San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The site is located in an industrial portion of Menlo Park, San Mateo County, California, between Highway 101 and the San Francisco Bay (Figure 1). The overall site is bounded by Haven Avenue to the south, 3585 Haven Avenue to the west, 3645 Haven Avenue to the east, and 3641 Haven Avenue and salt ponds to the north. The site is relatively flat, sloping gently to the north toward San Francisco Bay. AMEC understands that SAP intends to develop the site for multi-unit rental housing. Figure 2 presents an initial proposed layout for the residential complex. In addition, AMEC understands that SAP intends to raise the site elevation by approximately 2.5 to 3 feet through the import of clean fill material to be compacted on site prior to development. In general, approximately 2 to 3 feet of fill is distributed across the site. The fill material is of varying quality and includes debris such as wood, rubber material, concrete, brick, and ceramics. The results of the Phase II ESA activities indicate that the general character of chemical impacts to the fill material are likely insignificant relative to residential human health screening criteria <sup>1</sup> , with the exception of the following locations: h At the northwestern portion of the site, impacted soil was identified at boring location SB-13 (Figure 3), which may be associated with the historical operation of an automotive salvage facility. h At one boring location (SB-10) within an enclosed yard north of the 3611 Haven Avenue building, several pesticides were detected at concentrations exceeding their respective residential Environmental Screening Levels (ESLs) in the soil sample collected at 1 foot bgs. h One polychlorinated biphenyl (PCB) congener (PCB-1260) was detected above its residential ESL in the surface soil sample

(SB-19-SUR) collected adjacent to a transformer located west of the 3611 Haven Avenue building. Concrete samples were collected from the pad around the transformer and the swale directly adjacent to the pad to evaluate whether the materials will require special handling during demolition activities. PCBs were not detected in any concrete samples, indicating that the concrete may be disposed of as part of the building demolition.

Environmental Interest/Information System:  
TSCA SUBMITTER  
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.  
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Name: MAINSPRING ENERGY INC.  
Address: 3601 HAVEN AVE  
City,State,Zip: MENLO PARK, CA 94025  
Site ID: 441965  
CERS ID: 10769593  
CERS Description: Hazardous Waste Generator

Violations:

Site ID: 441965  
Site Name: Mainspring Energy Inc.  
Violation Date: 11-03-2022  
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)  
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal of acute/extremely hazardous waste after the first 1-kilogram threshold amount was accumulated within a 90 day period.  
Violation Notes: Returned to compliance on 11/29/2022. Labels on hazardous waste containers in the shed were dated from March or April of 2022, beyond the 180-day threshold for a small quantity generator. Please have these wastes picked up as soon as possible and send inspector copies of manifests.  
Violation Division: San Mateo County Environmental Health  
Violation Program: HW  
Violation Source: CERS,

Evaluation:

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 11-02-2022  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: Routine inspection. Last accepted HMBP submitted 2-28-2022. Facility stores various compressed gases used to test equipment and lithium ion batteries.

Eval Division: San Mateo County Environmental Health  
Eval Program: HMRRP  
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 09-07-2018  
Violations Found: No  
Eval Type: Routine done by local agency

Eval Notes: Facility has not yet generated any hazardous waste. Business is classified as R&D in physical and engineering sciences. Uses IPA to clean parts - no wipes used yet but Adam Calmis is aware of how to dispose solvent-contaminated wipes as hazardous waste.

Eval Division: San Mateo County Environmental Health

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Status Date: 08/16/2021  
 Global Id: SLT2O100106  
 Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
 Lead Agency Case Number: Not reported  
 Latitude: 37.4848247104198  
 Longitude: -122.178338966934  
 Case Type: Cleanup Program Site  
 Case Worker: KAW  
 Local Agency: Not reported  
 RB Case Number: 41S0044  
 File Location: Regional Board  
 Potential Media Affected: Aquifer used for drinking water supply, Soil Vapor  
 Potential Contaminants of Concern: Dichloroethene (DCE), Trichloroethylene (TCE), Vinyl chloride, Arsenic, Benzene, Diesel, Gasoline, Total Petroleum Hydrocarbons (TPH)  
 Site History: The site is located in Bohannon Industrial Park Unit 3. The parcel area is 39,650 sf. Prior to construction of the building around 1966, the site was used for agriculture. The building was used for component manufacturing by Electro Nuclear Laboratories from 1974 to approx. 1975. The bldg. had been occupied by semiconductor manufacturing companies, including Raychem Corporation from 1983 to 1994. The 1989 Phase I & II Site Investigation results showed TCE up to 610 ug/l and above MCL concentrations of Cd, Cr, and Ag in GW sample from MW-2. No source of contamination confirmed on-site. Raychem also formerly occupied the adjoining property at 119 Independence GW sample from the MMW-1 in 1997 contained up to 420 ug/l TCE, 35 ug/l DCE, and 35,000 ug/l chlorobenzene. Case was inactive for many years. In 2021, the Site was three separate properties each with a building that was historically used for industrial operations and was converted to office use in the 1990s. In 2021, the site was redevelop the Site with one commercial and one residential use building. The residential building is a seven-story multi-family apartment building on the eastern portion of the Site with ground-floor tenant amenities and parking. The office building is a three-story building on the western portion of the Site with a parking garage on the ground and second floors. Vapor intrusion concerns are mitigated by building design, the addition of 3 feet of clean soil across the site before the site is redeveloped, and construction earthwork/ soil removal. No remediation or mitigation measures are required; however, post-construction, pre-occupancy sampling is required to demonstrate that vapor intrusion is not a threat.

Violation Description: Chapter 12, Section(s) 66262.34(f)  
Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 05/11/2021. Accumulation start date added to both drums today. Ensure that this date is added the day that the first drop of thinner waste is put into the drum.

Violation Division: San Mateo County Environmental Health  
Violation Program: HW  
Violation Source: CERS,

Site ID: 34502  
Site Name: GRIFFIN PAINTING, INC.  
Violation Date: 07-17-2018  
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 07/30/2018. Last pickup of waste paint/solvent waste was 4/4/2017. Currently almost 2 drums are full. Have these picked up and provide documentation to SMCUPA within 30 days.

Violation Division: San Mateo County Environmental Health  
Violation Program: HW  
Violation Source: CERS,

Site ID: 34502  
Site Name: GRIFFIN PAINTING, INC.  
Violation Date: 05-11-2021  
Citation: HSC 6.5 25201.16(e) - California Health and Safety Code, Chapter 6.5, Section(s) 25201.16(e)

Violation Description: Failure of the universal waste handler to manage universal waste aerosol cans in a manner that prevents fire, explosion, and the unauthorized release of any universal waste or component of a universal waste to the environment.

Violation Notes: Returned to compliance on 08/09/2022. Observed drum of both empty and partially full aerosols waiting for sorting. Partially full aerosols are a hazardous waste and must be stored in a closed and labeled container. Empty aerosols can be placed in the regular trash. Because the drum contains partially full aerosols, it should be labeled as a hazardous waste container. The other option is to have two containers, one for empty non-hazardous aerosols and another for the partially full hazardous waste aerosols and sort them daily or immediately upon the decision to dispose. Please send verification of use of one of these options to inspector within 30 days.

Violation Description: Hazardous Waste Generator Program - Operations/Maintenance - General  
Violation Notes: Returned to compliance on 08/08/2022. Tenants using space at the back of the building near the flammable cabinet are storing open containers of what appears to be an unlabeled 5-gallon metal hazardous waste drum with a funnel. Also observed an open container of chemicals near the flammable cabinet and an unlabeled small can of coating material. If your tenants are generating hazardous waste, they need to be registered with the county. Please inform them of this requirement and how to handle the hazardous waste situations described above. Please provide their contact information to the inspector.

Name: Address: City,State,Zip: Global ID: Case Type: Status: Status Date: Lead Agency: Case Worker: Local Agency: RB Case Number: Loc Case Number: File Location: Potential Contaminants of Concern: Potential Media Affected: Site History:	JA MOREING COMPANY 120 CONSTITUTION DR MENLO PARK, CA 94025 SLT2O098104 Non-Case Information Informational Item / Review Complete 12/04/2020 SAN FRANCISCO BAY RWQCB (REGION 2) KAW Not reported 41S0144 Not reported Not reported * Volatile Organic Compounds (VOC) Not reported In 1993, San Mateo County required environmental sampling to follow-up on a gasoline UST that was removed from the property in 1986. The sampling results did not indicate residual gasoline contamination (THP-g), but trichloroethene (TCE) was detected. I believe that 120 Constitution became an official site with requirements for investigation and possibly cleanup in 1993. Follow-up sampling in 1994, 1995, and 1997 confirmed the presence of chlorinated solvents, including TCE, in soil and groundwater at the Site. In 1998, the Water Board issued a No Further Action letter stating that the groundwater pollution appears to be migrating from an off-property source, and the Water Board does not intend to require further action by the property owner at this time. However, should new information become available indicating that the pollution is caused by a source on the property or should any owners refuse reasonable access to Water Board staff or other responsible party for investigation or remediation, the Water Board would reconsider its decision. The case was then closed. In 2018, the Water Board reopened the case as a non-case informational item to further investigate the source of the known TCE contamination in the area. The property owner complied with the requirement for a Site History Report and provided

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status Date: 08/16/2021  
 Global Id: T10000014570  
 Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
 Lead Agency Case Number: Not reported  
 Latitude: 37.48314  
 Longitude: -122.17345  
 Case Type: Cleanup Program Site  
 Case Worker: KAW  
 Local Agency: Not reported  
 RB Case Number: 41S0221  
 File Location: All Files are on GeoTracker or in the Local Agency Database  
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Vapor  
 Potential Contaminants of Concern: Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Other Metal, Waste Oil / Motor / Hydraulic / Lubricating  
 Site History: The site is comprised of 3 parcels at 141 Jefferson Drive and 172 - 188 Constitution Drive which have been used for various commercial and industrial shops since the 1960s. Groundwater and soil vapor are contaminated with volatile organic compounds including chlorinated solvents. As of 2020, the 3 parcels are planned for redevelopment into 3 new residential buildings: one building would be seven stories with ground-floor parking garage and 6 levels of apartments; one building would be seven stories with ground-floor parking garage, ground-floor retail space, and 6 levels of apartments; and the third building would be made of up six townhome buildings that would each contain seven three-story units. Volatile organic compounds, including trichloroethene, exceed environmental screening levels (ESLs) in groundwater and soil vapor in the eastern-most portion of the Site. The 3 eastern-most townhome buildings, which are planned to be built in the area of the groundwater and soil vapor ESL exceedances, will be built with vapor intrusion mitigation systems (VIMS). Long-term operation, maintenance, and monitoring may be needed, in accordance with VIMS guidance.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

OSHA ESTABLISHMENT

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste Code:	F004
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F005
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	LABP
Waste Description:	LAB PACK
Waste Code:	P003
Waste Description:	2-PROPENAL (OR) ACROLEIN
Waste Code:	P005
Waste Description:	2-PROPEN-1-OL (OR) ALLYL ALCOHOL
Waste Code:	P015
Waste Description:	BERYLLIUM
Waste Code:	P029
Waste Description:	COPPER CYANIDE (OR) COPPER CYANIDE CU(CN)
Waste Code:	P030
Waste Description:	CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED
Waste Code:	P087
Waste Description:	OSMIUM OXIDE OSO4, (T-4)- (OR) OSMIUM TETROXIDE
Waste Code:	P098
Waste Description:	POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)
Waste Code:	P099
Waste Description:	ARGENTATE (1-), BIS(CYANO-C)-, POTASSIUM (OR) POTASSIUM SILVER CYANIDE
Waste Code:	P105
Waste Description:	SODIUM AZIDE
Waste Code:	U002
Waste Description:	2-PROPANONE (I) (OR) ACETONE (I)
Waste Code:	U012
Waste Description:	ANILINE (I,T) (OR) BENZENAMINE (I,T)
Waste Code:	U044
Waste Description:	CHLOROFORM (OR) METHANE, TRICHLORO-

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### *Lists of Federal NPL (Superfund) sites*

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/27/2022	Source: EPA
Date Data Arrived at EDR: 11/01/2022	Telephone: N/A
Date Made Active in Reports: 11/15/2022	Last EDR Contact: 01/03/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/10/2023
	Data Release Frequency: Quarterly

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/27/2022	Source: EPA
Date Data Arrived at EDR: 11/01/2022	Telephone: N/A
Date Made Active in Reports: 11/15/2022	Last EDR Contact: 01/03/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/10/2023
	Data Release Frequency: Quarterly

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Next Scheduled EDR Contact: 11/28/2011  
Data Release Frequency: No Update Planned

## ***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/27/2022  
Date Data Arrived at EDR: 11/01/2022  
Date Made Active in Reports: 11/15/2022

## ***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 08/25/2022  
Date Data Arrived at EDR: 09/06/2022  
Date Made Active in Reports: 12/05/2022  
Number of Days to Update: 90

Source: Environmental Protection Agency  
Telephone: 703-603-8704  
Last EDR Contact: 12/21/2022  
Next Scheduled EDR Contact: 04/10/2023  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/27/2022  
Date Data Arrived at EDR: 11/01/2022  
Date Made Active in Reports: 11/15/2022  
Number of Days to Update: 14

Source: EPA  
Telephone: 800-424-9346  
Last EDR Contact: 01/03/2023  
Next Scheduled EDR Contact: 04/24/2023  
Data Release Frequency: Quarterly

## ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/27/2022	Source: EPA
Date Data Arrived at EDR: 11/01/2022	Telephone: 800-424-9346
Date Made Active in Reports: 11/15/2022	Last EDR Contact: 01/03/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/24/2023
	Data Release Frequency: Quarterly

## ***Lists of Federal RCRA facilities undergoing Corrective Action***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 11/21/2022	Source: EPA
Date Data Arrived at EDR: 11/21/2022	Telephone: 800-424-9346
Date Made Active in Reports: 12/05/2022	Last EDR Contact: 12/21/2022
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/03/2023
	Data Release Frequency: Quarterly

## ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 11/21/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/21/2022	Telephone: (415) 495-8895
Date Made Active in Reports: 12/05/2022	Last EDR Contact: 12/21/2022
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/03/2023
	Data Release Frequency: Quarterly

## ***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 11/21/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/21/2022	Telephone: (415) 495-8895
Date Made Active in Reports: 12/05/2022	Last EDR Contact: 12/21/2022
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/03/2023
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 11/21/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/21/2022	Telephone: (415) 495-8895
Date Made Active in Reports: 12/05/2022	Last EDR Contact: 12/21/2022
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/03/2023
	Data Release Frequency: Quarterly

## RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 11/21/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/21/2022	Telephone: (415) 495-8895
Date Made Active in Reports: 12/05/2022	Last EDR Contact: 12/21/2022
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/03/2023
	Data Release Frequency: Quarterly

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 11/02/2022	Source: Department of the Navy
Date Data Arrived at EDR: 11/08/2022	Telephone: 843-820-7326
Date Made Active in Reports: 01/10/2023	Last EDR Contact: 11/01/2022
Number of Days to Update: 63	Next Scheduled EDR Contact: 02/20/2023
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/15/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/17/2022	Telephone: 703-603-0695
Date Made Active in Reports: 10/24/2022	Last EDR Contact: 11/16/2022
Number of Days to Update: 68	Next Scheduled EDR Contact: 03/06/2023
	Data Release Frequency: Varies

### US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

## ***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

	Data Release Frequency: Quarterly

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 02/23/2022	Source: Environmental Protection Agency

Data Release Frequency: No Update Planned

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/29/2022  
Date Data Arrived at EDR: 08/18/2022

	Data Release Frequency: Semi-Annually

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 08/25/2022	Source: DTSC and SWRCB
Date Data Arrived at EDR: 08/25/2022	Telephone: 916-323-3400

Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Data Release Frequency: Quarterly

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 10/28/2022
Number of Days to Update: 88	Next Scheduled EDR Contact: 02/16/2023
	Data Release Frequency: Quarterly

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/08/2018	Telephone: 703-308-4044

Number of Days to Update: 73	Next Scheduled EDR Contact: 02/16/2023
	Data Release Frequency: Varies

### TSCA: Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2016	Source: EPA
Date Data Arrived at EDR: 06/17/2020	Telephone: 202-260-5521
Date Made Active in Reports: 09/10/2020	Last EDR Contact: 12/12/2022
Number of Days to Update: 85	Next Scheduled EDR Contact: 03/27/2023
	Data Release Frequency: Every 4 Years

### TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2018	Source: EPA
Date Data Arrived at EDR: 08/14/2020	Telephone: 202-566-0250
Date Made Active in Reports: 11/04/2020	Last EDR Contact: 11/01/2022
Number of Days to Update: 82	Next Scheduled EDR Contact: 02/27/2023
	Data Release Frequency: Annually

### SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 10/17/2022	Source: EPA

	Data Release Frequency: Annually

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 10/27/2022	Source: EPA
Date Data Arrived at EDR: 11/01/2022	Telephone: 703-416-0223
Date Made Active in Reports: 11/15/2022	Last EDR Contact: 01/03/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 03/13/2023
	Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 04/27/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/04/2022	Telephone: 202-564-8600
Date Made Active in Reports: 05/10/2022	Last EDR Contact: 01/17/2023
Number of Days to Update: 6	Next Scheduled EDR Contact: 05/01/2023
	Data Release Frequency: Varies

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

	Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

## HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## US MINES 3: Active Mines & Mineral Plants Database Listing

Active Mines and Mineral Processing Plant operations for commodities monitored by the Minerals Information Team of the USGS.

Date of Government Version: 04/14/2011	Source: USGS
Date Data Arrived at EDR: 06/08/2011	Telephone: 703-648-7709
Date Made Active in Reports: 09/13/2011	Last EDR Contact: 11/21/2022
Number of Days to Update: 97	Next Scheduled EDR Contact: 03/06/2023
	Data Release Frequency: Varies

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST\_HANDLING\_INSTR), Non-hazardous waste description (NON\_HAZ\_WASTE\_DESCRIPTION), DOT printed information (DOT\_PRINTED\_INFORMATION), Waste line handling instructions (WASTE\_LINE\_HANDLING\_INSTR), Waste residue comments (WASTE\_RESIDUE\_COMMENTS).

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

Date of Government Version: 06/24/2020	Source: Department of Health & Human Services
Date Data Arrived at EDR: 03/17/2021	Telephone: 202-741-5770

## PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

Date of Government Version: 01/03/2022	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/31/2022	Telephone: 202-272-0167

## PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits.

## PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

	Data Release Frequency: Varies

## PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

## AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

North Map:	12016475 REDWOOD POINT, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06081C0306E	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06081C0195E	FEMA FIRM Flood data

## NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
PALO ALTO	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### **Site-Specific Hydrogeological Data\*:**

Search Radius:	1.25 miles
Status:	Not found

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q ( <i>decoded above as Era, System &amp; Series</i> )

#### **GEOLOGIC AGE IDENTIFICATION**

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.  
 Hydrologic Group:

Soil Drainage Class: Partially hydric  
 Hydric Status:

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

### Soil Map ID: 2

Soil Component Name: Novato

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9
2	16 inches	59 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9

### Soil Map ID: 3

Soil Component Name: Novato

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9
2	16 inches	59 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 9 Min: 7.9

### Soil Map ID: 4

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

### Soil Map ID: 5

Soil Component Name: Water

Soil Surface Texture:  
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:  
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

### Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

### California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

## RADON

### State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## Certified Sanborn Results:

**Certification #** 3440-4BF9-8800

**PO #** NA

**Project** 1858

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 3440-4BF9-8800

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Stantec (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Dear Ms. Alvarado:

We have received your Public Records Act Request at the Department of Toxic Substances Control (DTSC). Upon thorough review of our files, we found no records pertaining to the site(s) referenced above.

For information regarding public reports on hazardous waste shipments of generators, transporters, and TSDFs, you can access our Hazardous Waste Tracking System (HWTS) online at: <https://hwts.dtsc.ca.gov/>. Select the "Reports" tab for search options. If you are interested in retrieving detailed reports, please contact the HWTS unit via e-mail: [hwtsreports@dtsc.ca.gov](mailto:hwtsreports@dtsc.ca.gov) or phone: 1-800-618-6942. Customized reports may require a fee. For copies of manifests, please send an e-mail to [mcr@dtsc.ca.gov](mailto:mcr@dtsc.ca.gov).

In addition, the DTSC provides access to public records online via EnviroStor; another data management system that tracks our efforts in cleanup, permitting, enforcement, and investigation of known/suspected hazardous waste sites and facilities. The available data is updated in real-time. You can access Envirostor online at [www.envirostor.dtsc.ca.gov](http://www.envirostor.dtsc.ca.gov). Navigate the website easily by clicking the "How to Use EnviroStor" tab, then selecting the option "Take a Tour."

If you have any questions or would like further information regarding your request, please contact me via phone: [510-540-3800](tel:510-540-3800) or e-mail: [Berkeleyfileroom@dtsc.ca.gov](mailto:Berkeleyfileroom@dtsc.ca.gov).

Best regards,

*(Rose) Ann Reeser*

**San Francisco Bay Regional Water Quality Control Board**

June 16, 2014  
File No. 41S0105 (RL)

SUMCO Phoenix Corp.  
Attn: Mr. Jeffrey Bradshaw  
19801 North Tatum Boulevard  
Phoenix, AZ 85050

RE: No Further Action Required at the former Siltec site located at 3695-3723 Haven Avenue,  
Menlo Park, San Mateo County

Dear Mr. Bradshaw:

This letter confirms the completion of a site investigation and corrective action for the subject site. Thank you for your cooperation throughout this investigation.

This letter responds to the December 31, 2013, "Summary of Environmental Conditions, and Request for Declaration of No Further Active Remediation Status" prepared by Erler & Kalinowski, Inc. (EKI) on behalf of SUMCO Phoenix Corp. ("SUMCO") for the former Siltec facility located at 3695-3723 Haven Avenue, Menlo Park, in San Mateo County (Site). This request was based on an evaluation of the criteria specified in the Regional Water Board's July 31, 2009, "Assessment Tool for Closure of Low Threat Chlorinated Solvent Sites." As explained below, we conclude that no further action is necessary at the Site. I also concur with your request to properly abandon groundwater monitoring wells on-site, and on the off-site downgradient 3750 Haven Avenue property, except for the two on-site shallow monitoring wells MW-8 and MW-9, which are to be monitored by the current Site owner pursuant to the terms of the existing Deed Restrictions. You are requested to provide documentation within 30 days after the proper abandonment of these wells.

### **Summary of Site Investigation and Remediation**

The Site is comprised of three commercial buildings and was formerly used for semiconductor manufacturing which resulted in adverse impact of subsurface soil and groundwater by volatile organic compounds (VOCs), principally trichloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE). Due to the close proximity to former salt ponds, groundwater in the area has extremely elevated salinity and is not suitable for municipal supply. Extensive investigations of on-site and off-site soil and groundwater have been conducted from 1994 through 2012. Risk-based cleanup goals were developed as part of the 1999 Feasibility Study/Remedial Action Plan (FS/RAP) prepared by EKI. Remedial options were evaluated, including a pilot study of in-situ chemical oxidation using potassium permanganate injection. Ultimately, in-situ treatment did not achieve

targeted reductions in VOC concentrations, and Site remediation was accomplished in 1999 through excavation and removal of impacted soil that exceeded risk-based cleanup goal.

In accordance with the FS/RAP, approximately 2,860 cubic yards of VOC-impacted soil were excavated from the Site and the adjacent 3645 and 3665 Haven Avenue properties to the northwest. The excavation was backfilled with a multilayered mixture of materials intended to inhibit movement of VOC vapors from groundwater into the clean fill. As part of the excavation effort, the building in the middle (Building No. 2 at 3715 Haven Avenue) was demolished and a new two-story building was constructed south of the former Building 2 footprint, outside of the high groundwater risk area. A paved parking lot currently occupies this soil remediation area.

SUMCO and its predecessors have conducted groundwater monitoring for 13 years since Site source excavation, using on-site and off-site downgradient wells. Based on the available data, VOCs in groundwater have migrated off-site to the east and northeast, but the concentrations of chemicals of concern in groundwater have stabilized or declined over this time period through natural attenuation process. Shallow soil vapor sampling conducted by SUMCO's predecessors in 1999 near the commercial building on the adjacent downgradient property to the east (3750 Haven Avenue) did not detect chemicals of concern originated from the Site above laboratory reporting limits.

Currently, Building 2 (3715 Haven Avenue) is owned by Deerfield Realty, and Buildings 1 (3695-3705 Haven Avenue) and 3 (3721-3723 Haven Avenue) are owned by Integrus Millennium Joint Venture LLC (Integrus). A Risk Management Plan (RMP) was prepared and incorporated into a 1999 Covenant (a.k.a. Deed Restriction) between the Site owner and the Regional Water Board. In addition to specific measures to protect human health risk from residual contamination in the groundwater, the RMP also requires the performance of groundwater monitoring in certain on-site wells, and evaluation of changing Site and regulatory conditions, by the Site owner. SUMCO sampled the two on-site shallow (A-zone) wells MW-8 and MW-9 from 1999 through 2004, during which time the concentrations remained below site-specific risk-based screening levels. After 2004, Regional Water Board approved SUMCO's proposal to discontinue monitoring of these wells and they have not been sampled by the current owner since 2004. Based on the 2004 groundwater data, 95 and 3,300 µg/l of TCE remain in the sample collected from MW-8 and MW-9, respectively, which are lower than the site specific screening levels.

## **Conclusion**

Based on our review, we conclude that the Site meets the Water Board's criteria for a low-threat chlorinated solvent site. Remedial actions implemented to date have effectively removed the source and resulted in stabilized and improving groundwater condition. Further remedial actions will have marginal effect and it is anticipated that groundwater quality will further improve over time due to natural attenuation processes. There is an isolated pocket of elevated TCE concentrations in groundwater near MW-9 based on 2004 sampling result, which is above the existing Regional Water Board's Environmental Screening Levels (ESLs) for commercial land use. However, MW-9 is located outside of existing building footprint areas and the detected TCE concentrations were

below the site-specific risk-based screening levels. Based on groundwater data since 2004 from other monitoring wells at the Site, it is reasonable to expect that current TCE concentrations at MW-9 have also decreased significantly from its 2004 level.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, I conclude that no further action is necessary at the subject Site. Any risk associated with residual contamination can be adequately managed by the RMP and the deed restrictions. However, in the event the current or future land owner(s) proposes a more sensitive land use at the Site, we will require the use of up-to-date groundwater information, especially near the MW-9 area, to evaluate the risk before any revision of the deed restrictions can be granted.

If you have any questions concerning this letter, please contact Randy Lee of my staff at (510) 622-2375, [e-mail: [rylee@waterboards.ca.gov](mailto:rylee@waterboards.ca.gov)].

Benzene	n/a	(d)	460	ND <5	trans-1,2-Dichloroethene	0.11	(d)	1.6	ND <50
1,1-Dichloroethene	n/a	(d)	270	ND <50					

**Comments:**  
Excavation was performed in 1999-2001 to a maximum depth of approximately 6 feet below ground surface, i.e., approximately one foot above groundwater (EKI, 2000; EKI, 2001). Deeper excavation into the capillary fringe or saturated zone was not practicable.

**Notes:**  
(a) Listed pre-excavation VOC concentrations in soil and groundwater are from EKI (1999).  
(b) Post-excavation soil sampling was not required by the RWQCB. Soil was excavated to approximately one foot above groundwater, and lateral excavation boundaries were pre-determined, based on soil sampling prior to excavation. Excavation boundaries enclosed soil samples with VOCs above risk-based screening levels, and were extended to include soil samples with VOCs above reporting limits but below screening levels, as a conservative measure (EKI, 2000). Of the chemical species detected on-Site, risk drivers were trichloroethene and vinyl chloride. Values shown above, in the soil post-excavation column, are the risk-based maximum soil screening levels for VOCs used to demarcate excavation boundaries. These data do not represent analytical results for confirmation soil samples.  
(c) Post-remediation VOC concentrations in groundwater are the maximum analytical values from the three most recent sampling events for each well (EKI, 2013). All maximum post-remediation concentrations listed (except benzene and toluene) are analytical results of samples collected from on-site A-zone well MW-9, most recently sampled in 2004 (EKI, 2013).  
(d) The risk-based soil screening level for this chemical was greater than the maximum observed concentration, thus its distribution did not influence cleanup goals or excavation boundaries.

**IV. CLOSURE**

<p><i>Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan?</i></p> <p>Yes. Current listed beneficial uses include MUN, PROC, and IND for groundwater. Given the extreme salinity of groundwater at and around the Site, such uses currently are not possible. Nevertheless, VOC concentrations are expected to continue to decline over time, such that such beneficial uses could be possible in the absence of high salinity in groundwater.</p>		
<p><i>Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan?</i></p> <p>Yes. Potential beneficial uses include AGR for groundwater. Given elevated salinity of groundwater at and around the Site, such use is not currently possible. Nevertheless, VOC concentrations are expected to continue to decline over time such that such a beneficial use could be possible in the absence of high salinity in groundwater.</p>		
<p><i>Does corrective action protect public health for current land use? Yes</i></p>		
<p><i>Site Management Requirements:</i></p> <p>Site activities must be managed in accordance with the Risk Management Plan, dated 12 March 1999, recorded 9 August 1999, County of San Mateo, California; Document no. 1999-135815.</p>		
<p><i>Monitoring Wells Decommissioned:</i></p>	<p><i>Number Decommissioned:</i></p>	<p><i>Number Retained: 2 on-site shallow wells to be retained</i></p>
<p><i>List Enforcement Actions Taken: None</i></p>		
<p><i>List Enforcement Actions Rescinded: N/A</i></p>		

**V. TECHNICAL REPORTS, CORRESPONDENCE, ETC., THAT THIS CLOSURE RECOMMENDATION WAS BASED UPON**

## VI. ADDITIONAL COMMENTS, DATA, ETC.

EKI (2013) presents a comprehensive summary of the land use history, physical characteristics, former and current chemical concentrations, and remediation activities completed at the 3695-3723 Haven Avenue property (“Site”). Also presented are a description of administrative and engineering controls implemented to address potential future risks presented by residual concentrations of VOCs at the Site, and an analysis of concentration trends and potential fate and transport of VOCs in groundwater at the Site, and downgradient of the Site.

The Site Risk Management Plan (“RMP”) is presented in EKI (1999), and is attached to a Covenant and Environmental Restriction on the Property (i.e., a “deed restriction”), between the RWQCB and the property owner. The deed restriction and RMP detail the responsibilities of current and future owners of the Site for environmental monitoring and risk management, and prohibits certain land uses (e.g., water wells, day-care facilities, and others) that could potentially introduce or complete exposure pathways to future Site users. The deed restriction is recorded in the Official Records of San Mateo County and obligates current and future owners to specific actions to protect human health at the Site.

The Site meets RWQCB’s criteria for a low-threat chlorinated solvent site. Additional environmental monitoring and remediation by SUMCO would not be productive, given the following:

- VOC concentrations in soil, groundwater, and soil vapor at and near the Site have been characterized;
- Source removal has been implemented;
- Engineering and administrative controls have been designed and implemented;
- Thirteen years of groundwater monitoring have been completed;
- VOC concentration trends in the off-Site VOC plume in groundwater are stable to declining;
- Off-site VOC concentrations are well below appropriate Environmental Screening Levels;
- The VOC plume poses minimal to no threat to existing and potential uses of groundwater;
- Movement of VOCs in groundwater to marine water of San Francisco Bay is expected to take centuries to millennia;
- The most recent on-Site VOC groundwater concentration data were below Site-specific risk-based cleanup levels; and
- Under the RMP and deed restriction between the Site owner and the RWQCB, the Site owner is required to monitor on-Site VOC concentrations and perform certain other actions to manage risk at the property; SUMCO is not a party to the RMP or deed restriction.

**This document and the related CASE CLOSURE LETTER shall be retained by the lead agency as part of the official site file.**

**Subject: Variance from Covenant and Environmental Restriction on 3705 Haven Avenue, Menlo Park, San Mateo County**

Dear Mr. Williams:

This letter grants a variance (Variance) from certain use restrictions contained in the [Covenant and Environmental Restriction on Property \(Covenant\)](#) recorded against the subject property, 3705 Haven Avenue in Menlo Park, California, in response to the August 12, 2020 request from Integris/Millennium Joint Venture, LLC (Integris). It is our understanding that Integris is the current owner of the subject property. More specifically, this Variance suspends the Covenant's restriction on residential development.

As set forth in more detail below, granting a variance from certain restrictions in the Covenant is appropriate as to the 3705 Haven Avenue parcel. This Variance reflects the following findings:

- A. The Covenant was recorded on two adjacent parcels on Haven Avenue (Burdened Property) on August 9, 1999, in the Official Records of San Mateo County, California, as Document No. 1999-135815. The Covenant restricted development on the two parcels to commercial and industrial uses because groundwater concentrations of chlorinated volatile organic compounds exceeded residential screening levels. After recordation of the Covenant, the Burdened Property was reparcelized into the following 3 parcels: (1) 3705 Haven Avenue, which is the subject of this Variance (APN 055-170-240), and is more particularly described in [Exhibit A](#) attached hereto ("**3705 Haven Property**"); (2) 3715 Haven Avenue, in the City of Menlo Park, County of San Mateo, State of California, with Assessor's Parcel Number 055-170-340, which is more particularly described in [Exhibit B](#) attached hereto ("**3715 Haven Property**"); and (3) 3723 Haven Avenue, in the City of Menlo Park, County of San Mateo, State of California, with Assessor's Parcel Number 055-170-350, which is

---

JIM McGRATH, CHAIR | MICHAEL MONTGOMERY, EXECUTIVE OFFICER

more particularly described in Exhibit C attached hereto and (“**3723 Haven Property**”).

- B. Between January 31, 2020 and August 12, 2020, the Groundwater and Indoor Air Investigation Report and Soil Vapor Investigation Report were submitted demonstrating there is limited residual contamination on 3705 Haven Property compared to the rest of the site. The highest concentration of trichloroethene (TCE) in groundwater at the 3705 Haven Property is 23 micrograms per liter (µg/L). This is more than two orders of magnitude less than groundwater concentrations remaining on 3715 and 3723 Haven Ave. Soil vapor concentrations of TCE at the 3705 Haven Property are less than residential vapor intrusion-based screening levels.
- C. Integris submitted a request to the Water Board for a variance of the Covenant to allow residential land use on 3705 Haven Property. The Water Board concurs that residential land use is acceptable on 3705 Haven Property due to site conditions, including low soil and soil gas contaminant concentrations and risk management measures for groundwater contamination. Risk to residential receptors (including children and seniors) from residual groundwater contamination at 3705 Haven Property can be effectively managed with the Risk Management Plan (including any subsequent approved addenda) that is required by the Covenant. Specifically, the Risk Management Plan will be updated with an addendum to restrict the construction of subsurface structures that could create a vapor intrusion concern.

The Water Board grants to 3705 Haven Avenue a Variance from the following restrictions in Article III, Section 3.1 of the Covenant, provided that no subsurface structures are constructed on the property and the Risk Management Plan is updated as described in Finding C:

- a. Development of the Burdened Property shall be restricted to industrial commercial or office space;
- b. No residence for human habitation shall be permitted on the Burdened Property;
- e. No day care centers for children or day care centers for Senior Citizens shall be permitted on the Burdened Property.

Exhibit A of the Covenant is replaced with Exhibit A, Exhibit B, and Exhibit C attached to this Variance to distinguish the 3705 Haven Property parcel from the 3715 Haven Property and 3723 Haven Property parcels.

If you have any questions, please contact Nicole Fry of my staff at [Nicole.Fry@waterboards.ca.gov](mailto:Nicole.Fry@waterboards.ca.gov)

**COVENANT AND ENVIRONMENTAL RESTRICTION  
ON PROPERTY**

**3695-3723 Haven Avenue  
Menlo Park, California**

This Covenant and Environmental Restriction on Property (this "Covenant") is made as of the 9th day of Aug., 1999 by Integris/Millennium Joint Venture LLC ("Covenantor") who is the Owner of record of that certain property situated at 3695-3723 Haven Avenue, in the City of Menlo Park, County of San Mateo, State of California, which is more particularly described in Exhibit A attached hereto and incorporated herein by this reference (such portion hereinafter referred to as the "Burdened Property"), for the benefit of the California Regional Water Quality Control Board for the San Francisco Bay Region (the "Board"), with reference to the following facts:

A. **The Burdened Property and groundwater underlying the property contain hazardous materials.**

B. **Contamination of the Burdened Property.** It is believed that certain industrial operations caused soil and groundwater at the Burdened Property to be contaminated with halogenated volatile organic compounds, including trichloroethene and vinyl chloride, which constitute hazardous materials as that term is defined in Health & Safety Code section 25260. To mitigate potential exposure to such chemicals, soil excavation, in-situ chemical oxidation, if feasible, and institutional controls, including this Covenant, are to be implemented.

C. **Exposure Pathways.** The contaminants addressed in this Covenant are present in soil and groundwater on the Burdened Property. Without the mitigation measures described above, exposure to these contaminants could take place via direct contact, resulting in dermal exposure, inhalation, or ingestion by humans. The risk of public exposure to the contaminants has been and will be substantially lessened by the remediation and controls described herein.

D. **Adjacent Land Uses and Population Potentially Affected.** The Burdened Property is currently vacant but has been used for industrial and commercial uses, and is adjacent to industrial and commercial land uses.

E. Full and voluntary disclosure to the Board of the presence of hazardous materials on the Burdened Property has been made and extensive sampling of the Burdened Property has been conducted.

F. Covenantor desires and intends that in order to benefit the Board, and to protect the present and future public health and safety, the Burdened Property shall be used in such a manner as to avoid potential harm to persons or property that may result from hazardous materials that may have been deposited on portions of the Burdened Property.

## ARTICLE I

### GENERAL PROVISIONS

1.1 Provisions to Run with the Land. This Covenant sets forth protective provisions, covenants, conditions and restrictions (collectively referred to as "Restrictions") upon and subject to which the Burdened Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. The restrictions set forth in Article III are reasonably necessary to protect present and future human health and safety or the environment as a result of the presence on the land of hazardous materials. Each and all of the Restrictions shall run with the land, and pass with each and every portion of the Burdened Property, and shall apply to, insure to the benefit of, and bind the respective successors in interest thereof, for the benefit of the Board and all Owners and Occupants. Each and all of the Restrictions are imposed upon the entire Burdened Property unless expressly stated in the Risk Management Plan, see below, as applicable to a specific portion of the Burdened Property. Each and all of the Restrictions run with the land pursuant to section 1471 of the Civil Code. Each and all of the Restrictions are enforceable by the Board.

1.2 Concurrence of Owners and Lessees Presumed. All purchasers, lessees, or possessors of any portion of the Burdened Property shall be deemed by their purchase, leasing, or possession of such Burdened Property, to be in accord with the foregoing and to agree for and among themselves, their heirs, successors, and assignees, and the agents, employees, and lessees of such owners, heirs, successors, and assignees, that the Restrictions as herein established must be adhered to for the benefit of the Board and the Owners and Occupants of the Burdened Property and that the interest of the Owners and Occupants of the Burdened Property shall be subject to the Restrictions contained herein.

1.3 Apportionment of Burden Among Multiple Owners. Where ownership of the Burdened Property is held by multiple persons, holding by several titles, the burdens imposed by this Covenant shall be apportioned between them proportionate to the value of the property held by each owner, if such value can be ascertained, and if not, then according to their respective interests in point of quantity. (Cal. Civ. Code § 1467.)

1.4 Incorporation into Deeds and Leases. Covenantor desires and covenants that the Restrictions set out herein shall be incorporated in and attached to each and all deeds and leases of any portion of the Burdened Property. Recordation of this Covenant shall be deemed binding on all successors, assigns, and lessees, regardless of whether a copy of this Covenant and Agreement has been attached to or incorporated into any given deed or lease.

1998-135815  
08/09/1999 03:24P  
DR Page: 2 of 163

1.5 Purpose. It is the purpose of this instrument to convey to the Board real property rights, which will run with the land, to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

## ARTICLE II

### DEFINITIONS

2.1 Board. "Board" shall mean the California Regional Water Quality Control Board for the San Francisco Bay Region and shall include its successor agencies, if any.

2.2 Improvements. "Improvements" shall mean all buildings, roads, driveways, regradings, and paved parking areas, constructed or placed upon any portion of the Burdened Property.

2.3 Occupants. "Occupants" shall mean Owners and those persons entitled by ownership, leasehold, or other legal relationship to the exclusive right to occupy any portion of the Burdened Property.

2.4 Owner or Owners. "Owner" or "Owners" shall mean the Covenantor and/or its successors in interest, who hold title to all or any portion of the Burdened Property.

2.5 Risk Management Plan. "Risk Management Plan" (also referred to herein as "RMP") shall mean that certain Plan concerning the Burdened Property, prepared by Erier & Kalinowski, Inc. and dated March 12, 1999, and any and all subsequent addenda thereto, on file with the California Regional Water Quality Control Board, San Francisco Bay Region; the San Mateo County Division of Environmental Health and the City of Menlo Park Building Department. Covenantor shall cause the RMP to be filed with the aforementioned three agencies. Owner, at the time of any addenda to the RMP, shall cause the addenda to be filed with the aforementioned three agencies. The RMP is attached hereto and incorporated herein by this reference as Exhibit B.

## ARTICLE III

### DEVELOPMENT, USE AND CONVEYANCE OF THE BURDENED PROPERTY

3.1 Restrictions on Development and Use. Covenantor promises to restrict the use of the Burdened Property as follows:

- a. Development of the Burdened Property shall be restricted to industrial, commercial or office space;
- b. No residence for human habitation shall be permitted on the Burdened Property;
- c. No hospitals shall be permitted on the Burdened Property;

d. No schools for persons under 21 years of age shall be permitted on the Burdened Property;

e. No day care centers for children or day care centers for Senior Citizens shall be permitted on the Burdened Property;

f. No Owners or Occupants of the Burdened Property or any portion thereof shall conduct any excavation work on the Burdened Property, except in strict compliance with the RMP or unless expressly permitted in writing by the Board. Any contaminated soils brought to the surface by grading, excavation, trenching, or backfilling shall be managed by Covenantor or his agent in accordance with all applicable provisions of local, state and federal law;

g. All uses and development of the Burdened Property shall be consistent with the Risk Management Plan or any applicable Board Order, each of which is hereby incorporated by reference including future amendments thereto. All uses and development shall preserve the integrity of any cap, any remedial measures taken or remedial equipment installed, and any groundwater monitoring system installed on the Burdened Property pursuant to the requirements of the Board, unless otherwise expressly permitted in writing by the Board;

h. No Owners or Occupants of the Property or any portion thereof shall drill, bore, otherwise construct, or use a well for the purpose of extracting water for any use, including but not limited to, domestic, potable, or industrial uses, unless expressly permitted in writing by the Board;

i. The Owner shall notify the Board of each of the following: (1) The type, cause, location and date of any disturbance to any cap, any remedial measures taken or remedial equipment installed, and of the groundwater monitoring system installed on the Burdened Property pursuant to the requirements of the Board, which could affect the ability of such cap or remedial measures, remedial equipment, or monitoring system to perform their respective functions and (2) the type and date of repair of such disturbance. Notification to the Board shall be made by registered mail within ten (10) working days of both the discovery of such disturbance and the completion of repairs;

j. The Covenantor agrees that the Board, and/or any persons acting pursuant to Board orders, shall have reasonable access to the Burdened Property for the purposes of inspection, surveillance, maintenance, or monitoring, as provided for in Division 7 of the Water Code;

k. No Owner or Occupant of the Burdened Property shall act in any manner that will aggravate or contribute to the existing environmental conditions of the Burdened Property. All use and development of the Burdened Property shall preserve the integrity of any capped areas;

3.2 Enforcement. Failure of an Owner or Occupant to comply with any of the restrictions, as set forth in paragraph 3.1, shall be grounds for the Board, by reason of this Covenant, to have the authority to require that the Owner modify or remove any Improvements constructed in violation of that paragraph. Violation of the Covenant shall be grounds for the Board to file civil actions against the Owner as provided by law.

3.3 Notice in Agreements. After the date of Recordation hereof, all Owners and Occupants shall execute a written instrument which shall accompany all purchase agreements or leases relating to the property. Any such instrument shall contain the following statement:

This statement is not a declaration that a hazard exists. The land described herein contains hazardous materials in soils and in the groundwater under the property, and is subject to a deed restriction dated as of July \_\_\_\_\_, 1999, and recorded on July \_\_\_\_\_, 1999, in the Official Records of San Mateo County, California, as Document No. \_\_\_\_\_, which Covenant and Restriction imposes certain covenants, conditions, and restrictions on usage of the property described herein.

#### ARTICLE IV

#### VARIANCE AND TERMINATION

4.1 Variance Any Owner or, with the Owner's consent, any Occupant of the Burdened Property or any portion thereof may apply to the Board for a written variance from the provisions of this Covenant.

4.2 Termination Any Owner or, with the Owner's consent, any Occupant of the Burdened Property or a portion thereof may apply to the Board for a termination of the Restrictions as they apply to all or any portion of the Burdened Property.

4.3 Term Unless terminated in accordance with paragraph 4.2 above, by law or otherwise, this Covenant shall continue in effect in perpetuity.

#### ARTICLE V

#### MISCELLANEOUS

5.1 No Dedication Intended. Nothing set forth herein shall be construed to be a gift or dedication, or offer of a gift or dedication of the Burdened Property or any portion thereof to the general public.

5.2 Notices. Whenever any person gives or serves any notice, demand, or other communication with respect to this Covenant, each such notice, demand, or other communication shall be in writing and shall be deemed effective (1) when delivered, if personally delivered to the person being served or official of a government agency being served, or (2) three (3) business days after deposit in the mail if mailed by United States mail, postage paid certified, return receipt requested:

*If To:* "Covenantor"

Integris/Millennium Joint Venture LLC  
Attention: Mr Loren Baxter

If To: "Board"

Regional Water Quality Control Board  
San Francisco Bay Region  
Attention: Executive Officer  
1515 Clay Street, Suite 1400  
Oakland, California 94512

5.3 Partial Invalidity. If any portion of the Restrictions or terms set forth herein is determined to be invalid for any reason, the remaining portion shall remain in full force and effect as if such portion had not been included.

5.4 Article Headings. Headings at the beginning of each numbered article of this Covenant are solely for the convenience of the parties and are not a part of the Covenant.

5.5 Recordation. This instrument shall be executed by the Covenantor and by the Executive Officer of the Board. This instrument shall be recorded by the Covenantor in the County of San Mateo within ten (10) days of the date of execution.

5.6 References. All references to Code sections include successor provisions

5.7 Construction. Any general rule of construction to the contrary notwithstanding, this instrument shall be liberally construed in favor of the Covenant to effect the purpose of this instrument and the policy and purpose of the Water Code. If any provision of this instrument is found to be ambiguous, an interpretation consistent with the purpose of this instrument that would render the provision invalid shall be favored over any interpretation that would render it invalid.

5.8 Effective Date. This Covenant, its terms and conditions, and the burdens imposed and the benefits derived therefrom, shall become effective upon Recordation of this Covenant.

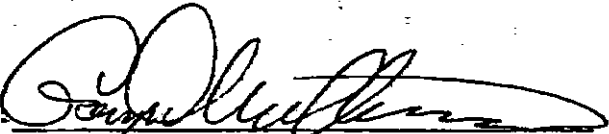

IN WITNESS WHEREOF, the parties execute this Covenant as of the date set forth above.

## **1. INTRODUCTION**

This Risk Management Plan is intended to address residual concentrations of chemicals of concern in environmental media at the 3695-3673 Haven Avenue property located in Menlo Park, California (the "Site"; Figure 1). The term Site, as used in this Risk Management Plan, refers to the entire property at the address 3695 -3723 Haven Avenue, Menlo Park, California and any parcels or subdivided parcels that may result from sale of portions of the current property to other owners. Mitsubishi Silicon America ("MSA"), the present owner, has made the property available for sale in whole or in part. Because current zoning of the Site is industrial, the Risk Management Plan contemplates redevelopment of the Site for a variety of industrial/commercial purposes.

The Risk Management Plan provides a decision framework to manage residual chemicals [(i.e., halogenated volatile organic compounds ("VOCs"))] in soil and groundwater at the Site in a manner that is: (1) satisfactory to the RWQCB, as lead agency, and other involved regulatory agencies with oversight authority, as required, (2) protective of human health and the environment, and (3) consistent with planned land uses. This Risk Management Plan contains the following:

- description of the Site background, including a brief history of Site usage, discussion of environmental investigations and remedial actions performed at the Site, and a summary of identified remaining environmental conditions;
- summary of the risk assessment that was conducted to evaluate potential human health impacts at the Site;
- short-term risk management plan to be implemented during construction at the Site, which includes worker health and safety planning requirements and construction impact mitigation measures; and,
- non-construction risk management plan for mitigation of potential long-term risks to human health and the environment, which includes a provision to ensure long-term compliance with this Risk Management Plan.

### **1.1 Representations**

This Risk Management Plan is based on a current understanding of environmental conditions at the Site as well as current environmental policies, laws, and regulations. If environmental conditions are found to differ from those described herein or in the environmental reports referenced in Section 2.3.1, or if environmental policies, laws, and regulations change, then the Risk Management Plan may have to be modified to accommodate those differing conditions. No representation is made by any present or future owner or developer of the Site or their consultants, agents, and contractors as to the

1999-135815  
08/05/1999 09:24P  
OR Page 17 of 183

applicability of this Risk Management Plan with respect to future environmental policies, laws, and regulations.

## **1.2 Owner Responsibilities**

All owners, developers, and any other entities with responsibility for Site activities shall have a continuing obligation to:

- determine the adequacy of this Risk Management Plan in light of the conditions actually encountered and the intended land use;
- comply with policies, laws, and regulations applicable at the time; and,
- establish a notification procedure and protocols for future sub-surface activity to ensure long-term compliance with the Risk Management Plan.

1999-125510

DR Page: 18 of 153

## 2. SITE BACKGROUND

This section describes the Site background, including the previous Site uses and the geology and hydrology at the Site.

### 2.1 Site Setting

The Site is located in an industrial section of east Menlo Park, adjacent to San Francisco Bay (Figures 1 and 2). Directly to the east of the Site is a channelized creek that runs to the Bay via Flood and Westpoint Sloughs. A public storage facility, salt evaporators, and Bayfront Park (the former Menlo Park landfill) are located north of the Site. West of the Site is a yard that contains used equipment and materials, and to the south, across Haven Avenue, are two-story buildings that are occupied by light industrial and commercial tenants. Figure 2 is an aerial photograph taken during early October 1998 of the Site and vicinity, prior to demolition of "Building 2".

### 2.2 Site History

The Site, as defined in Chapter 1, refers to the entire property at the address 3695 -3723 Haven Avenue, Menlo Park, California. Currently, the MSA Property is occupied by two vacant buildings ("Building 1" and "Building 3" in Figure 2) and covered by asphalt or concrete pavement with narrow planted areas along Haven Avenue.

Based on a review of historical aerial photographs performed by EKI, the MSA Property was formerly bare land with a few scattered buildings and cars prior to its development in 1969. In the 1969 aerial photograph, the MSA Property was developed with three buildings, two of which are standing as of this writing.

Based on a review of file information from the San Mateo County Department of Health Services and files provided by MSA, uses of the MSA Property have included:

- the fabrication and manufacturing of magnetic materials and electronic devices;
- manufacturing and fabrication of electronic components;
- manufacturing of polished silicon wafers;
- distribution of electronic equipment;
- warehousing and installation of automobile wheels and automotive accessories; and,
- a musical recording studio.

One of the prior tenants of the MSA Property was Siltec Corporation, a corporate predecessor to MSA. From 1970 through 1989, Siltec Corporation used the MSA

Property as manufacturing facility for polished silicon wafers, and as office space. Other more recent tenants of the MSA Property have included KOB Auto Inc., Nor Cal Tire and Wheel, Multiplex Studios, Huettig & Schromm Landscape Contractors, and BSG Associates, Inc.

During October 1998, the middle of the three buildings originally built at the Site during 1969 was demolished. The purpose of demolishing this building (Building 2) was to allow excavation of Site soils with elevated concentrations of halogenated VOCs.

### 2.3 Summary of Site Investigations and Remedial Actions

This section summarizes:

- the reports submitted to the RWQCB regarding investigative work, risk assessments, treatability studies, and work plans describing future work to be performed at the Site;
- the subsurface geology at the Site;
- the local hydrology;
- the chemicals detected in both soil and groundwater at the Site; and
- the remedial actions performed or planned for the Site.

#### 2.3.1 Documents Summary

The following documents describe the results of previous investigations and remedial, treatability, and risk assessments performed at the Site:

- *Feasibility Study and Remedial Action Plan, 3695 - 3723 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 10 March 1999 (EKI 1999a)*
- *In Situ Chemical Oxidation Bench-Scale Treatability Test Results, 3695-3723 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 8 January 1999 (EKI 1999b)*
- *Revised Risk Calculations and Cleanup Goals for Source Area Soil Excavation, 3695-3723 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 12 February 1999 (EKI 1999c)*
- *Results of Sampling and Analysis, 3645 and 3665 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 30 June 1998 (EKI 1998a)*
- *Results of Sampling and Analysis, Vicinity of 3695-3723 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 28 October 1998 (EKI 1998b)*

Directly underlying the A-zone are sediments that are generally coarser grained, consisting of sand and gravel. For the purposes of this report, these sediments that occur between approximately 15 and 38 feet bgs are referred to as the "B-zone".

### 2.3.3 Hydrology

During the on-Site and off-Site investigations, selected groundwater samples from borings and monitoring wells were measured for density, total dissolved solids, and chloride. The purpose of collecting such data for groundwater was to allow generalized mapping of the various water bodies that are present along the bay margin: fresh water, salt water associated with the Bay, and brines associated with the evaporation ponds. The available data indicate that brines have apparently leaked from salt evaporation ponds and have intruded primarily into the B-zone. Landward incursion of brines is pronounced beneath the Site as well as at the adjacent Fedex Facility to the east. It appears that the presence of brines in the subsurface has served as a barrier, limiting off-Site migration of chemicals of concern (see Section 2.3.4).

During drilling at the Site, groundwater has been encountered in the subsurface at depths of approximately 8 to 11 feet bgs in fine-grained sediments of the A-zone (EKI 1997a). During October 1998, the piezometric surface for the A-zone occurred at elevations of approximately 0.8 to 1.2 feet relative to the National Geodetic Vertical Datum 1929 (EKI 1999a). The groundwater gradient was to the southeast with a magnitude of approximately 0.003 ft/ft (EKI 1999a). During October 1998, the piezometric surface for the B-zone, corrected for variable density, occurred at elevations of 1.3 to 1.9 feet, relative to the National Geodetic Vertical Datum 1929. The groundwater gradient for the B-zone was generally to the north with a magnitude of approximately 0.003 ft/ft (EKI 1997a). These data indicate that there is a relative upward groundwater gradient at the Site. It should be noted that the local groundwater gradient is strongly affected by density variations. Thus, changes in operation of the nearby salt evaporation ponds could result in changed groundwater gradients.

### 2.3.4 Chemicals of Concern Detected in Soil and Groundwater

The primary chemicals of concern ("COCs") at the Site, based on prevalence in soil and groundwater at the Site and the results from the risk assessment, are halogenated VOCs. The VOCs that contribute most to the estimated risks at the Site are trichloroethene ("TCE") and vinyl chloride ("VC"). Tables 1 and 2 list all the VOCs that have been detected in soil or groundwater samples collected from the Site. The VOCs that have been detected in more than ten groundwater samples collected at the Site include, in order of decreasing frequency of detection:

- TCE;
- cis-1,2-dichloroethene ("cis-1,2-DCE");
- chloroform;
- 1,1,2-trichloro-1,2,2-trifluoro ethane ("CFC-113");
- carbon tetrachloride; and
- VC.

TCE and CFC-113 are believed to have been used historically at the Site. Further, the cis-1,2-DCE and VC found at the Site are presumed to be daughter products of naturally occurring reductive dechlorination of TCE in the soil and groundwater.

TCE is present in groundwater samples collected from the Site in the vicinity of former Building 2 at concentrations that suggest the presence of separate-phase dense non-aqueous phase liquid ("DNAPL"). The presence of separate-phase DNAPL can result in the long-term persistence of VOCs in groundwater. Furthermore, DNAPL liquids can, in some instances, migrate to deeper depths if remedial activities or other subgrade activities penetrate confining media or alter the hydrologic conditions.

Carbon tetrachloride has been detected at significantly higher concentrations in groundwater samples collected from the adjacent property to the west. The source of carbon tetrachloride is unknown but appears to be up-gradient of the Site. The chloroform found in groundwater samples collected on-Site may be a product of the naturally occurring degradation of the carbon tetrachloride.

### 2.3.5 Soil Remedial Actions

As discussed in the FS/RAP, source area soil near the northwestern corner of the former Building 2 will be excavated to a depth of approximately 6 feet during 1999. The extent of planned excavation is shown on Figure 3 (EKI 1998c). The remedial excavation will remove soil known to contain concentrations of COCs above the risk-based action levels listed in Table 3. Results of the remedial excavation will be documented in the Remedial Action Completion Report anticipated to be submitted to the RWQCB as described in Section 2.5.1.

After source area soil is excavated, clean backfill will be placed in the excavation. A high-density polyethylene ("HDPE") liner will be installed as a vapor barrier in the backfill at approximately 4 feet bgs. The vapor barrier will reduce the potential for the clean backfill to be contaminated by VOC vapors emanating from the underlying groundwater. The vapor barrier will also reduce the potential for migration of VOC vapors from groundwater into any buildings that may be constructed in that location in the future, thereby further reducing the potential future risks at the Site.

As discussed below, future owners of the property will be required to protect the integrity of the vapor barrier by not penetrating through the barrier during construction or maintenance activity at the Site unless (a) damage to the barrier can be effectively repaired, or (b) the underlying groundwater no longer contains VOCs above risk-based action levels.

### 2.3.6 Groundwater Remedial Actions

As discussed in the FS/RAP, a pilot test is planned to evaluate the efficacy of ICO by injecting potassium permanganate ("Oxidant") into saturated zone soils and groundwater

1998-135819  
08/08/1998 03:24P  
OR Page: 23 of 163

near the northwestern corner of the former Building 2 (EKI 1998d). The oxidant is intended to oxidize halogenated VOCs in soil and groundwater to less toxic daughter products. If the pilot test is successful, full-scale ICO treatment will be performed as described in the FS/RAP.

## 2.4 Remaining Environmental Conditions

This Section describes the available information regarding the residual concentrations of VOCs in soil, groundwater, and soil gas beneath concrete slabs. For the purposes of this document, it is assumed that soil excavation activities, including removal of the concrete slab and installation of a vapor barrier, as proposed in EKI (1998c) will have been executed.

### 2.4.1 Residual Concentrations of Halogenated VOCs in Soil

Figure 3 shows the locations of soil borings drilled in and around the source area at the northwestern corner of the former Building 2 as well as the proposed extent of the remedial soil excavation. Table 1 summarizes the data for soil samples collected from the area outside the remedial excavation area and represents the available data regarding residual concentrations of VOCs in Site soils post-excavation. The concentrations of TCE and VC in post-excavation Site soils are shown on Figures 4 and 5, respectively.

For the purposes of this Risk Management Plan, it has been assumed that there may exist on the Site areas of contamination undetected by previous investigations. Therefore, risk management for all future activities involving disturbance of soil at the Site will be performed under the assumption that VOCs may be present in soil, as discussed further in Chapter 4.

### 2.4.2 Residual Concentrations of Halogenated VOCs in Groundwater

Figures 6, 7, and 8 show the extents of TCE, VC, and carbon tetrachloride, respectively, in groundwater at the Site. Table 2 summarizes data for groundwater samples collected from the Site.

Elevated concentrations of VOCs have been detected in groundwater in the vicinity of the northern portion of former Building 2. The area of groundwater containing VOCs in excess of the risk-based action levels for groundwater is shown on Figure 9. For the purposes of this Risk Management Plan, this area is defined as the Groundwater Risk Area.

### 2.4.3 Possible Presence of Chlorinated VOCs Under Concrete Slabs

The VOCs detected in soil gas during the remedial investigation include trichloroethene, cis-1,2-dichloroethene, CFC-113, chloroform, and benzene (EKI 1997a). Trichloroethene, cis-1,2-dichloroethene, and CFC-113 are the three chemicals detected at highest concentrations (EKI 1997a). Elevated concentrations of these chemicals were

detected in soil gas from the vicinity of the northwestern corner of the former Building 2, both inside and outside of the former building.

It should be noted that some of the soil gas samples from locations within the former building were collected within the gravel base beneath the building slab. It is possible that the concentrations of chemicals detected in these samples reflect some relatively increased lateral migration because of the permeable gravel base. It is possible that, in the future, without proper engineering controls, VOCs could migrate from groundwater into permeable subgrade material beneath new structures. Chapter 5 discusses the use of engineering controls to prevent this type of VOC migration.

DR Page: 26 of 153

### 3. SUMMARY OF HUMAN HEALTH RISK ASSESSMENT

A human health risk assessment was undertaken to:

- Evaluate potential impacts to human health by chemicals of concern ("COCs") present in soil and groundwater at the Site; and
- Develop risk-based action levels for soil and groundwater at the Site.

The risk assessment is included in Attachment A.

Note that baseline risks at the Site were calculated previously for development of risk-based action levels for soil excavation using data collected prior to April 1998 (EKI 1998c; EKI 1999b). However, some additional groundwater data were collected for the Site after April 1998. Therefore, the data set used herein and in Appendix A to calculate the baseline risk at the Site has been updated to include the soil and groundwater data for the Site available as of February 1999. Also, the proposed risk-based action levels have now been developed to consider VOCs in both soil and groundwater, and one of the physical assumptions (soil saturated porosity) for the Site has been modified.

The risk assessment was conducted assuming hypothetical exposure scenarios for future occupants of the Site. Occupants were subdivided into several receptor populations based on their expected locations and activities. Each group was assumed to be subjected to different concentrations of chemicals for different amounts of time. All assumptions used in the risk assessment are quantified in the text and tables included in Attachment A.

Baseline risks were calculated for the following three hypothetical receptor populations at the Haven Avenue Site:

- Future commercial/industrial building occupants, who will work indoors on-Site over a long period of time ("Indoor Workers");
- Workers involved in the construction of new buildings or subsurface utilities on-Site, who will occupy the Site for much more limited periods ("Construction Workers"); and,
- Future maintenance personnel such as groundskeepers, who will labor primarily outdoors over a long period of time ("Maintenance Workers").

#### 3.1 Risk Calculations

As discussed in the risk assessment (Attachment A), summation of Hazard Indices over all pathways and chemicals gives the non-carcinogenic effects Hazard Index for each hypothetical receptor population. A total Hazard Index less than or equal to one indicates

that the population will not be exposed to the chemical beyond a dosage considered safe for non-carcinogenic adverse health effects.

Summation of the estimated incremental carcinogenic risk from all carcinogenic chemicals over all pathways valid for a particular receptor population gives an estimated overall incremental excess carcinogenic risk ("Cancer Risk") for the hypothetical receptor population (Appendix A). The National Oil and Hazardous Substances Pollution Contingency Plan (40 CFR §300) mandates an acceptable range of Cancer Risk between  $10^{-4}$  (1 in 10,000) and  $10^{-5}$  (1 in 1,000,000). California law requires notification of on-Site workers if the Cancer Risk is estimated to exceed  $10^{-5}$  (1 in 100,000) (California Code of Regulations ("CCR") Title 22, Section 12703). The targeted maximum Cancer Risk of  $10^{-5}$ , used in the risk assessment for the Site, satisfies both sets of regulations.

### 3.2 Estimated Baseline Risks

The estimated baseline risks for the three hypothetical future populations at the Site are summarized below based on the results of the risk assessment in Attachment A. Several references are made below to tables in Attachment A (e.g., "Table A-19").

Estimated baseline Hazard Indices and Cancer Risk for Indoor Workers are listed in Table A-19. Non-carcinogenic hazard for this population is calculated to have a Hazard Index equal to 0.08, less than the maximum target value of 1. The estimated Cancer Risk is  $1.9 \times 10^{-5}$ , above the maximum target level of  $10^{-5}$ . The most significant chemical/pathway combination for Indoor Workers, in terms of the estimated Cancer Risk, is inhalation of TCE and VC evaporating from groundwater.

Estimated baseline Hazard Indices and Cancer Risks for Maintenance Workers through all pathways are listed in Table A-20. Non-carcinogenic hazard for this population is calculated to be 0.03, less than the maximum target level of 1. The estimated Cancer Risk is  $4.5 \times 10^{-6}$ , below the maximum target level of  $1.0 \times 10^{-5}$ . The most significant chemical/pathway combination for the Maintenance Worker receptor population is inhalation of VC evaporating from soil.

Estimated baseline risk and Hazard Indices and Cancer Risk for all Construction Worker exposure pathways are listed in Table A-21. The estimated Cancer Risk is  $1.0 \times 10^{-7}$ , less than the target level of  $10^{-5}$ . Non-carcinogenic hazard for this population is calculated to be 0.01, less than the target level of 1. The most significant chemical/pathway combination, both in terms of Cancer Risk and non-carcinogenic health hazard for the Construction Worker receptor population is inhalation of VC evaporating from soil.

### **3.3 Calculation of Risk-Based Action Levels for Soil and Groundwater**

Using the baseline risks calculated for the hypothetical receptor populations at the Site, risk-based action levels for soil and groundwater have been calculated, as discussed below. Risk-based action levels have been calculated considering potential exposures to the future hypothetical receptor populations, i.e., Maintenance Workers, Construction Workers, and Indoor Workers.

Risk-based action levels (cleanup goals) for soil and groundwater were calculated to apportion post-remediation risk such that Cancer Risk to the Indoor Worker, Construction Worker, and Maintenance Worker populations are each at or below  $10^{-5}$ , and Hazard Indices are at or below 1.0. The method used for apportioning risk was to allocate most of the risk to the more hazardous chemicals and those more commonly found at the Site. This approach minimizes the volume of material to be remediated, while keeping future hypothetical populations' exposure to hazardous chemicals below the target maximum risk levels.

Tables 3 and 4 (and Tables A-22 and A-23 in Attachment A) list the calculated risk-based action levels for soil and groundwater, respectively. For soil, the risk-based action levels for TCE and VC are 3.2 mg/kg and 0.075 mg/kg, respectively. For groundwater, the risk-based action levels for TCE and VC are 8,000 ug/L and 500 ug/L, respectively, and carbon tetrachloride and chloroform have action levels of 2,600 ug/L and 2,000 ug/L, respectively.

Tables A-24, A-25, and A-26 show the estimated Hazard Indices and Cancer Risks for the receptor populations, i.e., Indoor Workers, Maintenance Workers and Construction Workers, assuming VOCs are present in soil and groundwater at the risk-based action level concentrations. For each population, the estimated total Hazard Index is less than 1 and the estimated cumulative Cancer Risk is less than or equal to  $10^{-5}$ . Therefore, the risk-based action levels result in an acceptable level of risk for the future potentially exposed populations.

Future collection and analysis of soil or groundwater samples from the Site could potentially indicate the presence of chemical concentrations different from the current dataset. In this case, risk-based action levels for the Site may be recalculated to reflect the improved understanding of the distribution and concentrations of chemicals in Site soil or groundwater.

#### 4. RISK MANAGEMENT DURING CONSTRUCTION

Risk management during construction activities at the Site involves precautions that will be taken by the property owner to mitigate risks to human health and the environment from possible exposure to chemicals of concern during various activities that involve disturbing soil at the Site. As discussed in Section 2.4.1, it is assumed for the purposes of this Risk Management Plan that residual VOCs may be present in soils located anywhere on-Site. Therefore, construction-related risk management procedures should be evaluated and implemented by the property owner, its contractors, agents, and consultants any time work will be performed that involves disturbing soil at the Site.

When establishing the procedures and precautions to be implemented, the evaluation should include, but not necessarily be limited to, the following:

- Establishing a notification procedure and protocols for future sub-surface activity to ensure long-term compliance with this Risk Management Plan;
- Establishment of health and safety training, worker protection procedures, and worker notification procedures for workers who may be exposed to VOC-containing soil or groundwater during any subsurface works;
- Use of construction methods that ensure that conduits to deeper groundwater zones are not created; and,
- Establishment of soil and groundwater management procedures to:
  - (1) appropriately manage soil and groundwater encountered during construction;
  - (2) characterize soil and groundwater that have indicators of VOC contamination;
  - (3) manage potential VOC vapors that could emanate from excavated soils or groundwater;
  - (4) properly store and dispose of soil and groundwater; and
  - (5) control or prevent storm water from contacting stored soils.

##### 4.1 Site-Specific Health And Safety Worker Planning Requirements

Considering that VOCs may remain in soil, groundwater, and soil gas at the Site following completion of the remedial actions, preparation and implementation of health and safety plans ("HSPs") will be required for activities at the Site during which workers may encounter VOCs in soil, groundwater, or soil gas during subgrade work. Separate HSPs may be prepared for different types of work, i.e., depending on the nature of the work and the estimated potential for exposure to VOCs based on the available data. It will be the responsibility of the property owner to evaluate work activities at the Site and identify those activities that require preparation of a HSP, subject to the constraints described below.

It will be assumed for the preparation of HSPs that VOCs may be present in soil throughout the Site. Therefore, subgrade work activities requiring a HSP include, but are not limited to, (a) excavation and grading during demolition or construction activity, (b) subgrade utility installation or repair, (c) entrance into subgrade confined spaces, such as utility vaults or manholes, and (d) landscaping work that disturbs native soil, including but not limited to activities such as tree and shrub planting, sprinkler installation, and soil relocation.

A HSP is not required by this RMP for activities where no more than the upper 12 inches of soil will be disturbed if the work is in an area where clean fill soil has been imported during 1999 or later (e.g., new topsoil in landscaped areas, backfill installed in the source area soil excavation). For those activities, however, a HSP should still be prepared if required by applicable laws or regulations or if determined appropriate by the responsible party.

A HSP is not required by this RMP for workers who will perform activities at the Site without disturbing soil (e.g., carpenters, painters, carpet installers). When constructed, buildings and cover materials such as roads and walk-ways will prevent exposure to VOC-containing soil. It remains the responsibility of the property owner to determine if a health and safety plan is required for compliance with other federal, state, and local requirements.

#### **4.2 Site-Specific Health And Safety Plans**

Each HSP prepared pursuant to the requirements of this RMP will be required to address potential worker exposures to VOCs that could result from the work if VOCs are encountered in soil, groundwater, or soil gas during the work. To the extent required by applicable law, each HSP will be prepared in accordance with Federal and California Occupational Safety and Health Administration ("OSHA") standards for hazardous waste operations (29 CFR 1910.120 and 8 CCR 5192), or applicable regulations promulgated in the future. The HSP should also include but not be limited to a description of health and safety training requirements for the affected workers, a description of the level of personal protective equipment to be used, if any, air quality monitoring plans if necessary, and any other applicable precautions to reduce potential exposure to VOCs to acceptable levels.

#### **4.3 Construction Impact Mitigation Measures**

This section outlines measures that should be considered to mitigate potential impacts to human health and the environment during construction at the Site. The need to implement any active measures should be identified in a Construction Impact Mitigation Plan to be prepared by the property owner or its agent. Identified mitigation measures should be implemented during construction. At a minimum, measures to be considered for implementation should include:

- Management of soil;

1999-135816  
08/06/1999 03:24P  
DR Page: 36 of 153

- Management of groundwater (e.g., during excavation dewatering);
- Preventing creation of migration pathways for contamination to deeper aquifer zones;
- Protection of the vapor barrier installed by MSA in the source area soil excavation backfill (see Section 2.3.5); and
- Protection of groundwater monitoring wells at the Site.

#### 4.3.1 Soil Management Plan

The Construction Impact Mitigation Plan should include a section that establishes procedures for safely managing excavated soil. The soil management plan should consider, at a minimum, the following:

- Methods for the safe excavation and on-Site storage of removed soil;
- Methods for screening excavated soil for the presence of VOCs, as discussed in Section 4.3.1.1;
- Methods for preventing exposure to VOC vapors that may emanate from excavated soil;
- Methods for controlling storm water runoff such that contact with excavated soils is eliminated; and
- Procedures for characterizing and properly disposing excavated soil.

##### 4.3.1.1 Soil Screening Methodology During Construction

During future excavation of soil, an appropriate field instrument should be used during the excavation to help determine if VOCs are present in the soil. VOC screening measurements should be taken periodically as soil is excavated at the Site. A soil screening plan also should be developed as part of the Site-specific health and safety plan generally described in Section 4.2. The soil screening plan should describe procedures for screening soil for the presence of VOCs and action levels for terminating work activities or upgrading worker personal protective equipment. Elevated VOC screening readings may be an indication of VOC contamination in soil.

##### 4.3.1.2 Management of Soil with Indications of VOC Contamination

Contingency protocols should be included in the Construction Impact Management Plan for management of soils should VOC screening indicate the presence of VOC contamination. These contingency protocols should include methods for safely stockpiling soil until the actual concentrations of VOCs in soil are identified and, based

on regulations governing management of excavated soil, an appropriate management method is determined. Excavated soil should be stored in a manner so as to limit access to and contact by unauthorized personnel and to minimize contact with storm water.

#### 4.3.2 Groundwater Management Plan

If construction at the Site is performed such that groundwater will be removed, a groundwater management plan should be included in the Construction Impact Mitigation Plan. The groundwater management plan should, at a minimum, consider implementing methods in accordance with applicable regulations to perform the following:

- safely remove and store groundwater during construction;
- limit exposure to VOC vapors that may emanate from groundwater; and
- characterize and properly dispose of stored groundwater.

#### 4.3.3 Use Of Construction Methods that Minimize the Potential for Creating Vertical Conduits

As discussed in Section 2.6.2, residual concentrations of VOCs currently exist in shallow groundwater at concentrations that suggest the presence of separate-phase DNAPL. The top of this shallow groundwater zone is typically encountered at a depth of approximately 6 to 8 feet bgs (EKI 1997a). DNAPLs can, in some instances, migrate to deeper depths if conduits are created in confining media or hydrologic conditions are altered.

If in the future chemical concentrations in groundwater suggest the presence of DNAPL, construction activities should be conducted such that the potential for DNAPL migration is limited. For example, penetrations through the bottom of the B-zone at the Site into deeper aquifers could potentially provide a conduit for the migration of groundwater containing elevated concentrations of VOCs to deeper aquifers that are currently not impacted. A specific example of a penetration to a deeper aquifer is the installation of pilings for the foundation of new construction.

Penetrations to below the B-zone will not be allowed in areas where VOCs are present in groundwater above California Maximum Contaminant Levels ("MCLs") for drinking water, unless (a) sufficient precautions are taken to prevent migration of impacted groundwater to deeper groundwater zones, and (b) RWQCB concurs that the design is adequate to prevent impacts to deeper groundwater.

#### 4.3.4 Protection of Vapor Barrier

A vapor barrier will be installed at approximately 4 feet bgs in the backfill for the source area soil excavation. The barrier is designed to prevent possible migration of VOC vapors from underlying groundwater into the clean backfill. The barrier would also reduce the rate at which VOCs from groundwater could migrate into any overlying

1999-135815  
08/08/1999 03:24P  
DR Page 32 of 163

structures. Owners of the property are required to protect the integrity of the vapor barrier by not penetrating through the barrier during construction or maintenance activity at the Site unless (a) damage to the barrier can be effectively repaired, or (b) the underlying groundwater no longer contains VOCs above risk-based action levels.

#### 4.3.5 Protection of Monitoring Wells

It is anticipated that selected existing groundwater monitoring wells at the Site will be required for future groundwater monitoring. Existing monitoring wells at the Site include monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5B, MW-6B, and MW-7B. Of these, monitoring wells MW-2, MW-5B, MW-6B, and MW-7B are planned for a future groundwater monitoring program. In addition two additional on-Site wells, MW-8 and MW-9 are planned for installation and monitoring. Existing and proposed on-Site monitoring wells are shown on Figure 10.

As long as groundwater monitoring is required by the RWQCB or other regulatory agency, construction procedures should be implemented to prevent accidental damage to the required groundwater monitoring wells. With the approval of the RWQCB, groundwater monitoring wells may be abandoned and replaced with new groundwater monitoring wells at a different locations.

## **5. DESIGN CONSIDERATIONS FOR NEW CONSTRUCTION**

Based on the results of the human health risk assessment (Chapter 3), the highest identified risk to indoor workers at the Site is exposure to VOCs migrating into enclosed spaces. No buildings currently exist over the Groundwater Risk Area, discussed in Section 2.4.2. Unless it is demonstrated that VOC concentrations in groundwater are less than risk-based action levels, any new buildings should be designed so that migration of VOCs into new buildings is limited. Materials and methods (e.g., liners, sub-slab aeration, low permeability concrete, crack sealants) are available to restrict vapor intrusion through building floors. At the time of building design, a professional engineer experienced in this type of work should be consulted to design appropriate barriers to prevent the potential migration of VOCs into new buildings.

1999-135815  
08/09/1998 03:28P  
DR Page 34 of 183

## 6. NON-CONSTRUCTION RISK MANAGEMENT

This risk management plan also addresses precautions that should be implemented to mitigate long-term risks to human health and the environment related to exposure to COCs during periods of normal, non-construction activity. Any construction that will disturb the soil, building foundations, or pavement should be completed in a manner that is consistent with Chapters 4 and 5 and applicable environmental policies, laws, and regulations.

Components of the risk management plan for non-construction activities are as follows:

- Ensuring that future land uses are consistent with the commercial/industrial uses assumed under this Risk Management Plan;
- Monitoring groundwater at the perimeter of the Groundwater Risk Area to monitor for possible future expansion of the Groundwater Risk Area, unless VOC concentrations in groundwater samples collected in all on-Site wells are less than risk-based action levels;
- Prohibiting the use of groundwater at the Site, unless VOC concentrations in groundwater are less than MCLs;
- Establishing a notification procedure and protocols for future sub-surface activity to ensure long-term compliance with this Risk Management Plan; and
- Inspecting the Site as necessary to verify that risk management controls are being implemented and that they are effective in limiting potential exposure to VOCs at the Site.

### 6.1 Property Manager and Tenant Notification

The property owner shall provide notification of the known environmental conditions at the Site and of the requirements of this RMP to (a) the property manager, and (b) tenants and other entities leasing or otherwise exercising control over space at the Site.

### 6.2 Maintaining Commercial/Industrial Land Use

The Site is restricted to commercial/industrial use, except that uses for day-care or primary education are explicitly not allowed. If other uses are proposed, the owner may make a proposal to the RWQCB or other appropriate agency, supported by analysis, that the provisions of this RMP should be changed.

### 6.3 Monitoring of Existing Buildings

As discussed in Section 2.4.2, groundwater with VOC concentrations above the risk-based action levels has not been detected outside the Groundwater Risk Area shown on Figure 7. However, over time, it is possible that the groundwater flow regime at the Site

## EXECUTIVE SUMMARY

This human health risk assessment was performed to:

- Evaluate potential impacts to human health by chemicals of concern ("COCs") present in soil and groundwater at the commercial/industrial property located at 3695-3723 Haven Avenue, Menlo Park, California (the "Site"); and,
- Develop risk-based action levels for soil and groundwater at the Site.

An analysis of risk was conducted assuming hypothetical exposure scenarios for potential future occupants of the Site. Occupants were subdivided into three hypothetical receptor populations based on their expected locations and activities. Each hypothetical population is described herein with a unique set of environmental and physiological assumptions, and was thus assumed to be exposed to different concentrations of chemicals for different amounts of time. All assumptions used in the risk assessment are quantified in the attached tables.

Baseline risks were calculated for the following three hypothetical receptor populations at the Site:

- Future commercial/industrial building occupants, who will work indoors on-Site over a long period of time ("Indoor Workers");
- Future maintenance personnel such as groundskeepers, who will labor primarily outdoors over a long period of time ("Maintenance Workers").
- Workers involved in the construction of new buildings or subsurface utilities on-Site, who will occupy the Site for much more limited periods ("Construction Workers"); and

A summary table of calculated baseline risks to each of the hypothetical future populations is shown below (Table A-1). These values represent the estimated total (a) Hazard Index for non-carcinogenic adverse health affects, and (b) incremental excess carcinogenic risk ("Cancer Risk"), to the hypothetical populations due to current Site conditions. In general, potential exposure pathways considered in the calculation of these baseline risks include exposure through incidental ingestion of soil, dermal contact with soil, inhalation of vapors from soil, and inhalation of vapors from groundwater.

One of the assumptions regarding the future Indoor Worker receptor population is that, unlike future Maintenance and Construction Workers, its members never work directly with soil. Thus, incidental ingestion and dermal contact with contaminated soil are not considered exposure pathways for this population. Inhalation of volatile organic

compounds evaporating from soil and groundwater were considered as complete pathways for all hypothetical populations.

HYPOTHETICAL POPULATION	BASELINE HAZARD INDEX	BASELINE CANCER RISK
Future Indoor Workers	0.08	$1.9 \times 10^{-5}$
Future Maintenance Workers	0.03	$4.5 \times 10^{-6}$
Construction Workers	0.01	$1.0 \times 10^{-7}$

**Table A-I. Summary of Baseline Risks to Hypothetical Future Site Populations.**

A more complete summary of estimated Hazard Index and Cancer Risk for the above populations may be found in Tables A-19, A-20, and A-21. Risk calculations are further documented in Tables A-9 through A-18.

### **Risk Calculations**

Table A-19 is a summary of estimated baseline risks for Indoor Workers. The most significant chemical/pathway combination for Indoor Workers, in terms of Cancer Risk, is inhalation of TCE evaporating from groundwater. The non-carcinogenic Hazard Index for this population is dominated by inhalation of vinyl chloride, trichloroethene ("TCE"), and *cis*-1,2-dichloroethene ("*cis*-1,2-DCE") from groundwater.

Baseline estimated Hazard Indices and Cancer Risk for Maintenance Workers through all pathways are listed in Table A-20. The most significant chemical/pathway combination for the Maintenance Worker receptor population is inhalation of vinyl chloride volatilizing from soil.

Baseline estimated Hazard Indices and Cancer Risk for all Construction Worker exposure pathways are listed in Table A-21. The most significant chemical/pathway combination, both in terms of Cancer Risk and the non-carcinogenic Hazard Index for the Construction Worker receptor population is inhalation of vinyl chloride volatilizing from soil.

### **Calculation of Risk-Based Action Levels**

Using the baseline risks calculated for the hypothetical receptor populations at the Site, risk-based action levels for soil and groundwater have been calculated, as discussed below.

1999-135810  
08/09/1999 03:24P  
DR Page 58 of 162

Risk-based action levels for soil and groundwater were calculated to apportion post-remediation risk such that overall Cancer Risk to the Indoor Worker, Maintenance Worker, and Construction Worker are each at or below  $1.0 \times 10^{-5}$ , and overall Hazard Index is at or below 1.0.

Table A-II is a listing of the risk-based action levels for those chemicals found in Site soil at concentrations exceeding the risk-based action levels. These include vinyl chloride and TCE. A more complete listing of risk-based action levels in soil for all chemicals of concern is provided in Table A-22.

VOLATILE ORGANIC COMPOUND	RISK-BASED ACTION LEVEL IN SOIL (ug/kg)
vinyl chloride	75
trichloroethene	3,200

Table A-II. Risk-Based Action Levels for VOCs in Soil

Table A-III is a summary of risk-based action levels for chemicals with maximum concentrations found in Site groundwater exceeding the risk-based action levels, i.e. TCE and vinyl chloride. Table A-23 is a more detailed enumeration of the calculated groundwater risk-based action levels.

VOLATILE ORGANIC COMPOUND	RISK-BASED ACTION LEVEL IN GROUNDWATER (ug/L)
vinyl chloride	500
trichloroethene	8,000

Table A-III. Risk-Based Action Levels for VOCs in Groundwater.

The method used for apportioning risk was to allocate most of the "available" risk to the more hazardous chemicals and those more commonly found at the Site. This approach minimizes the volume of soil and groundwater potentially requiring remediation, while keeping future hypothetical populations' estimated risks below target levels. Concentrations of vinyl chloride and TCE have been encountered in soil and groundwater samples from the Site in exceedence of their risk-based action levels. Other chemicals of concern have been discovered at concentrations consistently below the action levels.

Tables A-24, A-25, and A-26 are summaries of Hazard Index and Cancer Risk to each of the three hypothetical future worker populations at the calculated risk-based action levels

1999-135815  
08/09/1999 03:28P  
DR Page: 70 of 153

for soil and groundwater. Cumulative Hazard Indices and Cancer Risks are equal to or below 1.0 and  $1.0 \times 10^{-5}$ , respectively, in each case. Therefore, the risk-based action levels for soil and groundwater presented in Tables A-II and A-III result in an acceptable level of risk for future potentially exposed populations.

Future installation of monitoring wells (or other on-Site environmental work) may involve the collection of soil or groundwater samples for chemical analysis. Such analyses could potentially indicate the presence of chemical concentrations different from the current dataset. In this case, risk-based action levels for the Site may be recalculated to reflect the improved understanding of the distribution and concentrations of chemicals in Site soil or groundwater.

## 1. INTRODUCTION

This appendix presents a human health risk assessment that was performed to:

- evaluate potential impacts to human health by chemicals of concern ("COCs") present in soil and groundwater at the commercial/industrial property located at 3705-3723 Haven Avenue, Menlo Park, California (the "Site"), and
- develop risk-based action levels for soil and groundwater at the Site.

Note that baseline risks at the Site were calculated previously for development of risk-based action levels for soil excavation using data collected prior to April 1998 (EKI 1998c; EKI 1999b). The methods and assumptions used in the risk calculations described herein are consistent with the previous risk calculations, with the following exceptions. The previous risk assessment used the most conservative measured values of vadose and capillary zone saturated porosities for Site soil. The calculated risks presented herein have instead assumed Site-average values for each parameter. Some additional groundwater data were collected for the Site after April 1998. Therefore, the data set used herein to calculate the baseline risk at the Site has been updated to include all the soil and groundwater data for the Site available as of February 1999. Also, the proposed risk-based action levels have now been developed to consider VOCs in both soil and groundwater.

The risk assessment was conducted assuming hypothetical exposure scenarios for future occupants of the Site. Occupants are subdivided into several receptor populations based on their expected locations and activities. Each group was assumed to be subjected to different concentrations of chemicals for different amounts of time. All assumptions used in the risk assessment are quantified in the attached tables.

This report is divided into three major sections. The first discusses criteria used to define each of the future occupant populations, outlines the chemicals present at the Site and their representative concentrations, and explains the toxicity criteria used in calculations. The second section presents and discusses the calculation of risk-based cleanup goals at the Site, and the third section discusses conservative assumptions used and uncertainty involved in the calculations.

This risk assessment was performed using guidelines published by the U.S. Environmental Protection Agency ("USEPA"), the California Environmental Protection Agency ("Cal-EPA"), and the American Society for Testing and Materials ("ASTM"), in the following documents:

- USEPA, December 1989, *Risk Assessment Guidance for Superfund, Volume 1, Human Health Evaluation Manual*.

08/08/1999 03:24P  
DR Page 72 of 163

- Cal-EPA, July 1992, *Supplemental Guidance for Human Health Multimedia Risk Assessments of Hazardous Waste Sites and Permitted Facilities*.
- ASTM, September 1995, *Standard Guide for Risk-Based Corrective Action Applied at Petroleum Release Sites ("RBCA")*.

Although all three documents are used for guidance in the risk assessment calculations, RBCA was the source of transport models used to calculate indoor and outdoor air exposure point concentrations for the assessment.

Chemicals of concern at the Site include halogenated volatile organic compounds ("VOCs"), acetone, and the aromatics benzene and toluene. Ordered by frequency of detection, the most common contaminants in soil and groundwater are trichloroethene ("TCE"), *cis*-1,2-dichloroethene ("*cis*-1,2-DCE"), and 1,1,2-trichloro-1,2,2-trifluoroethane ("CFC-113"). In groundwater, chloroform is also a common constituent. Based on the current set of samples, more chemicals appear to be present at detectable levels in groundwater than in soil.

## 2. ASSESSMENT OF BASELINE HUMAN HEALTH RISKS

The objective of a risk assessment for a particular location is to calculate the potential for adverse health effects, caused by chemicals present at the Site, to hypothetical current and future populations that may use the Site. The Site is currently unoccupied. Therefore, risk calculations in this report concern only hypothetical future populations. This section presents a discussion of the following topics:

- Potentially exposed receptor populations and relevant exposure pathways,
- Chemicals of concern present in soil and groundwater,
- Toxicity criteria for the chemicals of concern used in risk calculations,
- Assumptions used to calculate representative and exposure-point contaminant concentrations, and
- Results of the risk calculations.

### 2.1 Identification of Potentially Exposed Receptor Populations and Relevant Exposure Pathways

The Site is a commercial/industrial property, previously used for the manufacture of polished silicon wafers. It is located in a low-elevation, industrial/commercial area, approximately one hundred feet south of the salt evaporation ponds at the margin of San Francisco Bay. Two buildings are located on the Site; both are currently vacant. Populations at risk of potential exposure to chemicals of concern at the Site are therefore limited to hypothetical future populations of workers, which for the purpose of this study are grouped into three categories:

- Future commercial/industrial building occupants, who will work indoors on-Site over a long period of time ("Indoor Workers");
- Future maintenance personnel such as groundskeepers, who will labor primarily outdoors over a long period of time ("Maintenance Workers"); and
- Workers involved in the construction of new buildings or subsurface utilities on-Site, who will occupy the Site for much more limited periods ("Construction Workers").

Based on current land use and zoning, no residential, health-care, or educational facilities are expected to be built on-Site. Thus, all potentially exposed receptor populations in the risk assessment are assumed to be adults. Each potentially exposed future population at the Site has a set of possible exposure mechanisms, or pathways, through which it may come in contact with various chemicals of concern. These exposure pathways are dependent upon the type of activity or tasks expected from the population.

Oral ingestion of groundwater is a potential exposure pathway that was considered and rejected. Analytical results for samples of groundwater from the Site range from 8,600 mg/L to 154,200 mg/L total dissolved solids ("TDS") [EKL, 1999a], which classifies the water as brackish to saline [Drever, 1988]. The groundwater beneath the Site cannot be considered a potential source of drinking water because these values exceed the California state TDS guideline of 3,000 mg/L for drinking water sources (CRWOCB, 1995).

Dermal contact with groundwater was also rejected. Historic depth to groundwater at the Site is six to eight feet below ground surface ("bgs") [EKL, 1997a]. Expected depth of excavation for future construction utility installation or repair is estimated to be less than six to eight feet, so direct dermal exposure to groundwater is not treated as a valid exposure pathway for any of the hypothetical future Site receptor populations.

For the purpose of calculating baseline risk, parameters assumed in this study for each of the receptor populations are the following:

- INDOOR WORKERS

- \* Exposure Pathways:

- Inhalation of volatiles from groundwater
- Inhalation of volatiles from soil

- \* Exposure Parameters:

- Frequency: 250 working days per year, none doing excavation work; all days spent working indoors
- Duration: 25 years

- MAINTENANCE WORKERS

- \* Exposure Pathways:

- Inhalation of volatiles from soil
- Inhalation of volatiles from groundwater
- Dermal contact with soil
- Incidental ingestion of soil

- \* Exposure Parameters:

- Frequency: 250 working days per year: 5 days of excavation work, 245 days of non-excavation work; all working days spent outside
- Duration: 25 years

• CONSTRUCTION WORKERS

• Exposure Pathways:

- Inhalation of volatiles from soil
- Inhalation of volatiles from groundwater
- Dermal contact with soil
- Incidental ingestion of soil

• Exposure Parameters:

- Frequency: 250 working days per year, 87 spent doing excavation work
  - Duration: 4 months

Unlike the Indoor Worker population, Maintenance and Construction Workers are assumed to have contact with Site soil in the course of their jobs during excavation work. Thus, dermal contact and incidental ingestion pathways are considered for these populations. Although the hypothetical Maintenance and Construction Worker populations share the same potential exposure pathways, the two groups differ in exposure duration. Maintenance Workers, being permanent employees, are assumed to undergo exposure through activities at the Site for 25 years [USEPA, 1991].

Construction Workers are assumed to have a much shorter per-individual exposure of one year, a span of time assumed to encompass the earthwork stage of a construction project. An additional difference between the two outdoor receptor populations is the assumption that Maintenance Workers engage in excavation-type activities for an average of 5 days per year of 250 days, whereas Construction Workers perform excavation 87 days (four months) of their work year. This is significant in that excavation work is modeled with a higher soil ingestion rate than non-excavation activity.

The Site is almost completely covered by asphalt or concrete. Due to this cover, mobilization of chemicals through inhalation of particulate matter from surficial soils is not considered as a viable exposure pathway. The assumption was made that the Site will retain a similar type of cover, such as asphalt, concrete, or clean landscaping fill, in the future. Volatilization of chemicals from surficial soils to ambient air is similarly precluded, as almost none of the soil at the Site exists at the surface. For modeling purposes, all contaminated soil is treated as subsurface soil.

Mobilization and diffusion of vapor-phase chemicals (volatilized from soil or groundwater) from the subsurface to the surface is driven by a concentration gradient between the subsurface source of the vapors and the local atmosphere. Many chemicals at the Site are present in both soil and groundwater, and are conservatively assumed, in the baseline risk calculations, to volatilize and diffuse from both soil and groundwater into the atmosphere.

1992a; Cal-EPA, 1992]. The conservative assumption is made whereby analyses that did not detect a particular chemical of concern are treated as though the chemical had been detected at a concentration of one half the detection limit [USEPA, 1989]. Representative concentrations for all chemicals of concern at the Site are shown in Table A-3.

## 2.3 Toxicity Criteria

Accumulated data from various laboratory toxicity studies have been compiled and interpreted by a number of Federal and State agencies, among them the U.S. Environmental Protection Agency and the California Environmental Protection Agency. Results from human and, more commonly, animal trials are summarized into reference doses ("RfDs") for non-carcinogenic chemicals and risk slope factors ("SFs") for carcinogens. Toxicity values used in this risk assessment are taken from a hierarchy of several sources. If the needed value was not available in the preferred source, the next most reviewed source was consulted, and so on.

Non-carcinogen RfDs are preferentially obtained from the U.S. EPA Integrated Risk Information System ("IRIS") [USEPA, 1996], an on-line database of peer-reviewed toxicity information. The next most desirable RfD sources, in order of preference, are the U.S. EPA Health Effects Summary Tables ("HEAST") [USEPA, 1997], the U.S. EPA National Center for Environmental Assessment ("NCEA") Risk Assessment Issue Papers, and the Cal-EPA Office of Environmental Health Hazard Assessment Technical Support Document for the Determination of Non-Cancer Chronic Reference Exposure Levels ("OEHHA") [Cal-EPA, 1997].

Carcinogen SFs are preferentially culled from the Cal-EPA Memorandum Concerning Cancer Potency Factors: Update [Cal-EPA, 1996]. Values unavailable in that document are obtained from one of the above references for RfDs, in the same order of preference.

### 2.3.1 Non-Carcinogenic Toxicity Criteria

Toxicity of non-carcinogenic chemicals is expressed through reference doses, or RfDs, in units of milligrams per kilogram of body weight per day (mg/kg-day). The RfD for a particular chemical of concern is the hypothetical dose which will cause no adverse effects in human populations. An oral or ingestion reference dose ("RfDo") for a chemical is calculated from a different set of experiments than is an inhalation reference dose ("RfDi"). When one quantity or the other is unavailable, a "route-to-route extrapolation," or substitution, is sometimes used in the above data sources to estimate the missing value. As most toxicity studies are performed on laboratory animals, direct quantitative data for human toxicity of a particular chemical are uncommon. Published RfDs therefore generally contain safety factors of one or two orders of magnitude, to account for cross-species uncertainty, uncertainty from experimental procedures, and other effects. RfDs may be interpreted as representing the maximum "safe" dosage of a non-carcinogenic chemical. A low RfD indicates a low threshold dose, and therefore a

more toxic chemical; a high RfD denotes a substance with less toxicity. Reference doses for each chemical of concern at the Site are listed in Table A-4, together with a summary of demonstrated health effects and sources of the toxicological data.

### 2.3.2 Carcinogenic Toxicity Criteria

Toxicity for carcinogens is expressed as a risk slope factor, or "SF". Units of an SF are inverse exposure units, or (mg/kg-day)<sup>-1</sup>. When multiplied by a dose, the inverse dosage units cancel, resulting in a dimensionless value that represents the risk associated with that dose. Slope factors are therefore the "plausible upper-bound estimates of the probability of a carcinogenic response per unit of chemical intake over a lifetime" [USEPA, 1989]. As opposed to RfDs, chemicals with low SFs are less carcinogenic than those with high SFs. Slope factors for chemicals of concern at the Site are summarized in Table A-5, along with carcinogenic effects and SF data sources for each chemical.

### 2.4 Calculation of Exposure Point Concentrations and Chronic Daily Intakes

Based on the calculated representative concentrations for the chemicals of concern at the Site, estimates can be calculated for the concentration each potentially exposed receptor population might experience through a particular set of exposure pathways. Called exposure point concentrations ("EPCs"), these values, along with parameters describing the potentially exposed populations, allow determination of a Chronic Daily Intake ("CDI") for each chemical, population, and pathway. CDIs are expressed as dosages, in units of milligram of chemical per kilogram of body weight per day (mg/kg-day). Carcinogenic CDIs are calculated differently from non-carcinogenic CDIs. Averaging time is assumed to be 25 years for non-carcinogens but a full lifetime of 70 years for carcinogens. Assumed values for all parameters, along with the sources of the assumptions, are summarized in Table A-6.

#### 2.4.1 Ingestion and Dermal Contact Exposure Pathways

For the cases of soil ingestion and dermal contact, exposure point concentrations are identical to representative concentrations. CDIs for the two potential future receptor populations assumed to have the greatest likelihood of contact with Site soil, Maintenance Workers and Construction Workers, are calculated according to equations [1] and [2]:

Ingestion:

$$CDI_i = \frac{C_s \times IR_s \times EF \times ED \times 10^{-6} \frac{\text{kg}}{\text{mg}}}{BW \times AT} \quad [1]$$

where

CDI<sub>i</sub> = Chronic daily intake through ingestion (mg/kg-day)

C<sub>s</sub> = Representative Concentration = Concentration in soil (mg/kg)

- IR<sub>s</sub> = Ingestion rate of soil (mg/day)  
 EF = Exposure frequency (days/year)  
 ED = Exposure duration (years)  
 BW = Body weight (kg)  
 AT = Averaging time (days)

Dermal Contact:

$$CDI_{dc} = \frac{C_s \times SA_s \times ABS \times AF \times EF \times ED \times 10^{-6} \frac{kg}{mg}}{BW \times AT} \quad [2]$$

where

- CDI<sub>dc</sub> = Chronic daily intake through dermal contact (mg/kg-day)  
 C<sub>s</sub> = Representative Concentration = Concentration in soil (mg/kg)  
 SA<sub>s</sub> = Surface area of skin exposed to soil contact (cm<sup>2</sup>/event)  
 ABS = Soil-dermal absorption fraction (unitless)  
 AF = Soil adherence factor (mg/cm<sup>2</sup>)  
 EF = Exposure frequency (days/year)  
 ED = Exposure duration (years)  
 BW = Body weight (kg)  
 AT = Averaging time (days)

The Maintenance and Construction Worker scenarios differ with regard to incidental ingestion of soil. A Maintenance Worker is assumed to excavate soil for a total of 5 days during a work year of 250 days. In contrast, a Construction Worker is assumed to engage in excavation labor for four months (approximately 87 days) throughout the 250-day work year. Soil ingestion is assumed to occur at a rate of 480 mg/day during excavation activity and 50 mg/day during routine maintenance activities [USEPA, 1991; Cal-EPA, 1992]. See Table A-6 for more details of human exposure assumptions.

2.4.2 Inhalation Exposure Pathways

Chemicals of concern can volatilize from the subsurface into the air, posing a potential hazard to on-Site workers breathing in the vicinity. Different algorithms are used to calculate Exposure Point Concentrations ("EPCs") for indoor and outdoor air. When chemicals evaporate from soil and groundwater, the rate of transfer, based on each chemical's volatility, must first be determined before air EPCs can be calculated. Volatilization is modeled as a linear transfer function of the chemical's concentration in soil or groundwater [ASTM, 1995]. Expressed as a volatilization factor ("VF"), the transfer function is based, in part, on a chemical's Henry's Law constant, diffusion coefficients in air and water, and organic carbon partition coefficient. Exposure point concentrations in air due to volatilization of chemicals present in soil and groundwater are calculated for all future worker receptor populations through equations [3], and [4]:

$$C_a = VFx \times RC \times AgF \quad [3]$$

for excavation work, and

$$C_a = VFx \times RC \quad [4]$$

for non-excavation work, where

- $C_a$  = Concentration in air, or EPC (mg/m<sup>3</sup>)
- RC = Representative concentration of the chemical (mg/kg or mg/L)
- AgF = Agitation factor to model enhanced evaporation from excavation (unitless)

and the general term VFx refers to one of the following pathway and chemical-specific Volatilization Factors ("VFs"):

$VF_{s_{amb}}$  = Soil-to-outdoor air (ambient) pathway (kg soil/m<sup>3</sup> air):

$$VF_{s_{amb}} = \frac{H \times \rho_s \times 10^3 \frac{cm^3 \text{ kg}}{m^3 \text{ g}}}{[\theta_{ws} + (k_{oc} \times f_{oc} \times \rho_s) + (H \times \theta_{AS})] \times \left( 1 + \frac{U_{AIR} \times \delta_{AIR} \times L_S}{D_S^{eff} \times W} \right)} \quad [5]$$

$VF_{w_{amb}}$  = Groundwater-to-outdoor air (ambient) pathway (L H<sub>2</sub>O/m<sup>3</sup> air):

$$VF_{w_{amb}} = \frac{H \times 10^3 \frac{L}{m^3}}{\left( 1 + \frac{U_{AIR} \times \delta_{AIR} \times L_{GW}}{D_{ws}^{eff} \times W} \right)} \quad [6]$$

$VF_{s_{esp}}$  = Soil-to-indoor air (enclosed space) pathway (kg soil/m<sup>3</sup> air):

$$VF_{s_{esp}} = \frac{\frac{H \times \rho_s}{[\theta_{ws} + (k_{oc} \times f_{oc} \times \rho_s) + (H \times \theta_{AS})]} \times \left[ \frac{D_S^{eff}}{L_S \times ER \times L_B} \right] \times 10^3 \frac{cm^3 \text{ kg}}{m^3 \text{ g}}}{1 + \left[ \frac{D_S^{eff}}{L_S \times ER \times L_B} \right] + \left[ \frac{D_S^{eff} \times L_{CRACK}}{L_S \times D_{CRACK}^{eff} \times \eta} \right]} \quad [7]$$

1999-122815  
 08/09/1998 03:24P  
 DR Page 91 of 153

$VFW_{exp}$  = Groundwater-to-indoor air (enclosed space) pathway (L H<sub>2</sub>O/m<sup>3</sup> air):

$$VFW_{exp} = \frac{H \times \left[ \frac{D_{ws}^{eff}}{L_{GW} \times ER \times L_B} \right] \times 10^3 \frac{L}{m}}{1 + \left[ \frac{D_{ws}^{eff}}{L_{GW} \times ER \times L_B} \right] + \left[ \frac{D_{ws}^{eff} \times L_{CRACK}}{L_{GW} \times D_{CRACK}^{eff} \times \eta} \right]} \quad [8]$$

VFs are based, in part, upon effective diffusion coefficients for each chemical, calculated as follows:

$D_s^{eff}$  = Effective diffusion coefficient in soil based on vapor concentration (cm<sup>2</sup> / s):

$$D_s^{eff} = \left[ D^{air} \times \frac{(\theta_{AS})^{10/3}}{(\theta_T)^2} \right] + \left[ D^{water} \times \frac{(\theta_{WS})^{10/3}}{H \times (\theta_T)^2} \right] \quad [9]$$

$D_{CAP}^{eff}$  = Effective diffusion coefficient through capillary fringe (cm<sup>2</sup> / s):

$$D_{CAP}^{eff} = \left[ D^{air} \times \frac{(\theta_{ACAP})^{10/3}}{(\theta_T)^2} \right] + \left[ D^{water} \times \frac{(\theta_{WCAP})^{10/3}}{H \times (\theta_T)^2} \right] \quad [10]$$

$D_{ws}^{eff}$  = Effective diffusion coefficient between groundwater and surface (cm<sup>2</sup> / s):

$$D_{ws}^{eff} = \frac{(h_{CAP} + h_y)}{\left[ \frac{h_{CAP}}{D_{CAP}^{eff}} + \frac{h_y}{D_s^{eff}} \right]} \quad [11]$$

$D_{CRACK}^{eff}$  = Effective diffusion coefficient through floor or wall cracks (cm<sup>2</sup> / s):

$$D_{CRACK}^{eff} = \left[ D^{air} \times \frac{(\theta_{ACRACK})^{10/3}}{(\theta_T)^2} \right] + \left[ D^{water} \times \frac{(\theta_{WCRACK})^{10/3}}{H \times (\theta_T)^2} \right] \quad [12]$$

Where:

$D^{air}$  = Diffusion coefficient of the chemical in air (cm<sup>2</sup> / s)

$D^{water}$  = Diffusion coefficient of the chemical in water (cm<sup>2</sup> / s)

$ER$	= Enclosed-space air exchange rate (L / sec)
$f_{OC}$	= Fraction of organic carbon in soil (g C / g soil)
$H$	= Henry's Law constant ( $\text{cm}^3 \text{H}_2\text{O} / \text{cm}^3 \text{air}$ )
$h_{cap}$	= Thickness of capillary fringe (cm)
$h_v$	= Thickness of vadose zone (cm)
$k_{OC}$	= Organic carbon-water sorption coefficient ( $\text{cm}^3 \text{H}_2\text{O} / \text{g C}$ )
$L_B$	= Enclosed-space volume / infiltration area ratio (cm)
$L_{CRACK}$	= Enclosed-space floor or wall thickness (cm)
$L_{GW}$	= Depth to groundwater, i.e. $h_{cap} + h_v$ (cm)
$L_S$	= Depth to subsurface soil sources (cm)
$U_{AIR}$	= Wind speed above ground surface in ambient mixing zone (cm / sec)
$W$	= Width of source area parallel to wind or groundwater flow direction (cm)
$\delta_{AIR}$	= Ambient air mixing zone height (cm)
$\delta_{GW}$	= Groundwater mixing zone thickness (cm)
$\eta$	= Areal fraction of cracks in floor or wall ( $\text{cm}^2 \text{cracks} / \text{cm}^2 \text{total area}$ )
$\theta_{ACAP}$	= Volumetric air content in capillary fringe soil ( $\text{cm}^3 \text{air} / \text{cm}^3 \text{soil}$ )
$\theta_{ACRACK}$	= Volumetric air content in floor or wall cracks ( $\text{cm}^3 \text{air} / \text{cm}^3 \text{crack vol.}$ )
$\theta_{AS}$	= Volumetric air content in vadose zone soil ( $\text{cm}^3 \text{air} / \text{cm}^3 \text{soil}$ )
$\theta_T$	= Total soil porosity ( $\text{cm}^3 / \text{cm}^3 \text{soil}$ )
$\theta_{WCAP}$	= Volumetric water content in capillary fringe soil ( $\text{cm}^3 \text{water} / \text{cm}^3 \text{soil}$ )
$\theta_{WCRACK}$	= Volumetric water content in floor or wall cracks ( $\text{cm}^3 \text{water} / \text{cm}^3 \text{crack vol.}$ )
$\theta_{WS}$	= Volumetric water content in vadose zone soil ( $\text{cm}^3 \text{water} / \text{cm}^3 \text{soil}$ )
$\rho_S$	= Soil bulk density (g soil / $\text{cm}^3 \text{soil}$ )

Volatilization Factors are calculated according to the method described in the ASTM RBCA guidance [ASTM, 1995]. Air diffusion coefficients (" $D_{air}$ ") for chemicals of concern at the Site are estimated using the FSG method [Lyman, et al., 1990; USEPA, 1988]. Water diffusion coefficients (" $D_{water}$ ") are calculated through the method of Hayduk and Laudie [Lyman, et al., 1990]. Ambient-air VFs are used for calculations regarding Construction and Maintenance Workers, while enclosed-space air VFs are used for Indoor Worker EPC calculations. Specific physical parameter assumptions used in the above VF equations can be found in Table A-7; the quantities are Site-specific and noted as such where available, and otherwise are default values from the ASTM RBCA guidance [ASTM, 1995]. Table A-8 lists the resulting VFs and other data for each chemical of concern and volatilization pathway.

Construction Workers are modeled herein as performing excavation for their four month on-Site tenure of 87 working days (USEPA, 1991; Cal-EPA, 1992), consequently equation [3] is applied throughout. Maintenance Workers, however, are assumed to only labor five days per year in excavation tasks; AgF is only factored in through the use of equation [3] for those five days annually. The rest of the time, Maintenance Worker air EPCs are calculated using equation [4]. Indoor Workers are assumed to never perform excavation tasks, thus air EPCs are calculated with equation [4].

Chronic Daily Intakes in air due to volatilization of chemicals present in soil are calculated for all future worker receptor populations through equation [13]:

$$CDI_{inh} = \frac{C_a \times IR_a \times EF \times ED}{BW \times AT} \quad [13]$$

where

- CDI<sub>inh</sub> = Chronic daily intake through inhalation (mg/kg-day)
- C<sub>a</sub> = Concentration in air, or EPC (mg/m<sup>3</sup>)
- IR<sub>a</sub> = Inhalation rate of air (m<sup>3</sup>/day)
- EF = Exposure frequency (days/year)
- ED = Exposure duration (years)
- BW = Body weight (kg)
- AT = Averaging time (days)

Chronic daily intakes of chemicals of concern for each valid population/pathway combination are summarized in Table A-9 through Table A-18.

## 2.5 Baseline Risk Characterization

For the purpose of risk assessment at the Site, effects from chemicals of concern are split into two broad categories, Cancer Risk and non-carcinogenic Hazard Index. Each of these types of risk is calculated differently, although many contaminants at the Site have both effects, and are assigned both classifications. The separation is driven by the toxicity data for the two chemical effect categories. Non-carcinogens are assigned a Reference Dose ("RfD") in mg/kg-day, and carcinogens are assigned a Slope Factor ("SF"), having inverse dosage units of (mg/kg-day)<sup>-1</sup>. This section outlines assumptions used to calculate quantitative, Site-specific estimates of potential health hazards from non-carcinogens and of incremental lifetime Cancer Risk from carcinogens occurring at the Site.

