading are then calculated following the same methodology used for mechanical and or explosive dismemberment:

$$E_L = EF_L \times SF \times 0.046(ton / ft^2)$$

Where:

E_L = emissions (lb)

EF_L = emission factor (lb/ton)

SF = building square footage (ft^2)

13 October 2017

Truck Loading Emissions

Truck Loading

Processes such as truck dumping on the pile or loading out from the pile to a truck with a front-end loader also cause fugitive dust emissions. The program calculates these emissions using the methodology described in Section 13.2, Introduction to Fugitive Dust Sources, of USEPA AP-42. The emission factor that is based on the material moisture content and mean wind speed is calculated using the following formula:

$$EF_D = k \times (0.0032) \times \frac{\left(\frac{U}{5}\right)^{1.3}}{\left(\frac{M}{2}\right)^{1.4}}$$

Where:

EF = emission factor (lb/ton)

K = particle size multiplier. The AP-42 default value for PM_{10} is 0.35 and that for $PM_{2.5}$ is 0.053

U = mean wind speed. The program selects wind speed based on the value listed on the Project Characteristics screen. It has been converted internally to miles per hour.

M = material moisture content (%). The moisture contents of different materials are listed in Table 13.2.4-1 of AP-42. The program uses the moisture content of cover (12%) as default.

The fugitive dust emissions are calculated by multiplying the emission factor with the throughput of loaded and unloaded material that is entered by the user.

$$E = EF \times TP$$

Where:

E = emissions (lb)

EF = emission factor (lb/ton)

TP = throughput of loaded and unloaded materials (ton)

CalEEMod assumes that 1.2641662 tons per cubic yard based on a bulk density of 1.5 grams per cubic centimeter. Typical soil densities range from about 1.25 to about 1.6 and 1.5 is the approximate density of a silty loam soil which is relatively common in most other parts of the state. The density reported above does not account for watering to suppress dust, it only accounts for natural moisture.

Bulldozing Emissions

$$EF_{TSP} = \frac{C_{TSP} \times s^{1.2}}{M^{1.3}}, \text{ and } EF_{PM2.5} = EF_{TSP} \times F_{PM2.5}$$

$$EF_{PM15} = \frac{C_{PM15} \times s^{1.5}}{M^{1.4}}, \text{ and } EF_{PM10} = EF_{PM15} \times F_{PM10}$$

Bulldozing

Similar to the grading equipment passes emission estimation, the bulldozing emission factors for PM_{10} and $PM_{2.5}$ are scaled from those of PM_{15} and TSP. Based on Section 11.9 of AP-42, the dust emission factor for bulldozing is calculated using the following equations:

$$EF_{TSP} = \frac{C_{TSP} \times s^{1.2}}{M^{1.3}}, \text{ and } EF_{PM2.5} = EF_{TSP} \times F_{PM2.5}$$

$$EF_{PM15} = \frac{C_{PM15} \times s^{1.5}}{M^{1.4}}, \text{ and } EF_{PM10} = EF_{PM15} \times F_{PM10}$$

Where:
EF = emission factor (lb/hr)
C = arbitrary coefficient used by AP-42
M = material moisture content (%)
S = material silt content (%)
F = scaling factor

C, M, s, and F vary depending on the bulldozed material. The following table summarizes the constants for overburden[8] presented in AP-42[9].

Bulldozing Fugitive Emission Factors

Constant	Overburden
C_{TSP}	5.7
C_{PM15}	1.0
M	7.9%
s	6.9%
F_{PM10}	0.75
$F_{PM2.5}$	0.105

The program uses the constants associated with overburden as default for calculation of bulldozing dust emissions since overburden more closely models the bulldozed materials during the development construction. The dust emissions are calculated by multiplying the emission factor with the hours of operation for the dozers listed in the equipment list using the formula below:

$$E = EF \times Hr$$

Where:
E = emissions (lb)
EF = emission factor (lb/hr)
Hr = hours of operation

[8] The earth that is between the topsoil and the coal seam (USEPA AP-42).
[9] Tables 11.9-1 and 11.9-3 of USEPA AP-42

Grading Emissions

EFPM15

$$EF_{PM15} = 0.051 \times (S)^{2.0}, \text{ and } EF_{PM10} = EF_{PM15} \times F_{PM10}$$
$$EF_{TSP} = 0.04 \times (S)^{2.5}, \text{ and } EF_{PM2.5} = EF_{TSP} \times F_{PM2.5}$$

