**Document Title**

3705 Haven Avenue Project

**Document Type**

NOP - Notice of Preparation of a Draft EIR

**Received**

12/1/2023

Hello Fahteen,

Thank you for providing the City's Notice of Preparation (NOP) of an EIR for our review. This email conveys the following recommendations from CGS concerning geologic and seismic hazard issues within the planned project:

1. Liquefaction Hazards

- The EIR should discuss liquefaction as a potential seismic hazard for the proposed project. The City should include a discussion of Earthquake Zones of Required Investigation (EZRI) for liquefaction and consider providing a map of these zones.
- CGS Seismic Hazard Zone maps and data are available here:  
<https://maps-cnra-cadoc.opendata.arcgis.com/datasets/cadoc::cgs-seismic-hazards-program-liquefaction-zones-1/about>  
<https://maps-cnra-cadoc.opendata.arcgis.com/datasets/cadoc::cgs-seismic-hazards-program-landslide-zones-doc-hosted/about>  
<https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=regulatorymaps>  
<https://maps.conservation.ca.gov/cgs/EQZApp/app/>
- Cities and counties affected by EZRIs must regulate certain development projects within them. The Seismic Hazards Mapping Act (1990) also requires sellers of real property (and their agents) within a mapped hazard zone to disclose at the time of sale that the property lies within such a zone.

2. Earthquake Ground Motion Hazards

- The EIR should provide a discussion of the probability of large earthquakes in the region. This discussion may include earthquake probabilities from the third Uniform California Earthquake Rupture Forecast (UCERF3). A non-technical discussion of this model is available here: <https://pubs.usgs.gov/fs/2015/3009/pdf/fs2015-3009.pdf>

### 3. Fault Hazards

- The EIR should consider providing maps depicting the locations of Alquist-Priolo Earthquake Fault Zones in the region. The City might also consider referring readers to the CGS website for a map that is continually updated: <https://maps.conservation.ca.gov/cgs/EQZApp/app/>
- CGS maps of Alquist-Priolo Earthquake Fault Zones and data are available here: <https://maps-cnra-cadoc.opendata.arcgis.com/datasets/cadoc::cgs-seismic-hazards-program-fault-traces/about>  
<https://maps-cnra-cadoc.opendata.arcgis.com/datasets/cadoc::cgs-seismic-hazards-program-alquist-priolo-fault-hazard-zones-1/about>  
<https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=regulatorymaps>

### 4. Tsunami Hazards

- The EIR should also consider and discuss potential tsunami hazards. The CGS has mapped a Tsunami Hazard Area (THA) near the proposed project. The purpose of a THA is to assist public agencies in identifying their exposure to tsunami hazards. It is intended for local jurisdictional, coastal evacuation planning uses only. Additional information can be found at the links below: <https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=regulatorymaps>  
<https://www.conservation.ca.gov/cgs/Documents/Publications/Tsunami-Maps/Tsunami Hazard Area Map Napa County a11y.pdf>  
<https://www.conservation.ca.gov/cgs/Documents/Publications/Tsunami-Maps/Tsunami Hazard Area Map Solano County a11y.pdf>  
<https://www.conservation.ca.gov/cgs/Documents/Publications/Tsunami-Maps/Tsunami Hazard Area Map Sonoma County a11y.pdf>
- The City should also check to see if the proposed project includes a Tsunami Design Zone within the California Building Code (CBC). The CBC requires certain design standards for essential/critical or larger structures. The following website provides additional information regarding Tsunami Design Zones: <https://asce7tsunami.online/>.

Please let me know if you have any questions.

Subject: Comments on Notice of Preparation for 3705 Haven EIR

Dear Ms. Khan:

The Sequoia Audubon Society (SAS) respectfully submits the following scoping comments regarding the Notice of Preparation (NOP) for the 3705 Haven EIR. SAS, the San Mateo County chapter of the National Audubon Society, has a strong interest in protecting the birds and their habitats in the nearby shoreline, Baylands, Bedwell Bayfront Park and in Don Edwards National Wildlife Refuge. It is also important to minimize bird collision hazards for resident and migrating birds and minimize night lighting and noise projecting towards the Bay habitats spanning the NE, N to SE directions from the Project site and light projecting up into the night sky. The EIR should address these concerns which are not adequately considered in the current project plans.