Note that baseline risks are calculated assuming receptor populations are unprotected from exposure to hazardous chemicals (i.e. no engineering controls or personal protection equipment used).

As discussed in Section 1.3, non-carcinogenic RfDs are generally based on the highest no-adverse-effects chronic dosages from several studies. The hazard of a chemical of concern through a particular exposure pathway is calculated as the Chronic Daily Intake ("CDI") divided by the RfD for that pathway. This quantity is called the Hazard Index ("HI"). It is unique to the site, chemical, exposure pathway, and receptor population:

$$HI_n = \frac{CDI_n}{RfD_n} \quad [14]$$

where

- $HI_n$  = Hazard Index for the  $n^{\text{th}}$  combination of population, exposure pathway, and chemical of concern (dimensionless)  
 $CDI_n$  = Chronic Daily Intake for the  $n^{\text{th}}$  combination of population, exposure pathway, and chemical of concern (mg/kg-day)  
 $RfD_n$  = Reference Dose for the  $n^{\text{th}}$  combination of exposure pathway and chemical of concern (mg/kg-day)

For an explanation of CDI calculation for each population / pathway combination, please see footnotes to Tables A-9 through A-18, as appropriate.

Summation of Hazard Indices over all pathways and chemicals gives the Hazard Index for each population, which is targeted to remain at or below a value of one. A total HI less than or equal to one indicates that the population will not be exposed to the chemical beyond a dosage considered safe.

Carcinogenic chemicals are assigned, based on experimental evidence and mathematical modeling, a published Slope Factor for each exposure pathway. When multiplied by the CDI for that pathway, a unitless quantity results which represents the incremental risk of developing cancer from exposure to that chemical, through that exposure pathway, over a lifetime of 70 years [USEPA, 1989].

$$CR_n = CDI_n \times SF_n \quad [15]$$

where

- $CR_n$  = Estimated incremental excess Cancer Risk for the  $n^{\text{th}}$  combination of population, exposure pathway, and chemical of concern (dimensionless)  
 $CDI_n$  = Chronic Daily Intake for the  $n^{\text{th}}$  combination of population, exposure pathway, and chemical of concern (mg/kg-day)  
 $SF_n$  = Slope Factor for the  $n^{\text{th}}$  combination of exposure pathway and chemical of concern (mg/kg-day)<sup>-1</sup>

As with the non-cancer Hazard Index, summation of risk from all chemicals over all pathways valid for a particular receptor population gives an overall Cancer Risk for the population at the Site. This value is targeted to remain at or below  $10^{-5}$ . The National Oil and Hazardous Substances Pollution Contingency Plan (40 CFR §300) mandates an acceptable range of maximum incremental carcinogenic risk between  $10^{-4}$  and  $10^{-5}$ . California law requires notification of on-Site workers if Cancer Risk is estimated to exceed  $10^{-5}$  (California Code of Regulations ("CCR") Title 22, Section 12703). The targeted maximum carcinogenic risk of  $10^{-5}$  satisfies both sets of regulations.

All potentially exposed populations are assumed to be unprotected in the baseline risk calculations.

### 2.5.1 Future Indoor Workers

One of the assumptions regarding the future Indoor Worker receptor population is that its members never work with soil, thus, incidental ingestion and dermal contact with contaminated soil are not considered exposure pathways for this population. Inhalation of volatile organic compounds evaporating from soil, however, is valid and is presented in Table A-9. The same data for inhalation of VOCs from groundwater is shown in Table A-10.

A summary of baseline hazard and risk for Indoor Workers may be found in Table A-19. The most significant chemical/pathway combination for Indoor Workers, in terms of Cancer Risk, is inhalation of TCE evaporating from groundwater. The non-carcinogenic Hazard Index for this population is dominated by inhalation of vinyl chloride, TCE, and cis-1,2-DCE from groundwater.

### 2.5.2 Future Maintenance Workers

Baseline risk characterization data for Maintenance Workers is compiled in several tables. Table A-11 summarizes the soil ingestion exposure pathway, and Table A-12 displays similar data for the soil dermal contact exposure pathway. Table A-13 displays Hazard Index and Cancer Risk for the inhalation pathway through volatilization of organic compounds from soil. The same calculations for inhalation of VOCs from groundwater are shown in Table A-14.

Hazard and risk for Maintenance Workers through all pathways is summarized in Table A-20. The most significant chemical/pathway combination for the Maintenance Worker receptor population is inhalation of vinyl chloride volatilizing from soil. Note that under existing Site conditions, potential risks experienced by the hypothetical Maintenance Worker population are within acceptable limits.

### 2.5.3 Construction Workers

Baseline Hazard indices and Cancer Risks for each chemical of concern at the Site are organized in the same way as for Maintenance Workers. Table A-15 lists the soil ingestion exposure pathway, and Table A-16 lists similar data for the soil dermal contact pathway. Table A-17 lists Hazard Index and Cancer Risk for the inhalation pathway of volatile organic compounds evaporating from soil; groundwater VOC volatilization is detailed in Table A-18. A summary of baseline Cancer Risks and Hazard Indices for all Construction Worker exposure pathways is listed in Table A-21. The most significant chemical/pathway combination, both in terms of potential carcinogenic risk and non-carcinogenic health hazard for the Construction Worker receptor population, is inhalation of vinyl chloride volatilizing from soil. Dermal contact with vinyl chloride is also a significant pathway in terms of generation of carcinogenic risk for Construction Workers. Note that under current conditions, potential risks experienced by the hypothetical Construction Worker population are less than the acceptable maximum values.

DR Page: 06 of 183

### 3. CALCULATION OF RISK-BASED ACTION LEVELS FOR SOIL AND GROUNDWATER

Using the baseline risks calculated for the hypothetical receptor populations at the Site, risk-based action levels for soil and groundwater have been calculated, as discussed below. Risk-based action levels have been calculated considering potential exposures to future hypothetical receptor populations, i.e., Indoor Workers, Maintenance Workers, and Construction Workers.

Risk-based action levels for soil and groundwater were calculated to apportion post-remediation risk such that overall Cancer Risk to all hypothetical worker populations is at or below  $1.0 \times 10^{-5}$ , and overall Hazard Index is at or below 1.0. The method used for apportioning risk was to allocate most of the risk to the more hazardous chemicals and those more commonly found at the Site. This approach minimizes the volume of soil and groundwater potentially requiring remediation, while keeping future hypothetical populations' estimated risks below target levels.

Table A-22 lists risk-based action levels for soil, and Table A-23 lists risk-based action levels for groundwater. Current representative concentrations of chemicals within soil and groundwater are also shown on Tables A-22 and A-23 for comparison. TCE and vinyl chloride have been detected in Site soil and groundwater at concentrations greater than their respective risk-based action levels.

Estimates of future estimated Hazard Indices and Cancer Risks for each of the hypothetical populations are listed in Tables A-24, A-25, and A-26. These risks represent estimates of what would result from cleanup of both soil and groundwater at the Site to the respective risk-based action levels. Estimated cumulative Hazard Indices and Cancer Risks for each hypothetical population are equal to or below 1.0 and  $1.0 \times 10^{-5}$ , respectively. Therefore, the risk-based action levels for soil and groundwater listed in Tables A-22 and A-23 would result in an acceptable level of risk for future potentially exposed populations.

If, in the future, chemicals are measured in soil or groundwater samples that differ significantly from the current dataset, risk-based action levels may be recalculated to more accurately reflect the distribution and concentrations of the chemicals.

#### 4. CONSERVATIVE ASSUMPTIONS IN THE RISK ASSESSMENT

The estimated baseline risks and the risk-based action levels presented in the attached tables are upper-bound, health conservative estimates of baseline risks and risk-based action levels for reasonable maximum exposure scenarios. Actual risks may be lower. This section discusses the conservative nature of some of the assumptions in the risk assessment.

Major conservative assumptions include:

- the method used to calculate representative concentrations for chemicals in soil and groundwater;
- the use of all chemicals detected on-Site for risk calculation, even if the frequency of detection was very low;
- the use of conservative exposure frequency assumptions (in days of exposure per year) for hypothetical future worker populations;
- "double counting" of certain calculated risks caused by summing the risks due to volatilization of VOCs from soil and from groundwater; and
- apportionment of risk to each chemical of concern in both soil and groundwater, even when the chemical was actually detected in only one medium.

##### 4.1 Calculation of Representative Concentrations

Representative concentrations of chemicals used to calculate baseline risks are assumed to be the lesser of the maximum detected concentration or the 95% upper confidence limit of the mean concentration ("95% UCL"), based on a lognormal model. When calculating the 95% UCL, samples without detectable concentrations were conservatively assumed to contain chemicals at concentrations equal to half the detection limit for the analyses. Potentially exposed populations may actually be exposed to a lesser concentration than either the maximum or the 95% UCL, as the distribution of chemicals at the Site is not homogeneous.

##### 4.2 Frequency of Detection

Chemicals detected in Site soil and groundwater are dominated by TCE and cis-1,2-DCE. As a conservative approach, however, all detected chemical species were used in calculation of baseline risks, regardless of each chemical's frequency of detection. Table A-3 shows frequencies of detection for all chemicals detected on-Site.

Given the overall conservative nature of the risk assessment, actual non-carcinogenic and carcinogenic risks to potentially exposed populations are likely to be significantly lower than reported herein. The calculated health risk-based action levels are founded on the same conservative assumptions as the baseline risk calculations. Consequently, chemicals present in soil and groundwater at their human health risk-based action level concentrations should not pose an adverse risk to occupants at the Site.

**Notes:**

- (a) Sample depth range in feet below ground surface (ft bgs).
- (b) A hyphen (-) indicates that the sample was not analyzed for the chemical.
- (c) The 95% upper confidence limit of the mean concentration was calculated assuming a log-normal data distribution. One-half the detection limit value was used for samples in which the analyte concentration was reported as below the detection limit.
- (d) The representative concentration was selected as the lesser of either the 95% upper confidence limit or the maximum detected concentration.

**Table A-5**  
**Oral and Inhalation Carcinogenic Toxicity Information for Chemicals of Concern**  
**3695-3723 Haven Avenue Property, Menlo Park, California**

**Notes:**

(a) U.S. EPA weight-of-evidence classification is as follows:

A = Human Carcinogen

B1 or B2 = Probable Human Carcinogen; B1 indicates that limited human data are available; B2 indicates that there is sufficient evidence in animals and inadequate or no evidence in humans.

C = Possible Human Carcinogen

D = Not Classifiable as to Human Carcinogenicity.

E = Evidence of Non-Carcinogenicity for Humans

Weight-of-evidence information obtained from the U.S. Environmental Protection Agency Integrated Risk Information System database ("IRIS"); the July 1997 U.S. EPA Health Effects Assessment Summary Tables ("HEAST"); or the U.S. EPA National Center for Environmental Assessment Risk Assessment Issue Papers ("NCEA"); in order of precedence.

(b) Slope factors were obtained from the California Environmental Protection Agency, 1996 Memorandum of Cancer Potency Factors Update ("Memo", see below); the U.S. EPA IRIS database; the 1997 U.S. EPA HEAST; or the U.S. EPA NCEA, in order of precedence.

(c) A hyphen (-) indicates that no data for the indicated field was available in the listed sources.

(d) 1,1-Dichloroethene is not recognized as a human carcinogen by the State of California (source: California EPA, 1996, *California Cancer Potency Factors*, California Environmental Protection Agency, Office of Environmental Health Hazard Assessment, Sacramento, California, 1 April 1996).

Notes:

(a) Solubility values from Montgomery, J.H. and L.M. Welkom, 1991, *Groundwater Chemicals Desk Reference*, Lewis Pub. Co., Chelsea, Mich.

(b) Saturation soil concentration ("C<sub>sat</sub>") calculated through the equation:

$$C_{sat} = (S \times \theta_m / \rho_s) \times (K_{oc} \times \rho_s \times \theta_w + \theta_w + H' \times \theta_{air})$$

(Parameters and values used in the above equation are shown in Table A-7 and Table A-8.)

(c) Definition of terms (for an explanation of calculations, see section 2.4 of the text):

S = Solubility

C<sub>sat</sub> = Saturation concentration

C<sub>max</sub> = Maximum analysed concentration in soil samples

H' = Dimensionless Henry's Law constant

D<sub>air</sub> = Diffusivity in air

D<sub>water</sub> = Diffusivity in water

K<sub>oc</sub> = Organic carbon partition coefficient

VFW<sub>esp</sub> = Volatilization factor for the groundwater to enclosed space air pathway

VFS<sub>esp</sub> = Volatilization factor for the soil to enclosed space air pathway

VFW<sub>amb</sub> = Volatilization factor for the groundwater to ambient air pathway

VFS<sub>amb</sub> = Volatilization factor for the soil to ambient air pathway

<b>Total Estimated Risk due to Inhalation of COCs Volatilized from Soil to Indoor Air:</b>									<b>2.35E-06</b>

**Notes:**

(a) Refer to Table A-3 for compilation of representative concentrations ("RCs").

(b) Volatilization factor from soil to enclosed-space air ("Vf<sub>soil</sub>") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") (ASTM, 1995). Parameters used in the RBCA model are listed in Tables 7 and 8.

(c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{C_a \cdot IR \cdot EF \cdot ED}{BW \cdot AT}$$

Table A-9

Characterization of Human Health Risks due to Inhalation of COCs Volatilized from Subsurface Soil  
for Future Indoor Workers  
3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)

$Ca$  = Exposure Point Air Concentration ( $mg/m^3$ ) =  $VF_{resp} \cdot RC$

$IRa$  = Air Inhalation Rate ( $m^3/day$ )

$EF$  = Exposure Frequency (days/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects (U.S. EPA, 1989). If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

<b>Total Estimated Risk due to Inhalation of COCs Volatilized from Groundwater to Outdoor Air:</b>									
								<b>0.06</b>	<b>1.7E-05</b>

**Notes:**

- (a) Refer to Table A-3 for compilation of representative concentrations ("RCs").
- (b) Volatilization factor from groundwater to enclosed-space air ("V<sub>Fwesp</sub>") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") [ASTM, 1995]. Parameters used in the RBCA model are listed in Tables 7 and 8.
- (c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{C_a \cdot IR_a \cdot EF \cdot ED}{BW \cdot AT}$$

Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Groundwater  
for Future Indoor Workers  
3695-3723 Haven Avenue Property, Menlo Park, California

Table A-10

where:

$CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)

$Ca$  = Exposure Point Air Concentration (mg/m<sup>3</sup>) \* VPwamb \* RC

$IRa$  = Air Inhalation Rate (m<sup>3</sup>/day)

$EF$  = Exposure Frequency (days/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Ingestion of Soil Containing COCs:							3.1E-04	1.5E-08

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations.

(b) Chronic daily intakes (CDIs) were estimated using method's recommended by U.S. EPA or Cal-EPA, as follows:

(Note that different soil ingestion rates were assumed for excavation and non-excavation work. See Table A-6 for details.)

$$CDI_{(ingestion)} = \frac{C_s \cdot IR_s \cdot EF \cdot ED \cdot 10^{-6} \text{ kg/mg}}{BW \cdot AT}$$

where:

$CDI_{(ingestion)}$  = Chronic daily intake (mg/kg-day)

$C_s$  = Concentration in soil (mg/kg)

$IR_s$  = Ingestion Rate of soil (mg/day)

Table A-11

Characterization of Baseline Human Health Risks due to Ingestion of COCs in Soil  
for Future Maintenance Workers  
3695-3723 Haven Avenue Property, Menlo Park, California

EF = Exposure Frequency (days/year)  
ED = Exposure Duration (years)  
BW = Body Weight (kg)  
AT = Averaging Time (days)  
and assuming Cs = RCsoil

- (c) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.
- (d) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.
- (e) Non-carcinogenic hazard index (HI) for a compound "i" is defined as the CDI/RfD<sub>i</sub>. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects (U.S. EPA, 1989). If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.
- (f) Estimated lifetime incremental cancer risk for compound "i" is defined as CDI<sub>i</sub> x SF<sub>i</sub>. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Inhalation of COCs Volatilized from Soil to Outdoor Air:									
								0.03	3.0E-06

Notes:

- (a) Refer to Table A-3 for compilation of representative concentrations ("RCs").
- (b) Volatilization factor from soil to ambient air ("VFsamb") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") (ASTM, 1995). Parameters used in the RBCA model are listed in Tables 7 and 8.
- (c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{C_p \cdot IR_a \cdot EF \cdot ED}{BW \cdot AT}$$

Table A-13

Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Subsurface Soil  
for Future Maintenance Workers  
3695-3723 Haven Avenue Property, Menlo Park, California

where:

- $CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)
- $Ca$  = Exposure Point Air Concentration (mg/m<sup>3</sup>) =  $VF_{amb} \cdot RC$  for non-excavation work and  $Ca = VF_{pamb} \cdot RC \cdot AgF$  for excavation work, where  $AgF = Agitation Factor \times 18$ .
- $IRa$  = Air Inhalation Rate (m<sup>3</sup>/day)
- $EF$  = Exposure Frequency (days/year)
- $ED$  = Exposure Duration (years)
- $BW$  = Body Weight (kg)
- $AT$  = Averaging Time (days)

- (d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.
- (e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.
- (f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects (U.S. EPA, 1989). If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.
- (g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

<b>Total Estimated Risk due to Inhalation of COCs Volatilized from Groundwater to Outdoor Air:</b>									<b>1.4E-06</b>

**Notes:**

- (a) Refer to Table A-3 for compilation of representative concentrations ("RCs").
- (b) Volatilization factor from groundwater to ambient air ("V<sub>Fw</sub><sup>amb</sup>") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") (ASTM, 1995). Parameters used in the RBCA model are listed in Tables 7 and 8.
- (c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{C_a \cdot IR \cdot EF \cdot ED}{BW \cdot AT}$$

# Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Groundwater for Future Maintenance Workers

3695-3723 Haven Avenue Property, Menlo Park, California

Table A-14

where:

$CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)

$Ca$  = Exposure Point Air Concentration ( $mg/m^3$ ) =  $VF \cdot w_{amb} \cdot RC$

$IRa$  = Air Inhalation Rate ( $m^3/day$ )

$EF$  = Exposure Frequency (days/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

1,1,2-Trichloro-1,2,2-Trifluoroethane	0.575	9.4E-07	-	30	-	3.1E-08	-
Vinyl Chloride	0.137	2.2E-07	3.2E-09	0.0014	0.27	1.6E-04	8.6E-10
Total Estimated Risk due to Ingestion of Soil Containing COCs:							
						0.0009	1.7E-09

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations.

(b) Chronic daily intakes (CDIs) were estimated using methods recommended by U.S. EPA or Cal-EPA, as follows:

(Note that different soil ingestion rates were assumed for excavation and non-excavation work. See Table A-6 for details.)

$$CDI_{(ingestion)} = \frac{Cs \cdot IRs \cdot EF \cdot ED \cdot 10^{-6} \text{ kg/mg}}{BW \cdot AT}$$

where:

$CDI_{(ingestion)}$  = Chronic daily intake (mg/kg-day)

$Cs$  = Concentration in soil (mg/kg)

$IRs$  = Ingestion Rate of soil (mg/day)

Table A-15

**Characterization of Baseline Human Health Risks due to Ingestion of COCs in Soil  
for Construction Workers  
3695-3723 Haven Avenue Property, Menlo Park, California**

EF = Exposure Frequency (days/year)  
ED = Exposure Duration (years)  
BW = Body Weight (kg)  
AT = Averaging Time (days)  
and assuming Cs = RC<sub>soil</sub>

- (c) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.
- (d) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.
- (e) Non-carcinogenic hazard index (HI) for a compound "i" is defined as the CDI/RfD<sub>i</sub>. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects (U.S. EPA, 1989). If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.
- (f) Estimated lifetime incremental cancer risk for compound "i" is defined as CDI<sub>i</sub> x SF<sub>i</sub>. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

**Table A-16**

						8.4E-04	3.9E-08

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations.

(b) Chronic daily intakes (CDI)s were estimated using methods recommended by U.S. EPA or Cal-EPA, as follows:

$$CDI_{(dermal contact)} = \frac{C_s \cdot SAs \cdot ABS \cdot A \cdot F \cdot ED \cdot 10^{-6}}{BW \cdot AT}$$

Table A-16

### Characterization of Baseline Human Health Risks due to Dermal Contact with COCs in Soil for Construction Workers

3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(dermal\ contact)}$  = Chronic daily intake (mg/kg-day)

$C_s$  = Concentration in soil (mg/kg)

$SAs$  = Surface Area of Skin exposed to soil contact ( $cm^2/event$ )

$AF$  = Soil Adherence Factor ( $mg/cm^2$ )

$ABS$  = Soil-Dermal Absorption Fraction (dimensionless)

$EF$  = Exposure Frequency (events/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

and assuming  $C_s = RC_{soil}$

- (c) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.
- (d) See Table A-5 for an explanation of carcinogenic slope factors (SF<sub>0</sub>) used here. A hyphen (-) indicates an SF was not found for the compound.
- (e) Non-carcinogenic hazard index (HI) for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.
- (f) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Inhalation of COCs Volatilized from Soil to Outdoor Air:										
									0.0	4.2E-08

Notes:

- (a) Refer to Table A-3 for compilation of representative concentrations ("RCs").
- (b) Volatilization factor from soil to ambient air ("VF<sub>s,amb</sub>") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") [ASTM, 1995]. Parameters used in the RBCA model are listed in Tables 7 and 8.
- (c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{C_a \cdot IR_a \cdot EF \cdot ED}{BW \cdot AT}$$

Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Subsurface Soil  
for Construction Workers  
3695-3723 Haven Avenue Property, Menlo Park, California

Table A-17

where:

$CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)

$Ca$  = Exposure Point Air Concentration ( $mg/m^3$ ) =  $Vf_{samb} * RC$  for non-excavation work and  $Ca = Vf_{samb} * RC * AgF$  for excavation work, where  $AgF$  = Agitation Factor = 1.

$IRa$  = Air Inhalation Rate ( $m^3/day$ )

$EF$  = Exposure Frequency (days/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

- (d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.
- (e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.
- (f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.
- (g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i * SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

## San Francisco Bay Regional Water Quality Control Board

July 30, 2021  
Cost Recovery ID 2020805  
GeoTracker ID: [SL18322742](#)

Integris/Millennium Joint Venture, LLC  
Attn.: Gary D. Williams  
2401 Waterman Blvd., Suite 4A-PMB#172  
Fairfield, CA 94534  
[gilliams@havenoffices.com](mailto:gilliams@havenoffices.com)

**Subject: Variance from Covenant and Environmental Restriction on 3705 Haven Avenue, Menlo Park, San Mateo County**

Dear Mr. Williams:

This letter grants a variance (Variance) from certain use restrictions contained in the [Covenant and Environmental Restriction on Property \(Covenant\)](#) recorded against the subject property, 3705 Haven Avenue in Menlo Park, California, in response to the August 12, 2020 request from Integris/Millennium Joint Venture, LLC (Integris). It is our understanding that Integris is the current owner of the subject property. More specifically, this Variance suspends the Covenant's restriction on residential development.

As set forth in more detail below, granting a variance from certain restrictions in the Covenant is appropriate as to the 3705 Haven Avenue parcel. This Variance reflects the following findings:

- A. The Covenant was recorded on two adjacent parcels on Haven Avenue (Burdened Property) on August 9, 1999, in the Official Records of San Mateo County, California, as Document No. 1999-135815. The Covenant restricted development on the two parcels to commercial and industrial uses because groundwater concentrations of chlorinated volatile organic compounds exceeded residential screening levels. After recordation of the Covenant, the Burdened Property was reparcelized into the following 3 parcels: (1) 3705 Haven Avenue, which is the subject of this Variance (APN 055-170-240), and is more particularly described in [Exhibit A](#) attached hereto ("**3705 Haven Property**"); (2) 3715 Haven Avenue, in the City of Menlo Park, County of San Mateo, State of California, with Assessor's Parcel Number 055-170-340, which is more particularly described in [Exhibit B](#) attached hereto ("**3715 Haven Property**"); and (3) 3723 Haven Avenue, in the City of Menlo Park, County of San Mateo, State of California, with Assessor's Parcel Number 055-170-350, which is

---

JIM McGRATH, CHAIR | MICHAEL MONTGOMERY, EXECUTIVE OFFICER

more particularly described in Exhibit C attached hereto and (“**3723 Haven Property**”).

- B. Between January 31, 2020 and August 12, 2020, the Groundwater and Indoor Air Investigation Report and Soil Vapor Investigation Report were submitted demonstrating there is limited residual contamination on 3705 Haven Property compared to the rest of the site. The highest concentration of trichloroethene (TCE) in groundwater at the 3705 Haven Property is 23 micrograms per liter (µg/L). This is more than two orders of magnitude less than groundwater concentrations remaining on 3715 and 3723 Haven Ave. Soil vapor concentrations of TCE at the 3705 Haven Property are less than residential vapor intrusion-based screening levels.
- C. Integris submitted a request to the Water Board for a variance of the Covenant to allow residential land use on 3705 Haven Property. The Water Board concurs that residential land use is acceptable on 3705 Haven Property due to site conditions, including low soil and soil gas contaminant concentrations and risk management measures for groundwater contamination. Risk to residential receptors (including children and seniors) from residual groundwater contamination at 3705 Haven Property can be effectively managed with the Risk Management Plan (including any subsequent approved addenda) that is required by the Covenant. Specifically, the Risk Management Plan will be updated with an addendum to restrict the construction of subsurface structures that could create a vapor intrusion concern.

The Water Board grants to 3705 Haven Avenue a Variance from the following restrictions in Article III, Section 3.1 of the Covenant, provided that no subsurface structures are constructed on the property and the Risk Management Plan is updated as described in Finding C:

- a. Development of the Burdened Property shall be restricted to industrial commercial or office space;
- b. No residence for human habitation shall be permitted on the Burdened Property;
- e. No day care centers for children or day care centers for Senior Citizens shall be permitted on the Burdened Property.

Exhibit A of the Covenant is replaced with Exhibit A, Exhibit B, and Exhibit C attached to this Variance to distinguish the 3705 Haven Property parcel from the 3715 Haven Property and 3723 Haven Property parcels.

If you have any questions, please contact Nicole Fry of my staff at [Nicole.Fry@waterboards.ca.gov](mailto:Nicole.Fry@waterboards.ca.gov)

Sincerely,

Michael Montgomery

## 1.0 INTRODUCTION

ACC Environmental Consultants, Inc. (ACC) has prepared this Groundwater and Indoor Air Investigation Report for the property identified as 3705 Haven Avenue in Menlo Park, California (Site) at the request of Integris Millenium Joint Venture, LLC (Client).

The purpose of the investigation was to assess current groundwater conditions at the Site with regard to chemicals-of-concern (COCs) historically detected in groundwater, primarily tetrachloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE). Subsequent to groundwater sampling, ACC conducted an indoor air assessment based on TCE concentrations detected in groundwater.

## 2.0 BACKGROUND

The Site is located along the northwest side of Haven Avenue in the City of Menlo Park, California (Figure 1). The Site is comprised of an approximately 0.60 acre parcel of land developed with a one-story multi-tenant commercial building constructed circa 1969. The building was historically occupied by Siltec Corporation from 1970 to 1989. Siltec Corporation became Mitsubishi Silicon American (MSA) in July 1996, and in February 2002 Mitsubishi Materials including MSA merged with Sumitomo Metals to form Sumitomo Mitsubishi Silicon Corporation (SUMCO USA), which was renamed SUMCO Phoenix Corporation (SUMCO). The SUMCO property was used for various industrial activities including the manufacturing of polished silicon wafers. Chlorinated VOCs were reportedly used during that time.

The Site was purchased by Integris Millenium Joint Venture LLC during 1999 for use as office space. The Site is currently occupied by various professional offices.

The Site is located approximately 800 feet southwest of San Francisco Bay. The documented groundwater flow direction is approximately east to east/northeast.

Groundwater was observed by ACC to be confined at the Site to between approximately 8 and 19 ft bgs, and rose as shallow as approximately 3.6 ft bgs subsequent to advancing soil borings through the confining layer.

Soils encountered by ACC consisted of moist brown silt with gravel extending to approximately 4 ft bgs and underlain by dark brown clay extending to the total depth explored of approximately 15 ft bgs.

## 3.0 ENVIRONMENTAL BACKGROUND

ACC reviewed the following documents:

- *Feasibility Study and Remedial Action Plan, 3695-3723 Haven Avenue, Menlo Park, California*, Erler & Kalinowski, Inc. (EKI), March 12, 1999;
- *Risk Management Plan, 3695-3723 Haven Avenue, Menlo Park, California*, Erler & Kalinowski Inc. (EKI), March 12, 1999;
- *Summary of Environmental Conditions, and Request for Declaration of No Further Active Remediation Status, 3695-3723 Haven Avenue, Menlo Park, California*, Erler & Kalinowski, Inc. (EKI), December 31, 2013; and
- *RWQCB Correspondence: No Further Action Required at the former Siltic Site located at 3675-3723 Haven Avenue, Menlo Park, San Mateo County*, Regional Water Quality Control Board, June 16, 2014.

The Site is part of the former SUMCO property, which included the Site, the north-adjacent property (3715 Haven Avenue), and the property adjacent to the north of 3715 Avenue (3723 Haven Avenue). The SUMCO property was developed with three slab-on-grade commercial buildings, one of which was referred to as “Building 1” and is the structure that currently exists at the Site. Semiconductor manufacturing at the SUMCO property resulted in adverse impacts to soil and groundwater by volatile organic compounds (VOCs), primarily TCE and cis-1,2-DCE. Extensive investigations were conducted from 1994 to 2012 and a former sump at the north-adjacent down-gradient parcel (3715 Haven Avenue) was determined to be the source of documented subsurface VOC impacts associated with the SUMCO property.

1994: One monitoring well was installed at the Site as an up-gradient groundwater monitoring well (MW-1) and numerous groundwater monitoring wells were installed off-site and north (down-gradient) of the Site. MW-1 extended to approximately 15.5 ft bg, was screened between 5.5 and 15.5 ft bgs, and was monitored from 1994 to 1998. During the last documented monitoring event (April 1998), TCE and cis-1,2-DCE were detected up to respective concentrations of 98 and 130 µg/L in MW-1.

1995: Two grab groundwater samples were collected at the Site (soil borings GP-1 and GP-3) as part of a larger investigation at the former SUMCO property. TCE and cis-1,2-DCE were detected in first-encountered groundwater at respective concentrations of up to 1200 and 280 µg/L. The highest TCE concentration detected on-site (1200 µg/L) was detected at the northwest property boundary.

1996: Four grab groundwater samples were collected along the eastern portion of the Site (soil borings EC-1 through EC-4) as part of a larger investigation at the former SUMCO property. TCE and cis-1,2-DCE were detected in first-encountered groundwater in soil boring EC-4 at respective concentrations of 2100 and 3300 µg/L. Soil boring EC-4 was advanced at the northeast boundary of the Site. TCE and cis-1,2-DCE concentrations in first-encountered groundwater decreased moving away from the north boundary of the Site and were detected in first-encountered groundwater in soil boring EC-3 at respective concentrations of 39 and 33 µg/L (approximately 85 feet south of EC-4). TCE and cis-1,2-DCE were detected in first-encountered groundwater at the southeastern boundary of the Site at respective concentrations of 3 and 1 µg/L

(EC-1). TCE and cis-1,2-DCE were not detected in the deeper “B Zone” groundwater horizon investigated by EKI.

1999: Approximately 2860 cubic yards of VOC-impacted soils were excavated from the source identified at the north-adjacent, down-gradient parcel (3715 Haven Avenue) and the parcel adjacent to the west of 3715 Haven Avenue (3645-3665 Haven Avenue) (Figure 1). The former building at 3715 Haven Avenue (“Building 2”, identified as the source area) was demolished and a new two-story building was constructed south of the former Building 2 footprint, outside of the high groundwater risk area. A paved parking lot currently occupies the soil remediation area.

A Risk Management Plan (RMP) was prepared for the SUMCO property in 1999 and incorporated into the Deed Restriction for the Site. The RMP details (a) risk management protocols to be implemented during future construction on Site; and (b) post-construction risk management protocols. The deed restriction prohibits residential development at the Site and documents soil management procedures in the event that soil is disturbed.

2000 to present: The on-site monitoring well (MW-1) was removed and no additional sampling was conducted at the Site subsequent to that time. Additional groundwater monitoring was continued off-site at the down-gradient parcels for thirteen years subsequent to source excavation. EKI concluded that VOCs in groundwater have migrated to the east/northeast of the down-gradient off-site source area, and that the concentrations of COCs in groundwater have stabilized or declined over this time period through natural attenuation process.

A No Further Action letter was issued for the Property by the Regional Water Quality Control Board (RWQCB) on June 16, 2014. According to the Closure Report, “remedial actions implemented to date have effectively removed the source and resulted in stabilized and improving groundwater condition. Further remedial actions will have marginal effect and it is anticipated that groundwater quality will further improve over time due to natural attenuation processes.”

For historical sampling locations and analytical data see Figure 3.

## **4.0 SAMPLING METHODOLOGY**

### **4.1 Groundwater Sampling**

On July 25, 2019, ACC advanced seven exploratory soil borings for purposes of groundwater sampling. Borings were advanced using a hydraulic direct-push rig equipped with two-inch diameter hollow drill rods. The approximate soil boring locations are shown on the attached Figure 2.

Temporary one-inch slotted PVC piping was installed in the soil boring to facilitate groundwater sampling. Groundwater samples were collected into laboratory-supplied volatile organic analysis (VOA) containers using a peristaltic pump, labeled, logged on a chain-of-custody form and stored

immediately on ice in a cooler pending transport to the laboratory following standard chain-of-custody protocol.

Prior to drilling, ACC obtained a drilling permit from San Mateo County Environmental Health Services Groundwater Protection Program (SMCEHS-GPP). ACC marked the proposed soil boring locations and subsequently contacted Underground Services Alert (USA) to mark the locations of underground public utilities. Soil boring locations advanced by ACC were additionally cleared by a private utility locator prior to drilling.

## 4.2 Indoor Air Sampling

On September 10, 2019, ACC collected three indoor air samples and one outdoor ambient air sample. Samples were collected in laboratory-supplied evacuated SIM-certified 6-liter SUMMA canisters with dedicated regulators at each sample location. Intakes were situated between approximately 3 and 5 feet above the ground surface. Sample flow rates allowed for samples to be collected over an approximately 8-hour period. The approximate air sampling locations are shown on the attached Figure 2.

## 5.0 GROUNDWATER ANALYTICAL RESULTS

Groundwater samples were delivered to McCampbell Analytical, Inc. in Pittsburg, California following chain-of-custody protocol. The complete laboratory reports and chains-of-custody are attached as Appendix A. Groundwater samples were analyzed for volatile organic compounds (VOCs, full list) by analytical method 8260. Groundwater analytical results for this sampling event were compared to Human Health Risk Levels (HHRLs) published by the San Francisco Regional Water Quality Control Board (RWQCB) for vapor intrusion risk at residential and commercial properties. Groundwater analytical results and corresponding HHRLs are summarized in the attached Table 1.

TCE was detected in groundwater at concentrations of up to 23 micrograms per liter ( $\mu\text{g/L}$ ), which exceeds the corresponding RWQCB groundwater HHRLs for vapor intrusion at commercial and residential properties.

Cis-1,2- DCE was detected up to 15  $\mu\text{g/L}$ , which does not exceed the RWQCB HHRL for vapor intrusion risk at commercial or residential properties.

Freon 113 and MTBE were detected up to respective concentrations of 4.4 and 0.92  $\mu\text{g/L}$ , which do not exceed corresponding RWQCB HHRLs for vapor intrusion at commercial or residential properties. Additional VOCs, including tetrachloroethene (PCE), were not detected.

## 6.0 INDOOR AIR ANALYTICAL RESULTS

Indoor air samples were delivered to Eurofins Air Toxics, Inc. in Folsom, California following

chain-of-custody protocol. The complete laboratory reports and chain-of-custody are attached as Appendix A. Indoor air samples were analyzed for the chlorinated solvents PCE, TCE, cis-1,2-DC), trans-1,2-dichloroethene (trans-1,2-DCE), and vinyl chloride by analytical method TO-15 SIM. Analytical results for this sampling event were compared to RWQCB HHRLs for direct exposure to indoor air at residential and commercial properties (ESL Table IA-1). Indoor Air analytical results and corresponding HHRLs are summarized in the attached Table 2.

PCE was detected in indoor air up to concentrations of 0.96 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) and at a concentration of 0.046  $\mu\text{g}/\text{m}^3$  in outdoor ambient air. Detected PCE concentrations exceed the RWQCB HHRL for direct exposure to indoor air at residential properties, but do not exceed the RWQCB HHRL for direct exposure to indoor air at commercial properties.

TCE was detected in indoor air up to a concentration of 0.079  $\mu\text{g}/\text{m}^3$ . Concentrations of TCE do not exceed corresponding RWQCB HHRLs for direct exposure to indoor air at commercial or residential properties.

Trans-1,2- DCE was detected in indoor air up to a concentration 0.096  $\mu\text{g}/\text{m}^3$ , which does not exceed the corresponding RWQCB HHRLs for direct exposure to indoor air at commercial or residential properties.

Cis-1,2-DCE and vinyl chloride were not detected in indoor air during this sampling event. Reporting limits for vinyl chloride exceed the RWQCB HHRLs for direct exposure to indoor air at residential properties, however the method detection limits (MDLs) for vinyl chloride are approximately equal to the HHRL. ACC regularly corresponded with the laboratory prior and during indoor air sampling in order to collect indoor air samples in a manner that would minimize sample dilution in order to minimize the potential for elevated laboratory reporting limits (RLs) and elevated method detection levels (MDLs).

## 7.0 QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

QA/QC procedures followed in the field were as follows:

- Air space was not present in the VOAs;
- ACC regularly corresponded with the laboratory prior and during indoor air sampling in order to collect indoor air samples in a manner that would minimize sample dilution in order to minimize the potential for elevated laboratory reporting limits (RLs) and elevated method detection levels (MDLs);
- Low flow groundwater sampling was conducted via a peristaltic pump in order to minimize sediment content in groundwater samples;
- Sampling equipment was decontaminated prior to advancement at each soil boring location using an Alconox solution and double rinsed with potable water;

- Nitrile gloves were worn and changed frequently (at a minimum of once between each sampling location) when handling samples in order to prevent cross-contamination of samples; and
- Samples were labeled in the field and chain-of-custody procedures were followed during the sample collection and analysis.

Laboratory QA/QC data area included in the attached Appendix A.

## 8.0 CONCLUSIONS

### 8.1 Groundwater

The primary chemicals-of-concern (COCs) in groundwater at the Site are TCE and cis-1,2-DCE. During this investigation TCE was detected in first-encountered groundwater at the Site at concentrations of up to 23 micrograms per liter ( $\mu\text{g/L}$ ), which exceeds the corresponding Regional Water Control Board (RWQCB) Human Health Risk Level (HHRL) for vapor intrusion at commercial and residential properties of 7.5 and 1.2  $\mu\text{g/L}$ , respectively. Cis-1,2-DCE was detected at concentrations of up to 15  $\mu\text{g/L}$ , which does not exceed the corresponding RWQCB HHRL for vapor intrusion at commercial and residential properties of 49 and 210  $\mu\text{g/L}$ , respectively.

The highest concentrations of TCE and cis-1,2,-DCE detected in groundwater during this investigation were detected at boring B7, which was advanced at the northeast portion of the Site. TCE and cis-1,2,-DCE concentrations detected in additional samples during this investigation were at least one order of magnitude less than at soil boring B7.

COC concentrations in groundwater at the Site have decreased significantly since the off-site source was remediated in 1999. Former on-site groundwater monitoring well MW-1 was last sampled in April 1998. At that time, TCE and cis-1,2,-DCE were detected at respective concentrations of 130 and 98  $\mu\text{g/L}$ . ACC collected one groundwater sample at the approximate location of former groundwater monitoring well MW-1 (ACC soil boring B1) and the analytical results indicated non-detectable concentrations of TCE and cis-1,2-DCE in groundwater at that location.

	MW-1 (1998)	B1 (2019)
TCE ( $\mu\text{g/L}$ )	130	ND<0.5
Cis-1,2-DCE ( $\mu\text{g/L}$ )	98	ND<0.5

One historical groundwater sample (GP-1) collected in 1995 along the southern portion of the Site indicated TCE and cis-1,2-DCE in groundwater at respective concentrations of 170 and 280  $\mu\text{g/L}$ . ACC collected one groundwater sample at the approximate location of GP-1 (ACC soil

boring B2) and analytical results indicate TCE and cis-1,2,-DCE in groundwater at respective concentrations of 1.3 and 0.66 µg/L at that location.

	GP-1 (1995)	B2 (2019)
TCE (µg/L)	170	1.3
Cis-1,2-DCE (µg/L)	280	0.66

In addition, TCE and cis-1,2-DCE were detected up to respective concentrations of 2100 and 3300 µg/L at the northern boundary of the Site in 1996 (EC-4). Detections of TCE and cis-1,2-DCE along the northern portion of the Site (in the general vicinity of EC-4) during this ACC groundwater investigation were up to 23 and 15 µg/L (B7).

	EC-4 (1996)	B7 (2019)
TCE (µg/L)	2100	23
Cis-1,2-DCE (µg/L)	3300	15

For historical sampling locations and analytical data see Figure 3.

## 8.2 Indoor Air

The highest concentration of TCE detected in groundwater during this sampling event exceeded the RWQCB Short-Term Action Level for TCE in groundwater at a commercial property of 20 µg/L. In response to the reported TCE concentrations in groundwater, ACC collected indoor air samples.

Analytical results from this sampling event indicate that indoor air at the Site is not impacted by TCE or cis-1,2-DCE at concentrations exceeding the corresponding RWQCB HHRLs for direct exposure to indoor air at commercial and residential properties.

PCE was detected in indoor air samples up to a concentration of 0.96 µg/m<sup>3</sup>, which exceeds the RWQCB HHRL for direct exposure to indoor air at residential properties, but not for commercial properties. PCE was non-detect in groundwater. Although PCE concentrations detected in outdoor ambient are one order of magnitude less than PCE concentrations detected in indoor air, ACC's opinion is that the PCE impacts to indoor air are likely the result of outdoor ambient air accumulating in the building, and may additionally be attributed to other potential sources not associated with soil, groundwater, and soil vapor at the Site.

## 9.0 RECOMMENDATIONS

Concentrations of dissolved chlorinated solvents in groundwater (particularly TCE and cis-1,2,-DCE) have decreased significantly since the off-site source was remediated in 1999. Current data does not indicate an on-site source and ACC agrees with the RWQCB closure letter for the

SUMCO property that that “further remedial actions will have marginal effect and it is anticipated that groundwater quality will further improve over time due to natural attenuation processes” (Section 3.0). No additional on-site groundwater characterization is recommended by ACC at this time.

ACC’s opinion is that impacts to indoor air as a result of residual subsurface contamination at the Site are minimal. ACC’s understanding is that the owner is proposing to sell the property, and that there is a high demand with regard to redeveloping the Site as residential units constructed on ground floor commercial units.

The deed restriction for the Site currently limits Site use to commercial. ACC requests that the RWQCB review the deed restriction with regard to the current groundwater data and ACC findings documented in this report. Based on current industry standards with regard to vapor intrusion and redevelopment, ACC’s opinion is that redevelopment of the Site as residential units constructed above commercial ground floor units in a manner that minimizes vapor intrusion concerns is highly feasible.

## **10.0 LIMITATIONS**

The service performed by ACC has been conducted in a manner consistent with the levels of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the area. No other warranty, expressed or implied, is made.

The conclusions presented in this report are professional opinions based on the indicated data described in this report and applicable regulations and guidelines currently in place. They are intended only for the purpose, site, and project indicated. Opinions and recommendations presented herein apply to site conditions existing at the time of our study. Site conditions could change over time due to unforeseen circumstances.

ACC has included analytical results from a state-certified laboratory, which performs analyses according to procedures suggested by the U.S. Environmental Protection Agency and/or the State of California. ACC shall not be responsible for laboratory errors.

We appreciate the opportunity to assist you with this project. If you have any questions regarding this report please contact (510) 638-8400 x110 or [isutherland@accenv.com](mailto:isutherland@accenv.com).

"When Quality Counts"

## Analytical Report

**WorkOrder:** 1907D02

**Report Created for:** ACC Environmental Consultants, Inc.

7977 Capwell Drive , Suite 100  
Oakland, CA 94621

**Project Contact:** Kim Bunting

**Project P.O.:**

**Project:** 1744-001.00

**Project Received:** 07/26/2019

Analytical Report reviewed & approved for release on 08/02/2019 by:

Christine Askari  
Project Manager

*The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.*

## Glossary of Terms & Qualifier Definitions

**Client:** ACC Environmental Consultants, Inc.  
**Project:** 1744-001.00  
**WorkOrder:** 1907D02

### Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

## **Glossary of Terms & Qualifier Definitions**

**Client:** ACC Environmental Consultants, Inc.

**Project:** 1744-001.00

**WorkOrder:** 1907D02

### **Analytical Qualifiers**

J Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.

### **Quality Control Qualifiers**

F2 LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.

**NOTES:** - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

\* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Dear Ms. Kim Bunting

The following report includes the data for the above referenced project for sample(s) received on 9/13/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 SIM are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Sarah Westerman at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Sarah Westerman  
Project Manager

**LABORATORY NARRATIVE  
Modified TO-15 SIM  
ACC Environmental Consultants  
Workorder# 1909272**

Four 6 Liter Summa Canister (100% SIM Ambient) samples were received on September 13, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the SIM acquisition mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
ICAL %RSD acceptance criteria	<math>\leq 30\%</math> RSD with 2 compounds allowed out to <math>< 40\%</math> RSD	Project specific; default criteria is <math>\leq 30\%</math> RSD with 10% of compounds allowed out to <math>< 40\%</math> RSD
Daily Calibration	+/- 30% Difference	Project specific; default criteria is <math>\leq 30\%</math> Difference with 10% of compounds allowed out up to <math>\leq 40\%</math>.; flag and narrate outliers
Blank and standards	Zero air	Nitrogen
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases

**Receiving Notes**

The Chain of Custody (COC) information for sample IA2 did not match the information on the canister with regard to canister barcode. The sample labeled 6L0886 on the COC is labeled as 6L0880 on the canister. The client was notified of the discrepancy and the information on the canister was used to process and report the sample.

**Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

**Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated value.
- E - Exceeds instrument calibration range.
- S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

## Appendix G INTERVIEW FORMS

### PHASE I ESA USER'S QUESTIONNAIRE

In order to qualify for protection from land owner liability under CERCLA as an *innocent landowner*, *bona fide prospective purchaser*, or *contiguous property owner*, ASTM standard practice E1527-13 and E1527-21 and the federal AAI rule (40 CFR 312) require that the User of the Phase I ESA report provide certain information (if available) to the Environmental Professional completing the assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Information that is not or cannot be provided to the Environmental Professional may be identified as a "data gap" in the Phase I ESA report.

Please answer the following questions as completely as possible. Attach additional pages as needed. Return the completed questionnaire to Stantec along with the executed Authorization For services form.

1. Property Information

Property Name: 3705 HAVEN AVE  
Property Address(es): 3705 HAVEN AVE  
City: Menlo Park State CA Zip 94025  
Property Owner Name: \_\_\_\_\_  
Property Owner Phone #: \_\_\_\_\_

2. Contact For Site Access

Name: HOWARD GRUBER  
Company/Organization/Title: PROBERT & ASSOCIATES  
Phone # 6504659970 E-Mail Address: H4GRUBER@GMAIL

3. Environmental Cleanup Liens. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

\_\_\_\_\_ Yes  No

If yes, describe or attach details of the lien \_\_\_\_\_

4. Activity and Land Use Limitations. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded as applicable to the property as a result of environmental contamination, investigation, cleanup, or related matters?

\_\_\_\_\_ Yes  No

If yes, describe or attach details of the limitations \_\_\_\_\_

5. Specialized Knowledge or Experience. As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?

Yes

No

If yes, describe or attach details of your specialized knowledge or experience \_\_\_\_\_

6. Relationship of Purchase Price to Fair Market Value of Property. Does the purchase price being paid for the property reasonably reflect the fair market value?

Yes

No

Not applicable. User is not involved in a purchase of the property.

If you conclude that there is a difference, do you have any reason to believe that the reduced purchase price may be related to contamination known or believed to be present at the property?

Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.

No, I have no reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property.

7. Commonly Known or Reasonably Ascertainable Information. Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products? For example:

Do you know the past uses of the property?

Yes (describe) \_\_\_\_\_

\_\_\_\_\_

No

Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?

Yes (describe) \_\_\_\_\_

\_\_\_\_\_

No

Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?

Yes (describe) \_\_\_\_\_  
\_\_\_\_\_

No

Do you know of any environmental cleanups that have taken place at the property?

Yes (describe) \_\_\_\_\_  
\_\_\_\_\_

No

- B. The Degree of Obviousness of Contamination. E1527-13 and the federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any *obvious* indicators that point to the presence or likely presence of contamination at the property?

Yes (describe) \_\_\_\_\_  
\_\_\_\_\_

No

9. Availability of Previous Environmental Reports. Are you aware of previous environmental site assessment reports, other environmental reports, documents, correspondence, etc. concerning the property and its environmental condition?

Yes (describe) \_\_\_\_\_  
\_\_\_\_\_

No

Signature: Howard Gruber

Title: Property Manager

Date: 11/17/23

Date: October 25, 2023

Project No.: 118-160-1

Prepared For: Ms. Fiona Phung  
**DAVID J. POWERS & ASSOCIATES**  
1871 The Alameda, Suite 200  
San Jose, California 95126

Re: Environmental Document Review  
3705 Haven Avenue  
Menlo Park, California

Dear Ms. Phung:

Per your request, Cornerstone Earth Group, Inc. (Cornerstone) is pleased to present this letter summarizing our review of the provided environmental reports for 3705 Haven Avenue in Menlo Park, California (Site). This letter was prepared for David J. Powers & Associates in accordance with our October 6, 2023 agreement.

### Project Background

We understand that David J. Powers is providing California Environmental Quality Act (CEQA) support to redevelop the approximately 0.66-acre Site, identified by Assessor's Parcel Number (APN): 055-170-240. The proposed project would demolish an existing commercial building and construct an eight-story apartment building with 99 units and interior parking on the ground floor and second floor podium levels. The project is proposing to use the City's bonus level development allowance and the density bonuses allowed through state and/or local density bonus laws. It would provide 15 percent of the total units (not including units allowed through state density bonus) as on-Site affordable housing, all of which would be affordable to very low-income households.

### Documents Reviewed

This letter briefly summarizes selected information obtained from the following provided report:

- Stantec Consulting Services, Inc. (Stantec). February 9, 2023. *Phase I Environmental Site Assessment, 3705 Haven Avenue, Menlo Park, California*

For complete details, please refer directly to the original report.

### Site History and Prior Studies

Based on the information reviewed, the Site was undeveloped until the 1960s, when it was developed with the existing single-story commercial building. The Site is listed as a closed case on the Water Board's leaking underground storage tank (LUST) database and as an open case on the cleanup program site (CPS) database. The Site, as well as 3715 and 3723 Haven Avenue, were occupied by Siltec Corporation from 1970 to 1989. Siltec Corporation reportedly manufactured polished silicon wafers. Volatile organic compounds (VOCs) were used in the process and were found to have impacted soil and groundwater beneath the Site. Between

1999 and 2001, approximately 3,530 tons of VOC impacted soil was excavated from the larger property and disposed of off-Site. A risk management plan (RMP) was prepared in 1999, which contained construction and post-construction protocols for future contractors and owners/lessees of the Site. Groundwater monitoring occurred semi-annually between 2002 and 2008.

A deed restriction (Covenant and Environmental Restriction on Property) was recorded for two adjoining parcels that included the Site on August 9, 1999 (Document No. 1999-135815). The Covenant prohibited residential development of the parcels and other sensitive uses because VOC concentrations in groundwater exceeded residential screening levels. After recording of the Covenant, the larger property was divided into three 3 parcels (3705, 3715 and 3723 Haven Avenue).

In 2019, VOCs were identified in groundwater at the Site at concentrations that were lower than those historically detected; however, some of the detected trichloroethene (TCE) concentrations in groundwater still exceeded the current residential screening levels based on potential vapor intrusion concerns. TCE was detected in groundwater at the Site at up to 23 micrograms per liter ( $\mu\text{g/L}$ ). For comparison, the Water Board's residential Environmental Screening Level (ESL)<sup>1</sup> for TCE in groundwater is 1.2  $\mu\text{g/L}$ . Based on these detections, indoor air samples were subsequently collected; analytical testing indicated that indoor air was not impacted by TCE or other VOCs including cis-1,2-dichloroethylene (cDCE) above commercial or residential risk-based screening levels. However, tetrachloroethene (PCE) was detected in indoor air at a concentration that exceeded residential risk-based screening levels, despite not being detected in groundwater.

In 2020, soil vapor samples were collected; VOCs including tetrachloroethene (PCE), TCE, benzene and chloroform were detected at concentrations exceeding residential ESLs. The 2020 report concluded that the Site is suitable for residential redevelopment with the condition that a vapor mitigation system is developed for any proposed new Site buildings.

In 2021, the Water Board issued a "Variance from Covenant and Environmental Restriction" for the Site. The Water Board stated that *"residential land use is acceptable on 3705 Haven Property due to site conditions, including low soil and soil gas contaminant concentrations and risk management measures for groundwater contamination. Risk to residential receptors (including children and seniors) from residual groundwater contamination at 3705 Haven Property can be effectively managed with the Risk Management Plan (including any subsequent approved addenda)."* The adjacent properties, 3715 and 3723 Haven Avenue, also formerly operated by Siltec, remain under the covenant restrictions due to higher contaminant levels still present on these properties.

Stantec (2023) concluded that any residual impacts from historical contamination can be properly managed in accordance with the Water Board-approved RMP, which includes soil management procedures and a health and safety plan. Stantec recommended that redevelopment work at the Site proceed in accordance with the RMP and that future residential construction include vapor mitigation systems.

---

<sup>1</sup> Environmental Screening Levels (ESLs) established by the Water Board (January 2019) are used to screen sites for potential human health concerns where releases of chemicals have occurred. These screening levels are risk-based concentrations derived from standardized equations combining exposure information assumptions with toxicity data. Under most circumstances, the presence of a chemical at concentrations below the corresponding screening level can be assumed not to pose a significant health risk.

## Conclusions and Recommendations

Based on the information obtained during this study, Cornerstone concludes and recommends the following:

- Based on sampling conducted in 2019 and 2020, VOCs remain in soil vapor and ground water at the Site at concentrations that exceed current residential ESLs. In general, Cornerstone concurs with the conclusions and recommendations provided by Stantec (2023). Specifically, we recommend that redevelopment of the Site be coordinated with the Water Board and conducted in accordance with the RMP. A Vapor Mitigation Plan (VMP) should be prepared that describes the measures to be implemented to help prevent exposure of Site occupants to VOCs in indoor air as a result of vapor intrusion. The VMP should present the appropriate structural and engineering design features for the proposed occupied spaces to reduce risk of vapor intrusion into buildings. The VMP should be reviewed and approved by the Water Board.

Mitigation measures for vapor intrusion for new buildings typically include: 1) passive sub-slab ventilation with a vapor barrier (and with the ability to convert the system from passive to active ventilation; and 2) monitoring to ensure the long-term effectiveness of the remedy. An Operations, Maintenance, and Monitoring Plan (OMMP) also should be prepared that describes actions to be taken following construction to maintain and monitor the vapor intrusion mitigation system, reporting requirements, as well as a contingency plan should the vapor mitigation system fail.

## Limitations

Cornerstone performed this investigation to support David J. Powers & Associates in the evaluation of the referenced Site. Conclusions presented in this letter are based on limited, readily available information. This letter, an instrument of professional service, was prepared for the sole use of David J. Powers & Associates and may not be reproduced or distributed without written authorization from Cornerstone. It is valid for 180 days. Cornerstone makes no warranty, expressed or implied, except that our services have been performed in accordance with the environmental principles generally accepted at this time and location.

We thank you for this opportunity to work with you on this important project. Should you have any questions, please contact us at your convenience.

Sincerely,

**Cornerstone Earth Group, Inc.**

Ron L. Helm, C.E.G.  
Senior Principal Geologist

- City of Menlo Park Drainage Criteria
- San Mateo County Water Pollution Prevention Program Stormwater Control Requirements

**Site Information:**

3075 Haven Avenue,  
Menlo Park, California  
APN: 055-170-240

**Project Information:**

Gross Lot Size: 28,808 sqft. (0.661 acre)  
Impervious Surface Created / Replaced: 24,455 sqft. (0.561 acre)

Existing Site Impervious Area: 22,873 sqft. (0.525 acre)  
Proposed Site Impervious Area: 24,455 sqft. (0.561 acre)  
Net Change of Impervious Area: +1,582 sqft. (+0.036 acre) *Net Increase*

Proposed Pervious Paving: 1,624 sqft. (0.037 acre)

**Hydrology Information:**

Storm Interval: 10-year event, 10-minute time of concentration  
Rainfall Intensity Required ( $I_{req}$ ): 1.70 In/hour (City of Menlo Park IDF Curve)  
Runoff Coefficient (C): 0.95 for Impervious areas, 0.35 for Pervious areas  
Watershed: Atherton Channel

Project Pre-Construction Runoff: 0.918 cfs.  
Project Post-Construction Runoff: 0.958 cfs.  
Net Change in Runoff: 0.040 cfs. (Net Increase)

**Project Introduction:**

The approximately 0.66 acre, rectangular-shaped lot is located on the north and west sides of Haven Avenue in the City Menlo Park, California. The lot measures approximately 150' X 180', and is bounded by Haven Avenue to the south and east, a multi-family residential building to the west, and a commercial building to the north.

The area in the local vicinity is very flat, sloping generally to the northeast at less than 0.5%. The parcel is currently occupied by a single-story commercial building in the southeast portion of the property. An asphaltic concrete driveway and parking lot are located on the north and west sides of the building with access points at the southwest and northeast corners of the lot.

A slightly raised building pad was created during the original development. Drainage from the site

can generally be described as uncontrolled sheet flow from the south and east sides of the building to the adjacent roadway, and from the north and west sided of the building to the driveway and parking area and then to the roadway at the driveway entryways.

A catch basin is located in the parking lot at the northeast corner of the site. It is assumed that this catch basin drains to an existing curb inlet on Haven Avenue approximately 35' northeast at the corner of the lot. A second existing curb inlet is located on Haven Avenue at the southeast corner of the lot.

The project will demolish the existing improvements and construct a new eight-story, 99 unit, multi-family residential building with parking on the ground and second floors, and a pool and common use terrace on the third floor.

Runoff from the building will be captured and directed to a series of flow-through planters for stormwater treatment and then discharged to the existing city storm drain as is the current condition.

**Hydrology Calculation Method:**

The rational method was used for calculations based on the City of Menlo Park Requirements for the Preparation of Hydrology Reports for both 10 year and 100 year storm events.

The intensity was taken from the City's IDF Curve. The time of Concentration was taken to be 10 minutes. The intensity for a 10 year event is 1.70 inches per hour and the intensity for a 100 year event is 2.50 inches per hour.

The C-values used in the calculations are weighted values based on using a C-value for impervious areas of 0.95, and a C-value for pervious paving and landscape areas of 0.30. These values are calculated to be 0.8.16 for the existing condition and 0.8352for the proposed condition.

Both pre-construction and post-construction runoff were calculated based on the existing sheet flow runoff of the site as a whole, using the total runoff area (net area of the property) of 28,808 sf. (0.661 acre), the weighted C values, and the storm intensity for each event. A summary of the runoff calculations is provided below:

	<u>Pre-Construction Runoff</u>	<u>Post-Construction Runoff</u>	<u>Net Change</u>
<u>10 year event:</u>	Q = 0.918 cfs.	Q = 0.958 cfs.	+0.040 cfs.
<u>100 year event:</u>	Q = 1.349 cfs.	Q = 1.408 cfs.	+0.059 cfs.

The calculations indicate that site runoff will be increased by approximately 4.4% by the increase of impervious surface for the project.

**Provision C.3 Considerations:**

Regulated Project Status: Based on the results of the Provision C.3 and C.6 Development Review Checklist, this project is a multi-family residential project that proposes to create or replace greater than 10,000 square feet of impervious surface. Therefore, the project is a regulated project. The project must implement source control and low impact site design measures to the fullest extent possible.

**Stormwater Treatment Method:**

Due to site constraints, globalized treatment of runoff in a single location is not feasible. The general stormwater treatment design concept is to provide several, flow-through bio-retention planters to treat runoff from the building. Treatment planters #1 through #3 are located on the third floor terrace deck. Treatment planters #4 & #5 are located on ground floor on the west side of the building. Treatment planters #6 & #7 are located on ground floor on the east side of the building.

To determine the post-construction stormwater treatment requirements, the site was divided into 27 Drainage Management Areas draining to the 7 treatment planters. Refer to the included Stormwater Control Plan Exhibit SCP-2 for drainage management area and treatment control measure information.

**Stormwater Treatment Considerations:**

The bio-retention planters are designed using the flow based, uniform intensity method, to provide a minimum surface area of 4% of the impervious surface directed to the bio-retention planter. A summary of the bio-retention planters is provided below:

**Treatment Control Measure Summary Table**

TCM	LOCATION	TREATS DMA #	IMPERVIOUS AREA (SQ.FT)	TREATMENT AREA REQUIRED (SQ.FT)	TREATMENT AREA PROVIDED (SQ.FT)	SURPLUS (SHORTFALL)
TCM 1	3RD FLOOR TERRACE	1	2,013	81	81	0
TCM 2	3RD FLOOR TERRACE	2	1,964	79	85	6
TCM 3	3RD FLOOR TERRACE	3	5,235	209	212	3
TCM 4	GROUND FLOOR	8	5,450	218	218	0
TCM 5	GROUND FLOOR	4, 5, 6, 7, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 21, 22, 23, 24, 25, 26, 27	5,576	223	229	6
TCM 6	GROUND FLOOR	20	2,350	94	94	0
TCM 7	GROUND FLOOR	19	1,310	52	54	2
TOTAL			23,898	956	973	17

The perimeter walkway along the north and east sides of the lot is constructed using pervious concrete and designed to be self-treating.

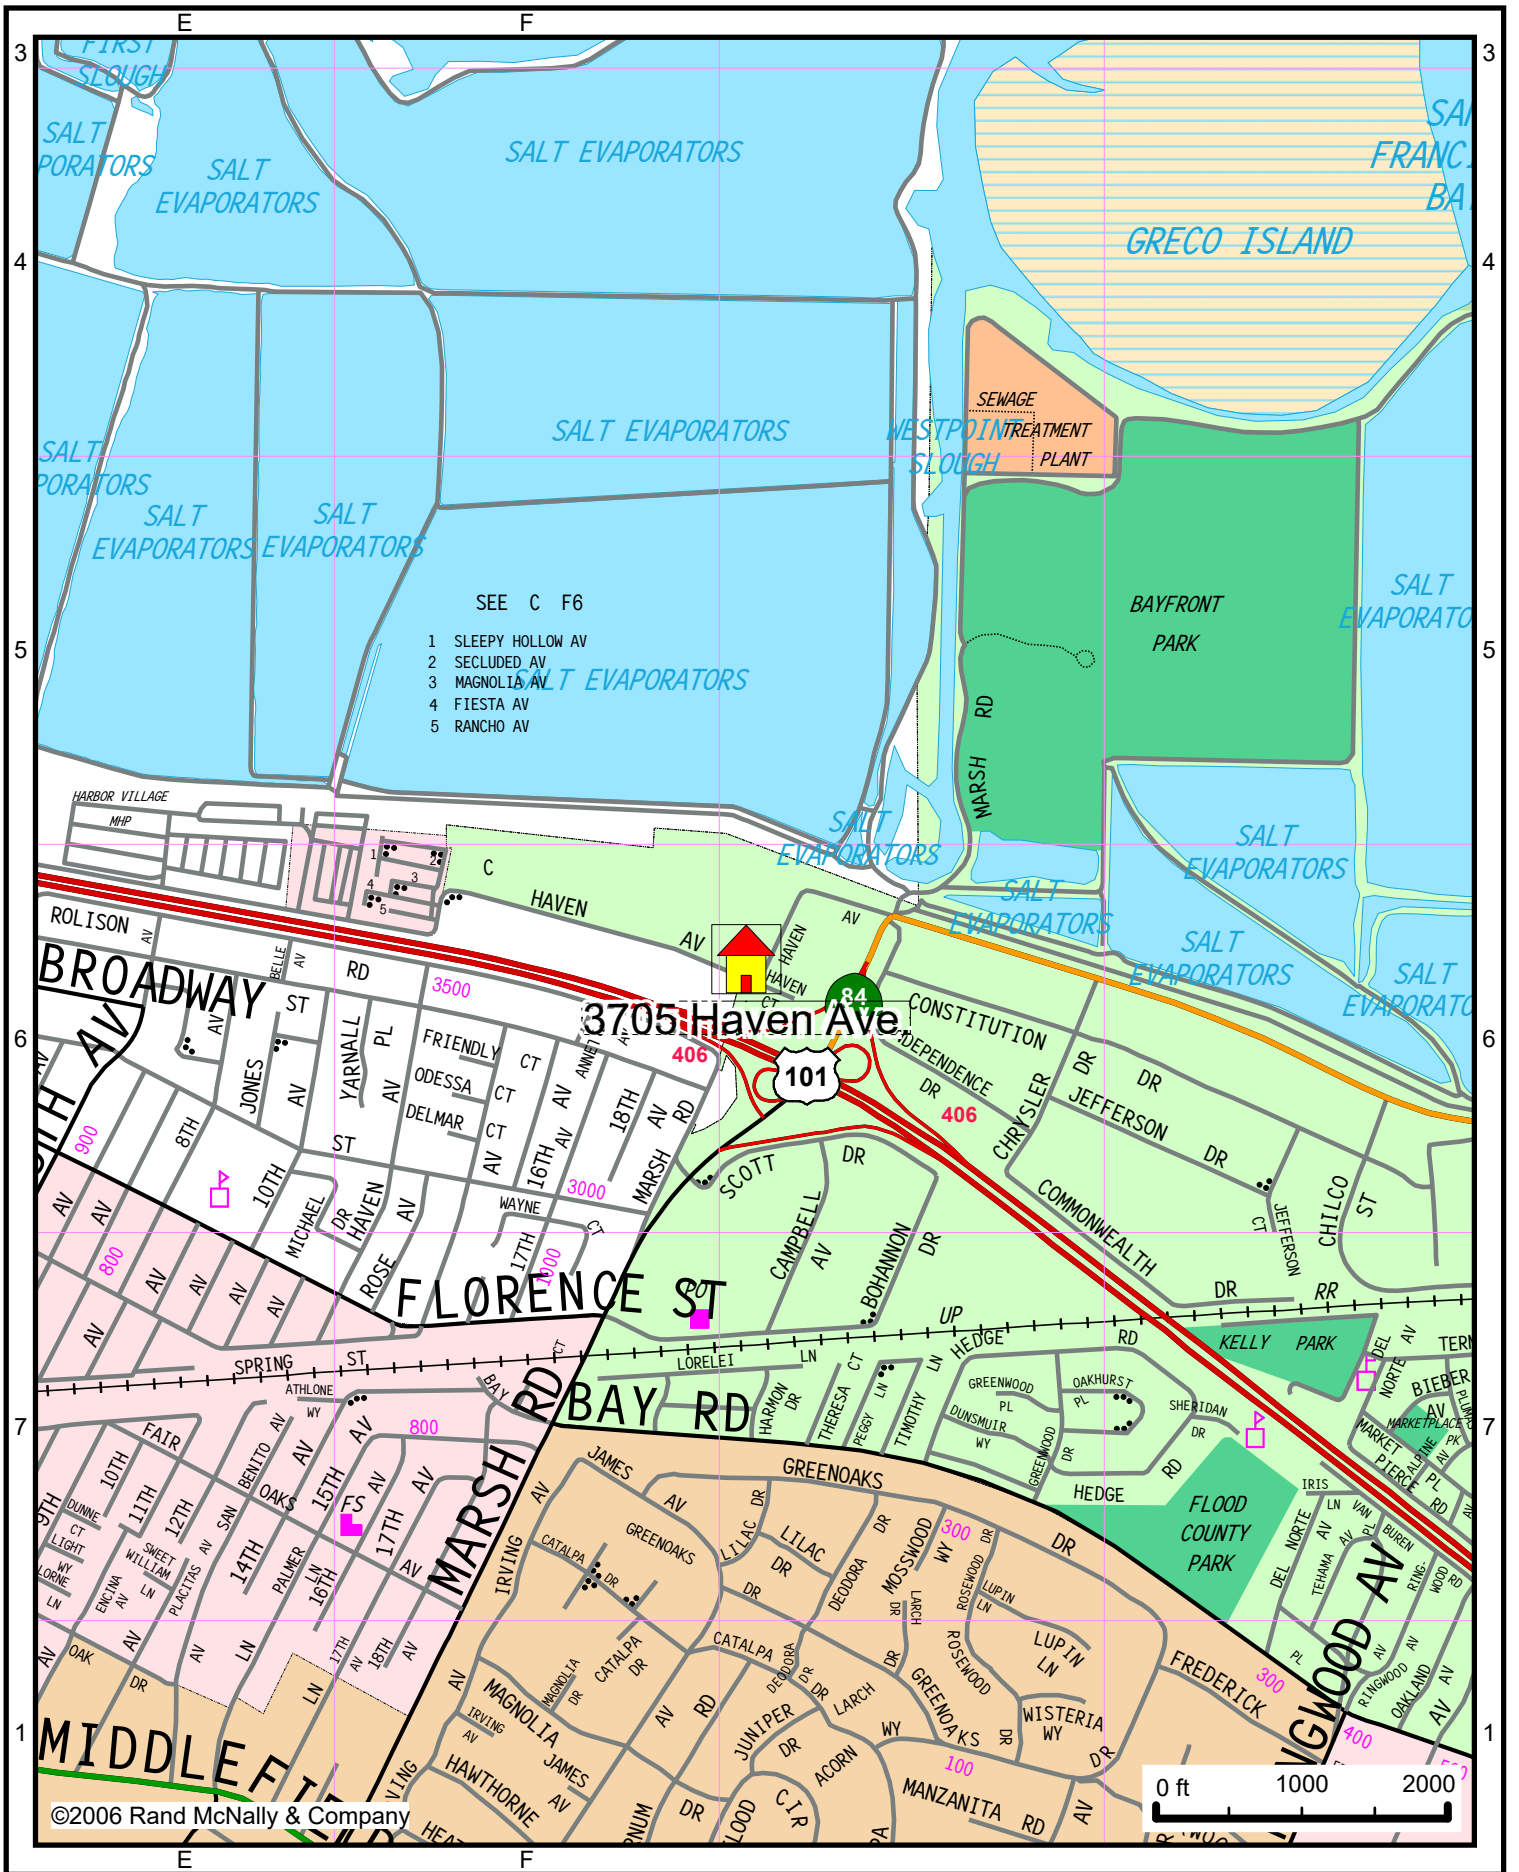

**Stormwater Control Measures:**

To comply with San Mateo County Plan C.3 requirements, the project proposes to disconnect downspouts, cluster structures and pavement and to label all inlets with “Drains to Bay” per site design and source control measures, respectively.

**Conclusion:**

Lea & Braze Engineering, Inc. believes that the proposed drainage design is both adequate to perform its intended function and is in conformance with the City of Menlo Park and the County of San Mateo stormwater drainage design requirements.

Please refer to the attached calculation sheets for specific information regarding the hydrology calculations and to the grading and drainage plans by Lea & Braze Engineering, Inc. for specific details of the drainage design

**BIO-RETENTION SOIL CONSIDERATIONS**  
 THE BIO-RETENTION SOIL SHALL MEET THE REQUIREMENTS SET FORTH IN CHAPTER 10 OF THE SAN MATEO COUNTY CLEAN WATER PROGRAM CS STORMWATER TECHNICAL GUIDANCE HANDBOOK.  
 BIO-RETENTION SOIL SHALL HAVE A MINIMUM PERCOLATION RATE OF 4" PER HOUR WITH A MINIMUM PERCOLATION RATE OF 10" PER HOUR IF THE SOIL DOES NOT MEET THIS PERCOLATION REQUIREMENT. AN ADJUSTURE SHALL BE MADE INTO PLANTING SOIL TO ALLOW FOR A 5" PER HOUR PERCOLATION RATE. IN-SITU TESTING SHALL BE CONDUCTED TO VERIFY THAT THE MATERIAL MEETS THE PERCOLATION REQUIREMENTS.  
 NO BARK MULCH SHALL BE PLACED IN THE VEGETATED AREA.  
 IF IMPORT SOIL IS USED, IT SHALL HAVE THE FOLLOWING PROPERTIES FOR SANDY LOAM. A TYPICAL SOIL MIX COMPRISES 60-70% SAND AND 30%-40% COMPOST.

## SITE RUNOFF CALCULATIONS

for

**3075 Haven LLC  
3705 Haven Avenue  
Menlo Park, CA.**

Calculations are based on the use of the Rational Method  $Q=CIA$

### CALCULATION BASE VALUES

SITE AREA = 28,808 sqft. = 0.661 acre

**Intensity** (From City of Menlo Park IDF Curve)

Time of Concentration = 10 Minutes

$I_{10 \text{ year}}$  = 1.70 in/hr

$I_{100 \text{ year}}$  = 2.50 in/hr

### Run-off

Calculations Summary Table									
	Area (ft <sup>2</sup> )	Area (Acre)	Composite $C_{\text{runoff}}$	$T_c$ (minutes)	$I_{10 \text{ year}}$ (in/hr)	$I_{100 \text{ year}}$ (in/hr)	$Q_{10 \text{ year}}$ ft <sup>3</sup> /sec	$Q_{100 \text{ year}}$ ft <sup>3</sup> /sec	
<b>Existing</b>	28,808	0.661	0.816	10	1.70	2.50	0.918	1.349	
<b>Proposed</b>	28,808	0.661	0.852	10	1.70	2.50	0.958	1.408	

### Net Change In Runoff

<b>10 Year</b>	<b>0.040 cfs.</b>	<b>Net Increase</b>
<b>100 Year</b>	<b>0.059 cfs.</b>	<b>Net Increase</b>

## **STORMWATER MANAGEMENT PLAN REPORT**

### **3705 Haven LLC Multi-Family Residential Building**

**3075 Haven Avenue  
Menlo Park, California**

This package includes:

- Information Sheet
- Engineer's Certification
- Owner's Certification
- Appendix
  - o Exhibit A-Project Site Legal Description
  - o Exhibit B-Project Vicinity Map
  - o Exhibit C-Completed C3 Stormwater Checklist and Infiltration/Harvesting and Use Feasibility Screening Worksheet
  - o Exhibit D-Geotechnical Investigation
  - o Exhibit E-Site Drainage Management Areas
  - o Exhibit F-Numeric BMP Sizing Criteria Computations
  - o Exhibit G-Construction Details of the Proposed Drainage System
  - o Exhibit H-Maintenance Plans

## C.3 and C.6 Development Review Checklist

### Municipal Regional Stormwater Permit (MRP) Stormwater Controls for Development Projects

### Project Information

**I.A Enter Project Data** (For "C.3 Regulated Projects," data will be reported in the municipality's stormwater Annual Report.)

Project Name:	3705 Haven LLC - Multi-Family Residential Building	Case Number:
Project Address & Cross St.:	3705 Haven Avenue / Marsh Road.	
Project APN:	055-170-240	Project Watershed: Atherton Channel
Applicant Name:	3705 Haven LLC - Attn: Oliver Davis, Project Manager	<b>I.A.4</b> Slope on Site: 1 %
Applicant Phone:	(310) 498-7575	Applicant Email Address: oliver@marchcapitalfund.com

- Development type: (check all that apply)
- Single Family Residential: A stand-alone home that is not part of a larger project.
  - Single Family Residential: Two or more lot residential development.<sup>1</sup> # of units: \_\_\_\_\_
  - Multi-Family Residential # of units: 99
  - Commercial
  - Industrial, Manufacturing
  - Mixed-Use # of units: \_\_\_\_\_
  - Streets, Roads<sup>2</sup>, etc.
  - 'Redevelopment' as defined by MRP: creating, adding and/or replacing exterior existing impervious surface on a site where past development has occurred.
  - 'Special land use categories' as defined by MRP: (1) auto service facilities<sup>3</sup>, (2) retail gasoline outlets, (3) restaurants, (4) uncovered parking area (stand-alone or part of a larger project)
  - Institutions: schools, libraries, jails, etc.
  - Parks and trails, camp grounds, other recreational
  - Agricultural, wineries
  - Kennels, Ranches
  - Other, Please specify \_\_\_\_\_

**I.A.1**

Project Description<sup>4</sup>:  
(Also note any past or future phases of the project.)

Construction of a new eight-story, multi-family residential building on a previously developed Parcel.

**I.A.2** Total Area of Site: \_\_\_\_\_ 0.661 acres

**I.A.3** Total Area of land disturbed during construction (include clearing, grading, excavating and stockpile area): \_\_\_\_\_ 0.661 acres.

**I.A.5 Certification:**

I certify that the information provided on this form is correct and acknowledge that, should the project exceed the amount of new and/or replaced impervious surface provided in this form, the as-built project may be subject to additional improvements.

- Attach Preliminary Calculations     Attach Final Calculations     Attach copy of site plan showing areas

Name of person completing the form: \_\_\_\_\_ Title: \_\_\_\_\_

Signature: \_\_\_\_\_ Date: \_\_\_\_\_

Phone number: \_\_\_\_\_ Email address: \_\_\_\_\_

<sup>1</sup> Common Plans of Development (subdivisions or contiguous, commonly owned lots, for the construction of two or more homes developed within 1 year of each other) are not considered single family projects by the MRP.  
<sup>2</sup> Roadway projects creating 10,000 sq.ft. or more of contiguous impervious surface are subject to C.3 requirements if the roadway is new or being widened with additional traffic lanes.  
<sup>3</sup> See Standard Industrial Classification (SIC) codes [here](#)  
<sup>4</sup> Project description examples: 5-story office building, industrial warehouse, residential with five 4-story buildings for 200 condominiums, etc.

**I.B Is the project a “C.3 Regulated Project” per MRP Provision C.3.b?**

**I.B.1 Enter the amount of impervious surface<sup>5</sup> Retained, Replaced and/or Created by the project:**

**Table I.B.1 Impervious<sup>5</sup> and Pervious Surfaces**

Type of Impervious <sup>5</sup> Surface	I.B.1.a	I.B.1.b	I.B.1.c	I.B.1.d	I.B.1.e
	Pre-Project Impervious <sup>5</sup> Surface (sq.ft.)	Existing Impervious <sup>5</sup> Surface to be Retained <sup>6</sup> (sq.ft.)	Existing Impervious <sup>5</sup> Surface to be Replaced <sup>6</sup> (sq.ft.)	New Impervious <sup>5</sup> Surface to be Created <sup>6</sup> (sq.ft.)	Post-Project Impervious <sup>5</sup> Surface (sq.ft.) (=b+c+d)
Roof area(s)	10,368	0	10,368	1,582	11,950
Impervious <sup>5</sup> sidewalks, patios, paths, driveways, streets	651	0	12,505	0	12,505
Impervious <sup>5</sup> uncovered parking <sup>7</sup>	11,854	0	0	0	0
Totals of Impervious Surfaces:	22,873	0	22,873	1,582	24,455
<b>I.B.1.f - Total Impervious<sup>5</sup> Surface Replaced and Created (sum of totals for columns I.B.1.c and I.B.1.d):</b>				24,455	sq. ft.
Type of Pervious Surface	Pre-Project Pervious Surface (sq.ft.)				Post-project Pervious Surface (sq.ft.)
Landscaping	5,935				2,729
Pervious Paving	0				I.B.1.e.1: 1,624
Green Roof	0				0
Totals of Pervious Surfaces:	5,935				4,353
Total Site Area (Total Impervious <sup>5</sup> +Total Pervious=I.A.2)	28,808				28,808

**I.B.2 Please review and attach additional worksheets as required below using the Total Impervious Surface (IS) Replaced and Created in cell I.B.1.f from Table I.B.1 above and other factors:**

	Check all that apply:	Check One		Attach Worksheet
		Yes	No	
I.B.2.a	Does this project involve any earthwork? If YES, then Check Yes, and Complete Worksheet A. If NO, then go to I.B.2.b	<input checked="" type="checkbox"/>	<input type="checkbox"/>	A
I.B.2.b	Is I.B.1.f greater than or equal to 2,500 sq.ft? If YES, then the Project is subject to Provision C.3.i. - complete Worksheets B, C & go to I.B.2.c. If NO, then Stop here - go to I.A.5 and complete Certification or ask municipal staff for Small Project Checklist.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	B, C
I.B.2.c	Is the total Existing IS to be Replaced (column I.B.1.c) 50 percent or more of the total Pre-Project IS (column I.B.1.a)? If YES, site design, source control and treatment requirements apply to the whole site. Continue to I.B.2.d If NO, these requirements apply only to the impervious surface created and/or replaced. Continue to I.B.2.d	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
I.B.2.d	Is this project a Special Land Use Category (I.A.1) and is I.B.1.f greater than or equal to 5,000 sq.ft? If YES, project is a Regulated Project. Fill out Worksheet D. Go to I.B.2.f. If NO, go to I.B.2.e	<input type="checkbox"/>	<input checked="" type="checkbox"/>	D
I.B.2.e	Is I.B.1.f greater than or equal to 10,000 sq.ft? If YES, project is a C.3 Regulated Project - complete Worksheet D. Then continue to I.B.2.f. If NO, then skip to I.B.2.g. N/A for Single Family Residential (Technical Guidance Table 2-1)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	D
I.B.2.f	Is I.B.1.f greater than or equal to 43,560 sq.ft? If YES, project may be subject to Hydromodification Management requirements - complete Worksheet E then continue to I.B.2.g. If NO, then go to I.B.2.g.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	E
I.B.2.g	Is I.A.3 greater than or equal to 1 acre? If YES, check box, obtain coverage under the CA Const. General Permit & submit Notice of Intent to municipality - go to I.B.2.h. If NO, then go to I.B.2.h. For more information see: <a href="http://www.swrcb.ca.gov/water_issues/programs/stormwater/construction.shtml">www.swrcb.ca.gov/water_issues/programs/stormwater/construction.shtml</a>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
I.B.2.h	Is this a Special Project or does it have the potential to be a Special Project? If YES, complete Worksheet F - then continue to I.B.2.i. If NO, go to I.B.2.i.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	F
I.B.2.i	Is project a High Priority Site? (Determined by the Municipality. High Priority Sites can include those located in or within 100 feet of a sensitive habitat, an Area of Special Biological Significance, a body of water, or starting 7/1/16 on sites disturbing >=5,000 ft <sup>2</sup> with slopes >=15% (see I.A.4) (or per municipal criteria/map) and are subject to monthly inspections from Oct 1 to April 30.) If YES, complete section G-2 on Worksheet G - then continue to I.B.2.j. If NO, then go to I.B.2.j	<input type="checkbox"/>	<input checked="" type="checkbox"/>	G
I.B.2.j	For Municipal Staff Use Only: Are you using Alternative Certification for the project review? If YES, then fill out section G-1 on Worksheet G. Fill out other sections of Worksheet G as appropriate. See cell I.B.1.e.1 above - Is the project installing 3,000 square feet or more of pervious paving? If YES, then fill out section G-3 on Worksheet G. Add to Municipal Inspection Lists (C.3.h)	<input type="checkbox"/>	<input type="checkbox"/>	G

<sup>5</sup> Per the MRP, pavement that meets the following definition of pervious pavement is NOT an impervious surface. Pervious pavement is defined as pavement that stores and infiltrates rainfall at a rate equal to immediately surrounding unpaved, landscaped areas, or that stores and infiltrates the rainfall runoff volume described in Provision C.3.

<sup>6</sup> “Retained” means to leave existing impervious surfaces in place, unchanged; “Replaced” means to install new impervious surface where existing impervious surface is removed anywhere on the same property; and “Created” means the amount of new impervious surface being proposed which exceeds the total existing amount of impervious surface at the property.

<sup>7</sup> Uncovered parking includes the top level of a parking structure.

## Worksheet A

<b>C6 – Construction Stormwater BMPs</b>
--

Identify Plan sheet showing the appropriate construction Best Management Practices (BMPs) used on this project:  
(Applies to all projects with earthwork)

Yes	Plan Sheet	Best Management Practice (BMP)
<input checked="" type="checkbox"/>	ER-1	Control and prevent the discharge of all potential pollutants, including pavement cutting wastes, paints, concrete, petroleum products, chemicals, wash water or sediments, rinse water from architectural copper, and non-stormwater discharges to storm drains and watercourses.
<input checked="" type="checkbox"/>	ER-1	Store, handle, and dispose of construction materials/wastes properly to prevent contact with stormwater.
<input checked="" type="checkbox"/>	ER-1	Do not clean, fuel, or maintain vehicles on-site, except in a designated area where wash water is contained and treated.
<input checked="" type="checkbox"/>	ER-1	Train and provide instruction to all employees/subcontractors re: construction BMPs.
<input checked="" type="checkbox"/>	ER-1	Protect all storm drain inlets in vicinity of site using sediment controls such as berms, fiber rolls, or filters.
<input checked="" type="checkbox"/>	ER-1	Limit construction access routes and stabilize designated access points.
<input checked="" type="checkbox"/>	BMP-1	Attach the San Mateo Countywide Water Pollution Prevention Program's construction BMP plan sheet to project plans and require contractor to implement the applicable BMPs on the plan sheet.
<input checked="" type="checkbox"/>	ER-1	Use temporary erosion controls to stabilize all denuded areas until permanent erosion controls are established.
<input checked="" type="checkbox"/>	ER-1	Delineate with field markers clearing limits, easements, setbacks, sensitive or critical areas, buffer zones, trees, and drainage courses.
<input checked="" type="checkbox"/>	ER-1 & BMP-1	Provide notes, specifications, or attachments describing the following: <ul style="list-style-type: none"> <li>▪ Construction, operation and maintenance of erosion and sediment controls, include inspection frequency;</li> <li>▪ Methods and schedule for grading, excavation, filling, clearing of vegetation, and storage and disposal of excavated or cleared material;</li> <li>▪ Specifications for vegetative cover &amp; mulch, include methods and schedules for planting and fertilization;</li> <li>▪ Provisions for temporary and/or permanent irrigation.</li> </ul>
<input checked="" type="checkbox"/>	ER-1	Perform clearing and earth moving activities only during dry weather.
<input checked="" type="checkbox"/>	ER-1	Use sediment controls or filtration to remove sediment when dewatering and obtain all necessary permits.
<input checked="" type="checkbox"/>	ER-1	Trap sediment on-site, using BMPs such as sediment basins or traps, earthen dikes or berms, silt fences, check dams, soil blankets or mats, covers for soil stock piles, etc.
<input checked="" type="checkbox"/>	ER-1	Divert on-site runoff around exposed areas; divert off-site runoff around the site (e.g., swales and dikes).
<input checked="" type="checkbox"/>	ER-1	Protect adjacent properties and undisturbed areas from construction impacts using vegetative buffer strips, sediment barriers or filters, dikes, mulching, or other measures as appropriate.

## Worksheet B

## C3 - Source Controls

Select appropriate source controls and identify the detail/plan sheet where these elements are shown.

Yes	Detail/Plan Sheet No.	Features that require source control measures	Source Control Measures (Refer to Local Source Control List for detailed requirements)
<input checked="" type="checkbox"/>	C-4	Storm Drain	Mark on-site inlets with the words "No Dumping! Flows to Bay" or equivalent.
<input type="checkbox"/>		Floor Drains	Plumb interior floor drains to sanitary sewer <sup>8</sup> [or prohibit].
<input type="checkbox"/>		Parking garage	Plumb interior parking garage floor drains to sanitary sewer. <sup>8</sup>
<input type="checkbox"/>		Landscaping	<ul style="list-style-type: none"> <li>▪ Retain existing vegetation as practicable.</li> <li>▪ Select diverse species appropriate to the site. Include plants that are pest- and/or disease-resistant, drought-tolerant, and/or attract beneficial insects.</li> <li>▪ Minimize use of pesticides and quick-release fertilizers.</li> <li>▪ Use efficient irrigation system; design to minimize runoff.</li> </ul>
<input checked="" type="checkbox"/>	C-4	Pool/Spa/Fountain	Provide connection to the sanitary sewer to facilitate draining. <sup>8</sup>
<input type="checkbox"/>		Food Service Equipment (non-residential)	<p>Provide sink or other area for equipment cleaning, which is:</p> <ul style="list-style-type: none"> <li>▪ Connected to a grease interceptor prior to sanitary sewer discharge.<sup>8</sup></li> <li>▪ Large enough for the largest mat or piece of equipment to be cleaned.</li> <li>▪ Indoors or in an outdoor roofed area designed to prevent stormwater run-on and run-off, and signed to require equipment washing in this area.</li> </ul>
<input type="checkbox"/>		Refuse Areas	<ul style="list-style-type: none"> <li>▪ Provide a roofed and enclosed area for dumpsters, recycling containers, etc., designed to prevent stormwater run-on and runoff.</li> <li>▪ Connect any drains in or beneath dumpsters, compactors, and tallow bin areas serving food service facilities to the sanitary sewer.<sup>8</sup></li> </ul>
<input type="checkbox"/>		Outdoor Process Activities <sup>9</sup>	Perform process activities either indoors or in roofed outdoor area, designed to prevent stormwater run-on and runoff, and to drain to the sanitary sewer. <sup>8</sup>
<input type="checkbox"/>		Outdoor Equipment/ Materials Storage	<ul style="list-style-type: none"> <li>▪ Cover the area or design to avoid pollutant contact with stormwater runoff.</li> <li>▪ Locate area only on paved and contained areas.</li> <li>▪ Roof storage areas that will contain non-hazardous liquids, drain to sanitary sewer<sup>8</sup>, and contain by berms or similar.</li> </ul>
<input type="checkbox"/>		Vehicle/ Equipment Cleaning	<ul style="list-style-type: none"> <li>▪ Roofed, pave and berm wash area to prevent stormwater run-on and runoff, plumb to the sanitary sewer<sup>8</sup>, and sign as a designated wash area.</li> <li>▪ Commercial car wash facilities shall discharge to the sanitary sewer.<sup>8</sup></li> </ul>
<input type="checkbox"/>		Vehicle/ Equipment Repair and Maintenance	<ul style="list-style-type: none"> <li>▪ Designate repair/maintenance area indoors, or an outdoors area designed to prevent stormwater run-on and runoff and provide secondary containment. Do not install drains in the secondary containment areas.</li> <li>▪ No floor drains unless pretreated prior to discharge to the sanitary sewer.<sup>8</sup></li> <li>▪ Connect containers or sinks used for parts cleaning to the sanitary sewer.<sup>8</sup></li> </ul>
<input type="checkbox"/>		Fuel Dispensing Areas	<ul style="list-style-type: none"> <li>▪ Fueling areas shall have impermeable surface that is a) minimally graded to prevent ponding and b) separated from the rest of the site by a grade break.</li> <li>▪ Canopy shall extend at least 10 ft. in each direction from each pump and drain away from fueling area.</li> </ul>
<input type="checkbox"/>		Loading Docks	<ul style="list-style-type: none"> <li>▪ Cover and/or grade to minimize run-on to and runoff from the loading area.</li> <li>▪ Position downspouts to direct stormwater away from the loading area.</li> <li>▪ Drain water from loading dock areas to the sanitary sewer.<sup>8</sup></li> <li>▪ Install door skirts between the trailers and the building.</li> </ul>
<input type="checkbox"/>		Fire Sprinklers	Design for discharge of fire sprinkler test water to landscape or sanitary sewer. <sup>8</sup>
<input type="checkbox"/>		Miscellaneous Drain or Wash Water	<ul style="list-style-type: none"> <li>▪ Drain condensate of air conditioning units to landscaping. Large air conditioning units may connect to the sanitary sewer.<sup>8</sup></li> <li>▪ Roof drains from equipment drain to landscaped area where practicable.</li> <li>▪ Drain boiler drain lines, roof top equipment, all wash water to sanitary sewer.<sup>8</sup></li> </ul>
<input type="checkbox"/>		Architectural Copper Rinse Water	<ul style="list-style-type: none"> <li>▪ Drain rinse water to landscaping, discharge to sanitary sewer<sup>8</sup>, or collect and dispose properly offsite. See flyer "Requirements for Architectural Copper."</li> </ul>

<sup>8</sup> Any connection to the sanitary sewer system is subject to sanitary district approval.

<sup>9</sup> Businesses that may have outdoor process activities/equipment include machine shops, auto repair, industries with pretreatment facilities.

## Worksheet C

<b>Low Impact Development – Site Design Measures</b>
--

**Select Appropriate Site Design Measures** (Required for C.3 Regulated Projects; all other projects are encouraged to implement site design measures, which may be required at municipality discretion.) Projects that create and/or replace 2,500 – 10,000 sq.ft. of impervious surface, and stand-alone single family homes that create/replace 2,500 sq.ft. or more of impervious surface, must include **one of Site Design Measures a through f** (Provision C.3.i requirements).<sup>10</sup> Larger projects must also include applicable Site Design Measures g through i. Consult with municipal staff about requirements for your project.

Select appropriate site design measures and identify the Plan Sheet where these elements are shown.

Yes	Plan Sheet Number	
<input type="checkbox"/>		a. Direct roof runoff into cisterns or rain barrels and use rainwater for irrigation or other non-potable use.
<input checked="" type="checkbox"/>	SCP-2	b. Direct roof runoff onto vegetated areas.
<input type="checkbox"/>		c. Direct runoff from sidewalks, walkways, and/or patios onto vegetated areas.
<input type="checkbox"/>		d. Direct runoff from driveways and/or uncovered parking lots onto vegetated areas.
<input checked="" type="checkbox"/>	SCP-1	e. Construct sidewalks, walkways, and/or patios with pervious or permeable surfaces. Use the specifications in the C3 Technical Guidance (Version 4.1) downloadable at <a href="http://www.flowstobay.org/newdevelopment">www.flowstobay.org/newdevelopment</a> .
<input type="checkbox"/>		f. Construct bike lanes, driveways, and/or uncovered parking lots with pervious surfaces. Use the specifications in the C3 Technical Guidance (Version 4.1) downloadable at <a href="http://www.flowstobay.org/newdevelopment">www.flowstobay.org/newdevelopment</a> .
<input type="checkbox"/>		g. Limit disturbance of natural water bodies and drainage systems; minimize compaction of highly permeable soils; protect slopes and channels; and minimize impacts from stormwater and urban runoff on the biological integrity of natural drainage systems and water bodies.
<input type="checkbox"/>		h. Conserve natural areas, including existing trees, other vegetation and soils.
<input type="checkbox"/>		i. Minimize impervious surfaces.

Regulated Projects can also consider the following site design measures to reduce treatment system sizing:

Yes	Plan Sheet Number	
<input checked="" type="checkbox"/>	SCP-1	j. Self-treating area (see Section 4.2 of the C.3 Technical Guidance)
<input type="checkbox"/>		k. Self-retaining area (see Section 4.3 of the C.3 Technical Guidance)
<input type="checkbox"/>		l. Plant or preserve interceptor trees (Section 4.1, C.3 Technical Guidance)

<sup>10</sup> See MRP Provision C.3.a.i.(6) for non-C.3 Regulated Projects, C.3.c.i.(2)(a) for Regulated Projects, C.3.i for projects that create/replace 2,500 to 10,000 sq.ft. of impervious surface and stand-alone single family homes that create/replace 2,500 sq.ft. or more of impervious surface.

## Worksheet D

<b>C3 Regulated Project - Stormwater Treatment Measures</b>
---

Check all applicable boxes and indicate the treatment measure(s) included in the project.

Yes											
<input type="checkbox"/>	<p>Is the project a <b>Special Project</b>?<sup>11</sup></p> <p>If yes, consult with municipal staff about the need to evaluate the feasibility and infeasibility of 100% LID treatment. Indicate the type of non-LID treatment to be used, the hydraulic sizing method<sup>12</sup>, and percentage of the amount of runoff specified in Provision C.3.d that is treated:</p> <table style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left; border-bottom: 1px solid black;">Non-LID Treatment Measures:</th> <th style="text-align: left; border-bottom: 1px solid black;">Hydraulic sizing method<sup>12</sup></th> <th style="text-align: right; border-bottom: 1px solid black;">% of C.3.d amount of runoff treated</th> </tr> </thead> <tbody> <tr> <td><input type="checkbox"/> Media filter</td> <td><input type="checkbox"/>2.a <input type="checkbox"/>2.b <input type="checkbox"/>2.c</td> <td style="text-align: right;">____%</td> </tr> <tr> <td><input type="checkbox"/> Tree well filter</td> <td><input type="checkbox"/>2.a <input type="checkbox"/>2.b <input type="checkbox"/>2.c</td> <td style="text-align: right;">____%</td> </tr> </tbody> </table>	Non-LID Treatment Measures:	Hydraulic sizing method <sup>12</sup>	% of C.3.d amount of runoff treated	<input type="checkbox"/> Media filter	<input type="checkbox"/> 2.a <input type="checkbox"/> 2.b <input type="checkbox"/> 2.c	____%	<input type="checkbox"/> Tree well filter	<input type="checkbox"/> 2.a <input type="checkbox"/> 2.b <input type="checkbox"/> 2.c	____%

A copy of the long term Operations and Maintenance (O&M) Agreement and Plan for this project will be required. Please contact the NPDES Representative of the applicable municipality for an agreement template and consult the C.3 Technical Guidance at [www.flowstobay.org](http://www.flowstobay.org) for maintenance plan templates for specific facility types.

<sup>11</sup> Special Projects are smart growth, high density, or transit-oriented developments with the criteria defined in Provision C.3.e.ii.(2), (3) or (4) (see Worksheet F).

<sup>12</sup> Indicate which of the following Provision C.3.d.i hydraulic sizing methods were used. Volume based approaches: 1(a) Urban Runoff Quality Management approach, or 1(b) 80% capture approach (recommended volume-based approach). Flow-based approaches: 2(a) 10% of 50-year peak flow approach, 2(b) 2 times the 85<sup>th</sup> percentile rainfall intensity approach, or 2(c) 0.2-Inch-per-hour intensity approach (recommended flow-based approach – also known as the 4% rule). Combination flow and volume-based approach: 3.

<sup>13</sup> See Section 6.1 of the C.3 Technical Guidance for conditions in which bioretention areas provide bioinfiltration.

## Worksheet G (For municipal staff use only)

**G-1 Alternative Certification:** Were the treatment and/or HM control sizing and design reviewed by a qualified third-party professional that is not a member of the project team or agency staff?

Yes     No    Name of Reviewer \_\_\_\_\_

**G-2 High Priority Site:** High Priority Sites can include those located in or within 100 feet of a sensitive habitat, an Area of Special Biological Significance (ASBS), a body of water, or **starting 7/1/16** on "hillside projects" disturbing  $\geq 5,000$  sq.ft. of land and with steep slopes (of  $\geq 15\%$  - see cell **I.A.4** - or as identified by municipal criteria or map). These sites are subject to monthly inspections from Oct 1 to April 30. See MRP Provision C.6.e.ii.(2).

Yes     No    If yes, then add site to Staff's Monthly Rainy Season Construction Site Inspection List

**G-3 Inspections of Sites with Pervious Paving: Starting 7/1/16,** Regulated projects that are installing 3,000 sq.ft. or more of pervious paving (see cell **I.B.1.e.1**) (excluding private-use patios in single family homes, townhomes, or condominiums) must have the paving system inspected by the jurisdiction upon completion of the installation and the site must be added to the jurisdiction's list of sites needing inspections at least once every five years – see provision C.3.h. Pervious pavement systems include pervious concrete, pervious asphalt, pervious pavers and grid pavers etc. and are described in the C3 Technical Guidance (Version 4.1) downloadable at: [www.flowstobay.org/newdevelopment](http://www.flowstobay.org/newdevelopment).

Yes     No    If yes, then add site to Staff's Lists for Inspections at the end of Construction and O&M.

### Operations and Maintenance (O&M) Submittals

**G-4** Stormwater Treatment Measure and/HM Control Owner or Operator's Information:

Name: \_\_\_\_\_

Address: \_\_\_\_\_

Phone: \_\_\_\_\_ Email: \_\_\_\_\_

➤ *Applicant must call for inspection and receive inspection within 45 days of installation of treatment measures and/or hydromodification management controls.*

*The following questions apply to C.3 Regulated Projects and Hydromodification Management Projects.*

	Yes	No	N/A
G-4.1 Was maintenance plan submitted?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
G-4.2 Was maintenance plan approved?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
G-4.3 Was maintenance agreement submitted? (Date executed: _____)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

➤ *Attach the executed maintenance agreement as an appendix to this checklist.*

**G-5 Annual Operations and Maintenance (O&M) Submittals (for municipal staff use only):**

*For C.3 Regulated Projects and Hydromodification Management Projects, indicate the dates on which the Applicant submitted annual reports for project O&M:*

\_\_\_\_\_

**G-6 Comments (for municipal staff use only):**

**G-7 NOTES (for municipal staff use only):**

Section I Notes: \_\_\_\_\_  
 Worksheet A Notes: \_\_\_\_\_  
 Worksheet B Notes: \_\_\_\_\_  
 Worksheet C Notes: \_\_\_\_\_  
 Worksheet D Notes: \_\_\_\_\_  
 Worksheet E Notes: \_\_\_\_\_  
 Worksheet F Notes: \_\_\_\_\_

**G-8 Project Close-Out (for municipal staff use only):**

	<b>Yes</b>	<b>No</b>	<b>NA</b>
8.1 Were final Conditions of Approval met?	<input type="checkbox"/>	<input type="checkbox"/>	
8.2 Was initial inspection of the completed treatment/HM measure(s) conducted? (Date of inspection: _____)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.3 Was maintenance plan submitted? (Date executed: _____)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.4 Was project information provided to staff responsible for O&M verification inspections? (Date provided to inspection staff: _____)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**G-9 Project Close-Out (Continued -- for municipal staff use only):**

Name of staff confirming project is closed out: \_\_\_\_\_  
 Signature: \_\_\_\_\_ Date: \_\_\_\_\_  
 Name of O&M staff receiving information: \_\_\_\_\_  
 Signature: \_\_\_\_\_ Date: \_\_\_\_\_

## Infiltration/Harvesting and Use Feasibility Screening Worksheet

Apply these screening criteria for **C.3 Regulated Projects**\* required to implement Provision C.3 stormwater treatment requirements. See the Glossary (Attachment 1) for definitions of terms marked with an asterisk (\*). Contact municipal staff to determine whether the project meets **Special Project**\* criteria. If the project meets Special Project criteria, it will receive LID treatment reduction credits.

### 1. Applicant Info

Site Address: 3705 Haven Avenue, Menlo Park, CA APN: 055-170-240  
 Applicant Name: 3705 Haven LLC Phone No.: \_\_\_\_\_  
 Mailing Address: 2040 Webster Street, San Francisco, CA 94111

### 2. Feasibility Screening for Infiltration

Do site soils either (a) have a **saturated hydraulic conductivity**\* (Ksat) that will NOT allow infiltration of 80% of the annual runoff (that is, the Ksat is LESS than 1.6 inches/hour), or, if the Ksat rate is not available, (b) consist of Type C or D soils?<sup>1</sup>

- Yes (continue)       No – complete the Infiltration Feasibility Worksheet. If infiltration of the C.3.d amount of runoff is found to be feasible, there is no need to complete the rest of this screening worksheet.

### 3. Recycled Water Use

Check the box if the project is installing and using a recycled water plumbing system for non-potable water use.

- The project is installing a recycled water plumbing system, and the installation of a second non-potable water system for harvested rainwater is impractical, and considered infeasible due to cost considerations. Skip to Section 6.

### 4. Calculate the Potential Rainwater Capture Area\* for Screening of Harvesting and Use

Complete this section for the entire project area. If completing this form shows that rainwater harvesting and use is infeasible for the entire project, and the project includes one or more buildings that each have an individual roof area of 10,000 sq. ft. or more, then complete Sections 4 and 5 of this form for each of these buildings. For special projects that receive < 100% LID treatment reduction, skip Sections 4 through 6 of this form and use the Rainwater Harvesting and Use Feasibility Worksheet to determine feasibility of harvest and use.

- 4.1 Table 1 for (check one):  The whole project       Area of 1 building roof (10,000 sq.ft. min.)

<b>Table 1: Calculation of the Potential Rainwater Capture Area*</b>				
<i>The Potential Rainwater Capture Area may consist of either the entire project area or one building with a roof area of 10,000 sq. ft. or more.</i>				
	1	2	3	4
	Pre-Project Impervious surface <sup>2</sup> (sq.ft.), if applicable	Proposed Impervious Surface <sup>2</sup> (IS), in sq. ft.		Post-project landscaping (sq.ft.), if applicable
		Replaced <sup>3</sup> IS	Created <sup>4</sup> IS	
a. Enter the totals for the area to be evaluated:	22,873	22,873	1,582	4,358
b. Sum of replaced and created impervious surface:	N/A	24,455		N/A
c. Area of existing impervious surface that will NOT be replaced by the project.	0	N/A		N/A

<sup>1</sup> Base this response on the site-specific soil report, if available. If this is not available, consult soil hydraulic conductivity maps in Attachment 3.

<sup>2</sup> Enter the total of all impervious surfaces, including the building footprint, driveway(s), patio(s), impervious deck(s), unroofed porch(es), uncovered parking lot (including top deck of parking structure), impervious trails, miscellaneous paving or structures, and off-lot impervious surface (new, contiguous impervious surface created from road projects, including sidewalks and/or bike lanes built as part of new street). Impervious surfaces do NOT include vegetated roofs or pervious pavement that stores and infiltrates rainfall at a rate equal to immediately surrounding, unpaved landscaped areas, or that stores and infiltrates the **C.3.d amount of runoff**\*.

<sup>3</sup> "Replaced" means that the project will install impervious surface where existing impervious surface is removed.

<sup>4</sup> "Created" means the project will install new impervious surface where there is currently no impervious surface.

\* For definitions, see Glossary (Attachment 1).

4.2 Answer this question ONLY if you are completing this section for the entire project area. If existing impervious surface will be replaced by the project, does the area to be replaced equal at least 50%, but less than 100%, of the existing area of impervious surface? (Refer to Table 1, Row "a". Is the area in Column 2  $\geq$  50%, but < 100%, of Column 1?)

- Yes, C.3. stormwater treatment requirements apply to areas of impervious surface that will remain in place as well as the area created and/or replaced. This is known as the 50% rule.
- No, C.3. requirements apply only to the impervious area created and/or replaced.

4.3 Enter the square footage of the **Potential Rainwater Capture Area\***. If you are evaluating only the roof area of a building, or you answered "no" to Question 4.2, this amount is from Row "b" in Table 1. If you answered "yes" to Question 4.2, this amount is the sum of Rows "b" and "c" in Table 1.:

24,455 square feet.

4.4 Convert the measurement of the **Potential Rainwater Capture Area\*** from square feet to acres (divide the amount in Item 4.3 by 43,560):

0.56 acres.

## 5. Feasibility Screening for Rainwater Harvesting and Use

5.1 Use of harvested rainwater for landscape irrigation:

Is the onsite landscaping LESS than 3.2 times the size of the **Potential Rainwater Capture Area\*** (Item 4.3)? (Note that the landscape area(s) would have to be contiguous and within the same Drainage Management Area to use harvested rainwater for irrigation via gravity flow.)

- Yes (continue)       No – direct runoff from impervious areas to **self-retaining areas\*** OR refer to Table 11 and the curves in Appendix F of the LID Feasibility Report to evaluate feasibility of harvesting and using the C.3.d amount of runoff for irrigation.

5.2 Use of harvested rainwater for toilet flushing or non-potable industrial use:

- a. Residential Projects: Proposed number of dwelling units: 99  
Calculate the dwelling units per impervious acre by dividing the number of dwelling units by the acres of the **Potential Rainwater Capture Area\*** in Item 4.4. Enter the result here:

176

Is the number of dwelling units per impervious acre LESS than 124 (assuming 2.7 occupants/unit)?

- Yes (continue)       No – complete the Harvest/Use Feasibility Worksheet.

- b. Commercial/Industrial Projects: Proposed interior floor area: \_\_\_\_\_ (sq. ft.)

Calculate the proposed interior floor area (sq.ft.) per acre of impervious surface by *dividing the interior floor area (sq.ft.) by the acres of the **Potential Rainwater Capture Area\*** in Item 4.4. Enter the result here:*

\_\_\_\_\_

Does square footage of the interior floor space per impervious acre equal LESS than 84,000?)

- Yes (continue)       No – complete the Harvest/Use Feasibility Worksheet

- c. School Projects: Proposed interior floor area: \_\_\_\_\_ (sq. ft.)

Calculate the proposed interior floor area per acre of impervious surface by *dividing the interior floor area (sq.ft.) by the acres of the **Potential Rainwater Capture Area\*** in Item 4.4. Enter the result here:*

\_\_\_\_\_

Does square footage of the interior floor space per impervious acre equal LESS than 27,000?)

\* For definitions, see Glossary (Attachment 1).

- Yes (continue)       No – complete the Harvest/Use Feasibility Worksheet

d. Mixed Commercial and Residential Use Projects

- Evaluate the residential toilet flushing demand based on the dwelling units per impervious acre for the residential portion of the project, following the instructions in Item 5.2.a, except you will use a prorated acreage of impervious surface, based on the percentage of the project dedicated to residential use.
- Evaluate the commercial toilet flushing demand per impervious acre for the commercial portion of the project, following the instructions in Item 5.2.b, except you will use a prorated acreage of impervious surface, based on the percentage of the project dedicated to commercial use.

e. Industrial Projects: Estimated non-potable water demand (gal/day): \_\_\_\_\_

Is the non-potable demand LESS than 2,900 gal/day per acre of the Potential Rainwater Capture Area?

- Yes (continue)       No – refer to the curves in Appendix F of the LID Feasibility Report to evaluate feasibility of harvesting and using the C.3.d amount of runoff for industrial use.

**6. Use of Biotreatment**

If only the “Yes” boxes were checked for all questions in Sections 2 and 5, or the project will have a recycled water system for non-potable use (Section 3), then the applicant may use appropriately designed bioretention facilities for compliance with C.3 treatment requirements. The applicant is encouraged to maximize infiltration of stormwater if site conditions allow.