EF	Emission Factor (lb/VMT)
S	mean vehicle speed (mph), AP-42 Default: 7.1 mph
$F_{PM2.5}$	PM2.5 scaling factor, AP-42 default: 0.031
F_{PM10}	PM10 scaling factor, AP-42 defualt: 0.6

S	7.1
$F_{PM2.5}$	0.031
F_{PM10}	0.6
EF_{PM15}	2.57
EF_{TSP}	5.37

Emission factor (lb/VMT)

EF_{PM10}	1.543
$EF_{PM2.5}$	0.167

The grading dust emissions are calculated by multiplying the emission factors with the total vehicle miles traveled (VMT) for the grading equipment (i.e., grader). The VMT are estimated based on the dimensions of the grading area and the blade width of the grading equipment.

$$E = EF \times VMT, \text{ and}$$

$$VMT = As / Wb \times 43{,}560(sqft / acre) / 5{,}280(ft / mile)$$

Where:

E: emissions (lb)
EF: emission factor (lb/VMT)
VMT: vehicle miles traveled (mile)
A_S: the acreage of the grading site (acre)
W_b: Blade width of the grading equipment. The program uses a default blade width of 12 ft. based on Caterpillar's 140 Motor Grader[7].

Note that the dimensions (e.g., length and width) of the grading site have no impact on the calculation, only the total area to be graded. In order to properly grade a piece of land multiple passes with equipment may be required. The acres is based on the equipment list and days in grading or site preparation phase according to the anticipated maximum number of acres a given piece of equipment can pass over in an 8-hour workday. The equipment-specific grading rates are given in the following table as determined by SCAQMD in consultation with building estimator references.

Equipment Type	Acres/8hr-day
Crawler Tractors	0.5
Graders	0.5
Rubber Tired Dozers	0.5
Scrapers	1

Emissions= EF x VMT

VMT:

A_{site}	acreage of grading site
W_b	Width of blade, default: 12 feet
Feet/acre conversion	43560
feet/mile conversion	5280
Acres per 8-hr day	amount of acres graded per day, see calc below

Paremeters:	Value

Worker trips based on # of workers provic

4.5 Trips and VMT

The number of worker, vendor, and hauling trips and associated vehicle miles traveled (VMT) are used to determine both the exhaust emissions associated with on-road vehicle use and fugitive dust emissions.

Trips

Worker trips for all construction phases except building construction and architectural coating is based on 1.25 workers per equipment in that phase resulting in one roundtrip per worker. For building construction workers, the trip number is estimated using the trip generation rate from a survey conducted by SMAQMD. This has been reanalyzed and results in slightly different numbers than used by other programs and that was previously reported in some agency documents. The analysis and data supporting these values can be found in Appendix E. The land types selected for the project are grouped into four categories presented in the following table which also presents the associated SMAQMD trip generation rates.

Building Construction Worker and Vendor Trip Rates

Land Use SubType	Rate Metric	Worker Trip Rate	Vendor Trip Rate
Single Family	Daily Trips per DU*	0.36	0.1069
Multi-Family	Daily Trips per DU*	0.72	0.1069

Commercial/Retail	Daily Trips per 1000 sq. ft.	0.32	0.1639
Office/Industrial	Daily Trips per 1000 sq. ft.	0.42	0.1639
Source: SCAQMD's analysis of SMAQMD Building Construction Worker and Vendor trip rates found in Appendix E.			

*DU = dwelling unit

Architectural coating worker trips are 20% of building construction phase trips. Vendor trips are only associated with building construction and is based on the land uses and trip rate indicated in the table above.

Haul trips are based on the amount of material that is demolished, imported or exported assuming a truck can handle 16 cubic yards of material. For phased trips, the truck is assumed to be full both ways. For non-phased trips, the truck is assumed to be empty one direction and thus results in more haul trips calculated.

4.7 Architectural Coatings

Volatile organic compounds[13] (VOC) off-gassing emissions result from evaporation of solvents contained in surface coatings. The program calculates the VOC evaporative emissions from application of residential and non-residential surface coatings using the following equation:

$$E_{AC} = EF_{AC} \times F \cdot A_{paint}$$

Where:

E = emissions (lb VOC)

EF = emission factor (lb/sq. ft.)

A = building surface area (sq. ft.).

The program assumes the total surface for painting equals 2.7 times the floor square footage for residential and 2 times that for nonresidential square footage defined by the user[14]. All of the land use information provided by a metric other than square footage will be converted to square footage using the default conversions or user defined equivalence. Green area square footage of City Parks and Golf Courses, pool surface area square footage of Recreational Swimming Pools, and parking surface area square

[12] CARB. EMFAC2007 version 2.30 User's Guide. Available at: http://www.arb.ca.gov/msei/downloads/emfac2014/emfac2014-vol1-users-guide-052015.pdf
[13] This program will assume that all VOCs are represented by reactive organic gases (ROGs).
[14] The factors 2.7 and 2 are based on page A9-124 of SCAQMD's 1993 CEQA Guide.

footage are excluded from the floor square footage in calculating VOC emission due to architectural coatings.