The ConnectMenlo EIR requires a Biological Assessment and appropriate mitigations for the 3705 Haven Project EIR. The Project area is within 1000 feet of sensitive tidal marsh habitat and salt ponds providing suitable habitat for a diverse group of birds and endangered species. The Federally Endangered Species, Ridgway's Rail has been observed, and there is likely habitat for Salt Marsh Harvest Mouse. In the eBird database, Steven Rottenborn reported two Ridgway's Rails on 29 Jan 2020: "one foraging at the edge of marsh and swimming in the tidal channel to circumvent some ducks along the shoreline; another called while this bird was visible. These birds were just north of the "bulb" formed where Flood Slough is enlarged at its southern/upper end."<sup>1</sup>

---

<sup>1</sup> <https://ebird.org/checklist/S65620888>

Sequoia Audubon is asking that the scope of the EIR include the following:

1. **Evaluate Measures to Minimize Bird Collisions with Building Surfaces:** Require the EIR to specify alternatives and design requirements to minimize bird collisions. As stated in bird-safe planning guidelines<sup>2</sup>:

“Birds strike transparent windows as they attempt to access potential perches, plants, food or water sources and other lures seen through the glass or reflected in glass. Design traps such as glass balcony walls, glass walls around planted atria and windows installed at building corners are dangerous because birds perceive an unobstructed route to the other side.” “Night-time lighting also interferes with avian migrations by attracting birds to the buildings.” “Night-migrating songbirds—already imperiled by habitat loss and other environmental stressors—are at double the risk, threatened both by illuminated buildings when they fly at night and by daytime glass collisions as they seek food and shelter.”

A recent news article highlights how communities are preventing bird deaths by minimizing impacts of night lighting and making sure that glass is marked with opaque patterns to prevent collisions.<sup>3</sup>

Mitigation Measure BIO-1 of the ConnectMenlo EIR requires measures to ensure that the project reduces bird collisions with new buildings. These requirements are as follows:

- A. No more than 10% of façade surface area shall have non-bird-friendly glazing.
- B. Bird-friendly glazing includes, but is not limited to, opaque glass, covering the outside surface of clear glass with patterns, paned glass with fenestrations, frit or etching patterns, and external screens over non-reflective glass. Highly reflective glass is not permitted.
- C. Occupancy sensors or other switch control devices with an astronomic time clock shall be installed on nonemergency lights and shall be programmed to shut off during non-work hours and between 10:00 p.m. and sunrise.
- D. Placement of buildings shall avoid the potential funneling of flight paths towards a building façade.
- E. Glass skyways or walkways, free-standing (see-through) glass walls and handrails, and transparent building corners shall not be allowed.
- F. Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with roof decks, patios and roofs with landscape vegetation.
- G. Use of rodenticides shall not be allowed.

---

<sup>3</sup> “Cities jump into action to mitigate bird deaths”, Joseph Howlett, The Mercury News, [https://edition.pagesuite.com/popovers/dynamic\\_article\\_popover.aspx?guid=1a75c1d2-63f3-4e12-8345-4826695770c1&appcode=SAN252&eguid=927031d1-d597-4c89-ab04-f3a43df8cce7&pnum=26](https://edition.pagesuite.com/popovers/dynamic_article_popover.aspx?guid=1a75c1d2-63f3-4e12-8345-4826695770c1&appcode=SAN252&eguid=927031d1-d597-4c89-ab04-f3a43df8cce7&pnum=26)

Item E prohibits clear panels on the roof deck, such as those shown in the photos in the current Project plan.<sup>4</sup> Require that the plan use opaque, non-reflective panels on decks

2. **Minimize artificial lighting:** Require that the EIR consider the Project's artificial lighting threat to birds.

SAS recommends that the Biological Assessment and EIR consider measures to reduce lighting impacts. Interior lights should be blocked by shades after dark in residences and opaque glass or motion sensors in common areas. Perhaps built in automatic shades and timers would make it easy for residents to reduce night light emissions. This will help prevent birds from being attracted to the lights. Plans for exterior lights on buildings, and lights for parking lots and walkways should follow these principles: Lights on buildings, and lights for parking lots and walkways, should be down - lighted with fully shielded fixtures.

- Only be on when needed
- Only light the area that needs it
- Be no brighter than necessary
- Minimize blue light emissions, by using fixtures with a color temperature of 3,000 Kelvin or less.
- Eliminate upward or outward directed light
- Prohibit outdoor blinking, flashing, or rotating lights, flood lights, and spotlights.