**7. Results of Screening Analysis**

Based on this screening analysis, the following steps will be taken for the project (If biotreatment is allowed, check the biotreatment option only. If further analysis is needed, check all that apply):

- Implement biotreatment measures (such as an appropriately designed bioretention area).
- Conduct further analysis of infiltration feasibility by completing the Infiltration Feasibility Worksheet.
- Conduct further analysis of rainwater harvesting and use by (check one):
  - Completing the Rainwater Harvesting and Use Feasibility Worksheet for:
    - The entire project
    - Individual building(s), if applicable, describe: \_\_\_\_\_
  - Evaluating the feasibility of harvesting and using the C.3.d amount of runoff for irrigation, based on Table 11 and the curves in Appendix F of the LID Feasibility Report
  - Evaluating the feasibility of harvesting and using the C.3.d amount of runoff for non-potable industrial use, based on the curves in Appendix F of the LID Feasibility Report.

\* For definitions, see Glossary (Attachment 1).

**GEOTECHNICAL INVESTIGATION  
PROPOSED RESIDENTIAL BUILDING  
3705 HAVEN AVENUE  
Menlo Park, California**

## **1.0 INTRODUCTION**

This report presents the results of the geotechnical investigation performed by Rockridge Geotechnical for the proposed residential building to be constructed at 3705 Haven Avenue in Menlo Park, California. The project site is on the northwestern side of the intersection of Haven Avenue and Haven Court, as shown on the Site Location Map, Figure 1.

The site is a relatively level, rectangular-shaped lot with plan dimensions of approximately 150 by 198 feet. It is bordered by commercial properties to the north and west, and by Haven Avenue to the east and south. The site is currently occupied by a one-story commercial building with adjacent landscaping and asphalt-paved parking

We understand plans include demolition of the existing improvements and construction of an at-grade, seven-story, podium-style residential building. The proposed building will be constructed with five stories of Type V materials over a two-story concrete podium.

## **2.0 SCOPE OF SERVICES**

Our investigation was performed in accordance with our proposal dated December 13, 2021. Our scope of work consisted of exploring subsurface conditions at the site by performing seven cone penetration tests (CPTs), drilling one test boring, performing laboratory testing on selected soil samples, and performing engineering analyses to develop conclusions and recommendations regarding:

- site seismicity and seismic hazards, including the potential for liquefaction and liquefaction-induced ground failure
- design groundwater table
- the most appropriate foundation type(s) for the proposed building
- design criteria for the recommended foundation type(s)

- estimates of foundation settlement
- slab-on-grade floors
- lateral earth pressures for permanent below-grade walls
- site grading and fill placement, including fill quality and compaction requirements
- 2019 California Building Code (CBC) site class and design spectral response acceleration parameters
- corrosivity of the near-surface soil and the potential effects on buried concrete and metal structures and foundations, and recommendations for corrosion protection
- rigid and flexible pavement design
- permeable and non-permeable pavers
- construction considerations.

### **3.0 FIELD INVESTIGATION AND LABORATORY TESTING**

We explored the subsurface conditions at the site by performing seven CPTs and drilling one test boring. Prior to performing the CPTs and drilling the boring, we filed drilling notification forms with San Mateo County Environmental Health (SMCEH) and contacted Underground Service Alert (USA) to notify them of our work, as required by law. We also retained C. Cruz Subsurface Locators, a private utility locator, to check that the boring and CPT locations were clear of underground utilities. Details of our field exploration are described in this section.

#### **3.1 Cone Penetration Tests**

Seven CPTs, designated as CPT-1 through CPT-7, were performed by Middle Earth Geo Testing, Inc. of Orange, California on January 21, 2022. The CPTs were performed at the approximate locations shown on the Site Plan, Figure 2. The CPTs were advanced to depths of 50 to 100 feet below ground surface (bgs) by hydraulically pushing a 1.7-inch-diameter, cone-tipped probe into the ground. The cone-tipped probe measured tip resistance, and the friction sleeve behind the cone tip measured frictional resistance. Electrical strain gauges within the cone continuously measured soil parameters for the entire depth advanced. A special cone was also used to measure the in-situ soil shear wave velocity in approximately five-foot intervals at CPT-3. Soil data, including tip resistance, frictional resistance, and shear wave velocity, were recorded

by a computer while the test was conducted. Accumulated data were processed by computer to provide engineering information, such as the soil behavior types and approximate strength characteristics of the soil encountered. The CPT logs showing tip resistance and friction ratio, as well as interpreted soil behavior type and shear wave velocity profiles, are presented on Figures A-1 through A-7 in Appendix A.

Upon completion, the CPT holes were backfilled with neat cement grout in accordance with SMCEH requirements, and the pavement surface was patched with quick-set concrete.

### **3.2 Test Boring**

One boring, designated as B-1, was drilled on January 12, 2022, by Pitcher Services, LLC of East Palo Alto, California at the approximate location shown on the Site Plan, Figure 2. Boring B-1 was drilled to a depth of 91 feet bgs using a truck-mounted drill rig equipped with rotary-wash equipment. During drilling, our field engineer logged the soil encountered and obtained samples for visual classification and laboratory testing. The log of Boring B-1 is presented in Appendix A on Figures A-8a through A-8c. The soil encountered in the boring was classified in accordance with the classification chart shown on Figure A-9.

Soil samples were obtained using the following samplers:

- Modified California (MC) split-barrel sampler with a 3.0-inch outside diameter and 2.5-inch inside diameter, lined with 2.43-inch inside diameter brass/stainless steel tubes.
- Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside and 1.5-inch inside diameter, without liners.
- Dames and Moore (DM) thin-walled tubes with a 2.5-inch outside and 2.43-inch inside diameter.

The MC and SPT samplers were driven with a 140-pound, automatic safety hammer falling 30 inches per drop. The samplers were driven up to 18 inches, and the hammer blows required to drive the samplers were recorded every six inches and are presented on the boring log. A “blow count” is defined as the number of hammer blows per six inches of penetration or 50 blows for six inches or less of penetration. The blow counts required to drive the MC and SPT samplers

were converted to approximate SPT N-values using factors of 0.84 and 1.44, respectively, to account for sampler type, approximate hammer energy (previously measured by the drilling subcontractor), and the fact that the SPT sampler was designed to accommodate liners, but liners were not used. The blow counts used for this conversion were the last two 6-inch blow counts, the last one blow count if the sampler was driven more than six inches but less than 12 inches, or the only blow count if the sampler was driven six inches or less. The converted SPT N-values are presented on the boring log.

The DM tubes were used in an attempt to obtain relatively undisturbed samples of medium stiff to stiff, fine-grained soils. The DM tubes were slowly advanced using the weight of the drill rods and hydraulic pressure, as needed. The hydraulic pressure required to obtain each DM sample is listed on the boring log.

Upon completion of drilling, the boreholes were backfilled with cement grout in accordance with SMCEH requirements and the pavement was patched with quick-set concrete. The soil cuttings from the borings were placed in 55-gallon drums and are scheduled to be removed from the site for disposal on February 24, 2022.

### **3.3 Laboratory Testing**

Laboratory tests were performed on selected soil samples from our boring to assess their engineering properties and physical characteristics. Soil samples were tested by B. Hillebrandt Soils Testing, Inc. of Alamo, California to measure moisture content, dry density, plasticity (Atterberg limits), and fines content. Three soil samples were also tested by Inspection Services Inc. of Berkeley, California to measure consolidation properties. Soil corrosivity testing was also performed on near-surface soil samples by Project X Corrosion Engineering of Murrieta, California. The results of the geotechnical laboratory tests are presented on the boring log and attached in Appendix B.

## 4.0 SUBSURFACE CONDITIONS

As presented on the Regional Geologic Map (Figure 3), the site is mapped as being underlain by Holocene-age alluvial deposits (Qha). The results of our boring and CPTs indicate the alluvium primarily consists of stiff to very stiff clay with occasional medium stiff layers up to about one foot thick. The clay is interbedded with layers of medium dense to very dense sand and gravel to the maximum depth explored of about 100 feet bgs. The granular layers encountered at this site vary in thickness from approximately 1 to 16 feet.

The results of an Atterberg limits test performed on a sample of the near-surface clay obtained from the boring indicate it is highly expansive<sup>1</sup>.

### 4.1 Groundwater Conditions

Groundwater was measured in each CPT with a weighted tape measure immediately following removal of the CPT rods. Depth to groundwater was recorded when first encountered while drilling the boring and again after waiting approximately 30 minutes. The measurements indicate the depth to groundwater ranged from about 6 to 11 feet bgs at the time of our field investigation. To further evaluate the depth to groundwater at the site, we reviewed information on the State of California Water Resources Control Board GeoTracker website (<http://geotracker.swrcb.ca.gov>). The nearest site with groundwater data is immediately to the north of the project site, at 3695-3723 and 3750 Haven Avenue. Groundwater was measured in eight monitoring wells from November 1999 to September 2001. The data indicates the groundwater level fluctuated from 3.91 to 7.09 feet bgs during that time. The closest monitoring well to the project site is MW-5B, where the depth to groundwater ranged from 5.71 to 7.09 feet bgs.

The groundwater level at the site is expected to fluctuate several feet seasonally, depending on the amount of rainfall. Based on our review of available historic groundwater information within the site vicinity, we conclude a high groundwater level of five feet bgs should be used for this project.

---

<sup>1</sup> Highly expansive soil undergoes large volume changes with changes in moisture content.

## 5.0 SEISMIC CONSIDERATIONS

Because the project site is in a seismically active region, we evaluated the potential for earthquake-induced geologic hazards, including ground shaking, ground surface rupture, liquefaction,<sup>2</sup> lateral spreading,<sup>3</sup> and cyclic densification<sup>4</sup>. The results of our evaluation regarding seismic considerations for the project site are presented in the following sections.

### 5.1 Regional Seismicity and Faulting

The site is located in the Coast Ranges Geomorphic Province of California that is characterized by northwest-trending valleys and ridges. These topographic features are controlled by folds and faults that resulted from the collision of the Farallon Plate and North American Plate and subsequent strike-slip faulting along the San Andreas Fault system. The San Andreas Fault is more than 600 miles long from Point Arena in the north to the Gulf of California in the south. The Coast Ranges Province is bounded on the east by the Great Valley and on the west by the Pacific Ocean.

The major active faults in the area are the San Andreas, Hayward, and Calaveras faults. These and other faults in the region are shown on Figure 4. Numerous damaging earthquakes have occurred along these faults in recorded time. For these and other active faults within a 50-kilometer radius of the site, the distance from the site and estimated characteristic moment magnitude<sup>5</sup> [Petersen et al. (2014) & Thompson et al. (2016)] are summarized in Table 1. These

---

<sup>2</sup> Liquefaction is a phenomenon where loose, saturated, cohesionless soil experiences temporary reduction in strength during cyclic loading such as that produced by earthquakes.

<sup>3</sup> Lateral spreading is a phenomenon in which surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. Upon reaching mobilization, the surficial blocks are transported downslope or in the direction of a free face by earthquake and gravitational forces.

<sup>4</sup> Cyclic densification is a phenomenon in which non-saturated, cohesionless soil is compacted by earthquake vibrations, causing ground-surface settlement.

<sup>5</sup> Moment magnitude ( $M_w$ ) is an energy-based scale and provides a physically meaningful measure of the size of a faulting event. Moment magnitude is directly related to average slip and fault rupture area.

references are based on the Third Uniform California Earthquake Rupture Forecast (UCERF3), prepared by Field et al. (2013).

Greenville (North)	49	Northeast	6.86
Concord	49	Northeast	6.45

Since 1800, four major earthquakes have been recorded on the North San Andreas Fault. In 1836, an earthquake with an estimated maximum intensity of VII on the Modified Mercalli (MM) scale occurred east of Monterey Bay on the San Andreas Fault (Topozada and Borchardt 1998). The estimated moment magnitude ( $M_w$ ) for this earthquake is about 6.25. In 1838, an

earthquake occurred with an estimated intensity of about VIII-IX (MM), corresponding to an  $M_w$  of about 7.5. The San Francisco Earthquake of 1906 caused the most significant damage in the history of the Bay Area in terms of loss of lives and property damage. This earthquake created a surface rupture along the San Andreas Fault from Shelter Cove to San Juan Bautista approximately 470 kilometers in length. It had a maximum intensity of XI (MM), an  $M_w$  of about 7.9, and was felt 560 kilometers away in Oregon, Nevada, and Los Angeles. The Loma Prieta Earthquake of October 17, 1989 had an  $M_w$  of 6.9 and occurred about 57 kilometers south of the site.

In 1868, an earthquake with an estimated maximum intensity of X on the MM scale occurred on the southern segment (between San Leandro and Fremont) of the Hayward Fault. The estimated  $M_w$  for the earthquake is 7.0. In 1861, an earthquake of unknown magnitude (estimated  $M_w$  of about 6.5) was reported on the Calaveras Fault. The most recent significant earthquake on this fault was the 1984 Morgan Hill Earthquake ( $M_w = 6.2$ ).

As a part of the UCERF3 project, researchers estimated that the probability of at least one  $M_w \geq 6.7$  earthquake occurring in the greater San Francisco Bay Area during a 30-year period (starting in 2014) is 72 percent. The highest probabilities are assigned to sections of the Hayward (South), Calaveras (Central), and the North San Andreas (Santa Cruz Mountains) faults. The respective probabilities are approximately 25, 21, and 17 percent.

## **5.2 Geologic Hazards**

During a major earthquake on a segment of one of the nearby faults, strong to very strong ground shaking is expected to occur at the project site. Strong shaking during an earthquake can result in ground failure such as that associated with soil liquefaction, lateral spreading, and cyclic densification.

### **5.2.1 Ground Shaking**

The seismicity of the site is governed by the activity of the San Andreas and Hayward faults, although ground shaking from future earthquakes on other faults, including the Monte Vista-

Shannon and Calaveras faults, will also be felt at the site. These and other faults in the region are shown in relation to the site on Figure 4. The ground shaking intensity felt at the project site will depend on: 1) the size of the earthquake (magnitude), 2) the distance from the site to the fault source, 3) the focusing of earthquake energy along the fault in the direction of the rupture (directivity), and 4) site-specific soil conditions. We judge that strong to very strong ground shaking could occur at the site during a large earthquake on one of the nearby faults.

### **5.2.2 Liquefaction and Associated Hazards**

When a saturated, cohesionless soil liquefies, it experiences a temporary loss of shear strength created by a transient rise in excess pore pressure generated by strong ground motion. Soil susceptible to liquefaction includes loose to medium dense sand and gravel, low-plasticity silt, and some low-plasticity clay deposits. Flow failure, lateral spreading, differential settlement, loss of bearing strength, ground fissures and sand boils are evidence of excess pore pressure generation and liquefaction.

The subject property is located in an area of Menlo Park designated as a potential liquefaction hazard zone on the map prepared by California Geological Survey (CGS) titled *State of California, Earthquake Zones of Required Investigation, Palo Alto Quadrangle*, dated October 18, 2006 (Figure 6). Special Publication 117 prepared by the CGS (2008) recommends subsurface investigations in mapped liquefaction potential areas be performed using rotary-wash borings and/or CPTs.

We evaluated the liquefaction potential of soil encountered below groundwater at the site using data collected in the CPTs with consideration of subsurface information from the rotary-wash boring and laboratory test results. We assessed the liquefaction susceptibility using the software CLiq 3.7.1.10 (GeoLogismiki, 2022). CLiq uses measured CPT data and assesses liquefaction susceptibility and post-earthquake vertical settlement, given a user-defined earthquake magnitude and peak ground acceleration (PGA). Our liquefaction analyses were performed using the methodology proposed by Boulanger and Idriss (2014). We calculated “free-field”

liquefaction-induced settlements of these layers and then modified the settlements using the methodology proposed by Çetin et al. (2009) to account for the depth of the liquefiable layers.

Our analyses were performed using an assumed high groundwater depth of five feet below existing grades for the “during earthquake” groundwater level. In accordance with the 2019 CBC, we used a peak ground acceleration of 0.70 times gravity (g) in our liquefaction evaluation; this peak ground acceleration is consistent with the Maximum Considered Earthquake Geometric Mean ( $MCE_G$ ) peak ground acceleration adjusted for site effects ( $PG_{AM}$ ). We also used a moment magnitude 8.04 earthquake, which is consistent with the characteristic moment magnitude for the San Andreas Fault, as presented in Table 1.

Most of the soils at the site are sufficiently cohesive and/or dense to resist liquefaction; however, several layers of potentially liquefiable material were encountered in the CPTs below a depth of 13 feet bgs. The layers consist of loose to medium dense sand to silty sand/sandy silt that are discontinuous and vary in thickness from about 6 inches to 5 feet. We estimate total ground surface settlement associated with liquefaction (referred to as post-liquefaction reconsolidation) following a major earthquake on a nearby fault will be up to 1-1/2 inches, with differential settlement of up to 3/4 inch over a horizontal distance of 30 feet.

Ishihara (1985) presented an empirical relationship that provides criteria used to evaluate whether liquefaction-induced ground failure, such as sand boils, would be expected to occur under a given level of shaking for a liquefiable layer of given thickness overlain by a resistant, or protective, surficial layer. We conclude the non-liquefiable soil overlying the potentially liquefiable soil layers is sufficiently thick such that the potential for liquefaction-induced ground failure at the ground surface is low.

Considering the potentially liquefiable layers are not continuous, we conclude the risk of lateral spreading is nil.

### **5.2.3 Cyclic Densification**

Cyclic densification (also referred to as differential compaction) of non-saturated sand (sand above groundwater table) can occur during an earthquake, resulting in settlement of the ground surface and overlying improvements. The soil above the groundwater at the site primarily consists of fine-grained deposits that are sufficiently cohesive or coarse-grained deposits that are sufficiently dense, such that they are not susceptible to cyclic densification. Therefore, we conclude the potential for cyclic densification to impact the proposed development is very low.

### **5.2.4 Ground Surface Fault Rupture**

Historically, ground surface displacements closely follow the trace of geologically young faults. The site is not within an Earthquake Fault Zone, as defined by the Alquist-Priolo Earthquake Fault Zoning Act, and no known active or potentially active faults exist on the site. We therefore conclude the risk of fault offset at the site from a known active fault is very low. In a seismically active area, the remote possibility exists for future faulting in areas where no faults previously existed; however, we conclude the risk of surface faulting and consequent secondary ground failure from previously unknown faults is also very low.

## **6.0 DISCUSSION AND CONCLUSIONS**

Based on the results of our engineering analyses using the subsurface data collected from our field investigation and laboratory testing, we conclude the site may be developed as proposed provided the geotechnical issues discussed below are properly addressed. The primary geotechnical issues to be addressed are: (1) foundation settlement due to compression of the underlying clay soils, (2) potentially liquifiable soil layers underlying the site that can result in liquefaction-induced settlement following a major earthquake, and (3) the presence of highly expansive near-surface soil. These and other geotechnical issues as they pertain to the proposed development are discussed in this section.

## **6.1 Expansive Soil**

An Atterberg limits test performed on a sample of the near-surface clay indicates it is highly expansive. Highly expansive near-surface soil is subject to volume changes during seasonal fluctuations in moisture content. These volume changes can cause movement and cracking of foundations, slabs, and pavements. Therefore, foundations and slabs should be designed and constructed to mitigate the adverse effects of the expansive clay. These effects can be mitigated by moisture-conditioning the expansive soil below slabs, providing non-expansive soil below slabs, and either supporting foundations below the zone of severe moisture change or providing a stiff, shallow foundation that can limit deformation of the superstructure as the underlying soil shrinks and swells.

## **6.2 Foundation Support and Settlement**

The highly expansive near-surface clay is subject to large volume changes during seasonal fluctuations in moisture content. Shrinking and swelling associated with these volume changes can cause cracking of foundations and slabs if not properly addressed during design and construction. The potential adverse effects of the highly expansive soil can be mitigated by moisture conditioning the expansive soil, providing select, non-expansive fill or lime-treated soil below interior and exterior slabs, and either supporting foundations below the zone of severe moisture change or providing a stiff, shallow foundation that can limit deformation of the superstructure as the underlying soil shrinks and swells.

Foundation alternatives for sites underlain by highly expansive clay include deepened spread footings, stiffened shallow foundations such as conventionally reinforced concrete mats or post-tensioned slabs-on-grade (P-T slabs), and deep foundations. We judge that the anticipated total and differential settlements due to a combination of static foundation loads and post-liquefaction reconsolidation will exceed the typical tolerance of a conventional spread footing foundation system. Therefore, we judge conventional spread footings are not appropriate for support of the proposed building. Based on our experience with similar structures and soil conditions, we conclude the most appropriate foundation type for the proposed building would consist of a

conventionally reinforced concrete mat foundation, provided the estimated static and liquefaction-induced settlements are acceptable to the project team. Recommendations for design of a mat foundation are presented in Section 7.3 below.

We estimate total settlement of the proposed building supported on a properly designed mat slab under static loading will be on the order of 1 to 1-1/2 inches and differential settlement will be on the order of 3/4 inch in 30 feet. As discussed in Section 5.2.3, we estimate additional total and differential settlement as a result of post-liquefaction reconsolidation during an MCE event could be up to 1-1/2 and 3/4 inches across a horizontal distance of 30 feet, respectively.

### **6.3 Construction Considerations**

The soil to be excavated generally consists of clay which can be excavated with conventional earth-moving equipment such as loaders and backhoes. If site grading is performed during the rainy season, the near-surface clay will likely be wet and will have to be dried before compaction can be achieved. Heavy rubber-tired equipment, such as scrapers and vibratory rollers, could cause excessive deflection (pumping) of the wet clay and, therefore, should be avoided. If the project schedule or weather conditions do not permit sufficient time for drying of the soil by aeration, the subgrade can be treated with lime prior to compaction or imported granular fill can be used. The appropriate amount of lime should be determined during construction based on a visual examination and, if necessary, laboratory testing of the soil to be treated. It is also important that the moisture content of the subgrade soil is sufficiently high to reduce the expansion potential. If the grading work is performed during the dry season, moisture-conditioning may be required.

Excavations that will be deeper than five feet and will be entered by workers should be sloped or shored in accordance with CAL-OSHA standards (29 CFR Part 1926). The contractor should be responsible for the construction and safety of temporary slopes.

## 6.4 Soil Corrosivity

Corrosivity tests were performed by Project X Corrosion Engineering of Murrieta, California on two soil samples obtained from soil borings at depths of 2-3/4 and 5-1/2 feet bgs. The corrosivity test results are presented in Appendix B of this report.

The resistivity test results (938 and 1,541 ohm-cm) indicate the near-surface soil is “highly to extremely corrosive<sup>6</sup>” to buried metallic structures, which is typical of clayey soils. Accordingly, buried iron, steel, cast iron, ductile iron, galvanized steel and dielectric-coated steel or iron may need to be protected against corrosion depending upon the critical nature of the structure. If it is necessary to have metal in contact with soil, a corrosion engineer should be consulted to provide recommendations for corrosion protection.

The chloride ion concentrations (5.6 and 11.8 mg/kg) indicate the chlorides in the soil do not pose a threat to buried metallic structures and reinforcing steel in concrete structures below ground. The results of the pH tests indicate the near-surface soil has a pH of 8.2 and 8.6, which should not have an adverse effect on buried concrete or steel; however, it may be corrosive to buried copper and aluminum. The results also indicate the sulfate ion concentrations (11.0 and 37.0 mg/kg) are sufficiently low such that sulfates do not to pose a threat to buried concrete.

## 7.0 RECOMMENDATIONS

Our recommendations for site preparation and grading, design of foundations, seismic design, and other geotechnical aspects of the project are presented in this section.

### 7.1 Site Preparation and Grading

Site clearing should include the removal of all existing underground utilities and buried foundations. In general, abandoned underground utilities should be removed to the property line or service connections and properly capped or plugged with concrete. Where existing utility lines

---

<sup>6</sup> Roberge, Pierre R. (2018). Corrosion Basics, an Introduction, Third Edition. NACE International, P. 189.

are outside of the proposed building footprint and will not interfere with the proposed construction, they may be abandoned in-place provided the lines are filled with lean concrete or cement grout to the property line. It may be feasible to abandon small-diameter utility lines below the mat foundation; however, these should be evaluated on a case-by-case basis. Voids resulting from demolition activities should be properly backfilled with compacted fill following the recommendations provided later in this section.

The near-surface clay at the site is highly expansive. To mitigate the detrimental effects of expansive near-surface clay, exterior concrete flatwork should be underlain by at least eight inches of select fill compacted per requirements in Table 2. At a minimum, the upper four inches of the select fill should consist of Class 2 aggregate base (AB). The soil subgrade beneath proposed improvements or areas for new fill should be scarified to a depth of at least 12 inches, moisture-conditioned to at least four percent above optimum moisture content and compacted to between 88 and 92 percent relative compaction<sup>7</sup>.

On-site soil may be used as general fill, provided the material is free of organic matter, contain no rocks or lumps larger than three inches in greatest dimension, and be approved by the Geotechnical Engineer. If material to be used as fill is imported to the site, it should meet the requirements for select fill provided below in Section 7.1.2. A summary of the compaction recommendations for the various types of fill that may be used at the site is presented in Table 2.

---

<sup>7</sup> Relative compaction refers to the in-place dry density of soil expressed as a percentage of the maximum dry density of the same material, as determined by the ASTM D1557-09 laboratory compaction procedure.

**TABLE 2**  
**Summary of Compaction Recommendations**

<b>Location</b>	<b>Recommended Relative Compaction (percent)</b>	<b>Moisture Recommendation</b>
Building pad subgrade – native high-plasticity clay	88 – 92	4+% above optimum
General fill – lime-treated clay and low-plasticity on-site and imported	90+	Above optimum
General fill – native high-plasticity clay	88 – 92	4+% above optimum
Utility trench backfill – native high-plasticity clay	88 – 92	4+% above optimum
Utility trench backfill – low-plasticity	90+	Above optimum
Utility trench - clean sand or gravel	95+	Near optimum
Pavement subgrade – native high-plasticity clay	90+	2+% above optimum
Pavement subgrade – low-plasticity soil or lime-treated clay	95+	Above optimum
Pavement – Class 2 AB	95+	Near optimum
Exterior slabs – native high-plasticity clay	88 – 93	4+% above optimum
Exterior slabs – low-plasticity	90+	Above optimum
Exterior slabs – select fill/Class 2 AB	90+	Above optimum

Where the above recommended compaction requirements conflict with the City of Menlo Park standard details for pavements and sidewalks within the public right-of-way, the City Engineer or inspector should determine which compaction requirements should take precedence.

**7.1.1 Soil Subgrade Stabilization**

In some areas, soft, wet soil may be exposed during grading, causing the subgrade to deflect and rut under the weight of grading equipment. Although, the majority of the soil beneath the site consists of stiff to very stiff clay, if heavy wheeled equipment is used during the rainy season,

these materials may become disturbed and soften. In these areas, some form of subgrade stabilization may be required if disturbance occurs. Several options for stabilizing subgrade are presented below.

### Aeration

Aeration consists of mixing and turning the soil to naturally lower the moisture content to an acceptable level. Aeration typically requires several days to a week of warm, dry weather to effectively dry the material. Material to be dried by aeration should be scarified to a depth of at least 12 inches; the scarified material should be turned at least twice a day to promote uniform drying. Once the moisture content of the aerated soil has been reduced to acceptable levels, the soil should be compacted in accordance with our previous recommendations. Aeration is typically the least costly subgrade stabilization alternative; however, it generally requires the most time to complete and may not be effective if the soft material extends to great depths. Aeration will likely not be effective if the building subgrade extends below or near the groundwater table; however, it depends on the time of year construction is performed.

### Overexcavation

Another method of achieving suitable subgrade in areas where soft, wet soil is exposed is to overexcavate the soft subgrade soil and replace it with drier, granular material. If the soft material extends to great depths, the upper 18 to 24 inches of soft material may be overexcavated and a geotextile tensile fabric (Mirafi 500X or equivalent) placed beneath the granular backfill to help span over the weaker material. The fabric should be pulled tight and placed at the base of the overexcavation, extending at least two feet laterally beyond the limits of the overexcavation in all directions. The fabric should be overlapped by at least two feet at all seams. Granular material such as Class 2 AB should then be placed and compacted over the geotextile tensile fabric.

Where very soft subgrade conditions are encountered, a bi-directional geogrid, such as Tensar TriAx TX-140 or equivalent, may be required in lieu of tensile fabric. Where geogrids are used, the depth of overexcavation will likely be on the order of 12 to 18 inches. The geogrids should

be overlapped by at least two feet and tied with hog rings or nylon ties at a spacing not to exceed 10 feet. The geogrids should be covered with a well-graded granular fill such as Class 2 AB; open-graded rock should not be used. All backfill placed over the geogrid should be compacted in accordance with our previous recommendations.

### Chemical Treatment

Lime and/or cement have been successfully used to dry and stabilize fine-grained soils with varying degrees of success. Lime- and/or cement-treatment will generally decrease soil density, change its plasticity properties, and increase its strength. The degree to which lime will react with soil depends on variables such as type of soil, mineralogy, quantity of lime, and length of time the lime-soil mixture is cured. Cement is generally used when a significant amount of granular material or low-plasticity silt is present in the soil. The quantity of lime and/or cement added generally ranges from 3 to 7 percent by weight and should be determined by laboratory testing. The specialty contractor performing the chemical treatment should select the most appropriate additive and quantity for the soil conditions encountered.

Lime treatment of fine-grained soils generally includes site preparation, application of lime, mixing, compaction, and curing of the lime-treated soil. Field quality control measures should include checking the depth of lime treatment, degree of pulverization, lime spread rate measurement, lime content measurement, moisture content and density measurements, and mixing efficiency.

The lime treatment process should be designed by a contractor specializing in its use and who is experienced in the application of lime in similar soil conditions. Based on our experience with lime treatment, we judge that the specialty contractor should be able to treat the highly expansive on-site material to produce a non-expansive fill for building pad subgrades and, if desired, for exterior flatwork and pavement subgrades. For planning purposes, we recommend assuming the lime treatment will consist of five percent Dolomitic Quicklime by dry weight of soil. The dry weight of soil should be assumed to be 105 pounds per cubic foot (pcf) for calculating lime quantities. The specialty contractor should: 1) perform a lime demand test prior to treatment to

determine the percentage of Quicklime required to achieve a pH of 12.4 or higher in the treated soil, 2) perform an Atterberg limits test to confirm the proposed percentage of Quicklime will reduce the plasticity index of the treated soil to 15 or less, and 3) prepare a lime treatment procedure for our review prior to construction.

### **7.1.2 Select Fill**

Select fill should consist of imported soil that is free of organic matter, contain no rocks or lumps larger than three inches in greatest dimension, have a liquid limit less than 40 and plasticity index less than 15, and be approved by the Geotechnical Engineer. Select fill should be placed in lifts not exceeding eight inches in loose thickness, moisture-conditioned to above optimum moisture content, and compacted to at least 90 percent relative compaction beneath concrete flatwork and sidewalks. Beneath vehicular pavements, the select fill should be compacted to at least 95 percent relative compaction. Samples of proposed select fill material should be submitted to the Geotechnical Engineer at least three business days prior to use at the site.

The grading contractor should provide analytical test results or other suitable environmental documentation indicating the imported fill is free of hazardous materials at least three days before use at the site. If this data is not provided, a minimum of two weeks will be required to perform any necessary analytical testing.

### **7.1.3 Exterior Flatwork Subgrade Preparation**

Exterior flatwork and sidewalks should be at least four inches thick and reinforced with No. 3 bars at 18 inches on center. We recommend at least eight inches of select fill be placed beneath proposed exterior concrete flatwork, including patio slabs and sidewalks; the select fill should extend at least six inches beyond the slab edges where the flatwork is adjacent to landscaping. At a minimum, the upper four inches of the select fill should consist of Class 2 AB. Select fill and AB beneath exterior slabs-on-grade, such as patios and sidewalks, should be moisture-conditioned and compacted in accordance with the requirements provided above in Table 2.

Even with eight inches of select fill, exterior slabs may experience some cracking due to shrinking and swelling of the underlying expansive soil. Thickening the slab edges and adding additional reinforcement will control this cracking to some degree. In addition, where slabs provide access to buildings, it would be prudent to dowel the entrance to the building to permit rotation of the slab as the exterior ground shrinks and swells and to prevent a vertical offset at the entries.

#### **7.1.4 Utility Trench Backfill**

Excavations for utility trenches can be readily made with a backhoe. All trenches should conform to the current CAL-OSHA requirements. To provide uniform support, pipes or conduits should be bedded on a minimum of four inches of sand or fine gravel. After the pipes and conduits are tested, inspected (if required) and approved, they should be covered to a depth of six inches with sand or fine gravel, which should be mechanically tamped. Backfill for utility trenches and other excavations is also considered fill, and should be placed and compacted in accordance with the recommendations previously presented. If imported clean sand or gravel (defined as soil with less than 10 percent fines) is used as backfill, it should be compacted to at least 95 percent relative compaction. Jetting of trench backfill should not be permitted. Special care should be taken when backfilling utility trenches in pavement areas. Poor compaction may cause excessive settlements, resulting in damage to the pavement section.

Foundations for the proposed building should be bottomed below an imaginary line extending up at a 1.5:1 (horizontal to vertical) inclination from the base of utility trenches that run parallel to the edge of the foundation. Alternatively, the portion of the utility trench (excluding bedding) that is below the 1.5:1 line can be backfilled with controlled low-strength material (CLSM) with a 28-day unconfined compressive strength of at least 100 pounds per square inch (psi) or Class 2 AB compacted to at least 95 percent relative compaction.

Where utility trenches enter the building pad, an impermeable plug consisting of CLSM, at least three feet in length, should be installed where the trenches enter the building footprint (see Figure 6). Furthermore, where sand- or gravel-backfilled trenches cross planter areas and pass

below asphalt or concrete pavements, a similar plug should be placed at the edge of the pavement. The purpose of these recommendations is to reduce the potential for water to become trapped in trenches beneath the building or pavements. This trapped water can cause heaving of soils beneath slabs and softening of subgrade soil beneath pavements.

## **7.2 Surface Drainage and Landscaping**

### **7.2.1 Surface Drainage**

Positive surface drainage should be provided around the building to direct surface water away from the foundations. To reduce the potential for water ponding adjacent to the building, we recommend the ground surface within a horizontal distance of five feet from the building slope down away from the building with a surface gradient of at least two percent in unpaved areas and one percent in paved areas. In addition, roof downspouts should be discharged into controlled drainage facilities to keep the water away from the foundations. The use of water-intensive landscaping around the perimeter of the building should be avoided to reduce the amount of water introduced to the expansive clay subgrade.

Care should be taken to minimize the potential for subsurface water to collect beneath flatwork and pavements. Where landscape beds and tree wells are immediately adjacent to pavements and flatwork that are not designed as permeable systems, we recommend vertical cutoff barriers be incorporated into the design to prevent irrigation water from saturating the subgrade and AB. These barriers may consist of either flexible impermeable membranes or deepened concrete curbs.

### **7.2.2 Landscaping**

Storm water treatment systems (infiltration basins, rain gardens, bio-retention systems, vegetated swales, flow-through planters, etc.), if constructed at the site, should be provided with underdrains, as well as impermeable liners. Due to the low permeability and expansion potential of the near-surface soil, these systems should be designed for no exfiltration into the subgrade soil. The drainage layer beneath the “treatment” soil should consist of a minimum 12-inch-thick layer

of Caltrans Class 2 Permeable drainage material and include a minimum 6-inch-diameter perforated drain pipe with perforations facing downward. An impermeable liner consisting of a high-density polyethylene membrane (or equivalent) that is at least 10 mils thick should line the entire bottom and sides of the system.

Prior experience and industry literature indicate that some species of high water-demand<sup>8</sup> trees can induce ground-surface settlement by drawing water from the expansive clay, causing it to shrink. Where these types of trees are planted near buildings, the ground-surface settlement may result in damage to structure. This problem usually occurs 10 or more years after planting, as the trees reach mature height. To reduce the risk of tree-induced, building settlement, we recommend trees of the following genera not be planted within 25 feet of the proposed buildings unless adequate deep irrigation is provided at the tree locations: Eucalyptus, Populus, Quercus, Crataegus, Salix, Sorbus (simple-leafed), Ulmus, Cupressus, Chamaecyparis, and Cupressocyparis. Because this is a limited list and does not include all genera that may induce ground-surface settlement, a tree specialist should be consulted prior to selection of trees to be planted at the site.

### **7.3 Mat Foundation**

Provided the estimated settlements presented in Section 6.2 are acceptable from a structural and architectural standpoint, the proposed building may be supported on a mat foundation. If portions of the mat foundation will be constructed below the design groundwater level, such as the elevator pit foundation, the mat should be underlain by waterproofing and designed to resist hydrostatic uplift pressures.

For mat design, we recommend using a modulus of subgrade reaction of 15 pounds per cubic inch (pci) for dead-plus-live load conditions; this value has been reduced to account for the size of the mat/equivalent footings (therefore, this is not  $k_{v1}$  for 1-foot-square plate) and may be

---

<sup>8</sup> “Water-demand” refers to the ability of the tree to withdraw large amounts of water from the soil subgrade, rather than soil suction exerted by the root system.

increased by 50 percent for total load conditions. Once the structural engineer estimates the distribution of bearing stress on the bottom of the mat, we should review the distribution and revise the modulus of subgrade reaction, if appropriate.

The edges of the mat should be thickened such that the foundation edge is bottomed at least one foot below the adjacent exterior finished grade. Where the mat is constructed near a bioswale or other stormwater treatment area, the edge of the mat should be founded below an imaginary line extending up at an inclination of 1.5:1 (horizontal:vertical) from the base of the bioswale/treatment area. We expect the average bearing stress under the mat to be relatively low; however, concentrated stresses will occur at column locations and at the edges of the mat. The mat should be designed to impose a maximum dead-plus-live bearing pressure of 3,000 pounds per square foot (psf) on the foundation subgrade soil for dead-plus-live load conditions; this pressure may be increased by one-third for total load conditions. The allowable bearing pressures recommended for dead-plus-live and total load conditions include factors of safety of at least 2.0 and 1.5, respectively.

Lateral loads may be resisted by a combination of passive pressure on the vertical faces of the mat and friction between the bottoms of the mat and the supporting soil. To compute passive resistance, we recommend using an allowable uniform pressure of 1,500 psf for transient load conditions and an equivalent fluid weight of 240 pounds per cubic foot (pcf) for sustained load conditions. The upper foot of soil should be ignored unless confined by a slab or pavement. Frictional resistance should be computed using a base friction coefficient of 0.30 where the mat is in contact with the soil. Where a vapor retarder is placed beneath the mat, a base friction coefficient of 0.20 should be used. The passive pressure and frictional resistance values include a factor of safety of at least 1.5 and may be used in combination without further reduction.

To reduce water vapor transmission through the mat foundation, we recommend a vapor retarder be placed between the bottom of the mat and the underlying subgrade soil in areas where water vapor transmission through the mat would be detrimental. The vapor retarder should be at least 15 mils thick and meet the requirements for Class A vapor retarders stated in ASTM E1745. The vapor retarder should be placed in accordance with the requirements of ASTM E1643. These

requirements include overlapping seams by six inches, taping seams, and sealing penetrations in the vapor retarder. Concrete can be placed directly on the vapor retarder provided the water/cement (w/c) ratio of the concrete does not exceed 0.45 and water is not added in the field. If necessary, workability may be increased by adding plasticizers. In addition, the concrete for the mat should be properly cured. Before floor coverings are placed over the mat, the contractor should check that the concrete surface and the moisture emission levels (if emission testing is required) meet the manufacturer's requirements.

Recommendations for preparation of the mat subgrade are presented in Section 7.1. The mat subgrade should consist of properly moisture-conditioned and compacted native clay and/or engineered fill and should be free of standing water, debris, and disturbed materials prior to placing the vapor retarder or waterproofing. If loose soil is encountered at mat subgrade elevation, the soil should be removed and the overexcavation should be backfilled with engineered fill or CLSM with minimum 28-day unconfined compressive strength of 50 pounds per square inch (psi). It is critical the mat subgrade be kept moist and free of shrinkage cracks until the vapor retarder is placed. If the mat subgrade dries during installation of utilities, it should be re-scarified and moisture-conditioned to meet the recommendations in Table 2 prior to placement of the vapor retarder. If the mat will be constructed during the rainy season, we recommend a three-inch-thick unreinforced concrete "rat" slab be placed on the prepared subgrade to prevent it from softening if exposed to rain. We should check the foundation subgrade prior to placement of the vapor retarder.

#### **7.4 Retaining Walls**

Retaining walls should be designed to resist static lateral earth pressures, lateral pressures caused by earthquakes, vehicular surcharge pressures, and surcharges from adjacent foundations, where appropriate. We recommend retaining walls that are restrained from movement at the top and/or sides, such as elevator pit walls, be designed for the more critical of the following criteria:

- At-rest equivalent fluid weight of 73 pcf above the design groundwater table and 97 pcf below.

- Active pressure of 27 pcf plus a seismic increment of 19 pcf (triangular distribution) above the design groundwater level, and 87 pcf plus a seismic increment of 9 pcf (triangular distribution) below the groundwater level.

The recommended lateral earth pressures above are based on a level backfill condition with no additional surcharge loads. Where the below-grade wall is subject to traffic loading within 10 feet of the wall, an additional uniform lateral pressure of 50 psf, applied to the upper 10 feet of the wall, should be used.

To protect against moisture migration, below-grade walls should be waterproofed and water stops should be placed at all construction joints. The design pressures above assume site retaining walls and the portion of below-grade walls above the design groundwater table are fully drained to prevent accumulation of water behind the walls from rainfall, irrigation, broken water lines, etc. One acceptable method for backdraining a retaining wall is to place a prefabricated drainage panel against the back of the wall. The drainage panel should extend down to a perforated PVC collector pipe at the design high groundwater level (or higher if confirmed acceptable by the Structural Engineer). The pipe should be surrounded on all sides by at least four inches of Caltrans Class 2 permeable material or 3/4-inch drain rock wrapped in filter fabric (Mirafi NC or equivalent). The pipe should be connected to a suitable discharge point; a sump and pump system may be required to drain the collector pipes. In lieu of installing a backdrain behind below-grade walls, the walls may be designed using the undrained lateral earth pressure acting over the entire height of the wall.

If backfill is required behind below-grade walls prior to pouring the building slabs, the walls should be braced, or hand compaction equipment used, to prevent unacceptable surcharges on walls (as determined by the Structural Engineer).

## 7.5 Pavement Design

Design recommendations for asphalt and Portland cement concrete pavements are presented in the following sections. Because of the near-surface soil in highly expansive, permeable pavements are not recommended at this site because of the potential for distress of pavements and surrounding improvements due to wetting-induced heave of the soil.

### 7.5.1 Flexible (Asphalt Concrete) Pavement Design

The State of California flexible pavement design method was used to develop the recommended asphalt concrete (AC) pavement sections. On the basis of our experience, we selected an R-value of 5, which is appropriate for highly expansive clay soils. Recommended pavement sections for traffic indices (TIs) ranging from 4.5 to 6.5 are presented in Table 3. The project Civil Engineer for the project should check that the TIs presented in this report are appropriate for the intended use. We can provide additional pavement sections for different TIs upon request.

**TABLE 3**  
**Asphalt Concrete Pavement Sections**

TI	Asphaltic Concrete (inches)	Class 2 AB R = 78 (inches)
4.5	2.5	9.5
5.0	3.0	10.0
5.5	3.0	12.0
6.0	3.5	13.0
6.5	4.0	13.5

The upper 12 inches of the subgrade should be moisture-conditioned and compacted in accordance with requirements presented in Section 7.1 and be non-yielding. The AB should be moisture-conditioned to near optimum and compacted to at least 95 percent relative compaction and be non-yielding.

If pavements are adjacent to irrigated landscaped areas (including infiltration basins), curbs adjacent to those areas should extend through the AB and at least three inches into the underlying soil to reduce the potential for irrigation water to infiltrate into the pavement section. If drip irrigation is used in the landscaping adjacent to the pavement, however, deepening of the curbs is not required.

### **7.5.2 Rigid (Portland-Cement Concrete) Pavement**

Concrete pavement design is based on a maximum single-axle load of 20,000 pounds, a maximum tandem axle load of 32,000 pounds, and light truck traffic (i.e., a few trucks per week). The recommended rigid pavement section for these axle loads is six inches of Portland cement concrete over six inches of Class 2 AB. Where fire truck traffic is expected, the pavement section should consist of 6.5 inches of Portland cement concrete over six inches of Class 2 AB. Where only passenger cars or light trucks will use the pavement, the recommended minimum pavement section is five inches of Portland cement concrete over six inches of Class 2 AB.

The modulus of rupture of the concrete should be at least 500 psi at 28 days. Contraction joints should be constructed at maximum spacing of 12.5 and 15 feet for 5 inch, 6-inch, and 6.5-inch-thick pavement sections, respectively. Where the outer edge of a concrete pavement meets asphalt concrete pavement, the concrete slab should be thickened by 50 percent at a taper not to exceed a slope of 1 in 10. For areas that will receive moderate truck traffic, such as weekly garbage truck traffic, we recommend the slab be reinforced with a minimum of No. 4 bars at 16-inch spacing in both directions. Recommendations for subgrade preparation and AB compaction for concrete pavement are the same as those we have described above for asphalt concrete pavement.

## **7.6 Pavers**

Recommendations for non-permeable and permeable pavers, as well as grass pavers are presented in the following sections. The recommendations below may also be used for cast-in-place permeable concrete pavements.

### 7.6.1 Non-Permeable Concrete Pavers

Non-permeable concrete pavers for pedestrian traffic should be underlain by at least four inches of Class 2 AB compacted to at least 90 percent relative compaction. The soil subgrade beneath the AB should be scarified to a depth of at least eight inches, moisture-conditioned, and compacted in accordance with the recommendations presented in Section 7.1.

Where non-permeable concrete pavers will be subject to vehicular traffic, we recommend they consist of fully dentated, interlocking shapes and be at least 80 millimeters (3.15 inches) thick. The pavers should be placed on a 1- to 2-inch-thick sand leveling course underlain by Class 2 AB. The thickness of the Class 2 AB beneath non-permeable pavers subject to vehicular traffic should be consistent with the sections presented for asphalt pavement in Section 7.5.1 for the applicable TI. The subgrade and AB should be compacted in accordance with the recommendations for AC pavement in Section 7.5.1.

### 7.7 Seismic Design

The results of CPT-3 indicate the shear wave velocity for the upper 100 feet of soil ( $V_{s30}$ ) at the site is about 760 feet per second. As discussed in Section 5.2.2, thin layers of potentially liquefiable soil were encountered beneath the site. The 2019 CBC calls for a Site Class F designation for sites underlain by potentially liquefiable soil; however, we judge that these layers are relatively thin and discontinuous and conclude that the soil at the site will not incur significant non-linear behavior. Therefore, we conclude a Site Class D designation is appropriate for seismic design.

The latitude and longitude of the site are  $37.4837^\circ$  and  $-122.1771^\circ$ , respectively. Hence, in accordance with the 2019 CBC, we recommend the following:

- Site Class D (stiff soil)
- $S_s = 1.5g$ ,  $S_1 = 0.6g$

The 2019 CBC is based on the guidelines contained within ASCE 7-16 which stipulates that where  $S_1$  is greater than 0.2 times gravity (g) for Site Class D, a ground motion hazard analysis is

needed unless the seismic response coefficient ( $C_s$ ) value will be calculated as outlined in Section 11.4.8, Exception 2. Assuming the  $C_s$  value will be calculated as outlined in Section 11.4.8, Exception 2, we recommend the following seismic design parameters:

- $F_a = 1.0$ ,  $F_v = 1.7$
- $S_{MS} = 1.5g$ ,  $S_{M1} = 1.02g$
- $S_{DS} = 1.0g$ ,  $S_{D1} = 0.68g$
- Seismic Design Category D for Risk Factors I, II, and III.

## **8.0 GEOTECHNICAL SERVICES DURING CONSTRUCTION**

Prior to construction, Rockridge Geotechnical should review the project plans and specifications to verify that they conform to the intent of our recommendations. During construction, our field engineer should provide on-site observation and testing during placement and compaction of fill, grading, and installation of foundations. These observations will allow us to compare actual with anticipated soil conditions and to verify that the contractor's work conforms to the geotechnical aspects of the plans and specifications.

## **9.0 LIMITATIONS**

This geotechnical investigation has been conducted in accordance with the standard of care commonly used as state-of-practice in the profession. No other warranties are either expressed or implied. The recommendations made in this report are based on the assumption that the subsurface conditions do not deviate appreciably from those disclosed in the exploratory boring and CPTs. If any variations or undesirable conditions are encountered during construction, we should be notified so that additional recommendations can be made. The foundation recommendations presented in this report are developed exclusively for the proposed development described in this report and are not valid for other locations and construction in the project vicinity.

**Liquefaction Zones**

Areas where historical occurrence of liquefaction, or local geological, geotechnical and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

**Earthquake-Induced Landslide Zones**

Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

Boring terminated at a depth of 91 feet below ground surface.  
Boring backfilled with cement grout.  
Groundwater encountered at a depth of 11 feet during drilling.

<sup>1</sup> MC and SPT blow counts for the last two increments were converted to SPT N-Values using factors of 0.84 and 1.44, respectively, to account for sampler type and hammer energy.

Project No.: 22-2153

## UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions	Symbols	Typical Names
<b>Coarse-Grained Soils</b> <small>(more than half of soil &gt; no. 200 sieve size)</small>	Gravels <small>(More than half of coarse fraction &gt; no. 4 sieve size)</small>	<b>GW</b> Well-graded gravels or gravel-sand mixtures, little or no fines
		<b>GP</b> Poorly-graded gravels or gravel-sand mixtures, little or no fines
		<b>GM</b> Silty gravels, gravel-sand-silt mixtures
		<b>GC</b> Clayey gravels, gravel-sand-clay mixtures
	Sands <small>(More than half of coarse fraction &lt; no. 4 sieve size)</small>	<b>SW</b> Well-graded sands or gravelly sands, little or no fines
		<b>SP</b> Poorly-graded sands or gravelly sands, little or no fines
		<b>SM</b> Silty sands, sand-silt mixtures
		<b>SC</b> Clayey sands, sand-clay mixtures
<b>Fine -Grained Soils</b> <small>(more than half of soil &lt; no. 200 sieve size)</small>	Silts and Clays LL = < 50	<b>ML</b> Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		<b>CL</b> Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		<b>OL</b> Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	<b>MH</b> Inorganic silts of high plasticity
		<b>CH</b> Inorganic clays of high plasticity, fat clays
		<b>OH</b> Organic silts and clays of high plasticity
<b>Highly Organic Soils</b>		<b>PT</b> Peat and other highly organic soils

### GRAIN SIZE CHART

Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel coarse fine	3" to No. 4	76.2 to 4.76
	3" to 3/4"	76.2 to 19.1
	3/4" to No. 4	19.1 to 4.76
Sand coarse medium fine	No. 4 to No. 200	4.76 to 0.075
	No. 4 to No. 10	4.76 to 2.00
	No. 10 to No. 40	2.00 to 0.420
	No. 40 to No. 200	0.420 to 0.075
Silt and Clay	Below No. 200	Below 0.075

### SAMPLE DESIGNATIONS/SYMBOLS

	Sample taken with California or Modified California split-barrel sampler. Darkened area indicates soil recovered
	Classification sample taken with Standard Penetration Test sampler

<sup>2</sup> Plant lists, Specifications for Biotreatment Soil Media and Mulch and Supplier lists, can be found here:

[www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/](http://www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/)

Flow-Through Planter Maintenance Plan  
 Property Address: 3705 Haven Avenue, Menlo Park

I. Routine Maintenance Activities

The principal maintenance objectives are to ensure that water flows unimpeded into the flowthrough planter and landscaping remains attractive in appearance. Table 1 shows the routine maintenance activities, and the frequency at which they will be conducted.

Table 1 Routine Maintenance Activities for Flow-Through Planters		
No.	Maintenance Task	Frequency of Task
1	Evaluate health of trees, shrubs and small plants. Remove and replace all dead and diseased vegetation. <sup>2</sup>	Twice a year
2	Maintain vegetation and the irrigation system. Prune and weed to keep flowthrough planter neat and orderly in appearance.	As needed
3	Check that mulch is 3" deep and replenish as necessary. It is recommended that composted arbor mulch be applied once per year to maintain the 3" depth in all bare soil areas except within six inches of tree trunks. <sup>2</sup>	Before wet season and as needed
4	Check that soil is at appropriate depth. If it has sunk more than 3" below the 9" design depth, till or replace soil with the approved biotreatment soil media as necessary to maintain a minimum of 6 inches and a maximum of 12" between the top of the biotreatment soil media and overflow outlet. <sup>2</sup>	Before wet season and as necessary
5	Remove obstructions, accumulated sediment, litter/trash and debris and dispose of properly. Confirm that no clogging will occur and that planter will drain within one day.	Before wet season and as necessary
6	Inspect flow-through planter to ensure that there are no clogs. Test with garden hose to confirm that the planter will drain within three to four hours.	Before wet season and after large storm events
7	Inspect downspouts from rooftops and sheet flow from paved areas to ensure flow to planter box is unimpeded. Remove debris and repair damaged pipes. Check splash blocks or rocks and repair, replace and replenish as necessary.	Monthly during the wet season, and as needed after storm events
8	Inspect overflow pipe to ensure that it will safely convey excess flows to storm drain. Repair or replace any damaged or disconnected piping.	Before the wet season, and as necessary
9	Inspect flow-through planter to ensure that box is structurally sound (no cracks or leaks). Repair as necessary.	Annually
10	Inspect flow-through planter using the attached inspection checklist.	Monthly, or after large storm events, and after removal of accumulated debris or material

II. Prohibitions

Do not use pesticides or other chemical applications to treat diseased plants, control weeds or removed unwanted growth. Employ non-chemical controls (biological, physical and cultural controls) to treat a pest problem. Prune plants properly and at the appropriate time of year. Provide adequate irrigation for landscape plants. Do not over water.

<sup>1</sup> Attached site plan must match the site plan exhibit to Maintenance Agreement.

<sup>2</sup> Plant lists, Specifications for Biotreatment Soil Media and Mulch and Supplier lists, can be found here: [www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/](http://www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/)

Flow-Through Planter Maintenance Plan  
Property Address: 3705 Haven Avenue, Menlo Park

### III. Mosquito Abatement

Standing water shall not remain in the treatment measures for more than five days, to prevent mosquito generation. Should any mosquito issues arise, contact the San Mateo County Mosquito and Vector Control District (SMCMVCD), as needed for assistance. Mosquito larvicides shall be applied only when absolutely necessary, as indicated by the SMCMAAD, and then only by a licensed professional or contractor. Contact information for SMCMAAD is provided below.

San Mateo County Mosquito and Vector Control District  
1351 Rollins Road  
Burlingame, CA 94010  
PH: (650) 344-8592  
FAX: (650) 344-3843  
[Email: info@smcmvcd.org](mailto:info@smcmvcd.org)

### IV. Inspections

The attached Flow-Through Planter Inspection and Maintenance Checklist shall be used to conduct inspections monthly (or as needed), identify needed maintenance, and record maintenance that is conducted.

<sup>1</sup> Attached site plan must match the site plan exhibit to Maintenance Agreement.

<sup>2</sup> Plant lists, Specifications for Biotreatment Soil Media and Mulch and Supplier lists, can be found here:  
[www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/](http://www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/)

### Flow-Through Planter Inspection and Maintenance Checklist

Property Address: 3705 Haven Avenue, Menlo Park

Property Owner: \_\_\_\_\_

Treatment Measure No.: \_\_\_\_\_ Date of Inspection: \_\_\_\_\_ Type of Inspection:  Monthly  Pre-Wet Season  
 After heavy runoff  End of Wet Season  
 Other: \_\_\_\_\_

Inspector(s): \_\_\_\_\_

Defect	Conditions When Maintenance Is Needed	Maintenance Needed? (Y/N)	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed
1. Vegetation	Vegetation is dead, diseased and/or overgrown.			Vegetation is healthy and attractive in appearance.
2. Soil	Soil too deep or too shallow.			Soil is at proper depth (per soil specifications) for optimum filtration and flow.
3. Mulch	Mulch is missing or patchy in appearance. Areas of bare earth are exposed, or mulch layer is less than 3 inches in depth.			All bare earth is covered, except mulch is kept 6 inches away from trunks of trees and shrubs. Mulch is even in appearance, at a depth of 3 inches.
4. Sediment, Trash and Debris Accumulation	Sediment, trash and debris accumulated in the flow-through planter. Planter does not drain as specified.			Sediment, trash and debris removed from flow-through planter and disposed of properly. Planter drains within 3-4 hours.
5. Clogs	Soil too deep or too shallow. Sediment, trash and debris accumulated in the flowthrough planter. Planter does not drain within three days after rainfall.			Planter drains per design specifications.

<sup>1</sup> Attached site plan must match the site plan exhibit to Maintenance Agreement.

<sup>2</sup> Plant lists, Specifications for Biotreatment Soil Media and Mulch and Supplier lists, can be found here: [www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/](http://www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/)

Flow-Through Planter Maintenance Plan

Property Address: 3705 Haven Avenue, Menlo Park

6. Downspouts and Sheet Flow	Flow to planter is impeded. Downspouts are clogged or pipes are damaged. Splash blocks and rocks in need of repair, replacement or replenishment.			Downspouts and sheet flow is conveyed efficiently to the planter.
7. Overflow Pipe	Does not safely convey excess flows to storm drain. Piping damaged or disconnected.			Overflow pipe conveys excess flow to storm drain efficiently.
8. Structural Soundness	Planter is cracked, leaking or falling apart.			Cracks and leaks are repaired and planter is structurally sound.
9. Miscellaneous	Any condition not covered above that needs attention in order for the flowthrough planter to function as designed.			Meet the design specifications.

<sup>1</sup> Attached site plan must match the site plan exhibit to Maintenance Agreement.

<sup>2</sup> Plant lists, Specifications for Biotreatment Soil Media and Mulch and Supplier lists, can be found here: [www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/](http://www.flowstobay.org/preventing-stormwater-pollution/with-new-redevelopment/c-3-regulated-projects/)

## INTRODUCTION

The project proposes to demolish the existing 10,361 square foot commercial building and redevelop the project site with an eight-story, 112-unit residential apartment building at 3705 Haven Avenue, Menlo Park, California.

This report evaluates the project's potential to result in significant environmental noise impacts with respect to applicable California Environmental Quality Act (CEQA) guidelines. The report is divided into three sections: (1) the Setting section provides a brief description of the fundamentals of environmental noise and groundborne vibration, summarizes applicable regulatory criteria, and discusses the results of the ambient noise monitoring survey completed to document existing noise conditions; (2) the General Plan Consistency section discusses land use compatibility utilizing noise policies in the City's General Plan; and (3) the Impacts and Mitigation Measures section describes the significance criteria used to evaluate project impacts, provides a discussion of each project impact, and presents measures, where necessary, to mitigate the impacts to a less-than-significant level.

## SETTING

### Fundamentals of Environmental Noise

Noise may be defined as unwanted sound. Noise is usually objectionable because it is disturbing or annoying. The objectionable nature of sound could be caused by its *pitch* or its *loudness*. *Pitch* is the height or depth of a tone or sound, depending on the relative rapidity (*frequency*) of the vibrations by which it is produced. Higher pitched signals sound louder to humans than sounds with a lower pitch. *Loudness* is the intensity of sound waves combined with the reception characteristics of the ear. Intensity may be compared with the height of an ocean wave in that it is a measure of the amplitude of the sound wave.

In addition to the concepts of pitch and loudness, there are several noise measurement scales which are used to describe noise in a particular location. A *decibel (dB)* is a unit of measurement which indicates the relative amplitude of a sound. The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 decibels represents a ten-fold increase in acoustic energy, while 20 decibels is 100 times more intense, 30 decibels is 1,000 times more intense, etc. There is a relationship between the subjective noisiness or loudness of a sound and its intensity. Each 10 decibel increase in sound level is perceived as approximately a doubling of loudness over a fairly wide range of intensities. Technical terms are defined in Table 1.

There are several methods of characterizing sound. The most common in California is the *A-weighted sound level (dBA)*. This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Representative outdoor and indoor noise levels in units of dBA are shown in Table 2. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events.

**TABLE 1 Definition of Acoustical Terms Used in this Report**

<b>Term</b>	<b>Definition</b>
Decibel, dB	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20 micro Pascals.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micro Pascals (or 20 micro Newtons per square meter), where 1 Pascal is the pressure resulting from a force of 1 Newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g., 20 micro Pascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and Ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, $L_{eq}$	The average A-weighted noise level during the measurement period.
$L_{max}$ , $L_{min}$	The maximum and minimum A-weighted noise level during the measurement period.
$L_{01}$ , $L_{10}$ , $L_{50}$ , $L_{90}$	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, $L_{dn}$ or DNL	The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured in the night between 10:00 pm and 7:00 am.
Community Noise Equivalent Level, CNEL	The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 pm to 10:00 pm and after addition of 10 decibels to sound levels measured in the night between 10:00 pm and 7:00 am.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

Source: Technical Noise Supplement (TeNS), California Department of Transportation, September 2013.

This *energy-equivalent sound/noise descriptor* is called  $L_{eq}$ . The most common averaging period is hourly, but  $L_{eq}$  can describe any series of noise events of arbitrary duration.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends upon the distance the receptor is from the noise source. Close to the noise source, the models are accurate to within about plus or minus 1 to 2 dBA.

Since the sensitivity to noise increases during the evening and at night -- because excessive noise interferes with the ability to sleep -- 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The *Community Noise Equivalent Level (CNEL)* is a measure of the cumulative noise exposure in a community, with a 5 dB penalty added to evening (7:00 p.m. to 10:00 p.m.) and a 10 dB addition to nocturnal (10:00 p.m. to 7:00 a.m.) noise levels. The *Day/Night Average Sound Level (DNL or  $L_{dn}$ )* is essentially the same as CNEL, with the exception that the evening time period is dropped and all occurrences during this three-hour period are grouped into the daytime period.

## **Effects of Noise**

### *Sleep and Speech Interference*

The thresholds for speech interference indoors are about 45 dBA if the noise is steady and above 55 dBA if the noise is fluctuating. Outdoors the thresholds are about 15 dBA higher. Steady noises of sufficient intensity (above 35 dBA) and fluctuating noise levels above about 45 dBA have been shown to affect sleep. Interior residential standards for multi-family dwellings are set by the State of California at 45 dBA DNL. Typically, the highest steady traffic noise level during the daytime is about equal to the DNL and nighttime levels are 10 dBA lower. The standard is designed for sleep and speech protection and most jurisdictions apply the same criterion for all residential uses. Typical structural attenuation is 12 to 17 dBA with open windows. With closed windows in good condition, the noise attenuation factor is around 20 dBA for an older structure and 25 dBA for a newer dwelling. Sleep and speech interference is therefore possible when exterior noise levels are about 57 to 62 dBA DNL with open windows and 65 to 70 dBA DNL if the windows are closed. Levels of 55 to 60 dBA are common along collector streets and secondary arterials, while 65 to 70 dBA is a typical value for a primary/major arterial. Levels of 75 to 80 dBA are normal noise levels at the first row of development outside a freeway right-of-way. In order to achieve an acceptable interior noise environment, bedrooms facing secondary roadways need to be able to have their windows closed, those facing major roadways and freeways typically need special glass windows.

### *Annoyance*

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that the causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The DNL as a measure of noise has been found to provide a valid

correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. When measuring the percentage of the population highly annoyed, the threshold for ground vehicle noise is about 50 dBA DNL. At a DNL of about 60 dBA, approximately 12 percent of the population is highly annoyed. When the DNL increases to 70 dBA, the percentage of the population highly annoyed increases to about 25 to 30 percent of the population. There is, therefore, an increase of about 2 percent per dBA between a DNL of 60 to 70 dBA. Between a DNL of 70 to 80 dBA, each decibel increase increases by about 3 percent the percentage of the population highly annoyed. People appear to respond more adversely to aircraft noise. When the DNL is 60 dBA, approximately 30 to 35 percent of the population is believed to be highly annoyed. Each decibel increase to 70 dBA adds about 3 percentage points to the number of people highly annoyed. Above 70 dBA, each decibel increase results in about a 4 percent increase in the percentage of the population highly annoyed.

### **Fundamentals of Groundborne Vibration**

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One method is the Peak Particle Velocity (PPV). The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. In this report, a PPV descriptor with units of mm/sec or in/sec is used to evaluate construction generated vibration for building damage and human complaints. Table 3 displays the reactions of people and the effects on buildings that continuous or frequent intermittent vibration levels produce. The guidelines in Table 3 represent syntheses of vibration criteria for human response and potential damage to buildings resulting from construction vibration.

Construction activities can cause vibration that varies in intensity depending on several factors. The use of pile driving, and vibratory compaction equipment typically generates the highest construction related ground borne vibration levels. Because of the impulsive nature of such activities, the use of the PPV descriptor has been routinely used to measure and assess ground borne vibration and almost exclusively to assess the potential of vibration to cause damage and the degree of annoyance for humans.

The two primary concerns with construction-induced vibration, the potential to damage a structure and the potential to interfere with the enjoyment of life, are evaluated against different vibration limits. Human perception to vibration varies with the individual and is a function of physical setting and the type of vibration. Persons exposed to elevated ambient vibration levels, such as people in an urban environment, may tolerate a higher vibration level.

Structural damage can be classified as cosmetic only, such as paint flaking or minimal extension of cracks in building surfaces; minor, including limited surface cracking; or major, that may threaten the structural integrity of the building. Safe vibration limits that can be applied to assess the potential for damaging a structure vary by researcher. The damage criteria presented in Table 3 include several categories for ancient, fragile, and historic structures, the types of structures most at risk to damage. Most buildings are included within the categories ranging from “Historic and

some old buildings” to “Modern industrial/commercial buildings”. Construction-induced vibration that can be detrimental to the building is very rare and has only been observed in instances where the structure is at a high state of disrepair and the construction activity occurs immediately adjacent to the structure.

The annoyance levels shown in Table 3 should be interpreted with care since vibration may be found to be annoying at lower levels than those shown, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage.

**TABLE 3 Reaction of People and Damage to Buildings from Continuous or Frequent Intermittent Vibration Levels**

<b>Velocity Level, PPV (in/sec)</b>	<b>Human Reaction</b>	<b>Effect on Buildings</b>
0.01	Barely perceptible	No effect
0.04	Distinctly perceptible	Vibration unlikely to cause damage of any type to any structure
0.08	Distinctly perceptible to strongly perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
0.1	Strongly perceptible	Threshold at which there is a risk of damage to fragile buildings with no risk of damage to most buildings
0.25	Strongly perceptible to severe	Threshold at which there is a risk of damage to historic and some old buildings.
0.3	Strongly perceptible to severe	Threshold at which there is a risk of damage to older residential structures
0.5	Severe - Vibrations considered unpleasant	Threshold at which there is a risk of damage to new residential and modern commercial/industrial structures

## Regulatory Background – Noise

### State of California

*State CEQA Guidelines.* The California Environmental Quality Act (CEQA) contains guidelines to evaluate the significance of effects of environmental noise attributable to a proposed project. Under CEQA, noise impacts would be considered significant if the project would result in:

- (a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- (b) Generation of excessive groundborne vibration or groundborne noise levels;
- (c) For a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels.

*2022 California Building Code, Title 24, Part 2.* The current version of the California Building Code (CBC) requires interior noise levels in multi-family residential units attributable to exterior environmental noise sources to be limited to a level not exceeding 45 dBA DNL/CNEL in any habitable room.

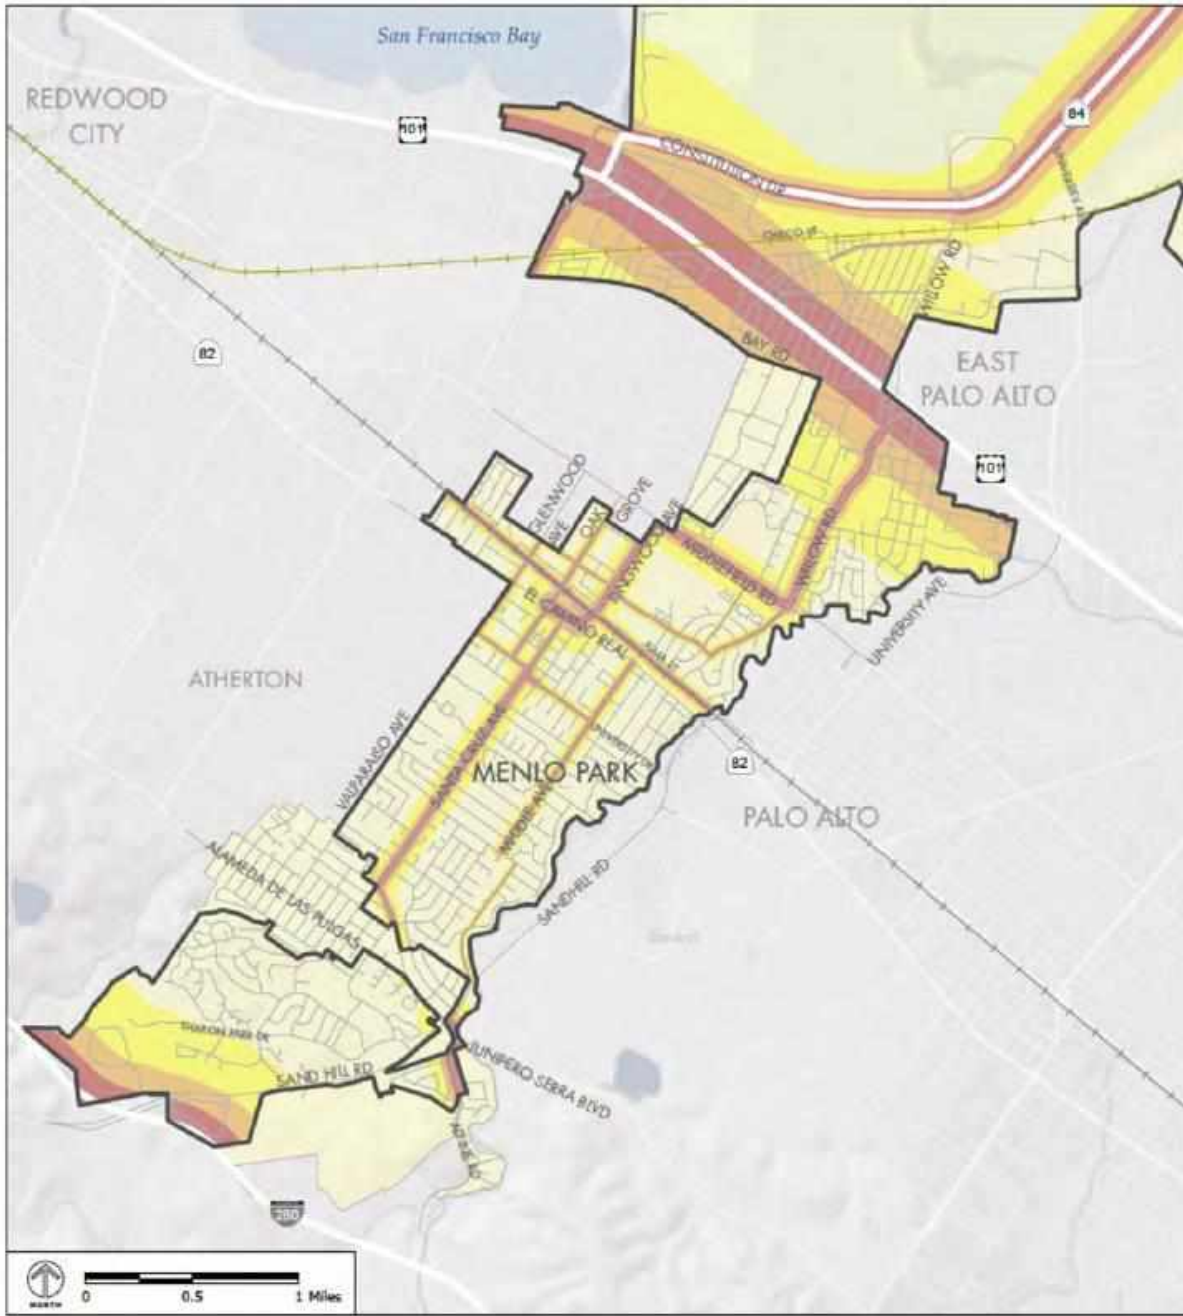

*City of Menlo Park General Plan.* The Noise Element of the City of Menlo Park General Plan provides the basis for code enforcement and other regulations, including implementation of the City's Noise Ordinance, to control nuisance noise. The 2035 Noise Contours for the City of Menlo Park was included in the General Plan and is shown below. The following goals, policies, and implementing programs established in the Noise Element would be applicable to the proposed project:

#### **Goal N1: Achieve Acceptable Noise Levels.**

Excessive noise is a concern for many residents of Menlo Park. These concerns can be managed with proper mitigation or through the implementation of the City's Noise Ordinance. The City of Menlo Park recognizes the issue of noise and has standards to protect the peace, health, and safety of residents and the community from unreasonable noise from any and all sources in the community and to strive to locate uses compatible to the area to minimize escalation of noise from mobile and stationary sources.

**POLICY N1.1: Compliance with Noise Standards:** Consider the compatibility of proposed land uses with the noise environment when preparing or revising community and/or specific plans. Require new projects to comply with noise standards of local, regional, and building code regulations, including but not limited to the City's Municipal Code, Title 24 of the California Code of Regulations, and subdivision and zoning codes.

**2035 Noise Contours**

Source: City of Menlo Park Open Space, Conservation, Noise and Safety Elements, adopted May 21, 2013.

**POLICY N1.2: Land Use Compatibility Noise Standards:** Protect people in new development from excessive noise by applying the City’s Land Use Compatibility Noise Standards for New Development to the siting and required mitigation for new uses in existing noise environments.

**Land Use Compatibility Noise Standards for New Development**

**POLICY N1.3 Exterior and Interior Noise Standards for Residential Use Areas:** Strive to achieve acceptable interior noise levels and exterior noise levels for backyards and/or common usable outdoor areas in new residential development, and reduce outdoor noise levels in existing residential areas where economically and aesthetically feasible.

**POLICY N1.4: Noise-Sensitive Uses:** Protect existing residential neighborhoods and noise sensitive uses from unacceptable noise levels and vibration impacts. Noise-sensitive uses include, but are not limited to, hospitals, schools, religious facilities, convalescent homes and businesses with highly sensitive equipment. Discourage the siting of noise-sensitive uses in areas in excess of 65 dBA CNEL without appropriate mitigation and locate noise-sensitive uses away from noise sources unless mitigation measures are included in development plans.

**POLICY N1.5: Planning and Design of New Development to Reduce Noise Impacts:** Design residential developments to minimize the transportation-related noise impacts to adjacent residential areas and encourage new development to be site planned and architecturally designed to minimize noise impacts on noise-sensitive spaces. Proper site planning can be effective in reducing noise impacts.

**POLICY N1.6: Noise Reduction Measures:** Encourage the use of construction methods, state-of-the-art noise abating materials and technology and creative site design including, but not limited to, open space, earthen berms, parking, accessory buildings, and landscaping to buffer new and existing development from noise and to reduce potential conflicts between ambient noise levels and noise-sensitive land uses. Use sound walls only when other methods are not practical or when recommended by an acoustical expert.

**POLICY N1.8: Potential Annoying or Harmful Noise:** Preclude the generation of annoying or harmful noise on stationary noise sources, such as construction and property maintenance activity and mechanical equipment.

**POLICY N1.9: Transportation Related Noise Attenuation:** Strive to minimize traffic noise through land use policies, traffic-calming methods to reduce traffic speed, law enforcement and street improvements, and encourage other agencies to reduce noise levels generated by roadways, railways, rapid transit, and other facilities.

**POLICY N1.10: Nuisance Noise:** Minimize impacts from noise levels that exceed community sound levels through enforcement of the City's Noise Ordinance. Control unnecessary, excessive and annoying noises within the City where not preempted by Federal and State control through implementation and updating the Noise Ordinance.

**IMPLEMENTING PROGRAM N1.A: Require Acoustical Studies.** Require acoustical studies for all new multi-family residential projects within the projected  $L_{dn}$  60 dB noise contours so that noise mitigation measures can be incorporated into project design and site planning.

**IMPLEMENTING PROGRAM N1.D: Minimize Construction Activity Noise.** Minimize the exposure of nearby properties to excessive noise levels from construction-related activity through CEQA review, conditions of approval and enforcement of the City's Noise Ordinance.

**IMPLEMENTING PROGRAM N1.J: Evaluate Noise Related Impacts of City Actions as Appropriate.** Analyze in detail the potential noise impacts of any actions that the City may take or act upon which could significantly alter noise level in the community.

*City of Menlo Park Municipal Code.* Chapter 8.06 of the City's Municipal Code provides provisions to protect the peace, health and safety of the City's citizens from unreasonable noises from all sources including, but not limited to, those specified in the chapter. The following sections of the Municipal Code are relevant for this project:

### Section 8.06.030 Noise Limitations.

- a. Except as otherwise permitted in this chapter, any source of sound in excess of the sound level limits set forth in Section 8.06.030 shall constitute a noise disturbance. For purposes of determining sound levels from any source of sound, sound level measurements shall be made at a point on the receiving property nearest where the sound source at issue generates the highest sound level. Sound level measurements shall be made with a precision sound level meter (Type 1 or 2) set to A-weighting, and "fast" response for fluctuating sound. Slow or fast response may be used for continual sources. For repetitive, impulsive sound, the one (1) second rms maximum level ( $L_{max}$ ) shall be used. For continuous sound, use the average level or  $L_{eq}$ . In multi-family residential structures, the microphone shall be placed no closer than three and one-half (3 1/2) feet from the wall through which the source of sound at issue is transmitting. The microphone shall also be placed five (5) feet above the floor regardless of whether the source of sound at issue transmits through the floor, ceiling or wall.
  - 1) For all sources of sound measured from any residential property:
    - A. "Nighttime" hours – fifty (50) dBA,
    - B. "Daytime" hours – sixty (60) dBA;
  - 2) For all sources of sound within a multifamily residential structure transmitting through a common interior partition (wall, floor or ceiling) from one (1) dwelling unit to another:
    - A. "Nighttime" hours – thirty-five (35) dBA,
    - B. "Daytime" hours – forty-five (45) dBA;
  - 3) Corrections for character of sound: In the event the alleged offensive noise contains a steady, audible tone, such as a whine, screech, beating, pulsating, throbbing or hum the standards set forth in Section 8.06.030(a)(1) and (2) shall be reduced by five (5) dB.
- b. Any and all excessively annoying, loud or unusual noises or vibrations such as offend the peace and quiet of persons of ordinary sensibilities and which interfere with the comfortable enjoyment of life or property and affect at the same time an entire neighborhood or any considerable number of persons shall be considered a noise disturbance.
- c. It shall be unlawful to create, permit, allow or maintain a noise disturbance in Menlo Park. (Ord. 892 § 2 (part), 1999).

**Section 8.06.040 Exceptions.** The following are exceptions to the noise limitations set forth in Section 8.06.030. These activities may occur at other times provided they meet the noise levels set forth in Section 8.06.030.

- a. Construction Activities.

- 1) Construction activities between the hours of eight (8) a.m. and six (6) p.m. Monday through Friday,
- 2) Residents/property owners personally undertaking construction activities to maintain or improve their property on Saturdays, Sundays or holidays between the hours of nine (9) a.m. and five (5) p.m.,
- 3) A sign, containing the permitted hours of construction activities exceeding the noise limits set forth in Section 8.06.030, shall be posted at all entrances to a construction site upon the commencement of construction, for the purpose of informing contractors and subcontractors and all other persons at the construction site of the basic requirements of this chapter. The sign shall be at least five (5) feet above ground level and shall consist of a white background with black letters,
- 4) Notwithstanding any other provision set forth above, all powered equipment shall comply with the limits set forth in Section 8.06.040(b);

b. Powered Equipment.

- 1) Powered equipment used on a temporary, occasional or infrequent basis operated between the hours of eight (8) a.m. and six (6) p.m. Monday through Friday. No piece of equipment shall generate noise in excess of eighty-five (85) dBA at fifty (50) feet,
- 2) Residents/property owners personally using powered equipment to maintain their property and/or residence on Saturdays, Sundays or holidays between the hours of nine (9) a.m. and five (5) p.m. No piece of equipment shall generate noise in excess of eighty-five (85) dBA at fifty (50) feet.

**Section 8.06.050 Exemptions.** The following noise disturbances shall be exempt from the noise limitations set forth in Section 8.06.030:

a. **Sound Generated by Motor Vehicles.** Sound generated by motor vehicles, trucks and buses operated on streets and highways, aircraft, trains, and other public transport.

- 1) This exemption shall not apply to the operation of any vehicle including any equipment attached to any vehicle (such as attached refrigeration and/or heating units or any attached auxiliary equipment) for a period in excess of ten (10) minutes in any hour while the vehicle is stationary, for reasons other than traffic congestion.
- 2) This exemption shall not apply to vehicles equipped with sound amplifiers which are not exempt. No person shall operate or drive any vehicle or cause any vehicle to be operated or driven, or otherwise used, on any public street, which vehicle is equipped with a sound amplifying device or other machine or device for the production or reproduction of sound, which causes sound to carry onto private property or causes

sound to be heard by others using the public streets or thoroughfares which exceeds the noise levels established in Section 8.06.030;

- b. **Emergencies.** Emergency repairs that deal with health or safety risk and emergency generators or powered equipment used during a power outage or other emergency;
- c. **Emergency Warning Devices.** Emergency warning devices such as fire alarms, burglar alarms, warning devices on emergency vehicles and train horns. This exemption shall not apply to the sounding of any burglar or fire alarm or any motor vehicle burglar alarm, except for emergency purposes, unless such alarm is terminated within ten (10) minutes of activation and no more than two (2) false activations within a four (4) hour period;
- d. **City and State Projects.** City and state construction work performed by the city and/or the state, their respective agents or contractors, for city and/or state maintenance, repair or construction projects which cannot be performed from seven (7) a.m. to six (6) p.m. Monday through Friday;
- e. **Special Events.** Any event or use for which a special event permit has been issued under Chapter [8.60](#) that specifically sets forth applicable noise levels;
- f. **Use Permits.** Any use for which a use permit has been issued by the city that specifically allows noise levels to be exceeded.
- g. **Athletic Fields/Playgrounds/Parks/Public Tennis Courts/Public Recreation Facilities.** From seven (7) a.m. to ten (10) p.m. any organized athletic events or activities occurring on athletic fields, playgrounds, parks, tennis courts or other public recreation facilities owned or operated by a school district, the city or the county; provided, no amplified music or sound system is utilized, unless a special events permit under Chapter [8.60](#) or a parks permit under Chapter [8.28](#) has been issued which sets forth applicable noise levels.

## Existing Noise Environment

Figure 1 shows the project site area on an aerial image of the site vicinity. As shown in this figure, the project site is surrounded by office uses to the north and south, a commercial use to the east, and a multi-family apartment complex to the west.

A noise monitoring survey consisting of two long-term (LT-1 and LT-2) and two short-term (ST-1, and ST-2) noise measurements was made at the site between Tuesday, October 24, 2023, and Friday, October 27, 2023. The existing noise environment at the site results primarily from vehicular traffic along Haven Avenue and traffic on U.S. Highway 101.

Long-term noise measurement LT-1 was made at the southwest corner of the site about 55 feet from the centerline of Haven Avenue. This measurement quantified the existing noise environment along the south portion of the project site along Haven Avenue. Hourly average noise levels at LT-1 typically ranged from 59 to 66 dBA  $L_{eq}$  during daytime hours (7:00 a.m. and 10:00 p.m.) and from 53 to 66 dBA  $L_{eq}$  during nighttime hours (10:00 p.m. and 7:00 a.m.). The Community Noise Equivalent Level (CNEL) ranged from 66 to 68 dBA. The daily trend in noise levels is shown in Figure 2.

Long-term noise measurement LT-2 was made at the northeast corner of the project site about 20 feet from the centerline of Haven Avenue. This measurement quantified the existing noise environment along the east portion of the project site along Haven Avenue. Hourly average noise levels at LT-2 typically ranged from 63 to 71 dBA  $L_{eq}$  during daytime hours and from 53 to 68 dBA  $L_{eq}$  during nighttime hours. The CNEL ranged from 70 to 73 dBA. The daily trend in noise levels is shown in Figure 3.

Table 4 summarizes the results of the short-term measurements.

**TABLE 4 Summary of Short-Term Noise Measurement Data (dBA)**

Noise Measurement Location	$L_{max}$	$L_{(1)}$	$L_{(10)}$	$L_{(50)}$	$L_{(90)}$	$L_{eq}$
ST-1: Southeast corner of project site (10/24/2023, 12:30 p.m. - 12:40 p.m.)	72	71	66	61	57	63
ST-2: Northwest corner of project site (10/24/2023, 12:30 p.m. - 12:40 p.m.)	61	60	55	52	51	53

## PLAN CONSISTENCY ANALYSIS

### Noise and Land Use Compatibility Thresholds

The Land Use Compatibility Noise Standards for New Development provided in the City’s General Plan indicate the following thresholds:

- The City’s “normally acceptable” exterior noise level standard is 65 dBA CNEL or less for the proposed multi-family residential land use. Up to 70 dBA CNEL is a conditionally acceptable noise level.
- The City’s acceptable interior noise level standard is 45 dBA CNEL or less for the proposed multi-family residential land use.

The existing measured noise conditions at the site indicate noise levels of up to 73 dBA CNEL at the northeast corner of the site (LT-2) and up to 68 dBA CNEL at the southwest corner of the site (LT-1).

The future noise environment at the project site would continue to result from transportation-related noise sources including traffic along Haven Avenue and U.S. Highway 101. The traffic study conducted for the project provides existing traffic volumes and projections of traffic volumes near the project site for the year 2040, both with and without the project's construction. Comparison between the existing traffic volumes and the 2040 cumulative traffic volumes with the project shows that there would be a 3 dBA CNEL increase in the noise environment around the project site. This 3 dBA CNEL increase was applied across the project site to represent worst-case future noise conditions.

#### *Future Exterior Noise Environment*

The site plan indicates three common outdoor spaces for project residents: a third-floor courtyard, fifth-floor deck, and a rooftop deck. The third-floor courtyard would include outdoor seating areas and possibly a swimming pool . This courtyard is located along the eastern façade of the project building. Private outdoor decks are located on floors three to eight along the south, west and north facades. Projected future exterior noise levels at the common outdoor areas and private outdoor decks are summarized in Table 5.

**TABLE 5 Future Exterior Noise Levels**

<b>Outdoor Use Area</b>	<b>Future Exterior Noise Level (dBA CNEL)</b>
Level 3 courtyard with swimming pool	66 to 69
Level 5 outdoor roof deck	69 to 72
Level 8 outdoor roof deck	61 to 64
Private decks (Levels 3 to 8)	67 to 74

As seen in Table 5, future noise levels at the common and private outdoor use areas are expected to exceed the City’s “normally acceptable” noise threshold of 65 dBA CNEL. It is recommended that the level 5 roof deck and private deck outdoor use areas be fitted with perimeter noise barriers

such as Plexiglass panels or laminated glass to reduce noise levels to either a "conditionally acceptable" (70 dBA CNEL) or a "normally acceptable" level (65 dBA CNEL). The noise barriers shall comply with the City of Menlo Park's bird-safe guidelines.

### *Future Interior Noise Environment*

Standard residential construction provides approximately 15 dBA of exterior-to-interior noise reduction, assuming the windows are partially open for ventilation. Standard construction with the windows closed provides approximately 20 to 25 dBA of noise reduction in interior spaces. Where exterior noise levels range from 60 to 65 dBA CNEL, the inclusion of adequate forced-air mechanical ventilation is often the method selected to reduce interior noise levels to acceptable levels by closing the windows to control noise. Where noise levels exceed 65 dBA CNEL, forced-air mechanical ventilation systems and sound-rated construction methods are normally required. Such methods or materials may include a combination of smaller window and door sizes as a percentage of the total building façade facing the noise source, sound-rated windows and doors, sound rated exterior wall assemblies, and mechanical ventilation so windows may be kept closed at the occupant's discretion.

Residential units located along the south façade of the proposed building would be subjected to an exterior noise level of about 74 dBA CNEL. These units would need forced-air mechanical ventilation systems and sound rated windows to bring noise levels to an acceptable level indoors to meet the City's 45 dBA CNEL threshold. Preliminary calculations indicate that windows and doors of units along the south façade of the proposed building would need to be rated at a minimum Sound Transmission Class (STC) of 35 to meet the City's interior noise threshold.

Units along the eastern façade would be subjected to an exterior noise level of about 71 dBA CNEL. Windows and doors of units along the east façade of the proposed building would need to be rated at a minimum of STC 30 to meet the City's interior noise threshold.

Units along the north and western façade of the proposed building would be subjected to an exterior noise level of about 66 dBA CNEL. Standard construction (STC 26) would be sufficient to reduce interior noise levels with closed windows.

A project specific acoustical analysis shall be prepared during the design phase of the project that would provide the exact STC ratings needed for walls, windows, and doors of the project buildings. These recommendations would ensure that the future interior noise within the buildings is maintained at or below 45 dBA CNEL.

### *Conditions of Approval*

**Exterior Noise Standard.** The project requires the installation of noise barriers such as Plexiglass or laminated glass panels to shield common outdoor spaces such as the third and fifth floor decks from traffic noise to satisfy a "conditionally acceptable" (70 dBA CNEL) level.

**Interior Noise Standard.** The project applicant shall prepare final design plans that incorporate building design and acoustical treatments as suggested above to ensure compliance with State

Building Codes and City noise standards. A project-specific acoustical analysis shall be prepared prior to the issuance of building permits to ensure that the design incorporates controls to reduce interior average noise levels to 45 dBA CNEL.

## **NOISE IMPACTS AND MITIGATION MEASURES**

This section describes the significance criteria used to evaluate project impacts under CEQA, provides a discussion of each project impact, and presents mitigation measures, where necessary, to reduce project impacts to less-than-significant levels.

### **Significance Criteria**

The following criteria were used to evaluate the significance of environmental noise resulting from the project:

- (a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- (b) Generation of excessive groundborne vibration or groundborne noise levels;
- (c) For a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels.

**Impact 1a Temporary Construction Noise.** Existing noise-sensitive multi-family residential land use located west of the project site would be exposed to a temporary increase in ambient noise levels. Implementation of previously adopted generally applicable mitigation measures would reduce this potentially significant temporary noise increase to a **less-than-significant** level.

The proposed project would demolish the existing 10,361-square foot commercial building and redevelop the project site with an eight-story (approximately 93 feet tall), 112-unit residential apartment building. Construction is expected to begin October 2024 and be completed by September 2026 (approximate 23-month period). Construction phases would include demolition, site preparation, grading, trenching, building construction, architectural coating, and paving. During each phase of construction, there would be a different mix of equipment operating, and noise levels would vary by phase and vary within phases, based on the amount of equipment in operation and the location at which the equipment is operating.

Noise impacts resulting from construction depend upon the noise generated by various pieces of construction equipment, the timing and duration of noise-generating activities, and the distance between construction noise sources and noise-sensitive areas. Construction noise impacts primarily result when construction activities occur during noise-sensitive times of the day (e.g.,

early morning, evening, or nighttime hours), the construction occurs in areas immediately adjoining noise-sensitive land uses, or when construction lasts over extended periods of time.

In addition to assessing construction noise relative to the noise standards of the Menlo Park Municipal Code, as described above, this analysis also identifies an increase of 10 dBA CNEL or more over existing ambient noise levels at sensitive receptor locations as a substantial temporary noise increase warranting the implementation of construction noise control measures, consistent with the analysis of the Subsequent EIR to the City's 2016 General Plan EIR, which was prepared in connection with the City's recent Housing Element Update (November 2022).

Construction activities generate considerable amounts of noise, especially during earth-moving activities when heavy equipment is used. The hauling of excavated materials and construction materials would generate truck trips on local roadways, as well. For the proposed project, pile driving, which generates excessive noise levels, is not expected. The typical range of maximum instantaneous noise levels for the proposed project would be 70 to 90 dBA  $L_{max}$  at a distance of 50 feet (see Table 6) from the equipment. Table 7 shows the hourly average noise level ranges, by construction phase, typical for various types of projects. Hourly average noise levels generated by construction are about 72 to 88 dBA  $L_{eq}$  for residential mixed-use buildings, measured at a distance of 50 feet from the center of a busy construction site. Construction-generated noise levels drop off at a rate of about 6 dBA per doubling of the distance between the source and receptor. Shielding by buildings or terrain often results in lower construction noise levels at distant receptors.

Equipment expected to be used in each construction stage are summarized in Table 8, along with the quantity of each type of equipment and the average noise level (CNEL) at 50 feet, assuming the operation of the two loudest pieces of construction equipment for each construction phase for the construction hours of 8:00 a.m. to 6:00 p.m. Federal Highway Administration's (FHWA's) Roadway Construction Noise Model (RCNM) was used to calculate the hourly average noise levels for each phase of construction, assuming the two loudest pieces of equipment would operate simultaneously, as recommended by the FTA for construction noise evaluations. This construction noise model includes representative sound levels for the most common types of construction equipment and the approximate usage factors of such equipment that were developed based on an extensive database of information gathered during the construction of the Central Artery/Tunnel Project in Boston, Massachusetts (CA/T Project or "Big Dig"). The usage factors represent the percentage of time that the equipment would be operating at full power.

A significant noise impact would be identified if construction required for the development of the proposed project generates a substantial temporary noise level increase 10 dBA CNEL or more over existing ambient noise levels at sensitive receptor locations. The construction equipment and phasing information in Table 8 was used to calculate construction levels on an average basis throughout the approximate 23-month construction period (average CNEL). The estimated average noise levels (average CNEL) at the nearest property lines projected from the center of the construction activity are given in Table 9.

**FIGURE 4 Aerial Project Site Image Showing Noise Sensitive Receptors in the Vicinity**

The existing ambient noise levels at ST-2, which represent the “quietest” off-site receptor locations, are about 53 dBA  $L_{eq}$ . To accurately estimate ambient noise levels in terms of CNEL, the measured  $L_{eq}$  values at different monitoring locations during the same time period, were compared. For instance, at 12:30 p.m., the ambient noise level at ST-2 was measured at 53 dBA  $L_{eq}$ , while at LT-2, it was 67 dBA  $L_{eq}$ . The 14 dBA difference between these measurements allows for the development of an adjustment to predict the CNEL at ST-2 based on the CNEL at LT-2. LT-2 has a CNEL of 70 to 73 dBA, which means that the CNEL at ST-2 would be estimated as 56 to 59 dBA. The same calculations, when repeated using LT-1 measurements, can be used to estimate the CNEL at ST-2 to be in the range of 59 to 61 dBA. The lower range of these ambient noise levels is used to conservatively estimate the potential impact from construction noise.

As shown in Table 9, noise levels from construction would range from 62 to 71 dBA CNEL, which is more than 10 dBA greater than the ambient noise levels. At the nearest residential receptor (R1), where estimated average construction noise would be 71 dBA CNEL, construction noise levels are about 12 to 15 dBA greater than the ambient conditions. Additionally, the construction noise levels are about 11 to 14 dBA greater than ambient conditions at the nearest office (C1), where estimated average construction noise would be 70 dBA CNEL. Therefore, temporary noise levels from construction of the proposed project are considered potentially significant at those locations (R1, C1) due to the increase above ambient noise. At other surrounding land uses (C2, C3, C4), construction noise levels would not exceed 10 dBA above ambient noise levels or the General Plan’s standard for acceptable noise levels at these receptors, and therefore, would not be considered a significant impact at those locations.

#### **Mitigation Measure NOI-1: Construction Noise Control.**

Project applicants shall minimize the exposure of nearby properties to excessive noise levels from construction-related activity through CEQA review, conditions of approval, and/or enforcement of the City’s Noise Ordinance. Prior to issuance of demolition, grading, and/or building permits for development projects, a note shall be provided on development plans indicating that during ongoing grading, demolition, and construction, the property owner/developer shall be responsible for requiring contractors to implement the following measures to limit construction-related noise:

- Demonstrate that any construction activities taking place outside daytime construction hours of 8:00 a.m. to 6:00 p.m. Monday through Friday shall comply with the 60 dBA  $L_{eq}$  limit during the hours of 7:00 a.m. to 8:00 a.m. and the 50 dBA  $L_{eq}$  limit during the hours of 6:00 a.m. to 7:00 a.m. In addition, the property owner/developer shall demonstrate that individual pieces of equipment proposed for use will not exceed the limit (85 dBA  $L_{eq}$  at 50 feet) for powered equipment noise and that combined construction noise will not result in a 10 dBA increase over the ambient noise level at nearby sensitive receptors. Activities that would produce noise above applicable daytime or nighttime limits shall be scheduled only during normal construction hours. If it is concluded that a particular piece of equipment will not meet the requirements of this mitigation measure, that equipment shall not be used outside the daytime construction hours.
- Verify construction activities are conducted at adequate distances or otherwise shielded with sound barriers, as determined through analysis, from noise-sensitive receptors when

working outside the daytime construction hours of 8:00 a.m. to 6:00 p.m. Monday through Friday and verify compliance with the Menlo Park Municipal Code through measurement.

- All internal combustion engines on construction equipment and trucks are fitted with properly maintained mufflers, air intake silencers, and/or engine shrouds that are no less effective than as originally equipped by the manufacturer.
- Stationary equipment such as generators and air compressors shall be located as far as feasible from nearby noise-sensitive uses.
- Stockpiling is located as far as feasible from nearby noise-sensitive receptors.
- Limit unnecessary engine idling to the extent feasible.
- Limit the use of public address systems.
- Construction traffic shall be limited to the haul routes established by the City of Menlo Park.
- Additional controls, as warranted, may include but are not limited to:
  - Upgraded construction equipment mufflers (e.g., improved mufflers, intake silencers, ducts, engine enclosures, acoustically attenuating shields, shrouds) on equipment and trucks used for Project construction.
  - Equipment staging plans (e.g., locating stationary equipment at adequate distances).
  - Limitations on equipment and truck idling.
  - Shielding sensitive receptors with sound barriers to comply with the Menlo Park Municipal Code

Pursuant to HEU SEIR Mitigation Measure NOI-1, the project would be required to implement the following additional project-specific measures to ensure the 10 dBA above ambient thresholds are not exceeded:

- Construct solid plywood fences around ground level construction sites adjacent to operational businesses, residences, or other noise-sensitive land uses. A temporary 8-foot noise barrier shall be constructed along the west and north property line of the project site to shield adjacent residential and office land uses from ground-level construction equipment and activities. The noise barrier shall be solid over the face and at the base of the barrier in order to provide a 5 dBA noise reduction. The noise barrier is required for the construction period prior to the Building Interior/Architectural Coating phase to meet the construction noise standards.
- Designate a “disturbance coordinator” who shall be responsible for responding to any complaints about construction noise. The disturbance coordinator shall determine the cause of the noise complaint (e.g., bad muffler, etc.) and shall require that reasonable measures be implemented to correct the problem. Conspicuously post a telephone number for the

disturbance coordinator at the construction site and include it in the notice sent to neighbors regarding the construction schedule.

With the implementation of the above measures and the City's Municipal Code requirements, the temporary construction noise impact would be reduced to a less-than-significant level.

**Impact 1b: Permanent Noise Level Increase/Exceed Applicable Standards.** The proposed project would not result in a substantial permanent noise level increase at receptors in the project vicinity. Operational noise levels generated by the proposed project would not exceed City's thresholds. This is a **less-than-significant** impact.

Typically, a significant permanent noise increase would occur if the project would increase noise levels at noise-sensitive receptors by 3 dBA CNEL or more where ambient noise levels equal or exceed the "normally acceptable" noise level standard. Where ambient noise levels are below the "normally acceptable" noise level standard, noise level increases of 5 dBA CNEL or more would be considered significant. The City's General Plan defines the "normally acceptable" outdoor noise level standard for the nearby multi-family residential land uses to be 65 dBA CNEL. Existing ambient levels, based on the measurements made in the project vicinity, exceed 65 dBA CNEL. Therefore, a significant impact would occur if traffic or operational noise due to the proposed project would permanently increase ambient levels by 3 dBA CNEL or more.

While the City's Noise Element does not include thresholds for residential or commercial buildings, the City's Municipal Code has noise limits of 60 dBA during "daytime" hours and 50 dBA during "nighttime" hours at receiving residential uses. There are no limits for noise at receiving commercial uses. Exceeding the above limits would not be considered a significant impact under CEQA; however, it is recommended that these limits be considered for design features in the proposed building.

#### *Project Traffic Increase*

The traffic study for the project includes existing and projected cumulative traffic volumes for 2040, both with and without the project. This project would generate 508 daily trips. Analysis of the net new project trips as per the project traffic study, shows a net of 218 new project trips compared to current conditions. This increase, set against the existing average daily traffic volume of approximately 7,595 vehicles, results in a noise level increase of less than 1 dBA CNEL due to project traffic. This is a less-than-significant impact.

#### *Mechanical Equipment*

Rooftop mechanical equipment typically included in similar projects are not shown in the site plan; however, some type of heating, ventilation and air conditioning (HVAC) equipment would be expected. These types of units typically cycle on and off continuously throughout a 24-hour period. This means that, at any given time, multiple units could be operating simultaneously in a relatively small vicinity of the rooftop. Typical heating pumps would generate noise ranging from 56 to 66 dBA at a distance of 3 feet. Assuming up to 10 heating pumps would run simultaneously at any given time, hourly average noise levels would range from 66 to 76 dBA  $L_{eq}$  at a distance of 3 feet.

Additionally, air handling units for buildings of this size typically generate noise levels up to 62 dBA at a distance of 20 feet. Assuming up to 10 air handling units would operate simultaneously at any given time, noise levels generated by the air handling units would be up to 72 dBA  $L_{eq}$  at 20 feet. When combined with the heating pumps, hourly average noise levels for the worst-case scenario would be up to 89 dBA  $L_{eq}$  at 3 feet.

The mechanical equipment located on the rooftops would be over 85 feet above the ground. All buildings in the immediate vicinity of the project site would be about 35 feet high or less. The elevation of the rooftop equipment would provide at least a 25 dBA reduction for all existing receptors. Table 10 below shows the estimated mechanical equipment noise propagated to the surrounding land uses that considers the effects of shielding provided by the elevated rooftops and the effects of distance from the closest sensitive residential and commercial receptors.

**TABLE 10 Estimated Operational Noise Levels for the Rooftop Equipment**

<b>Receptor</b>	<b>Distance from Rooftop Equipment</b>	<b>Maximum Hourly Noise (dBA <math>L_{eq}</math>)</b>	<b>Average Noise Level (dBA CNEL)</b>	<b>Noise Level Increase (dBA CNEL)</b>
North Office (3715 Haven Ave)	20 feet	48 <sup>a</sup>	55 <sup>a</sup>	0
West Residential (3645 Haven Ave)	30 feet	44 <sup>a</sup>	51 <sup>a</sup>	0

<sup>a</sup> A conservative 25 dBA reduction was applied to the noise levels due to the elevation of the rooftop equipment for existing receptors.

Based on the estimated noise levels in Table 10, mechanical equipment noise levels are not expected to exceed ambient conditions, or the City’s established 60 dBA daytime and 50 dBA nighttime Municipal Code noise standards at existing nearby land uses.

*Total Combined Project-Generated Noise*

The operational noise levels produced by the proposed project combined (i.e., traffic, mechanical equipment) would result in an increase of 1 dBA CNEL or less at all existing noise-sensitive receptors in the project vicinity. Therefore, the proposed project would not result in a substantial increase over ambient noise levels in the project vicinity.

**Mitigation Measure 1b: None Required.**

**Impact 2: Exposure to Excessive Groundborne Vibration.** Construction-related vibration levels would not exceed applicable vibration thresholds at nearby sensitive land uses. **This is a less-than-significant impact.**

The construction of the project may generate perceptible vibration when heavy equipment or impact tools (e.g., jackhammers, hoe rams) are used. Construction activities would include demolition, site preparation work, foundation work, and new building framing and finishing along

with paving. Pile driving equipment, which can cause excessive vibration, is not expected to be required for the proposed project.

The California Department of Transportation recommends a vibration limit of 0.5 in/sec PPV for buildings structurally sound and designed to modern engineering standards, which typically consist of buildings constructed since the 1990s. Buildings adjoining the site would fall into this category. Conservative vibration limits of 0.3 in/sec PPV have been used for buildings that are found to be structurally sound but where structural damage is a major concern (see Table 3 above for further explanation). No known historic buildings are located near the project site and, therefore, the lower vibration limits are not further discussed.

Table 11 summarizes the vibration levels at each of the surrounding buildings in the project vicinity. Vibration levels are highest close to the source and then attenuate with increasing distance at the rate  $\left(\frac{D_{ref}}{D}\right)^{1.1}$ , where  $D$  is the distance from the source in feet and  $D_{ref}$  is the reference distance of 25 feet. While construction noise levels increase based on the cumulative equipment in use simultaneously, construction vibration levels would be dependent on the location of individual pieces of equipment. That is, equipment scattered throughout the site would not generate a collective vibration level, but a vibratory roller, for instance, operating near the project site boundary would generate the worst-case vibration levels for the receptor sharing that property line. Further, construction vibration impacts are assessed based on the potential for damage to buildings on receiving land uses, not at receptors at the nearest property lines. Construction activities at the project site would not exceed the 0.5 in/sec PPV threshold.

**TABLE 11 Vibration Source Levels for Construction Equipment**

Equipment	PPV (in/sec) Estimated at Nearest Buildings Adjoining the Project Site	
	West Multi-Family Residence (30 ft)	North Office (15 ft)
Clam shovel drop	0.165	0.354
Hydromill (slurry wall)	in soil	0.007
	in rock	0.014
Vibratory roller	0.172	0.368
Hoe ram	0.073	0.156
Large bulldozer	0.073	0.156
Caisson drilling	0.073	0.156
Loaded trucks	0.062	0.133
Jackhammer	0.029	0.061
Small bulldozer	0.002	0.005

Source: Transit Noise and Vibration Impact Assessment Manual, Federal Transit Administration, Office of Planning and Environment, U.S. Department of Transportation, September 2018, as modified by Illingworth & Rodkin, Inc., December 2023.

A study completed by the US Bureau of Mines analyzed the effects of blast-induced vibration on buildings in USBM RI 8507.<sup>1</sup> The findings of this study have been applied to buildings affected by construction-generated vibrations.<sup>2</sup> As reported in USBM RI 8507<sup>3</sup> and reproduced by Dowding,<sup>4</sup> Figure 5 presents the damage probability, in terms of “threshold damage,” “minor damage,” and “major damage,” at varying vibration levels. Threshold damage, which is described as cosmetic damage in this report, would entail hairline cracking in plaster, the opening of old cracks, the loosening of paint or the dislodging of loose objects. Minor damage would include hairline cracking in masonry or the loosening of plaster, and major structural damage would include wide cracking or shifting of foundation or bearing walls.

As shown in Figure 5, maximum vibration levels of 0.368 in/sec PPV or lower would not result in any chance of cosmetic damage. No cosmetic, minor or major damage would be expected at the conventional buildings immediately adjoining the project site. At these locations, and in other surrounding areas where vibration would not be expected to cause cosmetic damage, vibration levels may still be perceptible. However, as with any type of construction, this would be anticipated and would not be considered significant, given the intermittent and short duration of the phases that have the highest potential of producing vibration (use of jackhammers and other high-power tools). By use of administrative controls, such as notifying neighbors of scheduled construction activities, the effects of perceptible vibration can be minimized. This is a less-than-significant impact.

**Mitigation Measure 2:       None Required.**

<sup>2</sup> Dowding, C.H., Construction Vibrations, Prentice Hall, Upper Saddle River, 1996.

**FIGURE 5 Probability of Cracking and Fatigue from Repetitive Loading**

Source: Dowding, C.H., Construction Vibrations, Prentice Hall, Upper Saddle River, 1996, as modified by Illingworth & Rodkin, Inc., December 2023.

**Impact 3 Exposure of Residents or Workers to Excessive Noise Levels in the Vicinity of a Private Airstrip or an Airport Land Use Plan.** The project site would not be exposed to aircraft noise levels of 65 dBA CNEL or greater. **This is a less-than-significant impact.**

As per the City's General Plan Noise Element, Menlo Park is located approximately 6 miles to the northwest of Moffet Federal Airfield, 14 miles to the northwest of the San José International Airport, 15 miles to the southeast of San Francisco International Airport, and 18 miles to the south of Oakland International Airport. Menlo Park is also located in close proximity to two smaller airports; with portions of Menlo Park as near as 4 miles from the Palo Alto Airport and other areas of Menlo Park as near as approximately 4 miles from the San Carlos Airport. Additional small airports in the vicinity include the Hayward Executive Airport, approximately 11 miles away, and the Half Moon Bay airport, approximately 16 miles away. Although Menlo Park does receive some noise from aircraft using these facilities, Menlo Park does not fall within the airport land use planning areas, runway protection zones, or the 55 dBA CNEL noise contours of any of these airports.

Noise levels resulting from aircraft would be less than 65 dBA CNEL at the project site, resulting in a less-than-significant impact in terms of noise exposure from aircraft.

**Mitigation Measure 3: None Required.**

**Cumulative Impacts**

Cumulative noise impacts would include either cumulative traffic noise increases under future conditions or temporary construction noise from cumulative construction projects.

A significant cumulative traffic noise increase would occur if two criteria are met: 1) if the cumulative traffic noise level increase was 3 dBA CNEL or greater for future levels exceeding 60 dBA CNEL or was 5 dBA CNEL or greater for future levels at or below 60 dBA CNEL; and 2) if the project would make a "cumulatively considerable" contribution to the overall traffic noise increase. A "cumulatively considerable" contribution would be defined as an increase of 1 dBA CNEL or more attributable solely to the proposed project.

Future 2040 cumulative traffic volumes showed a 3 dBA CNEL increase from existing volumes along Haven Avenue. But, looking at projected traffic volumes solely from the project, the associated noise level increase is less than 1 dBA CNEL. The project would not result in a cumulatively considerable contribution to the overall noise increase. This would be a less-than-significant impact.

Cumulative noise impacts from temporary construction typically arise when multiple construction phases of different projects occur simultaneously within 1,000 feet of the proposed project site. If construction from different projects overlaps in this area, sensitive receptors may experience an additive effect, with noise levels increasing due to the combined operation of multiple pieces of construction equipment. This cumulative increase in noise levels from simultaneous overlap of construction phases is generally limited to within 500 feet of a proposed project site since noise

levels drop down by 6 dB each time the distance from the source is doubled. This report uses a conservative 1,000 feet distance from the proposed project site to assess cumulative impacts from construction to nearby common sensitive receptors.