F = fraction of surface area. The default values based on SCAQMD methods used in their coating rules are 75% for the interior surfaces and 25% for the exterior shell.

The emission factor (EF) is based on the VOC content of the surface coatings and is calculated estimated using the equation below:

$$EF_{AC} = C_{VOC} / 454(g/lb) \times 3.785(L/Gal) / 180(sqft)$$

Where:

EF = emission factor (lb/sq. ft.)

C = VOC content (g/L). This varies by location and year.

The emission factors for coating categories are calculated using the equation above based on default VOC content provided by the air districts or ARB's statewide limits if an air district did not provide VOC content[15].

CalEEMod also calculates the VOC emissions from the painting of stripes, handicap symbols, directional arrows and car space descriptions in parking lots. Please refer to Appendix E for the studies conducted to determine a default percent of parking lot square footage that is painted. The equation for striping emission is the same as that for E_{AC} above, but A_{paint} is:

$$A_{paint} = A_{PL} \times P\%$$

Where:

A_{PL} = Parking lot area (sq. ft.)

P% = Default percent of parking lot area that is painted (6%)

The VOC content limit for parking lot area is either provided by local air districts or based on the exterior coating VOC limit of the region where the project is located. If the user has more specific VOC content limit on the coating being applied the default can be overridden but the user is expected to explain and justify the change in the "Remarks" box at the bottom of the screen.

Regional Emissions Summary-Unmitigated

Mechanical or Explosive Dismemberment

Based on the MRI report, there is no AP-42 emission factor data available for this mechanical or explosive dismemberment. Thus, the emission factor for dismemberment and collapse of a structure is calculated using the following AP-42 equation for batch drop operations:

$$EF_D = k \times (0.0032) \times \frac{\left(\frac{U}{5}\right)^{1.3}}{\left(\frac{M}{2}\right)^{1.4}}$$

Where:

EF_D = emission factor (lb PM/ton of debris)

$EF_{D\text{-}PM10}$ = 0.0011 lb PM_{10}/ton of debris

$EF_{D\text{-}PM2.5}$ = 0.00017 lb $PM_{2.5}$/ton of debris

k = particle size multiplier. The AP-42 default value for PM_{10} is 0.35 and that for $PM_{2.5}$ is 0.053.

U = mean wind speed. The program selects the default mean wind speed based on the wind speed (m/s) provided on the project characteristics screen.

M = material moisture content. The program uses 2% as the default based on the MRI report.

The dust emissions are calculated by multiplying the above emission factors with the total weight of building waste using the following equation:

$$E_D = EF_D \times W$$

Where:

E_D = emissions (lb of PM)

EF_D = emission factor (lb of PM/ton of debris)

W = building waste (ton of debris)

[10] Midwest Research Institute. 1988. Gap Filling PM10 Emission Factors for Selected Open Area Dust Sources.

12 October 2017

Debris Loading

The dust emission factor of PM_{10} and $PM_{2.5}$ in pounds per ton building waste is estimated based on the measured total suspended particulates (TSP) emission factor using the following equation:

$$EF_L = k \times EF_{L-TSP}$$

Where:

EF_L = emission factor (lb/ton)

k = particle size multiplier. The AP-42 default value for PM_{10} is 0.35 and that for $PM_{2.5}$ is 0.053.

The default value for $EF_{L\text{-}TSP}$ is 0.058 lb/ton, the average of the two TSP factor (i.e. 0.053 and 0.063 lb/ton) measured from two tests of the filling of trucks with crushed limestone using a front-end loader.

The dust emissions from debris loading are then calculated following the same methodology used for mechanical and or explosive dismemberment:

$$E_L = EF_L \times SF \times 0.046(ton / ft^2)$$

Where:

E_L = emissions (lb)

EF_L = emission factor (lb/ton)

SF = building square footage (ft^2)

13 October 2017

Truck Loading Emissions

$$EF_D = k \times (0.0032) \times \frac{\left(\frac{U}{5}\right)^{1.3}}{\left(\frac{M}{2}\right)^{1.4}}$$

Truck Loading

Processes such as truck dumping on the pile or loading out from the pile to a truck with a front-end loader also cause fugitive dust emissions. The program calculates these emissions using the methodology described in Section 13.2, Introduction to Fugitive Dust Sources, of USEPA AP-42. The emission factor that is based on the material moisture content and mean wind speed is calculated using the following formula:

$$EF_D = k \times (0.0032) \times \frac{\left(\frac{U}{5}\right)^{1.3}}{\left(\frac{M}{2}\right)^{1.4}}$$

Where:

EF = emission factor (lb/ton)

K = particle size multiplier. The AP-42 default value for PM_{10} is 0.35 and that for $PM_{2.5}$ is 0.053

U = mean wind speed. The program selects wind speed based on the value listed on the Project Characteristics screen. It has been converted internally to miles per hour.