Revise the project plans to eliminate high-intensity lighting and avoid light pollution of the Baylands to the extent possible. For example, the plan proposes 4,000 K LED street lights without full shielding. Lights this bright are bad both for the environment and for human health.

Since the project proposes roof decks, including a lighted social activity facility in a residential building, it may be impossible to eliminate light transmission skyward or bayward, nor will it be likely that noise can be controlled. Given these uncontrollable risks, eliminate the 8th floor roof deck with social facilities. Housing is given special privilege in CEQA analysis, but the roof decks are optional and not required to provide residential units.

Limit night lighting on the exposed terraces by requiring low intensity lights, directed downward, off when not in use, and with low reflectance to the sky. Provide illustrations of the expected nighttime glow from the project overhead and from various viewing angles and explain how that glow is minimized.

The installation of lighting in new development, streets and parking lots may result in potential impacts on animal species. Many animals, both special-status and common species, are sensitive to light cues, which influence their physiology and shape their behaviors, particularly during the breeding season.

---

<sup>4</sup> See picture on Page 69 of the September 2023 Project Plans (3705 Haven plng\_5\_dwgs-rev3-project-plans-sb330-3705-haven)

“Artificial light has been used as a means of manipulating breeding behavior and productivity in captive birds for decades and has been shown to influence the territorial singing behavior of wild birds. While it is difficult to extrapolate results of experiments on captive birds to wild populations, it is known that photoperiod (the relative amount of light and dark in a 24-hour period) is an essential cue triggering physiological processes as diverse as growth, metabolism, development, breeding behavior, and molting. This holds true for mammals and other taxa as well, suggesting that increases in ambient light may interfere with these processes across a wide range of species, resulting in impacts on wildlife populations. Artificial lighting may also indirectly affect animals by increasing the nocturnal activity of predators such as owls, hawks, and mammalian predators.”<sup>5</sup>

### 3. Other Comments on the Scope of the EIR:

- Require the developer to use replacement trees that are California native species rather than those suggested in the plan, which are all exotic species. Native trees provide better habitat for birds and use less water. Preservation of the native heritage oak trees would be a public benefit and amenity.
- Require that qualified biologists are used to accomplish the Biological Assessment, Mitigation Plans, Adaptation plans. Indicate what inspection of materials, monitoring and adaptation will occur.
- Aesthetics is another important issue. Consider the blockage of view of the natural Baylands and skies, and the effect of night glow back onto inland neighborhoods.
- The cumulative impacts of this project should be considered in the EIR. Has ConnectMenlo already over-committed, resulting in long term significant environmental impacts from glass hazards, lighting impacts, noise, excessive places for predator perches, and spoiling views and night skies?

SAS is concerned with the health of the ecosystems and wildlife, and access for appreciation of these natural resources. Addressing these concerns will benefit both 3705 Haven residents and wildlife. We appreciate your including these comments in the scope of the EIR.

Thank you.  
Sincerely,

Chris MacIntosh

Re: Response of Sequoia Union High School District to Notice of Preparation of the Environmental Impact Report for the 3705 Haven Avenue Housing Project

Dear Ms. Khan:

This office represents Sequoia Union High School District (“District”). The District appreciates the opportunity to provide comments and input regarding the Notice of Preparation of the Environmental Impact Report (“EIR”) for the 3705 Haven Avenue Housing Project (“Project”).

As the District has expressed in scoping and comment letters recently submitted to the City regarding other projects, the District is very concerned about the numerous large residential and commercial development projects proposed in the City. The District’s TIDE Academy is approximately 0.8 miles from the Project. The District’s Menlo-Atherton High School and Sequoia High School are each located approximately four miles from the Project. The Project is anticipated to result in extensive impacts on student safety, among other impacts. **As in the District’s prior letters, the District requests that all direct and indirect impacts related to the Project’s proximity to District schools, especially TIDE Academy, be thoroughly reviewed, analyzed, and mitigated.**

The Project sponsor, 3705 Haven LLC, proposes to demolish the existing 10,361-square foot commercial building and redevelop the project site with an eight-story (approximately 93 feet tall), 99-unit residential apartment building with approximately 1,550 square feet of ground floor commercial space and structured parking. The ground floor commercial space would be located at the southeast corner of the building where Haven Avenue curves. The Project includes a total of approximately 11,730 square feet of common open space, including approximately 4,670 square feet of publicly accessible outdoor space. Within the proposed building, the Project includes three common outdoor spaces for residents, located on the third floor (podium level), fifth floor, and rooftop. In addition, the Project would include standard mechanical equipment (such as heating, ventilation, and air conditioning equipment) and would potentially include a battery-powered electric emergency generator. The Project also includes utility and other public