Here, no other planned or proposed projects are located within 1,000 feet of the project site.<sup>3</sup> Therefore, there would not be any cumulative construction impacts.

## 1.0 EXECUTIVE SUMMARY

This Housing Needs Assessment (HNA) provides an analysis of housing supply and housing demand impacts of the proposed 3705 Haven Avenue Project (Project) in the City of Menlo Park (City) and evaluates the potential that the proposed Project could contribute to displacement of existing residents within the City of East Palo Alto and the Belle Haven neighborhood of Menlo Park, two proximate communities identified as having risk factors for displacement. The HNA is part of a range of analyses provided to assist in the decision-making and entitlement process for the proposed Project and accompanies the Project's environmental analysis. An HNA is, however, not a requirement of the California Environmental Quality Act (CEQA). Preparation of this HNA is required under the terms of a 2017 settlement agreement between the cities of Menlo Park and East Palo Alto<sup>1</sup>.

The proposed Project is located on an approximately 0.66 acre site at 3705 Haven Avenue in Menlo Park. The proposed Project includes 112 new multifamily rental units and replaces an existing 10,361 square foot one-story commercial office building. A summary of the proposed Project is provided in Table 1-1, below.

<b>Table 1-1. Project Summary</b>		
	<b><u>Residential Units</u></b>	<b><u>Building Area</u></b>
<b>Proposed Multifamily Rental Units</b>	112 Units	117,781 SF
<b>Existing Commercial Building [To Be Demolished]</b>		(10,361 SF)
<b>Net Change With Project</b>	112 Units	107,420 SF

*Note: building area figures exclude parking structure*

## 1.1 Housing Availability

The term "housing availability" is used to refer to the combined net housing supply and housing demand impacts of the proposed Project taking into consideration:

- a) Construction of new housing units, which adds to housing availability through additions to the housing supply;
- b) Removal of existing jobs, which adds to housing availability by reducing demand for housing by employees; and

---

<sup>1</sup> In 2016, the City updated its General Plan, specifically the land use and circulation elements, commonly referred to as ConnectMenlo. The City completed and certified a program level EIR for ConnectMenlo, which determined that there would be a less than significant impact on population and housing, except cumulative impacts projected to be reduced to less than significant following an update of ABAG regional forecasts. However, pursuant to the terms of the 2017 *City of East Palo Alto v. City of Menlo Park* Settlement Agreement, which settled the lawsuit regarding the ConnectMenlo EIR, preparation of this HNA is required.

- c) Addition of new jobs, which reduces housing availability by increasing demand for housing by employees.

HNAs prepared for projects that are exclusively non-residential have not used the term “housing availability” because these projects impact only the demand, or need, for housing.

## 1.2 Net Impact on Housing Availability

The proposed Project is estimated to increase the number of available housing units by 112 units as shown in Table 1-2. This estimate reflects the combined effect of:

1. The 112 new residential units added to the housing supply by the proposed Project.
2. A 25-unit increase in housing availability from removal of existing on-site jobs, which reduces worker housing demand. Removal of the existing building removes an estimated 46 on-site jobs. Removal of 46 jobs translates to a net reduction in employee<sup>2</sup> housing demand of 25 units based on 1.86 workers per housing unit<sup>3</sup>. See Section 4 for supporting analysis.
3. A 2-unit decrease in housing availability due to added housing demand from new on-site workers related to the on-site property management and maintenance of the residential units. A combined 3 jobs are estimated to be added on-site, which translates into an estimated employee housing demand of 2 units based on 1.86 workers per housing unit. See Section 4 for supporting analysis.
4. A 23-unit decrease in housing availability due to added housing demand by workers in off-site services to new residents such as restaurants, retail, education, medical care and others. This estimate reflects consideration of “multiplier effects” of household spending by residents of the new units consistent with the 2017 settlement agreement. Analysis supporting this estimate is provided in Section 5.

<b>Table 1-2. Estimated Net Impact of Project on Housing Availability</b>	
New Residential Units	112 Units
Reduced Housing Demand from removal of on-site jobs	25 Units
Less: Added Housing Demand from new on-site jobs	(2 Units)
Less: Added Housing Demand off-site workers in services to new residents	(23 Units)
<b>Net Increase in Available Housing</b>	<b>112 Units</b>

<sup>2</sup> The terms “worker” and “employee” are used interchangeably.

<sup>3</sup> This factor reflects the average number of workers per working household and is derived from U.S. Census data. See additional discussion under Step 2 on page 21.

### 1.3 Net Impact on Housing Availability by Income Category

The net impact on housing availability is estimated for each of the following six affordability categories, each expressed in relation to local Area Median Income (AMI):

- Extremely Low Income – households up to 30% of AMI;
- Very Low Income – households over 30% up to 50% of AMI;
- Low Income – households over 50% up to 80% of AMI;
- Moderate Income – households over 80% up to 120% of AMI;
- Above Moderate Income – households over 120% up to 150% of AMI; and
- Over 150% of AMI – households above 150% of AMI.

According to the California Department of Housing and Community Development (HCD), the AMI for a family of four in San Mateo County, is \$186,600 as of 2024. Section 2 provides income limits applicable to each of the identified income categories. The affordability categories from 0% through 120% AMI reflect those addressed by statewide housing programs such as the Regional Housing Needs Allocation (RHNA) process. In addition, the Above Moderate Income tier is included in the analysis for consistency with HNAs prepared for prior projects in Menlo Park and to provide decision makers with information regarding a broad spectrum of housing affordability levels. Above Moderate Income households also face affordable housing challenges in Menlo Park as well as in the broader Bay Area. In fact, due to the high cost of housing, housing affordability challenges also extend to households earning over 150% of AMI<sup>4</sup>, particularly in the for-sale housing market. The Over 150% of AMI category captures households with incomes that exceed 150% AMI and includes all households not included within one of the other income categories.

#### *Affordability Mix of Proposed Residential Units*

The Project is proposed to include ten Very Low Income Below Market Rate (BMR) units, four Moderate Income BMR units, and 98 market rate units. The proposed BMR units are to satisfy requirements of the City's Below Market Rate Housing Program, community amenity requirements for bonus level development, and qualify the Project for a State density bonus. See Section 3.1 for additional information.

---

<sup>4</sup> An income of approximately 277% of AMI, is estimated to be needed to afford the median priced home in Menlo Park. The median priced home in Menlo Park is \$2.65 million based on home sales from September 2022 through September 2023 from real estate data service provider CoreLogic. Estimates assume a down payment of 30% based on the median down payment for home purchases with a mortgage in Menlo Park, estimated from CoreLogic data during this period, 35% of income spent on housing, and a mortgage interest rate of 7% based on 30-year fixed mortgage rates from Freddie Mac Primary Mortgage Market Survey as of September 2023.

### *Net Impact on Housing Availability by Income Level*

The estimated net impacts on housing availability by income category are presented in Table 1-3. The findings represent the net result of:

- 1) 112 new housing units added to the housing supply, comprised of ten BMR units affordable to Very Low Income, four BMR units affordable to Moderate Income (14 BMR units in total), and 98 market rate units.
- 2) 25 units of increased housing availability across a range of income levels from removal of existing on-site jobs and related worker housing demand;
- 3) A 2-unit decrease in housing availability, including one Very Low and one Moderate Income unit, from addition of on-site jobs and related worker housing demand; and
- 4) A 23-unit decrease in housing availability across a range of income levels due to new housing demand by workers in services to new residents.

The net result is a 112-unit increase in available housing across various income categories, comprised of eight Very Low, 100 Moderate, two Above Moderate and seven Over 150% AMI units, which gross increase is partially offset by decreases in housing availability for Extremely Low, and Low Income households of three units and two units, respectively. The calculations are shown in Table 1-3.

Ten Very Low Income and four Moderate Income units to be constructed as part of the proposed Project would be deed-restricted BMR units. Of the 98 total market rate units, 97 are estimated to be affordable to Moderate Income households and one (the three-bedroom) is estimated to be affordable to Above Moderate Income households. Based on the size of the units and achievable market rate rents, 97 of the market rate units are estimated to fall within a range that is affordable to Moderate Income. Market rate units would **not** be deed-restricted BMR units, would not be restricted for occupancy by Moderate Income households, and could be occupied by households that have incomes that exceed income criteria for Moderate Income. Market rents are also free to adjust in response to rental market conditions and therefore affordability of the market rate units may adjust as well. The City's BMR Program Guidelines provide that BMR unit rents may not exceed 75% of market rate, a limitation that does not apply to market rate units estimated to be affordable to Moderate Income, which would be expected to have higher rents than the Moderate Income BMR units.

**Table 1-3. Net Impacts on Housing Availability by Income Category**

	Extremely Low	Very Low	Low	Moderate	Above Moderate	Over 150% AMI	Total
1. Increase in available housing from construction of new units	0	10	0	101	1	0	112
2. Increase in available housing from removal of existing on-site jobs, which reduces worker housing demand	1	2	4	7	2	9	25
3. Decrease in available housing from increase in housing demand by new on-site workers	0	(1)	0	(1)	0	0	(2)
4. Decrease in available housing from increase in housing demand by off-site workers in services to new residents	(4)	(3)	(6)	(7)	(1)	(2)	(23)
<b>Net Increase in Housing Availability <sup>(1)</sup></b>	<b>(3)</b>	<b>8</b>	<b>(2)</b>	<b>100</b>	<b>2</b>	<b>7</b>	<b>112</b>

(1) Negative figures represent a net increase in housing demand that is not offset by added housing supply.

Findings represent the total estimated housing availability impacts throughout the region and include impacts both within Menlo Park as well as in other jurisdictions where workers who hold on-site or off-site jobs live. See Section 1.4 for an estimate of impacts within Menlo Park.

Following is a brief description of the approach used for each component of the analysis.

- (1) *Residential units* – the affordability level of new residential units reflects the Project applicant’s proposal for compliance with the City’s BMR Program guidelines and State Density Bonus. For the market rate units, the affordability level is based on estimated market rate rents and the household income necessary to afford these rents. See Section 3 for additional description.
- (2) *Increase in available housing from removal of on-site jobs* – The decrease in worker housing demand is estimated based on the number of jobs in the existing commercial building that will be removed. Ratios derived from the U.S. Census are used to translate the decrease in employment to a decrease in worker housing demand. The decrease in worker housing demand by income category is identified by comparing estimated household incomes of workers to household income limits for the six affordability categories addressed in the analysis. Housing demand by income applicable to the existing commercial building is estimated using publicly available data on worker occupations and is reflective of the existing commercial tenants. See Section 4 for additional description.
- (3) *Decrease in available housing from addition of on-site jobs* – The increase in worker housing demand from the addition of new on-site jobs is based on the estimated number of jobs in on-site property management and maintenance of the residential units. Ratios derived from the U.S. Census are used to translate the number of jobs into worker

housing demand. Worker housing demand by income category is estimated using publicly available data on worker compensations. See Section 4 for additional description.

- (4) *Decrease in available housing due to added off-site jobs in services to new residents* – The analysis estimates the income of households renting the new residential units, their demand for goods and services such as groceries, restaurants, and healthcare, the off-site jobs created by the additional demand, and the housing needs by income level of workers who will hold these new jobs. See Section 5 for additional description.

#### **1.4 Menlo Park Share of Net Impact on Housing Availability**

This section provides an estimate of the share of the proposed Project's impacts on housing availability that occur in the City of Menlo Park. Findings of the prior section represent total estimated impacts regardless of the jurisdiction in which impacts occur. The portion of total housing availability impacts that occur in Menlo Park are estimated using the following approach:

- (1) All 112 residential units added by the proposed Project are in the City of Menlo Park; therefore, all 112 units are identified as additional housing supply in Menlo Park.
- (2) One of the 25 total units of increased housing availability from removal of on-site jobs are estimated to be in Menlo Park based on application of the existing 5.7% share of Menlo Park workers who live in the City. The City Council has expressed an interest in improving the jobs housing balance and obtaining data to inform the goal of increasing the number of workers who live and work in Menlo Park. Therefore, for informational purposes, the report provides a separate "increased commute share" estimate based on a 20% commute share, which was a goal identified in the City's 2000 Commercial Linkage Fee Nexus Study. With a 20% increased commute share, five of the 25-unit increase in housing availability from removal of on-site jobs is estimated to be within Menlo Park.
- (3) None of the two units of added regional housing demand from new on-site jobs is estimated to be in Menlo Park as application of the existing 5.7% share of Menlo Park workers who live in the City results in a fraction that rounds to zero. Similarly, the estimate using a 20% commute share also rounds to zero units of regional housing demand within Menlo Park.
- (4) One of 23 total units of added regional housing demand from new off-site jobs is estimated to be within Menlo Park based on the existing 5.7% share of Menlo Park workers who live in the City. With a 20% increased commute share, five units of regional housing demand is estimated within Menlo Park.

*Current Commute Share Estimate* – Assuming the current 5.7% commute share is maintained, the estimated net increase in housing availability in Menlo Park with the Project is 112 units (112 units = 112 new units, plus one unit of added housing availability from the removal of on-site jobs, minus one unit of new off-site employee housing demand in Menlo Park).

*Increased Commute Share Estimate* – Applying an increased commute share goal of 20%, the net increase in housing availability in Menlo Park is also 112 units (112 units = 112 new units, plus five units of added housing availability from removal of on-site jobs, minus five units of new off-site employee housing demand in Menlo Park).

Table 1-4 identifies the breakout of the net impact on housing availability in Menlo Park by income category for the two commute share alternatives.

Table 1-4. Estimated Menlo Park Share of Net Impacts on Housing Availability							
	Extremely Low	Very Low	Low	Moderate	Above Moderate	Over 150% AMI	Total
Current Commute Share (5.7%)	-	10	-	100	1	1	112
Increased Commute Share (20%)	(1)	9	-	100	2	2	112

Assuming the current 5.7% commute share, the estimated 112-unit net increase in housing availability in Menlo Park consists of ten Very Low, 100 Moderate, one Above Moderate, and one Over 150% AMI units.

With an increased 20% commute share, the estimated 112-unit net increase in housing availability in Menlo Park consists of nine Very Low, 100 Moderate, two Above Moderate and two Over 150% AMI units, offset by a net decrease in housing availability in the Extremely Low category of one unit.

See Section 6.2 for the supporting analysis.

## 1.5 Displacement Analysis

Displacement occurs when housing or neighborhood conditions force existing residents to move, or households feel like their move is involuntary. Displacement can be caused by a range of physical, economic and social factors including but not limited to foreclosure, condominium conversion, building deterioration or condemnation, increased taxes, natural disasters, eminent

domain and increases in housing costs<sup>5, 6, 7</sup>. The HNA is focused on economic drivers of displacement, specifically the potential for the proposed Project to affect the local housing market and contribute to increasing housing costs.

While displacement is not an impact for the purposes of the California Environmental Quality Act (CEQA), displacement has become an increasing regional concern in the Bay Area. A map produced by the Urban Displacement Project, a research and action initiative of UC Berkeley that aims to understand and describe the nature of gentrification and displacement, identifies numerous communities as undergoing displacement or at risk of displacement that extend from San Francisco down the Peninsula to many neighborhoods in San Jose and the East Bay.

The displacement analysis addresses the potential for the proposed Project to contribute to displacement of existing residents in two nearby communities, the City of East Palo Alto (East Palo Alto) and Menlo Park's Belle Haven neighborhood (Belle Haven). These communities have risk factors for displacement based on their relatively lower-income existing population that includes a high percentage of households who spend 35% or more of their income on housing. They are identified by the Urban Displacement Project<sup>8</sup> as experiencing on-going gentrification and/or displacement or being at risk of displacement. Another recent study of baseline housing conditions in the Belle Haven neighborhood, City of East Palo Alto, and North Fair Oaks neighborhood, prepared by the UC Berkeley Center for Community Innovation and its Y-PLAN initiative, identified similar conclusions<sup>9</sup>.

Because the proposed Project adds to the supply of market rate and affordable housing and results in a net increase in available housing both regionally and in Menlo Park, the proposed Project is not anticipated to contribute to displacement in East Palo Alto or Belle Haven. This conclusion is supported by recent research on localized market effects of new housing

development indicating a reduction or moderating effect on market rents in the vicinity<sup>10</sup>. Increasing the availability of market rate and affordable housing will tend to moderate or counteract displacement pressures to some degree by relieving market pressures on existing housing stock.

## 2.0 INTRODUCTION

This Housing Needs Assessment (HNA) provides an analysis of the proposed Project's impact on housing supply and housing demand and evaluates its potential to contribute to displacement of existing residents of the City of East Palo Alto (East Palo Alto) and the Belle Haven neighborhood of Menlo Park (Belle Haven), two proximate communities identified as having risk factors for displacement. The report has been prepared by Keyser Marston Associates (KMA) for the City of Menlo Park under a subcontract agreement with David J. Powers & Associates, Inc., prime consultant responsible for preparation of the Project's environmental analysis.

In 2016, the City updated its General Plan, specifically the land use and circulation elements, and its Zoning Ordinance (commonly referred to as ConnectMenlo). The City completed and certified a program level EIR for ConnectMenlo, which determined that there would be a less than significant impact on population and housing, except cumulative impacts projected to be reduced to less than significant following an update of ABAG regional forecasts. However, pursuant to the terms of the 2017 *City of East Palo Alto v. City of Menlo Park* Settlement Agreement, which settled the lawsuit regarding the ConnectMenlo EIR, preparation of this HNA is required. This HNA has been prepared consistent with the terms of that settlement agreement.

The following housing-related topics are addressed in this HNA:

- 1) Net impact on housing availability from the proposed Project, by income level, based on the combined effects of:
  - a. Added residential units;
  - b. Reduced worker housing need with removal of the existing commercial building;
  - c. Added housing needs for workers in residential property management; and
  - d. Added housing needs for workers in off-site retail and other services to residents of the new residential units.
- 2) Share of housing availability impacts estimated to occur within the City of Menlo Park; and
- 3) Potential for the proposed Project to contribute to rising housing costs and displacement of existing residents in East Palo Alto and Belle Haven.

These housing-related impacts are not required to be analyzed under the California Environmental Quality Act (CEQA) since economic or social changes are not considered significant effects on the environment. Nevertheless, this information is required by the settlement agreement and may be of interest to decision-makers and/or the public in evaluating the merits of the proposed Project.

## 2.1 Project Description

3705 Haven, LLC (Project Sponsor) is proposing construction of a new 112-unit multifamily rental apartment building. The proposed Project is located on an approximately 0.66 acre site at 3705 Haven Avenue in Menlo Park. The proposed Project replaces an existing commercial building on the Project site encompassing 10,361 square feet of building area. Table 2-1 provides a summary of the proposed Project.

Table 2-1. Project Summary		
	<u>Residential Units</u>	<u>Building Area</u>
<b>Proposed Multifamily Rental Units</b>	112 Units	117,781 SF
<b>Existing Commercial Building [To Be Demolished]</b>		(10,361 SF)
<b>Net Change With Project</b>	112 Units	107,420 SF

*Note: building area figures exclude parking structure*

## 2.2 Income Definitions

The income levels or tiers used in the analysis are expressed in relation to local Area Median Income (AMI). For example, Extremely Low Income is defined as households earning up to 30% of AMI. The AMI for each county or group of counties is issued annually by the U.S. Department of Housing and Urban Development (HUD) and released by the California Department of Housing and Community Development (HCD). Most housing programs and policies in California and its jurisdictions utilize these income definitions. The City of Menlo Park is covered by and utilizes the AMI information provided for San Mateo County.

Per HCD and statewide programs, the analysis includes households earning less than 120% AMI. In addition, an Above Moderate Income tier covering 120% to 150% AMI is presented in this analysis because this income tier also faces affordable housing challenges in Menlo Park and the greater Bay Area. In fact, due to the high cost of housing in Menlo Park, housing affordability challenges even extend to households earning more than 150% of AMI<sup>11</sup>, especially in the for-sale housing market. As with HNAs prepared for prior projects in Menlo Park, the Above Moderate Income tier was included to provide decision makers more information on the housing needs of a broad spectrum of housing affordability levels.

In summary, the income tiers used in the analysis are:

---

<sup>11</sup> An income of approximately 277% of AMI, is estimated to be needed to afford the median priced home in Menlo Park. The median priced home in Menlo Park is \$2.65 million based on home sales from September 2022 through September 2023 from real estate data service provider CoreLogic. Estimates assume a down payment of 30% based on the median down payment for home purchases with a mortgage in Menlo Park, estimated from CoreLogic data during this period, 35% of income spent on housing, and a mortgage interest rate of 7% based on 30-year fixed mortgage rates from Freddie Mac Primary Mortgage Market Survey as of September 2023.

- *Extremely Low Income* – households up to 30% of AMI;
- *Very Low Income* – households over 30% up to 50% of AMI;
- *Low Income* – households over 50% up to 80% of AMI;
- *Moderate Income* – households over 80% up to 120% of AMI;
- *Above Moderate Income* – households over 120% up to 150% of AMI; and
- *Over 150% of AMI* – households above 150% of AMI.

The 2024 income limits by household size for San Mateo County are presented below in Table 2-2.

Table 2-2. 2024 Household Income Limits San Mateo County		Household Size					
		1-person	2-person	3-person	4-person	5-person	6-person
Extremely Low Income	30% of AMI	\$41,150	\$47,000	\$52,900	\$58,750	\$63,450	\$68,150
Very Low Income	50% of AMI	\$68,550	\$78,350	\$88,150	\$97,900	\$105,750	\$113,600
Low Income	80% of AMI	\$109,700	\$125,350	\$141,000	\$156,650	\$169,200	\$181,750
Moderate Income	120% of AMI	\$156,750	\$179,100	\$201,500	\$223,900	\$241,800	\$259,700
Above Moderate	150% of AMI	\$174,300	\$199,200	\$224,100	\$249,000	\$268,950	\$288,825
Median Income	100% of AMI	\$130,600	\$149,300	\$167,950	\$186,600	\$201,550	\$216,450

AMI = Area Median Income, San Mateo County 2024

### 2.3 Report Organization

This report is organized into seven sections and one appendix:

- Section 1.0 provides an Executive Summary;
- Section 2.0 provides an Introduction;
- Section 3.0 identifies the income categories applicable to the new residential units;
- Section 4.0 provides an analysis of worker housing needs from removal of existing on-site jobs and addition of new on-site jobs;
- Section 5.0 estimates housing demand by income for off-site workers in services to new residents such as restaurants, retail and health care;
- Section 6.0 combines the findings of Sections 3, 4 and 5 to estimate the net impact on housing availability and the share of net impacts occurring within the City of Menlo Park;
- Section 7.0 provides a discussion of the potential for the proposed Project to contribute to displacement of existing residents in East Palo Alto and Belle Haven; and
- Appendix A provides supporting tables on worker occupation and incomes.

## **2.4 Data Sources and Qualifications**

The analysis in this report has been prepared using the best and most recent data available from sources including the American Community Survey (ACS) of the U.S. Census, the U.S. Bureau of Labor Statistics Occupational Employment Survey, California Employment Development Department, commercial data providers CoStar, CoreLogic, and data from the Project Sponsor on tenants within the existing office building. Local data was used wherever possible. Other sources are noted in the text and footnotes. While KMA believes all sources utilized are sufficiently accurate for the purposes of the analysis, KMA cannot guarantee their accuracy. KMA assumes no liability for information from these or other sources.

### 3.0 HOUSING UNITS ADDED BY THE PROJECT BY INCOME CATEGORY

This section estimates how the 112 new residential units added by the proposed Project will be distributed by income or affordability category.

#### 3.1 Below Market Rate Housing Units Required

The proposed Project would include 14 Below Market Rate (BMR) affordable units. The City's Below Market Rate Housing Program codified in Chapter 16.96 of the City's Zoning Code requires residential development projects with twenty or more units to provide 15% BMR affordable units. The BMR Program results in ten Very Low Income units based on applying the 15% requirement to the 66-unit "base project" before consideration of additional units permitted under density bonus provisions of the City's BMR Program (15% X 66 = 10 BMR units required).

The Project Sponsor proposes to utilize the provisions of California Government Code Section 65915 (State Density Bonus) to increase the allowable density on the site. The inclusion of 15% Very Low Income units allows the Project's base density to be increased by 50%. This results in a total project of 99 units – an increase of 33 units (66 x 150% = 99 units). Assembly Bill 1287 (AB 1287), which became effective January 1, 2024, allows for additional increases in density if additional affordable units are provided. The Project Sponsor proposes to restrict 5% of the base density to Moderate Income Units, which equates to four units (5% x 66 = 4 Moderate Income units). This allows for an additional 20% increase in density, which equates to 13 units (20% x 66 units = 13 units), and addresses community amenity requirements for bonus level development. Therefore, State Density Bonus allows for the 66-unit "base" project to be increased to 112 units (66 base units + 33 units + 13 units = 112 units).

In summary, State Density Bonus allows for a project with a total of 112 units inclusive of ten units restricted to Very Low Income households, four units restricted to Moderate Income, and 98 market rate units. Table 3-1 provides a summary.

	<b>Market Rate Units</b>	<b>BMR Units</b>	<b>Total Units</b>
Base Density	52*	14 (10 Very Low + 4 Moderate)	66
State Density Bonus	46	0	46
Total	98	14	112

\*Without inclusion of the additional 10 market rate units permitted under the City's BMR Program density bonus (equal to one market rate unit for each BMR unit provided, up to 15%), since the State Density Bonus exceeds this local density bonus.

The City's BMR Program Guidelines require BMR units to be generally proportionate in size and number of bedrooms to the market-rate unit mix.

### **3.2 Affordability Level of Market Rate Units**

The proposed Project will include 98 market rate rental units of which 31 are studio units averaging approximately 594 square feet in size, 43 are one-bedroom units averaging approximately 809 square feet in size, 23 are two-bedroom units averaging approximately 1,005 square feet in size, and one is a three-bedroom unit at 1,583 square feet in size. The market rate units are estimated to be affordable to households in the Moderate Income category, except the three-bedroom unit, which is estimated to be affordable to Above Moderate Income. Estimated affordability levels are based on estimated market rate rents for the units. Market rate units will not be deed restricted; therefore, the affordability level could change over time as market conditions and the income criteria used to determine affordability level change.

Market rents were estimated by KMA based on four newer rental properties in Menlo Park located on the north side of U.S. 101, the Lume at 172 Constitution (built 2024), the Anton Menlo at 3639 Haven (built 2017), the Elan Menlo at 3645 Haven (built 2017) and 777 Hamilton (built 2016). Market rents reflect data as of February 2024.

Average rental rates for the comparison properties by bedroom size are shown in Table 3-2 and Charts 1 - 4. Each data point in Charts 1 - 4 represents the average effective market rate rent for units of a specific square footage size. Estimated rents for the proposed Project are identified by purple circles. Based on the market data and the unit sizes for the proposed Project, studios are estimated to rent for approximately \$2,950 per month, one-bedrooms for approximately \$3,550 per month, two-bedrooms for approximately \$4,150 per month and three-bedrooms for \$5,600 per month.

**Chart 1 – Newer Studio Apartment Market Rate Rents and Estimated Rents for proposed Project**

Source: CoStar effective rents reported as of February 2024.

Market rate rents were then used to estimate the affordability level of the units. As shown in Table 3-3, the market rate units are estimated to be affordable to Moderate Income households, except for the three-bedroom unit, which is estimated to be affordable to Above Moderate Income households. Since the market rate units would not be deed-restricted, it is possible occupants would have incomes that exceed income criteria for Moderate Income and affordability of the market rate units could change over time.

Table 3-3. Estimated Affordability Level Applicable to Market Rate Apartments				
	Studio	1-BR	2-BR	3-BR
Estimated Monthly Rent <sup>(1)</sup>	\$2,950	\$3,550	\$4,150	\$5,600

(1) KMA estimate based on market rents for comparable new apartment properties.

(2) Tenant paid utilities estimated based on County Housing Authority utility allowance schedule.

(3) Per California Health and Safety Code Section 50053.

(4) HCD Income Limits for applicable household size for 2024.

### 3.3 New Residential Units by Income Level

Table 3-4 provides a summary of the income level applicable to the new residential units, combining the findings of Section 3.1 and 3.2.

The proposed Project includes ten Very Low Income BMR units, four Moderate Income BMR units, 97 market rate units estimated to be affordable to Moderate Income and one market rate unit estimated to be affordable to Above Moderate Income households.

Table 3-4. Estimated Affordability Level of New Residential Units

#### **4.0 CHANGE IN WORKER HOUSING NEEDS FROM REMOVAL OF EXISTING ON-SITE JOBS AND REPLACEMENT WITH NEW ON-SITE JOBS**

This section provides an analysis of the change in worker housing need by income level from:

- Removal of existing on-site jobs in the existing commercial building; and
- Addition of new on-site jobs related to the on-site property management and maintenance for the new apartments.

The analysis begins by quantifying the number of on-site jobs removed and added by the proposed Project. Then, the analysis proceeds through a series of steps to estimate how the changes in on-site jobs translate into a change in worker housing need by income level.

#### **4.1 Methodology**

The analysis estimates the changes in on-site employment from removal of the existing commercial building and construction of the new residential units. The estimated changes in employment are then translated into an estimated impact on worker housing demand based on relationships between jobs and housing demand derived from the U.S. Census. Finally, the income level associated with the housing demand is estimated using a combination of data sources including the U.S. Bureau of Labor Statistics occupation and wage data and U.S. Census data on households.

Following is a description of each step in the analysis.

##### ***Analysis Step 1 –On-Site Employment***

The proposed Project results in the removal of an estimated 46 existing jobs and an addition of an estimated three new jobs, for a net reduction of 43 jobs as summarized in Table 4-1.

##### ***Existing Employment to be Removed***

Demolition of the existing commercial building will remove an estimated 46 on-site jobs, including an estimated one job in building services (i.e. janitorial and maintenance).

The Project Sponsor provided a partial list of the existing tenants in the building. Per this information, the existing building is divided into 36 suites averaging 288 square feet of building area per suite. Twenty nine of the suites are occupied. Employment information was provided for 21 of the suites and totals 34 employees. KMA estimated that the remaining eight occupied suites include a total of 11 employees. This results in the estimated 45 employees within the existing commercial building. In addition, one building services employee is estimated to service

the building based on staffing ratios derived from data reported by the International Facility Management Association (IFMA). Building services workers are evaluated separately because these services are typically provided by separate contract service providers.

*New Employment Added by Proposed Project*

The proposed Project is estimated to add three new on-site jobs in property management and maintenance for the new residential units. The number of residential property management and maintenance staff are estimated based on a ratio of 39 apartment units per employee derived from the National Apartment Association 2018 Survey of Operating Income and Expenses.

<b>Table 4-1. Estimated Net Change in On-Site Employment</b>				
	<b>Development</b>	<b>Basis for On-Site Employment Estimate</b>	<b>Estimated Net Change in On-Site Employment</b>	
<b>Existing</b>				
Existing Commercial	10,361 SF	Applicant <sup>(1)</sup>	(45)	employees
Building Services		1 per 25,000 SF <sup>(2)</sup>	(1)	employee
Subtotal Existing			(46)	employees
<b>Proposed</b>				
Rental Units / Property Mangmt	112 Units	1 per 39 units <sup>(3)</sup>	3	employees
<b>Net Change in On-Site Employment</b>			<b>(43)</b>	<b>employees</b>

<sup>(1)</sup> The Applicant provided partial information regarding the number of existing employees. KMA utilized this information to extrapolate the number of employees for the entire building.

<sup>(2)</sup> Building services staff, which includes maintenance, janitorial, and security not expected to be directly employed by the tenant, was estimated by KMA based on a ratio of 1 employee per 25,000 square feet for the existing building and 1 per 10,000 square feet for new building. Estimate was derived from International Facility Management Association (IFMA), Operations and Maintenance Benchmarks Research Report #33 and adjusted by KMA as a reflection of employment density.

<sup>(3)</sup> Based on National Apartment Association 2018 Survey of Operating Income and Expenses in Rental Apartment Communities, average number of units per employee for projects that are 100 to 199 units in size.

**Step 2 – Adjustment from Employees to Employee Households**

Step 2 converts the number of employees to the number of employee households. This step recognizes that there is, on average, more than one worker per household, and thus the number of housing units in demand must be reduced. The workers per worker household ratio eliminates from the equation all non-working households, such as households comprised of retired persons or students. The calculation is shown in Table 4-2.

KMA derived the worker per worker household figure from ACS data for 2018 to 2022. The ACS data provide estimates of the total number of workers in San Mateo County, and the total

number of households with at least one working household member. The ratio of the two figures for San Mateo County is 1.86 workers per worker household. The San Mateo County figure is used in the analysis because workers will be more similar to the County as a whole than the smaller City of Menlo Park profile, which has an average of 1.73 workers per worker household. The workers per worker household ratio is used to translate the existing and new on-site employment to a change in employee households as shown in Table 4-2. The 46 existing jobs are divided by the 1.86 workers per worker household ratio to estimate the decrease of 25 existing employee households. Using the same approach, the three new jobs translate into an estimated two employee households.

<b>Table 4-2. Estimated Change in On-Site Employee Households</b>					
	<b>Existing (to be removed)</b>			<b>Proposed</b>	<b>Net New</b>
	<b>Existing Commercial</b>	<b>Building Services</b>	<b>Total Existing</b>	<b>Residential Property Management</b>	
Employment	(45)	(1)	(46)	3	3
Employee Households (at 1.86 workers per household) <sup>(1)</sup>	(24)	(1)	(25)	2	2

(1) Derived from 2018-2022 U.S. Census American Community Survey data for San Mateo County

### **Step 3 – Occupational Distribution**

Occupation refers to job description, such as management, sales clerk, cashier, etc. Occupational categories representative of jobs in the existing commercial space were identified using information on the existing mix of tenants provided by the Project Applicant. Occupations representative of property management and maintenance and building services occupations were selected by KMA from a list of Standard Occupational Classification (SOC) System categories. Table 4-3 provides a summary of worker occupations by major SOC category. Appendix A, Tables 3 to 5 provide a further breakdown by detailed worker occupation category.

**Table 4-3. On-Site Employee Households – Occupation Categories**

<b>Occupation Category</b>	<b>Existing Commercial</b>				<b>New Residential</b>

<b>Totals (rounded)</b>	<b>(24)</b>	<b>(1)</b>	<b>(25)</b>	<b>100%</b>	<b>2</b>	<b>100%</b>

Notes: see Appendix Tables 3-5 for information on detailed occupation categories.

#### **Step 4 – Estimate of Employee Wage and Salary Distribution**

The employee wage and salary distribution are based on the occupational distribution from Step 3 in combination with 2023 wage and salary information for San Mateo County for each occupation published by the California Employment Development Department (EDD). In addition to the average compensation levels, the analysis also utilizes data regarding the percentile distribution of wages within individual occupation categories in estimating the distribution of worker compensation levels. The data on employee wages and salaries utilized in the analysis is presented in Appendix A Tables 3 to 5.

#### **Step 5 – Household Size Distribution**

In this step, the household size distribution of workers is estimated using U.S. Census 2018-2022 ACS data for San Mateo County. Data for the County is used since workers are more representative of the larger area in which workers live (the County) than the City of Menlo Park.

In addition to the distribution in household sizes, the data also accounts for a range in the number of workers in households of various sizes. Table 4-4 indicates the percentage distribution utilized in the analysis.

<b>Table 4-4. Percent of Households by Size and No. of Workers</b>		
<b>No. of Persons in Household</b>	<b>No. of Workers in Household</b>	<b>Percent of Total Households</b>
1	1	15.9%
2	1	12.8%
	2	17.7%

6	1	1.1%
	2	2.3%
	3+	1.5%
Total		100%

Source: 2018-2022 American Community Survey data for San Mateo County.

### ***Step 6 – Estimate of Households that meet HCD Size and Income Criteria***

This step in the analysis calculates the number of employee households that fall into each income category for each size household. This calculation is based on the employee wage and salary distribution (Step 4), the worker household distribution (Step 5) and the 2024 HCD income limits for San Mateo County, as described above.

Household incomes are estimated based upon ratios between individual employee income and household income derived from U.S. Census data shown in Table 4-5. The ratios adjust employee incomes upward even for households with only one worker in consideration of non-wage/salary income sources such as child support, disability, social security, investment income and others.

Table 4-5. Ratio of Household Income to Individual Worker Income			
Individual Worker Income	One Worker Households	Two Worker Households	Three or More Workers
\$25,000 to \$50,000	1.39	3.34	4.77
\$50,000 to \$75,000	1.20	2.49	3.42
\$75,000 to \$100,000	1.11	2.17	2.79
\$100,000 to \$150,000	1.07	1.94	2.40
\$150,000 to \$200,000	1.04	1.75	2.03
\$200,000 to \$250,000	1.04	1.64	1.84
\$250,000 to \$300,000	1.04	1.57	1.66
\$300,000 to \$500,000	1.05	1.45	1.53
\$500,000 to \$10,000,000	1.02	1.29	1.35

Source: KMA analysis of American Community Survey PUMS data for San Francisco Bay Area.

Estimated household incomes are compared to HCD income criteria to determine the percentage that qualify within each income category. The comparison is made for each potential household size/number of workers combination. The result is multiplied by the percentage distribution of household sizes and number of workers per household from Step 5 to calculate the distribution of worker households by income.

Table 4-6 presents the estimated number of households in each income tier by worker occupation category. It represents the output of the analysis, after completing Step 4 (employee compensation levels), Step 5 (household size distribution of worker households), and Step 6 which uses this information to calculate the number of households that fall into each income category.

<b>Net Change: On-site Worker Households</b>	<b>(1)</b>	<b>(1)</b>	<b>(4)</b>	<b>(6)</b>	<b>(2)</b>	<b>(9)</b>	<b>(23)</b>

The removal of existing on-site employment is estimated to result in a reduction in housing demand for 25 housing units. This 25-unit reduction in housing demand consists of an estimated one Extremely Low Income, two Very Low Income, four Low Income, seven Moderate Income, two Above Moderate, and nine Over 150% units.

The addition of new on-site employment in the proposed Project is estimated to result in a demand for two housing units consisting of one Very Low Income and one Moderate Income unit.

The net change in on-site worker households is estimated at 23 units.

## 5.0 HOUSING DEMAND OF OFF-SITE WORKERS IN SERVICES TO NEW RESIDENTS

The following section provides an analysis of the linkages between development of the new residential units on the Project site, jobs generated in off-site services such as retail and restaurants, and the housing needs of the workers who hold these off-site jobs. Off-site jobs addressed in this section are incorporated into the analysis consistent with the terms of the 2017 settlement agreement which requires, to the extent possible, consideration of multiplier effects.

The analysis of housing needs for off-site workers starts with the estimated rental rate for the new units and moves through a series of linkages from the estimated income of the household that rents the unit, the portion of income available for expenditures on goods and services, jobs associated with the purchase and delivery of those services, the income of the workers doing those jobs and, ultimately, the affordability level of the housing needed by the workers.

The number of jobs by industry that are generated from the household spending of residents living in the proposed Project is estimated using the IMPLAN (IMpact Analysis for PLANning) model, a model widely used to quantify the impacts of changes in a local economy. The number of jobs by industry is then used to estimate worker housing need by income level using the same approach as in Section 4.

### 5.1 Estimated Household Incomes of New Residents

The estimated household incomes of residents in the new market rate residential units are drawn from the analysis provided in Section 3.2. For BMR units, household income is estimated based on the mid-point of the income range that would qualify for a BMR unit. Household income figures are then multiplied by the number of units to estimate the aggregate household income for all residents of the proposed Project as shown in Table 5-1. Aggregate household income is used to estimate household spending, the input to the IMPLAN model that is used to quantify the number of off-site jobs associated with household spending of new residents.

	Estimated Household Income <sup>(1)</sup>			Number of Units			Aggregate Income
	BMR Very Low	BMR Moderate	Market Rate	BMR Very Low	BMR Moderate	Market Rate	
Studios	\$54,850	\$123,760	\$123,760	3	2	31	\$4,248,630
1-Bedrooms	\$62,675	\$148,360	\$148,360	5	1	43	\$6,841,215
2-Bedrooms	\$70,525	\$171,250	\$174,520	2	1	23	\$4,326,260
3-Bedrooms	\$78,325	\$205,500	\$234,920	0	0	1	\$234,920
Total				10	4	98	\$15,651,025
Average Per Household							\$139,741

(1) For market rate units, see Table 3-3. For BMR units, estimates are based on the mid-point of the applicable qualifying income range, limited to the estimated income applicable to market rate units.

## Income Available for Expenditures

The input into the IMPLAN model used in this analysis is the net income available for expenditures. To arrive at income available for expenditures, gross income must be adjusted for Federal and State income taxes, contributions to Social Security and Medicare, savings, and payments on household debt. Per KMA correspondence with the producers of the IMPLAN model (IMPLAN Group LLC), other taxes including sales tax and property tax are handled internally within the model as part of the analysis of expenditures. Payroll deduction for medical benefits and pre-tax medical expenditures are also handled internally within the model. Table 5-2 shows the calculation of the percentage of household income available for expenditures.

<b>Table 5-2. Percent of Income Available for Expenditures <sup>(1)</sup></b>	
Gross Income	100%
<u>Less:</u>	
Federal Income Taxes <sup>(2)</sup>	11%
State Income Taxes <sup>(3)</sup>	4%
FICA Tax Rate <sup>(4)</sup>	7.65%
Savings & other deductions <sup>(5)</sup>	<u>6.75%</u>
Subtotal deductions	29%
<b>Percent of Income Available for Expenditures<sup>(6)</sup></b>	
	<b>71%</b>

(1) Calculated as gross income after deduction of taxes and savings. Income available for expenditures is the input to the IMPLAN model which is used to estimate the resulting employment impacts. Housing costs are not deducted as part of this adjustment step because they are addressed separately as expenditures within the IMPLAN model.

(2) Reflects average tax rates (as opposed to marginal) based on U.S. Internal Revenue Services, Tax Statistics, Tables 1.2 and 2.1 for 2020. Tax rates reflect averages for applicable income range. Assumes standard deduction.

(3) Average tax rate estimated by KMA based on marginal rates per the California Franchise Tax Board and ratios of taxable income to gross income estimated based on U.S. Internal Revenue Service data.

(4) For Social Security and Medicare.

(5) Household savings including retirement accounts like 401k / IRA and other deductions such as interest costs on credit cards, auto loans, etc, necessary to determine the amount of income available for expenditures. The 6.75% rate used in the analysis is based on a 20 year average computed from U.S. Bureau of Economic Analysis data, specifically the National Income and Product Accounts, Table 2.1 "Personal Income and Its Disposition."

(6) Deductions from gross income to arrive at the income available for expenditures are consistent with the way the IMPLAN model and National Income and Product Accounts (NIPA) defines income available for personal consumption expenditures. Income taxes, contributions to Social Security and Medicare, and savings are deducted; however, property taxes and sales taxes are not. Housing costs are not deducted as part of the adjustment because they are addressed separately as expenditures within the IMPLAN model.

Income available for expenditures is estimated at approximately 71% of gross income. Federal tax rates are estimated at 11% of gross income based upon Internal Revenue Service data. State taxes are estimated to average 4% of gross income based on tax rates per the California Franchise Tax Board. The employee share of FICA payroll taxes for Social Security and

Medicare is 7.65% of gross income. A ceiling of \$168,600 per employee applies to the 6.3% Social Security portion of this tax rate.

Savings and repayment of household debt represent another necessary adjustment to gross income. Savings includes various IRA and 401 K type programs as well as non-retirement household savings and investments. Debt repayment includes auto loans, credit cards, and all other non-mortgage debt. Savings and repayment of debt are estimated to represent a combined 6.75% of gross income based on the 20-year average derived from United States Bureau of Economic Analysis data.

The percentage of income available for expenditure for input into the IMPLAN model is prior to deducting housing costs. The reason is for consistency with the IMPLAN model which defines housing costs as expenditures. The IMPLAN model addresses the fact that expenditures on housing do not generate employment to the degree other expenditures such as retail or restaurants do, but there is some maintenance and property management employment generated.

After deducting income taxes, Social Security, Medicare, savings, and repayment of debt, the estimated income available for expenditures is 71% of gross household.

Another adjustment made to spending is to account for standard operational vacancy in rental units of 5%, a level of vacancy considered average for rental units in a healthy market.

Table 5-3 presents the estimate of household income available for expenditures in the local economy after adjustments to income available for expenditures and vacancy:

<b>Table 5-3. Income Available for Expenditures</b>	
Aggregate Annual Household Income, New Residents	\$15,651,025
Percent Available for Expenditure (Table 5-2)	71%
Adjustment for 5% rental vacancy	95%
Aggregate Household Income Available	\$10,557,000

The estimated household income available for expenditure associated with the 112 new residential units is the input into the IMPLAN model.

## **5.2 The IMPLAN Model**

Consumer spending by residents of new housing units will create jobs, particularly in sectors such as restaurants, health care, and retail, which are closely connected to the expenditures of residents. The widely used economic analysis tool, IMPLAN, was used to quantify these new jobs by industry sector.

### **5.2.1 IMPLAN Model Description**

The IMPLAN model is an economic analysis software package now commercially available through the IMPLAN Group, LLC. IMPLAN was originally developed by the U.S. Forest Service, the Federal Emergency Management Agency, and the U.S. Department of the Interior Bureau of Land Management and has been in use since 1979 and refined over time. It has become a widely used tool for analyzing economic impacts for a broad range of applications from major construction projects to natural resource programs.

IMPLAN is based on an input-output accounting of commodity flows within an economy from producers to intermediate and final consumers. The model establishes a matrix of supply chain relationships between industries and also between households and the producers of household goods and services. Assumptions about the portion of inputs or supplies for a given industry likely to be met by local suppliers, and the portion supplied from outside the region or study area are derived internally within the model using data on the industrial structure of the region.

The output or result of the model is generated by tracking changes in purchases for final use (final demand) as they filter through the supply chain. Industries that produce goods and services for final demand or consumption must purchase inputs from other producers, which in turn, purchase goods and services. The model tracks these relationships through the economy to the point where leakages from the region stop the cycle. This allows the user to identify how a change in demand for one industry will affect a list of over 500 other industry sectors. The projected response of an economy to a change in final demand can be viewed in terms of economic output, employment, or income.

Data sets are available for each county and state, so the model can be tailored to the specific economic conditions of the region being analyzed. This analysis utilizes the data set for San Mateo County. As will be discussed, much of the employment impact is in local-serving sectors, such as retail, eating and drinking establishments, and medical services. It is likely that many off-site employment impacts will occur in Menlo Park and other nearby jurisdictions; however, employment impacts will also extend throughout the county and beyond based on where residents of the proposed Project will shop, dine, seek medical care and other services. Consistent with the approach taken in most residential affordable housing nexus analyses, the analysis includes job impacts throughout the county.

### **5.2.2 Application of the IMPLAN Model to Estimate Job Growth**

The IMPLAN model was applied to link income to household expenditures to job growth. The estimated annual household spending of the residents of the 112 new housing units is the input to the IMPLAN model. The IMPLAN model then distributes spending among various types of goods and services (industry sectors) based on data from the Consumer Expenditure Survey and the Bureau of Economic Analysis Benchmark input-output study, to estimate the number of off-site jobs.

Job creation, driven by increased demand for products and services, was projected for each of the industries that will serve the new households. A total of 43.5 off-site jobs are estimated to be generated by spending of the residents as summarized in Table 5-4. Estimates in Table 5-4 exclude on-site jobs in property management and maintenance of the residential units which are already considered as part of the Section 4 analysis.

<b>Table 5-4. Jobs Generated from Household Spending of Residents</b>	
Annual Household Expenditures	\$10,557,000
Estimated Number of Off-site Jobs	43.5

As households added to the City by the proposed Project are new and these new households result in net new demand for products and services, the jobs associated with delivery of these products and services are also estimated to be net new jobs. While there may be an ability for existing retail, health care facilities, restaurants, schools and other services to absorb a share of new demand to some extent, existing establishments will still require additional employees in many cases. For example, individual health care providers are only able to see so many patients in a day. Waiters and cooks in restaurants can only serve so many customers. Grocery stores may need to add staff at check-out lanes in response to added demand, and so on. Employment in sectors that serve residents tends to expand with population. As indicated in Section 5.2.3, the ratio between employment in resident-serving sectors of the economy and the number of housing units is relatively consistent at the city and county geographic scales, indicating resident-serving jobs tend to be proportionate to the number of housing units and population.

Table 5-5 provides a detailed breakdown of the employment by industry sorted by projected employment. The Consumer Expenditure Survey published by the Bureau of Labor Statistics tracks expenditure patterns by income level. IMPLAN utilizes this data to reflect the pattern by income bracket. Estimated employment is shown for each IMPLAN industry sector representing 1% or more of total employment. The jobs that are generated are heavily retail jobs, jobs in restaurants and other eating establishments, and in services that are provided locally such as health care.

**Table 5-5. Jobs Generated by Industry from Housing Spending [IMPLAN Output]**

<b>Industry Category</b>	<b>No. Jobs</b>	<b>Percent</b>
Full-service restaurants	2.9	7%

### 5.2.3 Cross-Check Based on Existing Number of Resident-Serving Jobs

As context for the estimated number of off-site jobs and a secondary cross-check for reasonableness, Table 5-6 provides comparisons to the existing ratio of resident-serving jobs in sectors such as health care, retail, food service and education and the number of residential units within Menlo Park and San Mateo County. In Menlo Park, there are 7,401 existing jobs in resident-serving sectors based on data from the U.S. Census and 13,912 residential units based on data from the California Department of Finance. These figures translate to a ratio of approximately 60 resident-serving jobs for every 112 residential units<sup>12</sup>. The ratio for San Mateo County is similar at 55 resident-serving jobs for every 112 residential units. Based on existing relationships between resident-serving jobs and residential units for both the City and the County, estimates for the proposed Project appear reasonable.

<b>Table 5-6. Comparison to Existing City and County Relationships Between Number of Residential Units and Number of Jobs in Key Resident Serving Sectors.</b>					
	<i>Existing Jobs</i> <sup>(1)</sup>		<i>Jobs Per 112 Residential Units</i>		
	<b>City of Menlo Park</b>	<b>San Mateo County</b>	<b>Actual: City of Menlo Park</b> <sup>(4)</sup>	<b>Actual: San Mateo County</b> <sup>(4)</sup>	<b>Estimate for Proposed Project</b> <sup>(5)</sup>
<u>Key Resident-Serving Sectors</u>					
Health Care	2,448	41,590	19.7	16.2	8.7

Total All Sectors	57,213	401,819	461	156	46
Number of Residential Units <sup>(3)</sup>	13,912	287,967			

(1) U.S. Census Longitudinal Employer-Household Dynamics, 2020 data for workplace geography.

(2) Includes a broad range of services from auto repair, to dry cleaning, to religious organizations.

(3) Number of housing units as of January 1, 2023 per California Department of Finance Table E-5, Population and Housing Estimates for Cities, Counties, and the State, 2021-2023 with 2020 Census Benchmark.

(4) Calculated by dividing the total number of jobs by the number of residential units and multiplying by 112 units.

(5) For comparison purposes, figures are prior to adjustment to remove jobs included in on-site totals

Note: The number of jobs by industry from the HNA have been aggregated by major industry category to allow ready comparison to actual existing jobs in the City of Menlo Park and in San Mateo County.

<sup>12</sup> Calculated as 7,401 jobs divided by 13,912 residential units and multiplied by 112 units. This 112-unit figure is selected for ready comparison to the proposed Project.

### 5.3 Analysis of Housing Need by Income

This section presents a summary of the analysis linking the number of off-site jobs associated with the new residential units to the estimated number of housing units required in each of six income categories. The analysis is based on the same methodology as Section 4 and consists of the following analysis steps.

#### **Step 1 – Adjustment from Employees to Employee Households**

This step (Table 5-7) converts the number of employees identified in Table 5-5 to the number of employee households, recognizing that there is, on average, more than one worker per household, and thus the number of housing units in demand for new workers is reduced. The workers-per-worker-household ratio eliminates from the equation all non-working households, such as retired persons and students. The San Mateo County average of 1.86 workers per worker household derived from the U. S. Census Bureau 2018-2022 American Community Survey is used for this step in the analysis, consistent with Section 4. The estimated 43.5 off-site jobs is divided by 1.86 to estimate the number of worker households of 23.

Table 5-7. Estimated Net Change in On-Site Employee Households	
Off-Site Jobs in Services to New Residents	43.5
Number Employee Households - Off-site workers (at 1.86 workers per household) <sup>(1)</sup>	23.4

*(1) Derived from 2018-2022 U.S. Census American Community Survey data for San Mateo County*

#### **Step 2 – Occupational Distribution of Employees**

The occupational breakdown of employees is the first step to arrive at income level. The output from the IMPLAN model provides the number of employees by industry sector, shown in Table 5-5. The IMPLAN output is then paired with data from the Department of Labor, Bureau of Labor Statistics Occupational Employment Survey (OES) to estimate the occupational composition of employees for each industry sector. As shown in Table 5-8, new jobs will be distributed across a variety of occupational categories. The three largest occupational categories are sales and related (13.8%), office and administrative support (12.6%), and food preparation and serving (13.4%). Table 5-8 indicates the percentage and number of employee households by occupation for off-site workers.

**Table 5-8. Worker Households by Occupation - Jobs in Off-Site Services to New Residential Units**

<b>Occupation Category</b>	<b>Number of Worker Households</b>	<b>% of Jobs</b>
Management Occupations	1.0	4.1%
Business and Financial	1.0	4.3%
Computer and Mathematical	0.3	1.3%
Architecture and Engineering	0.0	0.2%
Sciences	0.1	0.4%
Community & Social Services	0.5	2.1%
Legal	0.2	0.7%
Education, and Library	0.7	3.2%
Arts, Design, Entertainment	0.3	1.4%
Healthcare Practitioners	2.0	8.3%
Healthcare Support	2.3	9.7%
Protective Service	0.1	0.6%
Food Prep and Serving	3.1	13.4%
Building and Grounds.	0.5	2.3%
Personal Care and Service	1.5	6.4%
Sales and Related	3.2	13.8%
Office and Admin Support	3.0	12.6%
Farming, Fishing, Forestry	0.0	0.1%
Construction and Extraction	0.2	0.8%
Installation, Maint. and Repair	0.8	3.5%
Production	0.4	1.6%
Transportation	2.2	9.3%
<b>Totals</b>	<b>23.4</b>	<b>100.0%</b>

See Appendix Tables 1 and 2 for additional detail.

### ***Step 3 – Estimates of Employee Households by Income***

In this step, occupations are translated to employee incomes based on recent wage and salary information for workers in San Mateo County from the BLS Occupational Employment Survey as updated to reflect 2023 wage levels by the California Employment Development Department (EDD). The wage and salary information summarized in Appendix A Table 2 provided the income inputs to the analysis.

For each occupational category shown in Table 5-8, the OES data provides a distribution of specific occupations within the category. For example, within the Food Preparation and Serving Category, there are Supervisors, Cooks, Bartenders, Waiters and Waitresses, Dishwashers, etc. In total, there are approximately 100 detailed occupation categories included in the analysis, as shown in Appendix A Table 2. Each of these occupation categories has a different distribution of wages, which was obtained from EDD and is specific to workers in the County as of 2023.

Household incomes are estimated from employee incomes using the same ratios between individual employee income and household income derived from U.S. Census data that are applied in Section 4, presented in Table 4-5.

Estimated household incomes are compared to the income criteria shown in Table 2-2 to determine the percentage that qualify within each income category for each potential household size/number of workers combination.

#### ***Step 4 – Distribution of Household Size and Number of Workers***

In this step, we account for the distribution in household sizes and number of workers using local data obtained from the U.S. Census. 2018-2022 ACS data is used to develop a set of percentage factors representing the distribution of household sizes and number of workers within working households. The percentage factors are the same as used in Section 4 and presented in Table 4-4. Application of these percentage factors accounts for the following:

- Households have a range in size and a range in the number of workers.
- Large households generally have more workers than smaller households.

The result of this step is a distribution of working households by number of workers and household size.

#### ***Step 5 – Estimate of Number of Households that Meet Size and Income Criteria***

Step 5 is the final step to calculate the number of worker households meeting the size and income criteria for the five affordability tiers. The calculation combines the results from Step 3 on percentage of worker households that would meet the income criteria at each potential household size / number of workers combination, with Step 4, the percentage of worker household having a given household size / number of workers combination. The result is the percent of households that fall into each affordability tier. The percentages are then multiplied by the number of households from Step 1 to arrive at number of households in each affordability tier.

Tables 5-9 presents the resulting estimates of the number of households within each income category by worker occupation category.

**Table 5-9. Employee Households By Occupation And Income (Steps 4, 5, And 6) for Workers In Off-Site Services To New Residents**

#### 5.4 Summary of Housing Need by Income, Off-site Workers

Table 5-10 summarizes the demand for housing by workers in off-site services to the 112 new residential units by income category.

**Table 5-10. Estimated Off-Site Employee Households by Income**

	Extremely Low	Very Low	Low	Moderate	Above Moderate	Over 150% AMI	Total
Worker Households by Income	4	3	6	7	1	2	23

As shown in Table 5-10, the 112 residential units are estimated to create a demand for an additional 23 housing units for off-site workers in services such as retail, restaurants, and education. Housing demand for new off-site workers is distributed across the income tiers with the greatest number of households in the Low and Moderate Income categories. The finding that the jobs associated with consumer spending tend to be low-paying jobs where the workers will require housing affordable at the lower income levels is not surprising. As noted above, consumer spending results in employment that is concentrated in lower paid occupations including food preparation, administrative, and retail sales.

## 6.0 NET IMPACT ON HOUSING AVAILABILITY

This section combines the findings of the prior three sections to estimate the net impact on housing availability from the proposed Project by income. Net impacts on housing availability represent the combined housing supply and demand effects of the proposed Project including from:

- Added housing supply (Section 3);
- Reduced housing demand from removal of existing on-site jobs (Section 4);
- Added housing demand from new on-site jobs (Section 4); and
- Added housing demand from jobs in off-site services to new residential units (Section 5).

Additions to housing supply are considered increases in housing availability. Reductions in housing demand are also considered to *increase* housing availability because this makes existing units available; conversely, increases in housing demand are considered as reducing housing availability.

Section 6.1 addresses total housing availability impacts regardless of location. Section 6.2 provides an estimate specific to impacts occurring within Menlo Park.

### 6.1 Net Impact on Housing Availability Regionally

The proposed Project is estimated to increase the number of available housing units by 112 units as shown in Table 6-1. This estimate reflects the combined effect of:

- Adding 112 new residential units to the housing supply.
- A 25-unit increase in housing availability from removal of existing on-site jobs, which removes existing worker housing demand.
- A two-unit decrease in housing availability due to added housing demand from new on-site workers.
- A 23-unit decrease in housing availability due to added housing demand by off-site workers who provide services to residents of the proposed Project.

<b>Table 6-1. Estimated Net Impact of Project on Housing Availability</b>	
1. Increase in available housing from construction of new units (Section 3)	112 Units
2. Increase in available housing from removal of existing on-site jobs, which reduces worker housing demand (Section 4)	25 Units
3. Decrease in available housing from increase in housing demand by new on-site workers (Section 4)	(2 Units)
4. Decrease in available housing from increase in housing demand by off-site workers in services to new residents (Section 5)	(23 Units)
<b>Net Increase in Available Housing</b>	<b>112 Units</b>

Table 6-2 provides a breakout of the housing availability findings by income category. As shown, the 112-unit net increase in housing availability consists of eight Very Low, 100 Moderate, two Above Moderate and seven Over 150% AMI units. Increased housing availability in the Very Low, Moderate, Above Moderate and Over 150% AMI categories is offset by decreases within the Extremely Low and Low categories of three units and two units, respectively, as a result of added housing demand from on- and off-site workers that exceeds added housing availability from construction of new units and removal of on-site jobs within these income categories.

<b>Table 6-2. Net Impacts on Housing Availability by Income Category</b>							
	<b>Extremely Low</b>	<b>Very Low</b>	<b>Low</b>	<b>Moderate</b>	<b>Above Moderate</b>	<b>Over 150% AMI</b>	<b>Total</b>
1. Increase in available housing from construction of new units	0	10	0	101	1	0	112
2. Increase in available housing from removal of existing on-site jobs, which reduces worker housing demand	1	2	4	7	2	9	25
3. Decrease in available housing from increase in housing demand by new on-site workers	0	(1)	0	(1)	0	0	(2)
4. Decrease in available housing from increase in housing demand by off-site workers in services to new residents	(4)	(3)	(6)	(7)	(1)	(2)	(23)
<b>Net Increase in Housing Availability <sup>(1)</sup></b>	<b>(3)</b>	<b>8</b>	<b>(2)</b>	<b>100</b>	<b>2</b>	<b>7</b>	<b>112</b>

(1) Negative figures represent a net increase in housing demand that is not offset by added housing supply.

## 6.2 Menlo Park Share of Impact on Housing Supply and Housing Demand

KMA estimated the share of impacts on housing supply and housing demand that would occur within the City of Menlo Park. Estimates represent an allocation of the total housing availability impacts presented in Table 6-2 based on where housing units included in the proposed Project will be constructed (in Menlo Park) and where workers will live (a share in Menlo Park and a share outside of Menlo Park). Two scenarios are presented regarding the share of workers who will seek and find housing within the City of Menlo Park:

- A. Current Commute Share (5.7%)** – the “Current Commute Share” scenario is based on the existing 5.7% share of Menlo Park workers who live in the City. Section 6.3 provides additional discussion of the existing commute share.
- B. Increased Commute Share (20%)** – the “Increased Commute Share” scenario assumes 20% of new workers are housed within the City consistent with an assumption used in the City’s 2000 commercial linkage fee nexus study<sup>13</sup> (2000 Nexus Study). The 20% commute share assumption from the 2000 Nexus Study reflects a goal of housing a larger share of the City’s workforce. This scenario is included for informational purposes in response to interest expressed by the City Council in improving the jobs housing balance and obtaining data to inform the goal of increasing the number of workers who live and work in Menlo Park.

The 5.7% and 20% commute shares described above are applied to estimate the number of on- and off-site employees that will live in Menlo Park.

The analysis under the two commute scenarios is described below.

### *A. Current Commute Share Scenario*

The analysis of housing availability impacts within Menlo Park under the Current Commute Share scenario reflects the following allocation of total regional impacts identified in Section 6.1:

- (1) All residential units added by the proposed Project are in the City of Menlo Park; therefore, all 112 units are identified as additional housing supply in Menlo Park.
- (2) One of 25 total units of added housing availability from removal of on-site jobs is estimated to be within Menlo Park based on the existing 5.7% share of Menlo Park workers who live in the City. This one unit of additional housing availability is estimated to be within the Over 150% AMI Income category.

---

<sup>13</sup> Commercial Linkage Fee Nexus Study prepared for the City of Menlo Park by Vernazza Wolfe Associates, Inc. dated September 2000.

(3) None of the two total units of additional housing need for new on-site workers is estimated to be within Menlo Park based on the existing 5.7% share of Menlo Park workers who live in the City. Applying the 5.7% factor to the findings by income level from Table 6-2 yields a fraction of a unit that rounds to zero.

(4) One of the 23 total units of additional housing need for off-site workers is estimated to be within Menlo Park based on the existing 5.7% share of Menlo Park workers who live in the City. This one unit of additional housing need is estimated to be within the Moderate Income category.

In summary, with the Current Commute Share scenario, the estimated net increase in housing availability in Menlo Park is 112 units based on the 112 new housing units constructed in Menlo Park, one unit of increased housing availability from removal of on-site jobs, minus one unit of added housing demand from new off-site workers.

Table 6-3 presents the findings by income level. As shown, the estimated 112-unit net increase in housing availability in Menlo Park consists of 10 Very Low, 100 Moderate, one Above Moderate, and one Over 150% AMI unit.

Table 6-3. Estimated Menlo Park Share of Net Impacts on Housing Demand and Housing Supply								
	Basis for Allocation to Menlo Park	Extremely Low	Very Low	Low	Moderate	Above Moderate	Over 150% AMI	Total
1. Increase in available housing from construction of new units	<i>all units are in Menlo Park</i>	-	10	-	101	1	-	112
2. Increase in available housing from removal of existing on-site jobs, which reduces worker housing demand	<i>Based on 5.7% Menlo Park commute share</i>	-	-	-	-	-	1	1
3. Decrease in available housing from increase in housing demand by new on-site workers	<i>Based on 5.7% Menlo Park commute share</i>	-	-	-	-	-	-	-
4. Decrease in available housing from increase in housing demand by off-site workers in services to new residents	<i>Based on 5.7% Menlo Park commute share</i>	-	-	-	(1)	-	-	(1)
<b>Menlo Park Share of Net Increase in Housing Availability</b>		-	10	-	100	1	1	112

## B. Increased Commute Share Scenario

The Increased Commute Share scenario is based on the City's 2000 Nexus Study which incorporated a commute share assumption of 20%. This 20% commute share assumption reflects a goal to house a larger share of the City's workforce locally that was approximately double the 10% commute share for Menlo Park as of the time the Nexus Study was prepared<sup>14</sup>. As stated in the 2000 Nexus Study:

*Using a relatively higher number provides a goal for the City to achieve. Although inflated housing prices in the 1990's have resulted in a decrease in the percentage of Menlo Park workers who can afford to live in Menlo Park, the City's goal is to encourage local workers to live in Menlo Park in order to achieve a better jobs/housing balance.*

This Increased Commute Share scenario provides additional information regarding how analysis findings would vary were the City to seek to house 20% of the added workforce locally consistent with the goal identified in the 2000 Nexus Study.

With the Increased Commute Share scenario, application of the 20% goal-based commute share results in allocation of five out of 25 units of added housing available from removal of existing employee housing demand and five of the 23 units of additional housing need for off-site workers to Menlo Park, rather than one unit each with the Current Commute Share scenario. In total, with the Increased Commute Share scenario, the estimated net increase in housing availability in Menlo Park is 112 units, consisting of 112 new housing units constructed in Menlo Park plus five units of added housing availability from removal of on-site jobs minus five units of new housing demand in Menlo Park from on- and off-site workers.

Table 6-4 presents the findings by income level for the Increased Commute Share. As shown, the estimated 112-unit net increase in housing availability in Menlo Park with the Increased Commute Share consists of nine Very Low, 100 Moderate, two Above Moderate and two Over 150% AMI units, offset by a net decrease of one unit of housing availability within the Extremely Low Income category.

---

<sup>14</sup> Per the 1990 Census, Menlo Park's commute share was 10% based on a total number working in Menlo Park of 26,048 of which 2,662 lived in Menlo Park. Figures do not include those who work out of their homes rather than commute to a separate workplace. The 1990 Census was the most recent data available at the time the 2000 Nexus Study was prepared as the 2000 Census data was not yet released. The 2000 Nexus Study references a separate factor of 23%, also as of 1990, which is not comparable to the 10% commute share in 1990. This 23% factor represents the share of Menlo Park *employed residents* (residents who are employed) who work in Menlo Park versus commute out of Menlo Park to a job located in another city.

Table 6-4. Estimated Menlo Park Share of Net Impacts on Housing Demand and Housing Supply								
	Basis for allocation to Menlo Park	Extremely Low	Very Low	Low	Moderate	Above Moderate	Over 150% AMI	Total
1. Increase in available housing from construction of new units	<i>all units are in Menlo Park</i>	-	10	-	101	1	-	112
2. Increase in available housing from removal of existing on-site jobs, which reduces worker housing demand	<i>2000 Nexus Goal-Based Menlo Park commute share of 20%</i>	-	-	1	1	1	2	5
3. Decrease in available housing from increase in housing demand by new on-site workers	<i>2000 Nexus Goal-Based Menlo Park commute share of 20%</i>	-	-	-	-	-	-	-
4. Decrease in available housing from increase in housing demand by off-site workers in services to new residents	<i>2000 Nexus Goal-Based Menlo Park commute share of 20%</i>	(1)	(1)	(1)	(2)	-	-	(5)
<b>Menlo Park Share of Net Increase in Housing Availability</b>		(1)	9	-	100	2	2	112

### 6.3 Additional Discussion of Commute Share

The share of new on- and off-site workers who will live in Menlo Park is estimated based on a commute share of 5.7% in the Current Commute Share scenario. This percentage is derived from the U.S. Census 2018-2022 American Community Survey and reflects the existing share of those working in Menlo Park who also live in Menlo Park, excluding those who work at home. The remaining 94.3% of the workforce commutes in from outside of the City.

Use of the existing commute share specific to the City of Menlo Park may overstate the share of off-site workers likely to live in Menlo Park as some jobs in off-site services to new residents such as retail, medical care, and restaurants may be in nearby cities rather than in Menlo Park. For those who work in nearby cities, the propensity to live in Menlo Park is expected to be less than the 5.7% commute share for Menlo Park workers<sup>15</sup>.

The existing percentage of workers commuting from other jurisdictions to Menlo Park is attributable to a number of factors including the supply of housing relative to the number of jobs

<sup>15</sup> For example, around 3.9% of those who work in Palo Alto live in Menlo Park based on data from the American Community Survey, lower than the 5.7% share for Menlo Park workers.

and the high cost of housing in Menlo Park. Although many factors influence housing decisions, because the number of workers that both live and work in Menlo Park is so low and the cost of housing is high, it is possible that the 5.7% does not reflect the proportion of workers who would live in Menlo Park if they could find housing and could afford it. The share of the workforce that lives in Menlo Park has also been declining over time from 10% in 1990 to 7% as of the 2000 Census to 5.7% per the 2018-2022 ACS. Workers most everywhere tend to commute more in recent years than in the past and, in addition, Menlo Park has become less affordable over time. The possibility that availability and affordability of housing have contributed to a downward trend in Menlo Park's commute share is the primary reason for including the separate goal-based Increased Commute Share scenario.

Construction of new housing can be expected to contribute toward increasing the number of workers that live locally by providing additional housing opportunities in Menlo Park. The 112-unit size of the proposed Project represents an approximately 0.8% increase in the size of the City's existing housing stock of 13,912 units<sup>16</sup>. While the number of units added is small relative to the larger workforce of over 30,000, the proposed Project can be expected to contribute incrementally to housing a greater number of workers locally.

---

<sup>16</sup> Number of housing units as of January 1, 2023 per California Department of Finance Table E-5, Population and Housing Estimates for Cities, Counties, and the State, 2021-2023 with 2020 Census Benchmark.

## 7.0 DISPLACEMENT ANALYSIS

This section provides a discussion of the potential for the proposed Project to contribute to displacement of existing residents and neighborhood change in two proximate communities known to be vulnerable to displacement, the City of East Palo Alto (East Palo Alto) and the Belle Haven neighborhood of Menlo Park (Belle Haven). Given the complex array of factors that influence housing markets and neighborhood change, precise estimates or projections of outcomes are not feasible; instead, a qualitative discussion of the potential for the proposed Project to impact displacement is provided.

### *Location of Proposed Project Relative to Belle Haven and East Palo Alto*

The aerial image below shows the location of the proposed Project relative to Belle Haven and East Palo Alto. The proposed Project is located within Menlo Park's Bayfront Area. Belle Haven is a residential neighborhood located to the east of the Project site generally bounded by U.S. 101, Willow Road and a railroad right-of-way, outlined in red on the aerial image below. East Palo Alto is just to the east of Belle Haven across Willow Road.

### **Proposed Project, Belle Haven and East Palo Alto Location**

Source: Google Earth

## 7.1 Displacement and Risk of Displacement in East Palo Alto and Belle Haven

Displacement occurs when housing or neighborhood conditions force existing residents to move, or households feel like their move is involuntary. Displacement can be caused by a range of physical, economic and social factors including but not limited to foreclosure, condominium conversion, building deterioration or condemnation, increased taxes, natural disasters, eminent domain, and increases in housing costs<sup>17, 18, 19</sup>. The HNA is focused on economic drivers of displacement, specifically the potential for the proposed Project to affect the local housing market and housing costs.

Lower income communities in the Bay Area have become increasingly vulnerable to displacement of existing residents. Employment growth, constrained housing production, and rising income inequality are among the factors that have contributed to increased displacement pressures, especially within lower income communities in locations accessible to employment centers where many households are housing-cost burdened.

East Palo Alto and Belle Haven both have existing risk factors for displacement. Both have a relatively lower-income existing population that includes a high percentage of households who spend 35% or more of their income on housing. East Palo Alto's rent control and just cause eviction ordinance provides significant protection to existing renters within multi-family buildings built prior to 1988 but does not preclude the potential for longer-term neighborhood change. The Urban Displacement Project,<sup>20</sup> an initiative of UC Berkeley "aimed at understanding the nature of gentrification and displacement in the Bay Area" has identified the Belle Haven census tract and census tracts within East Palo Alto as areas experiencing "ongoing gentrification and/or displacement" or "at risk of displacement." A separate analysis by the Urban Displacement Project<sup>21</sup> indicates that, despite risk factors for displacement, East Palo Alto had not experienced significant gentrification during the 2000 to 2013 period, potentially due to policies aimed at preventing displacement including rent control and just cause eviction protections.

A recent study by UC Berkeley's Center for Community Innovation and its Y-PLAN initiative, titled *Investment and Disinvestment as Neighbors: A Study of Baseline Housing Conditions in the Bay Area Peninsula*, provided an assessment of the baseline housing conditions in the Belle

Haven neighborhood, City of East Palo Alto, and North Fair Oaks neighborhood (unincorporated San Mateo County). The study found indications of recent changes including increased population turnover, declining school age population, and an increase in homelessness. The study also identified a high incidence of rent burdened households and disproportionate pressure on the local housing market compared to the rest of San Mateo County. The study found more signs of disinvestment in East Palo Alto and more indications of real estate speculation in Belle Haven<sup>22</sup>.

## 7.2 Potential for Proposed Project to Contribute to Displacement

The following outlines factors considered in the evaluation of whether the proposed Project could have an influence on displacement in East Palo Alto and Belle Haven:

- (1) The proposed Project adds 112 new units to the housing supply, including 14 BMR units, 97 market rate units estimated to be affordable to Moderate Income households, and one market rate unit estimated to be affordable to Above Moderate Income, which will make additional housing opportunities available in a very competitive housing market.
- (2) The proposed Project results in an estimated net increase in housing availability of 112 units, as described in Section 6.1, considering the 112 new units constructed and no net change in worker housing demand.
- (3) The proposed Project is located in an area geographically separate from both Belle Haven and East Palo Alto and will not physically alter either community.
- (4) The 112 new units in the proposed Project equate to an approximately 0.8% increase in the existing 13,912-unit Menlo Park housing stock<sup>23</sup> and a 0.04% increase in the 287,967-unit housing stock of San Mateo County.
- (5) Several recent studies have explored the effects of new market rate housing development on housing costs and displacement pressures within the immediate vicinity of new housing development<sup>24</sup>. The studies found that new residential development has

moderating effects on rents and displacement pressures at the local level. New residential developments were found to decrease rents in the area surrounding the new housing either in absolute terms or relative to market trend.

In consideration of the above factors, the proposed Project is not anticipated to contribute to displacement in East Palo Alto or Belle Haven. The proposed Project increases availability of market rate and affordable housing, which will tend to moderate or counteract displacement pressures by relieving, to some extent, market pressures on the existing local housing stock.

# EXECUTIVE SUMMARY

## PROJECT DESCRIPTION

This report documents the California Environmental Quality Act (CEQA) analysis findings and the local transportation analysis conducted by Kittelson & Associates, inc. (Kittelson) for the proposed eight-story apartment building to be located at 3705 Haven Avenue, Menlo Park, California ("Project"). The applicant is proposing to demolish an existing single-story commercial building and associated landscaping and to construct a new eight-story apartment building with 112 residential units.

## PROJECT TRIP GENERATION

The proposed Project (prior to any mandatory trip reduction) is expected to generate 508 daily trips, categorizing it as a "Large Residential Project". Following the implementation of a required 35 percent Transportation Demand Management (TDM) reduction and the replacement of the existing commercial land use, the Project would result in 218 net new daily trips, including 16 net new trips in the AM peak hour and 15 net new trips in the PM peak hour.

## CEQA VMT ANALYSIS

The Project does not meet any of the exemption criteria to be screened out of a detailed vehicle miles traveled (VMT) assessment. The VMT Assessment concludes that the Project, prior to any trip reduction, would generate 15.3 VMT per capita. Based on the City's VMT Guidelines, the Project must reduce VMT by a minimum of 27 percent, to 11.2 VMT per capita, to reduce the Project's impacts to less-than-significant levels. The 35 percent reduction in vehicle trips required by the C/CAG TDM Policy is sufficient to reduce the Project's VMT to less-than-significant levels. Based on the condition of approval of the Project's TDM plan, the VMT impact from the Project would be less than significant with proposed TDM measures.

Kittelson concludes that the project is consistent with the City/County Association of Governments of San Mateo (C/CAG) TDM Policy, ConnectMenlo General Plan and 2023-2031 Housing Element (CEQA § 15183).

## LOCAL TRANSPORTATION ANALYSIS

Following a detailed screening analysis of potential study intersections in coordination with City staff, Kittelson conducted the intersection Level of Service (LOS) analysis at the intersection of Haven Avenue/Bayfront Expressway and Marsh Road for Existing, Near-term (2027), Near-term (2027) Plus Project, Cumulative (2040), and Cumulative (2040) Plus Project Conditions for weekday AM and PM peak hour traffic conditions. The study intersection currently operates at LOS E during the AM peak hour and LOS D during the PM peak hour. However, with the planned changes to lane configuration and signal timing optimization, the study intersection is projected to operate at an acceptable LOS (LOS D or better) in both peak hours for near-term conditions, with or without the Project. The study intersection is expected to operate at LOS D in the AM peak hour and LOS E in the PM peak hour under cumulative conditions, with or without the Project. However, the Project would cause the intersection to experience an increase of less than 0.8 seconds in the delay of the most critical movement. Therefore, the Project complies with local policies.

The Project is estimated to generate 44 trips during the PM peak hour, which falls below the San Mateo County Congestion Management Program (CMP) requirement of 100 PM peak hour trips for a Routes of Regional Significance evaluation. Hence, CMP analysis is not required for the Project.

Kittelsohn reviewed the site access and on-site circulation based on the proposed site plan and the changes in the 95th percentile queue lengths caused by the proposed Project at the study intersection. During the AM and PM peak hours, the eastbound right-turn and southbound right-turn movements will experience 95<sup>th</sup> percentile queue lengths that exceed the storage length, but the queue lengths do not increase significantly with the plus Project scenarios when compared to no Project scenarios.

Kittelsohn recommends the applicant verify that the proposed vegetation will not obstruct the visibility of pedestrians and oncoming traffic on Haven Avenue from the driveway. Additionally, it is recommended that the Project applicant install visible and audible warning devices to alert pedestrians and bicyclists of vehicles exiting the parking garage. The Project applicant also should coordinate with the Fire Department to ensure that the installation of signs and markings designating fire lanes complies with standard requirements and facilitates adequate access for fire apparatus.

# Section 1

## Introduction

# INTRODUCTION

This report documents the CEQA and local transportation analyses conducted for the proposed development to be located at 3705 Haven Avenue in the R-MU-B (Residential Mixed Use-Bonus) zoning district in Menlo Park, California ("Project"), see **Figure 1**.

## PROJECT DESCRIPTION

The Project applicant, 3705 Haven LLC, is proposing to demolish an existing single-story commercial building to construct a new eight-story, 112 residential-unit development. 3705 Haven Avenue is an approximately 0.66-acre corner lot that fronts Haven Avenue on both sides. The complete Project plan submittal, dated July 2024, is included in **Appendix A** with the proposed site plan shown in **Figure 2**.

Currently, there is a single-story approximately 10,361 square feet (SF) general commercial building on the Project site. The proposed multifamily building would have dwelling units from the second floor to the eighth floor, with interior parking on the ground floor and second floor. The Project proposes 99 vehicle parking spaces, 168 interior bike parking spaces and 17 exterior bike parking spaces. As shown in the site plan (**Figure 2**), access to the parking garage is available on both the south and east sides of the building along Haven Avenue. In addition, pedestrian access to the site for residents of the development will be facilitated via walkways, with one entrance on the south side of the building and two entrances on the east side of the building.

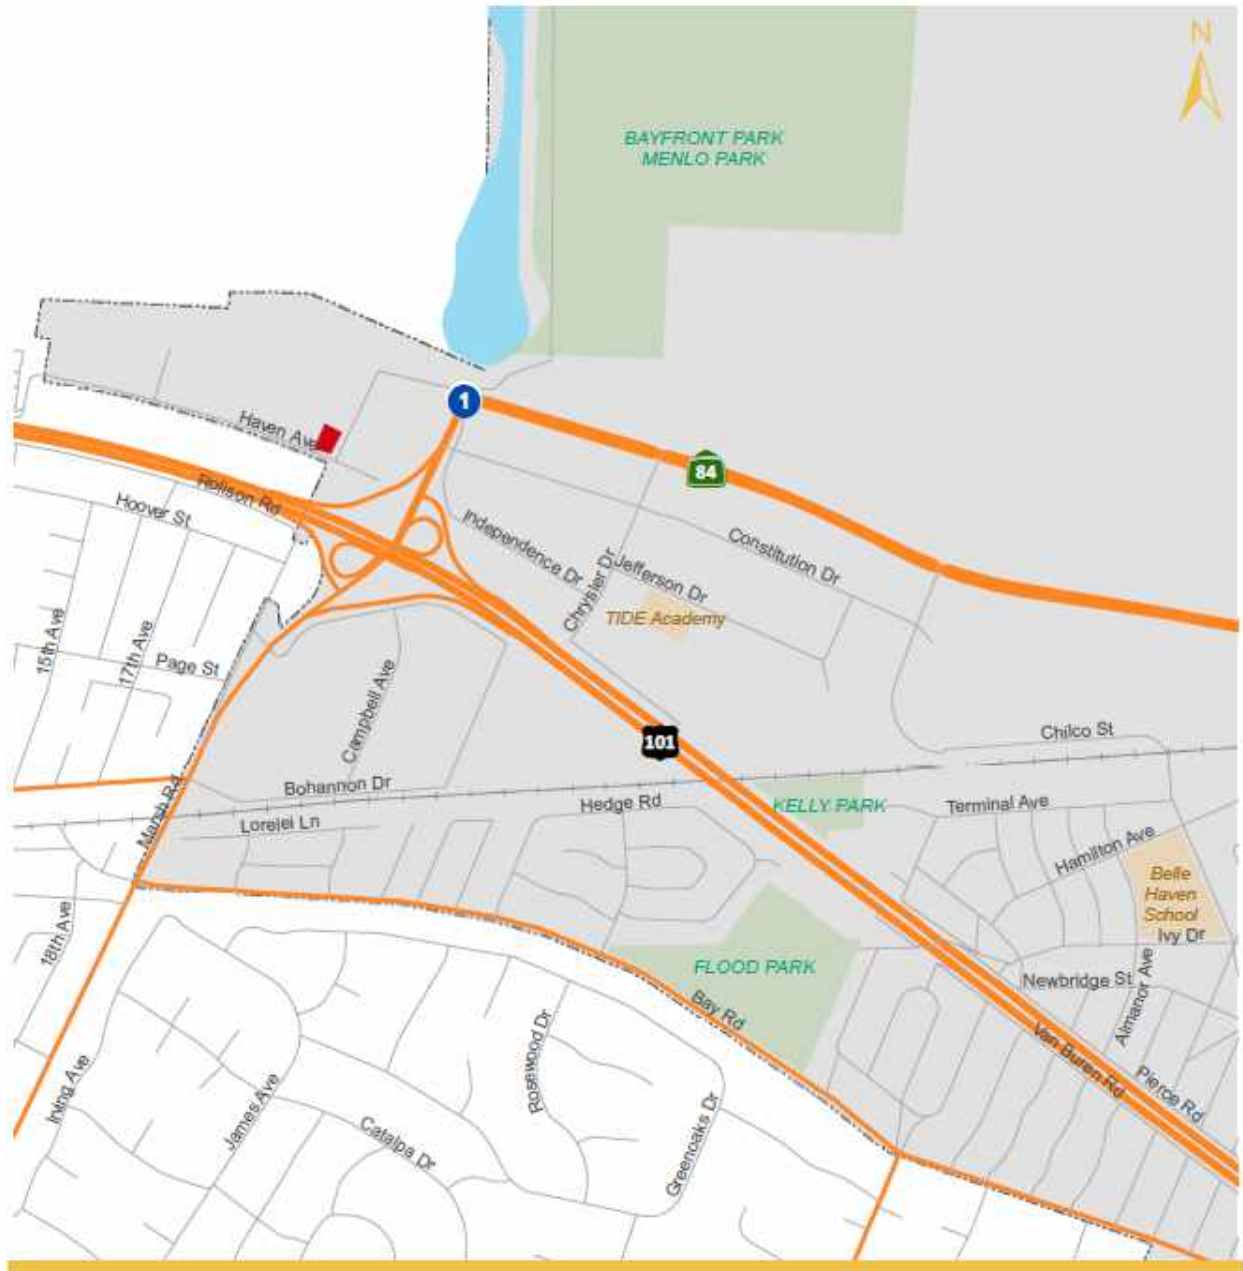

**Table 1** summarizes the existing and proposed land uses.

**Table 1: Existing and Proposed Land Uses**

Existing land-uses to be removed	Size
General Commercial	10,361 SF
Proposed Land Use	Size
Jr. 1-Bedroom (Studio)	36 DU
1-Bedroom	49 DU
2-Bedroom	26 DU
3-Bedroom	1 DU
<b>Total</b>	<b>112 DU</b>

Notes: SF – Square Feet; DU-Dwelling Units

Miles

## SCOPE OF STUDY

The purpose of this transportation analysis is to determine whether the proposed Project would have transportation impacts, as defined by the City of Menlo Park's Transportation Impact Analysis Guidelines (TIA Guidelines)<sup>1</sup>. The analysis covers the following topics:

### CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) VMT ANALYSIS

Senate Bill (SB) 743 updated the process of measuring transportation impacts for CEQA purposes based on VMT determined as the number of daily trips and the distance traveled by those trips to their destinations. The technical advisory provided by the Governor's Office of Planning and Research (OPR) specifically addresses the requirements of California SB 743 which mandated specific types of CEQA analysis of land use development and transportation projects effective July 1, 2020. The quantitative methodology, significance thresholds, and mitigation measures for conducting transportation analysis are based on VMT metrics as identified in the City of Menlo Park TIA Guidelines.

### TRANSPORTATION DEMAND MANAGEMENT (TDM) PLAN

The TDM Plan is prepared to meet the requirements outlined in Menlo Park Municipal Code 16.45.090, which mandates that all new projects involving a change of use of 10,000 or more square feet of gross floor area in the Residential Mixed-use (R-MU) zoning district should prepare TDM plans that will reduce vehicle trips by 20 percent from standard trip generation rates. City staff has indicated that the City's TDM ordinance is anticipated to be revised later this year to align with the C/CAG's TDM requirements. The City/County Association of Governments (C/CAG) adopted updated TDM policies (January 1, 2022) that require the project (qualifying as "Large Residential Project") to implement TDM measures that can achieve a 35% trip reduction based on its C/CAG checklist.

Kittelson peer reviewed the Transportation Demand Management (TDM) Plan report (TDM Plan) prepared by the applicant's consultant, Hexagon Transportation Consultants Inc. (Hexagon) dated July 23, 2024, and determined that the TDM Plan is consistent with the C/CAG TDM Policy. The proposed TDM measures will achieve the 35% trip reduction goal for "Residential Land Use: Large Project" category.

### LOCAL TRANSPORTATION ANALYSIS

The City of Menlo Park requires the local non-CEQA analysis to address traffic operations and needed project design features related to a proposed land use project, as well as to analyze site circulation and access. Based on the discussions with the City Staff and the approved scope of work, Kittelson evaluated the following items under the local transportation analysis section:

- Traffic Operations
  - Intersection Level of Service Analysis
- Other Topics
  - Pedestrian, Bicycle and Transit Facilities
  - Parking Assessment
  - Site Circulation
  - Emergency Access
  - Construction
  - 95<sup>th</sup> percentile queues

---

<sup>1</sup> City of Menlo Park Transportation Impact Analysis Guidelines, 2020.

## STUDY INTERSECTIONS

Kittelson conducted a screening process based on trip threshold to identify appropriate study intersections. The intersection of Haven Avenue/Bayfront Expressway and Marsh Road was selected for analysis in consultation with City staff and as per the guidance provided in the TIA guidelines. **Figure 1** shows the study intersection location.

## TIME PERIODS

Kittelson collected turning movement counts at the intersection of Haven Avenue/Bayfront Expressway and Marsh Road, and at two existing driveways for the existing land use - the northernly driveway and the southernly driveway on Haven Avenue. The counts were collected on March 5th, 2024 for the weekday AM (7-9 AM) and PM (4-6 PM) peak periods. The data collection times coincide with the traditional commute periods when traffic is at the maximum and when the local school semester is in session. The traffic counts were collected when the existing land use was in operation. The purpose of collecting driveway counts at the Project site was to estimate the existing trip generation to count as trip credits in the analysis. The proposed Project will remove all the existing driveways and the proposed driveway for the Project will be reconstructed on the south and east sides of the Project on Haven Avenue.

## STUDY SCENARIOS

Transportation conditions are evaluated for the following scenarios:

- **Existing Conditions:** This scenario describes existing transportation conditions in the study area based on the current roadway and sidewalk network characteristics, transit service and intersection counts.
- **Near-term (2027) Conditions:** This scenario describes the projected peak hour traffic operations based on the net change to travel patterns anticipated from approved (but not yet constructed) or fully/partially occupied developments in the vicinity of study area at the time of the Existing Conditions assessment. This includes additional trips that would be generated if the proposed developments were to operate at full occupancy.
- **Near-term (2027) Plus Project Conditions:** This scenario is similar to Near-term Conditions but with the inclusion of vehicle trips that would be generated by the Project. Near-term Plus Project Conditions were evaluated relative to Near-term Conditions to determine the effects the proposed Project would have on the Near-term roadway network.
- **Cumulative (2040) Conditions:** This scenario represents the future traffic volumes on the roadway network. This scenario was estimated by adding regional growth based on the Citywide traffic model to existing traffic volumes between the existing year and future year (2040). The future scenario represents the ConnectMenlo General Plan plus other recently approved General Plan amendment projects.
- **Cumulative (2040) Plus Project Conditions:** This scenario is similar to Cumulative Conditions but with the addition of vehicle trips generated by the Project. Cumulative Plus Project Conditions were evaluated relative to Cumulative Conditions to determine the effects the proposed Project would have on the future roadway network.

## INTERSECTION LEVEL OF SERVICE (LOS) CRITERIA

Level of service (LOS) describes the operating conditions experienced by motorists. LOS is a qualitative measure of the effect of several factors, including speed and travel time, traffic interruptions and delay, freedom to maneuver, driving comfort, and convenience. The operational LOS are given letter designations from A to F, with A representing the free-flow (underutilized) operating conditions and F representing the severely congested flow (overutilized) with high delays.

Intersection analyses for the study intersection are conducted using the operational methodologies outlined in the Highway Capacity Manual 7th Edition (HCM 7th Edition) methodology (Transportation Research Board, Washington, D.C., 2022), calculated with Vistro software developed by PTV America.

### Signalized Intersections

The HCM procedure calculates a weighted average control delay, in seconds per vehicle, at a signalized intersection and assigns a level of service designation based upon the delay. **Table 2** presents the relationship of average delay to level of service for both signalized and unsignalized intersections.

**Table 2: Level of Service Definition for Intersections**

Signalized Intersection	LOS	Description of Traffic Conditions
Average Delay Per Vehicle (Seconds)		
≤10.0	A	Free flowing. Most vehicles do not have to stop.
>10.0 and ≤20.0	B	Minimal delays. Some vehicles have to stop, although waits are not bothersome.
>20.0 and ≤35.0	C	Acceptable delays. Significant numbers of vehicles have to stop because of steady, high traffic volumes. Still, many pass without stopping.
>35.0 and ≤55.0	D	Tolerable delays. Many vehicles have to stop. Drivers are aware of heavier traffic. Cars may have to wait through more than one red light. Queues begin to form, often on more than one approach.
>55.0 and ≤80.0	E	Significant delays. Cars may have to wait through more than one red light. Long queues form, sometimes on several approaches.
>80.0	F	Excessive delays. Intersection is jammed. Many cars have to wait through more than one red light, or more than 60 seconds. Traffic may back up into "up-stream" intersections.

Source: Transportation Research Board, Highway Capacity Manual 7th Edition (Washington D.C., 2022)

### LOS POLICY STANDARD

The City of Menlo Park Transportation Impact Analysis (TIA) Guidelines outline procedures for conducting a transportation impact analysis for development projects. This ensures comprehensive assessment in accordance with the California Environmental Quality Act and aligns with the City's General Plan. Additionally, the City's General Plan Circulation Element includes policies and programs pertaining to transportation compliance and LOS requirements.

Per the City's TIA guidelines:

- A project is considered potentially noncompliant with local policies if the addition of project traffic causes an intersection on a collector street operating at LOS "A" through "C" to operate at an unacceptable level (LOS "D," "E" or "F") or have an increase of 23 seconds or greater in average vehicle delay, whichever comes first.

- Potential noncompliance shall also include a project that causes an intersection on arterial streets or local approaches to State controlled signalized intersections operating at LOS "A" through "D" to operate at an unacceptable level (LOS "E" or "F") or have an increase of 23 seconds or greater in average vehicle delay, whichever comes first.
- A project is also considered potentially noncompliant if the addition of project traffic causes an increase of more than 0.8 seconds of average delay to vehicles on all critical movements for intersections operating at a near-term LOS "D" through "F" for collector streets and at a near-term LOS "E" or "F" for arterial streets.
- For local approaches to State controlled signalized intersections, a project is considered to be potentially noncompliant if the addition of project traffic causes an increase of more than 0.8 seconds of delay to vehicles on the most critical movements for intersections operating at a near-term LOS "E" or "F."

Per the City's General Plan Circulation Element guidance:

- Policy CIRC-3.4: Level of Service. Strive to maintain LOS D at all City-controlled signalized intersections during peak hours, except at the intersection of Ravenswood Avenue and Middlefield Road and at intersections along Willow Road from Middlefield Road to US 101. The City shall work with Caltrans to ensure that the average stopped delay on local approaches to State-controlled signalized intersections does not exceed LOS E.

## Section 2 Existing Conditions

# EXISTING CONDITIONS

## ROADWAY NETWORK

The Project site is bounded by Haven Avenue to the east and south. Important roadways adjacent to the Project site are discussed below:

**Marsh Road** is a four-lane east-west roadway with an average daily traffic (ADT) volume of 45,000 and posted speed limit of 35 mph in Menlo Park. Between US 101 and Bayfront Expressway, Marsh Road is classified as a Thoroughfare with three lanes in each direction in the City of Menlo Park General Plan. From US 101 to Bay Road, Marsh Road is classified as a Mixed-Use Collector. On-street parking is not permitted between US 101 and Bayfront Expressway.

**Bayfront Expressway** is a six-lane north-south divided roadway that connects the San Francisco Peninsula to the east via the Dumbarton Bridge. Within Menlo Park, it connects Marsh Road with the Dumbarton Bridge. It is designated as a Freeway/Expressway by the City's General Plan. On-street parking is not permitted on Bayfront Expressway. From Marsh Road to Chilco Street, the speed limit is 45 mph and ADT is 32,400. South of Chilco Street, the speed limit is 50 mph.

North of Marsh Road, Bayfront Expressway becomes **Haven Avenue**. Haven Avenue is a two-lane undivided roadway, facilitating access to businesses and residences west of Marsh Road. East of the Project site, the roadway has a posted speed limit of 25 mph, with no on-street parking allowed. South of the Project site, the posted speed limit increases to 30 mph, and on-street parking is permitted on the south side of the road. The City classifies the roadway as a Mixed-Use Collector and has an ADT of 6,600.

## PARKING CONDITIONS

The Project Site is currently occupied by a one-story commercial building and associated surface parking on the North and East side of the building. There is on-street parking available along the southbound side of Haven Avenue and Haven Court with restrictions on vehicles over the height of 6 feet. Additionally, according to the City's overnight parking ordinance (Menlo Park Municipal Code 11.24.050), parking is prohibited between 2-5 a.m. on any residential street or within 300 feet of any residential area in Menlo Park.

## PEDESTRIAN FACILITIES AND AMENITIES

**Figure 3** illustrates the existing pedestrian facilities in the area. East of the Project site, along Haven Avenue, sidewalks are present on both sides of the road. However, to the south of the Project site, sidewalks are only present on the north side. Along Marsh Road, between Bayfront Expressway/Haven Avenue and Scott Drive, sidewalks are available on both sides of the road. Additionally, along Bayfront Expressway, there is the San Francisco Bay Trail available on the east side of the road.

The sidewalk gaps along the Haven Avenue near the intersection of Marsh Road and Bayfront Expressway can make walking less convenient and more challenging for pedestrians to access the San Francisco Bay Trail and TIDE Academy School. As a part of the Bayfront Expressway Multimodal Corridor Project, there is a plan to construct a Class I Multi-Use Path from Marsh Road to Atherton Channel and Pedestrian crossing upgrades to Haven Avenue/Bayfront Expressway and Marsh Road intersection.<sup>2</sup>

## BICYCLE FACILITIES AND AMENITIES

There are four classifications of bikeway facilities in California as defined by the California Department of Transportation (Caltrans) – Class I through Class IV.<sup>3</sup> More details on each of the following classes is shown below in **Figure 4**.

**Figure 5** displays the existing bike facilities in the area. Haven Avenue has an existing buffered Class II bike lane adjacent to the southernly side of the Project site. The San Francisco Bay Trail, a Class I facility (multi-use pathway), runs along Bayfront Expressway between Haven Avenue and the Dumbarton Bridge. A Class I Bike Path facility is also provided on Marsh Road between Haven Avenue/Bayfront Expressway and Constitution Drive. Constitution Drive, Chrysler Drive, and Jefferson Drive have Class II Bike Lanes and Buffered Bike Lanes that connect the Project to the TIDE Academy.

A Class II Bicycle Lane from Haven Court to Atherton Channel has been proposed in the Transportation Master Plan that would eliminate the gap between existing bicycle facilities.

---

<sup>3</sup> As detailed in Chapter 1000 of the Highway Design Manual (Caltrans, 2015).

# TRANSIT SERVICE

The current transit services serving the study area are operated by the San Mateo County Transit District (SamTrans) and Commute.org. Route 270, operated by SamTrans, includes two stops along Haven Avenue near the Project site. Additionally, Commute.org runs a shuttle service, the M3-Marsh Road Shuttle, which also makes stops on Haven Avenue. Details for both routes are shown in **Table 3**.

As shown in **Figure 6**, Route 270 stops at the Redwood City Transit Center and Kaiser Hospital and travels along Bay Road onto Marsh Road before continuing along Haven Road/Bayshore Road within the Project area. Transfers can be made to SamTrans Routes ECR, EPX, 276, 278, 295, 296, and 397 and to Caltrain at Redwood City Station. As of May 2024, Route 270 operates with one-hour headways on weekdays between about 6:30 AM and 6:30 PM and on Saturdays between 7:30 AM and 6:30 PM.

The M3-Marsh Road Shuttle offers morning and afternoon peak service between Menlo Park Caltrain and the Marsh Road business parks on Bohannon Drive, Constitution Drive, Jefferson Drive, and Haven Avenue, as shown in **Figure 7**. The M3-Marsh Road Shuttle schedule operates with one-hour headways on weekdays from 6:30 AM to 10:00 AM and from 4:00 PM to 6:30 PM to synchronize with the peak period Caltrain schedule.

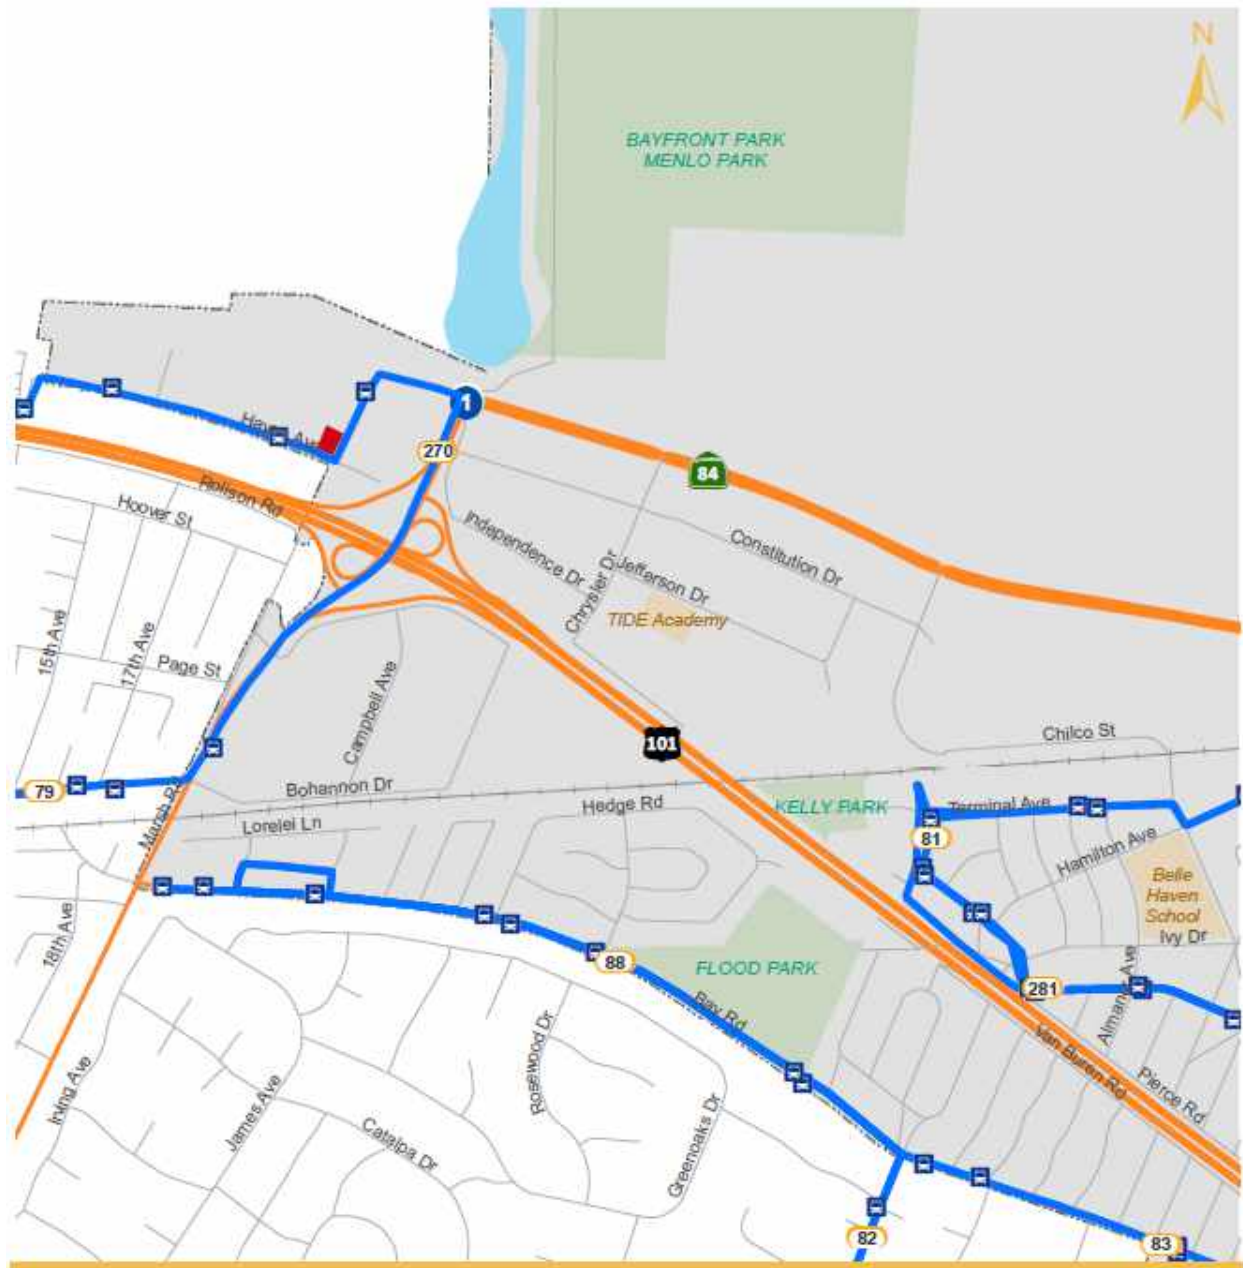

**Table 3: Transit Routes near the Project**

Route	Description	Service Time	Peak Hour Headways (as of May 2024)
270	Redwood City Caltrain – Florence/17 <sup>th</sup> Loop	Weekdays: 6:30 AM – 6:30 PM Weekends: 7:30 AM to 6:30 PM	60 minutes
M3-Marsh Road Shuttle	Menlo Park Caltrain – Marsh Road business parks	Weekdays: 6:30 AM – 10:00 AM 4:00 PM – 6:30 PM	60 minutes

# INTERSECTION LEVEL OF SERVICE

The collected traffic counts, existing lane configurations, and traffic controls for the study intersection were used to assess the Existing Conditions LOS and delay.

Figure 8 shows the lane configurations and traffic control at the study intersection under Existing Conditions. The intersection turning movement counts for each peak hour under Existing Conditions are provided in Figure 9. Detailed calculation worksheets for the Existing Conditions are provided in Appendix B. These delay and LOS values are compared to the City of Menlo Park thresholds outlined in the TIA guidelines, discussed in the previous section.

As mentioned in the previous section, intersection analyses for the study intersection were conducted using the operational methodologies outlined in the Highway Capacity Manual (HCM) 7<sup>th</sup> Edition methodology, calculated using Vistro software. Table 4 displays the existing intersection LOS operations of the study intersection. As shown in the table, the study intersection is currently operating at LOS E in the AM peak hour and LOS D in the PM peak hour.

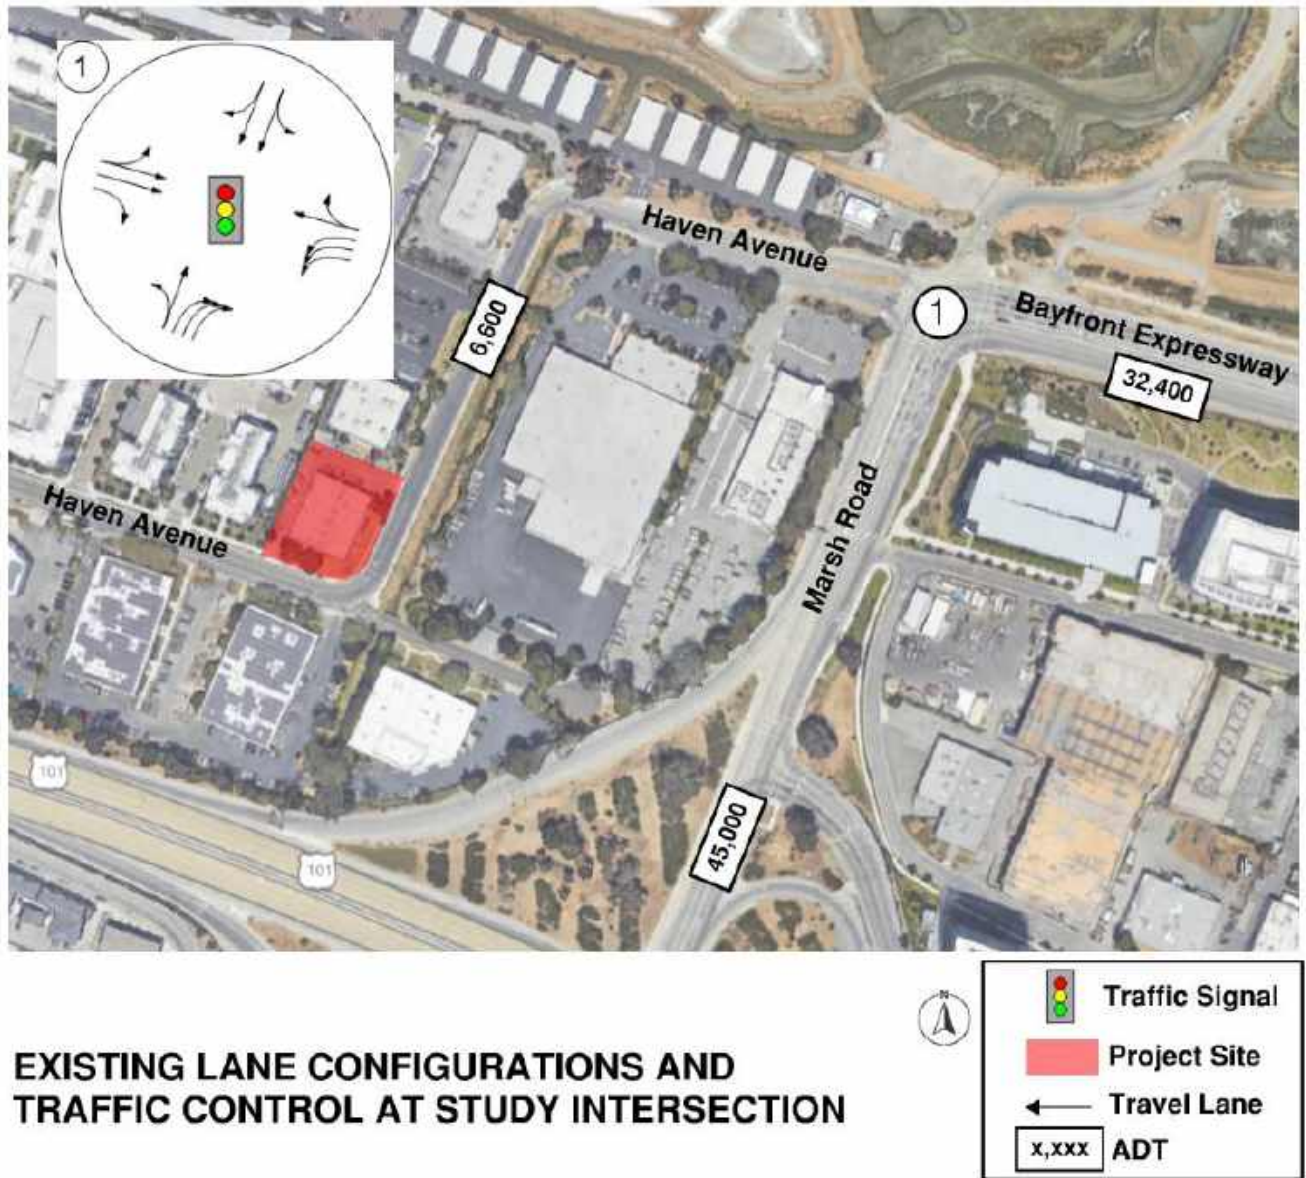

**Table 4: Existing Conditions Intersection Operation Results**

#	Intersection Name	Control Type	AM		PM	
			Delay	LOS	Delay	LOS
1	Haven Avenue/Bayfront Expressway and Marsh Road	Signalized	<b>68.0</b>	<b>E</b>	43.2	D

Notes: **Bold** lettering indicates an intersection that does not meet the City's minimum acceptable design LOS (maintaining LOS D at all City-controlled signalized intersections)  
 AM = weekday a.m. peak hour; PM = weekday p.m. peak hour; LOS = Level of Service; Delay reported in seconds per vehicle

## Section 3 CEQA VMT Analysis

# CEQA VMT ANALYSIS

Senate Bill 743 required the Governor's OPR to establish a new metric for identifying and mitigating transportation impacts within CEQA in an effort to meet the State's goals to reduce greenhouse gas (GHG) emissions, encourage infill development, and improve public health through more active transportation. OPR identified VMT as the required transportation metric and beginning July 1, 2020, VMT (not LOS) is the legally required threshold for transportation impacts pursuant to CEQA. OPR has identified recommendations regarding assessment of VMT and thresholds of significance, but the City may adopt local metrics and thresholds. Adoption of a local VMT threshold requires City Council approval; the Menlo Park City Council approved the VMT thresholds for incorporation into the updated Transportation Impact Analysis (TIA) guidelines on June 16, 2020. The VMT Guidelines were subsequently amended by the City Council on January 11, 2022.