M = material moisture content (%). The moisture contents of different materials are listed in Table 13.2.4-1 of AP-42. The program uses the moisture content of cover (12%) as default.

The fugitive dust emissions are calculated by multiplying the emission factor with the throughput of loaded and unloaded material that is entered by the user.

$$E = EF \times TP$$

Where:

E = emissions (lb)

EF = emission factor (lb/ton)

TP = throughput of loaded and unloaded materials (ton)

CalEEMod assumes that 1.2641662 tons per cubic yard based on a bulk density of 1.5 grams per cubic centimeter. Typical soil densities range from about 1.25 to about 1.6 and 1.5 is the approximate density of a silty loam soil which is relatively common in most other parts of the state. The density reported above does not account for watering to suppress dust, it only accounts for natural moisture.

Bulldozing Emissions

$$EF_{TSP} = \frac{C_{TSP} \times s^{1.2}}{M^{1.3}}, \text{ and } EF_{PM2.5} = EF_{TSP} \times F_{PM2.5}$$

$$EF_{PM15} = \frac{C_{PM15} \times s^{1.5}}{M^{1.4}}, \text{ and } EF_{PM10} = EF_{PM15} \times F_{PM10}$$

EF	emission factor (lb/hr)
C	arbitrary coefficient use by AP-42
M	material moisture content (%)
S	material silt content (%)
F	scaling factor

C_{TSP} (unitless)	5.7
C_{PM15} (unitless)	1
M(%)	7.9
s (%)	6.9
F_{PM10} (unitless)	0.75
$F_{PM2.5}$ (unitless)	0.105
EF_{TSP}	3.941
EF_{PM15}	1.004

Emission Factors (lb/hr)

EF_{PM10}	**0.753**	Emission Factor Method Confirmed with comparison to CalEEMod outputs
$EF_{PM2.5}$	**0.414**	Emission Factor Method Confirmed with comparison to CalEEMod outputs

Emissions= EF x Hr

Bulldozing Emissions	6.022	3.310

Bulldozing

Similar to the grading equipment passes emission estimation, the bulldozing emission factors for PM_{10} and $PM_{2.5}$ are scaled from those of PM_{15} and TSP. Based on Section 11.9 of AP-42, the dust emission factor for bulldozing is calculated using the following equations:

$$EF_{TSP} = \frac{C_{TSP} \times s^{1.2}}{M^{1.3}}, \text{ and } EF_{PM2.5} = EF_{TSP} \times F_{PM2.5}$$

$$EF_{PM15} = \frac{C_{PM15} \times s^{1.5}}{M^{1.4}}, \text{ and } EF_{PM10} = EF_{PM15} \times F_{PM10}$$

Where:
EF = emission factor (lb/hr)
C = arbitrary coefficient used by AP-42
M = material moisture content (%)
S = material silt content (%)
F = scaling factor

C, M, s, and F vary depending on the bulldozed material. The following table summarizes the constants for overburden[8] presented in AP-42[9].

Bulldozing Fugitive Emission Factors

Constant	Overburden
C_{TSP}	5.7
C_{PM15}	1.0
M	7.9%
s	6.9%
F_{PM10}	0.75
$F_{PM2.5}$	0.105

The program uses the constants associated with overburden as default for calculation of bulldozing dust emissions since overburden more closely models the bulldozed materials during the development construction. The dust emissions are calculated by multiplying the emission factor with the hours of operation for the dozers listed in the equipment list using the formula below:

$$E = EF \times Hr$$

Where:
E = emissions (lb)
EF = emission factor (lb/hr)
Hr = hours of operation

[8] The earth that is between the topsoil and the coal seam (USEPA AP-42).
[9] Tables 11.9-1 and 11.9-3 of USEPA AP-42

Grading Emissions

EFPM15

$$EF_{PM15} = 0.051 \times (S)^{2.0}, \text{ and } EF_{PM10} = EF_{PM15} \times F_{PM10}$$
$$EF_{TSP} = 0.04 \times (S)^{2.5}, \text{ and } EF_{PM2.5} = EF_{TSP} \times F_{PM2.5}$$

EF	Emission Factor (lb/VMT)
S	mean vehicle speed (mph), AP-42 Default: 7.1 mph
$F_{PM2.5}$	PM2.5 scaling factor, AP-42 default: 0.031
F_{PM10}	PM10 scaling factor, AP-42 defualt: 0.6

S	7.1
$F_{PM2.5}$	0.031
F_{PM10}	0.6
EF_{PM15}	2.57
EF_{TSP}	5.37
Emission factor (lb/VMT)	
EF_{PM10}	1.543
$EF_{PM2.5}$	0.167

The grading dust emissions are calculated by multiplying the emission factors with the total vehicle miles traveled (VMT) for the grading equipment (i.e., grader). The VMT are estimated based on the dimensions of the grading area and the blade width of the grading equipment.

$$E = EF \times VMT, \text{ and}$$

$$VMT = As / Wb \times 43{,}560(sqft / acre) / 5{,}280(ft / mile)$$

Where:

E: emissions (lb)
EF: emission factor (lb/VMT)
VMT: vehicle miles traveled (mile)
A_S: the acreage of the grading site (acre)
W_b: Blade width of the grading equipment. The program uses a default blade width of 12 ft. based on Caterpillar's 140 Motor Grader[7].

Note that the dimensions (e.g., length and width) of the grading site have no impact on the calculation, only the total area to be graded. In order to properly grade a piece of land multiple passes with equipment may be required. The acres is based on the equipment list and days in grading or site preparation phase according to the anticipated maximum number of acres a given piece of equipment can pass over in an 8-hour workday. The equipment-specific grading rates are given in the following table as determined by SCAQMD in consultation with building estimator references.

Equipment Type	Acres/8hr-day
Crawler Tractors	0.5
Graders	0.5
Rubber Tired Dozers	0.5
Scrapers	1

Emissions= EF x VMT

VMT:

A_{site}	acreage of grading site
W_b	Width of blade, default: 12 feet
Feet/acre conversion	43560
feet/mile conversion	5280
Acres per 8-hr day	amount of acres graded per day, see calc below

Paremeters:	Value
A_{site}	4.3

Road Dust Emission Factors

Daily Paved Road Dust EF[1]

$$E_{ext} = [\, k\,(sL)^{0.91} \times (W)^{1.02} \,]$$

EF_{paved}	Annual or other long-term average emission factor in the same units as k
k	particle size multiplier for particle size range and units of interest
sL	road surface silt loading (g/m^2)
W	average weight (tons) of all the vehicles raveling the road (2.4 tons)
P	Number of "wet' days with at least 0.254 (0.01 in) of precipitation during the averaging period
N	Number of days in the averaging period (e.g. 365 for annual, 91 for seasonal, 30 for monthly)

Parameters	**PM10**	**PM2.5**
k $(g/VMT)^2$	0.997898	0.244939
sL (g/m^2)	0.1	0.1
W (tons)	2.4	2.4
EF (g/mi)	3.00E-01	7.36E-02

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project would produce/purchase 100 percent renewable energy.

Land Use - Proposed land uses.

Construction Phase - Operations only - Construction was modeled in excel.

Grading - Operations only - Construction was modeled in excel.

Trips and VMT - Operations only - Construction was modeled in excel.

Architectural Coating - Operations only - Construction was modeled in excel.

Vehicle Trips - Mobile emissions were modeled outside of CalEEMod.

Energy Use - No Natural gas infrastructure. PRoject would pconsume approximately 18,188,000 kwH/year. This would be offset by onsite renewable energy and purchasing of 100 percent renewable elec.

Water And Wastewater - Per Applicant Office building would consume 3,241,411 gallons.

Solid Waste - Provided per applicant - 225 tons/year. Would comply with AB/SB regulations.

Stationary Sources - Emergency Generators and Fire Pumps - Emergency Generators and Fire Pumps - Emergency generator would have a rating of 400kW and be tested monthly for 15 minutes

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	249.50	1000sqft	1.47	249,500.00	0
Enclosed Parking Structure	1,336.00	Space	2.50	404,000.00	0
Parking Lot	6.50	1000sqft	0.15	6,500.00	0
City Park	0.78	Acre	0.78	34,020.36	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	70
Climate Zone	5			**Operational Year**	2025

Utility Company Pacific Gas and Electric Company

CO2 Intensity (lb/MWhr)	0	**CH4 Intensity (lb/MWhr)**	0	**N2O Intensity (lb/MWhr)**	0

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project would produce/purchase 100 percent renewable energy.