## VMT EXEMPTION CRITERIA

**Table 5** presents the criteria along with explanations for meeting or not meeting the screening criteria for a detailed VMT analysis. As indicated in the table, the Project does not meet any exemption criteria. Therefore, a detailed VMT analysis is required.

**Table 5: VMT Exemption Criteria and Discussion**

Exemption Criteria	Criteria Met (Yes/No/N/A)	Reason
1. Projects generating less than 100 vehicle trips/day	No	As indicated in the travel demand memorandum submitted on March 18, 2024, the Project generates 508 daily trips, which is more than 100 vehicle trips/day.
2. Local servicing retail projects and other commercial projects where the total square footage is 10,000 square feet or less	N/A	This criterion is not applicable as the Project does not include any commercial or retail land use.
3. Residential or office developments located in a low VMT area (defined below) and within ½ mile of an existing "major transit stop" or within ½ mile of a "high-quality transit corridor"	No	The review of Citywide travel demand model confirms that the Project is not located in a low VMT area. The Project is located in TAZ 3071 as shown in <b>Figure 10</b> . Although there are bus stops within ½ miles of the Project site, there is not adequate service for these to be considered a major transit stop or part of a high-quality transit corridor.
4. Affordable housing developments with 100 percent affordable units, either in a low VMT area or within ½ mile of an existing major transit stop or within ½ mile of a high-quality transit corridor	N/A	The Project does not include 100 percent affordable units.

Exemption Criteria	Criteria Met (Yes/No/N/A)	Reason
5. Local serving public facilities where the total new or added square footage is 10,000 square feet or less, such as libraries, police stations, fire stations or parks. Facility type and size outside the description shall provide evidence of local serving status to City satisfaction.	N/A	The Project is not a local serving public facility.
6. Projects in compliance with the El Camino Real and Downtown Specific Plan	N/A	The Project is outside of El Camino Real and Downtown Specific Plan boundary.

Source: City of Menlo Park, TIA Guidelines, 2022

## VMT IMPACT ASSESSMENT

The VMT assessment was conducted to determine the Project's VMT contribution for impact assessment under CEQA and SB 743. Kittelson used the City's most recent 2020 Travel Demand Model, updated by Hexagon Transportation Consultants, to estimate the VMT per capita for the Project. Based on the latest citywide travel demand model, and amended VMT Guidelines dated January 11, 2022, the regional average residential VMT per capita is 13.1. Therefore, the City's residential VMT impact threshold, set at 15% below the regional average, equates to 11.2 daily VMT per capita.

The City's Travel Demand Model indicates that the average VMT per capita within the Project's traffic analysis zone (TAZ) 3071 is 15.3 VMT per capita, as shown in **Figure 10**. Consequently, the Project will require a 27% trip reduction for the Project to reduce VMT and attain the residential threshold of 11.2 VMT per capita, with appropriate Transportation Demand Management (TDM) measures.

City staff has indicated that the City's TIA guidelines are anticipated to be updated later this year to align with the City/County Association of Governments (C/CAG) TDM requirements. The Project is required to follow adopted C/CAG's updated TDM policies (January 1, 2022), which are uniformly-applied development policies that require the Project (qualifying as a "Large Residential Project") to implement TDM measures that can achieve a 35% trip reduction based on the C/CAG TDM checklist.

## MITIGATION FOR EXCEEDING VMT SIGNIFICANCE CRITERIA

The Project applicant has submitted a TDM plan as a part of the project approval process that has the potential to exceed the 35% TDM trip reduction target for this Project. It is assumed that the percent reduction in trips will equate to the same percentage reduction in VMT per capita. While there are several factors that could influence the relationship between VMT per capita and trip reduction, such as trip lengths, mode shifts, vehicle occupancy and variation in travel pattern, the assumption is because different TDM measures will affect different types of trips, resulting in change in VMT per capita to be comparable with trips. Because the TDM's trip reduction would exceed the 27% VMT per capita reduction needed to result in a per-capita Project VMT that is 15% below the existing average, the Project would be able to meet the trip reduction needed to reduce the VMT impacts to less than significant with TDM measures.

The VMT Assessment concludes the Project would generate 15.3 VMT per capita. The Project must reduce VMT by a minimum of 27 percent, to 11.2 VMT per capita, to reduce the Project's impacts to less-than-

significant levels. The 35 percent reduction in vehicle trips required by the C/CAG TDM Policy is sufficient to reduce the Project's VMT to less-than-significant levels. Based on the condition of approval of the Project's TDM plan, the VMT impact from the Project would be less than significant with proposed TDM measures.

The Project would not conflict with applicable plans, ordinances, and policies that address the VMT requirements. The Project is consistent with the ConnectMenlo General Plan, which requires new development to mitigate its impact on VMT per service population by minimizing the number of vehicle trips and providing appropriate bicycle, pedestrian and transit connections (ConnectMenlo CIRC-2.14). Additionally, the project is consistent with the City of Menlo Park 2023-2031 Housing Element which requires implementation of VMT Reduction measures for multifamily housing development that do not screen out from VMT impact analysis.

## Section 4 Local Transportation Analysis

# LOCAL TRANSPORTATION ANALYSIS

## NEAR-TERM (2027) CONDITIONS

This section presents Near-term (2027) traffic conditions, which are defined as conditions just prior to the completion and opening of the proposed Project. Near-term represents cumulative conditions for a short-term horizon year and this scenario includes transportation network changes, land use changes and traffic generated from approved development projects in the area.

### PROGRAMMED/PLANNED TRANSPORTATION FACILITY IMPROVEMENTS

The Haven Avenue streetscape improvement plan will restripe the southbound Haven Avenue approach at Marsh Road to provide a shared through-left lane, a shared through-right lane and a right-turn only lane, the planned geometry is shown in **Figure 11**.

### INTERSECTION LEVEL OF SERVICE

The 2020 Travel Demand Model, developed by Hexagon Transportation Consultants, was used to develop the future volume forecast for Near-term Conditions. The model includes future development throughout the region. Base year (Year 2019) and future year (Year 2040) forecasts were extracted from the model to develop an incremental growth between the estimated existing traffic counts (2019) and the cumulative model horizon year (2040). Traffic volumes for the Near-term Conditions were calculated using the citywide travel demand model. The projected turning movement volumes for each peak hour under Near-term Conditions are provided in **Figure 12**. **Table 6** shows the Near-term Conditions intersection operations for the AM and PM peak hours. With the intersection improvements and signal timing optimization, the study intersection is expected to operate at an acceptable LOS in both peak hours. Detailed calculation worksheets for the Near-term Conditions are provided in **Appendix C**.

**Table 6: Near-term Conditions Intersection Operations Results**

#	Intersection Name	Control Type	AM		PM	
			Delay	LOS	Delay	LOS
1	Haven Avenue/Bayfront Expressway/Marsh Road	Signalized	47.0	D	53.1	D

Notes:

AM = weekday a.m. peak hour; PM = weekday p.m. peak hour; LOS = Level of Service; Delay reported in seconds per vehicle

Figure 11: Near-term and Cumulative Conditions Lane Configuration and Traffic Control

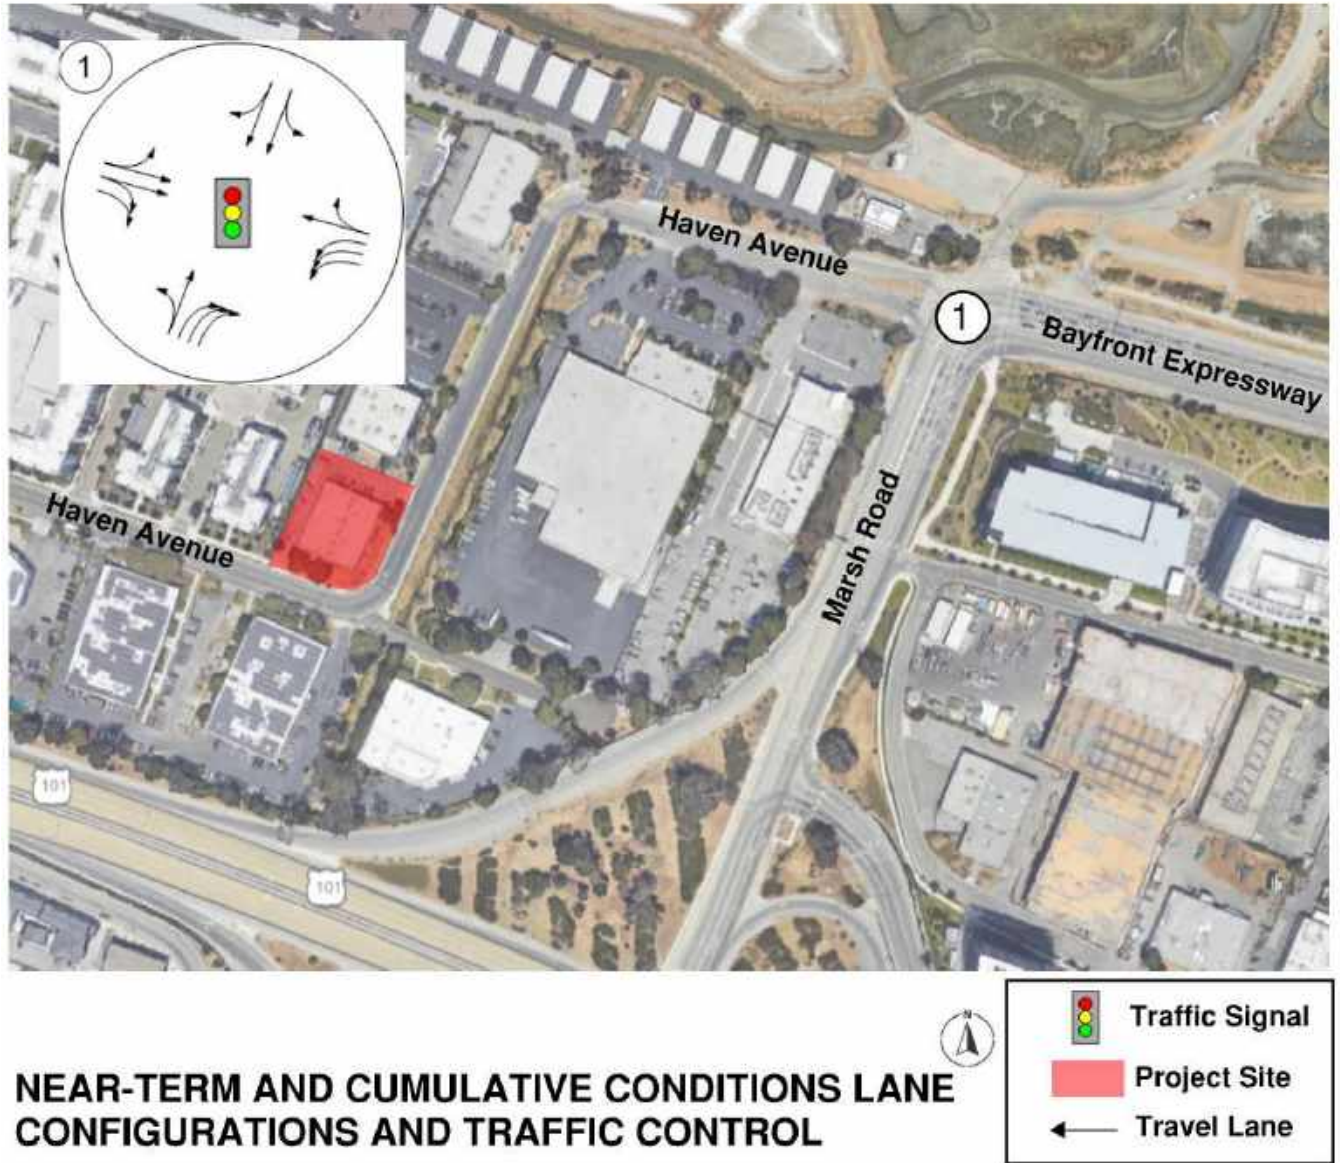

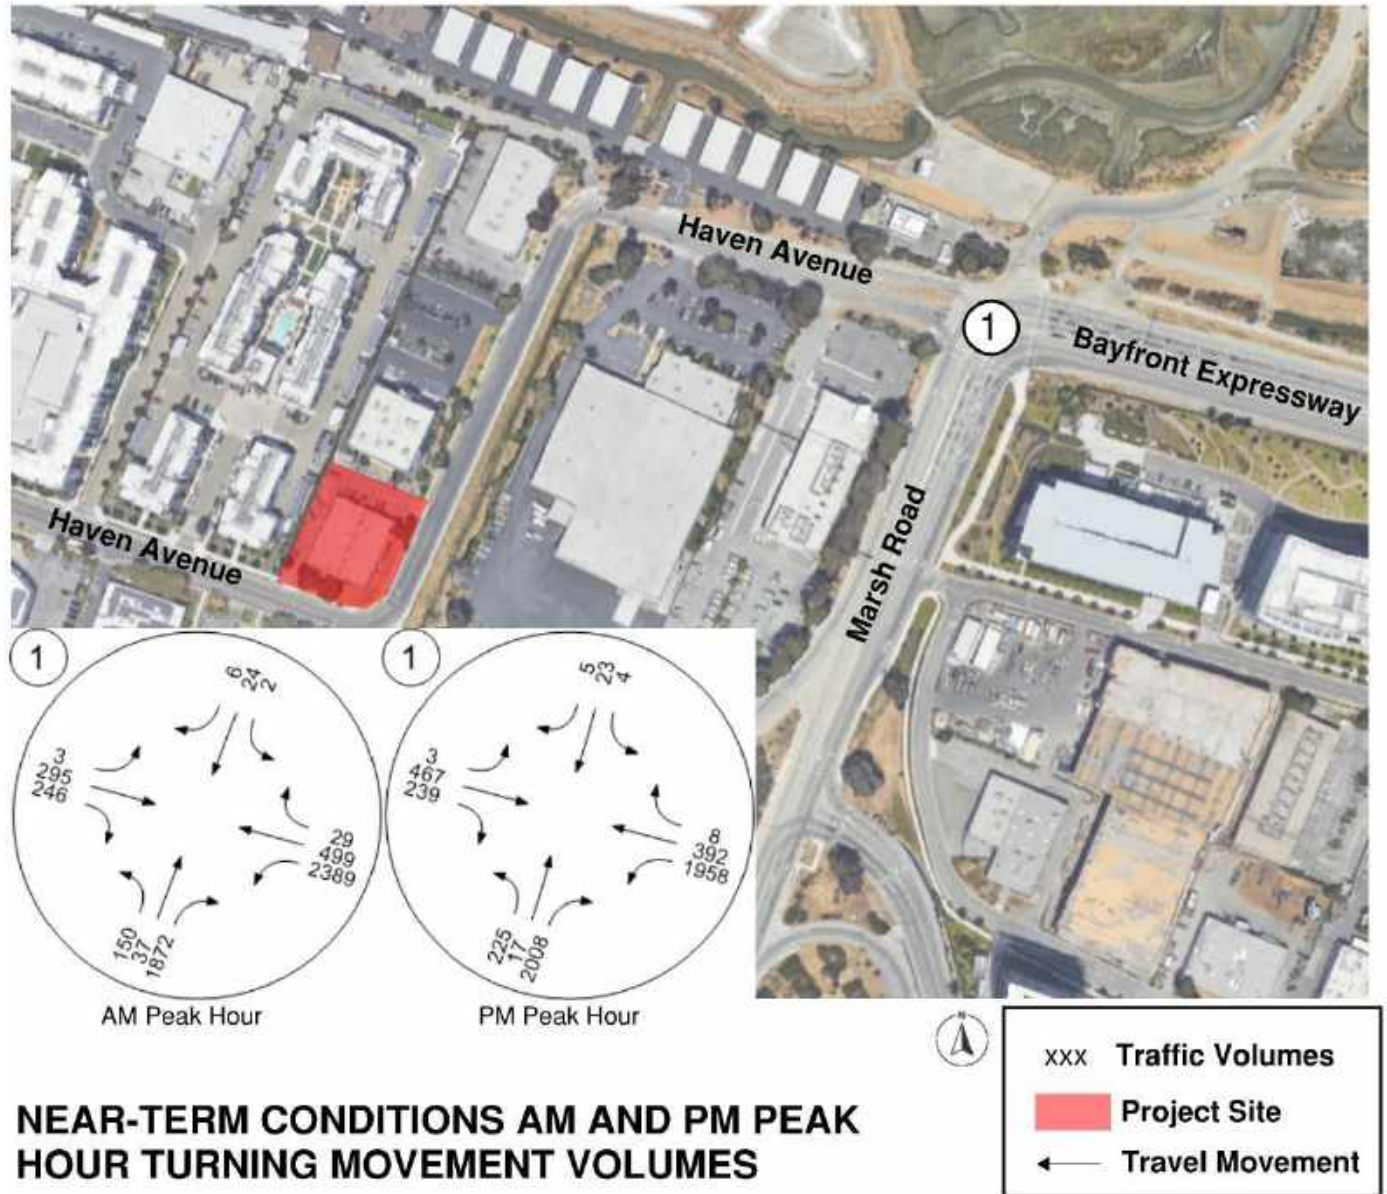

Figure 12: Near-term Conditions Peak Hour Turning Movement Volumes

# PROJECT TRAVEL DEMAND

## TRIP GENERATION

Trip generation is a key consideration for determining the local effects of the Project on the transportation network. Trip generation rates published by the Institute of Transportation Engineers (ITE) Trip Generation Manual 11th Edition were used to estimate the number of trips generated by the proposed Project. ITE trip estimates are associated with specific land use codes:

- Mid-Rise Multifamily Housing (ITE Land Use Code - 221) is used for the Project peak hour and daily trip generation.
- General Office Building (ITE Land Use Code – 710) is only used for the existing commercial space daily trip generation, since the peak hour trips were collected at the site driveways. Kittelson has used General Office Use instead of Commercial Use to provide credit for the existing land use. This decision was made after discussions with City staff, considering the surrounding land uses and current operations of the existing building.

**Table 7** displays the trip rates according to these ITE land use codes for Daily, AM and PM peak hours.

**Table 7: Trip Generation Rates**

Land Use	Source	Units	Weekday Daily Rate	Weekday AM Peak Hour			Weekday PM Peak Hour		
				Rate	In %	Out %	Rate	In %	Out %
Mid-Rise Multi-Family Housing	Land Use Code – 221 General Urban/Suburban <sup>1</sup>	DU	4.54	0.37	23	77	0.39	61	39
General Office Building <sup>2</sup>	Land Use Code – 710 General Urban/Suburban <sup>1</sup>	KSF	10.84	1.52	88	12	1.44	17	83

Notes: KSF- 1,000 Square Feet, DU - Dwelling Units

<sup>1</sup> Source: ITE Trip Generation Manual, 11th Edition

<sup>2</sup> For trip generation estimates, Kittelson has used General Office Use instead of Commercial Use to provide credit for the existing land use. This decision was made after discussions with City staff, considering the surrounding land uses and current operations of the existing building.

**Table 8** shows the potential trips generated by the Project. As mentioned in the previous section, the Project will replace the existing commercial use which is currently under operation at the time of data collection. Therefore, the existing trips generated at the Project site are credited toward the proposed Project trips. Ingress and egress driveway traffic to and from the existing land use were collected on March 5th, 2024, for both the AM and PM peak periods. The traffic counts at the two driveways are provided in **Appendix D**. Daily trips generated by the existing commercial space were calculated using the ITE trip generation rate, given the similarity observed between the estimated AM and PM peak hour trips using the ITE trip generation manual and the actual existing trip counts.

The City/County Association of Governments (C/CAG) Traffic Demand Management (TDM) policy requires large projects generating more than 499 daily trips to implement TDM to achieve a 35 percent trip reduction.<sup>4</sup> As shown in the table, the Project would generate 508 total daily trips and 396 net daily trips,

<sup>4</sup> City/County Association of Government of San Mateo County. Transportation Demand Management Implementation Guide, March 2021, access from [https://ccag.ca.gov/wp-content/uploads/2021/03/CCAG\\_TDM-Policy-Update\\_Implementation-Guide\\_Draft\\_3-24-2021\\_v2b.pdf](https://ccag.ca.gov/wp-content/uploads/2021/03/CCAG_TDM-Policy-Update_Implementation-Guide_Draft_3-24-2021_v2b.pdf)

potentially categorizing it as a large project. Following the implementation of a 35 percent TDM reduction and the replacement of the existing land use, the Project would result in 218 net daily trips, including 16 net new trips in the AM peak hour and 15 net new trips in the PM peak hour. However, due to the removal of the existing commercial space, there would be negative volumes of inbound trips in the AM peak hour. To be conservative, for movements with negative volumes, the negative volumes will be replaced with zero (0) in the trip assignments.

**Table 8: Proposed Project Net Trip Generation Estimates**

Land Use (ITE Land Use Code)	Unit	Size	Weekday Daily	Weekday AM Peak Hour			Weekday PM Peak Hour		
				In	Out	Total	In	Out	Total
<b>Proposed Project</b>									
Mid-Rise Multifamily Housing (LU-221) (1)	DU	112	508	9	32	41	27	17	44
TDM Reduction (35%) (2)			(178)	(3)	(11)	(14)	(9)	(6)	(15)
<b>Total Proposed Project Trips</b>			<b>331</b>	<b>6</b>	<b>21</b>	<b>27</b>	<b>18</b>	<b>11</b>	<b>29</b>
<b>Existing Project (Credits for Existing Land Use)</b>									
General Office Building (LU-710) (3)	KSF	10.355	(112)	(9)	(2)	(11)	(6)	(8)	(14)
<b>Net New Project Trips (Total Proposed Project Trips – Existing Trips at Project Site)</b>			<b>218</b>	<b>-3</b>	<b>19</b>	<b>16</b>	<b>12</b>	<b>3</b>	<b>15</b>

Notes: KSF- 1,000 Square Feet, DU - Dwelling Units

1) Source: ITE Trip Generation Manual, 11th Edition

2) C/CAG TDM policy requires 35 % TDM reduction for large projects that generate more than 499 daily trips.

3) Ingress and egress trips from the existing land use were collected at the site driveways on March 5th, 2024. Daily trips were estimated based on the ITE Trip Generation Manual.

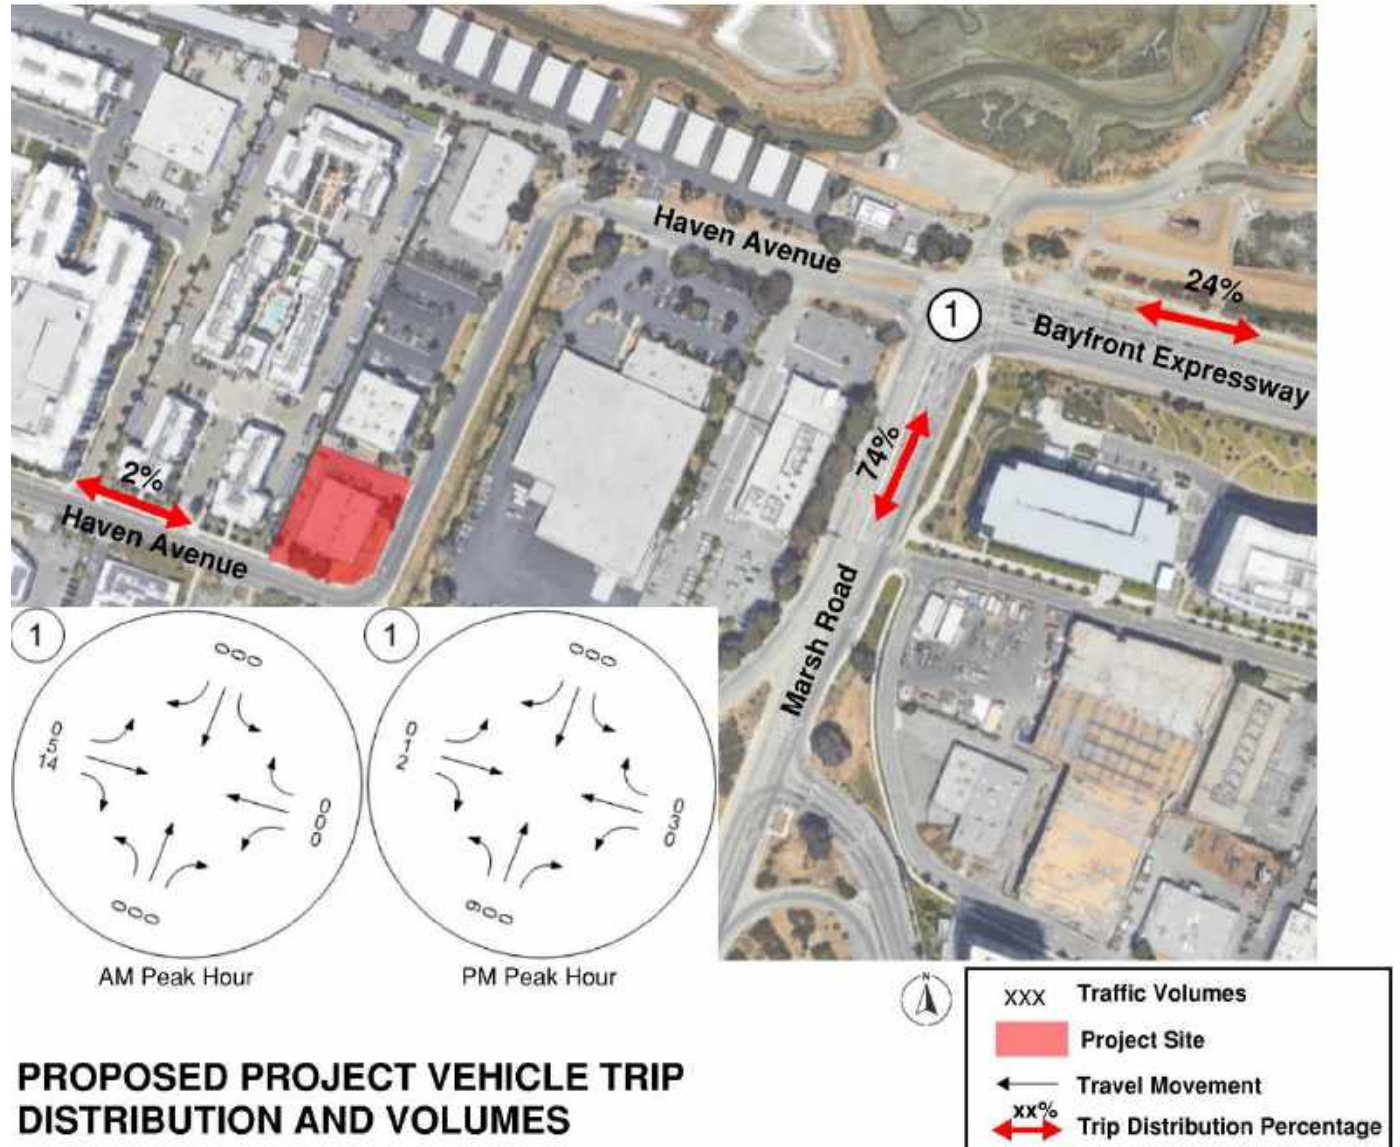

## TRIP DISTRIBUTION

The vehicle trip distribution assumptions are based on the City's Travel Demand Model, existing travel patterns combined with our understanding of the Project area, such as potential employer distribution, various land uses, and the presence of trip generators and attractors.

As described in the Trip Generation section, the proposed Project would generate 16 net new trips in the AM peak hour and 15 net new trips in the PM peak hour. **Figure 13** shows the proposed Project vehicle trip distribution percentages and volumes for AM and PM peak hours.

Figure 13: Proposed Project Vehicle Trip Distribution and Volumes

# NEAR-TERM PLUS PROJECT CONDITIONS

This section presents Near-term Plus Project traffic conditions, which are defined as conditions right after the completion of the proposed Project.

## INTERSECTION LEVEL OF SERVICE

Traffic volumes for the Near-term Plus Project Conditions were developed by combining the Near-term estimated traffic volumes with the Project volumes. The resulting Near-term Plus Project intersection turning movement volumes are shown in **Figure 14**.

**Table 9** displays the Near-term Plus Project intersection operations for the AM and PM peak hours, respectively. Detailed calculation worksheets are provided in **Appendix E**. As previously mentioned, a Project is considered potentially noncompliant with local policies if an intersection downgrades from an acceptable level to an unacceptable one or experiences an increase of 23 seconds or more in average vehicle delay. Additionally, for local approaches to State-controlled signalized intersections, an increase of more than 0.8 seconds in average delay for vehicles on the most critical movements is also considered noncompliance with local policies for intersections operating at LOS E or F. As shown in the table, the study intersection is anticipated to maintain an acceptable LOS (LOS D or better) with the Project during both peak hours. Therefore, the Project complies with local policies in the near-term.

**Table 9: Near-term Plus Project Conditions Intersection Operations Results**

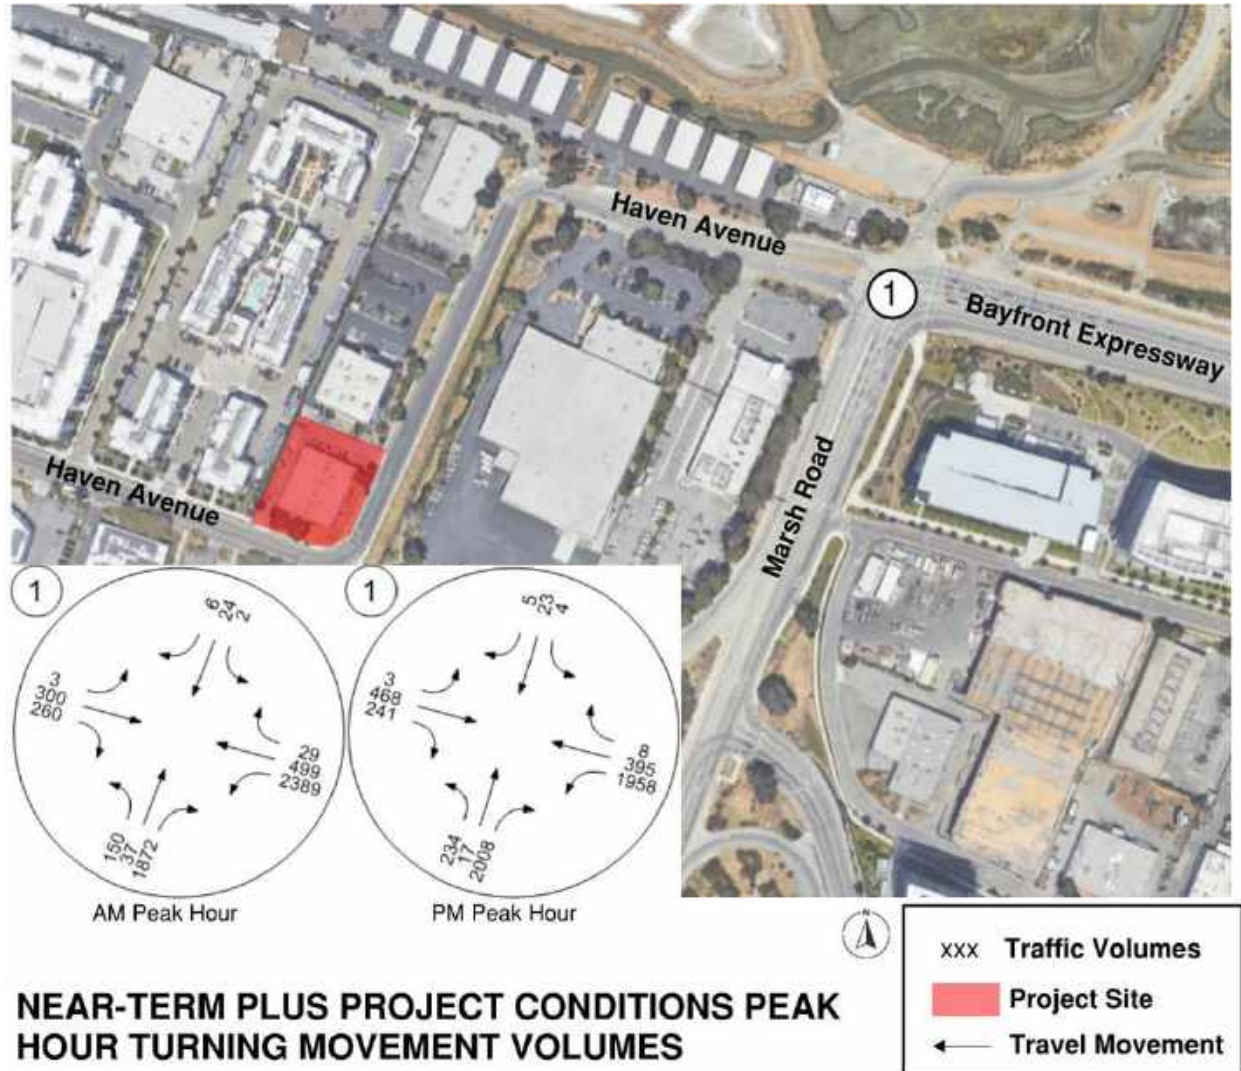

#	Intersection	Control Type	Peak Hour	Near Term		Near Term + Project		Change in Delay
				Delay	LOS	Delay	LOS	
1	Haven Avenue/Bayfront Expressway and Marsh Road	Signalized	AM	47.0	D	47.2	D	0.2
			PM	53.1	D	53.2	D	0.1

Notes:

AM = weekday a.m. peak hour; PM = weekday p.m. peak hour; LOS = Level of Service; Delay reported in seconds per vehicle

Source: Highway Capacity Manual 7th Edition; Kittelson & Associates, 2024

Figure 14: Near-term Plus Project Conditions Peak Hour Turning Movement Volumes

# CUMULATIVE (2040) CONDITIONS

This section presents the anticipated Cumulative conditions expected by 2040 and the effect of the future vehicular volumes on the study intersection.

## LAND USE DEVELOPMENT AND TRANSPORTATION NETWORK CHANGES

The City's most recent 2020 Travel Demand Model was used to develop the future volume forecast for Cumulative Conditions. The model includes future development throughout the region and is consistent with the ConnectMenlo General Plan and other recently approved general plan amendments within the city. Therefore, the traffic forecasts project growth on all roads in Menlo Park and increases in traffic volumes due to regional growth by 2040. Base year (Year 2019) and future year (Year 2040) forecasts were extracted from the model to develop an incremental growth between the estimated existing traffic counts (2019) and the cumulative model horizon year (2040). The intersection lane configurations under cumulative conditions were assumed to be the same as described under the Near-term (2027) Conditions.

## INTERSECTION LEVEL OF SERVICE

The projected turning movement volumes for each peak hour under Cumulative Conditions are provided in **Figure 15**. Based on these volumes and lane configurations, the cumulative operations at the study intersection are shown in **Table 10**. Detailed calculation worksheets for the Cumulative Conditions are provided in **Appendix F**. As shown in the table, the study intersection is expected to operate at LOS D in the AM peak hour and LOS E in the PM peak hour under Cumulative Conditions.

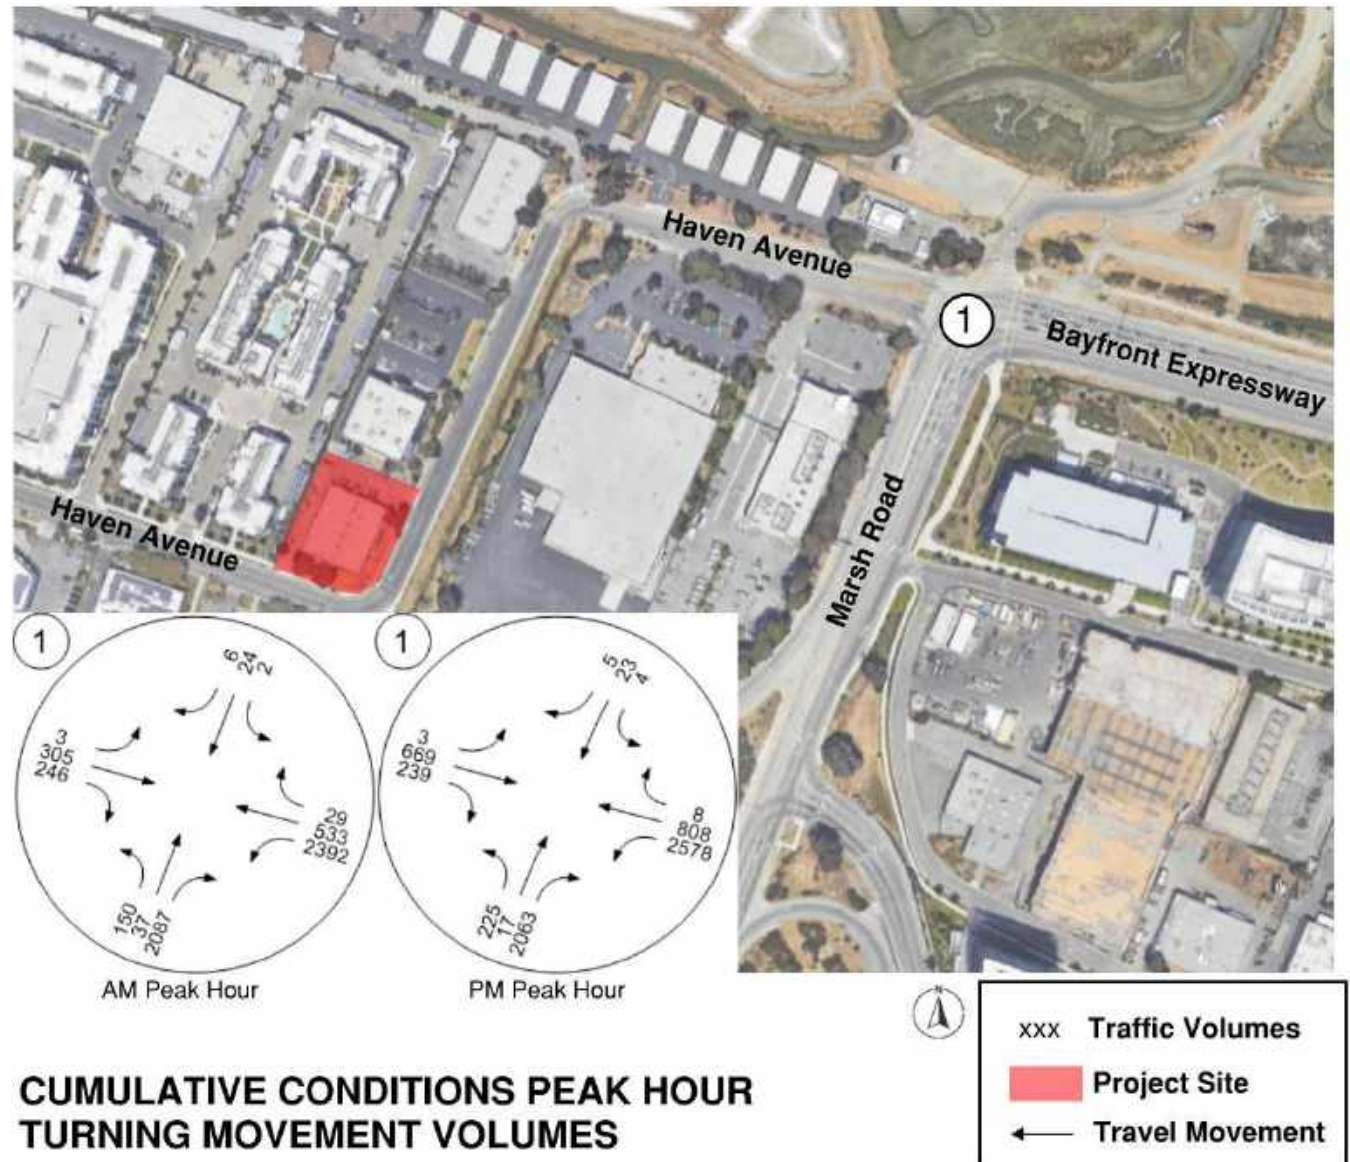

**Table 10: Cumulative Conditions Intersection Operations Results**

#	Intersection Name	Control Type	AM		PM	
			Delay	LOS	Delay	LOS
1	Haven Avenue/Bayfront Expressway and Marsh Road	Signalized	51.6	D	<b>65.0</b>	<b>E</b>

Notes:  
**Bold** lettering indicates an intersection that does not meet the City's minimum acceptable design LOS (maintaining LOS D at all City-controlled signalized intersections)  
 AM = weekday a.m. peak hour; PM = weekday p.m. peak hour; LOS = Level of Service; Delay reported in seconds per vehicle  
 Source: Highway Capacity Manual 7th Edition; Kittelson & Associates, 2024

Figure 15: Cumulative Conditions Peak Hour Turning Movement Volumes

# CUMULATIVE PLUS PROJECT CONDITIONS

This section describes the effect of the proposed Project on traffic operations under Cumulative Conditions. Traffic volumes for the Cumulative Plus Project Conditions were developed using the same additive approach used for the Near-term (2027) Plus Project volumes.

## INTERSECTION LEVEL OF SERVICE

Based on these volumes and lane configurations, the Cumulative Plus Project volumes are shown in **Figure 16** and the operations at the study intersections are shown in **Table 11**. Detailed calculation worksheets for the Cumulative Plus Project Conditions are provided in **Appendix G**. As previously mentioned, a project is considered potentially noncompliant with local policies if the addition of project traffic causes an intersection to downgrade from an acceptable level to an unacceptable one or results in an increase of 23 seconds or more in average vehicle delay. Additionally, for local approaches to state-controlled signalized intersections, an increase of more than 0.8 seconds in average delay for vehicles on the most critical movements is also considered noncompliance with local policies for intersections operating at LOS E or F. As shown in the table, the study intersection is expected to continue to operate at LOS D in the AM peak hour and LOS E in the PM peak hour under Cumulative Plus Project Conditions. The Project would cause the intersection to experience an increase of 0.3 seconds in the delay of the most critical movement. Therefore, the Project complies with local policies.

**Table 11: Cumulative Plus Project Intersection Operations Results**

#	Intersection	Control Type	Peak Hour	Critical Movement	Cumulative Year		Cumulative Year + Project		Change in Delay
					Delay	LOS	Delay	LOS	
1	Haven Avenue/Bayfront Expressway and Marsh Road	Signalized	AM	Overall	51.6	D	52.2	D	0.6
			PM	Overall	<b>65.0</b>	<b>E</b>	<b>65.3</b>	<b>E</b>	0.3
				Southbound	<b>131.3</b>	<b>F</b>	<b>131.6</b>	<b>F</b>	0.3

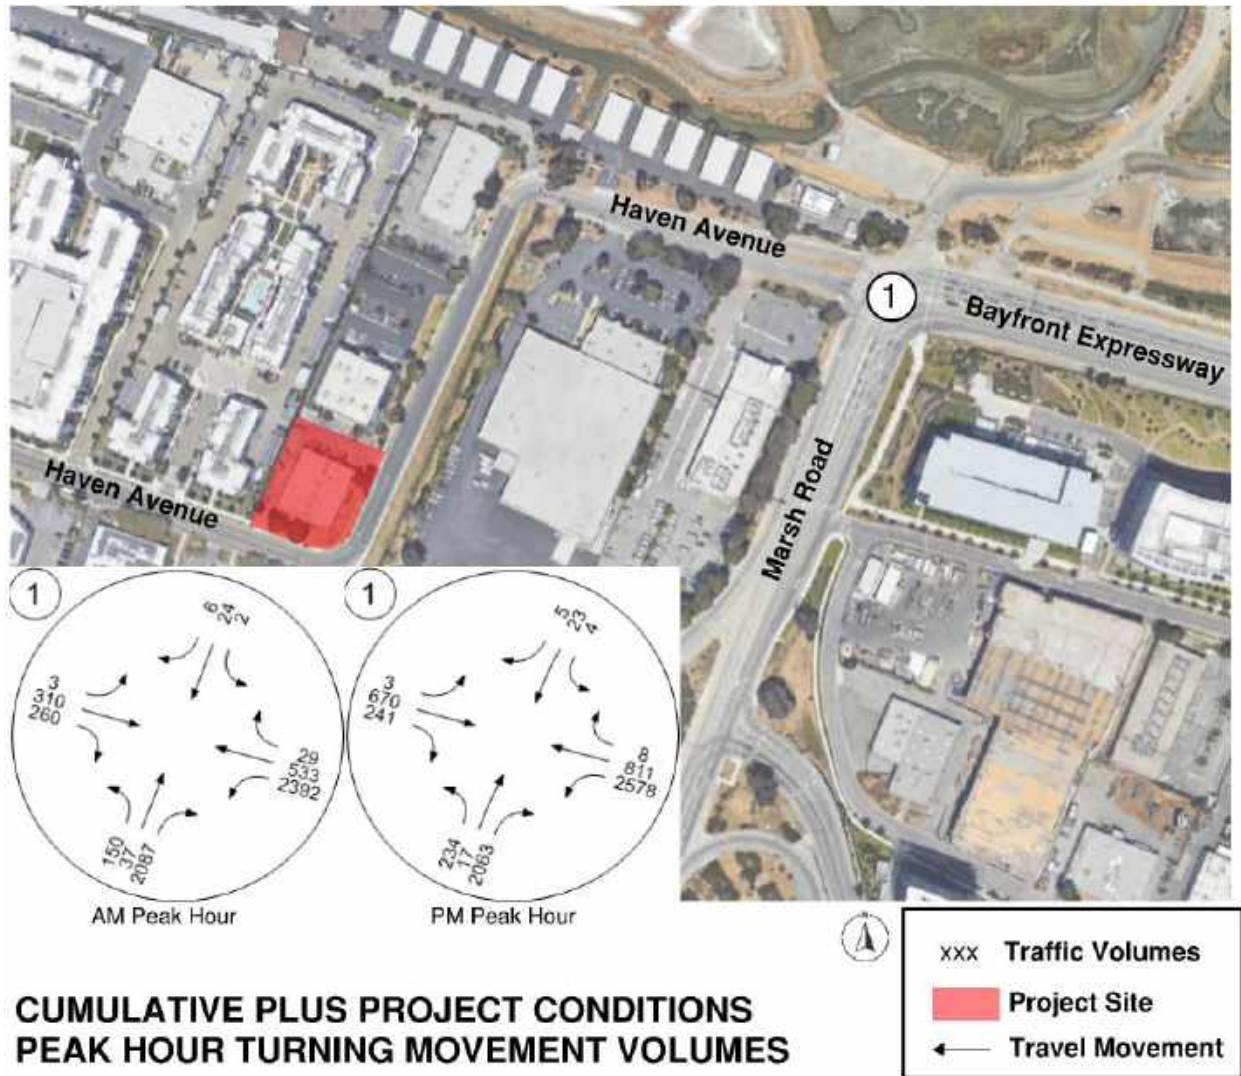

Notes:

**Bold** lettering indicates an intersection that does not meet the City's minimum acceptable design LOS (maintaining LOS D at all City-controlled signalized intersections)

AM = weekday a.m. peak hour; PM = weekday p.m. peak hour; LOS = Level of Service; Delay reported in seconds per vehicle

Figure 16: Cumulative Conditions Plus Project Peak Hour Turning Movement Volumes

## ADDITIONAL TRANSPORTATION ANALYSIS

This section describes additional transportation analysis related to site access and circulation of the proposed Project based on a review of the proposed site plan. This section includes analysis of the following items:

- Vehicular access and on-site circulation
  - Access driveway and drive aisles
  - Driveway sight distance
  - Trash collection
- Pedestrian, bicycle, and transit access
- Emergency vehicle access
- Parking assessment
- Construction
- 95<sup>th</sup> percentile queue analysis

The analysis in the following sections, while informed by adopted State and local standards, is driven by professional judgement. Citations are provided where applicable and available. References to the proposed Project characteristics and geometric features are per the most recent site plan dated June 2024.

### VEHICULAR ACCESS AND ON-SITE CIRCULATION

Site access and on-site circulation were evaluated using commonly accepted transportation design, planning principles and The City of Menlo Park Design Guidelines. The site access and circulation were evaluated to determine the adequacy of site driveways with regard to traffic volumes, geometric design, site distance, and truck access.

#### **Access Driveway and Drive Aisles**

The residential parking garages can be accessed via two entrances situated at the northeast corner of the building and south of the building on Haven Avenue, respectively.

- Residential Parking Entrance
  - Residential parking is available on the ground and second floors in the building. There are 99 vehicle parking spaces, including 5 disability parking spots.
  - The proposed two-way drive aisle is between 20 and 23 feet wide, which does not meet the 24-foot width requirement specified for two-way turning aisles for multi-family residentials, according to the City of Menlo Park Driveway Design Guidelines<sup>5</sup>.
  - The proposed slope for the parking garage ramps at two entrances is 1.8%, which is below the City's recommended driveway grade limit of 8 percent, as per the City of Menlo Park Driveway Grade Guidelines.<sup>6</sup>

---

## Driveway Sight Distance

Clear sight triangles identify areas at the corners of intersections of roads and driveways where views of approaching traffic should not be obstructed. The driveway design should provide sight distance of sufficient length so that drivers can control the operation of their vehicles to avoid impeding an unexpected object in the traveled way. A preliminary sight distance assessment was conducted for vehicles turning from the driveways onto Haven Avenue. The assessment evaluated the stopping site distance for vehicles exiting the Project driveways. For this analysis, the posted speed limit of 30 miles per hour on Haven Avenue was used based on the city's sight distance guidance<sup>7</sup>.

The driveway triangles in **Figure 17** shows the clear sight triangles at two Project driveways. Any landscaping added by the Project must be maintained properly to ensure it does not impede roadway visibility. The Zoning Ordinance Section 16.64.020 states that the maximum height of fences and hedges is three feet within the line of sight triangles at the intersection of two streets.

### ■ Recommendations

- Kittelson recommends the applicant confirm that the proposed vegetation will not hinder the visibility of pedestrians and oncoming traffic on Haven Avenue from the driveway.

## Trash Collection

Trash collection will occur along Haven Avenue south adjacent to the first-floor garage entrance. Garbage trucks will not enter the building. **Figure 18** shows the trash pick-up location. Trash receptacles will be staged by property management outside the flow of traffic. Due to space constraints on the property, a portion of the curb will be carved out to provide a place for trash collection service. Several factors influenced this design, including the absence of parking along the property's frontage, the necessity to minimize disruption to the bike lane, and the need to ensure clear sight lines at the corner of Haven Avenue. The proposed design enables trash collection trucks to pull off the street for safe servicing without impeding the existing bike lane.

## PEDESTRIAN ACCESS

Pedestrians have access to the site via three entries on Haven Avenue, one situated on the south side of the building (leading to the lobby), and two on the east side, as shown in **Figure 19**. The Project proposes to add sidewalks along the entire parcel boundaries.

The Project would generate activities that would interfere with access or circulation for people walking to, from, or passing by the site. Vehicles exiting through the garage doors might impede residents walking by on the sidewalks. To address this, the implementation of reduced speed limits and effective warning systems would ensure pedestrians can safely cross the garage entrance.

### ■ Recommendations

- Kittelson recommends that the Project applicant install warning devices that are both visible and auditory to indicate that vehicles are exiting the parking garages to ensure safety of pedestrians.

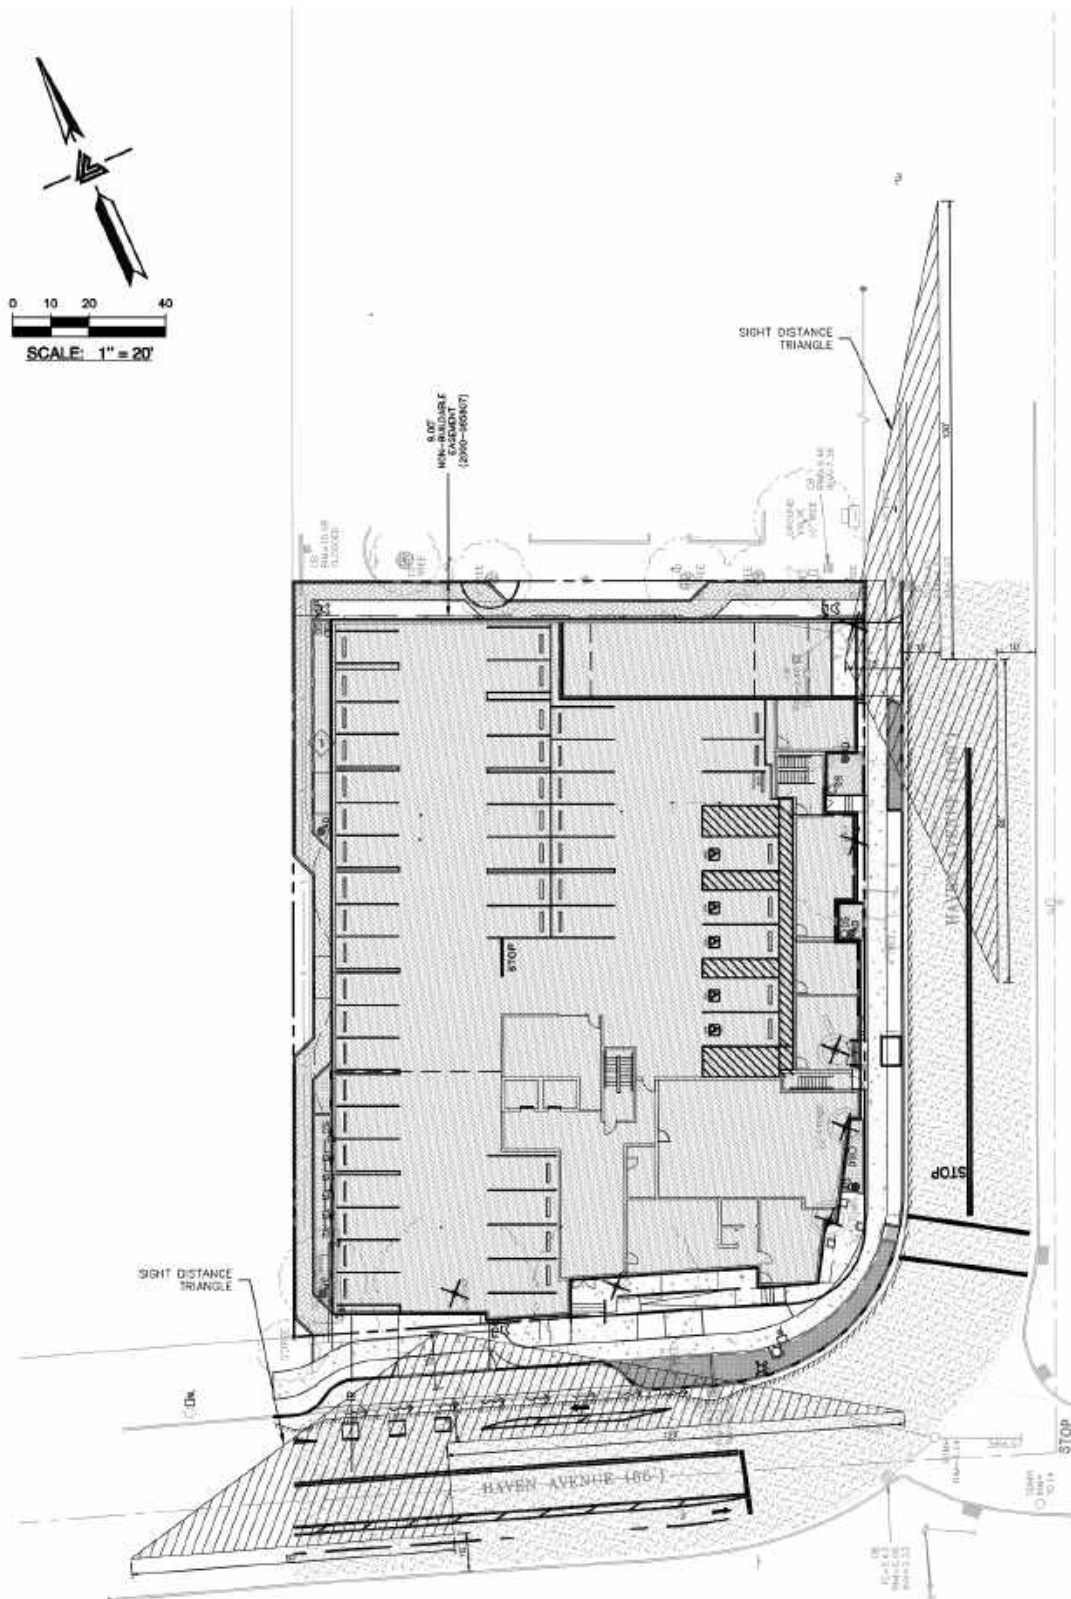

Students will be able to access the school by walking and biking along Haven Avenue and the trail along the Bayfront Expressway as pointed out in the Walk and Roll Map for Tide Academy.<sup>8</sup>

## BICYCLE ACCESS

Haven Avenue features Class II buffered bike lanes south of the Project. The Project is not expected to impact the existing Class II bike facility.

Long-term bike parking is available within the parking garage and can be accessed through the lobby on the south side of the building. Short-term bike parking is provided outside of the building at the southeast corner and south side of the Project.

Vehicles entering and exiting through the south garage door might obstruct bicyclists in the bike lanes. Green conflict paint crossing the garage entrance is necessary and has been shown in the site plan. Additionally, bikeway and caution signage should be installed.

### ■ Recommendations

- Kittelson recommends that the Project applicant install warning devices that are both visible and audible to indicate vehicles exiting the parking garages, ensuring bicyclist safety.

## TRANSIT ACCESS

Access to transit facilities and services outlined in the Existing Conditions section will not change with the proposed site plan. The nearby bus stops are not impeded and do not need to be relocated.

## VEHICLE PARKING

The Project would include a total of 104 vehicular parking spaces, 50 on the ground floor and 54 on the second floor. On the ground floor, 6 of 50 residential spaces would be Americans with Disabilities Act (ADA) accessible and 7 would be Electric Vehicle Supply Equipment (EVSE) parking. On the second floor, 9 of 54 spaces are EVSE parking. A review of City Parking Area Design Guidelines<sup>9</sup> found that the Project's proposed parking dimensions are in compliance with City specifications for standard and handicap stall types.

As shown in **Table 12**, the Project is proposing to provide fewer vehicle spaces (104) than otherwise required by City parking regulations (112) pursuant to the provisions of state law to accommodate the density permitted by the State Density Bonus Law. With the proposed TDM plan, the demand for parking will be reduced, and the 104 proposed parking stalls will be sufficient to meet the projected parking demand.

**Table 13** shows parking requirements based on the ITE Parking Generation Manual – 6<sup>th</sup> Edition and will require 91 spaces. It can be concluded that the proposed parking would meet the Project parking demand.

Based on the City of Menlo Park Handicap Parking Design Guidelines, the required number of disabled spaces is minimum 5 spaces for total number of parking spaces between 101 and 150, therefore, the Project disabled parking supply meets the City's requirements.

---

Note: Rounded up to the nearest integer

## BICYCLE PARKING

As per the guidelines delineated in the City of Menlo Park’s Municipal Code 16.45.050, the Project necessitates a minimum of 168 long-term parking spaces and 17 short-term parking spaces for bicycles. As shown in **Table 14**, the bicycle parking spaces meet the minimum requirements.

**Table 14: City of Menlo Park Bicycle Parking Requirements and Proposed Project Parking Spaces**

Land Use Type	Number of Units	Minimum Bicycle Parking	Minimum Bicycle Parking required	Proposed Parking Calcs – Parking Spaces
Residential Units	112	1.5 long-term per unit; 10% additional short-term for guests	168 long-term 17 short-term	168 long-term 17 short-term

Source: Menlo Park Municipal Code 16.45.080 Parking Standards

## EMERGENCY VEHICLE ACCESS

The nearest fire station (Menlo Park Fire Department Station #77) is located approximately 1.6 miles east of the Project site at 1467 Chilco Street, Menlo Park. Per Menlo Park Bureau of Fire Prevention and Life Safety Standards and Guidelines Manual<sup>10</sup>, all driveways and drive aisles are at least 20 feet wide to accommodate Emergency Vehicle access. However, according to the applicant’s statement, fire trucks

<sup>10</sup> Bureau of Fire Prevention and Life Safety Section 101.6 Standards and Guidelines Manual, access from <https://www.menlofire.gov/media/Fire%20Prevention/Guidelines%20and%20Standards/Menlo%20Park%20Fire%20Protection%20District%20S%20and%20G%20Manual%20FINAL%202023.pdf>

are not intended to enter the building or garage; instead, operations would take place along Haven Avenue. Therefore, EVA or truck turning templates are not needed.

■ **Recommendations**

- Kittelson recommends the Project applicant coordinate with the Fire Department to ensure that the installation of signs and markings designating fire lanes complies with standard requirements and facilitates adequate access for fire apparatus.

## CONSTRUCTION

The building is three stories of Type I construction under 5 stories of Type III construction. Construction would occur in a single phase and is expected to take approximately 22 months. The projected excavation depth is approximately 3 feet. The total estimated net export is expected to be 2,000 cubic yards.

The contractor should develop a Construction Traffic Management Plan (Plan) for the Project construction, aiming to minimize adverse effects of Project construction traffic. The Plan should also identify any road or lane closures and specify time-of-day activities. During construction, the contractor shall coordinate to provide dust control without the use of potable water. All roadways should always be open to emergency personnel. The anticipated effect on LOS is expected to be short-term and minimal, contingent upon the implementation of the Construction Traffic Management Plan.

## 95<sup>TH</sup> PERCENTILE QUEUE ANALYSIS

In addition to the operations analysis, Kittelson also reviewed the changes in 95<sup>th</sup> percentile queue lengths for the study intersection. The 95<sup>th</sup> percentile queue lengths are reported to provide appropriate storage for all but the worst 5% of traffic scenarios. This report provides queue lengths, which are derived from the outputs of the Vistro traffic analysis software and are representative of the 95<sup>th</sup> percentile traffic volumes.

**Table 15** shows the available queue storage for the exclusive movement lanes and 95<sup>th</sup> percentile queue lengths for the Existing, Near-term (2027), Near-term (2027) Plus Project, Cumulative (2040), and Cumulative (2040) Plus Project conditions. Movements where the expected 95<sup>th</sup> percentile queue length exceeds storage capacity during the weekday peak hours are highlighted in bold in the table.

Storage capacity is exceeded for the following scenarios:

### **Existing Conditions**

- Eastbound right-turn and southbound right-turn lanes – (PM)

### **Near-term Conditions**

- Eastbound right-turn lane – (PM)

### **Near-term Plus Project Conditions**

- Eastbound right-turn lane – (PM)

### **Cumulative Conditions**

- Eastbound right-turn and southbound right-turn lanes – (AM)
- Eastbound right-turn lane – (PM)

### **Cumulative Plus Project Conditions**

- Eastbound right-turn and southbound right-turn lanes – (AM)
- Eastbound right-turn lane – (PM)

Despite the storage capacity being exceeded at the eastbound right-turn and southbound right-turn movements, queue lengths do not increase significantly in the plus Project scenarios compared to the no-Project scenarios. Nevertheless, The City and Caltrans should monitor the traffic at this intersection and optimize or retime the signal based on new traffic counts to improve queuing conditions.

**Table 15: 95th Percentile Queue Lengths**

#	Location (Control)	Scenario	95th Percentile Queue Length (feet/lane)

PLANNING DATA	
ADDRESS	3705 HAVEN AVE, MENLO PARK CA 94025
PARCEL NUMBER	55170240
LOT SIZE	±28,808 SQ. FT., 0.66 ± ACRES
ZONING DISTRICT	R-MU-B, RESIDENTIAL MIXED USE
DEVELOPMENT AND DESIGN STANDARDS PER MENLO PARK MUNICIPAL CODE SECTION 16.45.120	
	REQUIRED
DENSITY	>30 DU / ACRE TO 100 DU / ACRE 20 UNITS - 66 UNITS
PROPOSED	170 DU / ACRE* 112 UNITS
SETBACKS	SEE ARCHITECTURAL PLANS (ALL MEET MIN. REQUIREMENTS)
STREET SETBACKS: 0'	
SIDE SETBACKS: 10'-0"	
REAR SETBACKS: 10'-0"	
HEIGHT LIMIT	PROPERTIES W/IN FLOOD ZONE ARE ALLOWED 10' INCREASE IN HEIGHT. MAXIMUM HEIGHT 70'-0" + 10'-0" = 80'-0" (SCREEN FOR MECH. EQUIP. +14', ELEVATOR TOWERS & EQUIP. +20')
PROPOSED	74'-9" HIGHEST OCCUPIABLE FLOOR LEVEL 84'-9" TOP OF ROOF SHEATHING 71.1' AVERAGE HEIGHT
MAXIMUM RESIDENTIAL FLOOR AREA RATIO (FAR)	>90%-225% (BONUS LEVEL) RESIDENTIAL
PROPOSED	410%*
OPEN SPACE	25% OF SITE: 7,202 SF 25% OPEN SPACE PUBLICLY ACCESSIBLE: 1,801 SF 100 SF / UNIT COMMON OPEN SPACE - OR - 80 SF / UNIT PRIVATE OPEN SPACE PRIVATE OPEN SPACE: MIN. DIMENSION 6' X 6' MIX OF OPEN SPACE: RATIO OF 1.25 SF COMMON OPEN SPACE FOR 1.0 PRIVATE OPEN SPACE COMMON OPEN SPACE: MIN. OF 1 SPACE, 40' MIN. DIMENSION; 1,600 SF TOTAL MIN. (101 OR MORE UNITS)
PROPOSED	PROJECT IS COMPLIANT & MEETS 25% OF REQ'D OPEN SPACE FOR RESIDENTIAL. 4,670 SF AT GRADE PUBLICLY ACCESSIBLE OCCURS ALONG NORTH AND WEST SIDES OF BUILDING WITH FEATURE GATEWAYS WITH LIGHTING, WALKWAYS ENHANCED WITH LIGHTING AND SCULPTURAL SEATING. CORNER PLAZA WITH MODULAR STACKED SEATING AND PLANTERS, DECORATIVE BIKE RACKS, AND PAVERS AT CORNER OF HAVEN. COMMON OPEN SPACE INCLUDES 3,200 SF AT COURTYARD, 895 AT 5TH FLOOR ROOF DECK, AND 1,995 AT ROOF DECK. ADDITIONAL PRIVATE DECKS PROVIDED, SEE G0.05B, C & D. PRIVATE DECKS INCLUDE: 36- NON-COMPLIANT PRIVATE OPEN SPACE 15- PARTIALLY COMPLIANT PRIVATE OPEN SPACE, MEETS 6'X6' MIN, BUT DOES NOT MEET 80 SF. 20- COMPLIANT COMMON PRIVATE OPEN SPACE, 6'X6' MIN & 80 SF
BICYCLE PARKING	RESIDENTIAL: 168 SPACES (1.5 LONG TERM/ UNIT) 17 SPACES (10% ADDITIONAL SHORT-TERM FOR GUESTS, MUST BE WITHIN 50' OF LOBBY)
VEHICLE PARKING - RESIDENTIAL UNITS	1 SPACE/UNIT - 1.5 SPACES / UNIT MAX. (112-168 MAX.)
PROPOSED	168 SPACES LONG TERM SPACES LOCATED AT THE GROUND FLOOR. 17 SPACES SHORT-TERM FOR GUESTS LOCATED AT GROUND FLOOR WITHIN 50' OF THE LOBBY 104 UNASSIGNED PARKING SPACES (5% ADA REQUIRED)* 6 ACCESSIBLE PARKING SPACES (INCLUDES 1 VAN PARKING SPACE) PARKING OCCURS AT FLOORS 1 & 2, 34 STANDARD SIZE SPACES AND 48 COMPACT SIZE SPACES UNLESS OTHERWISE NOTED. 16 EVSE (ELECTRIC VEHICLE SUPPLY EQUIPMENT, INCLUDES 1 EVSE SPACE WITH 8' WIDE LOADING AISLE) ALL REMAINING PARKING SPACES SHALL HAVE A LOW POWER LEVEL 2 EV READY SPACE PER 4.106.4.2.1
ELECTRIC VEHICLE PARKING	PER 4.106.4.2.1, 15% SHALL BE EVCS / EVSE EQUIPPED WITH ELECTRIC VEHICLE SUPPLY EQUIPMENT WITH MINIMUM OF LEVEL 2 EV READY.
FRONTAGE LANDSCAPING	25% MIN OF SETBACK AREA BETWEEN PROP. LINE & FACE OF BUILDING (50% SHOULD PROVIDE ON-SITE INFILTRATION OF STORMWATER RUNOFF).
BUILDING MASS & SCALE: BASE HEIGHT	55' MAX. AT SETBACK OR BEFORE HORIZONTAL DISTANCE SETBACK REQUIRED. MIN. SETBACK: 10' FOR A MIN. OF 75% OF THE BUILDING FACE ALONG PUBLIC STREETS (ABOVE 45'). MAX. 25% OF BUILDING FACE ALONG PUBLIC STREETS MAY BE EXCEPTED. ASSUME PROJECTIONS (I.E. BALCONIES) DO NOT COUNT TOWARDS THIS. BUILDING PROJECTIONS: 6' MAX. DEPTH (I.E. BALCONIES/BAY WINDOWS ABOVE GROUND FLR.)
BUILDING MASS & SCALE: MAJOR & MINOR BUILDING MODULATIONS	REQUIREMENTS MET, SEE PLANS ON A2.05-A2.09 & ELEVATIONS ON A3.01, AS WELL AS DIAGRAMS ON A3.05B AND A3.05C.
GROUND FLOOR EXTERIOR: BUILDING ENTRANCES	BUILDING ENTRANCES: ONE ENTRANCE EVERY 100' OF BUILDING LENGTH, MIN. ONE ALONG EACH LENGTH.
GROUND FLOOR EXTERIOR: TRANSPARENCY	GROUND FLOOR TRANSPARENCY: 30% FOR RESIDENTIAL.
GROUND FLOOR EXTERIOR: HEIGHT ALONG ST. FRONTAGE	10' RESIDENTIAL (GROUND FLOOR LEVEL TO CEILING ALONG STREET)
GROUND FLOOR EXTERIOR: GARAGE ENTRANCES	MAXIMUM 24-FOOT OPENING FOR TWO-WAY ENTRANCE.
GROUND FLOOR EXTERIOR: AWNINGS, SIGNS & CANOPIES	7' MAX. DEPTH. 8' MIN. VERTICAL CLR. TO GRADE; SHALL NOT EXTEND INTO PUBLIC RIGHT OF WAY.
BUILDING DESIGN	ROOF LINES: 4' MIN. HEIGHT MODULATION TO BREAK VISUAL MONOTONY AND CREATE VISUALLY INTERESTING SKYLINE AT PUBLIC STREETS

\*See requested density bonus and waivers pursuant to State Density Bonus Law (Gov. Code § 65915)

CALIFORNIA GREEN BUILDING CODE REQUIREMENTS

ENERGY EFFICIENCY 2022 CALIFORNIA GREEN BUILDING STANDARDS CODE (CGC) 2022 CALIFORNIA BUILDING ENERGY EFFICIENCY STANDARDS 1. SECTIONS 160.0-160.9 MANDATORY REQUIREMENTS FOR DWELLING UNITS AND COMMON USE AREAS IN MULTIFAMILY BUILDINGS.	
ENHANCED DURABILITY AND REDUCED MAINTENANCE (2022 CGC 4.406) 1. ANNULAR SPACES AROUND PIPES, ELECTRIC CABLES, CONDUITS OR OTHER OPENINGS IN SOLE/BOTTOM PLATES AT EXTERIOR WALLS SHALL BE RODENT PROOFED BY CLOSING SUCH OPENINGS WITH CEMENT MORTAR, CONCRETE MASONRY, OR SIMILAR METHOD ACCEPTABLE TO THE ENFORCING AGENCY PER SECTION 4.406.1.	
POLLUTANT CONTROL (2022 CGC 4.504) 1. ADHESIVES, SEALANTS AND CAULKS, ADHESIVES, SEALANTS AND CAULKS USED ON THE PROJECT SHALL MEET THE REQUIREMENTS OF THE STANDARDS LISTED IN SECTION 5.504.2.1. 2. HARDWOOD PLYWOOD, PARTICLEBOARD, AND MEDIUM DENSITY FIBERBOARD COMPOSITE WOOD PRODUCTS SHALL COMPLY WITH THE LOW FORMALDEHYDE EMISSION STANDARDS (2022 CGC 4.504.5) 3. SEE FINISH SCHEDULE FOR ADDITIONAL REQUIREMENTS	
INTERIOR MOISTURE CONTROL (2022 CGC 4.505) 1. A CAPILLARY BREAK SHALL BE INSTALLED IF A SLAB ON GRADE FOUNDATION SYSTEM IS USED. THE USED OF A 4" THICK BASE OF 1/2" OR LARGER CLEAN AGGREGATE UNDER 6 MIL VAPOR RETARDER WITH JOINT LAPPED NOT LESS THAN 6" WILL BE PROVIDED PER SECTION 4.505.2	
INSTALLER SPECIAL INSPECTOR QUALIFICATION (2022 CGC 702) 1. HVAC SYSTEM INSTALLERS WILL BE TRAINED AND CERTIFIED IN THE PROPER INSTALLATION OF HVAC SYSTEMS AND EQUIPMENT BY A RECOGNIZED TRAINING/CERTIFICATION PROGRAM PER SECTION 702.1 2. WHEN REQUIRED BY THE ENFORCING AGENCY, SHALL EMPLOY SPECIAL INSPECTORS (2022 CGC 702.2)	
VERIFICATION (2022 CGC 703) 1. UPON REQUEST, VERIFICATION OF COMPLIANCE WITH THIS CODE MAY INCLUDE CONSTRUCTION DOCUMENTS, PLANS, SPECIFICATIONS, BUILDER OR INSTALLER CERTIFICATION, INSPECTION REPORTS, OR OTHER METHODS ACCEPTABLE TO THE BUILDING OFFICIAL WHICH SHOW SUBSTANTIAL CONFORMANCE PER SECTION 703.1.	
EXPOSURE TO AIR POLLUTION (TOXIC AIR)	
PROJECT APPLICANT TO RETAIN A QUALIFIED AIR QUALITY CONSULTANT TO PREPARE A HEALTH RISK ASSESSMENT (HRA) IN ACCORDANCE WITH CALIFORNIA AIR RESOURCES BOARD (CARB) AND OFFICE OF ENVIRONMENTAL HEALTH AND HAZARD ASSESSMENT REQUIREMENTS TO DETERMINE THE HEALTH RISK OF EXPOSURE OF PROJECT RESIDENTS/OCCUPANTS/USERS TO AIR POLLUTANTS. THE HRA SHALL BE SUBMITTED TO THE CITY FOR REVIEW AND APPROVAL. IF TECH HRA CONCLUDES THAT THE HEALTH RISK IS AT OR BELOW ACCEPTABLE LEVELS, THEN HEALTH RISK REDUCTION MEASURES ARE NOT REQUIRED. IF THE HRA CONCLUDES THAT THE HEALTH RISK EXCEEDS ACCEPTABLE LEVELS, HEALTH RISK REDUCTION MEASURES SHALL BE IDENTIFIED TO REDUCE THE HEALTH RISK TO ACCEPTABLE LEVELS. IDENTIFIED RISK REDUCTION MEASURES SHALL BE SUBMITTED TO THE CITY FOR REVIEW AND APPROVAL AND BE INCLUDED ON THE PROJECT DRAWINGS SUBMITTED FOR THE CONSTRUCTION-RELATED PERMIT OR ON OTHER DOCUMENTATION SUBMITTED TO THE CITY. THE APPROVED RISK REDUCTION MEASURES SHALL BE IMPLEMENTED DURING CONSTRUCTION AND/OR OPERATIONS AS APPLICABLE.	
REQUESTS FOR CONCESSIONS & WAIVERS	
FOR A COMPLETE DESCRIPTION OF ITEMS NOTED BELOW, PLEASE SEE PROJECT DESCRIPTION LETTER AND DENSITY BONUS LAW LETTER.	
CONCESSIONS / INCENTIVES: ADDING RATHER THAN REPLACING A UTILITY POLE NOT PRE-PLUMBING FOR RECYCLED WATER REDUCING GROUND FLOOR TRANSPARENCY	
WAIVERS: INCREASE IN RESIDENTIAL FLOOR AREA ("FAR") INCREASE IN HEIGHT DECREASE GROUND FLOOR HEIGHT DECREASE IN PARKING REDUCTION IN PARKING SPACE SIZE BMR UNIT SIZE

## GREEN BUILDING CHECKLIST

# G0.01A

Y	NA	RESPON. PARTY	<b>CHAPTER 3 GREEN BUILDING SECTION 301 GENERAL</b>
			<b>301.1 SCOPE.</b> Buildings shall be designed to include the green building measures specified as mandatory in the application checklists contained in this code. Voluntary green building measures are also included in the application checklists and may be included in the design and construction of structures covered by this code, but are not required unless adopted by a city, county, or city and county as specified in Section 101.7.
			<b>301.1.1 Additions and alterations. [HCD]</b> The mandatory provisions of Chapter 4 shall be applied to additions or alterations of existing residential buildings where the addition or alteration increases the building's conditioned area, volume, or size. The requirements shall apply only to and/or within the specific area of the addition or alteration.
			The mandatory provision of Section 4.106.4.2 may apply to additions or alterations of existing parking facilities or the addition of new parking facilities serving existing multifamily buildings. See Section 4.106.4.3 for application.
			<b>Note:</b> Repairs including, but not limited to, resurfacing, restriping and repairing or maintaining existing lighting fixtures are not considered alterations for the purpose of this section.
			<b>Note:</b> On and after January 1, 2014, residential buildings undergoing permitted alterations, additions, or improvements shall replace noncompliant plumbing fixtures with water-conserving plumbing fixtures. Plumbing fixture replacement is required prior to issuance of a certificate of final completion, certificate of occupancy or final permit approval by the local building department. See Civil Code Section 1101.1, et seq., for the definition of a noncompliant plumbing fixture, types of residential buildings affected and other important enactment dates.
			<b>301.2 LOW-RISE AND HIGH-RISE RESIDENTIAL BUILDINGS. [HCD]</b> The provisions of individual sections of CALGreen may apply to either low-rise residential buildings high-rise residential buildings, or both. Individual sections will be designated by banners to indicate where the section applies specifically to low-rise only (LR) or high-rise only (HR). When the section applies to both low-rise and high-rise buildings, no banner will be used.
			<b>SECTION 302 MIXED OCCUPANCY BUILDINGS</b>
			<b>302.1 MIXED OCCUPANCY BUILDINGS.</b> In mixed occupancy buildings, each portion of a building shall comply with the specific green building measures applicable to each specific occupancy. Exceptions:
			1. [HCD] Accessory structures and accessory occupancies serving residential buildings shall comply with Chapter 4 and Appendix A4, as applicable.
			2. [HCD] For purposes of CALGreen, live/work units, complying with Section 419 of the California Building Code, shall not be considered mixed occupancies. Live/Work units shall comply with Chapter 4 and Appendix A4, as applicable.
			<b>DIVISION 4.1 PLANNING AND DESIGN</b>
			<b>ABBREVIATION DEFINITIONS:</b>
			HCD Department of Housing and Community Development
			BSC California Building Standards Commission
			DSA-SS Division of the State Architect, Structural Safety
			OSHPD Office of Statewide Health Planning and Development
			LR Low Rise
			HR High Rise
			AA Additions and Alterations
			N New
			<b>CHAPTER 4 RESIDENTIAL MANDATORY MEASURES</b>
			<b>SECTION 4.102 DEFINITIONS</b>
			<b>4.102.1 DEFINITIONS</b>
			The following terms are defined in Chapter 2 (and are included here for reference)
			<b>FRENCH DRAIN.</b> A trench, hole or other depressed area loosely filled with rock, gravel, fragments of brick or similar pervious material used to collect or channel drainage or runoff water.
			<b>WATTLES.</b> Wattles are used to reduce sediment in runoff. Wattles are often constructed of natural plant materials such as hay, straw or similar material shaped in the form of tubes and placed on a downflow slope. Wattles are also used for perimeter and inlet controls.
X		CONTR.	<b>4.106 SITE DEVELOPMENT</b>
			<b>4.106.1 GENERAL.</b> Preservation and use of available natural resources shall be accomplished through evaluation and careful planning to minimize negative effects on the site and adjacent areas. Preservation of slopes, management of storm water drainage and erosion controls shall comply with this section.
X		CONTR.	<b>4.106.2 STORM WATER DRAINAGE AND RETENTION DURING CONSTRUCTION.</b> Projects which disturb less than one acre of soil and are not part of a larger common plan of development which in total disturbs one acre or more, shall manage storm water drainage during construction. In order to manage storm water drainage during construction, one or more of the following measures shall be implemented to prevent flooding of adjacent property, prevent erosion and retain soil runoff on the site.
			1. Retention basins of sufficient size shall be utilized to retain storm water on the site.
			2. Where storm water is conveyed to a public drainage system, collection point, gutter or similar disposal method, water shall be filtered by use of a barrier system, wattle or other method approved by the enforcing agency.
			3. Compliance with a lawfully enacted storm water management ordinance.
			<b>Note:</b> Refer to the State Water Resources Control Board for projects which disturb one acre or more of soil, or are part of a larger common plan of development which in total disturbs one acre or more of soil.
			(Website: <a href="https://www.waterboards.ca.gov/water_issues/programs/stormwater/construction.html">https://www.waterboards.ca.gov/water_issues/programs/stormwater/construction.html</a> )
X		CONTR.	<b>4.106.3 GRADING AND PAVING.</b> Construction plans shall indicate how the site grading and drainage system will manage all surface water flows to keep water from entering buildings. Examples of methods to manage surface water include, but are not limited to, the following:
			1. Swales
			2. Water collection and disposal systems
			3. French drains
			4. Water retention gardens
			5. Other water measures which keep surface water away from buildings and aid in groundwater recharge.
			<b>Exception:</b> Additions and alterations not altering the drainage path.
X		ARCH&ENGR	<b>4.106.4 Electric vehicle (EV) charging for new construction.</b> New construction shall comply with Sections 4.106.4.1 or 4.106.4.2 to facilitate future installation and use of EV chargers. Electric vehicle charging equipment (EVSE) shall be installed in accordance with the California Electrical Code, Article 625.
			<b>Exceptions:</b>
			1. On a case-by-case basis, where the local enforcing agency has determined EV charging and infrastructure are not feasible based upon one or more of the following conditions:
			1.1 Where there is no local utility power supply or the local utility is unable to supply adequate power.
			1.2 Where there is evidence suitable to the local enforcing agency substantiating that additional local utility infrastructure design requirements, directly related to the implementation of Section 4.106.4, may adversely impact the construction cost of the project.
			2. Accessory Dwelling Units (ADU) and Junior Accessory Dwelling Units (JADU) without additional parking facilities.
			<b>4.106.4.1 New one- and two-family dwellings and townhouses with attached private garages.</b> For each dwelling unit, install a listed raceway to accommodate a dedicated 208/240-volt branch circuit. The raceway shall not be less than trade size 1 (nominal 1-inch inside diameter). The raceway shall originate at the main service or subpanel and shall terminate into a listed cabinet, box or other enclosure in close proximity to the proposed location of an EV charger. Raceways are required to be continuous and enclosed, inaccessible or concealed areas and spaces. The service panel and/or subpanel shall provide capacity to install a 40-ampere 208/240-volt minimum dedicated branch circuit and space(s) reserved to permit installation of a branch circuit overcurrent protective device.
			<b>Exception:</b> A raceway is not required if a minimum 40-ampere 208/240-volt dedicated EV branch circuit is installed in close proximity to the proposed location of an EV charger at the time of original construction in accordance with the California Electrical Code.
			<b>4.106.4.1.1 Identification.</b> The service panel or subpanel circuit directory shall identify the overcurrent protective device space(s) reserved for future EV charging as "EV CAPABLE". The raceway termination location shall be permanently and visibly marked as "EV CAPABLE".

Y	NA	RESPON. PARTY	<b>4.106.4.2 New multifamily dwellings, hotels and motels and new residential parking facilities.</b>
			When parking is provided, parking spaces for new multifamily dwellings, hotels and motels shall meet the requirements of Sections 4.106.4.2.1 and 4.106.4.2.2. Calculations for spaces shall be rounded up to the nearest whole number. A parking space served by electric vehicle supply equipment or designed as a future EV charging space shall count as at least one standard automobile parking space only for the purpose of complying with any applicable minimum parking space requirements established by a local jurisdiction. See Vehicle Code Section 22511.2 for further details.
			<b>4.106.4.2 Multifamily development projects with less than 20 dwelling units; and hotels and motels with less than 20 sleeping units or guest rooms.</b>
			The number of dwelling units, sleeping units or guest rooms shall be based on all buildings on a project site subject to this section.
			<b>1.EV Capable.</b> Ten (10) percent of the total number of parking spaces on a building site, provided for all types of parking facilities, shall be electric vehicle charging spaces (EV spaces) capable of supporting future Level 2 EVSE. Electrical load calculations shall demonstrate that the electrical panel service capacity and electrical system, including any on-site distribution transformer(s), have sufficient capacity to simultaneously charge all EVs at all required EV spaces at a minimum of 40 amperes.
			The service panel or subpanel circuit directory shall identify the overcurrent protective device space(s) reserved for future EV charging purposes as "EV CAPABLE" in accordance with the California Electrical Code.
			<b>Exceptions:</b>
			1. When EV chargers (Level 2 EVSE) are installed in a number equal to or greater than the required number of EV capable spaces.
			2. When EV chargers (Level 2 EVSE) are installed in a number less than the required number of EV capable spaces, the number of EV capable spaces required may be reduced by a number equal to the number of EV chargers installed.
			<b>Notes:</b>
			a. Construction documents are intended to demonstrate the project's capability and capacity for facilitating future EV charging.
			b. There is no requirement for EV spaces to be constructed or available until receptacles for EV charging or EV chargers are installed for use.
			<b>2.EV Ready.</b> Twenty-five (25) percent of the total number of parking spaces shall be equipped with low power Level 2 EV charging receptacles. For multifamily parking facilities, no more than one receptacle is required per dwelling unit when more than one parking space is provided for use by a single dwelling unit.
			<b>Exception:</b> Areas of parking facilities served by parking lifts.
X		ARCH&ENGR	<b>4.106.4.2.2 Multifamily development projects with 20 or more dwelling units, hotels and motels with 20 or more sleeping units or guest rooms.</b>
			The number of dwelling units, sleeping units or guest rooms shall be based on all buildings on a project site subject to this section.
			<b>1.EV Capable.</b> Ten (10) percent of the total number of parking spaces on a building site, provided for all types of parking facilities, shall be electric vehicle charging spaces (EV spaces) capable of supporting future Level 2 EVSE. Electrical load calculations shall demonstrate that the electrical panel service capacity and electrical system, including any on-site distribution transformer(s), have sufficient capacity to simultaneously charge all EVs at all required EV spaces at a minimum of 40 amperes.
			The service panel or subpanel circuit directory shall identify the overcurrent protective device space(s) reserved for future EV charging purposes as "EV CAPABLE" in accordance with the California Electrical Code.
			<b>Exception:</b> When EV chargers (Level 2 EVSE) are installed in a number greater than five (5) percent of parking spaces required by Section 4.106.4.2.2, Item 3, the number of EV capable spaces required may be reduced by a number equal to the number of EV chargers installed over the five (5) percent required.
			<b>Notes:</b>
			a. Construction documents shall show locations of future EV spaces.
			b. There is no requirement for EV spaces to be constructed or available until receptacles for EV charging or EV chargers are installed for use.
			<b>2.EV Ready.</b> Twenty-five (25) percent of the total number of parking spaces shall be equipped with low power Level 2 EV charging receptacles. For multifamily parking facilities, no more than one receptacle is required per dwelling unit when more than one parking space is provided for use by a single dwelling unit.
			<b>Exception:</b> Areas of parking facilities served by parking lifts.
			<b>3.EV Chargers.</b> Five (5) percent of the total number of parking spaces shall be equipped with Level 2 EVSE. Where common use parking is provided, at least one EV charger shall be located in the common use parking area and shall be available for use by all residents or guests.
			When low power Level 2 EV charging receptacles or Level 2 EVSE are installed beyond the minimum required, an automatic load management system (ALMS) may be used to reduce the maximum required electrical capacity to each space served by the ALMS. The electrical system and any on-site distribution transformers shall have sufficient capacity to deliver at least 3.3 kW simultaneously to each EV charging station (EVCS) served by the ALMS. The branch circuit shall have a minimum capacity of 40 amperes, and installed EVSE shall have a capacity of not less than 30 amperes. ALMS shall not be used to reduce the minimum required electrical capacity to the required EV capable spaces.
			<b>4.106.4.2.2.1 Electric vehicle charging stations (EVCS).</b>
			Electric vehicle charging stations required by Section 4.106.4.2.2, Item 3, shall comply with Section 4.106.4.2.2.1.
			<b>Exception:</b> Electric vehicle charging stations serving public accommodations, public housing, motels and hotels shall not be required to comply with this section. See California Building Code, Chapter 11B, for applicable requirements.
			<b>4.106.4.2.2.1.1 Location.</b>
			EVCS shall comply with at least one of the following options:
			1. The charging space shall be located adjacent to an accessible parking space meeting the requirements of the California Building Code, Chapter 11A, to allow use of the EV charger from the accessible parking space.
			2. The charging space shall be located on an accessible route, as defined in the California Building Code, Chapter 2, to the building.
			<b>Exception:</b> Electric vehicle charging stations designed and constructed in compliance with the California Building Code, Chapter 11B, are not required to comply with Section 4.106.4.2.2.1.1 and Section 4.106.4.2.2.1.2, Item 3.
			<b>4.106.4.2.2.1.2 Electric vehicle charging stations (EVCS) dimensions.</b>
			The charging spaces shall be designed to comply with the following:
			1. The minimum length of each EV space shall be 18 feet (5486 mm).
			2. The minimum width of each EV space shall be 9 feet (2743 mm).
			3. One in every 25 charging spaces, but not less than one, shall also have an 8-foot (2438 mm) wide minimum aisle. A 5-foot (1524 mm) wide minimum aisle shall be permitted provided the minimum width of the EV space is 12 feet (3658 mm).
			a. Surface slope for this EV space and the aisle shall not exceed 1 unit vertical in 48 units horizontal (2.083 percent slope) in any direction.
			<b>4.106.4.2.2.1.3 Accessible EV spaces.</b>
			In addition to the requirements in Sections 4.106.4.2.2.1.1 and 4.106.4.2.2.1.2, all EVSE, when installed, shall comply with the accessibility provisions for EV chargers in the California Building Code, Chapter 11B. EV ready spaces and EVCS in multifamily developments shall comply with California Building Code, Chapter 11A, Section 1109A.
			<b>4.106.4.2.3 EV space requirements.</b>
			1. Single EV space required. Install a listed raceway capable of accommodating a 208/240-volt dedicated branch circuit. The raceway shall not be less than trade size 1 (nominal 1-inch inside diameter). The raceway shall originate at the main service or subpanel and shall terminate into a listed cabinet, box or enclosure in close proximity to the location of the proposed location of the EV space. Construction documents shall identify the raceway termination point, receptacle or charger location, as applicable. The service panel and/or subpanel shall have a 40-ampere minimum dedicated branch circuit, including branch circuit overcurrent protective device installed, or space(s) reserved to permit installation of a branch circuit overcurrent protective device.
			<b>Exception:</b> A raceway is not required if a minimum 40-ampere 208/240-volt dedicated EV branch circuit is installed in close proximity to the location or the proposed location of the EV space, at the time of original construction in accordance with the California Electrical Code.
			2. Multiple EV spaces required. Construction documents shall indicate the raceway termination point and the location of installed or future EV spaces, receptacles or EV chargers. Construction documents shall also provide information on amperage of installed or future receptacles or EVSE, raceway method(s), wiring schematics and electrical load calculations. Plan design shall be based upon a 40-ampere minimum branch circuit. Required raceways and related components that are planned to be installed underground, enclosed, inaccessible or in concealed areas and spaces shall be installed at the time of original construction.

Y	NA	RESPON. PARTY	<b>Exception:</b> A raceway is not required if a minimum 40-ampere 208/240-volt dedicated EV branch circuit is installed in close proximity to the location or the proposed location of the EV space at the time of original construction in accordance with the California Electrical Code.
			<b>4.106.4.2.4 Identification.</b>
			The service panel or subpanel circuit directory shall identify the overcurrent protective device space(s) reserved for future EV charging purposes as "EV CAPABLE" in accordance with the California Electrical Code.
			<b>4.106.4.2.5 Electric Vehicle Ready Space Signage.</b>
			Electric vehicle ready spaces shall be identified by signage or pavement markings, in compliance with Caltrans Traffic Operations Policy Directive 13-01 (Zero Emission Vehicle Signs and Pavement Markings) or its successor(s).
			<b>4.106.4.3 Electric vehicle charging for additions and alterations of parking facilities serving existing multifamily buildings.</b>
			When new parking facilities are added, or electrical systems or lighting of existing parking facilities are added or altered and the work requires a building permit, ten (10) percent of the total number of parking spaces added or altered shall be electric vehicle charging spaces (EV spaces) capable of supporting future Level 2 EVSE.
			<b>Notes:</b>
			1. Construction documents are intended to demonstrate the project's capability and capacity for facilitating future EV charging.
			2. There is no requirement for EV spaces to be constructed or available until EV chargers are installed for use.
			<b>DIVISION 4.2 ENERGY EFFICIENCY</b>
			<b>4.201 GENERAL</b>
			<b>4.201.1 SCOPE.</b> For the purposes of mandatory energy efficiency standards in this code, the California Energy Commission will continue to adopt mandatory standards.
			<b>DIVISION 4.3 WATER EFFICIENCY AND CONSERVATION</b>
			<b>4.303 INDOOR WATER USE</b>
			<b>4.303.1 WATER CONSERVING PLUMBING FIXTURES AND FITTINGS.</b> Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) shall comply with the sections 4.303.1.1, 4.303.1.2, 4.303.1.3, and 4.303.4.4.
			<b>Note:</b> All noncompliant plumbing fixtures in any residential real property shall be replaced with water-conserving plumbing fixtures. Plumbing fixture replacement is required prior to issuance of a certificate of final completion, certificate of occupancy, or final permit approval by the local building department. See Civil Code Section 1101.1, et seq., for the definition of a noncompliant plumbing fixture, types of residential buildings affected and other important enactment dates.
			<b>4.303.1.1 Water Closets.</b> The effective flush volume of all water closets shall not exceed 1.28 gallons per flush. Tank-type water closets shall be certified to the performance criteria of the U.S. EPA WaterSense Specification for Tank-type Toilets.
			<b>Note:</b> The effective flush volume of dual flush toilets is defined as the composite, average flush volume of two reduced flushes and one full flush.
			<b>4.303.1.2 Urinals.</b> The effective flush volume of wall mounted urinals shall not exceed 0.125 gallons per flush. The effective flush volume of all other urinals shall not exceed 0.5 gallons per flush.
			<b>4.303.1.3 Showerheads.</b>
			<b>4.303.1.3.1 Single Showerhead.</b> Showerheads shall have a maximum flow rate of not more than 1.8 gallons per minute at 80 psi. Showerheads shall be certified to the performance criteria of the U.S. EPA WaterSense Specification for Showerheads.
			<b>4.303.1.3.2 Multiple showerheads serving one shower.</b> When a shower is served by more than one showerhead, the combined flow rate of all the showerheads and/or other shower outlets controlled by a single valve shall not exceed 1.8 gallons per minute at 80 psi, or the shower shall be designed to only allow one shower outlet to be in operation at a time.
			<b>Note:</b> A hand-held shower shall be considered a showerhead.
			<b>4.303.1.4 Faucets.</b>
			<b>4.303.1.4.1 Residential Lavatory Faucets.</b> The maximum flow rate of residential lavatory faucets shall not exceed 1.2 gallons per minute at 60 psi. The minimum flow rate of residential lavatory faucets shall not be less than 0.8 gallons per minute at 20 psi.
			<b>4.303.1.4.2 Lavatory Faucets in Common and Public Use Areas.</b> The maximum flow rate of lavatory faucets installed in common and public use areas (outside of dwellings or sleeping units) in residential buildings shall not exceed 0.5 gallons per minute at 60 psi.
			<b>4.303.1.4.3 Metering Faucets.</b> Metering faucets when installed in residential buildings shall not deliver more than 0.2 gallons per cycle.
			<b>4.303.1.4.4 Kitchen Faucets.</b> The maximum flow rate of kitchen faucets shall not exceed 1.8 gallons per minute at 60 psi. Kitchen faucets may temporarily increase the flow above the maximum rate, but not to exceed 2.2 gallons per minute at 60 psi, and must default to a maximum flow rate of 1.8 gallons per minute at 60 psi.
			<b>Note:</b> Where complying faucets are unavailable, aerators or other means may be used to achieve reduction.
			<b>4.303.1.4.5 Pre-rinse spray valves.</b>
			When installed, shall meet the requirements in the California Code of Regulations, Title 20 (Appliance Efficiency Regulations), Sections 1605.1 (h)(4) Table H-2, Section 1605.3 (h)(4)(A), and Section 1607 (d)(7) and shall be equipped with an integral automatic shutoff.
			<b>FOR REFERENCE ONLY:</b> The following table and code section have been reprinted from the California Code of Regulations, Title 20 (Appliance Efficiency Regulations), Section 1605.1 (h)(4) and Section 1605.3 (h)(4)(A).
			<b>TABLE H-2</b>

RE: 3705 Haven Avenue, Menlo Park, CA 94025 – Planning Application

Dear Ori,

I am the LEED for Homes AP for the 3705 Haven Avenue Project. My qualifications include LEED for Homes QAD, (Quality Assurance Designee) (2018), LEED for Homes AP (2011) and LEED for Homes Green Rater (2008). My company, Bright Green Strategies is a LEED for Homes Provider. As a LEED for Homes Provider, we oversee the LEED certification process. We collect and submit all final documents to the Green Building Certification Institute (GBCI) for LEED certification. We also provide quality assurance overseeing over 10 other LEED for Homes Green Raters throughout California and Canada.

Bright Green Strategies consists of seven individuals trained specifically in LEED for Homes and GreenPoint Rated certification, HERS testing and energy modeling to exceed Title-24 energy efficiency standards. I have personally certified multi-family projects from 100 units to over 400 units.

I have prepared the LEED for Homes checklist for this project and have relayed pertinent information to the project team with regards to LEED for Home prerequisites and credits. The project has been registered with the LEED Online. The project will be LEED Gold certified with LEED for Homes Midrise being the intended path for compliance. The Preliminary LEED checklist estimates 60 points, which is a Gold rating. LEED for Homes Midrise is part of the LEED BD&C family of rating systems.

Let me know if you need any further information. Please contact me at 510-863-1109, ext. 1011 or at my email: [sharon@brightgreenstrategies.com](mailto:sharon@brightgreenstrategies.com) with any questions.

Sincerely,

  
Sharon Block, Director of Sustainability  
Bright Green Strategies Inc.  
[sharon@brightgreenstrategies.com](mailto:sharon@brightgreenstrategies.com)

GREEN BUILDING DOCUMENTS

G0.01C

3705 HAVEN

MENLO PARK MUNICIPAL CODE 16.45.130

BUILDING TO COMPLY WITH MENLO PARK MUNICIPAL CODE CHAPTER 16.45.130

16.45.130 Green and sustainable building.

(1) Green Building.

(A) Any new construction to comply with Tables 16.45.130(1)(B) - Building designed to meet LEED Gold BD+C. Electric Vehicle Charging Spaces to meet requirements in Section 16.72.010. See LEED submittal documents for more information.

(2) Energy.

(A) For all new construction, the project will meet one hundred percent (100%) of energy demand (electricity and natural gas) through any combination of the following measures:

(i) On-site energy generation;

(ii) Purchase of one hundred percent (100%) renewable electricity through Peninsula Clean Energy or Pacific Gas and Electric Company in an amount equal to the annual energy demand of the project;

(iii) Purchase and installation of local renewable energy generation within the city of Menlo Park in an amount equal to the annual energy demand of the project;

(iv) Purchase of certified renewable energy credits and/or certified renewable energy offsets annually in an amount equal to the annual energy demand of the project.

**Solar zone has been indicated on roof plan.**

(3) Water Use Efficiency and Recycled Water.

(A) Single pass cooling systems shall be prohibited in all new buildings.

**To be verified at the building permit stage.**

(B) All new buildings shall be built and maintained without the use of well water.

**Building will not use well water.**

(C) Applicants for a new building more than one hundred thousand (100,000) square feet or more of gross floor area shall prepare and submit a proposed water budget and accompanying calculations following the methodology approved by the city.

**Water budget has been provided.**

(D) All new buildings shall be dual plumbed for the internal use of recycled water.

**Applicant is seeking a concession/incentive per State Density Bonus Law to not be dual plumbed.**

(E) All new buildings two hundred fifty thousand (250,000) square feet or more in gross floor area shall use an alternate water source for all city approved nonpotable applications. An alternate water source may include, but is not limited to, treated nonpotable water such as graywater. An alternate water source assessment shall be submitted that describes the alternative water source and proposed nonpotable application. Approval of the alternate water source assessment, the alternative water source and its proposed uses shall be approved by the city's public works director and community development director. If the Menlo Park Municipal Water District has not designated a recycled water purveyor and/or municipal recycled water source is not available prior to planning project approval, applicants may propose conservation measures to meet the requirements of this section subject to approval of the city council. The conservation measures shall achieve a reduction in potable water use equivalent to the projected demand of city approved nonpotable applications, but in no case shall the reduction be less than thirty percent

(30%) compared to the water budget in subsection (3)(C) of this section. The conservation measures may include on-site measures, off-site measures or a combination thereof.

**N/A**

(F) Potable water shall not be used for dust control on construction projects.

**Noted.**

(G) Potable water shall not be used for decorative features, unless the water recirculates.

**No decorative features using water are proposed on this project.**

(4) Hazard mitigation and sea level rise resiliency.

(A) The first floor elevation of all new buildings shall be twenty-four (24) inches above the Federal Emergency Management Agency base flood elevation (BFE) to account for sea level rise. Where no BFE exists, the first floor (bottom of floor beams) elevation shall be twenty-four (24) inches above the existing grade. Notwithstanding the foregoing, for projects on sites of two (2) acres or less, the first floor elevation shall be the maximum height reasonably practicable as determined by the city, but in no case less than six (6) inches above BFE or existing grade where no BFE exists. The building design and protective measures shall not create adverse impacts on adjacent sites as determined by the city.

**First floor elevation complies.**

(B) Prior to building permit issuance, all new buildings shall pay any required fee or proportionate fair share for the funding of sea level rise projects, if applicable.

**Noted.**

(5) Waste Management.

(A) Applicants shall submit a zero-waste management plan to the city, which will cover how the applicant plans to minimize waste to landfill and incineration in accordance with all applicable state and local regulations. Applicants shall show in their zero-waste plan how they will reduce, recycle and compost wastes from the demolition, construction and occupancy phases of the building. For the purposes of this chapter, "zero waste" is defined as ninety percent (90%) overall diversion of nonhazardous materials from landfill and incineration, wherein discarded materials are reduced, reused, recycled, or composted. Zero-waste plan elements shall include the property owner's assessment of the types of waste to be generated during demolition, construction and occupancy, and a plan to collect, sort and transport materials to uses other than landfill and incineration.

**Zero waste management plan provided.**

(6) Bird-Friendly Design.

(A) No more than ten percent (10%) of facade surface area shall have non-bird-friendly glazing.

(B) Bird-friendly glazing includes, but is not limited to, opaque glass, covering the outside surface of clear glass with patterns, paned glass with fenestration, frit or etching patterns, and external screens over nonreflective glass. Highly reflective glass is not permitted.

(C) Occupancy sensors or other switch control devices shall be installed on nonemergency lights and shall be programmed to shut off during nonwork hours and between ten (10) p.m. and sunrise.

(D) Placement of buildings shall avoid the potential funneling of flight paths towards a building facade.

(E) Glass skyways or walkways, freestanding (see-through) glass walls and handrails, and transparent building corners shall not be allowed.

(F) Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with roof decks, patios and green roofs.

(G) Use of rodenticides shall not be allowed.

(H) A project may receive a waiver from one (1) or more of the items listed in subsections (6)(A) to (F) of this section, subject to the submittal of a site specific evaluation from a qualified biologist and review and approval by the planning commission. (Ord. 1050 § 10, 2018; Ord. 1026 § 3 (part), 2016). **Project shall comply with all items noted above per plans and elevations.**

3705 HAVEN

REACH CODES

BUILDING TO COMPLY WITH REACH CODES & MENLO PARK MUNICIPAL CODE CHAPTER 12.16

BUILDING TO BE FULLY ELECTRIC

SOLAR READY ZONE, SEE A2.09. BUILDING TO COMPLY WITH ONE OF THE SOLAR ZONE OPTIONS NOTED BELOW:

SECTION 110.10 (a) (3) high-rise multifamily buildings with ten habitable stories or fewer shall comply with the requirements of Section 110.10(b) through 110.10(d) and Table 2.

SECTION 1010.10 Table 2: Solar panel requirements for all new nonresidential and high rise residential buildings Building greater than or equal to 10,000 SF to provide min. 5-kilowatt PV systems

b) Solar Zone.

1. Minimum Solar Zone Area. The solar zone shall have a minimum total area as described below. The solar zone shall comply with access, pathway, smoke ventilation, and spacing requirements as specified in Title 24, Part 9 or other Parts of Title 24 or in any requirements adopted by a local jurisdiction. The solar zone total area shall be comprised of areas that have no dimension less than five feet and are no less than 80 square feet each for buildings with roof areas less than or equal to 10,000 square feet or no less than 160 square feet each for buildings with roof areas greater than 10,000 square feet.

B. Low-rise and High-rise Multifamily Buildings, Hotel/Motel Occupancies, and Nonresidential Buildings. The solar zone shall be located on the roof or overhang of the building or on the roof or overhang of another structure located within 250 feet of the building or on covered parking installed with the building project, and shall have a total area no less than 15 percent of the total roof area of the building excluding any skylight area. The solar zone requirement is applicable to the entire building, including mixed occupancy.

EXCEPTION 1 to Section 110.10(b)1B: High-rise Multifamily Buildings, Hotel/Motel Occupancies, and Nonresidential Buildings with a permanently installed solar electric system having a nameplate DC power rating, measured under Standard Test Conditions, of no less than one watt per square foot of roof area.

EXCEPTION 2 to Section 110.10(b)1B: High-rise multifamily buildings, hotel/motel occupancies with a permanently installed domestic solar water-heating system complying with Section 150.1(c)8Biii and an additional collector area of 40 square feet.

EXCEPTION 3 to Section 110.10(b)1B: Buildings with a designated solar zone area that is no less than 50 percent of the potential solar zone area. The potential solar zone area is the total area of any low-sloped roofs where the annual solar access is 70 percent or greater and any steep-sloped roofs oriented between 90 degrees and 300 degrees of true north where the annual solar access is 70 percent or greater. Solar access is the ratio of solar insolation including shade to the solar insolation without shade. Shading from obstructions located on the roof or any other part of the building shall not be included in the determination of annual solar access.

EXCEPTION 4 to Section 110.10(b)1B: Low-rise and high-rise multifamily buildings with all thermostats in each dwelling unit are demand response controls that comply with Section 110.12(a), and are capable of receiving and responding to Demand Response Signals prior to granting of an occupancy permit by the enforcing agency. In addition, either A or B below:

A. In each dwelling unit, comply with one of the following measures:

a. Install a dishwasher that meets or exceeds the ENERGY STAR Program requirements with either a refrigerator that meets or exceeds the ENERGY STAR Program requirements or a whole house fan driven by an electronically commutated motor; or

b. Install a home automation system that complies with Section 110.12(a) and is capable of, at a minimum, controlling the appliances and lighting of the dwelling and responding to demand response signals; or

c. Install alternative plumbing piping to permit the discharge from the clothes washer and all showers and bathtubs to be used for an irrigation system in compliance with the California Plumbing Code and any applicable local ordinances; or

d. Install a rainwater catchment system designed to comply with the California Plumbing Code and any applicable local ordinances, and that uses rainwater flowing from at least 65 percent of the available roof area.

B. Meet the Title 24, Part 11, Section A4.106.8.2 requirements for electric vehicle charging spaces.

c) Interconnection Pathways.

1. The construction documents shall indicate a location reserved for inverters and metering equipment and a pathway reserved for routing of conduit from the solar zone to the point of interconnection with the electrical service.

2. For single family residences and central water-heating systems, the construction documents shall indicate a pathway for routing of plumbing from the solar zone to the water-heating system.

(b) Documentation. A copy of the construction documents or a comparable document indicating the information from Sections 110.10(b) through 110.10(c) shall be provided to the occupant.

Address: 3705 Haven Ave  
City: Menlo Park

Accepted X W/Conditions

Scope: Planning-Site Review – Multi-Family Residential Building

Reviewed by: Stuart Blakesley, William Saxton Permit#: MPR23-0110

Planning application for proposed construction of a new Multi-Family/Commercial building. The project is to comply with the 2022 CA Building / Fire Codes and local amendments. The following planning review comments are applicable to this submittal:

**Access:**

Fire Apparatus Access is to be provided along Haven Ave & Haven Ave East, these to meet public access for covered and open parking. Aerial Ladder Access to be established along roadway fronting subject project where overhead electrical wiring shall not be located, the aerial ladder placement shall meet the prescriptive distance requirements outlined in CFC Appendix D105. The following are general access requirements that apply to subject project:

- Overhead Electrical Obstruction – Overhead Electrical Utility power lines shall not be located over the aerial fire apparatus access road or between the aerial fire apparatus road and the building.
- Fire apparatus roadways, including public and private streets and in some cases, driveways used for vehicle access, shall be capable of supporting the imposed weight of a 75,000-pound (34,050 kg) fire apparatus and shall be provided with an all-weather driving surface. Only paved or concrete surfaces are considered to be all weather driving surfaces. CFC 2022, Appendix D.
- NOTE ON FIELD PLAN: All curbing located within the complex that has not been assigned as onsite parking shall be designated as “No Parking Fire Lane”. All fire lanes to comply with MPFD standard for “Designation and Marking of Fire Lane” Provide a complete no parking-fire lane striping plan on Civil Sheet specifying the no parking along entire Haven Ave frontage with no parking signage in accordance to MPFD standard on subsequent submittal:
  - Required no parking signage installed at an approved location.
- NOTE ON FIELD PLAN: Fire apparatus roadways, including public or private streets or roads used for vehicle access shall be installed and in service prior to construction. Fire protection water serving all hydrants shall be provided as soon as combustible material arrives on the site:

- PRIOR TO COMBUSTIBLE MATERIAL ARRIVING ON THE SITE, CONTACT THE MENLO PARK FIRE PROTECTION DISTRICT TO SCHEDULE AN INSPECTION OF ROADWAYS AND FIRE HYDRANTS. CFC 2022.
- For buildings 30 feet (9144 mm) and over in height (plan illustrates building height at 74’9” above natural grade, the required fire apparatus access roadway shall be a minimum of 26 feet (7925 mm) in width, and shall be positioned parallel to at least one entire side of the building, and the fire lane shall be located within a minimum of 15feet (4572 mm) and a maximum of 30 feet (9144 mm) from the building. CFC 2022, Appendix D105:
  - Provided plan illustrates Haven Ave as the aerial ladder access roadway which meets necessary requirements listed above for aerial ladder access to upper floors, however the 8<sup>th</sup> level which is located to rear of project adjacent to two neighboring properties where aerial ladder access cannot be provided from Haven Ave or Haven Ave East and there is no private access road illustrated on plans, due to this issue there may be additional requirements that would include increasing stairwells to meet high-rise standard for a pressurized stairwell. This specific issue will be addressed at building permit review, as per the discretion of the Fire Marshal.
- Traffic Opticom Signal Preemption System required for all traffic intersections controlled with a traffic signal. An encroachment permit shall accompany these installations.

**Water Supply:**

- Applicant to provide fire flow information through a separate engineering modeling report with plan sheets showing how this is to be achieved. This document shall be submitted to Menlo Park Fire Protection District for review and approval prior to issuance of grading and building permits. CFC 2022, Sec. 507.5.1 Appendix B Section 105.2 & Table 105.1:
  - The established fire flow for this project is as follows:
    - Type IA Construction, levels 1-3, 3 level enclosed parking at 68,369 sq ft  
Type IA Construction, 4,000 gpm @ 4 hours based on 144,601 sq ft  
4,000 gpm @ 47.2% = 1,888 gpm @ 2 hours
    - Type IIIA Construction, levels 4-8, 5 level apartment at 76,232 sq ft  
Type IIIA Construction, 5,500 gpm @ 4 hours based on 144,601 sq ft  
5,500 gpm @ 52.7% = 2,898.5 gpm @ 3 hours
 Total Fire Flow: 1,888 gpm + 2,989.5 = 4,786.5 gpm @ 4-hour flow duration.  
MPFD permits a 50% reduction = **2,393.25 gpm @ 2 hours flow duration.**
  - The Fire Flow Modeling Report shall verify the existing fire mains pipe size so illustrated on the Civil Utility Sheet C-4.0, any difference from the approved fire flow modeling report shall require changes to the Utility Sheet.
- The Public hydrants illustrated on C-4.0 meet MPFD and CFC for location and spacing. All new and existing public fire hydrants to comply to the following:
  - All fire hydrants shall be wet barrel standard steamer type with 1-4 1/2” (114.3 mm) and 2-2 1/2” (63.5 mm) outlets. MPFPD CFC Sec. 507.5.1 Appendix C
- Fire hydrants and fire appliances (fire department connections and post indicator valves) shall be clearly accessible and free from obstruction.

**Deferred Submittal's shall include the following: (Note on Plans)**

- Fire Suppression System, NFPA 13 (2022 edition).
- Class I Standpipe System, NFPA 14 (2019 edition).
- Fire Pump, NFPA 20 (2019 edition). (if applicable)
- Water Tank(s), NFPA 22 (2018 edition). (if applicable)
- Private Underground Fire Service Main, NFPA 24 (2019 edition).

- One-hour fire rated walls are provided to separate the car stacker areas from any other areas in the garage.
- One-hour fired rated walls are not required in the driveway areas. For the hydraulic calculation, flow from all sprinklers, upright or pendant sprinklers at ceiling and all sidewall sprinklers at all levels, located in the area of application shall be included in the calculation.
- For low-rise building, if the city main cannot provide the required flow at 20 psi, a primary water supply tank and fire pump must be provided. The capacity of the tank shall meet the above requirements and the requirements of NFPA 13 and 14.
- An approved (manual and automatic) fire alarm system is required. A minimum of two sets of plans, specifications and other information pertinent to the system must be submitted to the Menlo Park Fire Protection District for review and approval prior to installation. A separate plan review fee will be collected upon review of these plans:
  - Fire alarm systems shall be U.L. Certificated, Certificate of Completion and other documentation listed the National Fire Alarm Code shall be provided for all new fire alarm system installations.
- A wet chemical extinguisher shall be provided for protection of all commercial cooking equipment and the Type I Hood Exhaust System in conjunction with UL 300 (wet) pre-engineered systems and shall be installed within 30 feet (9,144 mm) of commercial food heat-processing equipment, as measured along an unobstructed path of travel:
  - Automatic fire extinguishing systems protecting commercial cooking equipment shall be interconnected to the fuel and electrical supply for the cooking operation, and arranged to automatically shut off all gas and electric equipment under the hood when the system is actuated. Shutoff valves or switches shall be of a type that require manual operation to reset. Automatic fire extinguishing systems shall be connected to the fire alarm system and zoned accordingly. Deep Fat Fryer require a Type K Extinguisher.
- Approved numbers or addresses shall be placed on all new and existing buildings in such a position as to be plainly visible and legible from the street or road fronting the property. Said numbers shall contrast with their background. Individual suite numbers shall be permanently posted on the main entrance doors of tenant spaces. If rear outside doors to tenant spaces are installed, they shall include the installation of numerical address numbers corresponding to front addressing. Numbers on new occupancies shall comply with the following:
  - Structures over 50 feet (15240 mm) high shall have addresses with a min. 2.5 inch (63.5 mm) stroke wide by min. 12 inches (304.8 mm) high.
- CFC Section 511, Firefighter Air Systems. When required by the fire code official, a firefighter air system shall be installed in new buildings four or more stories in height and in existing buildings greater than 75 feet in height, not later than December 31, 2005, and any underground structures that are two or more floors below grade. Installation shall be in accordance with this ordinance and Menlo Park Fire Protection District Standard, “Firefighter Air Systems,” see Chapter 80.  
**Exception:** R-3 Occupancies.
- CFC Section 510, Emergency Responder Radio Coverage. When required by the fire code official, all new buildings shall have approved radio coverage for emergency responders within the building based upon the existing coverage levels of the public safety communication systems within MPFD at the exterior of the building. This section shall not require improvements of the existing public safety communication systems.  
**Exceptions:**
  - Where it is determined by the fire code official that the radio coverage system is not needed. MPFD requires a construction permit for the installation or modification to emergency responder radio coverage system as provisioned in CFC Section 105.7.5. A separate plan review fee will be collected

- Fire Alarm System, NFPA 72 (2022 edition).
- Generator - Stationary, CFC Section 1203 (2022 edition).
- PV Systems, CFC Section 1204 (2022 edition).
- Emergency Responder Radio Coverage, CFC Section 510 (2022 edition).

**Commercial Building:**

- For single story buildings or structures with an interior height of up to 18 feet as measured from the finished floor to the underside of ceiling, the minimum sprinkler design shall be 0.18 gpm over the most remote 3,000 sq. ft. area plus 500 gpm hose stream included at the base of the riser. For buildings or structures with an interior height of over 18 feet from finished floor to the underside of the ceiling, the minimum sprinkler design shall be 0.33 gpm over the most remote 3,000 sq. ft. area plus 500 gpm for hose streams included at the base of the riser. With written approval from the fire code official, schools, churches and similar occupancies which have few hazards and are unlikely to change may use lesser sprinkler design densities allowed by NFPA 13 and Chapter 9 of the Fire Code.
- An approved Combination Fire Sprinkler/Class I Standpipe System shall be installed throughout this structure. Systems in new office buildings shall include a safety factor in the piping system, and plugged branch line piping allowing for future modifications. In new office buildings shell the sprinkler system shall be designed to .18 gpm/ 3,000 square foot of coverage area. In new garage area the automatic fire sprinkler system shall be designed to .20 gpm/ 2,000 square feet of coverage area. In multi-family buildings the sprinkler system shall be designed to .15gpm/1500 square feet of coverage area. Fire sprinkler system to comply with NFPA 13 2022 edition and Menlo Park Fire Protection District Standards. A separate plan review fee will be collected upon review of these plans:
  - Each floor level shall have a dedicated sprinkler riser assembly installed enabling fire department personnel direct access. The buildings 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup>, 4<sup>th</sup>, 5<sup>th</sup>, 6<sup>th</sup>, 7<sup>th</sup>, & 8<sup>th</sup> floors sprinkler riser assembly to be located in all stairwell providing access to the roof. A 2-1/2” Standpipe Outlet required in each stairwell on the main landing, therefore, relocate Standpipe outlets from the intermediate landing to the main landing.
  - The Standpipe Outlet shall be located on main floor landing and shall reach all portions of the floor served at a 150-foot distance from the Outlet.
  - Each floor level shall have a dedicated sprinkler riser assembly installed enabling fire department personnel direct access.
  - Roof access shall have two standpipe outlets, and most remote standpipe shall be calculated at 500gpm, and additional 250gpm added to outlet below totaling 750gpm. Include in fire flow calculation.
- (if applicable) To establish requirements for sprinkler protection of vehicle car stackers not specifically addressed in NFPA 13. The following shall apply:
  - Parking garage areas containing car stackers shall be protected by an automatic wet-pipe sprinkler system designed to Extra Hazard Group 1. In addition, non-extended coverage standard sidewall sprinklers listed for Ordinary Hazard shall be provided under each parking level, including the bottom level if the stacker is provided with a pit. Each sidewall sprinkler shall cover an area of 80 sq. ft. or less.
  - The area of application may be reduced from the required 2500 sq. ft. to as low as 1500 sq. ft. if:
    - 1-hour fire rated walls are provided to separate the car stacker areas from the standard parking stalls,
    - The car stacker areas are divided up into 1500 sq. ft. areas via 1-hour fire rated walls, and

- upon review of these plans.
- Elevators shall conform to the provisions of listed in Section 607 of the CBC 2022. At least one elevator shall be of a size that will accommodate one gurney (max 24 inches by 84 inches [610 mm by 2134 mm]) and three attendants.
- A minimum 2A 10BC rated fire extinguisher shall be located at or near exits and shall be placed so that the travel distance to a fire extinguisher shall not to exceed 75 feet. Verify with Fire Inspector at time of rough inspection to assist with placement of extinguisher(s).
- Exit signs, emergency lighting, address posting, fire lane, marking, fire extinguishers and Knox Box location to be field verified by Fire Inspector.
- Means of egress components to include exit pathway throughout use, exit stairwells, exit enclosure providing access to exit doors, door hardware, exit signs, exit illumination and emergency lighting shall comply to CFC/CBC Chapter Ten.
- The single man door providing direct access to the Sprinkler Riser Assembly (for each building) shall require signage on the door accessing riser stating- “Riser Room” or agreed upon language.
- Approved plans and approval letter must be on site at the time of inspection.
- Final acceptance of this project is subject to field inspection.

Nothing in this review is intended to authorize or approve any aspects of the design or installation which do not strictly comply with all applicable codes and standards. Menlo Park Fire Protection District is not responsible for inadvertent errors or omissions pertaining to his review and/or subsequent field inspection(s) i.e., additional comments may be added during subsequent drawing review or field inspection. Please call with any questions.

**HORIZONTAL EXIT DESCRIPTION AND CALCULATION**

HORIZONTAL EXITS: HORIZONTAL EXIT IS BEING USED AS AN ACCESSIBLE MEANS OF EGRESS FOR PERSONS WITH DISABILITIES IN LIEU OF PROVIDING AN ELEVATOR AS PERMITTED BY 2022 CBC 1009.2.1 EXCEPTION #1

- THE ARRANGEMENT OF EACH HORIZONTAL EXIT PROVIDES EXIT ENCLOSURES ON EACH SIDE OF THE HORIZONTAL EXIT THAT ARE CAPABLE OF ACCOMMODATING THE TOTAL OCCUPANT LOAD OF EACH FLOOR
  - THE HORIZONTAL EXIT WILL BE REQUIRED EXCLUSIVELY FOR DISABLED OCCUPANTS
    - EACH SIDE OF THE HORIZONTAL EXIT CONTAINS SPACE FOR MULTIPLE WHEEL CHAIR USERS WITH A CLEAR AREA OF 30"x42" ADJACENT TO THE 2-WAY EMERGENCY COMMUNICATION DEVICE.
- CALCULATIONS:
- FOR OCCUPANT LOAD PER FLOOR SEE MATRICES
  - FOR REQUIRED AND PROVIDED STAIR WIDTH SEE MATRICES FOR EACH FLOOR

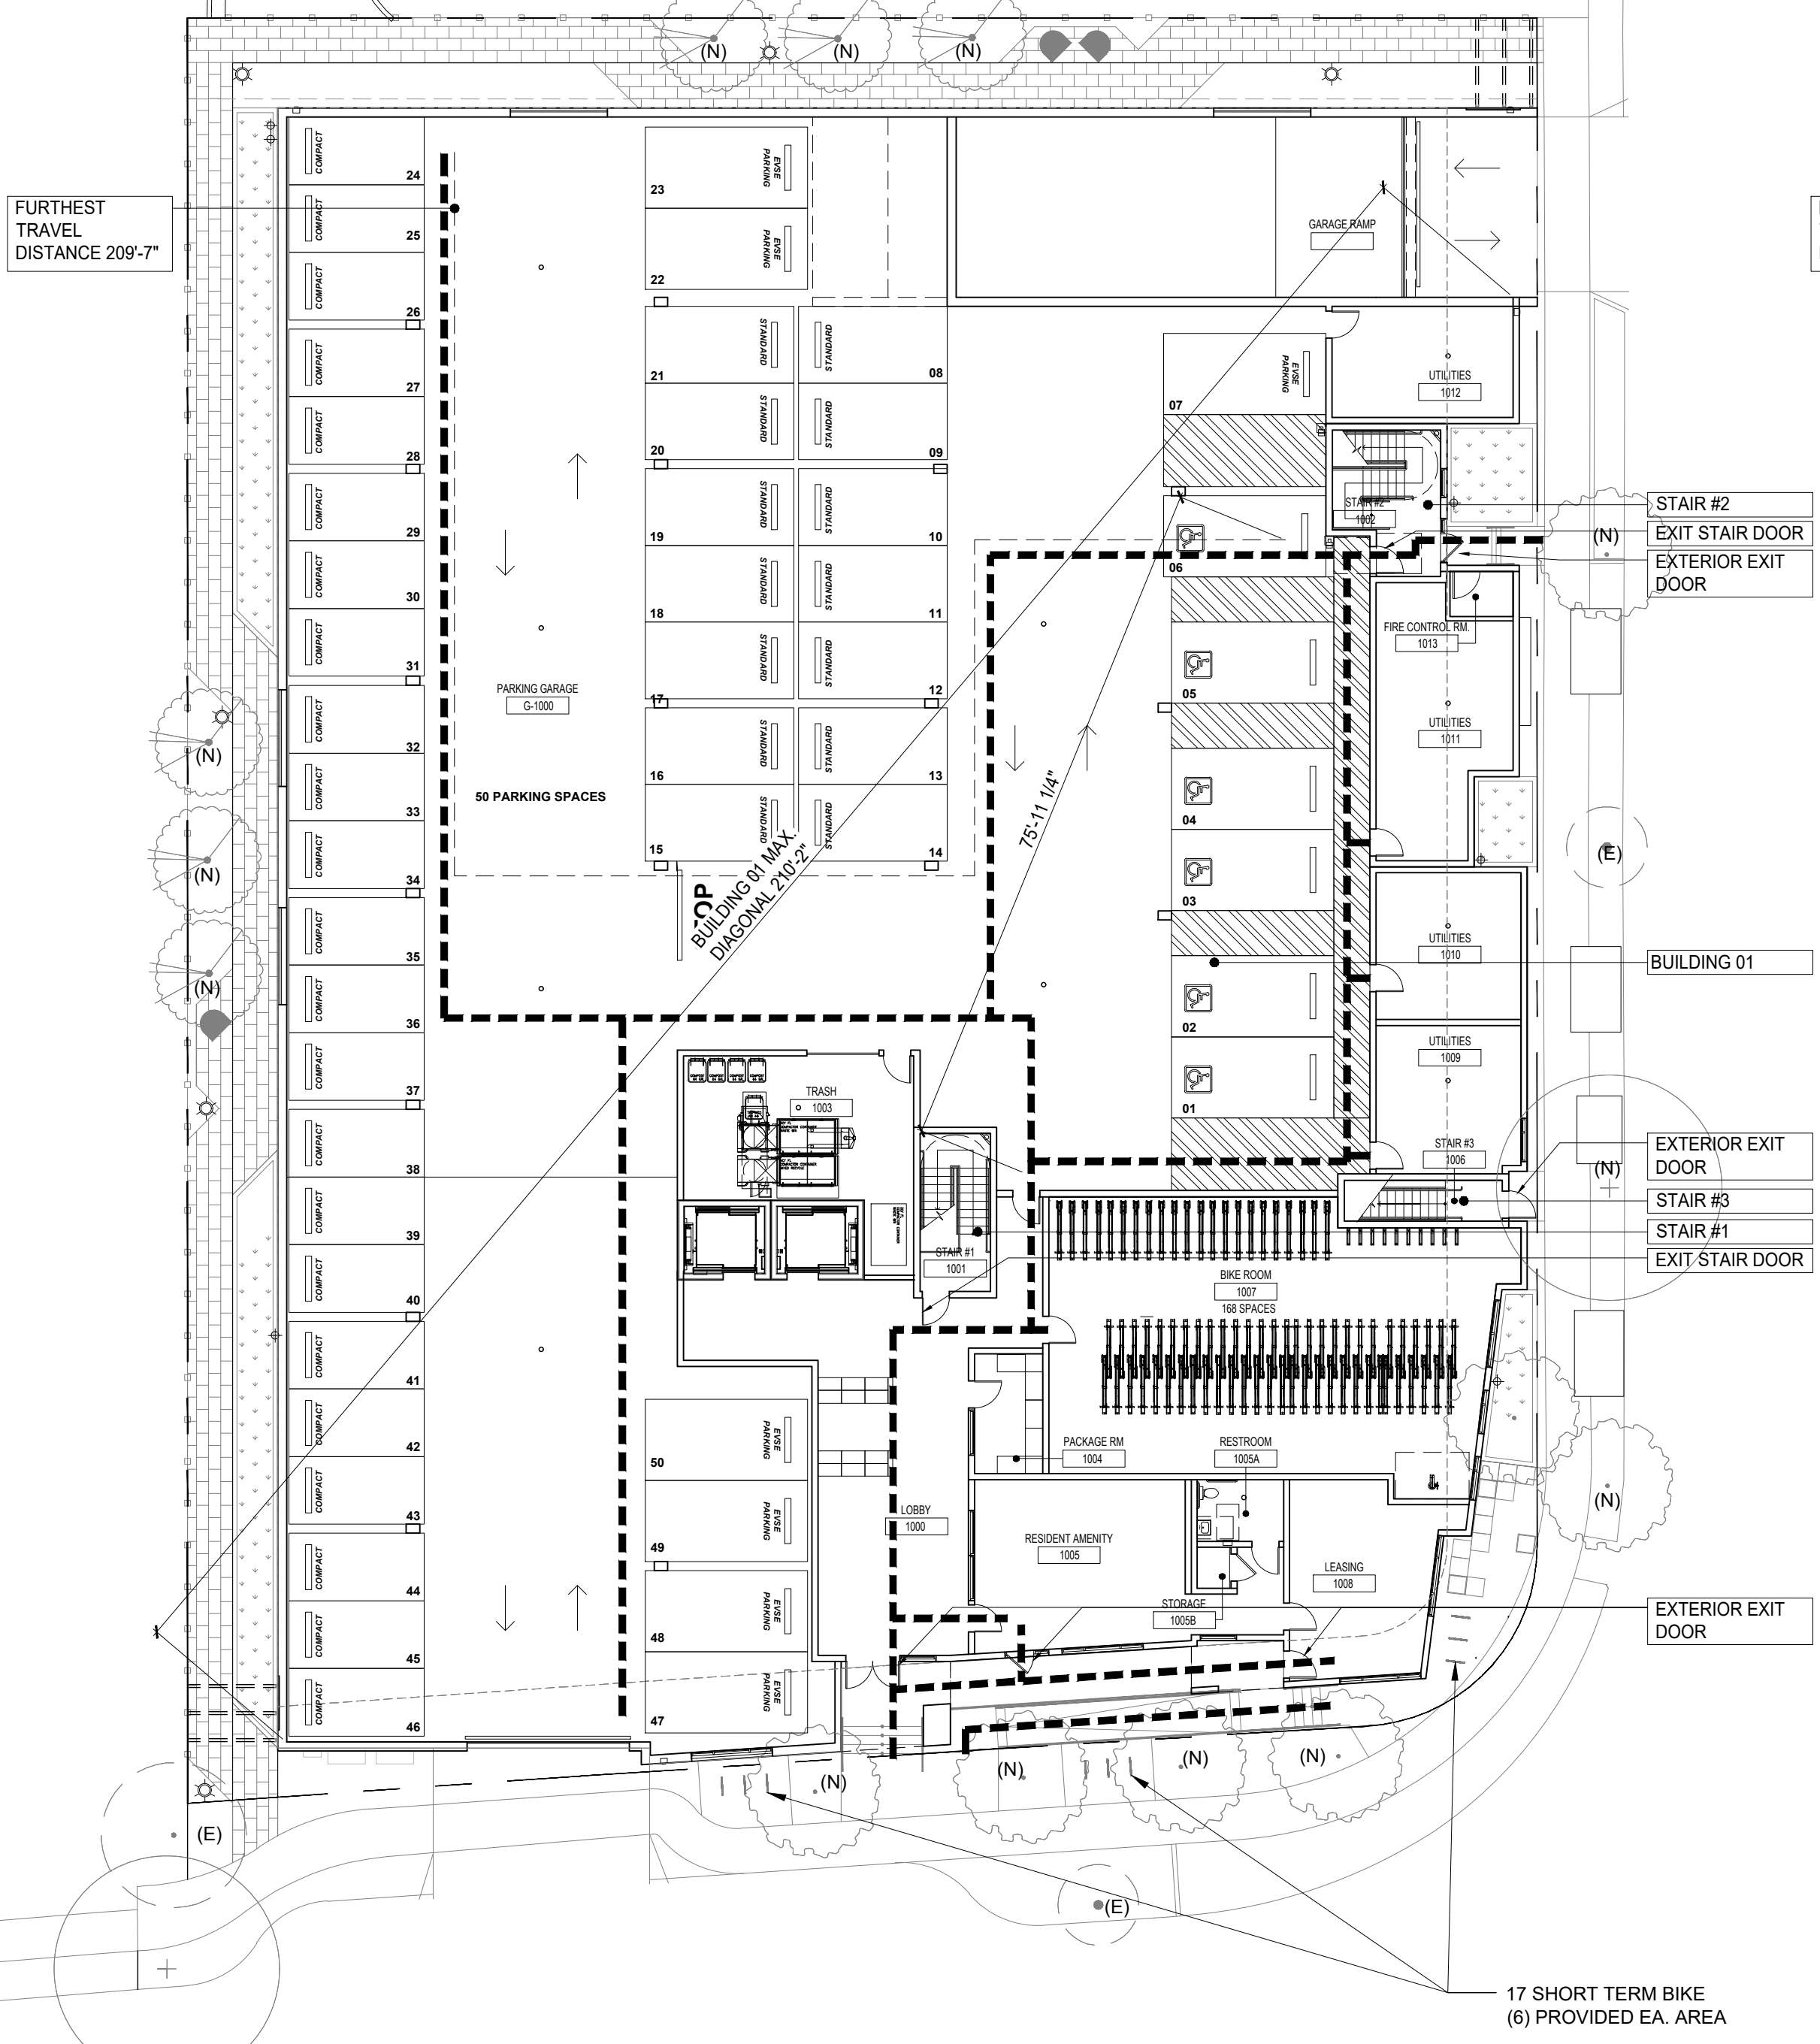

**HORIZONTAL EXIT STANDPIPE**

PER 2022 CBC 905.4 EXCEPTION #2 WHERE FLOOR AREAS ADJACENT TO A HORIZONTAL EXIT ARE REACHABLE FROM AN INTERIOR EXIT STAIR HOSE CONNECTION BY A 30-FOOT HOSE STREAM FROM A NOZZLE ATTACHED TO 100 FEET OF HOSE AS MEASURED ALONG THE PATH OF TRAVEL, A HOSE CONNECTION SHALL NOT BE REQUIRED AT THE HORIZONTAL EXIT.

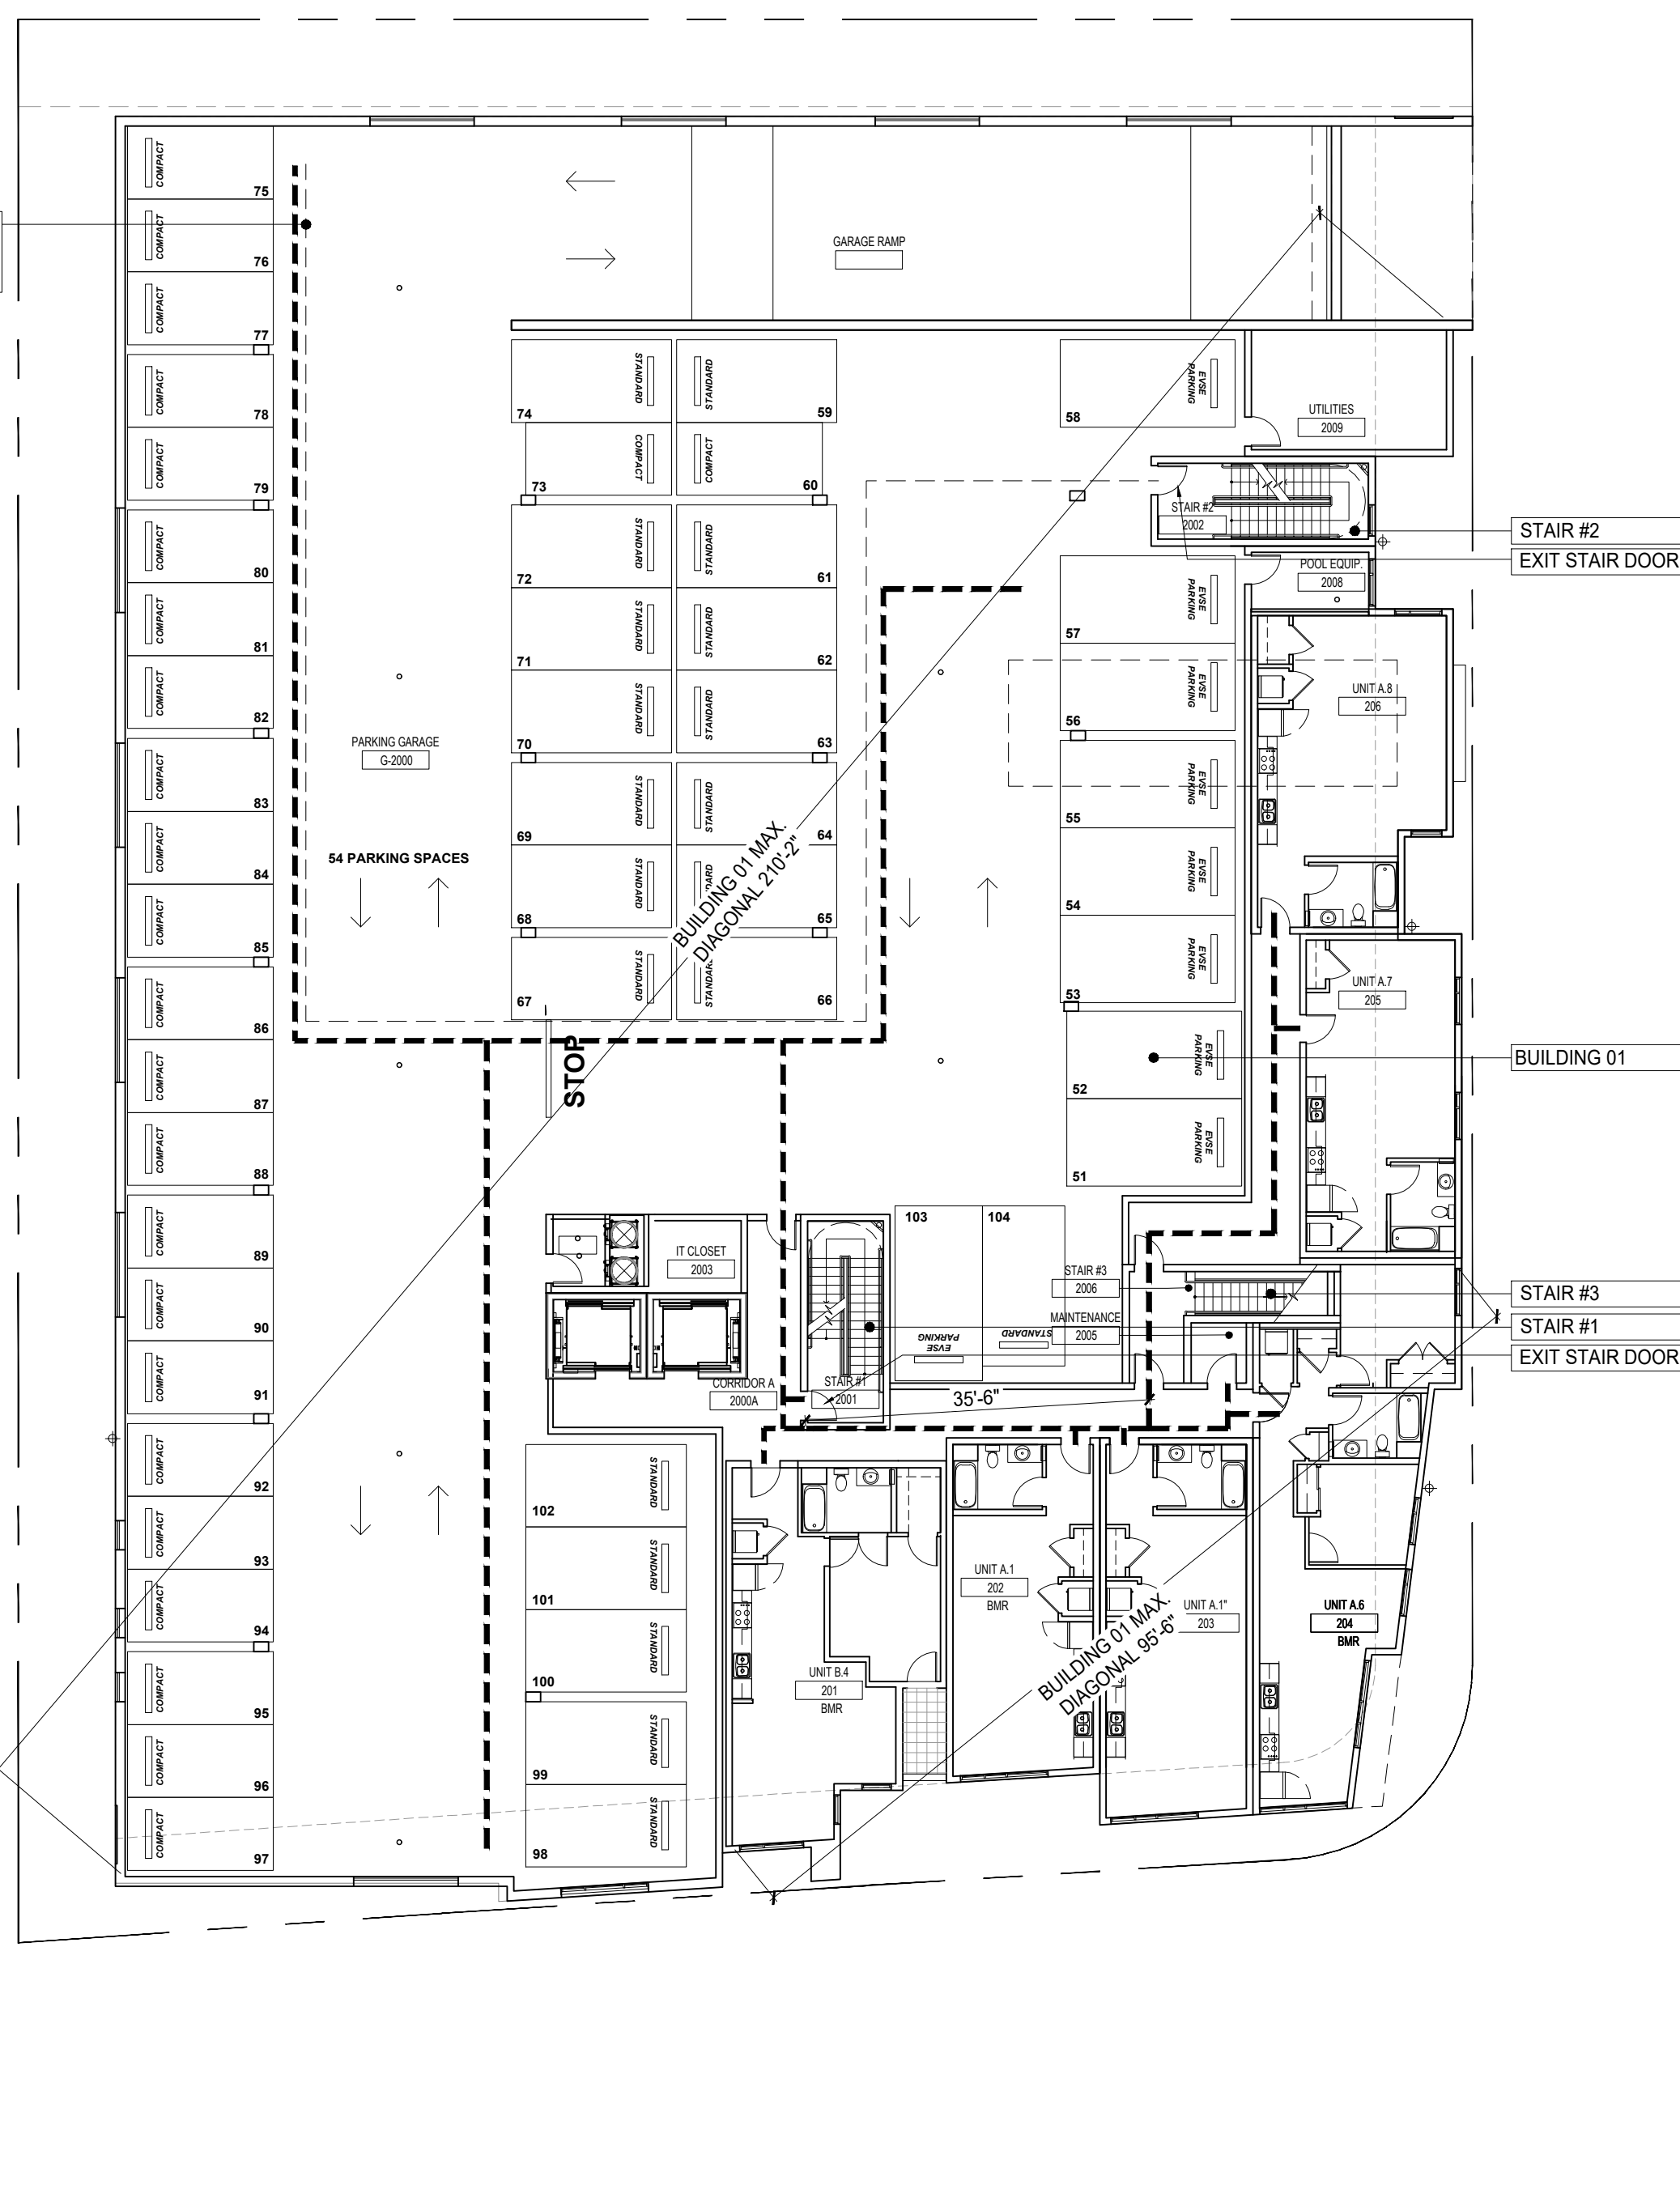

PROPOSED PROJECT MEETS THAT EXCEPTION.

**LEGEND**

- TRAVEL DISTANCE BY BUILDING
- EGRESS PATH
- FIRE WALL / HORIZONTAL EXIT
- CORRIDOR BUILDING 02
- CORRIDOR BUILDING 03

**HORIZONTAL EXIT DESCRIPTION AND CALCULATION**

HORIZONTAL EXITS: HORIZONTAL EXIT IS BEING USED AS AN ACCESSIBLE MEANS OF EGRESS FOR PERSONS WITH DISABILITIES IN LIEU OF PROVIDING AN ELEVATOR AS PERMITTED BY 2022 CBC 1009.2.1 EXCEPTION #1

- THE ARRANGEMENT OF EACH HORIZONTAL EXIT PROVIDES EXIT ENCLOSURES ON EACH SIDE OF THE HORIZONTAL EXIT THAT ARE CAPABLE OF ACCOMMODATING THE TOTAL OCCUPANT LOAD OF EACH FLOOR
  - THE HORIZONTAL EXIT WILL BE REQUIRED EXCLUSIVELY FOR DISABLED OCCUPANTS
    - A EACH SIDE OF THE HORIZONTAL EXIT CONTAINS SPACE FOR MULTIPLE WHEEL CHAIR USERS WITH A CLEAR AREA OF 30"x42" ADJACENT TO THE 2-WAY EMERGENCY COMMUNICATION DEVICE.
- CALCULATIONS:
- FOR OCCUPANT LOAD PER FLOOR SEE MATRICES
  - FOR REQUIRED AND PROVIDED STAIR WIDTH SEE MATRICES FOR EACH FLOOR

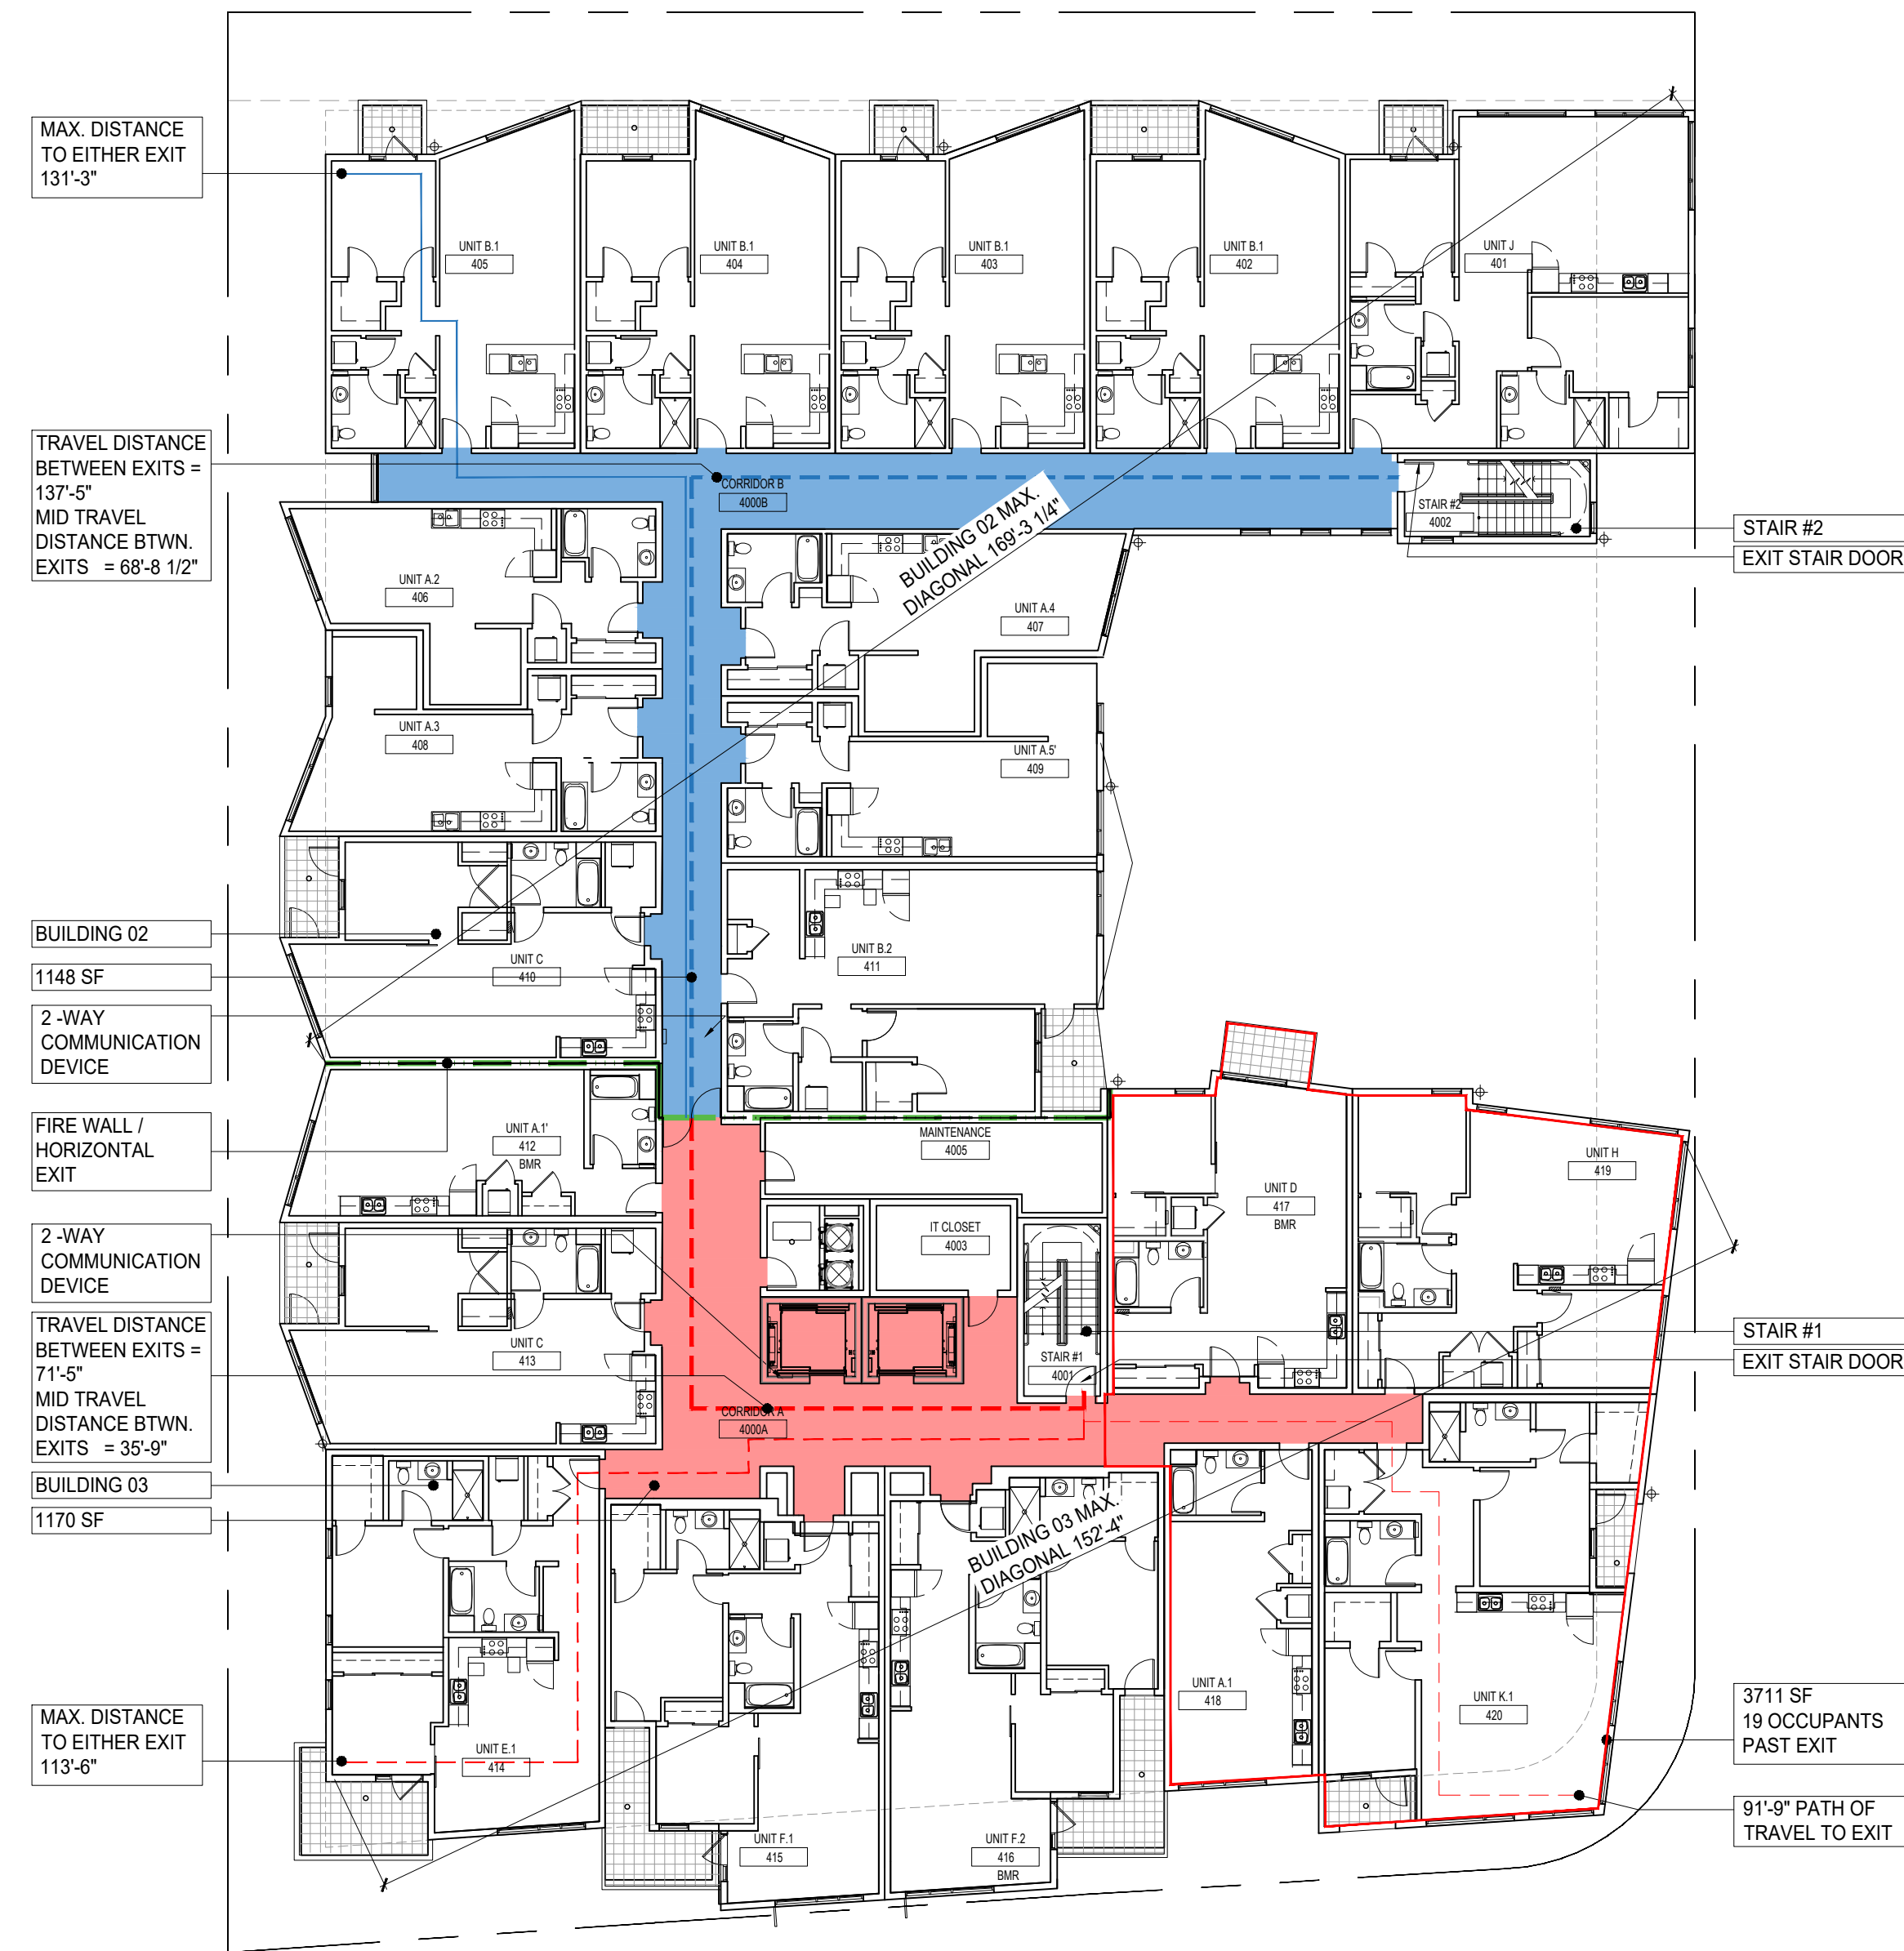

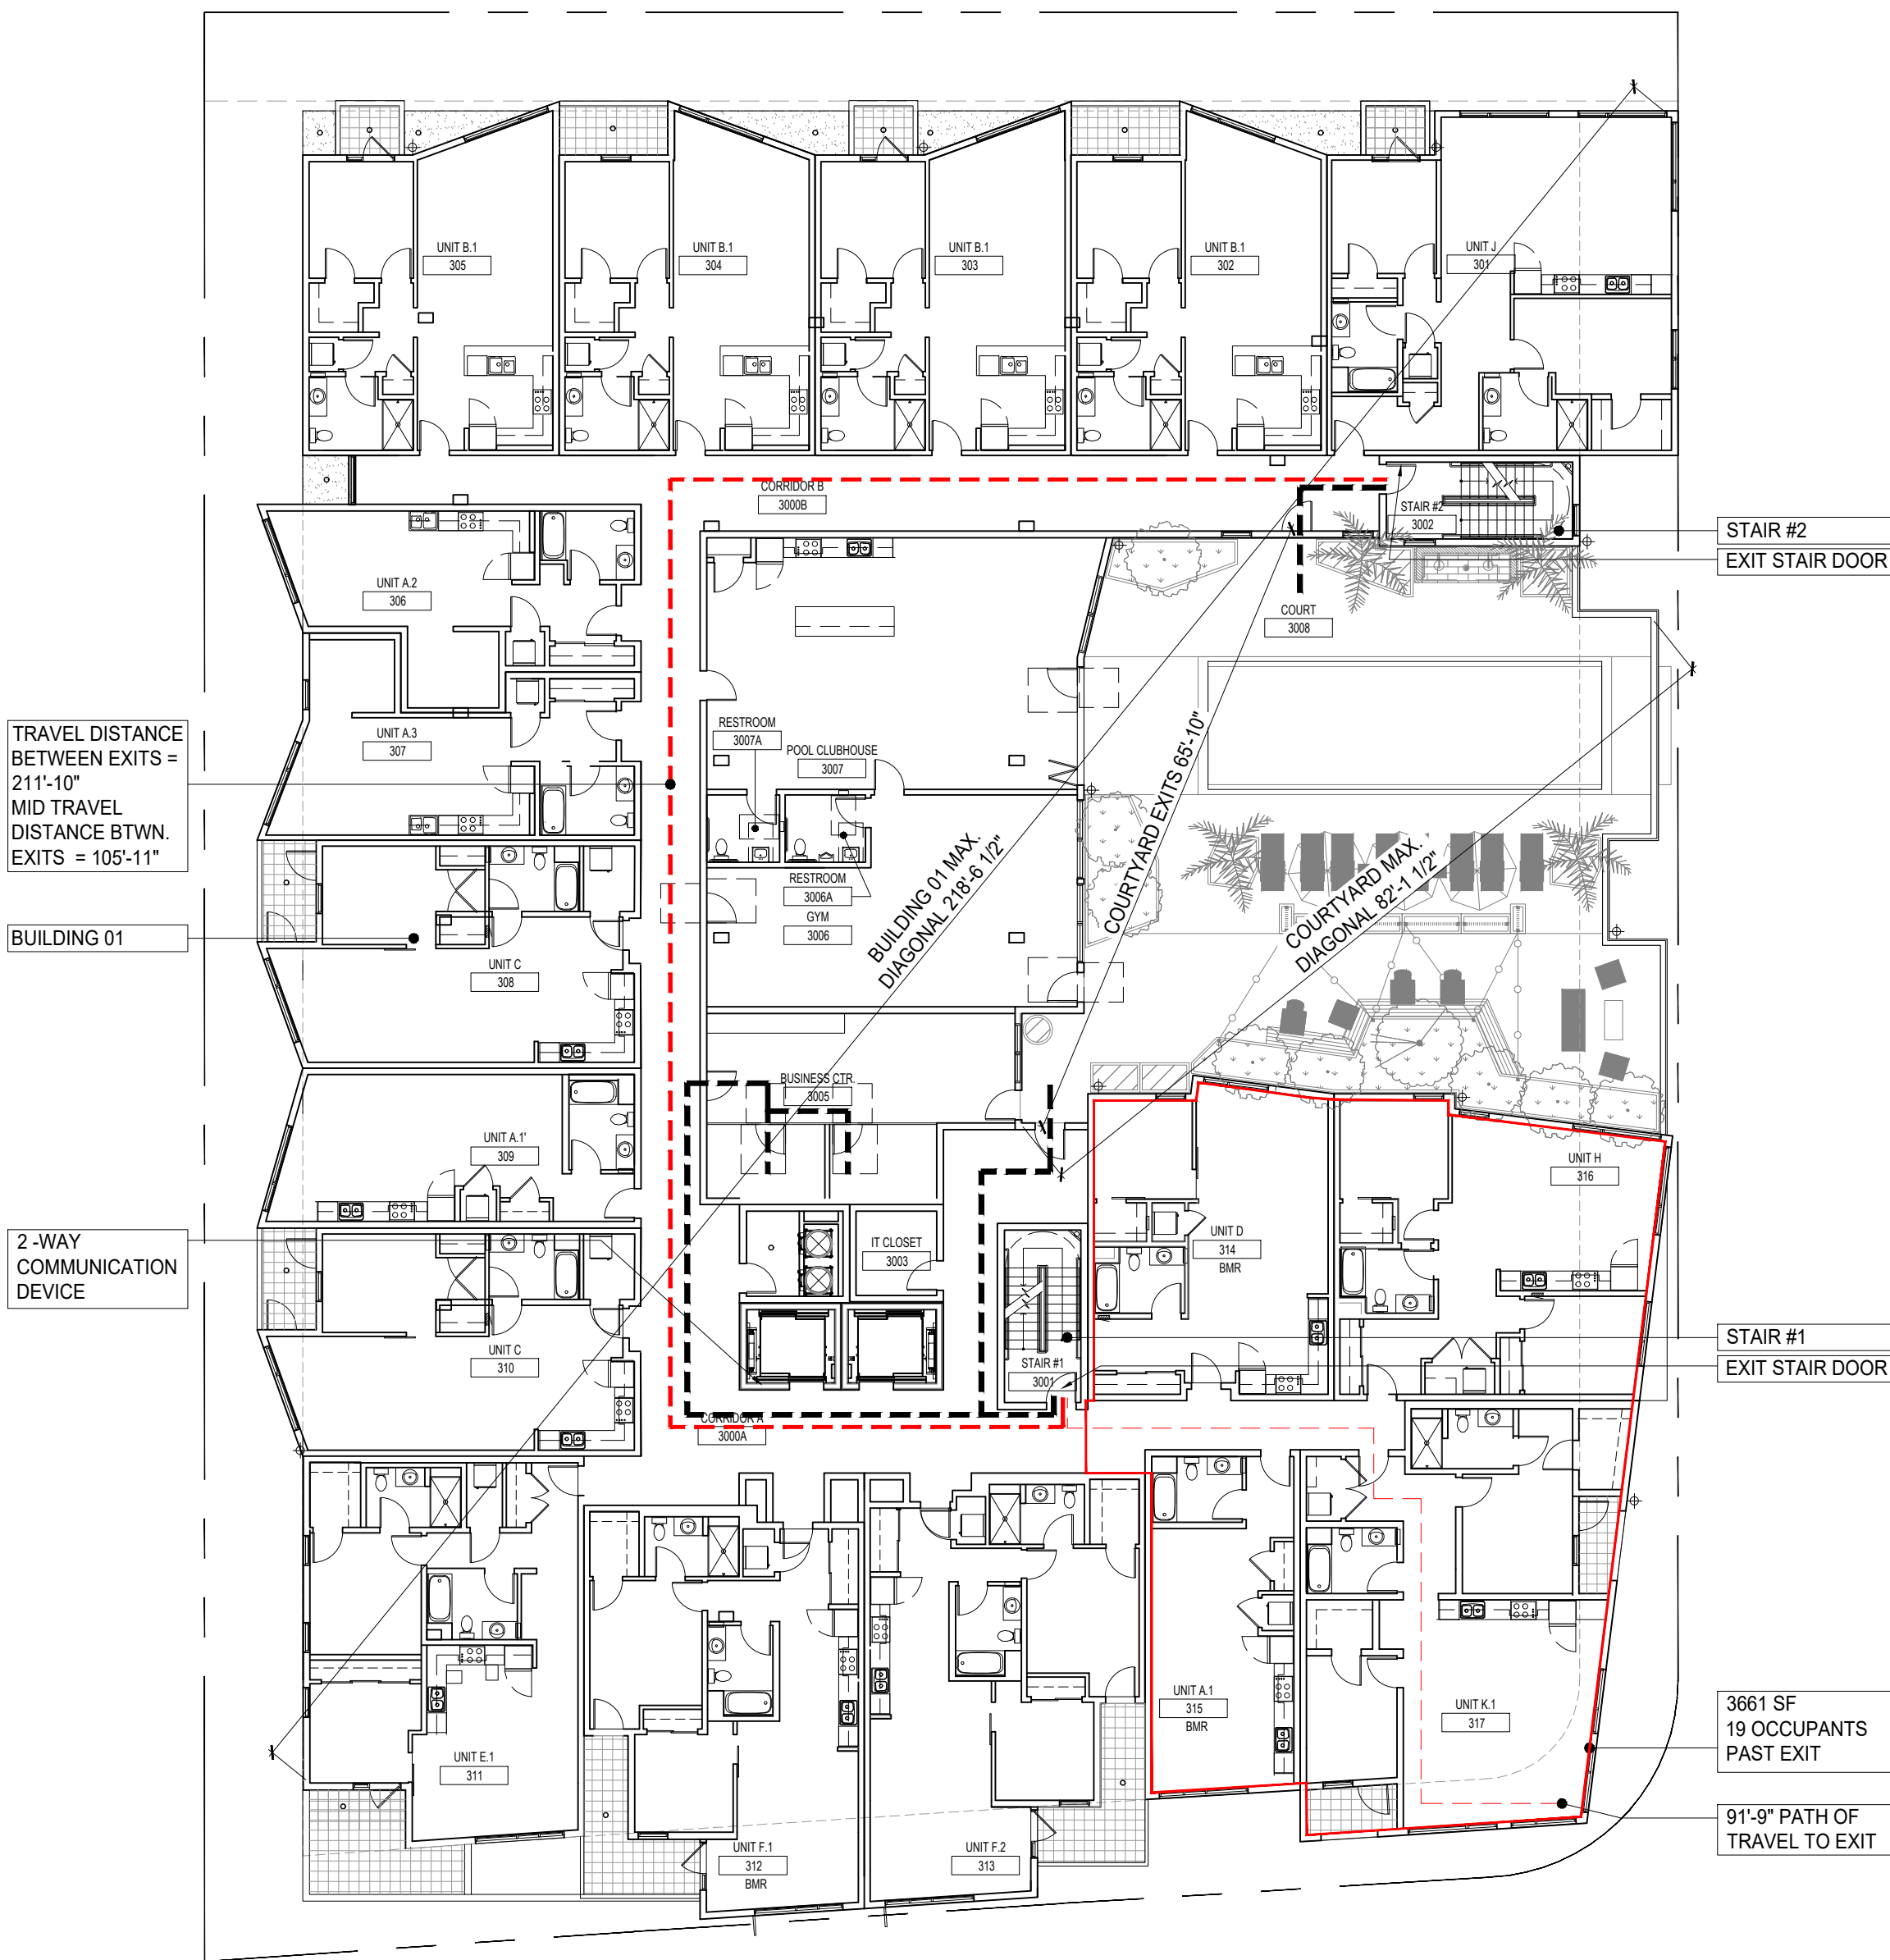

**HORIZONTAL EXIT STANDPIPE**

PER 2022 CBC 905.4 EXCEPTION #2 WHERE FLOOR AREAS ADJACENT TO A HORIZONTAL EXIT ARE REACHABLE FROM AN INTERIOR EXIT STAIR HOSE CONNECTION BY A 30-FOOT HOSE STREAM FROM A NOZZLE ATTACHED TO 100 FEET OF HOSE AS MEASURED ALONG THE PATH OF TRAVEL. A HOSE CONNECTION SHALL NOT BE REQUIRED AT THE HORIZONTAL EXIT.

PROPOSED PROJECT MEETS THAT EXCEPTION.

**ACCESSIBILITY NOTES**

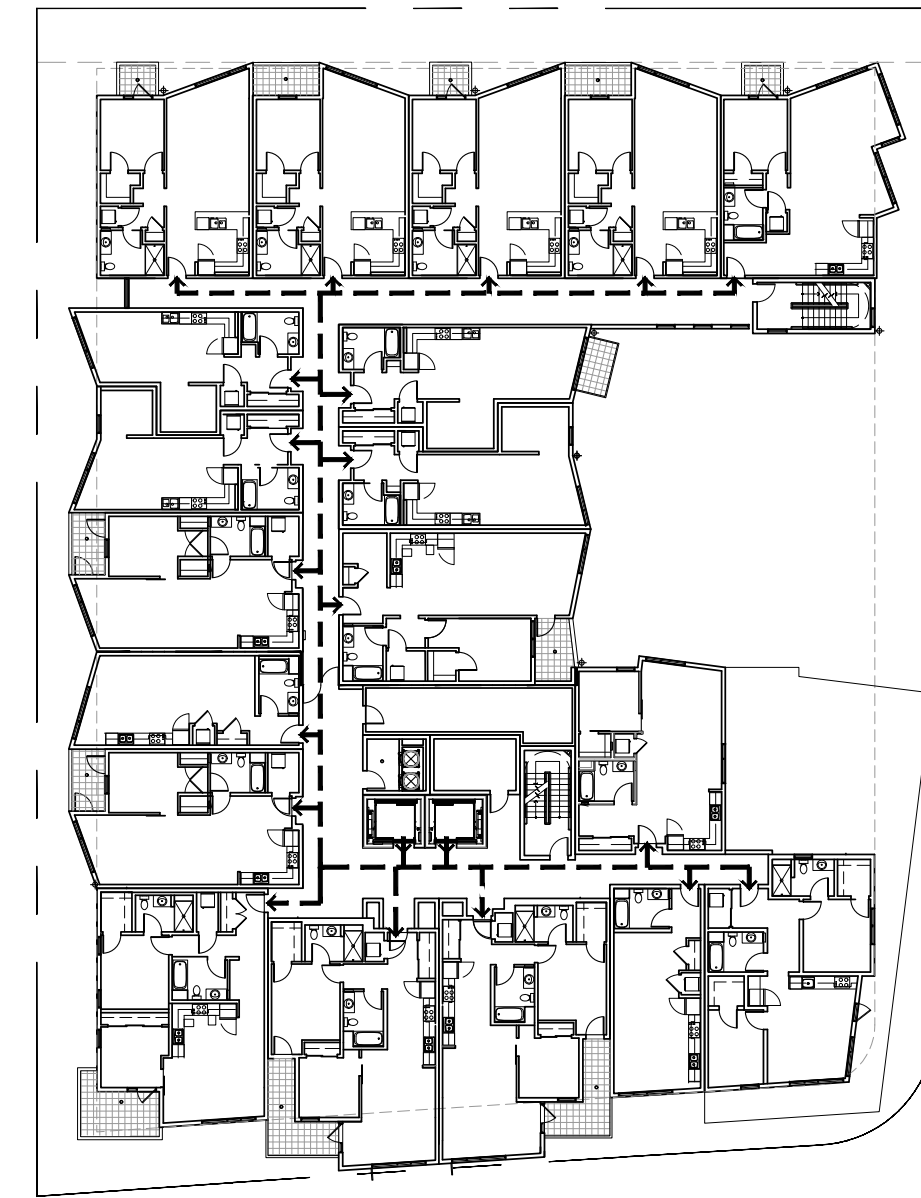

1. ACCESSIBLE PATH OF TRAVEL (P.O.T.) AS INDICATED ON PLANS IS A BARRIER FREE ACCESS ROUTE WITHOUT ANY ABRUPT LEVEL CHANGES EXCEEDING 1/2" IF BEVELED AT 1:2 MAX. SLOPE, OR VERTICAL LEVEL CHANGES NOT EXCEEDING 1/4" MAX. ALL ACCESSIBLE ROUTES OF TRAVEL TO BE AT LEAST 44" WIDE. SURFACE IS STABLE, FIRM & SLIP RESISTANT. CROSS SLOPE DOES NOT EXCEED 2% AND SLOPE IN THE DIRECTION OF TRAVEL IS LESS THAN 5% U.O.N.
2. WHEN THE SLOPE IN THE DIRECTION OF TRAVEL OF ANY WALK EXCEED 1:20, IT SHALL COMPLY WITH THE PROVISIONS FOR PEDESTRIAN RAMPS.
3. WALKS, SIDEWALKS AND PEDESTRIAN WAYS SHALL BE FREE OF GRATINGS WHERE EVER POSSIBLE. FOR GRATINGS LOCATED IN THE SURFACE OF THESE AREAS, GRID OPENINGS SHALL BE LIMITED TO 1/2" IN THE DIRECTION OF TRAVEL FLOW.
4. SURFACES WITH A SLOPE OF LESS THAN 6% GRADIENT SHALL BE AT LEAST AS SLIP-RESISTANT AS THAT DESCRIBED AS A MEDIUM SALT FINISH AND HEAVY BROOM FINISH FOR SLOPES GREATER THAN 6%.
5. ACCESSIBLE ROUTES OF TRAVEL SHALL BE MAINTAINED FREE OF OVERHANGING OBSTRUCTIONS TO 80" MINIMUM AND PROTRUDING OBJECTS GREATER THAN 4" PROJECTION FROM WALL AND ABOVE 27" AND LESS THAN 80".
6. SEE G1 SERIES FOR TYPICAL ACCESSIBILITY DETAILS.
7. ALL REQUIRED ACCESSIBLE DOORS TO HAVE A 32" CLEAR OPENING MEASURED WITH THE DOOR POSITIONED AT AN ANGLE OF 90 DEGREES FROM ITS CLOSED POSITION.

- SEE A11 SERIES FOR GENERAL ACOUSTICAL DETAILS
- PROVIDE 1 HOUR CONSTRUCTION WITH SOUND INSULATION BETWEEN RESIDENTIAL UNITS AND BETWEEN RESIDENTIAL UNITS AND PUBLIC AREAS (50 STC MIN.) PER 2016 CBC SECTION 1206.
- CONTRACTOR TO PROVIDE SOLID & CONTINUOUS BACKING FOR ALL WALL MTD. FIXTURES, ACCESSORIES, MILLWORK, EQUIPMENT RACKS, SHELVING, ETC. ALL BLOCKING TO BE SAME GAUGE AS FRAMING OR GREATER.
- EXHAUST SHAFTS SHALL COMPLY WITH 2022 CBC SECTION 713, PROTECTED BY APPROVED FIRE DAMPERS, S.M.D. FOR MORE INFORMATION.
- ALL PENETRATIONS SHALL CONFORM PER 2022 CBC SECTION 714; SEE SHEET A11 SERIES FOR MORE INFORMATION
- ALL HABITABLE ROOMS SHALL BE HEATED PER 2022 CBC 1203
- ALL UNITS TO HAVE UNIT ENTRY SIGNAGE
- PROVIDE FLOOR DRAINS, SLOPE 1/4" FOOT.
- PAINT ALL EXPOSED MECHANICAL, PLUMBING, ELECTRICAL AND FIRE LINES THROUGHOUT
- ALL STRUCTURAL COLUMNS & POSTS, AND THEIR CONNECTION TO OTHER STRUCTURAL MEMBERS, ARE TO BE FIRE RATED. IF COLUMNS & POSTS ARE WITHIN WALLS, COLUMNS & POSTS TO BE INDIVIDUALLY ENCASED IN GYP. BD. IF COLUMNS & POSTS ARE EXPOSED, COLUMNS & POSTS TO BE SPRAYED WITH INTUMESCENT PAINT. SEE A8 SERIES FOR ADDITIONAL DETAILS.
- 5 LB. CLASS ABC FIRE EXTINGUISHER SPACED SO THAT EVERY INTERIOR SPACE IS WITHIN 75' TO AN EXTINGUISHER. CABINET TO NOT PROTRUDE MORE THAN 4" INTO WALKWAYS. SEE A11 SERIES FOR RECESS CABINET INSTALLATION DETAIL
- BUILDING IS REQUIRED TO MEET 2022 CBC SECTION 1206 SOUND TRANSMISSION REQUIREMENTS.

**SHEET NOTES**

3/32" = 1'-0"

**SHEET NOTES**

PROJECT NORTH TRUE NORTH

--- PROPERTY LINE

**MUNICIPAL CODE 16.45.120 (1) - Build-To Area Requirement**  
Minimum 60% of street frontage within 25'-0" of setback.  
The minimum building frontage at the ground floor or podium level, as a percentage of the street frontage length, that must be located within the area of the lot between the minimum and maximum setback lines parallel to the street.

HAVEN EAST: LENGTH OF BUILDING FRONTAGE: 198'-0"  
MIN. FRONTAGE WITHIN SETBACKS: 198'-0" X 60% = 118'-9"  
PROPOSED FRONTAGE WITHIN SETBACKS: 174'-4" > 118'-9"  
COMPLIES

HAVEN SOUTH LENGTH OF BUILDING FRONTAGE: 149'-8 1/2"  
MIN. FRONTAGE WITHIN SETBACKS: 149'-8 1/2" X 60% = 89'-9"  
PROPOSED FRONTAGE WITHIN SETBACKS: 138'-9 3/4" > 89'-9"  
COMPLIES

**MUNICIPAL CODE 16.45.120 (3) - BUILDING ENTRANCES**  
One entrance every 200 feet of building length along a public street or paseo. A minimum of one is required along each length.

BUILDING ENTRANCES

**MUNICIPAL CODE 16.45.120 (3) - GARAGE ENTRANCES**  
Maximum 12-foot opening for one-way entrance; maximum 24-foot opening for two-way entrance

GARAGE ENTRANCES

**MUNICIPAL CODE 16.45.120 (3) - AWNINGS, SIGNS & CANOPIES**  
The maximum depth of awnings, signs, and canopies that project horizontally from the face of the building is 7 feet.

AWNING

**MUNICIPAL CODE 16.45.120 (6) (G) - Rooflines and eaves**  
adjacent to street-facing facades shall vary across a building, including a four (4) foot minimum height modulation to break visual monotony and create a visually interesting skyline as seen from public streets

ROOF LINE

**MUNICIPAL CODE 16.45.120 (6) (F) - Stucco** shall not be used on more than fifty percent (50%) of the building facade. When stucco is used, it must be smooth troweled.

Building Complies, no stucco is used at street frontages

**SHEET NOTES**

PROPERTY LINE

MUNICIPAL CODE 16.45.120 (2) -  
BASE HEIGHT : 45' + 10' = 55'  
The maximum height of a building at the minimum setback at street or before the building steps back the minimum horizontal distance required.  
Note: Properties within the flood zone or subject to flooding and sea level rise are allowed a 10-foot height increase : 55'

HEIGHT

MINIMUM SETBACK - The horizontal distance a building's upper stories must be set back above the base height.  
10 feet for a minimum of 75% of the building face along public streets. A maximum of 25% of building face along public streets may be excepted.

STEPPED BACK PORTION OF BUILDING  
EXCEPTED AREA

BUILDING PROJECTIONS  
The maximum depth of allowable building projections, such as balconies, or bay windows, from the required setback for portions of the building above the ground floor.  
6' max. depth  
LABELED IN ELEVATION & PLAN

OVERALL LENGTH OF BUILDING FRONTAGE: 184'-9"  
MIN. FRONTAGE ABOVE 45'-0" WITHIN SETBACKS:  
184'-9" X 75% = 138'-6 3/4"

PROPOSED FRONTAGE WITHIN SETBACKS:  
14'-9 1/2" + 69'-1" + 55'-7 1/2" + 9'-2 1/2" = 148'-9"  
148'-9" > 138'-6 3/4"

75% OF BUILDING FACE STEPS BACK AT LEAST 10'-0" ON THE UPPER STORIES

184'-9" X 25% = 46'-2 1/4" (MAX.)  
PROPOSED: 25'-11 1/4" < 46'-2 1/4"

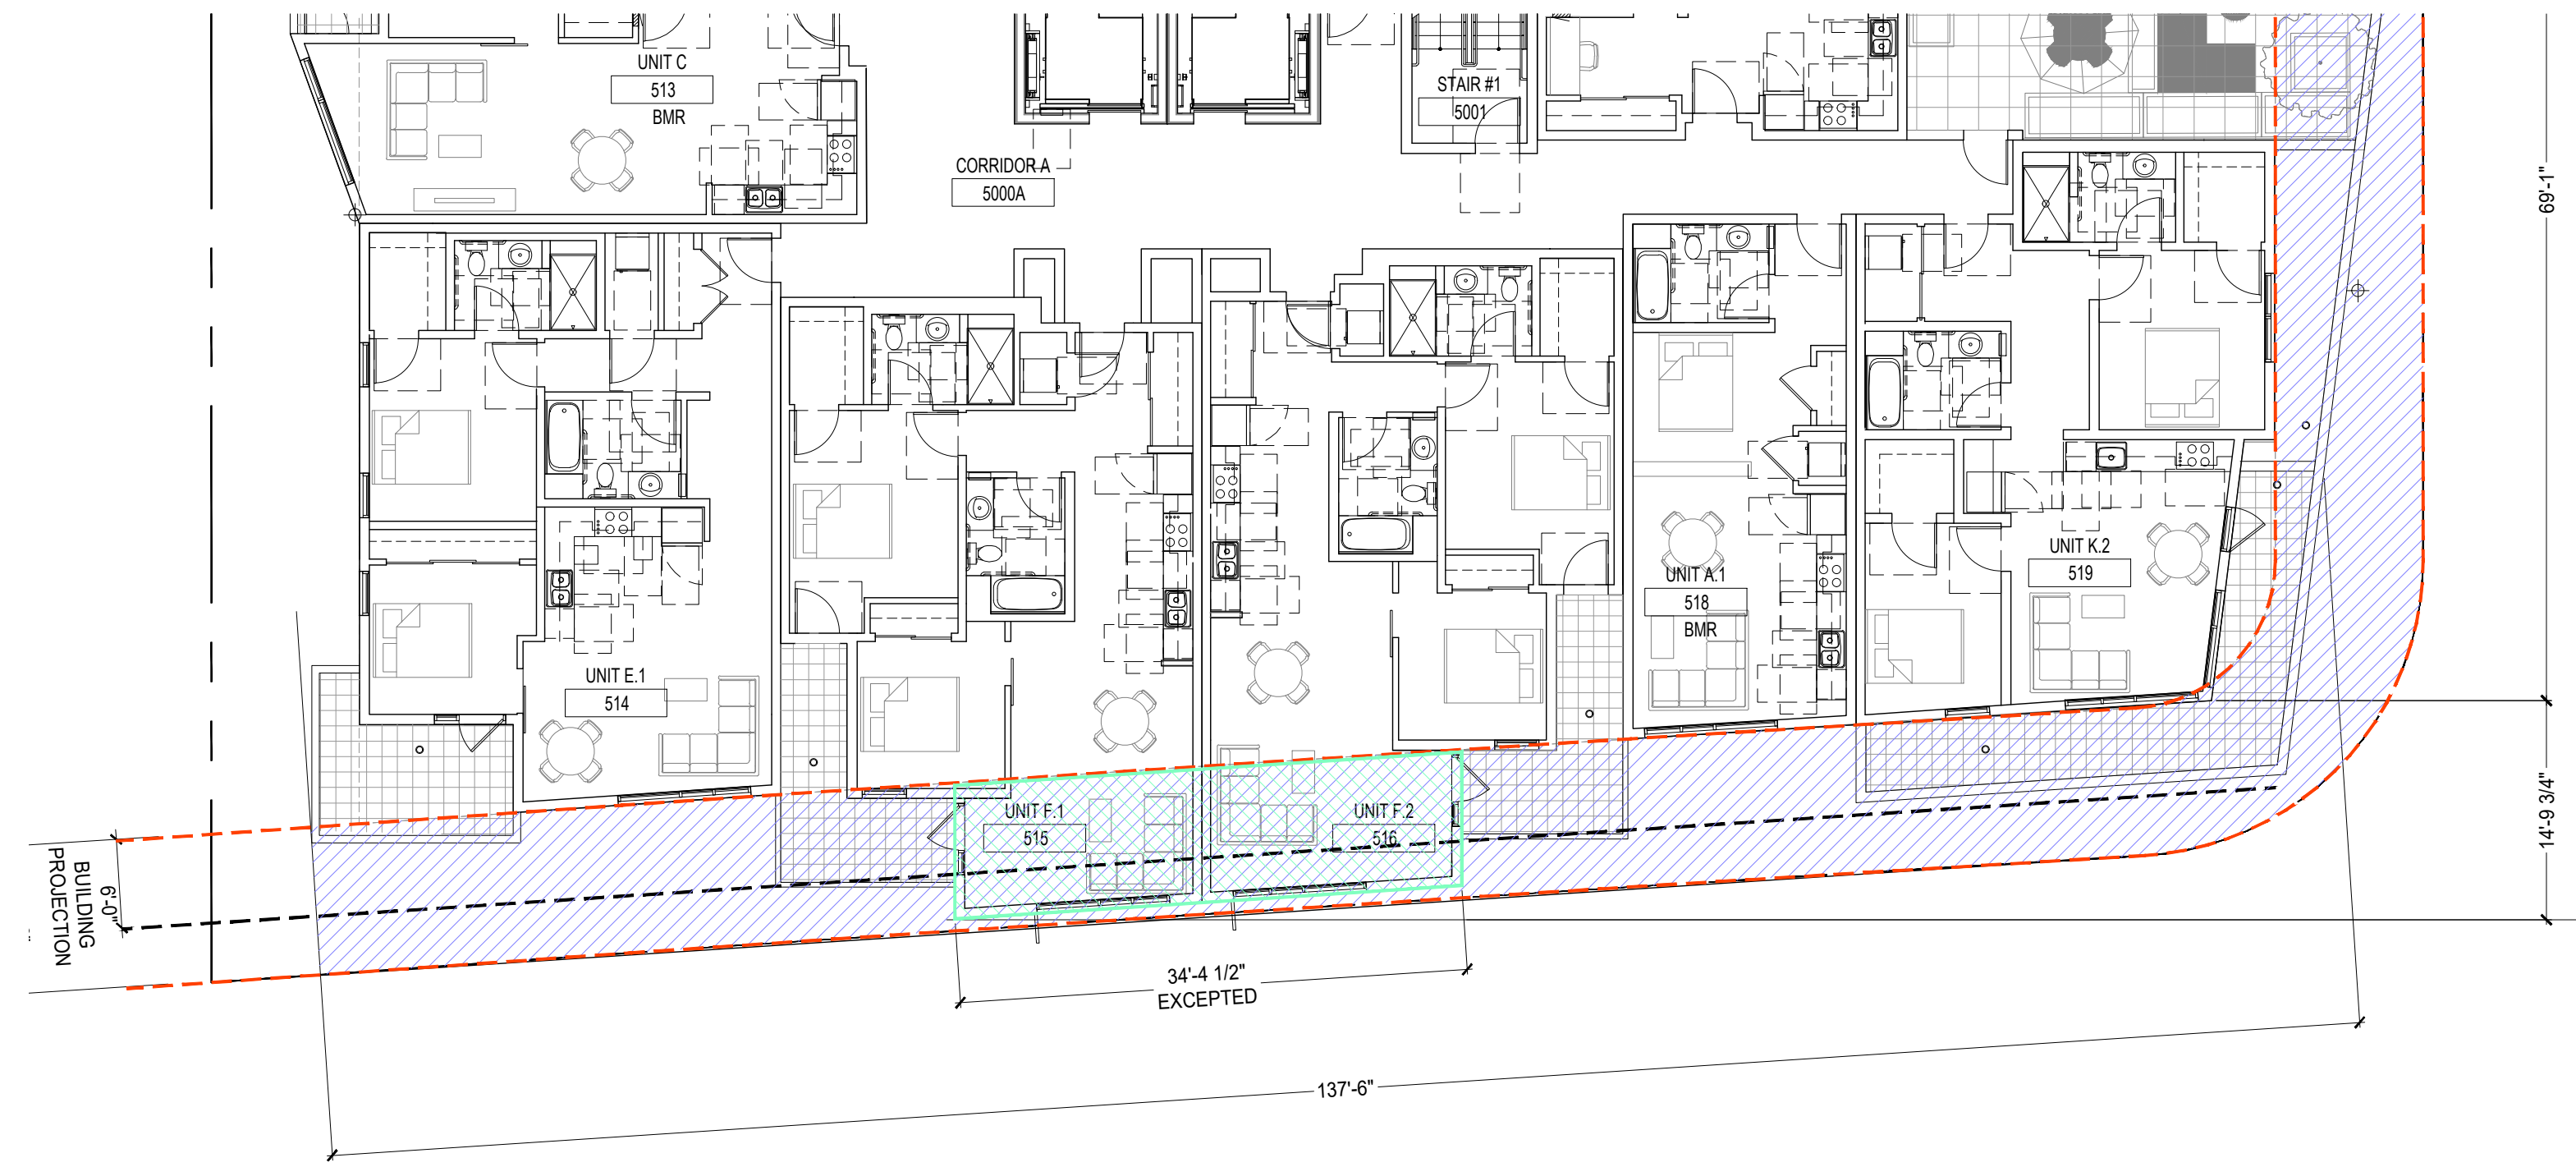

**2 PLANS : HAVEN STREET EAST - SETBACK (FIFTH FLOOR PLAN SHOWN, SIXTH & SEVENTH SIM.)**  
3/32" = 1'-0"

**1 ELEVATION : HAVEN STREET EAST - GROUND FLOOR SETBACK**  
3/32" = 1'-0"

OVERALL LENGTH OF BUILDING FRONTAGE: 137'-6"  
 MIN. FRONTAGE ABOVE 45'-0" WITHIN SETBACKS: 137'-6" X 75% = 103'-1 1/2"  
 75% OF BUILDING STEPS BACK AT LEAST 10'-0" ON THE UPPER STORIES ABOVE 45'-0"  
 25% MAY BE EXCEPTED WITHIN SETBACK: 137'-6" X 25% = 34'-4 1/2"  
 25% MAX. EXCEPTED WITHIN SETBACK: 34'-4 1/2"

SHEET NOTES

PROPERTY LINE

MUNICIPAL CODE 16.45.120 (2) - MAJOR BUILDING MODULATIONS

A major modulation is a break in the building plane from the ground level to the top of the building's base height that provides visual variety, reduces large building volumes, and provides spaces for entryways and publicly accessible spaces.

- Minimum of one recess of 15 feet wide by 10 feet deep per 200 feet of facade length

MAJOR BUILDING RECESS

MINOR BUILDING MODULATIONS 16.45.120 (2) -

Modulation is required on the building facade(s) facing publicly accessible spaces (streets, open space, and paseos).

- Minimum recess of 5 feet wide by 5 feet deep per 50 feet of facade length
- Building projections spaced no more than 50' apart with min. 3' depth & 5' width may satisfy this in lieu of a recess.

MINOR BUILDING RECESS

# 3705 HAVEN AVENUE MENLO PARK, CALIFORNIA

VICINITY MAP

## OWNER'S INFORMATION

OWNER:  
3705 HAVEN LLC  
2040 WEBSTER STREET  
SAN FRANCISCO, CA 94115

APN: 055-170-240

## REFERENCES

- THIS GRADING AND DRAINAGE PLAN IS SUPPLEMENTAL TO:
- TOPOGRAPHIC SURVEY BY LEA AND BRAZE ENGINEERING, ENTITLED: "BOUNDARY AND TOPOGRAPHICAL SURVEY" 3705 HAVEN AVENUE MENLO PARK, USA DATED: 2-11-22 JOB# 2212296
  - SITE PLAN BY LEVY DESIGN PARTNERS ENTITLED: "GROUND FLOOR PLAN" 3705 HAVEN AVENUE MENLO PARK, USA
  - LANDSCAPE PLANS BY JETT LANDSCAPE ENTITLED: "LANDSCAPE PLAN" 3705 HAVEN AVENUE MENLO PARK, USA
  - JOINT TRENCH PLANS BY TARRAR ENTITLED: "JOINT TRENCH COMPOSITE PLAN" 3705 HAVEN AVENUE MENLO PARK, USA

THE CONTRACTOR SHALL REFER TO THE ABOVE NOTED SURVEY AND PLAN, AND SHALL VERIFY BOTH EXISTING AND PROPOSED ITEMS ACCORDING TO THEM.

## CITY FEMA NOTE:

- THE PROJECT IS BUILT IN COMPLIANCE WITH THE CITY'S FLOOD DAMAGE PREVENTION ORDINANCE, CHAPTER 12, SECTION 42
- ALL MATERIALS BELOW DFE SHALL BE RESISTANT TO FLOOD DAMAGE (I.E., CONCRETE, REDWOOD OR PRESSURE TREATED DOUGLAS FIR)
- THE BOTTOM ELEVATION OF ALL APPLIANCES AND UTILITIES (METERS, AIR CONDITIONING UNITS, ETC) SHALL BE AT OR ABOVE DFE.
- STORM RUNOFF RESULTING FROM THE PROJECT'S GRADING AND DRAINAGE ACTIVITIES SHALL NOT ENCROACH ONTO ANY NEIGHBORING LOT. RUNOFF MUST BE CONTAINED ON-SITE.
- NO BASEMENTS OR ANY HABITABLE ENCLOSURE BELOW THE DFE ARE ALLOWED FOR PROJECTS IN THE FLOOD ZONE.
- FLOOD VENTS SHALL BE INSTALLED FOR ALL NON-HABITABLE ENCLOSURES BELOW THE DFE (I.E. CRAWLSPACE, GARAGE, ETC.) AT A RATE OF 1 SQUARE INCH OF NET OPENING TO 1 SQUARE FOOT OF ENCLOSURE. REFER TO THE ENGINEERING PLANS HEREIN FOR VENT LOCATIONS AND CALCULATIONS.

I CERTIFY THAT I AM THE ENGINEER OF RECORD AND THE PLANS DATED 07-29-22 SUBMITTED ON 11-18-22 COMPLY WITH THE CITY'S FLOOD DAMAGE PREVENTION ORDINANCE (CHAPTER 12, SECTION 42).

SIGNED: PETER CARLINO  
REGISTERED CIVIL ENGINEER NO. C79555 (EXP. 09-30-24)

## FEMA FLOOD ELEVATIONS:

FFE: 11.2'  
BFE: 10.2'  
DFE: 11.2'

## \* BUILDING PAD NOTE:

ADJUST PAD LEVEL AS REQUIRED. REFER TO STRUCTURAL PLANS FOR SLAB SECTION OR CRAWL SPACE DEPTH TO ESTABLISH PAD LEVEL.

## NOTE:

FOR CONSTRUCTION STAKING SCHEDULING OR QUOTATIONS PLEASE CONTACT ALEX ABAYA AT LEA & BRAZE ENGINEERING (510)887-4086 EXT 116. aabaya@leabraze.com

## INSPECTION NOTE:

THE CONTRACTOR SHALL INFORM THE OWNER (IN WRITING) OF RECOMMENDED PERIODIC INSPECTION AND MAINTENANCE OF THE ON-SITE STORM DRAINAGE SYSTEM. THE REGULAR CLEARING OF SILT AND DEBRIS IS ESPECIALLY IMPORTANT PRIOR TO EACH RAINY SEASON.

## BASIS OF BEARINGS

THE BEARING NORTH 24°13'00" EAST ALONG THE WESTERLY RIGHT OF WAY OF HAVEN AVENUE AS SHOWN ON THAT CERTAIN PARCEL MAP FILED IN BOOK 72 OF PARCEL MAPS AT PAGE 46, SAN MATEO COUNTY RECORDS, IS THE BASIS OF ALL BEARINGS SHOWN ON THIS MAP.

## BENCHMARK

CITY OF MENLO PARK BM3 BRONZE DISK EPOXIED INTO THE TOP OF A CONCRETE CURB OF THE NORTHERLY CURB LINE OF HAVEN AVENUE AT #3585 HAVEN AVENUE AT THE WESTERLY SIDE OF A STORM WATER CATCH BASIN. ELEVATION = 8.178' (ADJUSTED TO NAVD 88 DATUM)

## PUBLIC WORKS NOTE:

THE STORM RUNOFF GENERATED BY THE NEW DEVELOPMENT SHALL NOT DRAIN ONTO ADJACENT PROPERTIES. THE EXISTING STORM DRAINAGE FROM THE ADJACENT PROPERTIES SHALL NOT BE BLOCKED BY THE NEW DEVELOPMENT.

THE APPLICANT/CONTRACTOR SHALL OBTAIN AN ENCROACHMENT PERMIT FROM THE CITY'S ENGINEERING DIVISION PRIOR TO START OF ANY WORK WITHIN THE CITY'S RIGHT-OF-WAY OR PUBLIC EASEMENT AREAS. THE APPLICANT SHALL OBTAIN PERMITS FROM UTILITY COMPANIES PRIOR TO APPLYING FOR CITY ENCROACHMENT PERMIT.

ALL TRENCHES IN THE CITY'S RIGHT-OF-WAY SHALL COMPLY WITH CITY STANDARD DETAILS ST-9A, ST-9B, AND ST-16.

ALL CONCRETE WORK IN THE CITY'S RIGHT-OF-WAY SHALL COMPLY WITH CITY STANDARD DETAIL G-3.

ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE CITY STANDARDS AND TO THE SATISFACTION OF THE CITY ENGINEER.

EXISTING FRONTAGE IMPROVEMENTS (A.C., PARKING STRIPE, DRIVEWAY, AND VALLEY GUTTER) THAT ARE CRACKED, DAMAGED, ELEVATED, OR DEPRESSED OR THAT CAUSE SURFACE WATER PONDING SHALL BE REMOVED AND REPLACED BY THE APPLICANT PER CITY STANDARDS.

INSTALL STABILIZED CONSTRUCTION ENTRANCE (AS APPLICABLE) PER CITY STANDARD DETAIL CG-16.

## UTILITY NOTE

ALL UNDERGROUND PIPE TYPES, SIZES AND LOCATION SHOWN ON THIS SURVEY ARE BASED ON VISUAL OBSERVATION. ANY USE OF THIS INFORMATION SHOULD BE VERIFIED, BEFORE ITS USE, WITH THE CONTROLLING MUNICIPALITY OR UTILITY PROVIDER. THIS SURVEY MAKES NO GUARANTEE OF THE INSTALLED ACTUAL LOCATION, DEPTHS OR SIZE.

## EASEMENT NOTE

EASEMENTS ARE SHOWN PER PRELIMINARY TITLE REPORT ISSUED BY OLD REPUBLIC TITLE COMPANY, ORDER NO 0227027166-RL, DATED AS OF NOVEMBER 22, 2021 EASEMENT TO PG&E FOR ELECTRIC TRANSMISSION LINES PER DOCUMENT RECORDED IN BOOK 127, PAGE 468, OFFICIAL RECORDS OF SAN MATEO COUNTY, IS NOT PLOTTABLE. EXACT LOCATION NOT DISCLOSED OF RECORD.

## SITE BENCHMARK

SURVEY CONTROL POINT CUT CROSS IN CONCRETE ELEVATION = 9.91' (ADJUSTED TO NAVD 88 DATUM)

## NOTES

ALL DISTANCES AND DIMENSIONS ARE IN FEET AND DECIMALS.

BUILDING FOOTPRINTS ARE SHOWN TO FINISHED MATERIAL (STUCCO/SIDING) AT GROUND LEVEL.

FINISH FLOOR ELEVATIONS ARE TAKEN AT DOOR THRESHOLD (EXTERIOR).

THE AREA OF THE SURVEYED LOT IS 28,808± SQUARE FEET / 0.66± ACRES

## DEVELOPMENT AREA SUMMARY

PRE-DEVELOPMENT	(SQFT)
BUILDINGS	10,368
DRIVEWAY & PARKING	11,854
PATIOS, WALKWAYS & PADS	651
TOTAL	22,873
POST-DEVELOPMENT	(SQFT)
BUILDINGS	11,950
DRIVEWAY & PARKING	0
PATIOS, WALKWAYS & PADS	12,505
PERVIOUS PATIOS, WALKWAYS & PADS	1,624
TOTAL	24,455
DIFFERENCE (NET DECREASE)	1,582

## TREE NOTE

TREE SIZE, TYPE AND DRIFTLINES ARE BASED ON A VISUAL OBSERVATION. FINAL DETERMINATION SHOULD BE MADE BY THE PROJECT ARBORIST.

## FEMA FLOOD NOTE

FLOOD ZONE: AE

100-YEAR BASE FLOOD ELEVATION (BFE): 10.2' (NAVD88 DATUM) PER FLOOD INSURANCE STUDY TABLE 11, SUMMARY OF NON-COASTAL STILLWATER ELEVATIONS

FEMA FLOOD INSURANCE RATE MAP NO.: 06081C0306F EFFECTIVE DATE: APRIL 5, 2019

FEMA FLOOD INSURANCE STUDY FOR SAN MATEO COUNTY, CA NO.: 06081CV001D REVISED: APRIL 5, 2019

## ESTIMATED EARTHWORK QUANTITIES

CUBIC YARDS	TOTAL CUBIC YARDS (WITHIN BUILDING)
CUT	62
FILL	702
IMPORT	646

NOTE: GRADING QUANTITIES REPRESENT ONSITE BANK YARDAGE ONLY. IT DOES NOT INCLUDE ANY SWELLING OR SHRINKAGE FACTORS AND IS INTENDED TO REPRESENT IN-SITU CONDITIONS. QUANTITIES DO NOT INCLUDE OVER-EXCAVATION, TRENCHING, STRUCTURAL FOUNDATIONS OR PIERS, OR POOL EXCAVATION (IF ANY). NOTE ADDITIONAL EARTHWORKS, SUCH AS KEYWAYS OR BENCHING MAY BE REQUIRED BY THE GEOTECHNICAL ENGINEER IN THE FIELD AT TIME OF CONSTRUCTION. CONTRACTOR TO VERIFY QUANTITIES.

SAN MATEO COUNTY

TITLE SHEET

01 OF 22 SHEETS

**GENERAL NOTES**

ALL GENERAL NOTES, SHEET NOTES, AND LEGEND NOTES FOUND IN THESE DOCUMENTS SHALL APPLY TYPICALLY THROUGHOUT. IF INCONSISTENCIES ARE FOUND IN THE VARIOUS NOTATIONS, NOTIFY THE ENGINEER IMMEDIATELY IN WRITING REQUESTING CLARIFICATION.

THESE DRAWINGS AND THEIR CONTENT ARE AND SHALL REMAIN THE PROPERTY OF LEA AND BRAZE ENGINEERING, INC. WHETHER THE PROJECT FOR WHICH THEY ARE PREPARED IS EXECUTED OR NOT. THEY ARE NOT TO BE USED BY ANY PERSONS ON OTHER PROJECTS OR EXTENSIONS OF THE PROJECT EXCEPT BY AGREEMENT IN WRITING AND WITH APPROPRIATE COMPENSATION TO THE ENGINEER.

ALL WORK SHALL COMPLY WITH APPLICABLE CODES AND TRADE STANDARDS WHICH GOVERN EACH PHASE OF WORK INCLUDING, BUT NOT LIMITED TO, CALIFORNIA MECHANICAL CODE, CALIFORNIA PLUMBING CODE, CALIFORNIA ELECTRICAL CODE, CALIFORNIA FIRE CODE, CALTRANS STANDARDS AND SPECIFICATIONS, AND ALL APPLICABLE STATE AND/OR LOCAL CODES AND/OR LEGISLATION.

IT IS THE RESPONSIBILITY OF THE CONTRACTOR AND ALL SUBCONTRACTORS TO CHECK AND VERIFY ALL CONDITIONS, DIMENSIONS, LINES AND LEVELS INDICATED, PROPER FIT AND ATTACHMENT OF ALL PARTS IS REQUIRED. SHOULD THERE BE ANY DISCREPANCIES, IMMEDIATELY NOTIFY THE ENGINEER FOR CORRECTION OR ADJUSTMENT THE EVENT OF FAILURE TO DO SO, THE CONTRACTOR SHALL BE RESPONSIBLE FOR CORRECTION OF ANY ERROR.

ALL DIMENSIONS AND CONDITIONS SHALL BE CHECKED AND VERIFIED ON THE JOB BY EACH SUBCONTRACTOR BEFORE HE/SHE BEGINS HIS/HER WORK. ANY ERRORS, OMISSION, OR DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE OWNER/CONTRACTOR BEFORE CONSTRUCTION BEGINS.

COMMENCEMENT OF WORK BY THE CONTRACTOR AND/OR ANY SUBCONTRACTOR SHALL INDICATE KNOWLEDGE AND ACCEPTANCE OF ALL CONDITIONS DESCRIBED IN THESE CONSTRUCTION DOCUMENTS, OR EXISTING ON SITE, WHICH COULD AFFECT THEIR WORK.

**WORK SEQUENCE**

IN THE EVENT ANY SPECIAL SEQUENCING OF THE WORK IS REQUIRED BY THE OWNER OR THE CONTRACTOR, THE CONTRACTOR SHALL ARRANGE A CONFERENCE BEFORE ANY SUCH WORK IS BEGUN.

SITE EXAMINATION: THE CONTRACTOR AND ALL SUBCONTRACTORS SHALL THOROUGHLY EXAMINE THE SITE AND FAMILIARIZE HIM/HERSELF WITH THE CONDITIONS UNDER WHICH THE WORK IS TO BE PERFORMED. THE CONTRACTOR SHALL VERIFY AT THE SITE ALL MEASUREMENTS AFFECTING HIS/HER WORK AND SHALL BE RESPONSIBLE FOR THE CORRECTIONS OF THE SAME. NO EXTRA COMPENSATION WILL BE ALLOWED TO THE CONTRACTOR FOR EXPENSES DUE TO HIS/HER NEGLIGENCE TO EXAMINE, OR FAILURE TO DISCOVER, CONDITIONS WHICH AFFECT HIS/HER WORK.

LEA AND BRAZE ENGINEERING, INC. EXPRESSLY RESERVES ITS COMMON LAW COPYRIGHT AND OTHER PROPERTY RIGHTS IN THESE PLANS. THESE PLANS ARE NOT TO BE REPRODUCED, CHANGED OR COPIED IN ANY FORM OR MANNER WHATSOEVER, NOR ARE THEY TO BE ASSIGNED TO A THIRD PARTY WITHOUT FIRST OBTAINING THE WRITTEN PERMISSION AND CONSENT OF LEA AND BRAZE ENGINEERING, INC. IN THE EVENT OF UNAUTHORIZED REUSE OF THESE PLANS BY A THIRD PARTY, THE THIRD PARTY SHALL HOLD HARMLESS LEA AND BRAZE ENGINEERING, INC.

CONSTRUCTION IS ALWAYS LESS THAN PERFECT SINCE PROJECTS REQUIRE THE COORDINATION AND INSTALLATION OF MANY INDIVIDUAL COMPONENTS BY VARIOUS CONSTRUCTION INDUSTRY TRADES. THESE DOCUMENTS CANNOT PORTRAY ALL COMPONENTS OR ASSEMBLIES EXACTLY. IT IS THE INTENTION OF THESE ENGINEERING DOCUMENTS THAT THEY REPRESENT A REASONABLE STANDARD OF CARE IN THEIR CONTENT. IT IS ALSO PRESUMED BY THESE DOCUMENTS THAT CONSTRUCTION REVIEW SERVICES WILL BE PROVIDED BY THE ENGINEER. SHOULD THE OWNER NOT RETAIN THE ENGINEER TO PROVIDE SUCH SERVICES, OR SHOULD HE/SHE RETAIN THE ENGINEER TO PROVIDE ONLY PARTIAL OR LIMITED SERVICES, THEN IT SHALL BE THE OWNER'S AND CONTRACTOR'S RESPONSIBILITY TO FULLY RECOGNIZE AND PROVIDE THAT STANDARD OF CARE.

IF THE OWNER OR CONTRACTOR OBSERVES OR OTHERWISE BECOMES AWARE OF ANY FAULT OR DEFECT IN THE PROJECT OR NONCONFORMANCE WITH THE CONTRACT DOCUMENTS, PROMPT WRITTEN NOTICE THEREOF SHALL BE GIVEN BY THE OWNER AND/OR CONTRACTOR TO THE ENGINEER.

THE ENGINEER SHALL NOT HAVE CONTROL OF OR CHARGE OF AND SHALL NOT BE RESPONSIBLE FOR CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES, OR PROCEDURES, OR FOR SAFETY PRECAUTIONS AND PROGRAMS IN CONNECTION WITH THE WORK. FOR THE ACTS OR OMISSIONS OF THE CONTRACTOR, SUBCONTRACTORS, OR ANY OTHER PERSONS PERFORMING ANY OF THE WORK, OR FOR THE FAILURE OF ANY OF THEM TO CARRY OUT THE WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.

**SITE PROTECTION**

PROTECT ALL LANDSCAPING THAT IS TO REMAIN. ANY DAMAGE OR LOSS RESULTING FROM EXCAVATION, GRADING, OR CONSTRUCTION WORK SHALL BE CORRECTED OR REPLACED BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE OWNER. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE LOCATION OF ALL EXISTING SITE UTILITIES AND SHALL COORDINATE THEIR REMOVAL OR MODIFICATIONS (IF ANY) TO AVOID ANY INTERRUPTION OF SERVICE TO ADJACENT AREAS. THE GENERAL CONTRACTOR SHALL INFORM HIM/HERSELF OF MUNICIPAL REGULATIONS AND CARRY OUT HIS/HER WORK IN COMPLIANCE WITH ALL FEDERAL AND STATE REQUIREMENTS TO REDUCE FIRE HAZARDS AND INJURIES TO THE PUBLIC.

**STORMWATER POLLUTION PREVENTION NOTES**

- 1) STORE, HANDLE, AND DISPOSE OF CONSTRUCTION MATERIALS AND WASTES PROPERLY, SO AS TO PREVENT THEIR CONTACT WITH STORMWATER.
- 2) CONTROL AND PREVENT THE DISCHARGE OF ALL POTENTIAL POLLUTANTS, INCLUDING SOLID WASTES, PAINTS, CONCRETE, PETROLEUM PRODUCTS, CHEMICALS, WASH WATER OR SEDIMENT, AND NON-STORMWATER DISCHARGES TO STORM DRAINS AND WATER COURSES.
- 3) USE SEDIMENT CONTROL OR FILTRATION TO REMOVE SEDIMENT FROM DEWATERING EFFLUENT.
- 4) AVOID CLEANING, FUELING, OR MAINTAINING VEHICLES ON SITE, EXCEPT IN A DESIGNATED AREA IN WHICH RUNOFF IS CONTAINED AND TREATED.
- 5) DELINEATE CLEARING LIMITS, EASEMENTS, SETBACKS, SENSITIVE OR CRITICAL AREAS, BUFFER ZONES, TREES AND DISCHARGE COURSE WITH FIELD MARKERS.
- 6) PROTECT ADJACENT PROPERTIES AND UNDISTURBED AREAS FROM CONSTRUCTION IMPACTS USING VEGETATIVE BUFFER STRIPS, SEDIMENT BARRIERS OF FILTERS, DIKES, MULCHING, OR OTHER MEASURES AS APPROPRIATE.
- 7) PERFORM CLEARING AND EARTH MOVING ACTIVITIES DURING DRY WEATHER TO THE MAXIMUM EXTENT PRACTICAL.
- 8) LIMIT AND TIME APPLICATIONS OF PESTICIDES AND FERTILIZERS TO PREVENT POLLUTED RUNOFF.
- 9) LIMIT CONSTRUCTION ACCESS ROUTES AND STABILIZE DESIGNATED ACCESS POINTS.
- 10) AVOID TRACKING DIRT OR MATERIALS OFF-SITE; CLEAN OFF-SITE PAVED AREAS AND SIDEWALKS USING DRY SWEEPING METHODS TO THE MAXIMUM EXTENT PRACTICAL.

**SUPPLEMENTAL MEASURES**

- A. THE PHRASE "NO DUMPING - DRAINS TO BAY" OR EQUALLY EFFECTIVE PHRASE MUST BE LABELED ON STORM DRAIN INLETS (BY STENCILING, BRANDING, OR PLAQUES) TO ALERT THE PUBLIC TO THE DESTINATION OF STORM WATER AND TO PREVENT DIRECT DISCHARGE OF POLLUTANTS INTO THE STORM DRAIN.
- B. USING FILTRATION MATERIALS ON STORM DRAIN COVERS TO REMOVE SEDIMENT FROM DEWATERING EFFLUENT.
- C. STABILIZING ALL DENUDED AREAS AND MAINTAINING EROSION CONTROL MEASURES CONTINUOUSLY FROM OCTOBER 15 AND APRIL 15.
- D. REMOVING SPOILS PROMPTLY, AND AVOID STOCKPILING OF FILL MATERIALS, WHEN RAIN IS FORECAST. IF RAIN THREATENS, STOCKPILED SOILS AND OTHER MATERIALS SHALL BE COVERED WITH A TARP OR OTHER WATERPROOF MATERIAL.
- E. STORING, HANDLING, AND DISPOSING OF CONSTRUCTION MATERIALS AND WASTES SO AS TO AVOID THEIR ENTRY TO THE STORM DRAIN SYSTEMS OR WATER BODY.

**GRADING & DRAINAGE NOTES:**

**1. SCOPE OF WORK**

THESE SPECIFICATIONS AND APPLICABLE PLANS PERTAIN TO AND INCLUDE ALL SITE GRADING AND EARTHWORK ASSOCIATED WITH THE PROJECT INCLUDING, BUT NOT LIMITED TO THE FURNISHING OF ALL LABOR, TOOLS AND EQUIPMENT NECESSARY FOR SITE CLEARING AND GRUBBING, SITE PREPARATION, DISPOSAL OF EXCESS OR UNSUITABLE MATERIAL, STRIPPING, KEYING, EXCAVATION, OVER EXCAVATION, RECOMPACTION PREPARATION FOR SOIL RECEIVING FILL, PAVEMENT, FOUNDATION OF SLABS, EXCAVATION, IMPORTATION OF ANY REQUIRED FILL MATERIAL, PROCESSING, PLACEMENT AND COMPACTION OF FILL AND SUBSIDIARY WORK NECESSARY TO COMPLETE THE GRADING TO CONFORM TO THE LINES, GRADING AND SLOPE SHOWN ON THE PROJECT GRADING PLANS.

**2. GENERAL**

- A. ALL SITE GRADING AND EARTHWORK SHALL CONFORM TO THE RECOMMENDATIONS OF THESE SPECIFICATIONS, THE SOILS REPORT; AND THE CITY OF MENLO PARK.
- B. ALL FILL MATERIALS SHALL BE DENSIFIED SO AS TO PRODUCE A DENSITY NOT LESS THAN 90% RELATIVE COMPACTION BASED UPON ASTM TEST DESIGNATION D1557. FIELD DENSITY TEST WILL BE PERFORMED IN ACCORDANCE WITH ASTM TEST DESIGNATION 2922 AND 3017. THE LOCATION AND FREQUENCY OF THE FIELD DENSITY TEST WILL BE AS DETERMINED BY THE SOIL ENGINEER. THE RESULTS OF THESE TEST AND COMPLIANCE WITH THE SPECIFICATIONS WILL BE THE BASIS UPON WHICH SATISFACTORY COMPLETION OF THE WORK WILL BE JUDGED BY THE SOIL ENGINEER. ALL CUT AND FILL SLOPES SHALL BE CONSTRUCTED AS SHOWN ON PLANS, BUT NO STEEPER THAN TWO (2) HORIZONTAL TO ONE (1) VERTICAL.
- C. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE SATISFACTORY COMPLETION OF ALL THE EARTHWORK IN ACCORDANCE WITH THESE PLANS AND SPECIFICATIONS. NO DEVIATION FROM THESE SPECIFICATIONS SHALL BE MADE EXCEPT UPON WRITTEN APPROVAL BY THE SOILS ENGINEER. BOTH CUT AND FILL AREAS SHALL BE SURFACE COMPLETED TO THE SATISFACTION OF THE SOILS ENGINEER AT THE CONCLUSION OF ALL GRADING OPERATIONS AND PRIOR TO FINAL ACCEPTANCE. THE CONTRACTOR SHALL NOTIFY THE SOILS ENGINEER AT LEAST TWO (2) WORKING DAYS PRIOR TO DOING ANY SITE GRADING AND EARTHWORK INCLUDING CLEARING.