Land Use - Proposed land uses.

Construction Phase - Operations only - Construction was modeled in excel.

Grading - Operations only - Construction was modeled in excel.

Trips and VMT - Operations only - Construction was modeled in excel.

Architectural Coating - Operations only - Construction was modeled in excel.

Vehicle Trips - Mobile emissions were modeled outside of CalEEMod.

Energy Use - No Natural gas infrastructure. PRoject would pconsume approximately 18,188,000 kwH/year. This would be offset by onsite renewable energy and purchasing of 100 percent renewable elec.

Water And Wastewater - Per Applicant Office building would consume 3,241,411 gallons.

Solid Waste - Provided per applicant - 225 tons/year. Would comply with AB/SB regulations.

Stationary Sources - Emergency Generators and Fire Pumps - Emergency Generators and Fire Pumps - Emergency generator would have a rating of 400kW and be tested monthly for 15 minutes

Project Operations GHG Summary-Buildout Year 2025 Emissions

Source Category	$MTCO_2e$/year
Area	0.03
Electricity[a]	0
Natural Gas[b]	0
Mobile	2,378
Waste	113
Water	4
Stationary	1
Total Project Emissions	**2,496**

[a] The Project will purchase 100% renewable electricity from Peninsula Clean Energy, therefore no GHG emissions would be associated with Project's electricity consumption

[b] The Proposed Project would not have any natural gas infrastructure.

Commonwealth Building 3 Project - Operational Emissions - San Mateo County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	249.50	1000sqft	1.47	249,500.00	0
Enclosed Parking Structure	1,336.00	Space	2.50	404,000.00	0
Parking Lot	6.50	1000sqft	0.15	6,500.00	0
City Park	0.78	Acre	0.78	34,020.36	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	70
Climate Zone	5			**Operational Year**	2025

Utility Company Pacific Gas and Electric Company

CO2 Intensity (lb/MWhr)	0	**CH4 Intensity (lb/MWhr)**	0	**N2O Intensity (lb/MWhr)**	0

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Project would produce/purchase 100 percent renewable energy.

Land Use - Proposed land uses.

Construction Phase - Operations only - Construction was modeled in excel.

Grading - Operations only - Construction was modeled in excel.

Trips and VMT - Operations only - Construction was modeled in excel.

Architectural Coating - Operations only - Construction was modeled in excel.

Vehicle Trips - Mobile emissions were modeled outside of CalEEMod.

Energy Use - No Natural gas infrastructure. PRoject would pconsume approximately 18,188,000 kwH/year. This would be offset by onsite renewable energy and purchasing of 100 percent renewable elec.

Water And Wastewater - Per Applicant Office building would consume 3,241,411 gallons.

Solid Waste - Provided per applicant - 225 tons/year. Would comply with AB/SB regulations.

Stationary Sources - Emergency Generators and Fire Pumps - Emergency Generators and Fire Pumps - Emergency generator would have a rating of 400kW and be tested monthly for 15 minutes.

Road Dust Emission Factors

Daily Paved Road Dust EF[1]

$$E_{ext} = [\, k\,(sL)^{0.91} \times (W)^{1.02} \,]$$

EF_{paved}	Annual or other long-term average emission factor in the same units as k
k	particle size multiplier for particle size range and units of interest
sL	road surface silt loading (g/m^2)
W	average weight (tons) of all the vehicles raveling the road (2.4 tons)
P	Number of "wet' days with at least 0.254 (0.01 in) of precipitation during the averaging period
N	Number of days in the averaging period (e.g. 365 for annual, 91 for seasonal, 30 for monthly)

Parameters	**PM10**	**PM2.5**
k $(g/VMT)^2$	0.997898	0.244939
sL (g/m^2)	0.1	0.1
W (tons)	2.4	2.4
EF (g/mi)	3.00E-01	7.36E-02

2) AP42: Chapter 13: Miscellaneous Sources, 13.2.1 Paved Roads, Table 13.2.1-1

Daily Unpaved Road Dust EF[1]

$$E.F._{\text{dust},i} = \left(\frac{k(s/12)^1 (S/30)^{0.5}}{(M/0.5)^{0.2}} - C \right)$$

k	particle size multiplier for particle size range and units of interest
s	surface material silt content (%)
M	surface material moisture content (%)
S	mean vehicle speed (mph)
C	emission factor for 1980s vehicle fleet exhaust, brakewear and tire wear

Parameters	**PM10**	**PM2.5**
k $(g/VMT)^2$	816.462	81.6462
s[3]	8.5	8.5
M	0.5	0.5
S	#REF!	#REF!
C	0.213187	0.163292
EF (g/mi)	#REF!	#REF!