**3. CLEARING AND GRUBBING**

- A. THE CONTRACTOR SHALL ACCEPT THE SITE IN ITS PRESENT CONDITION. ALL EXISTING PUBLIC IMPROVEMENTS SHALL BE PROTECTED. ANY IMPROVEMENTS DAMAGED SHALL BE REPLACED BY THE CONTRACTOR AS DIRECTED BY THE LOCAL JURISDICTION WITH NO EXTRA COMPENSATION.
- B. ALL ABANDONED BUILDINGS AND FOUNDATIONS, TREE (EXCEPT THOSE SPECIFIED TO REMAIN FOR LANDSCAPING PURPOSES), FENCES, VEGETATION AND ANY SURFACE DEBRIS SHALL BE REMOVED AND DISPOSED OF OFF THE SITE BY THE CONTRACTOR.
- C. ALL ABANDONED SEPTIC TANKS AND ANY OTHER SUBSURFACE STRUCTURES EXISTING IN PROPOSED DEVELOPMENT AREAS SHALL BE REMOVED PRIOR TO ANY GRADING OR FILL OPERATION. ALL APPURTENANT DRAIN FIELDS AND OTHER CONNECTING LINES MUST ALSO BE TOTALLY REMOVED.
- D. ALL ABANDONED UNDERGROUND IRRIGATION OR UTILITY LINES SHALL BE REMOVED OR DEMOLISHED. THE APPROPRIATE FINAL DISPOSITION OF SUCH LINES WILL BE DETERMINED BY THE SOILS ENGINEER. THE METHOD OF REMOVAL OR DEMOLITION SHALL BE DETERMINED BY THE SOILS ENGINEER. ONE OF THE FOLLOWING METHODS WILL BE USED:
  - (1) EXCAVATE AND TOTALLY REMOVE THE UTILITY LINE FROM THE TRENCH.
  - (2) EXCAVATE AND CRUSH THE UTILITY LINE IN THE TRENCH.
  - (3) CAP THE ENDS OF THE UTILITY LINE WITH CONCRETE TO PREVENT THE ENTRANCE OF WATER. THE LOCATIONS AT WHICH THE UTILITY LINE WILL BE CAPPED WILL BE DETERMINED BY THE UTILITY DISTRICT ENGINEER. THE LENGTH OF THE CAP SHALL NOT BE LESS THAN FIVE FEET, AND THE CONCRETED MIX EMPLOYED SHALL HAVE MINIMUM SHRINKAGE.

**4. SITE PREPARATION AND STRIPPING**

- A. ALL SURFACE ORGANICS SHALL BE STRIPPED AND REMOVED FROM BUILDING PADS, AREAS TO RECEIVE COMPACTED FILL AND PAVEMENT AREAS.
- B. UPON THE COMPLETION OF THE ORGANIC STRIPPING OPERATION, THE GROUND SURFACE (NATIVE SOIL SUBGRADE) OVER THE ENTIRE AREA OF ALL BUILDING PADS, STREET AND PAVEMENT AREAS AND ALL AREAS TO RECEIVE COMPACTED FILL SHALL BE PLOWED OR SCARIFIED UNTIL THE SURFACE IS FREE OF RUTS, HUMMOCKS OR OTHER UNEVEN FEATURES WHICH MAY INHIBIT UNIFORM SOIL COMPACTION. THE GROUND SURFACE SHALL THEN BE DISCED OR BLADED TO A DEPTH OF AT LEAST 6 INCHES. UPON ENGINEER'S SATISFACTION, THE NEW SURFACE SHALL BE WATER CONDITIONED AND RECOMPACTED PER REQUIREMENTS FOR COMPACTING FILL MATERIAL.

**5. EXCAVATION**

- A. UPON COMPLETION OF THE CLEARING AND GRUBBING, SITE PREPARATION AND STRIPPING, THE CONTRACTOR SHALL MAKE EXCAVATIONS TO LINES AND GRADES NOTED ON THE PLAN. WHERE REQUIRED BY THE SOILS ENGINEER, UNACCEPTABLE NATIVE SOILS OR UNENGINEERED FILL SHALL BE OVER EXCAVATED BELOW THE DESIGN GRADE. SEE PROJECT SOILS REPORT FOR DISCUSSION OF OVER EXCAVATION OF THE UNACCEPTABLE MATERIAL. RESULTING GROUND LINE SHALL BE SCARIFIED, MOISTURE-CONDITIONED AND RECOMPACTED AS SPECIFIED IN SECTION 4 OF THESE SPECIFICATIONS. COMPACTED FILL MATERIAL SHALL BE PLACED TO BRING GROUND LEVEL BACK TO DESIGN GRADE.
- B. EXCAVATED MATERIALS SUITABLE FOR COMPACTED FILL MATERIAL SHALL BE UTILIZED IN MAKING THE REQUIRED COMPACTED FILLS. THOSE NATIVE MATERIALS CONSIDERED UNSUITABLE BY THE SOILS ENGINEER SHALL BE DISPOSED OF OFF THE SITE BY THE CONTRACTOR.

**6. PLACING, SPREADING AND COMPACTING FILL MATERIAL**

**A. FILL MATERIALS**

THE MATERIALS PROPOSED FOR USE AS COMPACTED FILL SHALL BE APPROVED BY THE SOILS ENGINEER BEFORE COMMENCEMENT OF GRADING OPERATIONS. THE NATIVE MATERIAL IS CONSIDERED SUITABLE FOR FILL; HOWEVER, ANY NATIVE MATERIAL DESIGNATED UNSUITABLE BY THE SOILS ENGINEER SHALL BE REMOVED FROM THE SITE BY THE CONTRACTOR. ANY IMPORTED MATERIAL SHALL BE APPROVED FOR USE BY THE SOILS ENGINEER, IN WRITING, BEFORE BEING IMPORTED TO THE SITE AND SHALL POSSESS SUFFICIENT FINES TO PROVIDE A COMPETENT SOIL MATRIX AND SHALL BE FREE OF VEGETATIVE AND ORGANIC MATTER AND OTHER DELETERIOUS MATERIALS. ALL FILL VOIDS SHALL BE FILLED AND PROPERLY COMPACTED. NO ROCKS LARGER THAN THREE INCHES IN DIAMETER SHALL BE PERMITTED.

**B. FILL CONSTRUCTION**

THE SOILS ENGINEER SHALL APPROVE THE NATIVE SOIL SUBGRADE BEFORE PLACEMENT OF ANY COMPACTED FILL MATERIAL. UNACCEPTABLE NATIVE SOIL SHALL BE REMOVED AS DIRECTED BY THE SOILS ENGINEER. THE RESULTING GROUND LINE SHALL BE SCARIFIED MOISTURE CONDITIONED AND RECOMPACTED AS SPECIFIED IN SECTION 4 OF THESE SPECIFICATIONS. COMPACTED FILL MATERIAL SHALL BE PLACED TO BRING GROUND LEVEL BACK TO DESIGN GRADE. GROUND PREPARATION SHALL BE FOLLOWED CLOSELY BY FILL PLACEMENT TO PREVENT DRYING OUT OF THE SUBSOIL BEFORE PLACEMENT OF THE FILL.

THE APPROVED FILL MATERIALS SHALL BE PLACED IN UNIFORM HORIZONTAL LAYERS NO THICKER THAN 8" IN LOOSE THICKNESS. LAYERS SHALL BE SPREAD EVENLY AND SHALL BE THOROUGHLY BLADE MIXED DURING THE SPREADING TO ENSURE UNIFORMITY OF MATERIAL IN EACH LAYER. THE SCARIFIED SUBGRADE AND FILL MATERIAL SHALL BE MOISTURE CONDITIONED TO AT LEAST OPTIMUM MOISTURE. WHEN THE MOISTURE CONTENT OF THE FILL IS BELOW THAT SPECIFIED, WATER SHALL BE ADDED UNTIL THE MOISTURE DURING THE COMPACTION PROCESS. WHEN THE MOISTURE CONTENT OF THE FILL IS ABOVE THAT SPECIFIED, THE FILL MATERIAL SHALL BE AERATED BY BLADING OR OTHER SATISFACTORY METHODS UNTIL THE MOISTURE CONTENT IS AS SPECIFIED.

AFTER EACH LAYER HAS BEEN PLACED, MIXED, SPREAD EVENLY AND MOISTURE CONDITIONED, IT SHALL BE COMPACTED TO AT LEAST THE SPECIFIED DENSITY.

THE FILL OPERATION SHALL BE CONTINUED IN COMPACTED LAYERS AS SPECIFIED ABOVE UNTIL THE FILL HAS BEEN BROUGHT TO THE FINISHED SLOPES AND GRADES AS SHOWN ON THE PLANS. NO LAYER SHALL BE ALLOWED TO DRY OUT BEFORE SUBSEQUENT LAYERS ARE PLACED.

COMPACTION EQUIPMENT SHALL BE OF SUCH DESIGN THAT IT WILL BE ABLE TO COMPACT THE FILL TO THE SPECIFIED MINIMUM COMPACTION WITHIN THE SPECIFIED MOISTURE CONTENT RANGE. COMPACTION OF EACH LAYER SHALL BE CONTINUOUS OVER ITS ENTIRE AREA UNTIL THE REQUIRED MINIMUM DENSITY HAS BEEN OBTAINED.

**7. CUT OR FILL SLOPES**

ALL CONSTRUCTED SLOPES, BOTH CUT AND FILL, SHALL BE NO STEEPER THAN 2 TO 1 (HORIZONTAL TO VERTICAL). DURING THE GRADING OPERATION, COMPACTED FILL SLOPES SHALL BE OVERFILLED BY AT LEAST ONE FOOT HORIZONTALLY AT THE COMPLETION OF THE GRADING OPERATIONS. THE EXCESS FILL EXISTING ON THE SLOPES SHALL BE BLADED OFF TO CREATE THE FINISHED SOLE EMBANKMENT. ALL CUT AND FILL SLOPES SHALL BE TRACK WALKED AFTER BEING BROUGHT TO FINISH GRADE AND THEN BE PLANTED WITH EROSION CONTROL SLOPE PLANTING. THE SOILS ENGINEER SHALL REVIEW ALL CUT SLOPES TO DETERMINE IF ANY ADVERSE GEOLOGIC CONDITIONS ARE EXPOSED. IF SUCH CONDITIONS DO OCCUR, THE SOILS ENGINEER SHALL RECOMMEND THE APPROPRIATE MITIGATION MEASURES AT THE TIME OF THEIR DETECTION.

**8. SEASONAL LIMITS AND DRAINAGE CONTROL**

FILL MATERIALS SHALL NOT BE PLACED, SPREAD OR COMPACTED WHILE IT IS AT AN UNSUITABLY HIGH MOISTURE CONTENT OR DURING OTHERWISE UNFAVORABLE CONDITIONS. WHEN THE WORK IS INTERRUPTED FOR ANY REASON THE FILL OPERATIONS SHALL NOT BE RESUMED UNTIL FIELD TEST PERFORMED BY THE SOILS ENGINEER INDICATE THAT THE MOISTURE CONDITIONS IN AREAS TO BE FILLED ARE AS PREVIOUSLY SPECIFIED. ALL EARTH MOVING AND WORKING OPERATIONS SHALL BE CONTROLLED TO PREVENT WATER FROM RUNNING INTO EXCAVATED AREAS. ALL EXCESS WATER SHALL BE PROMPTLY REMOVED AND THE SITE KEPT DRY.

**9. DUST CONTROL**

THE CONTRACTOR SHALL TAKE ALL STEPS NECESSARY FOR THE ALLEVATION OR PREVENTION OF ANY DUST NUISANCE ON OR ABOUT THE SITE CAUSED BY THE CONTRACTOR'S OPERATION EITHER DURING THE PERFORMANCE OF THE GRADING OR RESULTING FROM THE CONDITION IN WHICH THE CONTRACTOR LEAVES THE SITE. THE CONTRACTOR SHALL ASSUME ALL LIABILITY INCLUDING COURT COST OF CO-DEFENDANTS FOR ALL CLAIMS RELATED TO DUST OR WIND-BLOWN MATERIALS ATTRIBUTABLE TO HIS WORK. COST FOR THIS ITEM OF WORK IS TO BE INCLUDED IN THE EXCAVATION ITEM AND NO ADDITIONAL COMPENSATION SHALL BE ALLOWED.

**10. INDEMNITY**

THE CONTRACTOR WILL HOLD HARMLESS, INDEMNIFY AND DEFEND THE ENGINEER, THE OWNER AND HIS CONSULTANTS AND EACH OF THEIR OFFICERS AND EMPLOYEES AND AGENTS, FROM ANY AND ALL LIABILITY CLAIMS, LOSSES OR DAMAGE ARISING OR ALLEGED TO HEREIN, BUT NOT INCLUDING THE SOLE NEGLIGENCE OF THE OWNER, THE ARCHITECT, THE ENGINEER AND HIS CONSULTANTS AND EACH OF THEIR OFFICERS AND EMPLOYEES AND AGENTS.

**11. SAFETY**

IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, THE CONTRACTOR WILL BE SOLELY AND COMPLETELY RESPONSIBLE FOR CONDITIONS OF THE JOB SITE INCLUDING SAFETY OF ALL PERSONS AND PROPERTY DURING PERFORMANCE OF THE WORK. THIS REQUIREMENT WILL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS.

THE DUTY OF THE ENGINEERS TO CONDUCT CONSTRUCTION REVIEW OF THE CONTRACTOR'S PERFORMANCE IS NOT INTENDED TO INCLUDE REVIEW OF THE ADEQUACY OF THE CONTRACTOR'S SAFETY MEASURES, IN, ON OR NEAR THE CONSTRUCTION SITE.

**12. GUARANTEE**

NEITHER THE FINAL PAYMENT, NOR THE PROVISIONS IN THE CONTRACT, NOR PARTIAL, NOR ENTIRE USE OR OCCUPANCY OF THE PREMISES BY THE OWNER SHALL CONSTITUTE AN ACCEPTANCE OF THE WORK NOT DONE IN ACCORDANCE WITH THE CONTRACT OR RELIEVES THE CONTRACTOR OF LIABILITY IN RESPECT TO ANY EXPRESS WARRANTIES OR RESPONSIBILITY FOR FAULTY MATERIAL OR WORKMANSHIP.

THE CONTRACTOR SHALL REMEDY ANY DEFECTS IN WORK AND PAY FOR ANY DAMAGE TO OTHER WORK RESULTING THERE FROM WHICH SHALL APPEAR WITHIN A PERIOD OF ONE (1) CALENDAR YEAR FROM THE DATE OF FINAL ACCEPTANCE OF THE WORK.

**13. TRENCH BACKFILL**

EITHER THE ON-SITE INORGANIC SOIL OR APPROVED IMPORTED SOIL MAY BE USED AS TRENCH BACKFILL. THE BACKFILL MATERIAL SHALL BE MOISTURE CONDITIONED PER THESE SPECIFICATIONS AND SHALL BE PLACED IN LIFTS OF NOT MORE THAN SIX INCHES IN HORIZONTAL UNCOMPACTED LAYERS AND BE COMPACTED BY MECHANICAL MEANS TO A MINIMUM OF 90% RELATIVE COMPACTION. IMPORTED SAND MAY BE USED FOR TRENCH BACKFILL MATERIAL PROVIDED IT IS COMPACTED TO AT LEAST 90% RELATIVE COMPACTION. WATER JETTING ASSOCIATED WITH COMPACTION USING VIBRATORY EQUIPMENT WILL BE PERMITTED ONLY WITH IMPORTED SAND BACKFILL WITH THE APPROVAL OF THE SOILS ENGINEER. ALL PIPES SHALL BE BEDDED WITH SAND EXTENDING FROM THE TRENCH BOTTOM TO TWELVE INCHES ABOVE THE PIPE. SAND BEDDING IS TO BE COMPACTED AS SPECIFIED ABOVE FOR SAND BACKFILL.

**14. EROSION CONTROL**

- A. ALL GRADING, EROSION AND SEDIMENT CONTROL AND RELATED WORK UNDERTAKEN ON THIS SITE IS SUBJECT TO ALL TERMS AND CONDITIONS OF THE COUNTY GRADING ORDINANCE AND MADE A PART HEREOF BY REFERENCE.
- B. THE CONTRACTOR WILL BE LIABLE FOR ANY AND ALL DAMAGES TO ANY PUBLICLY OWNED AND MAINTAINED ROAD CAUSED BY THE AFORESAID CONTRACTOR'S GRADING ACTIVITIES, AND SHALL BE RESPONSIBLE FOR THE CLEANUP OF ANY MATERIAL SPILLED ON ANY PUBLIC ROAD ON THE HAUL ROUTE.
- C. THE EROSION CONTROL MEASURES ARE TO BE OPERABLE DURING THE RAINY SEASON, GENERALLY FROM OCTOBER FIRST TO APRIL FIFTEENTH. EROSION CONTROL PLANTING IS TO BE COMPLETED BY OCTOBER FIRST. NO GRADING OR UTILITY TRENCHING SHALL OCCUR BETWEEN OCTOBER FIRST AND APRIL FIFTEENTH UNLESS AUTHORIZED BY THE LOCAL JURISDICTION.
- D. ALL EROSION CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED AND CHANGES TO THIS EROSION AND SEDIMENT CONTROL PLAN SHALL BE MADE TO MEET FIELD CONDITIONS ONLY WITH THE APPROVAL OF OR AT THE DIRECTION OF THE SOILS ENGINEER.
- E. DURING THE RAINY SEASON, ALL PAVED AREAS SHALL BE KEPT CLEAR OF EARTH MATERIAL AND DEBRIS. THE SITE SHALL BE MAINTAINED SO AS TO MINIMIZE SEDIMENT-LADEN RUNOFF TO ANY STORM DRAINAGE SYSTEM.
- F. ALL EROSION CONTROL FACILITIES MUST BE INSPECTED AND REPAIRED AT THE END OF EACH WORKING DAY DURING THE RAINY SEASON.
- G. WHEN NO LONGER NECESSARY AND PRIOR TO FINAL ACCEPTANCE OF DEVELOPMENT, SEDIMENT BASINS SHALL BE REMOVED OR OTHERWISE DEACTIVATED AS REQUIRED BY THE LOCAL JURISDICTION.
- H. A CONSTRUCTION ENTRANCE SHALL BE PROVIDED AT ANY POINT OF EGRESS FROM THE SITE TO ROADWAY. A CONSTRUCTION ENTRANCE SHOULD BE COMPOSED OF COARSE DRAIN ROCK (2" TO 3" MINIMUM DIAMETER) AT LEAST EIGHT INCHES THICK BY FIFTY (50) FEET LONG BY TWENTY (20) FEET WIDE UNLESS SHOWN OTHERWISE ON PLAN AND SHALL BE MAINTAINED UNTIL THE SITE IS PAVED.
- I. ALL AREAS SPECIFIED FOR HYDROSEEDING SHALL BE NOZZLE PLANTED WITH STABILIZATION MATERIAL CONSISTING OF FIBER, SEED, FERTILIZER AND WATER, MIXED AND APPLIED IN THE FOLLOWING PROPORTIONS:
 

FIBER, 2000 LBS/ACRE
SEED, 200 LBS/ACRE (SEE NOTE J, BELOW)
FERTILIZER (11-8-4), 500 LBS/ACRE
WATER, AS REQUIRED FOR APPLICATION
- J. SEED MIX SHALL BE PER CALTRANS STANDARDS.
- K. WATER UTILIZED IN THE STABILIZATION MATERIAL SHALL BE OF SUCH QUALITY THAT IT WILL PROMOTE GERMINATION AND STIMULATE GROWTH OF PLANTS. IT SHALL BE FREE OF POLLUTANT MATERIALS AND WEED SEED.
- L. HYDROSEEDING SHALL CONFORM TO THE PROVISIONS OF SECTION 20, EROSION CONTROL AND HIGHWAY "PLANTING", OF THE STANDARD SPECIFICATIONS OF THE STATE OF CALIFORNIA DEPARTMENT OF TRANSPORTATION, AS LAST REVISED.
- M. A DISPERSING AGENT MAY BE ADDED TO THE HYDROSEEDING MATERIAL, PROVIDED THAT THE CONTRACTOR FURNISHES SUITABLE EVIDENCE THAT THE ADDITIVE WILL NOT ADVERSELY AFFECT THE PERFORMANCE OF THE SEEDING MIXTURE.
- N. STABILIZATION MATERIALS SHALL BE APPLIED AS SOON AS PRACTICABLE AFTER COMPLETION OF GRADING OPERATIONS AND PRIOR TO THE ONSET OF WINTER RAINS, OR AT SUCH OTHER TIME AS DIRECTED BY THE COUNTY ENGINEER. THE MATERIAL SHALL BE APPLIED BEFORE INSTALLATION OF OTHER LANDSCAPING MATERIALS SUCH AS TREES, SHRUBS AND GROUND COVERS.
- O. THE STABILIZATION MATERIAL SHALL BE APPLIED WITHIN 4-HOURS AFTER MIXING. MIXED MATERIAL NOT USED WITHIN 4-HOURS SHALL BE REMOVED FROM THE SITE.
- P. THE CONTRACTOR SHALL MAINTAIN THE SOIL STABILIZATION MATERIAL AFTER PLACEMENT. THE COUNTY ENGINEER MAY REQUIRE SPRAY APPLICATION OF WATER OR OTHER MAINTENANCE ACTIVITIES TO ASSURE THE EFFECTIVENESS OF THE STABILIZATION PROCESS. APPLICATION OF WATER SHALL BE ACCOMPLISHED USING NOZZLES THAT PRODUCE A SPRAY THAT DOES NOT CONCENTRATE OR WASH AWAY THE STABILIZATION MATERIALS.

**15. CLEANUP**

THE CONTRACTOR MUST MAINTAIN THE SITE CLEAN, SAFE AND IN USABLE CONDITION. ANY SPILLS OF SOIL, ROCK OR CONSTRUCTION MATERIAL MUST BE REMOVED FROM THE SITE BY THE CONTRACTOR DURING CONSTRUCTION AND UPON COMPLETION OF THE PROJECT. COST FOR THIS ITEM OF WORK SHALL BE INCLUDED IN THE EXCAVATION AND COMPACTION ITEM AND NO ADDITIONAL COMPENSATION SHALL BE ALLOWED.

**NOTE:**  
THESE NOTES ARE INTENDED TO BE USED AS A GENERAL GUIDELINE. THE REFERENCED SOILS REPORT FOR THE PROJECT AND GOVERNING AGENCY GRADING ORDINANCE SHALL SUPERSEDE THESE NOTES. THE SOILS ENGINEER MAY MAKE ON-SITE RECOMMENDATIONS DURING GRADING OPERATIONS.

**LEA & BRAZE ENGINEERING, INC.**  
CIVIL ENGINEERS & LAND SURVEYORS

**DEMOLITION LEGEND**

-  ALL ITEMS WITHIN LIMITS OF DEMOLITION TO BE REMOVED UNLESS OTHERWISE NOTED TO REMAIN ON PLANS. CONTRACTOR IS TO REMOVE ALL LAWN IRRIGATION SYSTEMS, PAVEMENT CONCRETE AND STRUCTURES UNLESS CALLED OUT TO REMAIN. NO DEMOLITION SHALL COMMENCE WITHOUT REQUIRED DEMOLITION PERMITS.
-  TREE PROTECTION FENCING PER ARBORIST RECOMMENDATIONS. REFER TO CITY OF MENLO PARK TREE PROTECTION SPECIFICATIONS AND ARBORIST REPORT.
-  REMOVE (E) TREE. CONTRACTOR SHALL OBTAIN THE PROPER TREE REMOVAL PERMITS AS REQUIRED.

**NOTES**

1. THE APPLICANT SHALL REMOVE AND REPLACE ALL CRACKED, DAMAGED, UPLIFTED OR DEPRESSED FRONTAGE IMPROVEMENTS LOCATED IN CITY'S RIGHT-OF-WAY, EXISTING OR DAMAGED BY THE CONSTRUCTION ACTIVITIES, PER CITY STANDARDS ALONG THE ENTIRE PROPERTY FRONTAGE.
2. CIVIL ENGINEER SHALL COORDINATE WITH PROJECT ARBORIST TO DETERMINE THE LOCATIONS OF EDGE OF PAVEMENT, STORM DRAIN LINES AND OTHER UTILITY LINES NEAR TREES. THE LOCATIONS OF IMPROVEMENTS NEAR CITY TREES SHALL BE APPROVED BY CITY ARBORIST.
3. CONTACT PUBLIC WORKS AT (650) 330-6740 TO SCHEDULE AN INSPECTION A MINIMUM OF 24 HOURS IN ADVANCE OF COMMENCEMENT OF PUBLIC IMPROVEMENT WORK. THE CONSTRUCTION SUPERVISOR WILL DISCUSS ANY REPAIR WORK TO FRONTAGE IMPROVEMENTS WHICH ARE NOT SHOWN ON THE PLANS.
4. PRIOR TO FINAL INSPECTION, THE APPLICANT SHALL OBTAIN AN ENCROACHMENT PERMIT FROM THE CITY'S ENGINEERING DIVISION FOR ALL EXISTING PRIVATE STRUCTURES, IMPROVEMENTS AND LANDSCAPING (IF ANY) LOCATED IN THE CITY'S RIGHT-OF-WAY ALONG THE PROPERTY FRONTAGE.
5. THE APPLICANT SHALL REMOVE AND REPLACE ALL CRACKED, DAMAGED UPLIFTED OR DEPRESSED FRONTAGE IMPROVEMENTS (CURB, GUTTER, SIDEWALK, DRIVEWAY, ETC.), EXISTING OR DAMAGED BY THE CONSTRUCTION ACTIVITIES, PER CITY STANDARDS ALONG THE ENTIRE PROPERTY FRONTAGE. IF FRONTAGE IMPROVEMENTS DO NOT CURRENTLY EXIST, THE APPLICANT IS REQUIRED TO INSTALL FRONTAGE IMPROVEMENTS PER CITY STANDARDS ALONG THE ENTIRE PROPERTY FRONTAGE. ALL IMPROVEMENTS ARE TO BE COMPLETED AND APPROVED BY THE CITY OF MENLO PARK'S PUBLIC WORKS INSPECTOR PRIOR TO THE FINAL INSPECTION BY THE BUILDING INSPECTOR.

 FEMA FLOOD INSURANCE STUDY FOR SAN MATEO COUNTY, CA NO.: 06081C001D REVISED: APRIL 5, 2019

**FLATWORK KEYNOTES 1 TO 5**  
 FINISHED GRADES AT BUILDING PERIMETER SHALL BE SLOPED AT A MINIMUM OF 5% FOR THE FIRST 10' AWAY FROM THE BUILDING PER CBC 1804.4 OR TO AN APPROVED DRAINAGE SWALE OR STRUCTURE. GRADES SHALL CONTINUE TO SLOPE TOWARDS POSITIVE DRAINAGE AND A POSITIVE OUTFALL. MAINTAIN 8" CLEARANCE BETWEEN FINISH EARTHEN GRADE AND BOTTOM OF MUD SILL AT ALL TIMES PER CBC 2304.12.1.2 UNLESS STRUCTURAL DETAILING ALLOWS LESS. REFER TO STRUCTURAL PLANS FOR FOUNDATION DESIGN AND DETAILS.  
 1 PROVIDE 1.8% SLOPE ACROSS FLAT WORK AND/OR PAVING PER CBC 1804.4. SLOPE TOWARDS POSITIVE DRAINAGE AS SHOWN ON PLAN.  
 2 (N) CONCRETE DRIVEWAY/PATIO/WALKWAY. SEE DETAIL ON SHEET C-6.0.  
 3 (N) PERMEABLE PAVER WALKWAY-S.L.D.  
 4 (N) CITY STANDARD CURB AND GUTTER ALONG ENTIRE PROJECT FRONTAGE. USE GREEN INFRASTRUCTURE EDGE TREATMENT WITH DRAINAGE NOTCHES WHERE APPLICABLE. SEE SCP-4 FOR DETAILS.  
 5

**NOTES**

- THE APPLICANT SHALL REMOVE AND REPLACE ALL CRACKED, DAMAGED, UPLIFTED OR DEPRESSED FRONTAGE IMPROVEMENTS LOCATED IN CITY'S RIGHT-OF-WAY, EXISTING OR DAMAGED BY THE CONSTRUCTION ACTIVITIES, PER CITY STANDARDS ALONG THE ENTIRE PROPERTY FRONTAGE.
- CIVIL ENGINEER SHALL COORDINATE WITH PROJECT ARBORIST TO DETERMINE THE LOCATIONS OF EDGE OF PAVEMENT, STORM DRAIN LINES AND OTHER UTILITY LINES NEAR TREES. THE LOCATIONS OF IMPROVEMENTS NEAR CITY TREES SHALL BE APPROVED BY CITY ARBORIST.
- CONTACT PUBLIC WORKS AT (650) 330-6740 TO SCHEDULE AN INSPECTION A MINIMUM OF 24 HOURS IN ADVANCE OF COMMENCEMENT OF PUBLIC IMPROVEMENT WORK. THE CONSTRUCTION SUPERVISOR WILL DISCUSS ANY REPAIR WORK TO FRONTAGE IMPROVEMENTS WHICH ARE NOT SHOWN ON THE PLANS.
- PRIOR TO FINAL INSPECTION, THE APPLICANT SHALL OBTAIN AN ENCROACHMENT PERMIT FROM THE CITY'S ENGINEERING DIVISION FOR ALL EXISTING PRIVATE STRUCTURES, IMPROVEMENTS AND LANDSCAPING (IF ANY) LOCATED IN THE CITY'S RIGHT-OF-WAY ALONG THE PROPERTY FRONTAGE.
- THE APPLICANT SHALL REMOVE AND REPLACE ALL CRACKED, DAMAGED UPLIFTED OR DEPRESSED FRONTAGE IMPROVEMENTS (CURB, GUTTER, SIDEWALK, DRIVEWAY, ETC.), EXISTING OR DAMAGED BY THE CONSTRUCTION ACTIVITIES, PER CITY STANDARDS ALONG THE ENTIRE PROPERTY FRONTAGE. IF FRONTAGE IMPROVEMENTS DO NOT CURRENTLY EXIST, THE APPLICANT IS REQUIRED TO INSTALL FRONTAGE IMPROVEMENTS PER CITY STANDARDS ALONG THE ENTIRE PROPERTY FRONTAGE. ALL IMPROVEMENTS ARE TO BE COMPLETED AND APPROVED BY THE CITY OF MENLO PARK'S PUBLIC WORKS INSPECTOR PRIOR TO THE FINAL INSPECTION BY THE BUILDING INSPECTOR.

**FIRE NOTES**

- FIRE APPARATUS ROADWAYS, INCLUDING PUBLIC AND PRIVATE STREETS AND IN SOME CASES DRIVEWAYS USED FOR VEHICLE ACCESS, SHALL BE CAPABLE OF SUPPORTING THE IMPOSED WEIGHT OF A 75,000 POUND (34,050 KG) FIRE APPARATUS AND SHALL BE PROVIDED WITH AN ALL-WEATHER DRIVING SURFACE. ONLY PAVED OR CONCRETE SURFACES ARE CONSIDERED TO BE ALL WEATHER DRIVING SURFACES. CFC 2016, APPENDIX D.
- CURBING LOCATED WITHIN THE COMPLEX THAT HAS NOT BEEN ASSIGNED AS ON-SITE PARKING SHALL BE DESIGNATED AS "NO PARKING FIRE LANE". ALL FIRE LANES TO COMPLY WITH MPFD STANDARD FOR "DESIGNATION AND MARKING OF FIRE LANE", SINCE THERE ARE ONLY TO POINTS OF ACCESS TO THE COMPLEX "ENTRANCE SIGN B" MAY BE USED AT EACH POINT OF ACCESS TO COMPLEX. PROVIDE A COMPLETE NO PARKING-FIRE LANE STRIPPING PLAN WITH NO PARKING SIGNAGE IN ACCORDANCE TO MPFD STANDARD ON SUBSEQUENT SUBMITTAL.
  - ROADWAY WIDTH FOR PROJECT SHALL BE NO LESS THAN 26 FEET WIDE AND SHALL REQUIRE CURB STRIPPING WITH NO PARKING SIGNAGE AS PER MPFD STANDARD.
  - REQUIRED NO PARKING SIGNAGE INSTALLED AT AN APPROVED LOCATION AT ENTRANCES.
- FIRE APPARATUS ROADWAYS, INCLUDING PUBLIC OR PRIVATE STREETS OR ROADS USED FOR VEHICLE ACCESS SHALL BE INSTALLED AND IN SERVICE PRIOR TO CONSTRUCTION. FIRE PROTECTION WATER SERVING ALL HYDRANTS SHALL BE PROVIDED AS SOON AS COMBUSTIBLE MATERIAL ARRIVES ON THE SITE.
  - PRIOR TO COMBUSTIBLE MATERIAL ARRIVING ON THE SITE, CONTACT THE MENLO PARK FIRE DISTRICT TO SCHEDULE AN INSPECTION OF ROADWAYS AND FIRE HYDRANTS. CFC 2013.

**INSPECTION NOTE:**  
 THE CONTRACTOR SHALL INFORM THE OWNER (IN WRITING) OF RECOMMENDED PERIODIC INSPECTION AND MAINTENANCE OF THE ON-SITE STORM DRAINAGE SYSTEM. THE REGULAR CLEARING OF SILT AND DEBRIS IS ESPECIALLY IMPORTANT PRIOR TO EACH RAINY SEASON.

**NOTE:**  
 CONTRACTOR SHALL FIELD VERIFY LOCATIONS AND DEPTHS OF EXISTING UTILITIES PRIOR TO COMMENCING CONSTRUCTION. CONTRACTOR SHALL NOTIFY THE ENGINEER OF ANY CONFLICTS IN ANY EXIST.

**NOTE:**  
 ALL UTILITIES SHALL BE PLACED UNDERGROUND IF REQUIRED BY THE UTILITY COMPANY.

**NOTE:**  
 SITE GRADING SHALL NOT IMPEDE EXISTING DRAINAGE FROM ADJACENT PROPERTIES AND SHALL NOT GENERATE SURFACE RUN-OFF FLOW ONTO ADJACENT PROPERTIES.

**NOTE:**  
 FOR CONSTRUCTION STAKING SCHEDULING OR QUOTATIONS PLEASE CONTACT ALEX ABAYA AT LEA & BRAZE ENGINEERING (510)887-4086 EXT 116. aabaya@leabraze.com

**BUILDING PAD NOTE:**  
 ADJUST PAD LEVEL AS REQUIRED. REFER TO STRUCTURAL PLANS FOR SLAB SECTION OR CRAWL SPACE DEPTH TO ESTABLISH PAD LEVEL.

**NOTE:**  
 TOPOGRAPHIC INFORMATION HAS BEEN REMOVED FOR CLARITY. SEE ORIGINAL SURVEY FOR EXISTING SITE CONDITIONS.

**STORM DRAIN KEYNOTES 10 TO 12**  
 INSTALL (N) ON-SITE STORM DRAIN SYSTEM. USE MINIMUM 6" PVC (SDR 35) OR HDPE (ADS N-12 W/ SMOOTH INTERIOR WALLS). MAINTAIN 24" MINIMUM COVER AND SLOPED AT 1% MINIMUM AT ALL TIMES UNLESS OTHERWISE NOTED. PROVIDE CLEANOUT TO GRADE AT MAJOR CHANGES IN DIRECTION. AVOID USING 90° BENDS AND INSTEAD USE (2) 45° BENDS AND WYE CONNECTIONS.  
 INSTALL (N) SUBDRAIN. USE PERFORATED 4" PVC (SDR-35) WITH HOLES DOWN AND SLOPED AT 1% MINIMUM SURROUND WITH 3/4" DRAIN ROCK WRAPPED IN FILTER FABRIC (MIRAFI 140N). MIRADRAIN OR OTHER LEA & BRAZE PREAPPROVED DRAINAGE SYSTEM MAY ALSO BE USED. AVOID USING 90° BENDS AND INSTEAD USE (2) 45° BENDS AND WYE CONNECTIONS. PROVIDE CLEANOUT TO GRADE AT MAJOR CHANGES IN DIRECTION AND AT 100' MAXIMUM INTERVALS. SUBDRAIN SHALL REMAIN A DEDICATED SEPARATE SYSTEM UNTIL IT CONNECTS TO STORM DRAIN SYSTEM OR OUTFALL AS SHOWN.  
 DIRECT DOWNSPOUTS TO FLOW THROUGH PLANTERS - SEE STORMWATER CONTROL PLAN SCP-1, SCP-2 AND SCP-3 FOR DETAILS.

**UTILITIES KEYNOTES 31 TO 36**  
 INSTALL (N) SANITARY SEWER LATERALS. USE 6" PVC (SDR-26) SLOPED AT 2% MINIMUM. CONNECT TO (E) SEWER MAIN AS SHOWN. PROVIDE CLEANOUT TO GRADE AT BUILDING AND BEHIND PROPERTY LINE AND AT MAJOR CHANGES IN DIRECTION AS SHOWN. REUSE (E) LATERAL IF POSSIBLE. CONNECT PER DISTRICT STANDARDS.  
 NOT USED  
 INSTALL (N) JOINT TRENCH. LATERAL CONNECTIONS TO ELECTRIC, FIBER OPTIC, AND COMMUNICATION LINES SHALL BE PLACED IN A JOINT TRENCH. CONNECT FROM NEAREST POINT OF CONNECTION. DESIGN BY OTHERS.  
 ALL EXISTING OVERHEAD ELECTRICAL, COMMUNICATION AND FIBER OPTIC LINES ALONG THE PROJECT FRONTAGE ARE TO BE UNDERGROUNDED.  
 NOT USED  
 EXISTING STREET LIGHT ACROSS HAVEN AVE TO BE UPGRADED. THE STREET LIGHT SHALL BE PAINTED MESA BROWN AND UPGRADED WITH LED FIXTURES COMPLIANT WITH PG&E STANDARDS. STREET LIGHT SHALL MIRROR THE STREET LIGHT IN FRONT OF 3645 HAVEN AVE.

- NOTES**
- THE APPLICANT SHALL REMOVE AND REPLACE ALL CRACKED, DAMAGED, UPLIFTED OR DEPRESSED FRONTAGE IMPROVEMENTS LOCATED IN CITY'S RIGHT-OF-WAY, EXISTING OR DAMAGED BY THE CONSTRUCTION ACTIVITIES, PER CITY STANDARDS ALONG THE ENTIRE PROPERTY FRONTAGE.
  - CIVIL ENGINEER SHALL COORDINATE WITH PROJECT ARBORIST TO DETERMINE THE LOCATIONS OF EDGE OF PAVEMENT, STORM DRAIN LINES AND OTHER UTILITY LINES NEAR TREES. THE LOCATIONS OF IMPROVEMENTS NEAR CITY TREES SHALL BE APPROVED BY CITY ARBORIST.
  - CONTACT PUBLIC WORKS AT (650) 330-6740 TO SCHEDULE AN INSPECTION A MINIMUM OF 24 HOURS IN ADVANCE OF COMMENCEMENT OF PUBLIC IMPROVEMENT WORK. THE CONSTRUCTION SUPERVISOR WILL DISCUSS ANY REPAIR WORK TO FRONTAGE IMPROVEMENTS WHICH ARE NOT SHOWN ON THE PLANS.
  - PRIOR TO FINAL INSPECTION, THE APPLICANT SHALL OBTAIN AN ENCROACHMENT PERMIT FROM THE CITY'S ENGINEERING DIVISION FOR ALL EXISTING PRIVATE STRUCTURES, IMPROVEMENTS AND LANDSCAPING (IF ANY) LOCATED IN THE CITY'S RIGHT-OF-WAY ALONG THE PROPERTY FRONTAGE.
  - THE APPLICANT SHALL REMOVE AND REPLACE ALL CRACKED, DAMAGED UPLIFTED OR DEPRESSED FRONTAGE IMPROVEMENTS (CURB, GUTTER, SIDEWALK, DRIVEWAY, ETC.), EXISTING OR DAMAGED BY THE CONSTRUCTION ACTIVITIES, PER CITY STANDARDS ALONG THE ENTIRE PROPERTY FRONTAGE. IF FRONTAGE IMPROVEMENTS DO NOT CURRENTLY EXIST, THE APPLICANT IS REQUIRED TO INSTALL FRONTAGE IMPROVEMENTS PER CITY STANDARDS ALONG THE ENTIRE PROPERTY FRONTAGE. ALL IMPROVEMENTS ARE TO BE COMPLETED AND APPROVED BY THE CITY OF MENLO PARK'S PUBLIC WORKS INSPECTOR PRIOR TO THE FINAL INSPECTION BY THE BUILDING INSPECTOR.

- FIRE NOTES**
- FIRE APPARATUS ROADWAYS, INCLUDING PUBLIC AND PRIVATE STREETS AND IN SOME CASES DRIVEWAYS USED FOR VEHICLE ACCESS, SHALL BE CAPABLE OF SUPPORTING THE IMPOSED WEIGHT OF A 75,000 POUND (34,050 KG) FIRE APPARATUS AND SHALL BE PROVIDED WITH AN ALL-WEATHER DRIVING SURFACE. ONLY PAVED OR CONCRETE SURFACES ARE CONSIDERED TO BE ALL WEATHER DRIVING SURFACES. CFC 2016, APPENDIX D.
  - CURBING LOCATED WITHIN THE COMPLEX THAT HAS NOT BEEN ASSIGNED AS ONSITE PARKING SHALL BE DESIGNATED AS "NO PARKING FIRE LANE". ALL FIRE LANES TO COMPLY WITH MPFD STANDARD FOR "DESIGNATION AND MARKING OF FIRE LANE", SINCE THERE ARE ONLY TO POINTS OF ACCESS TO THE COMPLEX "ENTRANCE SIGN B" MAY BE USED AT EACH POINT OF ACCESS TO COMPLEX. PROVIDE A COMPLETE NO PARKING-FIRE LANE STRIPPING PLAN WITH NO PARKING SIGNAGE IN ACCORDANCE TO MPFD STANDARD ON SUBSEQUENT SUBMITTAL.
    - ROADWAY WIDTH FOR PROJECT SHALL BE NO LESS THAN 26 FEET WIDE AND SHALL REQUIRE CURB STRIPPING WITH NO PARKING SIGNAGE AS PER MPFD STANDARD.
    - REQUIRED NO PARKING SIGNAGE INSTALLED AT AN APPROVED LOCATION AT ENTRANCES.
  - FIRE APPARATUS ROADWAYS, INCLUDING PUBLIC OR PRIVATE STREETS OR ROADS USED FOR VEHICLE ACCESS SHALL BE INSTALLED AND IN SERVICE PRIOR TO CONSTRUCTION. FIRE PROTECTION WATER SERVING ALL HYDRANTS SHALL BE PROVIDED AS SOON AS COMBUSTIBLE MATERIAL ARRIVES ON THE SITE.
    - PRIOR TO COMBUSTIBLE MATERIAL ARRIVING ON THE SITE, CONTACT THE MENLO PARK FIRE DISTRICT TO SCHEDULE AN INSPECTION OF ROADWAYS AND FIRE HYDRANTS. CFC 2013.

**INSPECTION NOTE:**  
 THE CONTRACTOR SHALL INFORM THE OWNER (IN WRITING) OF RECOMMENDED PERIODIC INSPECTION AND MAINTENANCE OF THE ON-SITE STORM DRAINAGE SYSTEM. THE REGULAR CLEARING OF SILT AND DEBRIS IS ESPECIALLY IMPORTANT PRIOR TO EACH RAINY SEASON.

**NOTE:**  
 CONTRACTOR SHALL FIELD VERIFY LOCATIONS AND DEPTHS OF EXISTING UTILITIES PRIOR TO COMMENCING CONSTRUCTION. CONTRACTOR SHALL NOTIFY THE ENGINEER OF ANY CONFLICTS IN ANY EXIST.

**NOTE:**  
 ALL UTILITIES SHALL BE PLACED UNDERGROUND IF REQUIRED BY THE UTILITY COMPANY.

**NOTE:**  
 SITE GRADING SHALL NOT IMPEDE EXISTING DRAINAGE FROM ADJACENT PROPERTIES AND SHALL NOT GENERATE SURFACE RUN-OFF FLOW ONTO ADJACENT PROPERTIES.

**NOTE:**  
 FOR CONSTRUCTION STAKING SCHEDULING OR QUOTATIONS PLEASE CONTACT ALEX ABAYA AT LEA & BRAZE ENGINEERING (510)887-4086 EXT 116. aabaya@leabraze.com

**BUILDING PAD NOTE:**  
 ADJUST PAD LEVEL AS REQUIRED. REFER TO STRUCTURAL PLANS FOR SLAB SECTION OR CRAWL SPACE DEPTH TO ESTABLISH PAD LEVEL.

**NOTE:**  
 TOPOGRAPHIC INFORMATION HAS BEEN REMOVED FOR CLARITY. SEE ORIGINAL SURVEY FOR EXISTING SITE CONDITIONS.

**3.3.1. Sight Distance** ATTACHMENT B

Insufficient sight distance can be a contributing factor in intersection traffic crashes. Intersection sight distance is typically defined as the distance a motorist can see approaching vehicles before their line of sight is blocked by an obstruction near the intersection. The driver of a vehicle approaching or departing from a stopped position at an intersection should have an unobstructed view of the intersection, including any traffic control devices, and sufficient lengths along the intersecting roadway to permit the driver to anticipate and avoid potential collisions. Examples of obstructions include crops, hedges, trees, parked vehicles, utility poles, or buildings. In addition, the horizontal and vertical alignment of the roadway approaching the intersection can reduce the sight triangle of vehicles navigating the intersection.

It is important for approaching motorists on the major road to see side street vehicles approaching the Stop sign, and for minor road motorists to see approaching major road vehicles before entering the intersection. Poor sight distance can lead to rear-end crashes on the approaches and to angle crashes within the intersection because motorists may be unable to see and react to traffic control devices or approaching vehicles.

The area needed for provision of this unobstructed view is called the Clear Sight Triangle (see Figure 3).

Figure 3. Sight Distance Triangles for 4-Leg Stop-controlled Intersections<sup>9</sup>

The Intersection Sight Distance (ISD) is measured along the major road beginning at a point that coincides with the location of the minor road vehicle. Table 3 provides the recommended values for ISD, based on the following assumptions:

- Stop control of the minor road approaches;
- Using driver eye and object heights associated with passenger cars;
- Both minor and major roads are considered at level grade;
- Considers a left-turn from the minor road as the worst-case scenario (i.e., requiring the most sight distance); and
- The major road is an undivided, two-way, two-lane roadway with no turn lanes.

If conditions at the intersection being evaluated differ from these assumptions, an experienced traffic engineer or highway designer should be consulted to determine whether different ISD values should be used.

**BIO-RETENTION SOIL CONSIDERATIONS**  
THE BIO-RETENTION PLANTING SOIL SHALL MEET THE REQUIREMENTS SET FORTH IN APPENDIX K OF THE SAN MATEO COUNTY CLEANWATER PROGRAM C.3 STORMWATER TECHNICAL GUIDANCE HANDBOOK.  
BIO-RETENTION SOIL SHALL HAVE A MINIMUM PERCOLATION RATE OF 5" PER HOUR AND MAXIMUM PERCOLATION RATE OF 10" PER HOUR. IF NATIVE SOILS DO NOT MEET THIS PERCOLATION REQUIREMENT, AN ADMIXTURE SHALL BE MIXED INTO PLANTING SOIL TO ALLOW FOR A 5" PER HOUR PERCOLATION RATE. IN-SITU TESTING SHALL BE CONDUCTED TO VERIFY THAT THE MATERIAL MEETS THE PERCOLATION REQUIREMENTS.  
NO BARK MULCH SHALL BE PLACED IN THE VEGETATED AREA.  
IF IMPORT SOIL IS USED, IT SHALL HAVE THE FOLLOWING PROPERTIES FOR SANDY LOAM. A TYPICAL SOIL MIX COMPRISES 60-70% SAND AND 30%-40% COMPOST.

 SHEET NO:

**PURPOSE:**  
 ROADSIDE BIORETENTION PLANTERS IN:  
 • CDS AREAS: CONTROL PEAK FLOWS AND VOLUMES OF STORMWATER RUNOFF BY PROVIDING SURFACE, SUBSURFACE STORAGE AND INFILTRATION INTO NATIVE SOIL.  
 • MSA AREAS: REMOVE POLLUTANTS OF CONCERN AS WATER FILTERS THROUGH BIORETENTION SOIL.

**DESIGNER NOTES & GUIDELINES:**

- THE DESIGNER MUST ADAPT PLAN AND SECTION DRAWINGS TO ADDRESS SITE-SPECIFIC CONDITIONS.
- PLANTER AREA, PONDING DEPTH, BIORETENTION SOIL DEPTH, AND AGGREGATE STORAGE DEPTH MUST BE SIZED TO MEET PROJECT HYDROLOGIC PERFORMANCE GOALS.
- PONDING AND BIORETENTION SOIL DRAWDOWN TIME (I.E., TIME FOR MAXIMUM SURFACE PONDING TO DRAIN THROUGH THE BIORETENTION SOIL AFTER THE END OF A STORM) REQUIREMENTS:
  - 3-12 HOUR PONDING AND BIORETENTION SOIL DRAWDOWN (TYPICAL)
  - 24 HOUR MAXIMUM PONDING AND BIORETENTION SOIL DRAWDOWN
- FACILITY DRAWDOWN TIME (I.E., TIME FOR SURFACE PONDING TO DRAIN THROUGH THE ENTIRE SECTION INCLUDING AGGREGATE STORAGE AFTER THE END OF A STORM) REQUIREMENTS:
  - 48 HOUR MAXIMUM FACILITY DRAWDOWN (I.E. ORIFICE CONTROLLED SYSTEM OR EXTENDED STORAGE DEPTH WITHIN INFILTRATION SYSTEM)
- AN AGGREGATE COURSE UNDER THE BIORETENTION SOIL IS REQUIRED FOR BIORETENTION IN SEPARATE SEWER SYSTEM AREAS. USE AGGREGATE COURSE WHERE REQUIRED (E.G., WITH UNDERDRAIN, FOR STORAGE, ETC.) FOR FACILITIES IN COMBINED SEWER SYSTEM AREAS.
- THE PLANTER WALL SLOPE IS TYPICALLY DESIGNED TO MATCH THE LONGITUDINAL SLOPE OF THE ADJACENT ROADWAYSIDEWALK. CHECK DAMS MAY BE USED FOR HIGHER SLOPED INSTALLATIONS TO TERRACE FACILITIES TO PROVIDE SUFFICIENT PONDING AND TO MINIMIZE LARGE ELEVATION DROPS FROM ADJACENT SURFACES. DESIGNER MUST SPECIFY CHECK DAM HEIGHT AND SPACING. REFER TO BC 6.1 AND BC 6.2 FOR GUIDANCE ON CHECK DAM DESIGN.
- THE DESIGN SHALL MINIMIZE THE HEIGHT OF EXPOSED PLANTER WALLS BETWEEN THE TOP OF SOIL AND TOP OF CURB WALL AND CONSIDER PEDESTRIAN AND VEHICLE SAFETY, ACCESSIBILITY REQUIREMENTS, AND OVERALL AESTHETICS. DEPENDING ON THE HEIGHT OF THE PROPOSED PLANTER WALL, ADDITIONAL STRUCTURAL CONSIDERATIONS MAY BE REQUIRED TO ADDRESS WALL LOADING. REFER TO BC 1.1 THROUGH BC 1.7 FOR GUIDANCE ON EDGE TREATMENTS.
- WHEN FACILITY CONSTRUCTION IMPACTS EXISTING SIDEWALK, ALL SAW CUTS MUST ADHERE TO SFPPC REQUIREMENTS. SAW CUTS SHOULD BE ALONG SCORE LINES AND ANY DISTURBED SIDEWALK FLAG SHOULD BE REPLACED IN THEIR ENTIRETY.
- BIORETENTION PLANTERS LOCATED IN PUBLIC ROW SHOULD BE DESIGNED WITH AN OFFLINE CONFIGURATION (I.E. NO OVERFLOW STRUCTURE TO SD LATERAL CURB CUTS SERVE AS INLET AND OVERFLOW TO GUTTER FLOW LINE). ONLINE BIORETENTION CONFIGURATION (I.E. OVERFLOW STRUCTURE WITHIN PLANTER TO SD LATERAL) REQUIRES SFPPC APPROVAL. HAND-PIPED DISCHARGE INTO ROW BIORETENTION PLANTERS MAY REQUIRE AN ONLINE CONFIGURATION.
- FOR APPROVED ONLINE CONFIGURATIONS: OVERFLOW STRUCTURE (MATERIAL AND WORKMANSHIP) SHALL CONFORM TO APPLICABLE CODES AND REQUIREMENTS. SIZE AND MODEL OF ATRIUM GRATE AT OVERFLOW TO BE DETERMINED BY ENGINEER TO ENSURE CONVEYANCE OF PEAK FLOW.
- PLANTER VEGETATION MUST BE SPECIFIED BY DESIGN PROFESSIONAL PER SFPPC VEGETATION PALLETTE.
- THE DESIGNER MUST EVALUATE UTILITY SURVEYS FOR POTENTIAL UTILITY CROSSINGS OR CONFLICTS. REFER TO GC 2.1 - GC 2.12 FOR UTILITY CROSSING DETAILS AND GC 3.1 - GC 3.4 FOR UTILITY CROSSING CONFLICT DETAILS.
- MINIMUM UTILITY SETBACKS AND PROTECTION MEASURES MUST CONFORM TO CURRENT UTILITY PROTECTION STANDARDS AND OTHER UTILITY PROVIDER REQUIREMENTS.

**RELATED COMPONENTS**

EDGE TREATMENTS:	BC 1.1	BC 1.7
INLETS:	BC 2.1	BC 2.4

AGGREGATE STORAGE:	BC 4.1	
UNDERDRAINS:	BC 5.1	BC 5.2
CHECK DAMS:	BC 6.1	BC 6.2
LINEARS:	GC 1.1	GC 1.2
UTILITY CROSSINGS:	GC 2.1	GC 2.12
UTILITY CONFLICTS:	GC 3.1	GC 3.4
OBSERVATION PORTS:	GC 4.1	GC 4.3
CLEANOUTS:	GC 5.1	

**RELATED SPECIFICATIONS**

BIORETENTION: BIORETENTION SOIL MIX	CS1 NO. 33-47-27
AGGREGATE STORAGE	
MULCH	
STREAMBED COBBLES	

**LAYOUT REQUIREMENTS:**

- REFER TO THE SAN FRANCISCO STANDARD ACCESSIBILITY REQUIREMENTS IN THE SAN FRANCISCO PUBLIC WORKS SIDEWALK LANDSCAPING REFERENCE DRAWINGS AND SPECIFICATIONS FOR COURTESY STRIP, THROUGHWAY, PARKING SPACE AND ACCESSIBLE PATH REQUIREMENTS.
- LOCATE CURB CUTS AND GUTTER MODIFICATIONS TO AVOID CONFLICTS WITH ACCESSIBILITY REQUIREMENTS (E.G. OVERLAPS SHALL DISCHARGE TO CURB OR INLET PRIOR TO CROSSING A CURB RAMP OR CROSSWALK).
- REFER TO SHEET GEN 0.2 AND APPENDIX C OF THE STORMWATER MANAGEMENT REQUIREMENTS FOR MORE DETAILED INFORMATION ON SITING AND DESIGN REQUIREMENTS FOR INFILTRATION-BASED BMPs.

**DESIGNER CHECKLIST (MUST SPECIFY, AS APPLICABLE):**

- PLANTER WIDTH AND LENGTH
- DEPTH OF PONDING
- DEPTH OF FREEBOARD
- DEPTH OF BIORETENTION SOIL
- DEPTH AND TYPE OF AGGREGATE STORAGE, IF ANY
- PLANTER SURFACE ELEVATION (TOP OF BIORETENTION SOIL) AT UPSLOPE AND DOWNSLOPE ENDS OF FACILITY (I.E., PROVIDE SPOTS AND/OR CONTOURS AS NEEDED).
- DEFINED SURVEY POINTS AT EVERY PLANTER WALL CORNER AND POINT OF TANGENCY
- HORIZONTAL CONTROL: DIMENSIONS AND DISTANCE TO EVERY INLET, OUTLET, CHECK DAM, SIDEWALK NOTCH, ETC.
- VERTICAL CONTROL: ELEVATIONS OF EVERY INLET, OUTLET, STRUCTURE RIM AND INVERT, CHECK DAM, PLANTER WALL CORNER, AND SIDEWALK NOTCH
- TYPE AND DESIGN OF PLANTER COMPONENTS (E.G. EDGE TREATMENTS, INLETS/GUTTER MODIFICATIONS, UTILITY CROSSINGS, LINER, AND PLANTING DETAILS)

**CONSTRUCTION NOTES:**

- CHECK DAMS SHALL BE SPACED TO PROVIDE PONDING PER SITE SPECIFIC DESIGN.
- LAY OUT DRAINAGE NOTCHES TO PREVENT PONDING BEHIND PLANTER WALL WITH 5' MAXIMUM SPACING BETWEEN NOTCHES.
- PROVIDE ONE CLEANOUT PER PLANTER (MIN) FOR FACILITIES WITH UNDERDRAINS.
- MINIMUM UTILITY SETBACKS AND PROTECTION MEASURES MUST CONFORM TO CURRENT SFPPC ASSET PROTECTION STANDARDS. COORDINATE WITH ENGINEER IN THE EVENT OF UTILITY CROSSING AND UTILITY CONFLICTS.
- PUBLIC ROW/SFPUC ASSETS SHALL BE OFFLINE CONFIGURATION. SEE BP 1.1.
- PRIVATE PARCEL: OFFLINE OR ONLINE CONFIGURATION ALLOWED.
- PRIOR TO PLACEMENT OF IMPERMEABLE LINER, THE SUBGRADE SHALL BE PREPARED AND CONTOURED AS NECESSARY TO PROVIDE A SMOOTH SURFACE. VOID OF SHARP ROCK/CORNERS. NO VOID SPACES SHALL BE PRESENT BETWEEN THE LINER AND THE SUBGRADE. GEOTEXTILE FABRIC MAY BE INSTALLED BETWEEN THE SUBGRADE AND THE LINER TO PROTECT THE LINER FROM SHARP AGGREGATE PRESENT IN THE SUBGRADE. ENGINEER SHALL INSPECT/APPROVE THE PREPARED BASIN SUBGRADE PRIOR TO THE INSTALLATION OF ANY OVERLYING GEOTEXTILE MATERIAL. SEE BIORETENTION SPECIFICATION.

**PLAN - OFFLINE CONFIGURATION**

**PLAN - ONLINE CONFIGURATION**

**CONSTRUCTION NOTES:**

- ALL MATERIAL AND WORKMANSHIP FOR CURB CUTS SHALL CONFORM TO SAN FRANCISCO STANDARD SPECIFICATIONS AND APPLICABLE CODES PER SAN FRANCISCO DBI AND PUBLIC WORKS.
- BOND NEW CURB AND GUTTER TO EXISTING CURB AND GUTTER WITH EPOXY AND DOWEL CONNECTION.
- MATCH GUTTER SLOPE UP AND DOWNSLOPE OF CURB CUT TO MATCH GUTTER SLOPE UP AND DOWNSLOPE OF CURB CUT UNLESS MODIFIED GUTTER.
- OUTLET CURB CUT WIDTH SHALL BE 18" ON GUTTER SLOPES ≥ 5%.

 SHEET NO. 3.0  
 PROJECT: 3705 HAVEN AVENUE

**ROADSIDE PLANTER DESIGNER NOTES (1 OF 2)**  
**BP 1.1**

**PURPOSE:**  
 ROADSIDE BIORETENTION PLANTERS IN:  
 • CDS AREAS: CONTROL PEAK FLOWS AND VOLUMES OF STORMWATER RUNOFF BY PROVIDING SURFACE, SUBSURFACE STORAGE AND INFILTRATION INTO NATIVE SOIL.  
 • MSA AREAS: REMOVE POLLUTANTS OF CONCERN AS WATER FILTERS THROUGH BIORETENTION SOIL.

**DESIGNER NOTES & GUIDELINES:**

- THE DESIGNER MUST ADAPT PLAN AND SECTION DRAWINGS TO ADDRESS SITE-SPECIFIC CONDITIONS.
- PLANTER AREA, PONDING DEPTH, BIORETENTION SOIL DEPTH, AND AGGREGATE STORAGE DEPTH MUST BE SIZED TO MEET PROJECT HYDROLOGIC PERFORMANCE GOALS.
- PONDING AND BIORETENTION SOIL DRAWDOWN TIME (I.E., TIME FOR MAXIMUM SURFACE PONDING TO DRAIN THROUGH THE BIORETENTION SOIL AFTER THE END OF A STORM) REQUIREMENTS:
  - 3-12 HOUR PONDING AND BIORETENTION SOIL DRAWDOWN (TYPICAL)
  - 24 HOUR MAXIMUM PONDING AND BIORETENTION SOIL DRAWDOWN
- FACILITY DRAWDOWN TIME (I.E., TIME FOR SURFACE PONDING TO DRAIN THROUGH THE ENTIRE SECTION INCLUDING AGGREGATE STORAGE AFTER THE END OF A STORM) REQUIREMENTS:
  - 48 HOUR MAXIMUM FACILITY DRAWDOWN (I.E. ORIFICE CONTROLLED SYSTEM OR EXTENDED STORAGE DEPTH WITHIN INFILTRATION SYSTEM)
- AN AGGREGATE COURSE UNDER THE BIORETENTION SOIL IS REQUIRED FOR BIORETENTION IN SEPARATE SEWER SYSTEM AREAS. USE AGGREGATE COURSE WHERE REQUIRED (E.G., WITH UNDERDRAIN, FOR STORAGE, ETC.) FOR FACILITIES IN COMBINED SEWER SYSTEM AREAS.
- THE PLANTER WALL SLOPE IS TYPICALLY DESIGNED TO MATCH THE LONGITUDINAL SLOPE OF THE ADJACENT ROADWAYSIDEWALK. CHECK DAMS MAY BE USED FOR HIGHER SLOPED INSTALLATIONS TO TERRACE FACILITIES TO PROVIDE SUFFICIENT PONDING AND TO MINIMIZE LARGE ELEVATION DROPS FROM ADJACENT SURFACES. DESIGNER MUST SPECIFY CHECK DAM HEIGHT AND SPACING. REFER TO BC 6.1 AND BC 6.2 FOR GUIDANCE ON CHECK DAM DESIGN.
- THE DESIGN SHALL MINIMIZE THE HEIGHT OF EXPOSED PLANTER WALLS BETWEEN THE TOP OF SOIL AND TOP OF CURB WALL AND CONSIDER PEDESTRIAN AND VEHICLE SAFETY, ACCESSIBILITY REQUIREMENTS, AND OVERALL AESTHETICS. DEPENDING ON THE HEIGHT OF THE PROPOSED PLANTER WALL, ADDITIONAL STRUCTURAL CONSIDERATIONS MAY BE REQUIRED TO ADDRESS WALL LOADING. REFER TO BC 1.1 THROUGH BC 1.7 FOR GUIDANCE ON EDGE TREATMENTS.
- WHEN FACILITY CONSTRUCTION IMPACTS EXISTING SIDEWALK, ALL SAW CUTS MUST ADHERE TO SFPPC REQUIREMENTS. SAW CUTS SHOULD BE ALONG SCORE LINES AND ANY DISTURBED SIDEWALK FLAG SHOULD BE REPLACED IN THEIR ENTIRETY.
- BIORETENTION PLANTERS LOCATED IN PUBLIC ROW SHOULD BE DESIGNED WITH AN OFFLINE CONFIGURATION (I.E. NO OVERFLOW STRUCTURE TO SD LATERAL CURB CUTS SERVE AS INLET AND OVERFLOW TO GUTTER FLOW LINE). ONLINE BIORETENTION CONFIGURATION (I.E. OVERFLOW STRUCTURE WITHIN PLANTER TO SD LATERAL) REQUIRES SFPPC APPROVAL. HAND-PIPED DISCHARGE INTO ROW BIORETENTION PLANTERS MAY REQUIRE AN ONLINE CONFIGURATION.
- FOR APPROVED ONLINE CONFIGURATIONS: OVERFLOW STRUCTURE (MATERIAL AND WORKMANSHIP) SHALL CONFORM TO APPLICABLE CODES AND REQUIREMENTS. SIZE AND MODEL OF ATRIUM GRATE AT OVERFLOW TO BE DETERMINED BY ENGINEER TO ENSURE CONVEYANCE OF PEAK FLOW.
- PLANTER VEGETATION MUST BE SPECIFIED BY DESIGN PROFESSIONAL PER SFPPC VEGETATION PALLETTE.
- THE DESIGNER MUST EVALUATE UTILITY SURVEYS FOR POTENTIAL UTILITY CROSSINGS OR CONFLICTS. REFER TO GC 2.1 - GC 2.12 FOR UTILITY CROSSING DETAILS AND GC 3.1 - GC 3.4 FOR UTILITY CROSSING CONFLICT DETAILS.
- MINIMUM UTILITY SETBACKS AND PROTECTION MEASURES MUST CONFORM TO CURRENT UTILITY PROTECTION STANDARDS AND OTHER UTILITY PROVIDER REQUIREMENTS.

**LAYOUT REQUIREMENTS:**

- REFER TO THE SAN FRANCISCO STANDARD ACCESSIBILITY REQUIREMENTS IN THE SAN FRANCISCO PUBLIC WORKS SIDEWALK LANDSCAPING REFERENCE DRAWINGS AND SPECIFICATIONS FOR COURTESY STRIP, THROUGHWAY, PARKING SPACE AND ACCESSIBLE PATH REQUIREMENTS.
- LOCATE CURB CUTS AND GUTTER MODIFICATIONS TO AVOID CONFLICTS WITH ACCESSIBILITY REQUIREMENTS (E.G. OVERLAPS SHALL DISCHARGE TO CURB OR INLET PRIOR TO CROSSING A CURB RAMP OR CROSSWALK).
- REFER TO SHEET GEN 0.2 AND APPENDIX C OF THE STORMWATER MANAGEMENT REQUIREMENTS FOR MORE DETAILED INFORMATION ON SITING AND DESIGN REQUIREMENTS FOR INFILTRATION-BASED BMPs.

**DESIGNER CHECKLIST (MUST SPECIFY, AS APPLICABLE):**

- PLANTER WIDTH AND LENGTH
- DEPTH OF PONDING
- DEPTH OF FREEBOARD
- DEPTH OF BIORETENTION SOIL
- DEPTH AND TYPE OF AGGREGATE STORAGE, IF ANY
- PLANTER SURFACE ELEVATION (TOP OF BIORETENTION SOIL) AT UPSLOPE AND DOWNSLOPE ENDS OF FACILITY (I.E., PROVIDE SPOTS AND/OR CONTOURS AS NEEDED).
- DEFINED SURVEY POINTS AT EVERY PLANTER WALL CORNER AND POINT OF TANGENCY
- HORIZONTAL CONTROL: DIMENSIONS AND DISTANCE TO EVERY INLET, OUTLET, CHECK DAM, SIDEWALK NOTCH, ETC.
- VERTICAL CONTROL: ELEVATIONS OF EVERY INLET, OUTLET, STRUCTURE RIM AND INVERT, CHECK DAM, PLANTER WALL CORNER, AND SIDEWALK NOTCH
- TYPE AND DESIGN OF PLANTER COMPONENTS (E.G. EDGE TREATMENTS, INLETS/GUTTER MODIFICATIONS, UTILITY CROSSINGS, LINER, AND PLANTING DETAILS)

**CONSTRUCTION NOTES:**

- CHECK DAMS SHALL BE SPACED TO PROVIDE PONDING PER SITE SPECIFIC DESIGN.
- LAY OUT DRAINAGE NOTCHES TO PREVENT PONDING BEHIND PLANTER WALL WITH 5' MAXIMUM SPACING BETWEEN NOTCHES.
- PROVIDE ONE CLEANOUT PER PLANTER (MIN) FOR FACILITIES WITH UNDERDRAINS.
- MINIMUM UTILITY SETBACKS AND PROTECTION MEASURES MUST CONFORM TO CURRENT SFPPC ASSET PROTECTION STANDARDS. COORDINATE WITH ENGINEER IN THE EVENT OF UTILITY CROSSING AND UTILITY CONFLICTS.
- PUBLIC ROW/SFPUC ASSETS SHALL BE OFFLINE CONFIGURATION. SEE BP 1.1.
- PRIVATE PARCEL: OFFLINE OR ONLINE CONFIGURATION ALLOWED.

PAVEMENT TIE-IN

APPROVED: [Signature]

DATE: 1/1/97

SCALE: NTS

SHEET: 1 OF 1

STD. DETAIL No.: ST-1

- NOTES:**
1. CD DESIGN MIX FOR ANGLULAR BEDDING MATERIAL SHALL MEET THE FOLLOWING REQUIREMENTS:  
 SIEVE SIZE: 1" X PASSING: 100  
 3/4" 80-100  
 3/8" 50-70  
 #4 10-20  
 #10 5-10
  2. THE DESIGN FOR CD SHALL MEET THE FOLLOWING REQUIREMENTS:  
 CEMENT: 50-100 LB/CU YD  
 FLY ASH, CLASS F: 70-2000 LB/CU YD  
 FINE AGGREGATE: 2800-3100 LB/CU YD  
 WATER: 300-350 LB/CU YD  
 STRENGTH: 800 PSI
  3. STRUCTURE BACKFILL MATERIAL WITH SAND EQUIVALENT NOT LESS THAN 2% AND SIEVE GRADATION BY WEIGHT AS FOLLOWS:  
 SIEVE SIZE: 3/4" X PASSING: 100  
 NO. 4 10-20  
 NO. 10 5-10
  4. BACKFILL MATERIAL FOR LANDSCAPED AREAS: MATERIAL FROM EXCAVATION FREE FROM STONES OR LUMPS EXCEEDING 3". ORGANIC MATTER OR OTHER UNDESIRABLE MATERIAL. CONSTRUCTION OF UTILITY TRENCH TO 18" MAX. DEPTH. CONSTRUCTION SHALL PLACE SLURRY SEAL TO CONFORM TO CITY STANDARD ST-16.
  5. FINISHED GRADE TO MATCH EXISTING.
  6. SAND MATERIAL FREE FROM ORGANIC MATTER AND CLAY WITH A SIEVE GRADATION BY WEIGHT AS FOLLOWS:  
 SIEVE SIZE: #10 X PASSING: 100  
 NO. 4 10-20  
 NO. 10 5-10
  7. CUT EDGE OF EXISTING PAVEMENT SHALL NOT BE WITHIN THE WHEELTRACK. SEE ST-20 FOR WHEEL TRACK DIAGRAM.

1. SLURRY SEAL SHALL BE APPLIED TO FINISHED GRADE. FULL DEPTH A.C. PAVEMENT, 4" MIN. BUT SHALL NEVER BE LESS THAN EXISTING PAVEMENT SECTION: TOP 2" LAYER 1/2" MEDIUM TYPE B AC LOWER LAYER 3/4" MAX TYPE B AC.
  2. APPLY ASPHALT EMULSION UNDER TO CUT EDGE OF EXISTING PAVEMENT.
  3. A.C. KEY CUT AREA.
  4. CURB & GUTTER.
  5. SAND FILL FROM RESTORATION (NOT TO SCALE).

**CITY OF MENLO PARK STANDARD DETAILS**

NO. REVISIONS DATE

STANDARDS FOR TRENCH CONSTRUCTION SEAL COAT

APPROVED: [Signature]

DATE: 3-6-02

SCALE: NTS

SHEET: 1 OF 1

STD. DETAIL No.: ST-18

- STANDARDS FOR SYSTEM AND ALL SERVICE CONNECTIONS:**
1. NO DIRECT TAP. SERVICE CONNECTION SHALL BE WET TAP ONLY USING DOUBLE STRAPPED BRONZE SADDLE; WORK TO BE PERFORMED BY CONTRACTOR PRE-APPROVED BY THE CITY.
  2. FOR 3/4" AND 1" SERVICES, POLYETHYLENE TUBING (PE 3406) WITH MUELLER INSTA-TITE FITTINGS IS ALLOWED. SEE WA-17.
  3. FOR 3/4" TO 2" SERVICES, TYPE "K" SOFT COPPER TUBING (ASTM B-88-82) IS REQUIRED WITH FLARED OR PACKED JOINT COUPLING OR FLANGED COMPRESSION FITTINGS (NO SOLDERED JOINTS ARE ALLOWED).
  4. FOR 3" AND 4" SERVICES, USE C-900 PIPE WITH MEGALUG MECHANICAL JOINTS (SEE ITEM 8 BELOW) OR DUCTILE IRON PIPE WITH MECHANICAL OR FLANGED JOINTS. NO PUSH ON JOINTS ALLOWED. SEE WA-22.
  5. FOR FIRE SERVICE AND HYDRANT CONNECTIONS, CONTACT MENLO PARK FIRE PROTECTION DISTRICT FOR UNDERGROUND STANDARDS AND APPROVAL OF ONSITE DESIGN. SEE WA-6.
  6. RESURFACING AND BACKFILL IN THE PUBLIC RIGHT-OF-WAY SHALL CONFORM TO CITY OF MENLO PARK STANDARD DETAILS ST-8A, ST-8B, AND ST-16 OR AS DIRECTED BY ENGINEERING SERVICE MANAGER.
  7. USE FUSION EPOXY COATED (EXTERIOR AND INTERIOR) MUELLER FULL BODIED TAPPING SLEEVE #H-516. USE STAINLESS STEEL BOLTS, TRIM, AND SLEEVES. FOR AC PIPES USE STAINLESS STEEL SLEEVES.
  8. ALL BURIED FERROUS (IRON) FITTINGS AND VALVES SHALL BE FUSION EPOXY COATED (EXTERIOR AND INTERIOR) AND WRAPPED WITH SINGLE LAYER OF 8 MIL POLYETHYLENE COVERING, WITH ENDS TAPED.
  9. JOINTS SHALL BE MECHANICAL, FLANGED OR FLEX (NO PUSH ON JOINTS ALLOWED), JOINTS SHALL BE FUSION EPOXY COATED (EXTERIOR AND INTERIOR).
  10. 2" NUT MUELLER A-2360 RESILIENT WEDGE GATE VALVES SHALL BE FUSION EPOXY COATED (EXTERIOR AND INTERIOR).

- SPECIFIC STANDARDS FOR AREAS NORTH AND EAST (BAY SIDE) OF HIGHWAY 101 (CORROSIVE SOIL CONDITIONS):**
11. USE # 316 STAINLESS STEEL BOLTS, TRIM, AND SLEEVES, BOTH ABOVE AND BELOW GRADE.
  12. USE C-900, OR APPROVED EQUAL PVC (POLYVINYL CHLORIDE) PIPE, WITH #8 BLUE LOCATOR WIRE, SINGLE LENGTH WITH INSULATION TIGHT.

- SPECIFIC STANDARDS FOR AREAS SOUTH AND WEST (UP-HILL SIDE) OF HIGHWAY 101:**
13. USE #304 STAINLESS STEEL BOLTS, TRIM, AND SLEEVES BOTH ABOVE AND BELOW GRADE.
  14. USE DUCTILE IRON PIPE, WITH SINGLE LAYER OF 8 MIL POLYETHYLENE COVERING. (SEE CALIFORNIA CODE OF REGULATIONS, TITLE 22, § 64622 FOR MATERIAL STANDARDS).
  15. MASTIC COATING WITH DOUBLE WRAPPED 8 MIL POLYETHYLENE COVERING MAY BE USED UPON APPROVAL OF ENGINEERING SERVICE MANAGER.

WATER SERVICE AND SYSTEM STANDARDS

APPROVED: [Signature]

DATE: 2/14/12

SCALE: NTS

SHEET: 1 OF 1

STD. DETAIL No.: WA-23

- NOTES:**
1. ALL ON-SITE WORK SHALL BE APPROVED BY MENLO PARK FIRE DEPARTMENT.
  2. SPECIALIST AT (650) 330-6780 FOR APPROVAL.
  3. TEST COCKS AND RISING STEM (OS & Y) VALVES MUST BE SIZED AND INSTALLED AS SHOWN.
  4. ALL VALVES SHALL BE CHAIN LOCKED IN AN OPEN POSITION AT ALL TIMES.
  5. GATE VALVES SHALL BE CHAIN LOCKED IN AN OPEN POSITION AT ALL TIMES.
  6. ALL ASSEMBLIES SHALL BE TESTED UPON INSTALLATION AND ANNUALLY THEREAFTER BY A CERTIFIED BACKFLOW TESTER. TAGS INDICATING TEST DATE SHALL BE ATTACHED TO THE DEVICE. A COPY OF THE TEST REPORT SHALL BE DELIVERED TO THE WATER DISTRICT WITHIN 10 DAYS OF THE TEST. FOR FURTHER INFORMATION, CONTACT THE CROSS-CONNECTION SPECIALIST AT (650) 330-6780.
  7. THE INSTALLED BACKFLOW ASSEMBLY SHALL BE PAINTED RED AND MAY BE ENCLOSED IN A FENCE UPON APPROVAL OF ENGINEERING SERVICE MANAGER.
  8. ASSEMBLY SHALL BE LOCATED A MINIMUM OF 2' CLEAR DISTANCE FROM ANY PERMANENT STRUCTURE AND SHALL BE ACCESSIBLE FOR TESTING AND MAINTENANCE.
  9. MECHANICAL JOINT COUPLINGS AND CONNECTIONS REQUIRED (NO PUSH ON JOINTS ALLOWED).
  10. MECHANICAL OR FLANGED JOINTS, COUPLING AND CONNECTIONS REQUIRED; NO PUSH ON JOINTS ALLOWED.

 DESIGN BY: VA  
 CHECKED BY: JH/PC  
 SHEET NO:

**PURPOSE:**

THE PURPOSE OF THIS PLAN IS TO STABILIZE THE SITE TO PREVENT EROSION OF GRADED AREAS AND TO PREVENT SEDIMENTATION FROM LEAVING THE CONSTRUCTION AREA AND AFFECTING NEIGHBORING SITES, NATURAL AREAS, PUBLIC FACILITIES OR ANY OTHER AREA THAT MIGHT BE AFFECTED BY SEDIMENTATION. ALL MEASURES SHOWN ON THIS PLAN SHOULD BE CONSIDERED THE MINIMUM REQUIREMENTS NECESSARY. SHOULD FIELD CONDITIONS DICTATE ADDITIONAL MEASURES, SUCH MEASURES SHALL BE PER CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD'S FIELD MANUAL FOR EROSION AND SEDIMENTATION CONTROL AND THE CALIFORNIA STORM WATER QUALITY ASSOCIATION BEST MANAGEMENT PRACTICES HANDBOOK FOR CONSTRUCTION. LEA & BRAZE ENGINEERING SHOULD BE NOTIFIED IMMEDIATELY SHOULD CONDITIONS CHANGE.

**EROSION CONTROL NOTES:**

- IT SHALL BE THE OWNER'S/CONTRACTOR'S RESPONSIBILITY TO MAINTAIN CONTROL OF THE ENTIRE CONSTRUCTION OPERATION AND TO KEEP THE ENTIRE SITE IN COMPLIANCE WITH THIS EROSION CONTROL PLAN.
- THE INTENTION OF THIS PLAN IS FOR INTERIM EROSION AND SEDIMENT CONTROL ONLY. ALL EROSION CONTROL MEASURES SHALL CONFORM TO CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD'S FIELD MANUAL FOR EROSION AND SEDIMENTATION CONTROL, THE CALIFORNIA STORM WATER QUALITY ASSOCIATION BEST MANAGEMENT PRACTICES HANDBOOK FOR CONSTRUCTION, AND THE LOCAL GOVERNING AGENCY FOR THIS PROJECT.
- OWNER/CONTRACTOR SHALL BE RESPONSIBLE FOR MONITORING EROSION AND SEDIMENT CONTROL MEASURES PRIOR TO, DURING, AND AFTER STORM EVENTS. PERSON IN CHARGE OF MAINTAINING EROSION CONTROL MEASURES SHOULD WATCH LOCAL WEATHER REPORTS AND ACT APPROPRIATELY TO MAKE SURE ALL NECESSARY MEASURES ARE IN PLACE.
- SANITARY FACILITIES SHALL BE MAINTAINED ON THE SITE AT ALL TIMES.
- DURING THE RAINY SEASON, ALL PAVED AREAS SHALL BE KEPT CLEAR OF EARTH MATERIAL AND DEBRIS. THE SITE SHALL BE MAINTAINED SO AS TO MINIMIZE SEDIMENT-LADEN RUNOFF TO ANY STORM DRAINAGE SYSTEM, INCLUDING EXISTING DRAINAGE SWALES AND WATERCOURSES.
- CONSTRUCTION OPERATIONS SHALL BE CARRIED OUT IN SUCH A MANNER THAT EROSION AND WATER POLLUTION WILL BE MINIMIZED. COMPLIANCE WITH FEDERAL, STATE AND LOCAL LAWS CONCERNING POLLUTION SHALL BE MAINTAINED AT ALL TIMES.
- CONTRACTOR SHALL PROVIDE DUST CONTROL AS REQUIRED BY THE APPROPRIATE FEDERAL, STATE AND LOCAL AGENCY REQUIREMENTS.
- ALL MATERIALS NECESSARY FOR THE APPROVED EROSION CONTROL MEASURES SHALL BE IN PLACE BY OCTOBER 15TH.
- EROSION CONTROL SYSTEMS SHALL BE INSTALLED AND MAINTAINED THROUGHOUT THE RAINY SEASON, OR FROM OCTOBER 15TH THROUGH APRIL 15TH, WHICHEVER IS LONGER.
- IN THE EVENT OF RAIN, ALL GRADING WORK IS TO CEASE IMMEDIATELY AND THE SITE IS TO BE SEALED IN ACCORDANCE WITH THE APPROVAL EROSION CONTROL MEASURES AND APPROVED EROSION CONTROL PLAN.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR CHECKING AND REPAIRING EROSION CONTROL SYSTEMS AFTER EACH STORM.
- ADDITIONAL EROSION CONTROL MEASURES MAY BE REQUIRED BY LOCAL JURISDICTION'S ENGINEERING DEPARTMENT OR BUILDING OFFICIALS.
- MEASURES SHALL BE TAKEN TO COLLECT OR CLEAN ANY ACCUMULATION OR DEPOSIT OF DIRT, MUD, SAND, ROCKS, GRAVEL OR DEBRIS ON THE SURFACE OF ANY STREET, ALLEY OR PUBLIC PLACE OR IN ANY PUBLIC STORM DRAIN SYSTEMS. THE REMOVAL OF AFORESAID SHALL BE DONE BY STREET SWEEPING OR HAND SWEEPING. WATER SHALL NOT BE USED TO WASH SEDIMENTS INTO PUBLIC OR PRIVATE DRAINAGE FACILITIES.
- EROSION CONTROL MEASURES SHALL BE ON-SITE FROM SEPTEMBER 15TH THRU APRIL 15TH.
- ALL EROSION CONTROL MEASURES SHALL BE INSTALLED AND MAINTAINED THROUGHOUT THE RAINY SEASON OR FROM OCTOBER 15 THROUGH APRIL 15, WHICHEVER IS GREATER.
- PLANS SHALL BE DESIGNED TO MEET C3 REQUIREMENTS OF THE MUNICIPAL STORMWATER REGIONAL PERMIT("MRP") NPDES PERMIT CAS 612008.
- THE CONTRACTOR TO NPDES (NATIONAL POLLUTION DISCHARGE ELIMINATION SYSTEM) BEST MANAGEMENT PRACTICES (BMP) FOR SEDIMENTATION PREVENTION AND EROSION CONTROL TO PREVENT DELETERIOUS MATERIALS OR POLLUTANTS FROM ENTERING THE TOWN OR COUNTY STORM DRAIN SYSTEMS.
- THE CONTRACTOR MUST INSTALL ALL EROSION AND SEDIMENT CONTROL MEASURES PRIOR TO THE INCEPTION OF ANY WORK ONSITE AND MAINTAIN THE MEASURES UNTIL THE COMPLETION OF ALL LANDSCAPING.
- THE CONTRACTOR SHALL MAINTAIN ADJACENT STREETS IN A NEAT, CLEAN DUST FREE AND SANITARY CONDITION AT ALL TIMES AND TO THE SATISFACTION OF THE TOWN INSPECTOR. THE ADJACENT STREET SHALL AT ALL TIMES BE KEPT CLEAN OF DEBRIS, WITH DUST AND OTHER NUISANCE BEING CONTROLLED AT ALL TIMES. THE CONTRACTOR BE RESPONSIBLE FOR ANY CLEAN UP ON ADJACENT STREETS AFFECTED BY THE BY THEIR CONSTRUCTION, METHOD OF STREET CLEANING SHALL BE BY DRY SWEEPING OF ALL PAVED AREAS. NO STOCKPILING OF BUILDING MATERIALS WITHIN THE TOWN RIGHT-OF-WAY.
- SEDIMENTS AND OTHER MATERIALS SHALL NOT BE TRACKED FROM THE SITE BY VEHICLE TRAFFIC. THE CONTRACTOR SHALL INSTALL A STABILIZED CONSTRUCTION ENTRANCE PRIOR TO THE INSPECTION OF ANY WORK ONSITE AND MAINTAIN IT FOR THE DURATION OF THE CONSTRUCTION PROCESS SO AS TO NOT INHIBIT SEDIMENTS FROM BEING DEPOSITED INTO THE PUBLIC RIGHT-OF-WAY UNTIL THE COMPLETION OF ALL LANDSCAPING.
- THE CONTRACTOR SHALL PROTECT DOWN SLOPE DRAINAGE COURSES, STREAMS AND STORM DRAINS WITH ROCK FILLED SAND BAGS, TEMPORARY SWALES, SILT FENCES, AND EARTH PERMS IN CONJUNCTION OF ALL LANDSCAPING.
- STOCKPILED MATERIALS SHALL BE COVERED WITH VISQUEEN OR A TARPULIN UNTIL THE MATERIAL IS REMOVED FROM THE SITE. ANY REMAINING BARE SOIL THAT EXISTS AFTER THE STOCKPILE HAS BEEN REMOVED SHALL BE COVERED UNTIL A NATURAL GROUND COVER IS ESTABLISHED OR IT IS SEEDED OR PLANTED TO PROVIDE GROUND COVER PRIOR TO THE FALL RAINY SEASON.
- EXCESS OR WASTE CONCRETE MUST NOT BE WASHED INTO THE PUBLIC RIGHT-OF-WAY OR ANY OTHER DRAINAGE SYSTEM. PROVISIONS SHALL BE MADE TO RETAIN CONCRETE WASTES ON SITE UNTIL THEY CAN BE DISPOSED OF AS SOLID WASTE.
- TRASH AND CONSTRUCTION RELATED SOLID WASTES MUST BE DEPOSITED INTO A COVERED RECEPTACLE TO PREVENT CONTAMINATION AND DISPERSAL BY WIND

**EROSION CONTROL NOTES CONTINUED:**

- FUELS, OILS, SOLVENTS AND OTHER TOXIC MATERIALS MUST BE STORED IN ACCORDANCE WITH THEIR LISTING AND ARE NOT TO CONTAMINATE THE SOIL AND SURFACE WATERS. ALL APPROVED STORAGE CONTAINERS ARE TO BE PROTECTED FROM THE WEATHER. SPILLS MUST BE CLEANED UP IMMEDIATELY AND DISPOSED OF IN A PROPER MANNER. SPILLS MUST NOT BE WASHED INTO THE DRAINAGE SYSTEM,
- DUST CONTROL SHALL BE DONE BY WATERING AND AS OFTEN AS REQUIRED BY THE TOWN INSPECTOR.
- SILT FENCE(S) AND/OR FIBER ROLL(S) SHALL BE INSTALLED PRIOR TO SEPTEMBER 15TH AND SHALL REMAIN IN PLACE UNTIL THE LANDSCAPING GROUND COVER IS INSTALLED. CONTRACTOR SHALL CONTINUOUSLY MONITOR THESE MEASURES, FOLLOWING AND DURING ALL RAIN EVENTS, TO PUBLIC OWNED FACILITIES.

**EROSION CONTROL MEASURES:**

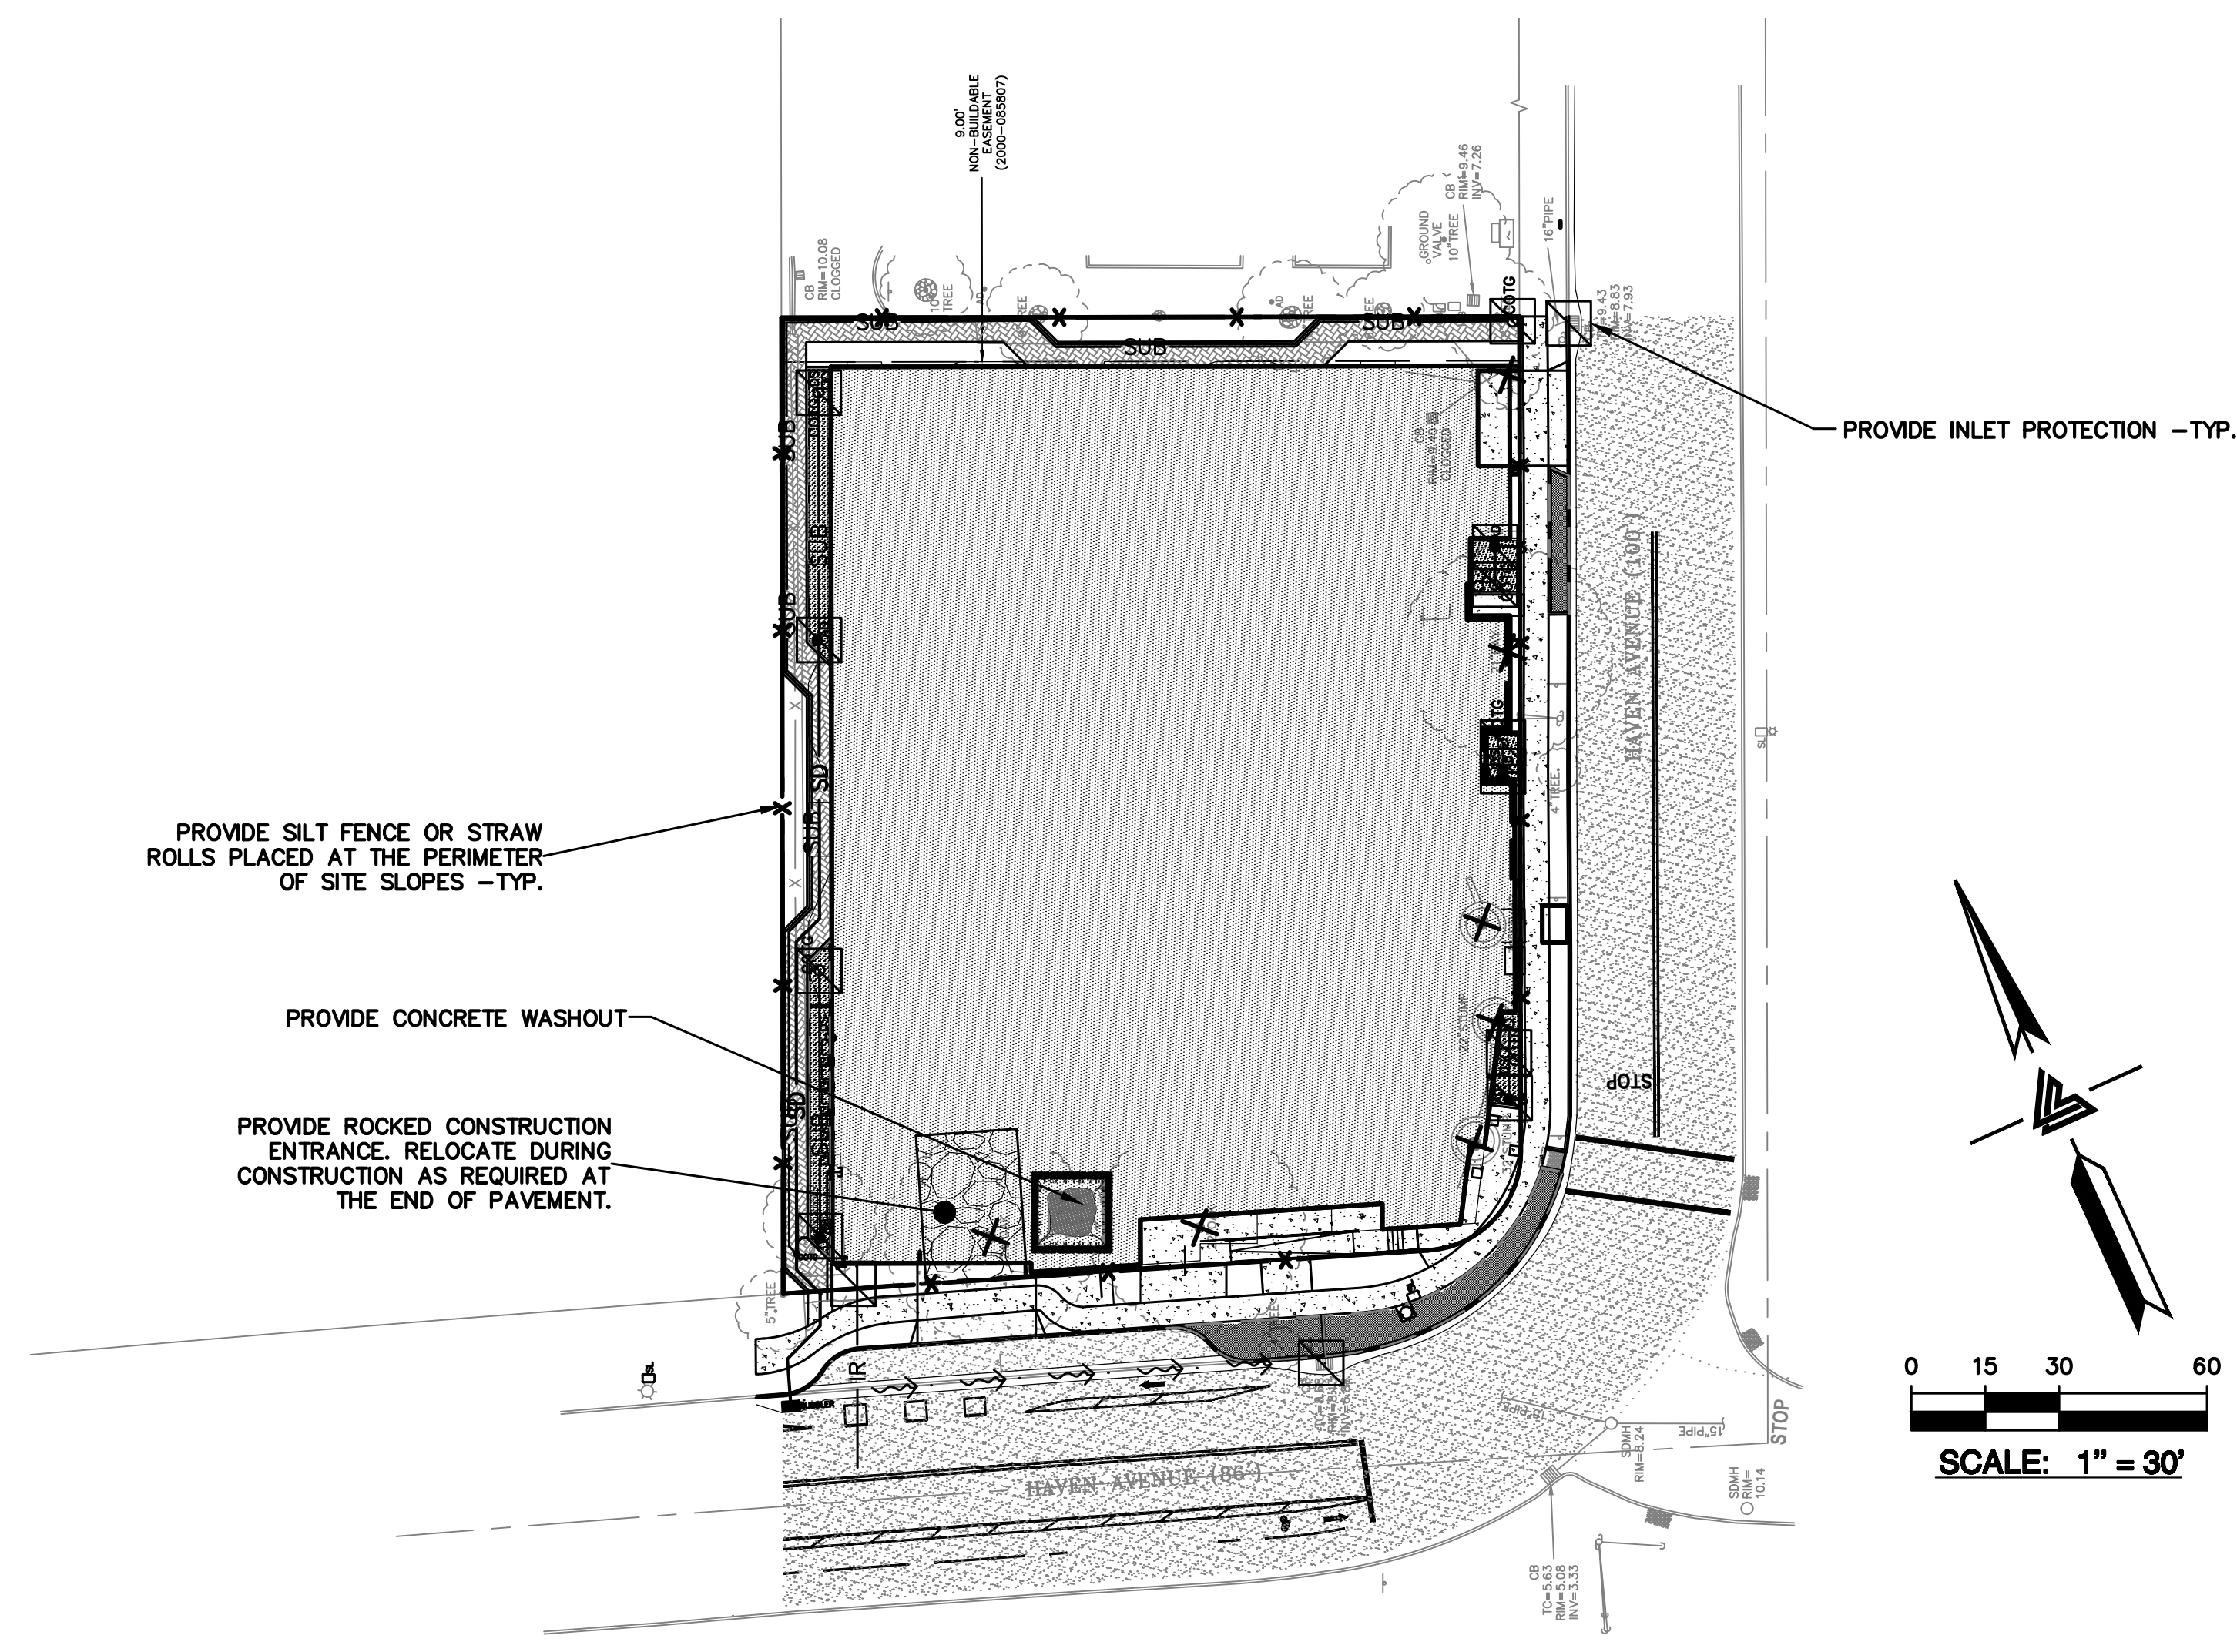

- THE FACILITIES SHOWN ON THIS PLAN ARE DESIGNED TO CONTROL EROSION AND SEDIMENT DURING THE RAINY SEASON, OCTOBER 15TH TO APRIL 15. EROSION CONTROL FACILITIES SHALL BE IN PLACE PRIOR TO OCTOBER 15TH OF ANY YEAR. GRADING OPERATIONS DURING THE RAINY SEASON WHICH LEAVE DENUDED SLOPES SHALL BE PROTECTED WITH EROSION CONTROL MEASURES IMMEDIATELY FOLLOWING GRADING ON THE SLOPES.
- SITE CONDITIONS AT TIME OF PLACEMENT OF EROSION CONTROL MEASURES WILL VARY. APPROPRIATE ACTION INCLUDING TEMPORARY SWALES, INLETS, HYDROSEEDING, STRAW BALES, ROCK SACKS, ETC. SHALL BE TAKEN TO PREVENT EROSION AND SEDIMENTATION FROM LEAVING SITE. EROSION CONTROL MEASURES SHALL BE ADJUSTED AS THE CONDITIONS CHANGE AND THE NEED OF CONSTRUCTION SHIFT.
- CONSTRUCTION ENTRANCES SHALL BE INSTALLED PRIOR TO COMMENCEMENT OF GRADING. ALL CONSTRUCTION TRAFFIC ENTERING ONTO THE PAVED ROADS MUST CROSS THE STABILIZED CONSTRUCTION ENTRANCES. CONTRACTOR SHALL MAINTAIN STABILIZED ENTRANCE AT EACH VEHICLE ACCESS POINT TO EXISTING PAVED STREETS. ANY MUD OR DEBRIS TRACKED ONTO PUBLIC STREETS SHALL BE REMOVED DAILY AND AS REQUIRED BY THE GOVERNING AGENCY.
- ALL EXPOSED SLOPES THAT ARE NOT VEGETATED SHALL BE HYDROSEEDED. IF HYDROSEEDING IS NOT USED OR IS NOT EFFECTIVE BY OCTOBER 15, THEN OTHER IMMEDIATE METHODS SHALL BE IMPLEMENTED, SUCH AS EROSION CONTROL BLANKETS, OR A THREE-STEP APPLICATION OF 1) SEED, MULCH, FERTILIZER 2) BLOWN STRAW 3) TACKIFIER AND MULCH. HYDROSEEDING SHALL BE IN ACCORDANCE WITH THE PROVISIONS OF SECTION 20" EROSION CONTROL AND HIGHWAY PLANTING" OF THE STANDARD SPECIFICATION OF THE STATE OF CALIFORNIA DEPARTMENT OF TRANSPORTATION, AS LAST REVISED. REFER TO THE EROSION CONTROL SECTION OF THE GRADING SPECIFICATIONS THAT ARE A PART OF THIS PLAN SET FOR FURTHER INFORMATION.
- INLET PROTECTION SHALL BE INSTALLED AT OPEN INLETS TO PREVENT SEDIMENT FROM ENTERING THE STORM DRAIN SYSTEM. INLETS NOT USED IN CONJUNCTION WITH EROSION CONTROL ARE TO BE BLOCKED TO PREVENT ENTRY OF SEDIMENT. MINIMUM INLET PROTECTION SHALL CONSIST OF A ROCK SACKS OR AS SHOWN ON THIS PLAN
- THIS EROSION AND SEDIMENT CONTROL PLAN MAY NOT COVER ALL THE SITUATIONS THAT MAY ARISE DURING CONSTRUCTION DUE TO UNANTICIPATED FIELD CONDITIONS. VARIATIONS AND ADDITIONS MAY BE MADE TO THIS PLAN IN THE FIELD. A REPRESENTATIVE OF LEA & BRAZE ENGINEERING SHALL PERFORM A FIELD REVIEW AND MAKE RECOMMENDATIONS AS NEEDED. CONTRACTOR IS RESPONSIBLE TO NOTIFY LEA & BRAZE ENGINEERING AND THE GOVERNING AGENCY OF ANY CHANGES.
- THE EROSION CONTROL MEASURES SHALL CONFORM TO THE LOCAL JURISDICTION'S STANDARDS AND THE APPROVAL OF THE LOCAL JURISDICTION'S ENGINEERING DEPARTMENT.
- STRAW ROLLS SHALL BE PLACED AT THE TOE OF SLOPES AND ALONG THE DOWN SLOPE PERIMETER OF THE PROJECT. THEY SHALL BE PLACED AT 25 FOOT INTERVALS ON GRADED SLOPES. PLACEMENT SHALL RUN WITH THE CONTOURS AND ROLLS SHALL BE TIGHTLY END BUTTED. CONTRACTOR SHALL REFER TO MANUFACTURER'S SPECIFICATIONS FOR PLACEMENT AND INSTALLATION INSTRUCTIONS.

**REFERENCES:**

- CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD'S FIELD MANUAL FOR EROSION AND SEDIMENTATION CONTROL
- CALIFORNIA STORM WATER QUALITY ASSOCIATION BEST MANAGEMENT PRACTICES HANDBOOK FOR CONSTRUCTION

**PERIODIC MAINTENANCE:**

- MAINTENANCE IS TO BE PERFORMED AS FOLLOWS:
  - DAMAGES CAUSED BY SOIL EROSION OR CONSTRUCTION SHALL BE REPAIRED AT THE END OF EACH WORKING DAY.
  - SWALES SHALL BE INSPECTED PERIODICALLY AND MAINTAINED AS NEEDED.
  - SEDIMENT TRAPS, BERMS, AND SWALES ARE TO BE INSPECTED AFTER EACH STORM AND REPAIRS MADE AS NEEDED.
  - SEDIMENT SHALL BE REMOVED AND SEDIMENT TRAP RESTORED TO ITS ORIGINAL DIMENSIONS WHEN SEDIMENT HAS ACCUMULATED TO A DEPTH OF 1" FOOT.
  - SEDIMENT REMOVED FROM TRAP SHALL BE DEPOSITED IN A SUITABLE AREA AND IN SUCH A MANNER THAT IT WILL NOT ERODE.
  - RILLS AND GULLIES MUST BE REPAIRED.
- GRAVEL BAG INLET PROTECTION SHALL BE CLEANED OUT WHENEVER SEDIMENT DEPTH IS ONE HALF THE HEIGHT OF ONE GRAVEL BAG.
- STRAW ROLLS SHALL BE PERIODICALLY CHECKED TO ASSURE PROPER FUNCTION AND CLEANED OUT WHENEVER THE SEDIMENT DEPTH REACHED HALF THE HEIGHT OF THE ROLL.
- SILT FENCE SHALL BE PERIODICALLY CHECKED TO ASSURE PROPER FUNCTION AND CLEANED OUT WHENEVER THE SEDIMENT DEPTH REACHES ONE FOOT IN HEIGHT.
- CONSTRUCTION ENTRANCE SHALL BE REGRAVELED AS NECESSARY FOLLOWING SILT/SOIL BUILDUP.
- ANY OTHER EROSION CONTROL MEASURES SHOULD BE CHECKED AT REGULAR INTERVALS TO ASSURE PROPER FUNCTION

**EROSION CONTROL LEGEND**

**NOTE:**  
SEAL ALL OTHER INLETS NOT INTENDED TO ACCEPT STORM WATER AND DIRECT FLOWS TEMPORARILY TO FUNCTIONAL SEDIMENTATION BASIN INLETS. -TYP

2 STREET INLET PROTECTION  
ER-2 NTS

3 CONCRETE WASHOUT  
ER-2 NTS

NOTES:  
ACTUAL LAYOUT DETERMINED IN FIELD.  
THE CONCRETE WASHOUT SIGN SHALL BE INSTALLED WITHIN 10' OF THE TEMPORARY CONCRETE WASHOUT FACILITY.

4 CONSTRUCTION ENTRANCE  
ER-2 NTS

NOTES:  
STABILIZED CONSTRUCTION SITE ACCESS SHALL BE CONSTRUCTED OF 3" TO 4" WASHED, FRACTURED STONE AGGREGATE.  
MATERIAL SHALL BE PLACED TO A MINIMUM THICKNESS OF 12". LENGTH OF ENTRANCE SHALL BE A MINIMUM OF 50'.  
WIDTH SHALL BE A MIN. OF 15' OR GREATER IF NECESSARY TO COVER ALL VEHICULAR INGRESS AND EGRESS. PROVIDE AMPLE TURNING RADIUS.  
THE ENTRANCE SHALL BE KEPT IN GOOD CONDITION BY OCCASIONAL TOP DRESSING WITH MATERIAL AS SPECIFIED IN ABOVE NOTE.  
ACCESSES SHALL BE INSPECTED WEEKLY DURING PERIODS OF HEAVY USAGE, MONTHLY DURING NORMAL USAGE, AND AFTER EACH RAINFALL, WITH MAINTENANCE PROVIDED AS NECESSARY.  
PERIODIC TOP DRESSING SHALL BE DONE AS NEEDED.

5 STRAW ROLLS FLAT LOT  
ER-2 NTS

NOTE:  
1. STRAW ROLL INSTALLATION REQUIRES THE PLACEMENT AND SECURE STAKING OF THE ROLL IN A TRENCH, 3" TO 5" DEEP, DUG ON CONTOUR. RUNOFF MUST NOT BE ALLOWED TO RUN UNDER OR AROUND ROLL.  
2. CONTRACTOR IS RESPONSIBLE FOR REGULAR MAINTENANCE AND INSPECTION. THE SILT SHALL BE CLEANED OUT WHEN IT REACHES HALF THE HEIGHT OF THE ROLL.

6 EXISTING TREE PROTECTION DETAIL  
ER-2 NTS

NOTE:  
REFER TO LANDSCAPE ARCHITECTURAL PLANS FOR ADDITIONAL TREE PROTECTION INFORMATION.  
NOTE:  
LOCAL JURISDICTION MIGHT HAVE MORE STRINGENT REQUIREMENTS. CONTRACTOR IS RESPONSIBLE FOR COORDINATING W/ INSPECTOR TO ENSURE PROPER PROCEDURES ARE BEING FOLLOWED.

7 SILT FENCE  
ER-2 NTS

NOTE:  
PREMANUFACTURED SILT FENCE PRODUCTS MAY BE USED IN LIEU OF WIRE FENCE. INSTALL PER MANUFACTURER'S RECOMMENDATIONS AND MAINTAIN KEYING OF FABRIC PER THIS DETAIL.

NOTE:  
IT IS ESSENTIAL THAT THE WIRE/FABRIC BE FULLY EMBEDDED INTO THE GROUND SO RUN-OFF CANNOT FLOW FREELY UNDER FENCE.

# Construction Best Management Practices (BMPs)

Construction projects are required to implement the stormwater best management practices (BMP) on this page, as they apply to your project, all year long.

## Materials & Waste Management

### Non-Hazardous Materials

- Berm and cover stockpiles of sand, dirt or other construction material with tarps when rain is forecast or if not actively being used within 14 days.
- Use (but don't overuse) reclaimed water for dust control.

### Hazardous Materials

- Label all hazardous materials and hazardous wastes (such as pesticides, paints, thinners, solvents, fuel, oil, and antifreeze) in accordance with city, county, state and federal regulations.
- Store hazardous materials and wastes in water tight containers, store in appropriate secondary containment, and cover them at the end of every work day or during wet weather or when rain is forecast.
- Follow manufacturer's application instructions for hazardous materials and be careful not to use more than necessary. Do not apply chemicals outdoors when rain is forecast within 24 hours.
- Arrange for appropriate disposal of all hazardous wastes.

### Waste Management

- Cover waste disposal containers securely with tarps at the end of every work day and during wet weather.
- Check waste disposal containers frequently for leaks and to make sure they are not overfilled. Never hose down a dumpster on the construction site.
- Clean or replace portable toilets, and inspect them frequently for leaks and spills.
- Dispose of all wastes and debris properly. Recycle materials and wastes that can be recycled (such as asphalt, concrete, aggregate base materials, wood, gyp board, pipe, etc.)
- Dispose of liquid residues from paints, thinners, solvents, glues, and cleaning fluids as hazardous waste.

### Construction Entrances and Perimeter

- Establish and maintain effective perimeter controls and stabilize all construction entrances and exits to sufficiently control erosion and sediment discharges from site and tracking off site.
- Sweep or vacuum any street tracking immediately and secure sediment source to prevent further tracking. Never hose down streets to clean up tracking.

## Equipment Management & Spill Control

### Maintenance and Parking

- Designate an area, fitted with appropriate BMPs, for vehicle and equipment parking and storage.
- Perform major maintenance, repair jobs, and vehicle and equipment washing off site.
- If refueling or vehicle maintenance must be done onsite, work in a bermed area away from storm drains and over a drip pan or drop cloths big enough to collect fluids. Recycle or dispose of fluids as hazardous waste.
- If vehicle or equipment cleaning must be done onsite, clean with water only in a bermed area that will not allow rinse water to run into gutters, streets, storm drains, or surface waters.
- Do not clean vehicle or equipment onsite using soaps, solvents, degreasers, or steam cleaning equipment.

### Spill Prevention and Control

- Keep spill cleanup materials (e.g., rags, absorbents and cat litter) available at the construction site at all times.
- Inspect vehicles and equipment frequently for and repair leaks promptly. Use drip pans to catch leaks until repairs are made.
- Clean up spills or leaks immediately and dispose of cleanup materials properly.
- Do not hose down surfaces where fluids have spilled. Use dry cleanup methods (absorbent materials, cat litter, and/or rags).
- Sweep up spilled dry materials immediately. Do not try to wash them away with water, or bury them.
- Clean up spills on dirt areas by digging up and properly disposing of contaminated soil.
- Report significant spills immediately. You are required by law to report all significant releases of hazardous materials, including oil. To report a spill: 1) Dial 911 or your local emergency response number, 2) Call the Governor's Office of Emergency Services Warning Center, (800) 852-7550 (24 hours).

## Earthmoving

- Schedule grading and excavation work during dry weather.
- Stabilize all denuded areas, install and maintain temporary erosion controls (such as erosion control fabric or bonded fiber matrix) until vegetation is established.
- Remove existing vegetation only when absolutely necessary, and seed or plant vegetation for erosion control on slopes or where construction is not immediately planned.
- Prevent sediment from migrating offsite and protect storm drain inlets, gutters, ditches, and drainage courses by installing and maintaining appropriate BMPs, such as fiber rolls, silt fences, sediment basins, gravel bags, berms, etc.
- Keep excavated soil on site and transfer it to dump trucks on site, not in the streets.

### Contaminated Soils

- If any of the following conditions are observed, test for contamination and contact the Regional Water Quality Control Board:
  - Unusual soil conditions, discoloration, or odor.
  - Abandoned underground tanks.
  - Abandoned wells
  - Buried barrels, debris, or trash.

## Paving/Asphalt Work

- Avoid paving and seal coating in wet weather or when rain is forecast, to prevent materials that have not cured from contacting stormwater runoff.
- Cover storm drain inlets and manholes when applying seal coat, tack coat, slurry seal, fog seal, etc.
- Collect and recycle or appropriately dispose of excess abrasive gravel or sand. Do NOT sweep or wash it into gutters.
- Do not use water to wash down fresh asphalt concrete pavement.

### Sawcutting & Asphalt/Concrete Removal

- Protect nearby storm drain inlets when saw cutting. Use filter fabric, catch basin inlet filters, or gravel bags to keep slurry out of the storm drain system.
- Shovel, absorb, or vacuum saw-cut slurry and dispose of all waste as soon as you are finished in one location or at the end of each work day (whichever is sooner!).
- If sawcut slurry enters a catch basin, clean it up immediately.

## Concrete, Grout & Mortar Application

- Store concrete, grout, and mortar away from storm drains or waterways, and on pallets under cover to protect them from rain, runoff, and wind.
- Wash out concrete equipment/trucks offsite or in a designated washout area, where the water will flow into a temporary waste pit, and in a manner that will prevent leaching into the underlying soil or onto surrounding areas. Let concrete harden and dispose of as garbage.
- When washing exposed aggregate, prevent washwater from entering storm drains. Block any inlets and vacuum gutters, hose washwater onto dirt areas, or drain onto a bermed surface to be pumped and disposed of properly.

## Landscaping

- Protect stockpiled landscaping materials from wind and rain by storing them under tarps all year-round.
- Stack bagged material on pallets and under cover.
- Discontinue application of any erodible landscape material within 2 days before a forecast rain event or during wet weather.

## Painting & Paint Removal

### Painting Cleanup and Removal

- Never clean brushes or rinse paint containers into a street, gutter, storm drain, or stream.
- For water-based paints, paint out brushes to the extent possible, and rinse into a drain that goes to the sanitary sewer. Never pour paint down a storm drain.
- For oil-based paints, paint out brushes to the extent possible and clean with thinner or solvent in a proper container. Filter and reuse thinners and solvents. Dispose of excess liquids as hazardous waste.
- Paint chips and dust from non-hazardous dry stripping and sand blasting may be swept up or collected in plastic drop cloths and disposed of as trash.
- Chemical paint stripping residue and chips and dust from marine paints or paints containing lead, mercury, or tributyltin must be disposed of as hazardous waste. Lead based paint removal requires a state-certified contractor.

## Dewatering

- Discharges of groundwater or captured runoff from dewatering operations must be properly managed and disposed. When possible send dewatering discharge to landscaped area or sanitary sewer. If discharging to the sanitary sewer call your local wastewater treatment plant.
- Divert run-on water from offsite away from all disturbed areas.
- When dewatering, notify and obtain approval from the local municipality before discharging water to a street gutter or storm drain. Filtration or diversion through a basin, tank, or sediment trap may be required.
- In areas of known or suspected contamination, call your local agency to determine whether the ground water must be tested. Pumped groundwater may need to be collected and hauled off-site for treatment and proper disposal.

**Storm drain polluters may be liable for fines of up to \$10,000 per day!**

**TREE PROTECTION NOTES:**

- 6" LAYER OF COARSE MULCH OR WOODCHIPS IS TO BE PLACED BENEATH THE DRIPLINE OF THE PROTECTED TREES. MULCH IS TO BE KEPT 12" FROM THE TRUNK.
- A PROTECTIVE BARRIER OF 6' CHAIN LINK FENCING SHALL BE INSTALLED AROUND THE DRIPLINE OF PROTECTED TREE(S), "TPZ".
- AVOID THE FOLLOWING CONDITIONS:  
DO NOT:
  - ALLOW RUN OFF OF SPILLAGE OF DAMAGING MATERIALS INTO THE AREA BELOW ANY TREE CANOPY.
  - STORE MATERIALS, STOCKPILE SOIL, OR PARK OR DRIVE VEHICLES WITHIN THE TPZ.
  - CUT, BREAK, SKIN, OR BRUISE ROOTS, BRANCHES, OR TRUNKS WITHOUT FIRST OBTAINING AUTHORIZATION FROM THE CITY ARBORIST.
  - ALLOW FIRES UNDER AND ADJACENT TO TREES.
  - DISCHARGE EXHAUST INTO FOLIAGE.
  - SECURE CABLE, CHAIN, OR ROPE TO TREES OR SHRUBS.
  - TRENCH, DIG, OR OTHERWISE EXCAVATE WITHIN THE DRIPLINE OR TPZ OF THE TREE(S) WITHOUT FIRST OBTAINING AUTHORIZATION FROM THE CITY ARBORIST.
  - APPLY SOIL STERILANTS UNDER PAVEMENT NEAR EXISTING TREES.
- ONLY EXCAVATION BY HAND OR COMPRESSED AIR SHALL BE ALLOWED WITHIN THE DRIPLINE OF TREES. MACHINE TRENCHING SHALL NOT BE ALLOWED.
- AVOID INJURY TO TREE ROOTS.
- ROUTE PIPES OUTSIDE OF THE AREA THAT IS 10 TIMES THE DIAMETER OF A PROTECTED TREE TO AVOID CONFLICT WITH ROOTS.
- ANY DAMAGE DUE TO CONSTRUCTION ACTIVITIES SHALL BE REPORTED TO THE PROJECT ARBORIST OR CITY ARBORIST WITHIN SIX HOURS SO THAT REMEDIAL ACTION CAN BE TAKEN.
- AN ISA CERTIFIED ARBORIST OR ASCA REGISTERED CONSULTING ARBORIST SHALL BE RETAINED AS THE PROJECT ARBORIST TO MONITOR THE TREE PROTECTION SPECIFICATIONS.

- LEGEND**
- EXISTING TREE TO BE REMOVE
  - EXISTING TREE TO REMAIN & PROTECTED

## PLANT IMAGERY TREES

## SHRUBS, GRASSES & PERENNIALS

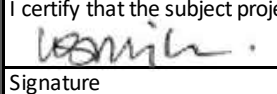

## IRRIGATION DESIGN INTENT

- THESE PLANT SHALL COMPLY WITH THE REQUIREMENTS OF THE STATE OF CALIFORNIA'S MODEL WATER EFFICIENT LANDSCAPE ORDINANCE (MWELO), AND THE CITY OF MENLO PARK DESIGN GUIDELINES.
- IRRIGATION WITHIN PUBLIC RIGHT OF WAY SHALL COMPLY WITH CITY STANDARD DETAILS LS-1 THROUGH LS-19 AND SHALL BE CONNECTED TO THE ON-SITE WATER SYSTEM.
- THE IRRIGATION SYSTEM SHALL BE DESIGNED TO PROVIDE THE MINIMUM AMOUNT OF WATER NECESSARY TO SUSTAIN GOOD PLANT HEALTH.
- THE IRRIGATION SYSTEM IS TO BE A FULLY AUTOMATIC, WEATHER-BASED SYSTEM USING RAIN SENSOR, LOW FLOW DRIP AND BUBBLER DISTRIBUTION, AND SPRINKLERS WITH MATCHED PRECIPITATION RATE NOZZLES DESIGNED FOR HEAD-TO-HEAD COVERAGE.
- IRRIGATION CONTROLLER DO NOT LOSE PROGRAMMING DATA WHEN POWER SOURCE IS INTERRUPTED.
- ALL SELECTED COMPONENTS SHALL BE PERMANENT, COMMERCIAL GRADE, SELECTED FOR DURABILITY, VANDAL RESISTANCE, AND MINIMUM MAINTENANCE REQUIREMENT.
- THE SYSTEM SHALL INCLUDE A MANUAL SHUT-OFF VALVE, PRESSURE REGULATOR, MASTER CONTROL VALVE, AND FLOW SENSING CAPABILITY WHICH WILL SHUT DOWN ALL OR PART OF THE SYSTEM IF LEAKS ARE DETECTED.
- THE IRRIGATION SYSTEM SHALL BE DESIGNED TO DELIVER WATER TO HYDROZONES BASED ON MOISTURE REQUIREMENTS OF THE PLANT GROUPING.

## PLANTING DESIGN INTENT

- ALL TREES WITHIN 5' OF PAVEMENT SHALL USE TREE ROOT BARRIERS.
- ALL TREES, EXISTING AND PROPOSED, SHALL BE A MINIMUM OF FIVE (5) FEET FROM ANY EXISTING OR PROPOSED ELECTRIC DEPARTMENT FACILITIES. EXISTING TREES IN CONFLICT WILL HAVE TO BE REMOVED. TREES SHALL NOT BE PLANTED IN PUE'S OR ELECTRIC EASEMENTS.
- THE PLANTING DESIGN SHALL UTILIZE A VARIETY OF MEDITERRANEAN-STYLE, NATIVE, AND DROUGHT-TOLERANT PLANT SPECIES TO CREATE LAYERS OF COLOR AND TEXTURE TO COMPLEMENT THE ARCHITECTURE AND SETTING.
- PLANT SPECIES SHALL BE SELECTED BASED ON LOCAL CLIMATE SUITABILITY, DISEASE AND PEST RESISTANCE, AND WATER-USE AS LISTED IN THE STATE OF CALIFORNIA'S MODEL WATER EFFICIENT LANDSCAPE ORDINANCE (MWELO) PLANT LIST, WUCOLS IV.
- 80% OF PLANT MATERIAL TO BE NATIVE OR LOW WATER USE AND FOLLOW MWELO GUIDELINES.
- TURF/LAWN SHALL NOT EXCEED 10% OF THE LANDSCAPE AREA. TURF SPECIES, IF INCLUDED, SHALL BE A FESCUE-BLEND TURF GRASS TO MINIMIZE WATER CONSUMPTION.
- NO PLANT CONSIDERED INVASIVE IN THE REGION AS LISTED BY THE CAL-IPC WILL BE USED.
- THE PLANTING DESIGN SHALL ALLOW FOR THE PLANTS TO REACH THEIR NATURAL, FULL-GROWN SIZE TO ELIMINATE THE NEED FOR EXCESSIVE PRUNING OR HEDGING.
- PLANTS SHALL BE GROUPED IN HYDROZONES BASED ON WATER USE AND EXPOSURE.
- TREE LOCATIONS SHALL BE DESIGNED FOR MAXIMUM AESTHETIC EFFECTS AND PASSIVE SOLAR BENEFITS, CREATING SUMMER SHADE AND WINTER SUN EXPOSURE.
- ALL PLANTING AREAS SHALL RECEIVE A 3-INCH LAYER OF MULCH.

City of Menlo Park - Water Efficient Landscape Ordinance (WELO) Landscape Application Checklist			
Page 1 of 2			
I certify that the subject project meets the specified requirements of the Water Conservation in Landscaping Ordinance.			
Signature: 		Date: 7/29/2022

**PROJECT NOTES:**

- FIELD ADJUST SERVICES TO MINIMIZE INTERFERENCE WITH EXISTING FACILITIES (TYPICAL).
- CONTRACTOR SHALL PERFORM ALL TRENCHING, EXCAVATING, BACKFILLING AND OTHER WORK AS SHOWN OR NOTED ON PLANS, AND AS SPECIFIED ON UTILITY BID DOCUMENTS.
- FIELD ADJUST SPLICE BOXES TO KEEP CLEAR OF SIDEWALK, DRIVEWAYS AND EXISTING FACILITIES (TYPICAL).
- A 3 FOOT LEVEL WORKING AREA MUST BE MAINTAINED AROUND ALL ELECTRIC ENCLOSURES. PRIOR TO ENERGIZING THE SYSTEM, THE ELECTRIC UTILITY COMPANY INSPECTOR WILL DETERMINE IF RETAINING WALLS ARE REQUIRED TO MEET MINIMUM CLEARANCE BETWEEN ENCLOSURES AND THE TOPS OR TOES OF SLOPES. IF RETAINING WALLS ARE REQUIRED, THE DEVELOPER AND/OR CONTRACTOR SHALL OBTAIN THE NECESSARY PERMITS FROM THE CITY/COUNTY BUILDING DEPARTMENT PRIOR TO WALL CONSTRUCTION.
- TRANSITION TO VAULTS FROM TRENCH NOT SHOWN, SEE TRANSITION DETAIL SHEET JT3 (TYPICAL).
- CONTRACTOR SHALL PLACE ALL UTILITY SPLICE BOXES, ENCLOSURES & CONDUIT IN PROPER RELATIONSHIP TO FINAL GRADE (SHOWN SCHEMATICALLY).
- ALL PG&E, TELEPHONE, CABLE T.V. AND FIBER OPTIC BOXES AND JOINT TRENCH FACILITIES ARE TO MAINTAIN A MINIMUM OF 3' SEPARATION FROM SEWER, WATER LATERALS AND DRIVEWAYS.
- CONTRACTOR SHALL COORDINATE ALL CONNECTIONS BETWEEN PROPOSED AND EXISTING FACILITIES AS DIRECTED BY THE RESPECTIVE UTILITY COMPANY INSPECTOR. UTILITY COMPANY PERSONNEL SHALL MAKE ALL "HOT TIE-INS"; THE CONTRACTOR IS PROHIBITED FROM WORKING IN ANY ENERGIZED FACILITIES.
- THE CONTRACTOR SHALL OBTAIN THE APPROPRIATE STREET EXCAVATION AND ENCROACHMENT PERMIT(S) FROM THE CITY/COUNTY PRIOR TO STARTING WORK IN THE PUBLIC STREET AREA.
- FIELD LOCATE JOINT TRENCH FACILITIES TO KEEP CLEAR OF SERVICE LATERALS. SERVICE LATERALS TO BE ROUTED TO AVOID SPLICE BOX (ADDITIONAL P.U.E MAY BE REQUIRED).
- RESPECTIVE UTILITY COMPANY TO OBTAIN CITY APPROVAL OF ALL ABOVE GROUND EQUIPMENT.
- UNLESS OTHERWISE SHOWN ON THE PLANS, NATURAL BENDS SHALL BE USED FOR ALL CONDUIT EXCEPT STREET LIGHT CONDUIT.
- INCIDENTAL TRENCHING TO SPLICE BOXES NOT SHOWN (TYPICAL). CONTRACTOR TO PROVIDE ADDITIONAL TRENCHING AS REQUIRED FOR CONDUIT ROUTING TO SPLICE BOXES AND CABINETS (TYPICAL).
- ALL CONDUITS SHALL ENTER OR EXIT PERPENDICULAR TO BOX WALLS.
- ALL CONDUITS MUST BE MANDREL TESTED AND APPROVED.
- OFFSET SPLICE BOXES TO ROUTE TELEPHONE/FIBER OPTIC CONDUIT AS NEEDED (TYPICAL).
- PULL ROPES SHALL BE PLACED IN ALL EMPTY CONDUITS AS REQUIRED BY EACH UTILITY COMPANY.
- ALL PG&E SPLICE BOXES ADJACENT TO TRANSFORMER SHALL BE 26" IN DEPTH (TYPICAL).
- ALL CONDUITS NOT ENTERING SPLICE BOXES OR ENCLOSURES SHALL BE CAPPED.
- COORDINATE TIE-IN WITH UTILITY COMPANY AS REQUIRED.
- THE STREET LIGHT SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH THE "MATERIAL AND LABOR RECAP" AND LIGHT SCHEDULE AS SHOWN ON THESE PLANS.
- ALL EXISTING DUCTS TO BE USED IN THESE PLANS SHALL BE "VERIFIED" BY PULLING A MANDREL THROUGH THE ENTIRE EXISTING LENGTH PRIOR TO CONNECTION.
- EDGE OF SPLICE BOXES & PEDESTALS SHALL BE 5' FROM EDGE OF FIRE HYDRANT AND 3' FROM STREET LIGHT (TYPICAL). CONTRACTOR TO AVOID DISTURBING FIRE HYDRANT THRUST BLOCK.
- ALL UTILITY SUBSTRUCTURES SHALL BE INSTALLED IN ACCORDANCE WITH THE "MATERIAL AND LABOR RECAP" SHOWN ON THESE PLANS.
- MAINTAIN 3' CLEARANCE AND LEVEL AREA AROUND PRIMARY SPLICE BOXES & XFMRs.
- DUE TO UNCERTAINTIES OF THE EXACT LOCATION OF EXISTING FACILITIES, FIELD LOCATION OF PROPOSED FACILITIES MAY BE REQUIRED. CONFIRM WITH VARIOUS UTILITIES FOR EXACT PLACEMENT.
- FOR CLARITY - BOXES/PEDESTALS ARE SHOWN AT LARGER SIZE THAN ACTUAL. FIELD ADJUST TO KEEP CLEAR OF DRIVEWAYS (TYPICAL).
- ALL SERVICE FACILITIES SHALL BE EXTENDED TO EITHER THE PROPERTY LINE OR TO POSITION SHOWN ON THE PLANS, AND THEN CAPPED, BURIED AND LOCATION STAKED.
- THESE PLANS WERE PREPARED UTILIZING PLANS RECEIVED FROM LDP ARCHITECTURE (415) 777-0561.

**GENERAL NOTES:**

- ALL JOINT TRENCH CONSTRUCTION WORK SHALL BE IN ACCORDANCE WITH PG&E UTILITY OPERATIONS UO STANDARD 55453.
- ALL WORK SHALL BE SUBJECT TO THE INSPECTION AND SATISFACTION OF ALL PARTICIPATING UTILITIES AND CITY INSPECTORS.
- BACKFILL SELECTION SHALL BE SUBJECT TO THE APPROVAL OF THE RESPECTIVE UTILITY COMPANIES, THE SOILS ENGINEER AND THE CITY AND/OR COUNTY WHERE THE PROJECT IS LOCATED. CONSULT PARTICIPATING UTILITIES, SOILS ENGINEER, AND THE CITY FOR APPROVED BACKFILL MATERIAL. COMPACTION TO MEET LOCAL AGENCIES REQUIREMENTS.
- THE BOTTOM OF THE TRENCH SHALL BE CLEARED OF ROCKS AND OTHER HARD SURFACES. DISTRIBUTION TRENCHES WITHOUT TELEPHONE CONDUIT DO NOT REQUIRE BEDDING MATERIAL. SERVICE TRENCHES WITHOUT TELEPHONE CONDUIT REQUIRE 2" SAND BEDDING AS A PAD ON WHICH UTILITY FACILITIES CAN REST. SERVICE TRENCHES CONTAINING TELEPHONE CONDUIT ONLY REQUIRE A 1" SAND BEDDING. ALL OTHER TRENCHES CONTAINING TELEPHONE CONDUIT REQUIRE A 3" SAND BEDDING. REFER TO PG&E GREEN BOOK PUBLICATION 55453, EXHIBIT B AND AT&T SPEC95 "AT&T SPECIFICATIONS" TRENCHING AND CONDUIT GUIDE FOR FURTHER INFORMATION.
- THE CONTRACTOR SHALL BE RESPONSIBLE TO REPLACE PAVEMENT AND/OR SIDEWALK WHERE REMOVED OR DAMAGED AS A RESULT OF ITS OPERATION (UNLESS OTHERWISE NOTED). REPLACEMENT OF PAVEMENT AND/OR SIDEWALK TO BE PER CITY SPECIFICATIONS.
- THE CONTRACTOR SHALL BE RESPONSIBLE TO COORDINATE AND NOTIFY ALL PARTICIPATING UTILITY INSTALLATIONS.
- THE CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ANY FIELD CHANGES MADE WITHOUT FIRST NOTIFYING TARRAR UTILITY CONSULTANTS.
- IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE EXISTENCE AND/OR PRECISE LOCATION OF ALL UNDERGROUND FACILITIES PRIOR TO THE START OF CONSTRUCTION. TARRAR UTILITY CONSULTANTS MAKES NO WARRANTY WHATSOEVER THAT THE EXISTING UNDERGROUND UTILITIES AND/OR STRUCTURES DEPICTED ON THE PLANS HAVE BEEN ACCURATELY LOCATED OR THAT THERE ARE NO OTHER UNDERGROUND UTILITIES AND STRUCTURES IN ADDITION TO WHAT HAS BEEN SHOWN. CALL U.S.A. A MINIMUM OF 48 HOURS PRIOR TO STARTING CONSTRUCTION. FOR CALIFORNIA NORTH, (KERN COUNTY AND NORTHERLY, AND NEVADA) CALL (800)227-2600. FOR CALIFORNIA SOUTH, (SAN BERNARDINO COUNTY AND SOUTHERLY) CALL (800)422-4133.
- CONTRACTOR SHALL COMPLY WITH ALL STATE, COUNTY AND CITY LAWS AND ORDINANCES AND WITH THE REGULATIONS OF THE DEPARTMENT OF INDUSTRIAL RELATIONS, O.S.H.A. AND ANY OTHER GOVERNMENTAL AGENCY RELATING TO THE SAFETY AND CHARACTER OF WORK, EQUIPMENT AND LABOR PERSONNEL.
- THE DRAWINGS AND SPECIFICATIONS SHALL BE CONSIDERED TO BE COMPLEMENTARY TO EACH OTHER. ANYTHING SHOWN ON THE DRAWINGS AND NOT MENTIONED IN THE SPECIFICATIONS, OR MENTIONED IN THE SPECIFICATIONS AND NOT SHOWN ON THE DRAWINGS, SHALL BE OF LIKE EFFECT AS IF SHOWN ON OR MENTIONED IN BOTH. IF DISCREPANCY IS FOUND, NOTIFY TARRAR UTILITY CONSULTANTS PRIOR TO STARTING WORK.
- TRENCH AND CONDUIT LAYOUTS ARE SHOWN SCHEMATICALLY.
- TRENCHING OR SUBSTRUCTURE EXCAVATION MAY NECESSITATE OPERATION OVER, UNDER, OR ADJACENT TO OTHER UNDERGROUND UTILITIES (STORM, SEWER, WATER, ETC...). THE CONTRACTOR IS RESPONSIBLE TO LOCATE, PROSPECT, EXPOSE AND PROTECT ALL ADJACENT OR CROSSING UNDERGROUND UTILITIES. THIS WORK TO PROTECT THOSE UTILITIES IS NOT CONSIDERED AS EXTRA WORK. IT IS THE CONTRACTOR'S RESPONSIBILITY TO REVIEW IMPROVEMENT PLANS, IN CONJUNCTION WITH THIS PLAN, AND BID THE WORK ACCORDINGLY.
- THE QUANTITIES SHOWN ON THESE PLANS ARE ONLY ESTIMATES OF WHAT WILL ACTUALLY BE REQUIRED FOR THE CONSTRUCTION OF THE OVERALL PROJECT. FINAL QUANTITIES MAY VARY ACCORDING TO CHANGES, ADDITIONS, DELETIONS OR OMISSIONS ON THE ORIGINAL PLAN.
- VERIFY ALL SUBSTRUCTURE EXCAVATION DIMENSIONS WITH SUPPLIER(S) BEFORE BIDDING.
- TARRAR UTILITY CONSULTANTS ASSUMES NO RESPONSIBILITY FOR ANY VARIANCE BETWEEN THESE PLANS AND THE ACTUAL FIELD CONDITIONS. THE CONTRACTOR SHOULD REVIEW THE PROJECT SITE PRIOR TO SUBMITTING ITS BID.
- THE CONTRACTOR IS REQUIRED TO EXCAVATE BELL HOLE(S) AT TIE-IN LOCATIONS AS DIRECTED BY PARTICIPATING UTILITY.
- CONTRACTOR WILL COMPLY WITH ALL LAWS, ORDINANCES AND REGULATIONS. CONTRACTOR SHALL BE FAMILIAR WITH O.S.H.A. INDUSTRIAL ORDERS AND SHALL CONDUCT HIS WORK ACCORDINGLY. WHEN WORKING ENERGIZED EQUIPMENT, THE UTILITY OWNER SHALL BE NOTIFIED TO SUPPLY THE APPROPRIATE MAN POWER AND SAFETY PRECAUTIONS AS NEEDED. THE CONTRACTOR IS RESPONSIBLE FOR PUBLIC SAFETY AND TRAFFIC CONTROL MEASURES.
- THE CONTRACTOR IS RESPONSIBLE TO PROVIDE AS-BUILT DRAWINGS AFTER INSTALLATION OF PG&E'S GAS AND ELECTRIC SYSTEMS (PRIOR TO "HOT TIE-INS").
- THE CITY INSPECTOR SHALL BE NOTIFIED TWO WORKING DAYS PRIOR TO COMMENCEMENT OF WORK. COORDINATE WITH THE INSPECTOR ANY SERVICES TO BE ABANDONED.
- THE CONTRACTOR IS TO VERIFY THE RIGHT OF WAY, PUBLIC UTILITY EASEMENT AND/OR PUBLIC SERVICE EASEMENT ACQUISITION WITH THE APPLICANT PRIOR TO CONSTRUCTION WITHIN AREAS OF QUESTION.
- PG&E'S GENERAL TERM AND CONDITIONS FOR GAS AND ELECTRIC EXTENSION AND SERVICE CONSTRUCTION BY "APPLICANT" (EFFECTIVE 07/1/95) TO BE UTILIZED FOR ALL TRENCHING, BACKFILLING, AND INSTALLATION WORK.
- IN THE EVENT OF DISPUTES OR DISAGREEMENT OVER ANY INSTALLATIONS, DESIGNS, PLANS OR DRAWINGS, THE SPECIFICATIONS AND REQUIREMENTS OF THE INDIVIDUAL UTILITY COMPANIES AND THEIR INSPECTORS SHALL TAKE PRECEDENCE. IN CASE OF DISCREPANCIES WITHIN THE DRAWINGS AND SPECIFICATIONS HEREIN, THE CONTRACTOR SHALL CONSULT TARRAR UTILITY CONSULTANTS FOR INTERPRETATION BEFORE WORK IS STARTED.
- TARRAR UTILITY CONSULTANTS HEREIN, ASSUMES NO RESPONSIBILITY WHATSOEVER FOR THE QUALITY, QUANTITY OR TIMING OF WORK TO BE PERFORMED BY THE CONTRACTOR, UTILITY COMPANY CONSTRUCTION CREWS, OR OTHER SUB-CONTRACTOR OF DEVELOPER.
- ALL TRENCHING, BACKFILLING AND INSTALLATION WORK IS TO BE IN ACCORDANCE WITH THE STANDARD PRACTICES AND SPECIFICATIONS OF EACH UTILITY COMPANY PARTICIPATING IN THE UTILITY TRENCHES WITHIN THE PROJECT.
- THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING POINTS OF ACCESS THAT ARE AGREEABLE TO ADJACENT LAND USES AND TENANTS AT ALL TIMES.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR ASCERTAINING WHAT INSPECTIONS WILL BE REQUIRED FOR APPROVAL OF THE WORK AND FOR COORDINATING ALL SUCH INSPECTIONS. THE CONTRACTOR SHALL GIVE AT LEAST 48 HOURS PRIOR NOTICE TO THE CITY, SOILS ENGINEER, UTILITY COMPANIES OR ANY OTHER INDIVIDUALS OR PUBLIC AGENCIES, THAT THE WORK IS READY FOR INSPECTION.
- THE CONTRACTOR SHALL NOTIFY DEVELOPER 48 HOURS PRIOR TO THE NEED FOR SURVEY STAKING. THE CONTRACTOR IS RESPONSIBLE FOR THE PRESERVATION OF ALL CONSTRUCTION STAKING SET BY THE DEVELOPER'S SURVEYORS AND WILL BE BACK CHARGED FOR ANY RE-STAKING THAT IS REQUIRED. ANY EXTRA CONSTRUCTION STAKING NECESSITATED SOLELY BY THE CONTRACTOR'S NEGLIGENCE WILL BE CHARGED TO AND PAID FOR BY THE CONTRACTOR.
- ALL TRANSFORMERS AND TRANSFORMER PADS ARE TO BE INSTALLED PER PG&E SPECIFICATIONS. PROTECTIVE BOLLARDS ARE TO BE PLACED WHERE NEEDED.
- THE CONTRACTOR SHALL MAKE HIMSELF FAMILIAR WITH THE PROJECT IMPROVEMENT PLANS AND CONDUCT HIS WORK ACCORDINGLY.
- KEEP ALL BOXES AND PEDESTALS WITHIN PUBLIC UTILITY EASEMENTS OR RIGHT OF WAY. AS SHOWN.
- ALL SAND BACKFILL MUST HAVE TESTING OF PH LEVEL AS WELL AS SAND EQUIVALENT. SEE CITY OF MENLO PARK REQUIREMENTS.
- THE PROPOSED CONSTRUCTION OPERATION MAY TAKE PLACE AT OR NEAR FENCE LINES, PROPERTY LINES AND PROPERTY IMPROVEMENTS PRIOR TO CONSTRUCTION, CONTRACTOR SHALL BE RESPONSIBLE FOR IDENTIFYING THESE AREAS AND FOR MAINTAINING THESE AREAS AND FACILITIES AT ALL TIMES DURING THE CONSTRUCTION OPERATION.
- THE CONTRACTOR ASSUMES SOLE AND COMPLETE RESPONSIBILITY FOR THE SITE CONDITION AND SHALL DEFEND AND HOLD THE DEVELOPER AND TARRAR UTILITY CONSULTANTS HARMLESS FROM ANY ALLEGED CLAIMS OR LIABILITIES, EXCEPT THOSE ARISING FROM SOLE NEGLIGENCE OF THE DEVELOPER OR TARRAR UTILITY CONSULTANTS.
- THE APPROXIMATE LOCATIONS OF ALL EXISTING UTILITY COMPANY UNDERGROUND LINES, POLES BOXES, ETC., WERE OBTAINED FROM A REVIEW OF AVAILABLE UTILITY COMPANY RECORDS, REPRESENTATIONS OF UTILITY COMPANY PERSONAL, OR FIELD OBSERVATIONS. NEITHER THE DEVELOPER NOR TARRAR UTILITY CONSULTANTS ASSUME ANY RESPONSIBILITY FOR VARIANCES BETWEEN THESE PLANS AND THE ACTUAL FIELD CONDITIONS. NO EXTRA PAYMENT WILL BE MADE TO THE CONTRACTOR FOR ANY ADDITIONAL TRENCHING, BOX EXCAVATIONS, MATERIALS, ETC., THAT MAY BE REQUIRED TO COMPLETE THIS PROJECT IN THE EVENT AN EXISTING TIE-IN POINT SUBSTRUCTURE IS EITHER NON-EXISTING OR IS NOT SHOWN ON THE PLANS IN ITS ACTUAL FIELD POSITION. IT IS THE CONTRACTOR'S OBLIGATION AND RESPONSIBILITY TO SAFELY LOCATE ALL EXISTING UNDERGROUND FACILITIES BY SURFACE MARKING AND/OR HAND EXCAVATION PRIOR TO STARTING CONSTRUCTION.
- "DEVELOPER AND/OR CONTRACTOR IS RESPONSIBLE TO OBTAIN A CITY OF MENLO PARK ENCROACHMENT PERMIT FOR ALL WORK DONE IN THE PUBLIC RIGHT OF WAY. DEVELOPER AND/OR CONTRACTOR IS ALSO RESPONSIBLE TO PROVIDE JOINT TRENCH PLANS TO THE CITY OF MENLO PARK AT THE TIME OF APPLICATION FOR THE ENCROACHMENT PERMIT."

TRENCH IN DIRT AREA

TRENCH IN STREET AREA

**JOINT TRENCH NOTES:**

- TRENCH COVER & CLEARANCES SHOWN ARE MINIMUMS ONLY AND MAY REQUIRE ALTERATIONS TO SUIT FIELD CONDITIONS.
- IT IS RECOMMENDED THAT ALL FACILITIES ARE TO BE A MINIMUM OF 12" BELOW SUB-BASE DISTURBANCE.
- \* WITH MUTUAL AGREEMENT FROM PARTICIPATING UTILITIES, WHEN 4" O.D. OR SMALLER GAS PIPE IS INSTALLED, SEPARATION MAY BE REDUCED TO NOT LESS THAN 6" BETWEEN GAS AND COMMUNICATION DUCTS (TELEPHONE, C.A.T.V. & FIBER OPTIC).
- \* WHERE 6" GAS MAIN IS LOCATED IN THE JOINT TRENCH A 18" MINIMUM SEPARATION FROM GAS MAIN TO ALL UTILITIES WILL BE REQUIRED.
- \*\* WITH MUTUAL AGREEMENT FROM PARTICIPATING UTILITIES, STREET LIGHT SEPARATION MAY BE REDUCED TO 0" BETWEEN STREET LIGHT AND COMMUNICATION DUCTS (TELEPHONE, C.A.T.V. & FIBER OPTIC).
- TRENCH CONFIGURATIONS SHOWN ARE FOR INSTALLATION WHERE EACH OCCUPANT IS UTILIZING HIS ENTIRE SPACE ALLOCATION. OTHER CONFIGURATIONS OR REDUCED DIMENSIONS MAY BE USED, PROVIDED THAT MINIMUM COVER AND CLEARANCES ARE MAINTAINED.
- THE CONTRACTOR IS TO ADJUST TRENCH DEPTHS AT ALL JOINT TRENCH LATERAL CROSSINGS TO MAINTAIN REQUIRED CLEARANCES BETWEEN ALL PARTICIPATING UTILITIES.
- TRENCH SECTIONS ARE SHOWN SCHEMATICALLY AND INDICATE AREAS OF OCCUPANCY ONLY; THEY DO NOT REFLECT SIZE OR QUANTITY OF FACILITIES TO BE INSTALLED.
- TRENCH FOOTAGES PER SECTION ARE APPROXIMATE. SECTIONS ARE DESIGNED TO ACCOMMODATE ALL REQUIRED FACILITIES AS INDICATED ON EACH TRENCH PARTICIPANT'S CONSTRUCTION DRAWINGS.
- THE CONTRACTOR SHALL VERIFY TRENCH FOOTAGES FOR ACCURACY PRIOR TO EXCAVATION AND TAKE NECESSARY PRECAUTION CROSSING WATER AND SEWER FACILITIES.
- THE CONTRACTOR SHALL REFER TO THE COMPOSITE, CONDUIT, AND/OR EACH RESPECTIVE UTILITY INSTALLATION PLAN FOR THE NECESSARY CONDUIT CABLE AND/OR PIPE TO BE INSTALLED IN THIS PROJECT.
- TYPE "M2" TRENCH SHALL BE INSTALLED AFTER CURB AND GUTTER INSTALLATION. CONTRACTOR SHALL COORDINATE ADDITIONAL MOVE-INS NECESSARY TO COMPLETE THE SERVICES TO THE DWELLING UNITS WITH THE DEVELOPER, ALL AGENCIES AND THE UTILITY COMPANIES. THE COST OF THESE MOVE-INS SHALL BE INCLUDED IN THE CONTRACTOR'S UNIT PRICE FOR TRENCHING.
- THE AVERAGE TRENCH DEPTHS SHOWN ARE BASED ON THE MINIMUM UTILITY COMPANY REQUIREMENTS FOR DEPTH AND SEPARATION. CONTRACTOR SHALL ADJUST TRENCH WIDTH & DEPTH AS REQUIRED TO ADEQUATELY CLEAR EXISTING UNDERGROUND FACILITIES AND MAINTAIN MINIMUM UTILITY CLEARANCES. ALL TRENCHES OVER 60" DEEP MUST COMPLY WITH OSHA REQUIREMENTS. (SEE THE JOINT TRENCH MINIMUM COVER AND CLEARANCE TABLE)
- CONTRACTOR SHALL USE SAND BEDDING AND SHADING AS REQUIRED BY THE UTILITY COMPANIES. THE BOTTOM OF THE TRENCH SHALL BE CLEARED OF ROCKS AND OTHER HARD SURFACES. DISTRIBUTION TRENCHES WITHOUT TELEPHONE CONDUIT DO NOT REQUIRE BEDDING MATERIAL. SERVICE TRENCHES WITHOUT TELEPHONE CONDUIT REQUIRE 2" SAND BEDDING AS A PAD ON WHICH UTILITY FACILITIES CAN REST. SERVICE TRENCHES CONTAINING TELEPHONE CONDUIT ONLY REQUIRE A 1" SAND BEDDING. ALL OTHER TRENCHES CONTAINING TELEPHONE CONDUIT REQUIRE A 3" SAND BEDDING. REFER TO PG&E GREEN BOOK PUBLICATION S5453, EXHIBIT B AND AT&T SPEC95 "AT&T SPECIFICATIONS" TRENCHING AND CONDUIT GUIDE FOR FURTHER INFORMATION.
- ALL TRENCHING AND BACKFILLING TO BE DONE IN ACCORDANCE WITH THE CITY OF MENLO PARK ENGINEERING STANDARDS AND SPECIFICATIONS.
- ALL PG&E, TELEPHONE, CABLE, AND FIBER OPTIC BOXES AND JOINT TRENCH FACILITIES ARE TO MAINTAIN A MINIMUM OF 3" SEPARATION FROM SEWER AND WATER LATERALS AND DRIVEWAYS. ALL UTILITY VAULTS, BOXES, PEDESTALS, ETC. MUST MAINTAIN A 5' MINIMUM CLEARANCE FROM FIRE HYDRANTS, AND 3' MINIMUM FROM STREETLIGHTS.

## PUBLIC STREET LIGHTING NOTES

1. ALL MATERIAL AND WORKMANSHIP SHALL FULLY CONFORM WITH THE NATIONAL ELECTRIC CODE AND STANDARD SPECIFICATIONS AND DETAILS OF THE CITY OF MENLO PARK.
2. THE ELECTRICAL CONTRACTOR SHALL INSTALL THE UNDERGROUND SERVICE FROM THE LUMINAIRE TO PG&E SERVICE POINT AND TERMINATE CONDUIT AND WIRES AT BOX AS DIRECTED BY THE CITY.
3. KEEP STREET LIGHTS A MINIMUM OF 3 FEET AWAY FROM THE EDGE OF DRIVEWAYS, SEWER AND WATER LATERALS, AND 5 FEET AWAY FROM FIRE HYDRANTS & CATCH BASINS.
4. TWO OR MORE STREET LIGHTS ON THE SAME CIRCUIT SHALL BE WIRED TO BALANCE THE LOAD. (SEE WIRING DIAGRAM), UNLESS OTHERWISE NOTED.
5. **CONDUIT AND FITTINGS:** ALL CONDUIT AND FITTINGS SHALL BE U.L. APPROVED SCHEDULE 40 P.V.C., USE MINIMUM 1-1/2" SCH. 40 P.V.C. CONDUIT AND FITTINGS BELOW GRADE, UNLESS OTHERWISE NOTED OR REQUIRED. MINIMUM RADIUS BENDS SHALL BE 18". FOR ABOVE GROUND INSTALLATION USE METALLIC RIGID STEEL CONDUIT. PROVIDE PULL WIRE IN EMPTY CONDUITS. ALL CROSSINGS TO BE PERPENDICULAR TO STREET.
6. **CONDUIT DEPTH:** 24" UNDER SIDEWALK; 24" UNDER PLANTER STRIP; 30" UNDER PAVEMENT.
7. **CABLE:** CABLE SHALL BE U.L. A.W.G. NO. 8, 7-STRAND SOFT COPPER, TYPE THW OR THWN WITH MINIMUM OF 3/64" (40 MIL) POLYVINYLCHLORIDE INSULATION, UNLESS OTHERWISE NOTED. U.L. LISTED 600 VOLT, NO. 10 IN POLE MAY BE USED (40 MIL INSULATION).
8. **SPlice BOXES:** SPlice BOXES SHALL BE NO. 3-1/2 STATE TYPE WITH LID AND BRASS HOLD DOWN BOLTS, UNLESS OTHERWISE NOTED. LIDS TO BE INSCRIBED "STREET LIGHTING". SPlice BOXES SHALL NOT BE MORE THAN 200 FEET APART ON LONG RUNS. SPlice BOXES TO BE SET ON A CONCRETE FOOTING WHEN SUBJECT TO TRAFFIC LOAD.
9. **FUSES:** EACH POLE SHALL BE FUSED WITH WATERPROOF IN-LINE FUSE HOLDERS AT EACH ADJACENT BOX WITH 5 AMP FUSE. FOR DUPLEX LIGHTS, EACH LUMINAIRE SHALL BE FUSED SEPARATELY.
10. **SPlicing:** ALL SPlicing SHALL BE MADE IN HAND HOLES OR SPlice BOXES ONLY. SPlicing SHALL BE MADE WITH "STACK-ON" CRIMP JOINTS, "SCOTCH LOCK" FASTENERS, OR APPROVED EQUAL. ON SPlicing MADE BELOW GRADE, WRAP WITH MOISTURE PROOF INSULATION THICKNESS.
11. **POLE NUMBERS:** OBTAIN AND PLACE POLE NUMBERS ON ALL STREET LIGHT STANDARDS AS REQUIRED. COORDINATE WITH PG&E AND/OR CITY FOR THEIR REQUIREMENTS.
12. **TRENCH:** CONDUIT CANNOT BE PLACED IN JOINT TRENCH. THE CONDUIT LAYOUT IS SHOWN SCHEMATICALLY. SEE COMPOSITE DRAWING FOR TRENCH AND BOX LOCATIONS. ANY INCIDENTAL TRENCHING NOT PROVIDED BY TRENCHING AGENT IS CONTRACTOR'S RESPONSIBILITY.
13. THE CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ANY FIELD CHANGES MADE WITHOUT FIRST NOTIFYING TARRAR UTILITY CONSULTANTS.
14. TARRAR UTILITY CONSULTANTS ASSUMES NO RESPONSIBILITY FOR ANY VARIANCE BETWEEN THESE PLANS AND THE ACTUAL FIELD CONDITIONS. CONTRACTOR SHOULD REVIEW PROJECT SITE PRIOR TO SUBMITTING ITS BID.
15. CONTRACTOR TO CONSULT WITH LOCAL AGENCIES FOR THEIR CIRCUIT GROUNDING REQUIREMENTS. IF GROUND WIRE IS REQUIRED IN CONDUIT, INSTALL ACCORDINGLY.
16. LEGEND SYMBOLS ARE SHOWN IN STREET AREA FOR CLARITY. INSTALL BEHIND CURB AND/OR SIDEWALK PER THE CITY SPECIFICATIONS KEEP CLEAR OF DRIVEWAYS AND PATHWAYS (TYPICAL).
17. CENTERLINE OF STREET LIGHTS SHALL BE LOCATED ON THE LOT LINE UNLESS OTHERWISE NOTED ON THESE PLANS.
18. ANY CHANGES OR MODIFICATIONS TO PROPOSED STREET LIGHT LOCATIONS SHALL BE APPROVED, IN WRITING, BY THE CITY PRIOR TO INSTALLATION.
19. SET ALL STREET LIGHTS TO ULTIMATE FINISHED GRADE. CONSULT WITH CITY FOR PROPER PHYSICAL PROTECTION AND/OR SIGNING AND STRIPING ADJACENT TO ANY STREET LIGHTS INSTALLED IN THEIR ULTIMATE LOCATIONS THAT ARE NOT PROTECTED BY A VERTICAL CURB. BERM AND COMPACT EARTH TO FINISHED GRADE A MINIMUM OF 5' AROUND STREET LIGHT BASES AT THESE LOCATIONS.
20. CONTACT U.S.A. (2) FULL WORKING DAYS PRIOR TO STARTING WORK IF EXISTING UTILITIES CONFLICT WITH POLE LOCATION, FIELD ADJUST TO CLEAR EXISTING UTILITIES A MINIMUM OF 3'-0".
21. STREET LIGHT CONDUIT BENDS SHALL HAVE A MINIMUM 2 FOOT RADIUS. UNLESS OTHERWISE SHOWN ON THE PLANS, NO BEND SHALL BE INSTALLED IN THE STREET LIGHT SYSTEM WITHOUT PRIOR APPROVAL OF THE CITY INSPECTOR.
22. ALL BOXES ARE TO BE INSTALLED WITHIN THE R/W AND/OR P.U.E. AREA.

- GENERAL NOTES:**
1. Anchor bolts - 25x91x102mm(1"x 3/8" x 4") (4 ea.)
  2. All steel parts shall be hot dip galvanized after fabrication.
  3. Base cover required.
  4. Pole shall be 401 (10 ga.)
  5. Conduit size: 32mm(1-1/4") min. unless otherwise noted.
  6. Conductor size: In streetlight pole & arm use #10 THWN. In conduit use #8 THWN.
  7. Handhole reinforcement ring to be 6x38mm(1/4" x 1-1/2").
  8. Luminaire shall be high pressure sodium vapor (HPSV) manufactured by General Electric or approved equal. The wattage and distribution as shown on approved plans.
  9. All street lights shall be wired to a multiple circuit, 240 volts.
  10. Poles and mounting arms shall be steel, prime coated and painted with two coats of paint, semi gloss, "Kelly Moore # 183," "Mesa Brown."
  11. All luminaires shall be installed with integral ballasts and individual photo-electric control.
  12. Luminaires shall be Semi-Cut-Off and housing shall be provided with a slip-filter capable of mounting on two inch pipe tenon and of being adjusted ±5 degrees from the axis of the tenon.

**LEDway® Series**

LEDway® LED Street Light

Rev. Date: V5.04/24/2020

**Product Description**  
Luminaire housing is all aluminum construction. Standard luminaire utilizes terminal block for power input suitable for #2-#14 AWG wire. Luminaire is designed to mount on a 2" (51mm) IP: 2.375" (60mm) O.D. horizontal tenon and/or a 1.25" (32mm) IP: 1.44" (37mm) O.D. horizontal tenon (minimum 8" (203mm) in length) and is adjustable +/- 3° to allow for luminaire leveling (two axis 1-level included).  
**Applications:** Roadway, parking lots, walkways and general area spaces

**Performance Summary**

- Patented Non-Cold-Start Protection Technology
- Assembled in the U.S.A. of U.S. and imported parts
- UL Minimum 70 CRI
- CEC: 400K (v-f: 300K, 5700K (v-f: 500K) standard
- Limited Warranty: 10 years on luminaire/10 years on ColorSelect DetailShield® Finish

Product Specifications

- CONSTRUCTION & MATERIALS**
  - Housing is all aluminum construction
  - Terminal block for power input suitable for #2-#14 AWG wire
  - HT Mount is designed to mount on a 2" (51mm) IP: 2.375" (60mm) O.D. horizontal tenon and/or a 1.25" (32mm) IP: 1.44" (37mm) O.D. horizontal tenon (minimum 8" (203mm) in length) and is adjustable +/- 3° to allow for luminaire leveling (two axis 1-level included)
  - Exclusive ColorSelect DetailShield® Finish features an E-Coat epoxy primer with an ultra-durable powder topcoat, providing excellent resistance to corrosion, ultraviolet degradation and abrasion. Black, bronze, and silver are available
  - Weight: See Dimensions and Weight chart on page 1
- ELECTRICAL SYSTEM**
  - Input Voltage: 120-277V or 347-480V, 50/60Hz, Class 1 drivers
  - Power Factor: > 0.9 at full load
  - Total Harmonic Distortion: < 20% at full load
  - Quick disconnect harness suitable for mate and break under load provided on power feed to driver for ease of maintenance
  - Integral 100V surge suppression protection standard
  - To address inrush current, slow blow fuse or type C/D breaker should be used
  - 10V Source Current: 20-40 LED: 0.15mA, 80-120 LED: 0.30mA
- REGULATORY & VOLUNTARY QUALIFICATIONS**
  - cULus Listed
  - Suitable for wet locations
  - Meets CALTRANS #11 Vibration testing and GR-43-CORE Section 4.4.1/5.4.2 Earthquake Zone 4
  - Certified to ANSI C136.31-2001, 30 bridge and overpass vibration standards
  - ANSI C136.2 100V surge protection, tested in accordance with IEEE/ANSI C42.41.2
  - Luminaire and finish are endurance tested to withstand 5,000 hours of elevated ambient salt fog as defined in ASTM Standard B 117
  - Meets Bay American requirements within ARRA
  - Meets FCC Part 15, Subpart B, Class A limits for conducted and radiated emissions

**Intersection Analysis Summary**

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Bayfront Expy/Marsh Rd	Signalized	HCM 7th Edition	SB Right	0.829	43.2	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

**Intersection Level Of Service Report**  
**Intersection 1: Bayfront Expy/Marsh Rd**

Control Type:	Signalized	Delay (sec / veh):	43.2
Analysis Method:	HCM 7th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.829

## **APPENDIX E: NEAR-TERM (2027) PLUS PROJECT CONDITIONS VISTRO REPORTS**

Menlo Park Haven Ave Residential EIR

Vistro File: H:\...\Haven Ave\_AM\_v3.vistro  
Report File: H:\...\2027 with project AM.pdf

Scenario 19 2027 with project AM  
7/10/2024

**Intersection Analysis Summary**

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Bayfront Expy/Marsh Rd	Signalized	HCM 7th Edition	SB Left	0.908	47.2	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

**Intersection Level Of Service Report**  
**Intersection 1: Bayfront Expy/Marsh Rd**

Control Type:	Signalized	Delay (sec / veh):	47.2
Analysis Method:	HCM 7th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.908

7/9/2024

**Intersection Analysis Summary**

<b>ID</b>	<b>Intersection Name</b>	<b>Control Type</b>	<b>Method</b>	<b>Worst Mvmt</b>	<b>V/C</b>	<b>Delay (s/veh)</b>	<b>LOS</b>
1	Bayfront Expy/Marsh Rd	Signalized	HCM 7th Edition	SB Left	0.981	65.0	E

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

**Intersection Level Of Service Report**  
**Intersection 1: Bayfront Expy/Marsh Rd**

Control Type:	Signalized	Delay (sec / veh):	65.0
Analysis Method:	HCM 7th Edition	Level Of Service:	E
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.981

# 1. Introduction

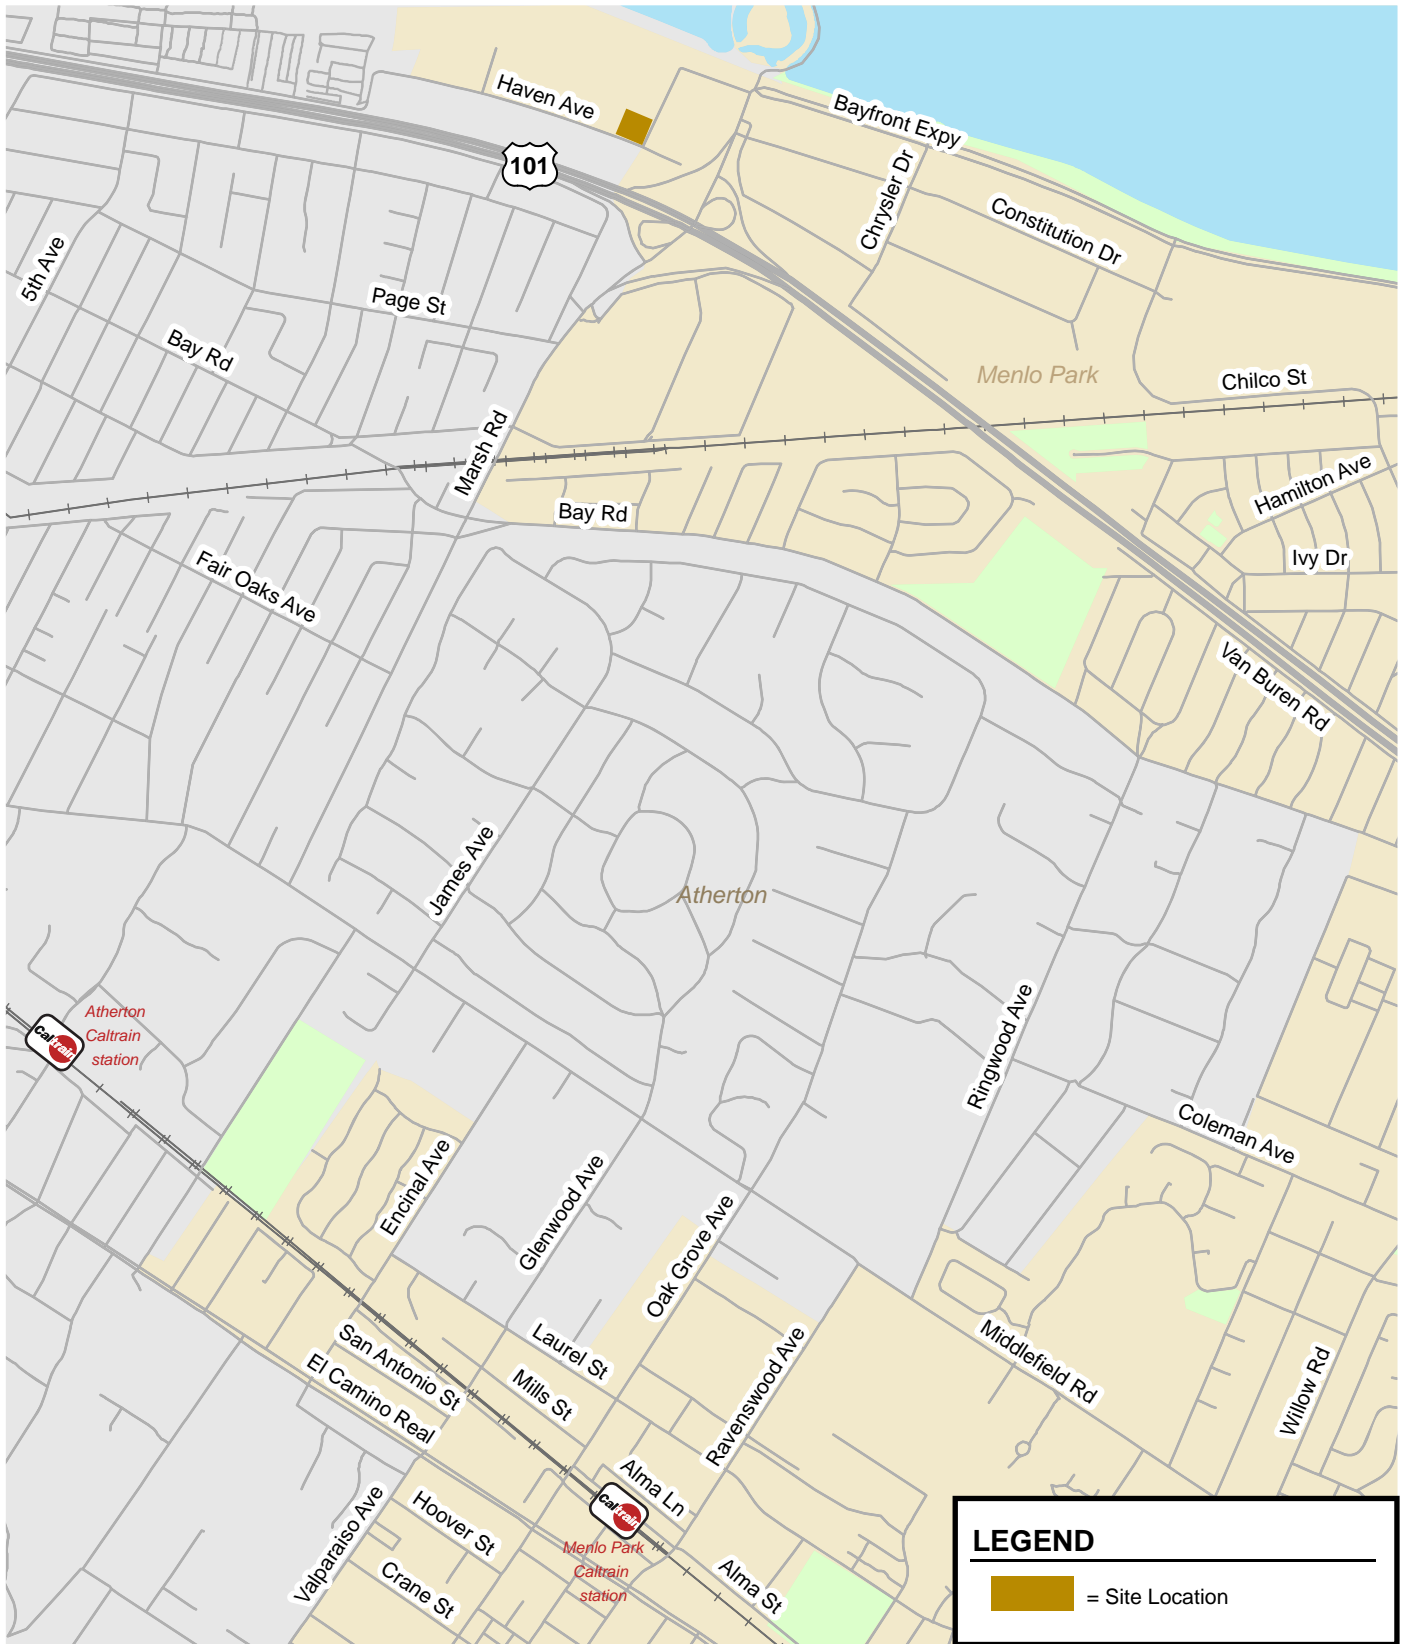

---

Transportation Demand Management (TDM) is a combination of services, incentives, facilities, and actions that reduce single-occupant vehicle (SOV) trips to help relieve traffic congestion, parking demand, and air pollution problems. The purpose of TDM is to promote more efficient utilization of existing transportation facilities, and to ensure that new developments are designed to maximize the potential for sustainable transportation usage. This Plan has been prepared for the proposed residential development at 3705 Haven Avenue in Menlo Park, California. In order to propose effective and appropriate TDM measures, this Plan has been developed based on the project's size, location, and land use. This plan has been developed to satisfy Section 16.45.090 of the City of Menlo Park Municipal Code, which requires a TDM plan to be prepared with the goal of achieving at least a 20 percent reduction below standard generation rates for uses on the project site. City staff has indicated that the City's TDM ordinance is anticipated to be revised later in 2024 to align with the C/CAG's TDM requirements. The City/County Association of Governments (C/CAG) adopted updated TDM policies (January 1, 2022) that require the project (qualifying as "large residential project") to implement TDM measures that can achieve 35% trip reduction based on its C/CAG checklist.

## Project Description

The project is located at 3705 Haven Avenue in the R-MU-B (Residential Mixed Use-Bonus) zoning district in Menlo Park, California (see Figure 1). The project proposes to construct a eight-level apartment complex with 112 apartment units and a leasing office on-site. Parking would also be provided on-site. Access to the site would be provided via driveways on Haven Avenue (see Figure 2).

The project would have two floors of garage parking. The final number of parking spaces has not been determined but will generally be between 99 to 111 parking spaces. The project would also have secured bike parking on the first floor. A total of 185 bike parking spaces (17 short-term parking spaces and 168 long-term parking spaces) will be provided for the project.

**Figure 1**  
**Site Location and Surrounding Area**

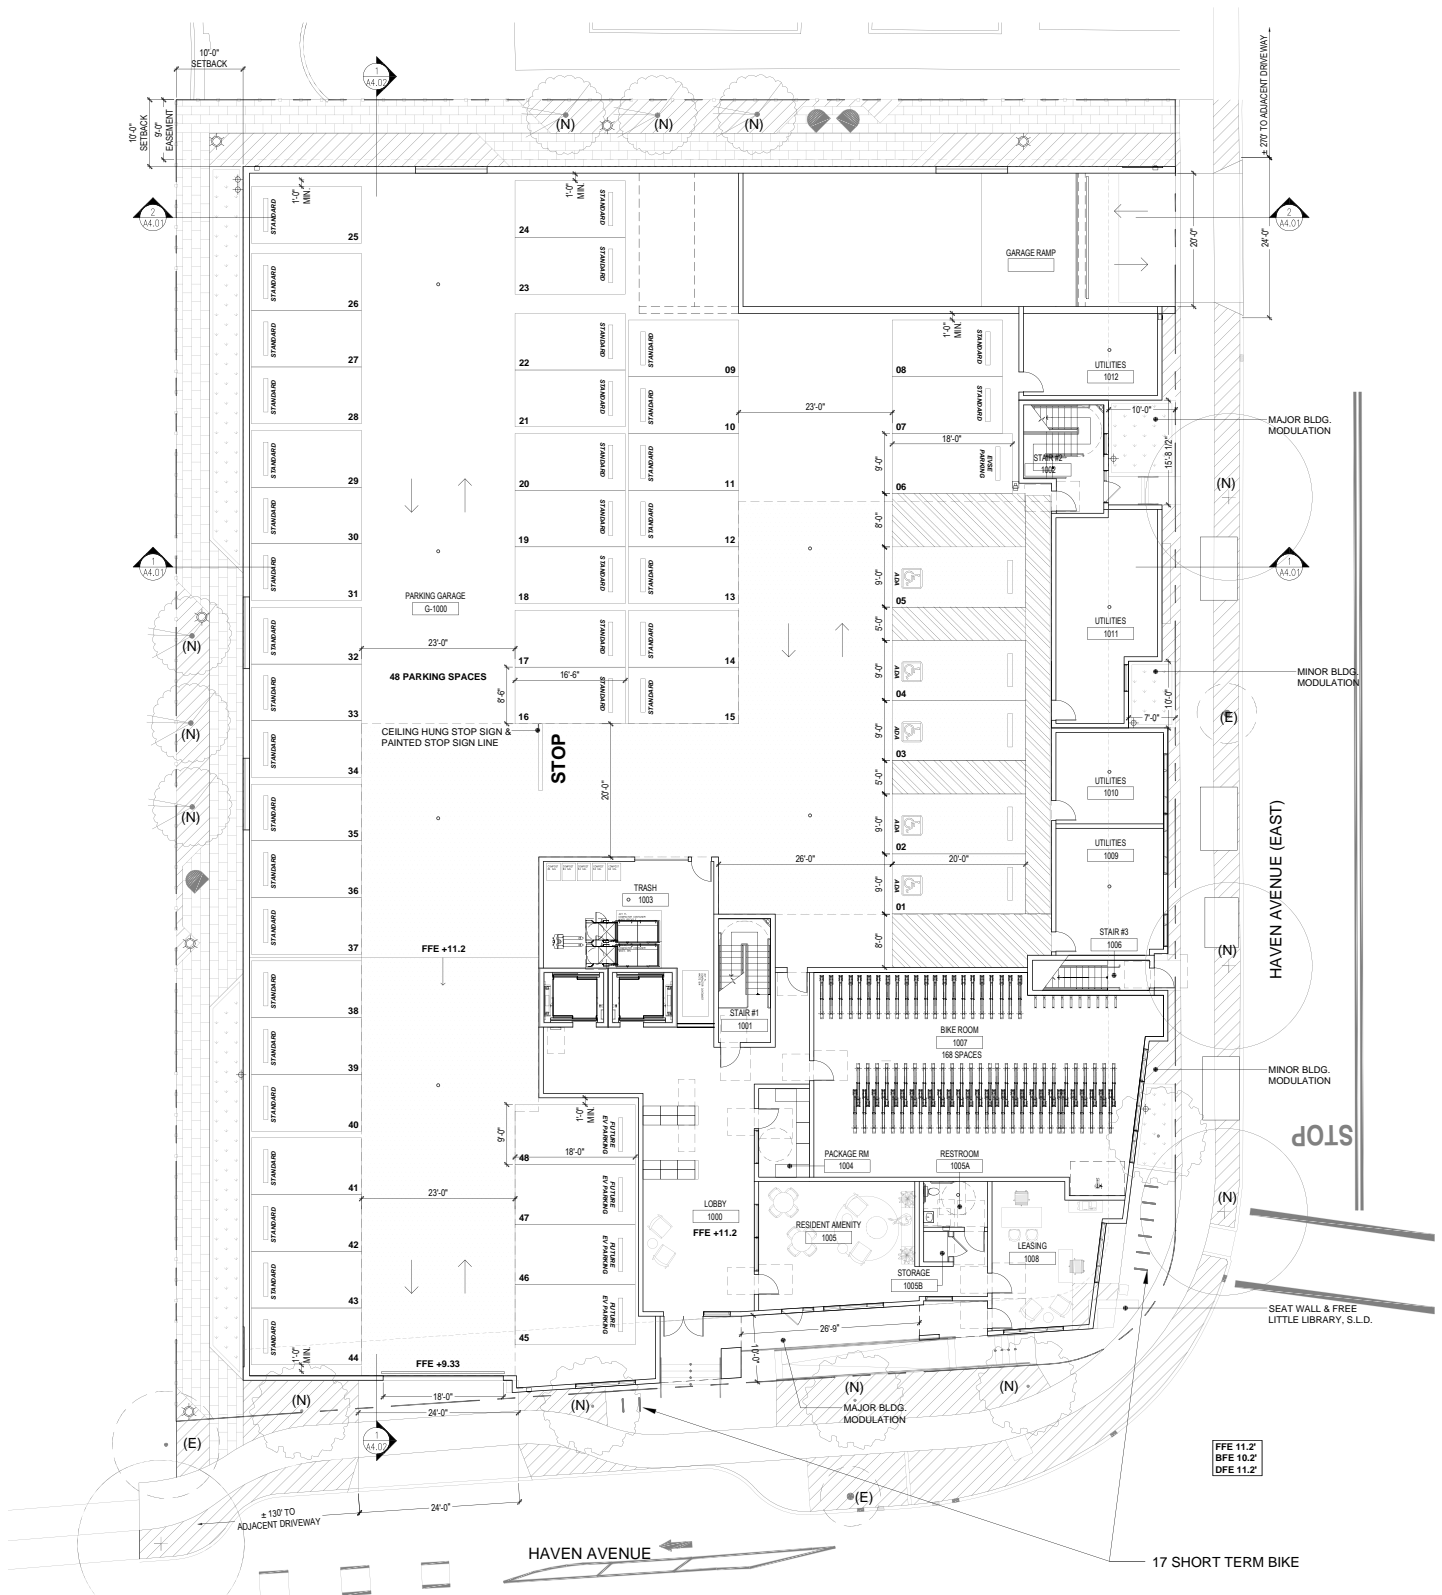

Figure 2  
Site Plan

## Menlo Park TDM Requirement for R-MU Residential Mixed-Use District

The City of Menlo Park requires that all new projects involving a change of use of 10,000 or more square feet of gross floor area in the Residential Mixed-use (R-MU) zoning district prepare TDM plans that will reduce vehicle trips by 20 percent from standard trip generation rates (Menlo Park Municipal Code Section 16.45.090). City staff has indicated that the City’s TDM ordinance is anticipated to be revised later in 2024 to align with the C/CAG’s TDM requirements. The City/County Association of Governments (C/CAG) adopted updated TDM policies (January 1, 2022) that require the project (qualifying as “large residential project”) to implement TDM measures that can achieve 35% trip reduction based on its C/CAG checklist. This plan has been prepared with the goal of achieving at least a 35 percent reduction in daily trips.

The trip generation rates published in the Institute of Transportation Engineers’ (ITE) manual entitled *Trip Generation, 11<sup>th</sup> Edition (2021)* for Multifamily Mid-Rise Housing Not Close to Rail Transit in a General Urban/Suburban area (Land Use 221) were used for this study. Multifamily Mid-Rise Housing includes housing developments between 4 to 10 floors. Before TDM reductions, the proposed project is estimated to generate a total of 508 daily trips with 41 trips during the AM peak hour and 44 trips during the PM peak hour.

As shown in Table 1, in order to meet the City’s 35 percent reduction requirement, at least 178 daily trips will need to be eliminated through the implementation of the various TDM measures. Stated conversely, the project will be required to generate no more than 330 daily trips.

**Table 1**  
**Trip Generation Estimates for the Residential Development at 3705 Haven Avenue**

Land Use	Size	Unit	Daily		AM Peak Hour			PM Peak Hour						
			Rate	Trips	Rate	In %	In	Out	Total	Rate	In %	In	Out	Total
<b>Proposed Uses</b>														
Multi-Family Apartments <sup>1</sup>	112	DU	4.54	508	0.37	23%	9	32	41	0.39	61%	27	17	44
35% Required TDM Reduction				(178)			(3)	(11)	(14)			(9)	(6)	(15)
<b>Net Project Trip Target</b>				<b>330</b>			<b>6</b>	<b>21</b>	<b>27</b>			<b>18</b>	<b>11</b>	<b>29</b>
<b>Notes:</b>														
<sup>1</sup> Multi-Family Housing (Mid-Rise) Not Close to Rail Transit (Land Use 221) average rates published in ITE’s <i>Trip Generation Manual, 11th Edition</i> .														

## 2. Transportation Facilities and Services

---

Transportation facilities and services that support sustainable modes of transportation include commuter rail, buses and shuttle buses, high-occupancy vehicle (HOV) lanes, bicycle facilities, and pedestrian facilities. This chapter describes existing facilities and services near the project site that will support the TDM measures contained in this plan. The existing transit service in the project vicinity is described below and shown on Figure 3. Information on nearby roadways is also included in order to provide a more comprehensive description of the nearby transportation network.

### Roadway Network

Regional access to the project site is provided via US 101 and State Route 84.

**US 101** extends to the northwest through San Francisco and to the southeast through San Jose. Within Menlo Park, this freeway has three mixed-flow travel lanes, one express lane, and one auxiliary lane in each direction. Access to and from the project study area is provided via a full-access interchange at Marsh Road.

**Bayfront Expressway (SR 84)** is a six-lane expressway that extends along the northern edge of Menlo Park. SR 84 extends eastward across the Dumbarton Bridge into Alameda County and westward through San Mateo County. Bayfront Expressway provides access to the project site via Haven Avenue.

Local access to the site is provided via Marsh Road and Haven Avenue. These roadways are described below and shown in Figure 1 in the previous chapter.

**Marsh Road** extends from SR 84/Bayshore Expressway in the north to Middlefield Road in the south. In the project area, Marsh Road is a four-lane thoroughfare between Scott Drive and Bayfront Expressway. The posted speed limit in the project area is 35 mph. Sidewalks are present on both sides of Marsh Road between Bayfront Expressway and Scott Drive. Marsh Road becomes a mixed-use collector between Scott Drive and Bay Road. A Class III bike route is designated between Bay Road and Scott Drive. On-street parking is permitted on the west side of Marsh Road between Fair Oaks Avenue and Rolison Road. Access to the project site is provided via Haven Avenue.

**Haven Avenue** is a two-lane local roadway that includes a sharp turn near its intersection with Marsh Road. The speed limit on Haven Avenue is 25 mph. Sidewalks are present on both sides of Haven Avenue. There are Class II bike lanes both sides on Haven Avenue west of the project site. Haven Avenue provides direct access to the project site.

## Caltrain Commuter Rail

Caltrain provides commuter rail service between San Francisco and San Jose, with limited service to Gilroy during commute hours. The closest Caltrain station to the project site is the Menlo Park Station, located on Merrill Street between Oak Grove Avenue and Ravenswood Avenue, near El Camino Real.

The Menlo Park Station is located 3.1 miles south from the project site. This is an approximately 16-minute bike ride. Also, the Marsh Road Shuttle (described below) currently offers free shuttle service between the project site and the Menlo Park Caltrain Station with timed connections to trains during the commute peak periods. The station has bike racks, bike lockers, and two surface parking lots.

The Menlo Park Station accommodates local-stop and limited-stop trains. During the morning commute period of 6:00 to 9:30 AM, the Menlo Park Station has three northbound limited-stop trains and three local-stop trains with headways of 25 to 30 minutes. Four southbound limited-stop trains and three local-stop trains serve the Menlo Park Station in the AM peak hour with headways between 20 to 35 minutes.

During the PM commute period between 3:30 and 7:30 PM, the station has eight northbound trains (four limited-stop and four local-stop trains) with headways of 25 and 35 minutes. Eight southbound trains (four limited-stop and four local-stop trains) with headways between 20 and 40 minutes serve the Menlo Park Station during the PM peak hour.

## Marsh Road Shuttle

Primary access to the project site from the Menlo Park Caltrain station is provided by the Marsh Road Shuttle, which is a free shuttle service with timed connections to many of the AM and PM peak period trains in both the northbound and southbound directions. The shuttle operates in a loop through the Marsh Road business park. There are two bus stops near the project site located at 1) 3641 Haven (Elan Menlo Park); and 2) 3760 Haven (Quicken). Both stops are within walking distance of the project site. Based on the schedule, the shuttle takes 28 to 30 minutes to travel from the Caltrain station to these stops. In the afternoon, the shuttle takes about 20 to 22 minutes to travel from the stops to the Caltrain station.

The Marsh Road Shuttle is funded jointly by the City of Menlo Park, the Bay Area Air Quality Management District (BAAQMD), and the San Mateo County Transportation Authority. The shuttle is free and open to everyone.

## SamTrans Bus Service

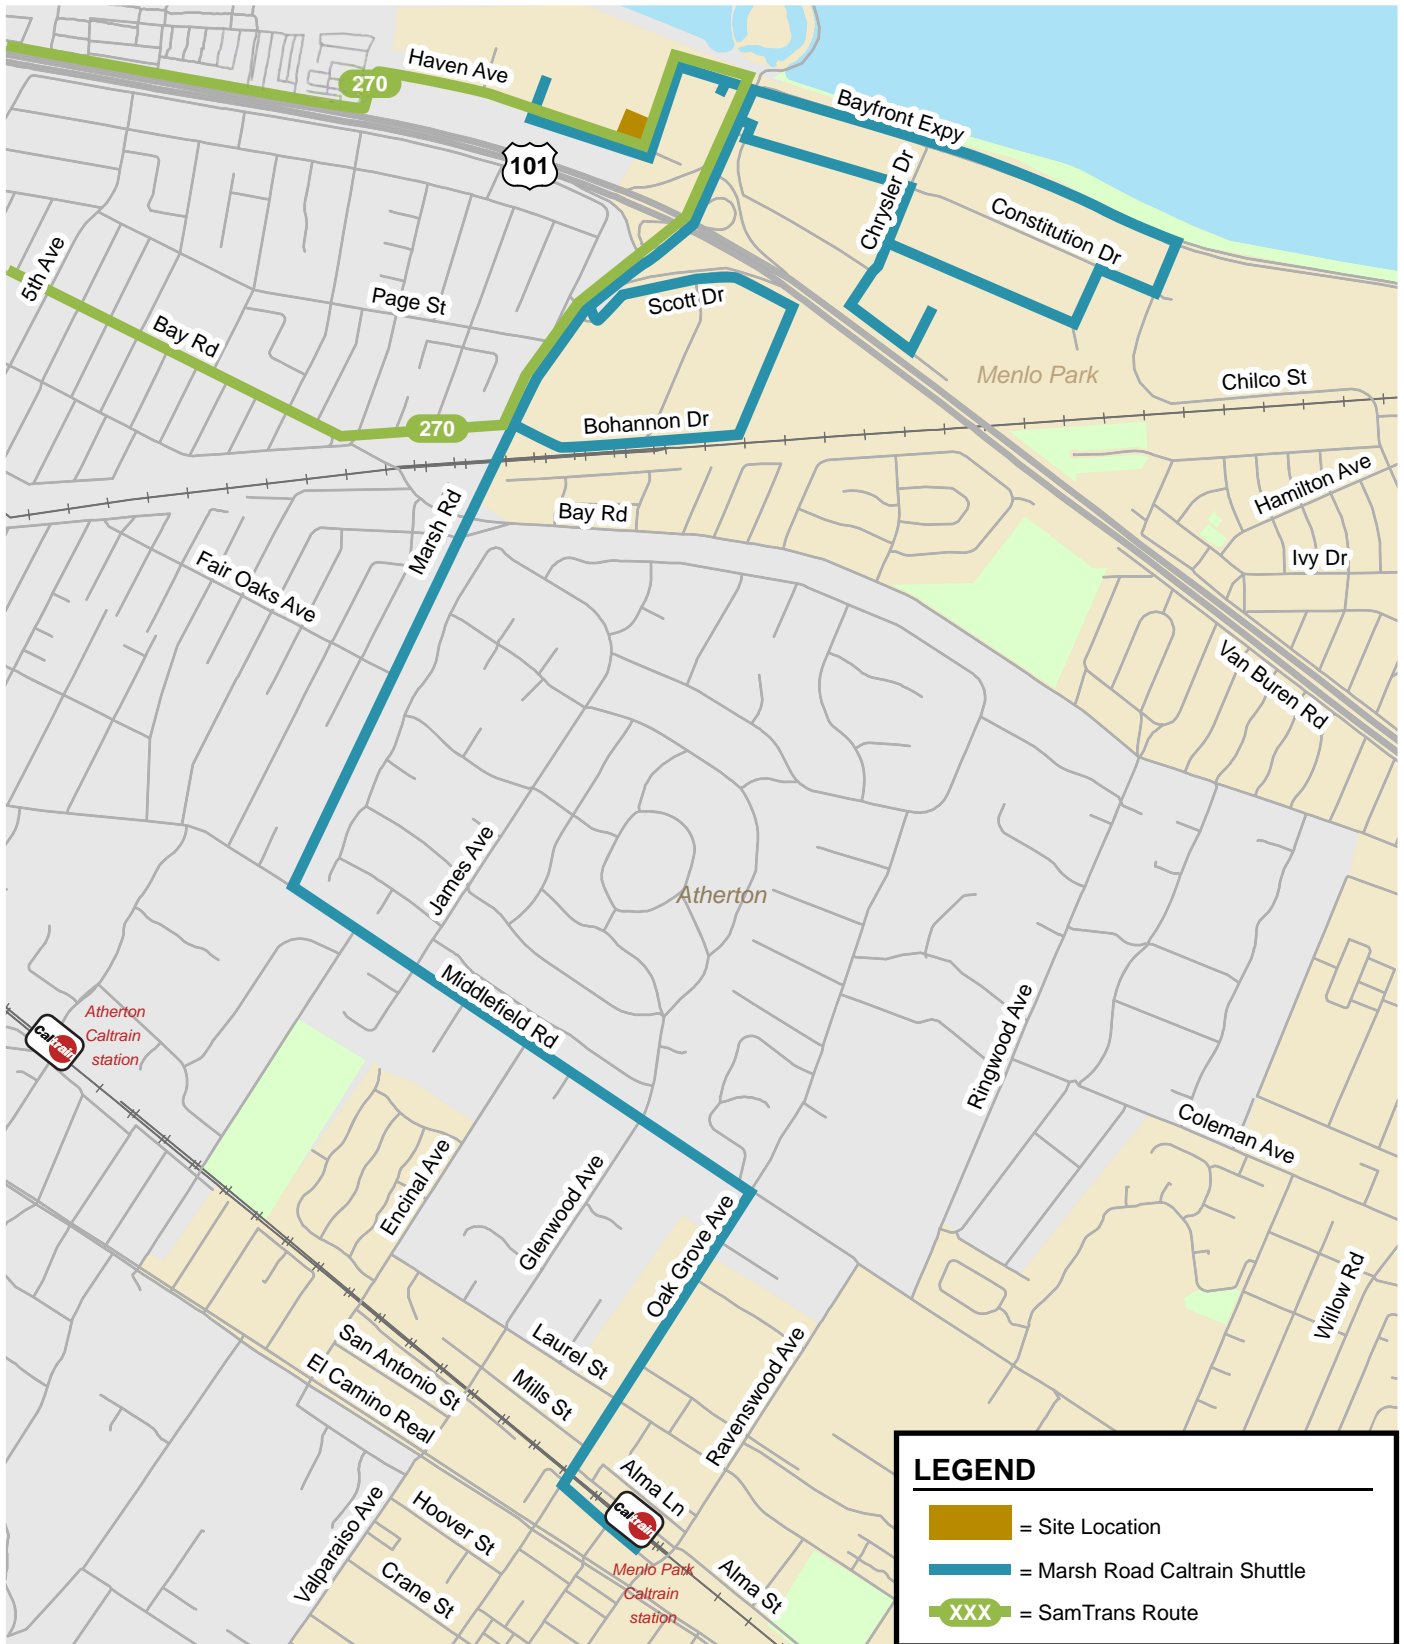

SamTrans Route 270, the Redwood City Loop, provides service to the Marsh Road/Bayfront Expressway office area. The closest bus stops are located on Haven Avenue, approximately 420 feet north from the project site and 330 feet west from the project site. Route 270 operates in a loop between the Redwood City Caltrain Station (Baby Bullet service at this station), Redwood Plaza/City Hall, Kaiser Hospital, southbound along Broadway and Bay Road, across US 101 to the Marsh Road business park area, northbound along Bayshore Road, back across US 101 on Maple Street, and then returning to the Redwood City Caltrain Station. Route 270 operates with 60-minute headways on weekdays and Saturdays.

## Express Lanes

Express lanes are present on US 101 within the vicinity of City of Menlo Park. The express lane system on US 101 will eventually stretch from Morgan Hill thru South San Francisco in both directions of US 101. Express lanes will allow 3+ person carpools, vanpools, buses and motorcycles to use the facility for free with a properly set FasTrak Flex or FasTrak CAV (clean air vehicle) toll tag. Solo drivers may use the express lane facility by paying the full price. Solo CAV, and 2-person carpools may use the facility by paying 50% of the Solo driver's fee. Express lanes are in operation Monday through Friday from 5 AM until 8 PM. Outside these hours, all vehicles may use the facility for free.

Express lanes would generally encourage commuters to seek carpool alternatives as they may use the relatively faster express lane (compared to general purpose lanes) for free.

**Figure 3**  
Existing Transit Services

## Bicycle Facilities

Bicycle facilities are an important component of the City of Menlo Park's transportation network. The City's bikeways are classified as Class I, Class II, or Class III facilities, as follows:

- Class I Bicycle Path – bike paths within exclusive right-of-way, sometimes shared with pedestrians
- Class II Bicycle Lane – bike lanes for bicycle use only that are striped within the paved area of roadways
- Class III Bicycle Route – bike routes are shared with motor vehicles on the street. Class III bikeways may also be defined by a wide curb lane and/or use of a shared use arrow stencil marking on the pavement, known as a “sharrow”

### **Bike Paths:**

- Recreational trails at Bedwell Bayfront Park, Facebook along Hacker Way, and north of Bayfront Expressway

### **Bike Lanes:**

- Haven Avenue between Sleepy Hollow Ln and Haven Court
- Chrysler Drive between Independence Drive and Bayfront Expressway
- Constitution Drive between Independence Drive and Chilco Street
- Chilco Street between Constitution Drive and Bayfront Expressway
- Willow Road between Bayfront Expressway and Bay Road south of US 101
- Jefferson Drive between Chrysler Drive and Constitution Drive

### **Bike Routes:**

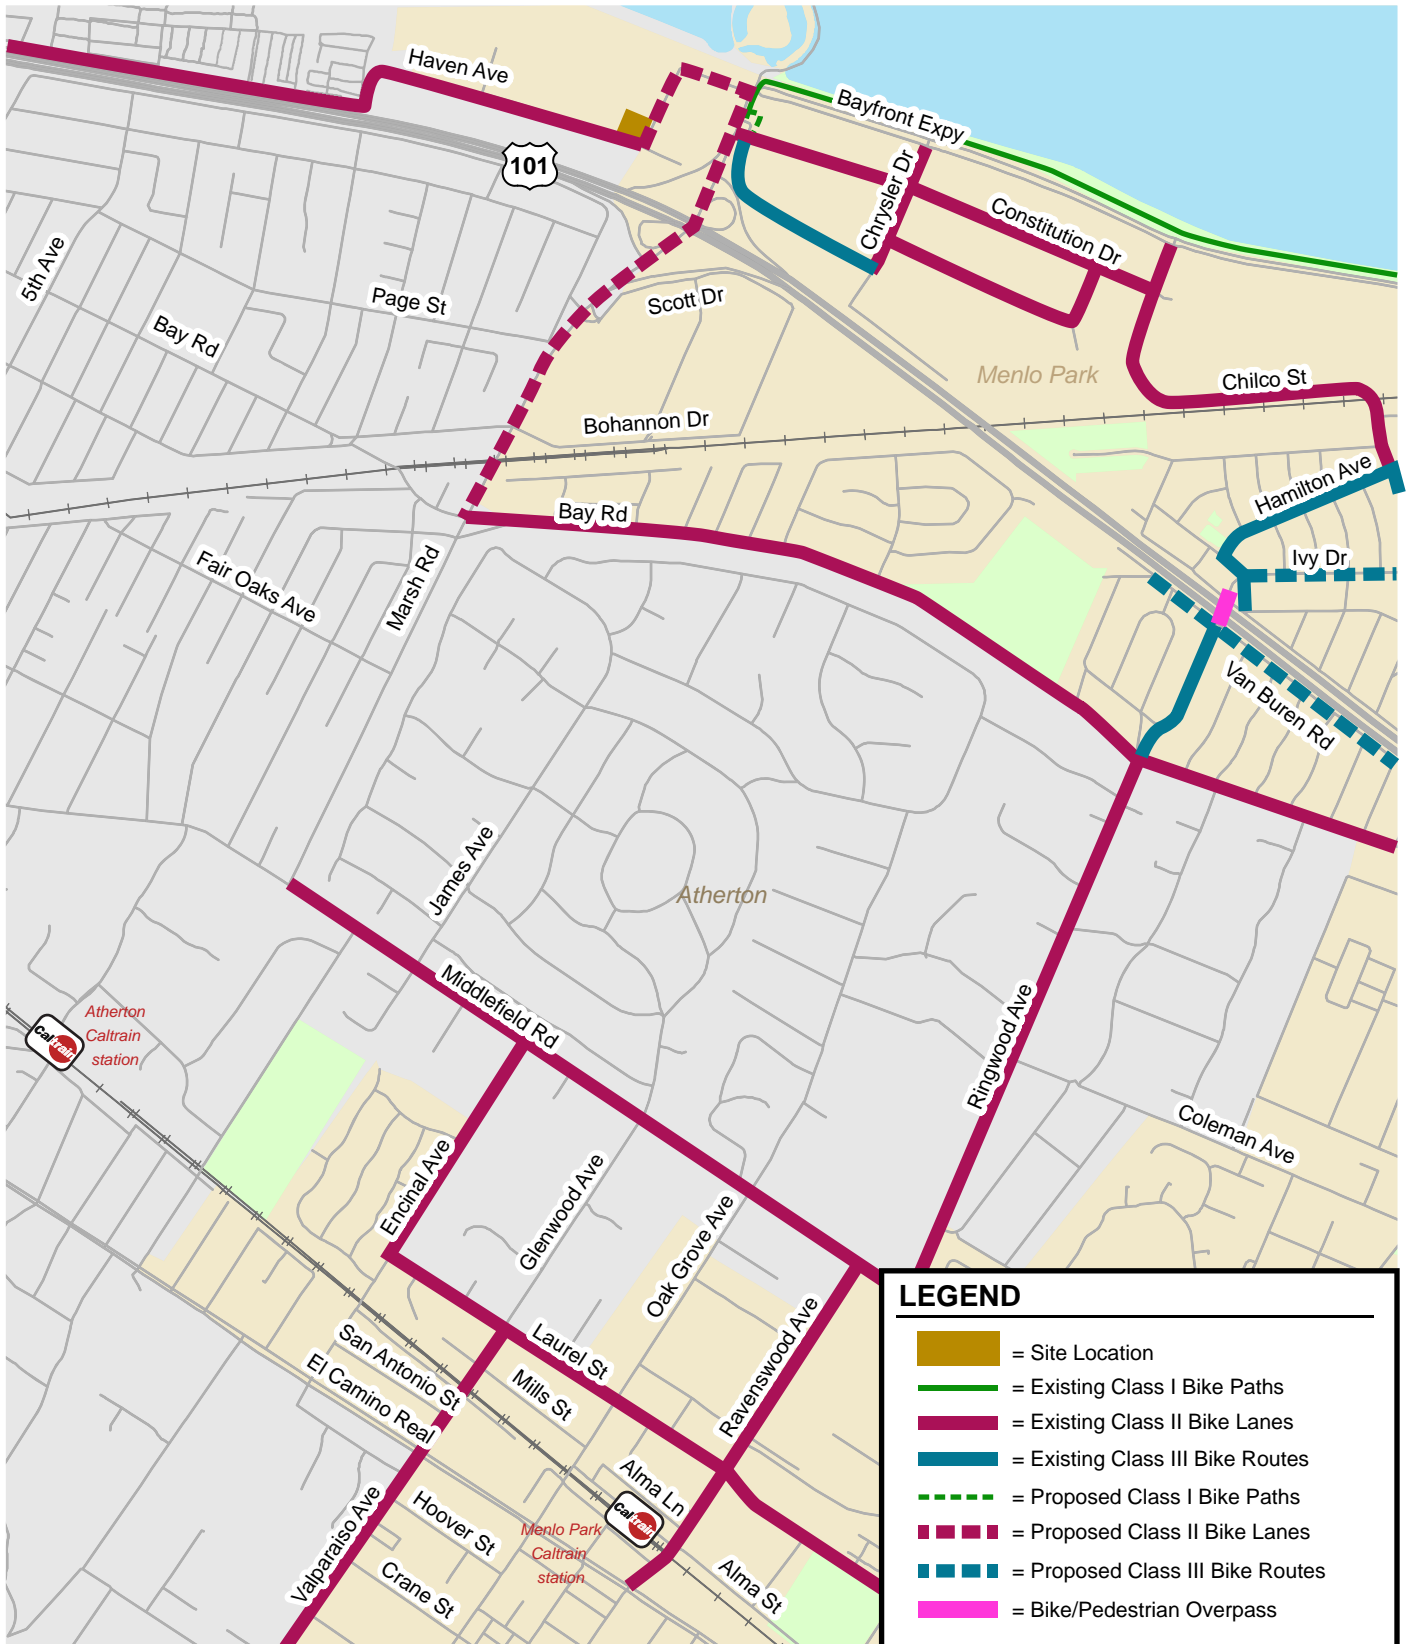

- Independence Drive between Constitution Drive and Chrysler Drive

The following improvements to the City's bicycle facilities have been proposed in its Transportation Master Plan:

- Class II bike lanes are planned for Haven Avenue between Marsh Road to Haven Court.
- A new bicycle and pedestrian bridge over the Atherton Channel is planned to extend the bike lanes and sidewalks on Haven Avenue to Marsh Road, as part of the Haven Avenue Streetscape Project. The Haven Avenue Streetscape Project connects Menlo Park, San Mateo County, and Redwood City residents and employees.

Bike lanes on Marsh Road are identified as long-term projects. The Marsh Road bike lanes are also identified as proposed improvements in the San Mateo County Comprehensive Bicycle and Pedestrian Plan. It is not known when these two proposed improvements will be constructed.

**Figure 4**  
Existing and Proposed Bicycle Facilities

## Pedestrian Facilities

Pedestrian facilities consist of sidewalks, crosswalks, and pedestrian signals at signalized intersections. Roadways providing pedestrian access to the project site include Haven Avenue, Constitution Drive and Marsh Road.

Crosswalks with pedestrian signal heads and push buttons are found on one or more approaches at the signalized intersection of Marsh Road and Bayfront Expressway/Haven Avenue. The intersection of Marsh Road and Bayfront Expressway/Haven Avenue has crosswalks on north, west and south approaches. The intersection of Marsh Road and Constitution Drive has a crosswalk on the east approach.

As described in the preceding section on bicycle facilities, the Haven Avenue Streetscape Project also includes pedestrian crossing improvements to the Marsh Road-Haven Avenue-Bayfront Expressway intersection, which will improve the overall pedestrian network in the area east of US 101. The improvements include widened sidewalks, replacement of curb ramps to comply with current ADA standards, realigning the existing crosswalk on the northwest (Haven Avenue) leg of the intersection, and improving the existing median to provide a crossing refuge island.

### 3.

## Proposed TDM Measures

---

This chapter describes Transportation Demand Management (TDM) measures that will be implemented by the proposed project. This plan has been developed to meet the City's anticipated 35 percent trip reduction requirement .

The TDM measures to be implemented by the project include services, incentives, actions, and planning and design features related to the attributes of the site design and site amenities. Such design features encourage walking, biking, and use of transit. Some of the recommended TDM measures are programs that will be created and implemented by the building manager. Table 2 presents a summary of the TDM measures in this plan. An indication of who will have primary responsibility for implementing each measure is also shown on the table.

### TDM Administration and Promotion

#### Transportation Coordinator

A Transportation Coordinator will be assigned to provide information regarding alternative modes of transportation to residents of the project. The Transportation Coordinator will be designated by the building developer, the property manager, or any subsequent building owner.

The Transportation Coordinator's responsibilities will include updating information on the online information board/kiosk, providing trip planning assistance and/or ride-matching assistance to residents who are considering an alternative mode for their commute, and managing the annual surveys. The Transportation Coordinator will maintain a supply of up-to-date transit schedules and route maps for SamTrans and Caltrain and be knowledgeable enough to answer residents' TDM program-related questions. The Transportation Coordinator will distribute a carpool/vanpool matching application to all residents as part of the New Resident Information packets. The application will match residents who live at the project site who may be able to carpool or vanpool together.

**Table 2  
Recommended TDM Measures**

TDM Measure	Implementation Responsibility	C/CAG TDM Checklist Percentage	Implementation Stage			
			Existing Resource	Part of Building Construction	Occupancy Permit Issued	Ongoing After Building Occupancy
<b>Program Administration</b>						
Designating a Transportation Coordinator	Property Manager	0.5%			X	
Online Kiosk/TDM Information Board <sup>1</sup>	Transportation Coordinator	n/a			X	
Transportation Information Packets	Transportation Coordinator	1%			X	
Active Participation in Commute.org	Transportation Coordinator	5%			X	
Trip Planning Assistance	Transportation Coordinator	n/a			X	
<b>Program Monitoring and Reporting</b>						
Annual Resident Surveys	Transportation Coordinator	n/a				X
Target Drive-alone Mode Share Monitoring	Transportation Coordinator	n/a				X
<b>Carpool and Vanpool Programs</b>						
511 Ridematching Service	Available to public	2%	X			
Incentives for New Carpools/Vanpools	Available to public		X			
<b>Bicycle Facilities</b>						
Bicycle Parking	Building developer	1%		X		
Bicycle Repair Station	Building developer	0.5%		X		
Resources (bikeway maps & other info)	Transportation Coordinator	n/a	X			
<b>Pedestrian Facilities</b>						
Design Features Enhancing Pedestrian Experience	Building developer	1%		X		
<b>Transit Subsidies</b>						
Monthly Reimbursement of up to \$19.68 per resident	Transportation Coordinator	10%				X
<b>Other On-Site Amenities</b>						
Gym, Pool, Clubhouse	Building developer	3%		X		
High-Bandwidth Internet Connection	Building developer	n/a		X		
Delivery Amenities	Building developer	1%		X		
Business Center	Building developer	n/a		X		
<b>Parking</b>						
Unbundled Parking	Building developer	25%			X	
Reduced Parking	Building developer	10%		X		
<b>Notes:</b>						
1. The building developer will have initial responsibility for creating an online kiosk and appointing the Transportation Coordinator. After the building is occupied, the Transportation Coordinator will have ongoing responsibility for the online kiosk and various program elements.						

## Online Transportation Kiosk

The Transportation Coordinator will establish an “online kiosk” with transportation information that residents could access from their smart phones, their homes, or anywhere else. This online kiosk can be available on the project website.

By allowing someone to have all the information about transportation alternatives and TDM programs available to them in a single online location, people will be more likely to refer to this information from home. The project developer or property manager will have responsibility for setting up and maintaining this online information center. This website will include site-specific information about all the measures, services, and facilities discussed in this plan. In addition, this online information center will include:

- A summary of SamTrans, Caltrain, and nearby shuttle services and links to further information about their routes and schedules.
- Information about ride matching services (511.org and on-site ride matching) and the incentive programs available to carpools and vanpools.
- Information about services such as Uber, Lyft, and other on-demand transportation services.
- A local bikeways map and bicycling resources on 511.org.
- A link to the many other resources available in the Bay Area, such as the 511 Carpool Calculator, the 511 Transit Trip Planner, real-time traffic conditions, etc.

## Resident Orientation (Welcome) Packet

New residents will be provided transportation information packets. This packet will include information about transit maps/schedules (Caltrain, SamTrans, and shuttle services), location of bus stops, bike maps, ride matching services, transit planning resources, and bicycle parking on site. Also included in the packet will be information regarding how to contact the Transportation Coordinator, who can provide information regarding alternative modes of transportation to residents.

The resident orientation (welcome) packet will provide a quick, easy-to-read announcement of the most important features of the TDM program for residents to know about immediately and a message that the building values alternative modes of transportation and takes their commitment to supporting alternative transportation options seriously. For example, it could include a flyer announcing some highlights of the TDM program and where to find more information online.

## Bicycle and Pedestrian Amenities

### Bicycle Parking

Providing secure bicycle parking encourages bicycle commuting. A total of 185 bike parking spaces (168 long-term parking space and 17 short-term parking spaces) will be provided for the proposed project. The Transportation Coordinator will monitor the usage of the bicycle parking facilities and will also tabulate the mode share for bicycles based on survey results.

### Bicycle Repair Station

In addition to bicycle parking, the project includes a bike repair station within the bike storage room, which will provide a singular point where bicyclists can share information on routes, commuting, and maintenance practices to help generate a stronger community that is more engaged in bicycling as a mode of transportation.

## **Bicycle Resources**

The following resources are available to bicycle commuters through 511.org. These resources will be noted on the project's online information center, in order to make residents aware of them.

- Free Bike Buddy matching
- Bicycle maps
- Bicycle safety tips
- Information about taking bikes on public transit
- Location and use of bike parking at transit stations
- Information on Bike to Work Day
- Tips on selecting a bike, commute gear, and clothing
- Links to bicycle organizations

## **Pedestrian Facilities**

The project proposes to maintain the existing pedestrian facilities along Haven Avenue. The project proposes to include additional landscaping, including trees along its building frontages to improve the pedestrian walking experience. The project also proposes two building entrances, one near the northeast corner of the project and one along the south edge of the project. The project also proposes its lobby, leasing office and short-term bike racks along the south edge of the project. These attributes would promote the pedestrian walking experience as well.

## **Onsite Amenities**

### **Gym, Clubhouse, Pool, and Spa**

The project will include a pool, a gym, and a clubhouse on site for use by residents for socializing and recreation. These amenities will encourage residents to stay on site for these services, reducing the number of trips that are required to be made.

### **High-Bandwidth Internet Connection, Business Center**

The residential units will include high-bandwidth internet connections to facilitate telecommunicating. Access to high-bandwidth internet connections will allow residents to work from home and therefore reduce the number of commute trips to and from project site. In addition, the proposed on-site business center will provide residents an alternative location to work without going to office.

### **Delivery Amenities**

The project will include a package room on the ground floor so residents can conveniently retrieve their delivery packages on site, rather than requiring residents to retrieve packages from an offsite facility (i.e. UPS store or Amazon lockers).

## Carpool and Vanpool Programs

### 511 Ride Matching Assistance

#### 511 RideMatch

The 511 RideMatch service provides an interactive, on-demand system that helps commuters find carpools, vanpools or bicycle partners. The Transportation Coordinator, in conjunction with the future building manager contacts, will promote the on-line 511 service to residents. This free car and vanpool ride matching service helps commuters find others with similar routes and travel patterns with whom they may share a ride. Registered users are provided with a list of other commuters near their employment or residential ZIP code along with the closest cross street, email, phone number, and hours they are available to commute to and from work. Participants are then able to select and contact others with whom they wish to commute. The service also provides a list of existing car and vanpools in their residential area that may have vacancies.

### Carpool/Vanpool Incentives

#### The Star Store

The Peninsula Traffic Congestion Relief Alliance has established a program called the Star Store. Residents and commuters who travel to, from, or through San Mateo County can earn points by logging their commutes in the STAR platform. Every day that someone commutes by an alternative to driving alone, they earn a point. Users collect points and then redeem them for rewards.

#### First Five Rides Free on 511

Currently, the 511 Carpool Program is offering new riders on carpool apps Scoop or Waze Carpool five free rides. Users can download the apps, set up an account, enter their schedule and get their first five rides free.

#### Vanpool Formation Incentive

The 511 Regional Rideshare Program provides up to \$500 in gas cards to new vanpools that meet certain eligibility requirements and complete three to six consecutive months of operation.

#### Vanpool Seat Subsidy

The 511 Regional Rideshare Program also offers a vanpool seat subsidy in the form of gas cards. The seat subsidy will provide \$100 per month, with a limit of three months per van during the program year, to help cover the fare of a lost participant. The gas cards will be offered to eligible vans on a first-come, first-served basis until the funds are exhausted.

#### Vanpool Participant Rebates

The Peninsula Traffic Congestion Relief Alliance also offers an incentive to commuters to try vanpooling. The Alliance will pay half of the cost of a new vanpool participant's seat, up to \$100 per month, for the first three months in the van. New vanpools that operate for at least six months can receive a one-time rebate of \$500, paid to the vanpool driver (rotating drivers may share the bonus).

## Transit Subsidies

Transit subsidies are an extremely effective means of encouraging residents to use transit rather than driving. There are a number of ways that transit subsidies can be implemented. In coordination with City staff, the project will provide transit reimbursement of up to \$19.68 (30% of a monthly SamTrans pass of \$65.6) on a monthly basis per resident once residents provide transit receipts.

## Parking

### Unbundled Parking

To further encourage non-auto transportation methods and to reduce costs for residents, onsite residential parking for the apartment building will be unbundled from each living unit. This will allow residents without cars to rent a unit without having to pay for a parking spot. Parking spaces will be added to leases only for residents who desire parking. Unbundling of parking encourages residents to forego a second car or to have no car at all.

### Limited Parking Supply

The project would have two floors of garage parking. The final number of parking spaces has not been determined but will generally be between 99 to 111 parking spaces. The proposed parking ratio will be less than the City's requirement of 1 space per unit. There are also very limited on-street parking available within the project vicinity. Limited parking supply would also attract residents who do not own cars or own only one vehicle.

## C/CAG TDM Requirement

The City/County Association of Governments (C/CAG) for San Mateo County has established trip reduction requirements for new development within the county. C/CAG categorizes new developments as small projects and large projects. Multi-family residential projects generating more than 500 average daily trips are considered to be large projects. The recommended vehicle trip reduction target for large multi-family residential is 35 percent. As shown in Table 1 above, the project is estimated to generate 508 daily trips, and would need to comply with C/CAG's "Residential Land Use: Large Project" category.

To accomplish the reduction goal, C/CAG provides a list of potential TDM measures, some of which are required and some of which are optional. Each measure has an associated point value and reduction percentage. Based on the updated C/CAG TDM policy, the project must first fulfill all required measures prior to selecting a sufficient number of additional recommended measures to achieve the minimum 35 percent trip reduction.

As shown in the Appendix, the C/CAG checklist estimated that the project would achieve a 60% reduction, achieving the 35% trip reduction goal for "Residential Land Use: Large Project" category. It should be noted that not all recommended measures will necessarily achieve the estimated percentage reduction as calculated using the C/CAG TDM checklist.

## 4. TDM Implementation, Monitoring, and Reporting

---

This chapter outlines the required implementation, monitoring, and reporting for the proposed project's TDM Plan.

### Annual Commute Surveys

The purpose of the TDM Plan is to reduce daily vehicle trips by at least 35 percent, thereby lessening parking issues, traffic congestion, and vehicle emissions associated with the proposed project. Regular monitoring will ensure that the implemented TDM measures are effective and achieve that standard. The program will be evaluated annually to assess the actual level of trip reduction achieved at the site and to identify any adjustments to the program necessary to ensure the TDM measures are successful.

Annual commute surveys will be administered by the transportation coordinator to measure the number of residents commuting by alternative modes and whether they are aware of the services and programs that are available to them. Residents who do not respond to the survey will be assumed to be driving alone. In addition to obtaining quantitative data on the mode split, the survey will provide qualitative data regarding resident perceptions of the alternative transportation programs. The survey results will measure the relative effectiveness of individual program components relative to other components and facilitate the design of possible program enhancements. Along with collecting information on mode split, the survey can gather information on use of the bike storage, use of the online kiosk, and walking trips made to nearby commercial uses. The transportation coordinator will be responsible for administering the survey, compiling the results, and communicating the results to the City.

## Annual Driveway Counts

In order to evaluate whether or not the project has met the 35 percent daily vehicle trip reduction requirement, annual driveway counts will be conducted. A count of the number of vehicles entering and exiting the project's driveways on a typical weekday will be conducted annually by an independent third party to determine the number of vehicle trips being generated by the project. The counts will be conducted at the site's driveway on a weekday that is not disclosed in advance. All vehicles entering and exiting the project driveways will be counted.

The driveway counts will be used to determine the actual daily trip generation of the project. The Transportation Coordinator will provide the results of the driveway counts to the City of Menlo Park, along with a statement as to whether the 35 percent trip reduction goal was met.

## Annual Reporting to City

The TDM ordinance for the residential mixed-use (R-MUS) district states that the required trip reduction will be achieved "over the life of the development, as evidenced by annual reporting provided to the satisfaction of the City's Transportation Manager." The Transportation Coordinator will submit to the City of Menlo Park annual documentation to substantiate implementation of the TDM plan elements, the results of the resident survey, and the results of the driveway counts. If the 35 percent peak-hour trip reduction requirement has not been met, then the report will state what additional measures (i.e. providing transit subsidies) will be implemented in the coming year in order to achieve the City's requirement.

## Active Participation Certification with Commute.Org

The project applicant will be required to achieve "Active Participation" status with Commute.org. The latest requirements to achieve this status can be found online at <https://commute.org/resources/developers/>. Currently, the project applicant must complete the following steps:

- Register with Commute.org and provide pertinent information, including the TDM contact person.
- Consult with Commute.org staff to verify the certification process and requirements for active transportation.
- Submit a signed Letter of Commitment confirming that the developer and/or their successor(s) will be active participants with Commute.org.
- Provide a copy of the C/CAG TDM Policy Checklist.
- Receive a Pre-Certification Letter from Commute.org that confirms registration and commitment to active participation.
- Achieve certification status within six months of receiving Certificate of Occupancy.
- Maintain annual certification status with Commute.org by complying with the requirements for active participation

## 5. Conclusion

---

The City of Menlo Park requires that all new projects involving a change of use of 10,000 or more square feet of gross floor area in the Residential Mixed-use (R-MU) zoning district prepare TDM plans that will reduce vehicle trips by 20 percent from standard trip generation rates (Menlo Park Municipal Code Section 16.45.090). City staff has indicated that the City's TDM ordinance is anticipated to be revised later in 2024 to align with the C/CAG's TDM requirements. The City/County Association of Governments (C/CAG) adopted updated TDM policies (January 1, 2022) that require the project (qualifying as "large residential project") to implement TDM measures that can achieve 35% trip reduction based on its C/CAG checklist. This plan has been prepared with the goal of achieving at least a 35 percent reduction in daily trips.

As shown in the Appendix, the C/CAG checklist estimated that the project would achieve a 60% reduction, achieving the 35% trip reduction goal for "Residential Land Use: Large Project" category. It should be noted that not all recommended measures will necessarily achieve the estimated percentage reduction as calculated using the C/CAG TDM checklist.

Therefore, by fully implementing all TDM measures included in this TDM Plan, the project would be in compliance with the City's TDM ordinance.