Appendix 3.2-2

Health Risk Assessment (HRA) Modeling Files

Commonwealth Building 3 Project Health Risk Assessment Protocol

Project Description

Project would develop a 249,500 square foot (sf) office building with a 404,000 sf parking structure. The Project would also develop a 27,500 SF park with a 6,500 sf parking lot.

Purpose

Evaluate health impacts (cancer and chronic risk) to off-site residential receptors from exhaust emissions from diesel-powered offroad equipment and diesel-powered trucks. Also evaluate the incremental increase in annual $PM_{2.5}$ from exhaust and fugitive dust emissions.

Analyses/Pollutants of Concern

- HRA (Cancer & Chronic Risk)/Diesel Particulate Matter (DPM) (modeled as $PM_{2.5}$ exhaust)
- $PM_{2.5}$ Analysis/$PM_{2.5}$ (exhaust and dust)

Construction Emissions Sources

Unitized Emission Rate

For HRA and PM Analysis, all sources used a unitized emission rate approach to estimate actual concentrations. ***To reduce the number of modeling runs required, each source was modeled with a unit emission rate (1 g/s). Model output was a dispersion factor with units of concentration per unit emissions ([µg/m³]/[g/s]). Following this approach, annual average concentrations resulted from multiplying the dispersion factor by an annual average emission rate (BAAQMD 2012)***.

- AERMOD output concentration [(ug/m³)/(1g/s)] x Actual Emission rate (g/s) = Actual Concentration (ug/m³)

Offroad Construction Equipment Emissions

Project construction would develop each of the components at different areas across the Project site. Each construction area was modeled as area sources in AERMOD that represented where development would occur. Exhaust emissions from offroad equipment were included in the HRA and $PM_{2.5}$ Analysis.

OFFROAD EQUIPMENT

AERMOD Source Name	Source Type:[1]	Release Height (m):[2]	Initial Vertical Dimension (m):[1]	Emission Rate (g/s):
PRK_EX	Polygon Area	5.0	1.4	1.0
BLDG_EX	Polygon Area	5.0	1.4	1.0
GARG_EX	Polygon Area	5.0	1.4	1.0

[1] BAAQMD 2012
[2] SCAQMD 2008

Onsite Dust Emissions

Project construction would develop each of the components at different areas across the Project site. Each construction area was modeled as area sources in AERMOD that represented where development would

occur. Onsite dust emissions included fugitive dust emissions from bulldozing, grading, and truck loading. Onsite dust emissions were only included in the $PM_{2.5}$ Analysis.

ONSITE DUST

AERMOD Source Name	Source Type:	Release Height (m):[1]	Initial Vertical Dimension (m):[1]	Emission Rate (g/s):
PRK_DST	Polygon Area	0.0	1.0	1.0
BLDG_DST	Polygon Area	0.0	1.0	1.0
GARG_DST	Polygon Area	0.0	1.0	1.0
[1]SCAQMD 2008				

Onroad Exhaust Emissions

Onroad exhaust emissions were modeled as a line volume source with the parameters listed below. DPM exhaust emissions from vendor and haul trucks were included in the HRA. PM exhaust emissions from workers, vendors, and haul trucks were included in the $PM_{2.5}$ analysis.

ONROAD EXHAUST

AERMOD Source Name	Source Type	Source Length (m)	Road Width (m)[1]	Plume Width (m)[2]	Plume Height (m)[2]	Vehicle Height (m)[3]	Initial Vertical Dimension (m)[3]	Release Height (m)[3]	Emission Rate (g/s)
ONRD_EX	Line Volume	4,348.3	15	21	6.8	4.0	3.16	3.4	1.0
[1] Road width measured using Google Earth. [2] USEPA 2012 [3] ICF Modeling Parameters									

Onroad Dust Emissions

Onroad dust emissions were modeled as a line volume source with the parameters listed below. Dust emissions factors were based on USEPA AP-42 methodology for paved roads. $PM_{2.5}$ dust emissions from workers, vendors, and haul trucks were included in the $PM_{2.5}$ analysis.

ONROAD DUST

AERMOD Source Name	Source Type	Source Length (m)	Road Width (m)[1]	Plume Width (m)[2]	Plume Height (m)[2]	Vehicle Height (m)[3]	Initial Vertical Dimension (m)[3]	Release Height (m)[3]	Emission Rate (g/s)
ONRD_DST	Line Volume	4,348.3	15	21	1.7	1.0	0.79	0.85	1.0
[1] Road width measured using Google Earth. [2] USEPA 2012 [3] ICF Modeling Parameters									

Operational Emissions Sources

Delivery Truck Idling Emissions

Truck idling emissions were modeled as a single volume source at the building's loading dock area at the eastern portion of the building.

TRUCK IDLING

AERMOD Source Name	Source Type[1]:	Volume Source Width (m)[1]:	Release Height (m)[1]:	Initial Vertical Dimension (m):[1]	Emission Rate (g/s):
TRK_IDL	Volume	5	3.4	3.16	1.0
[1] ICF Modeling Parameters					

Onroad Delivery Truck Exhaust Emissions

Onroad exhaust emissions were modeled as a line volume source with the parameters listed below. DPM and $PM_{2.5}$ exhaust from buses were included in the HRA and $PM_{2.5}$ analysis.

ONROAD EXHAUST

AERMOD Source Name	Source Type	Source Length (m)	Road Width (m)[1]	Plume Width (m)[2]	Plume Height (m)[2]	Vehicle Height (m)[3]	Initial Vertical Dimension (m)[3]	Release Height (m)[3]	Emission Rate (g/s)
ONRD_EX	Line Volume	4,348.3	15	21	6.8	4.0	3.16	3.4	1.0
[1] Road width measured using Google Earth. [2] USEPA 2012 [3] ICF Modeling Parameters									

Onroad Delivery Truck Dust Emissions

Onroad dust emissions were modeled as a line volume source with the parameters listed below. Dust emissions factors were based on USEPA AP-42 methodology for paved roads. $PM_{2.5}$ dust emissions from buses were included in the $PM_{2.5}$ analysis.

ONROAD DUST

AERMOD Source Name	Source Type	Source Length (m)	Road Width (m)[1]	Plume Width (m)[2]	Plume Height (m)[2]	Vehicle Height (m)[3]	Initial Vertical Dimension (m)[3]	Release Height (m)[3]	Emission Rate (g/s)
ONRD_DST	Line Volume	4,348.3	15	21	1.7	1.0	0.79	0.85	1.0
[1] Road width measured using Google Earth. [2] USEPA 2012 [3] ICF Modeling Parameters									

Emergency Generator Emissions

The project would have one emergency generator. Exhaust emissions were modeled as a point source with the stack parameters listed below. DPM and $PM_{2.5}$ exhaust from generators were included in the HRA and $PM_{2.5}$ analysis.

Generators

AERMOD Source Name[1]	Source Type	Release Height (m) [3]	Stack Width (ft)[2]	Gas Exit Temp (C)[2]	Exhaust Flow Rate (ft^3/min)[2]	Emission Rate (g/s)
GEN_1	Point	3.048	0.42	680	3,044	1.0

[1] Information provided by applicant.
[2]Based on generator spec sheets.
[3] Release height is based on height of sound enclosure, 10 feet (3.048m) is conservative since the actual release height would be greater than the enclosure.

Additional Modeling Details

- Pollutant/Averaging Times:
  - PM2.5/ PERIOD
- Receptor Height (BAAQMD 2020): 1.5 meters.
- Receptor Spacing (BAAQMD 2020): 10 meters; Receptor grid extends 1,000 feet from project boundary.
  - *Guidance has rule of thumb of no larger than 25 meters out to 200 meters from project boundary. Our analysis uses tighter spacing at 10 meters, which would be consistent with guidance.*
- Met Data (CARB 2021): PALO ALTO AIRPORT OF SANTA CLARA COUNTY.
  - Met Years: January 1, 2009 to January 2, 2014.
  - Elevation: 2.1 meters.
- Variable Emission Rates:
  - Construction: 7AM-3PM Monday – Friday (8 hours to be consistent with equipment usage hours)
  - Operations-None
- City of Menlo Park (Census 2020): 34,698

Thresholds

Analysis Type	Cancer Risk (per million)	Chronic Hazard Index	Annual $PM_{2.5}$ (ug/m^3)

References for source parameters and additional AERMOD modeling details are found in "HRA Assumptions and AERMOD Parameters".

Health Risk Methodology

- Used OEHHA 2015 Guidelines
- Used FAH of 1.0 for 3rd Trimester and 0<2.
- Cancer risk and chronic risk were estimated using a spreadsheet methodology.
- Residential Exposure factors shown below.
- **30-Year Residential Exposure:** Construction will analysis have 3.6 year exposure duration and operations will evaluate the remaining 26.41 years.

Exposure Factors by Age Bin- Construction-3.23 years