*Limited Liability Partnership*

*2001 North Main Street, Suite 500 Walnut Creek, California 94596 Tel 925-953-1620 Fax 925-953-1625*

right-of-way improvements including undergrounding of overhead electrical lines and new utility lateral connections, driveways, sidewalks, curbs, and gutters. As explained further below, the Project has the potential to cause severe detriment to the District and its students.

The Notice of Preparation (“NOP”) prepared for the Project concludes that the Project may have numerous impacts on the environment, including potential impacts on Public Services, Population and Housing, Transportation, Noise and Vibration, Air Quality and Utilities. The NOP thus correctly concludes that a subsequent full-scope EIR is required.

Preliminarily, the District notes that it is willing to participate in meetings or study sessions with City Staff and the applicant to discuss the proposed Project. The District is hopeful that opening the door to these discussions will yield solutions that benefit the District, the City, and the community as a whole. The District therefore requests that the following topics be analyzed and considered in the Draft EIR for the Project.

**A. Transportation/Circulation/Traffic Analysis**

- 1. Describe the existing and the anticipated vehicular traffic and student pedestrian movement patterns to and from school sites, including movement patterns to and from Menlo-Atherton High School, TIDE Academy, and Sequoia High School, and including consideration of bus routes.**
- 2. Assess the impact(s) of increased vehicular movement and volumes caused by the Project, including but not limited to potential conflicts with school pedestrian movement, school transportation, and bussing activities to and from Menlo-Atherton High School, TIDE Academy, and Sequoia High School.**
- 3. Estimate travel demand and trip generation, trip distribution, and trip assignment by including consideration of school sites and home-to-school travel.**
- 4. Assess cumulative impacts on schools and the community in general resulting from increased vehicular movement and volumes expected from additional development already approved or pending in the City.**
- 5. Discuss the direct, indirect, and cumulative impacts on the circulation and traffic patterns in the community as a result of traffic generated by the transportation needs of students to and from the Project and schools throughout the District during and after the Project build-out.**
- 6. Assess the impacts on the routes and safety of students traveling to school by vehicle, bus, walking, and bicycles.**

The District has significant concerns about the traffic, transportation, and circulation impacts that the Project may have on the District, including the District’s staff, parents, and students that

attend TIDE Academy. The foregoing categories of information are critical for determining the extent of those impacts.

**(a) The City Must Consider All Traffic and Related Impacts, Including Impacts of Traffic on Student Safety, Caused by the implementation of the Project.**

Any environmental analysis related to the Project must address potential effects related to traffic, noise, air quality, and any other issues affecting schools. (Pub. Resources Code, §§ 21000, *et seq.*; Cal. Code Regs., tit. 14, §§ 15000, *et seq.*; *Chawanakee Unified School District v. County of Madera, et al.*, (2011) 196 Cal.App.4th 1016.) Additionally, specifically regarding traffic, there must be an analysis of safety issues related to traffic impacts, such as reduced pedestrian safety, particularly as to students walking or bicycling to and from TIDE Academy; potentially reduced response times for emergency services and first responders traveling to the school; and increased potential for accidents due to gridlock during school drop-off and pick-up hours. (See, *Journal of Planning Education and Research*, “Planning for Safe Schools: Impacts of School Siting and Surrounding Environments on Traffic Safety,” November 2015, Chia-Yuan Yu and Xuemei Zhu, pg. 8 [Study of traffic accidents near Austin, Texas schools found that “[a] higher percentage of commercial uses was associated with more motorist and pedestrian crashes” around schools].)

The State Office of Planning and Research has developed new CEQA Guidelines which set forth new criteria for the assessment of traffic impacts, and now encourages the use of metrics such as vehicle miles traveled (“VMT”), rather than level-of-service (“LOS”), to analyze project impacts on traffic. (14 Cal. Code Regs. § 15064.3.) However, local agencies may still consider impacts on traffic congestion at intersections where appropriate, and must do so where, as here, such traffic congestion will cause significant impacts on air quality, noise, and safety issues caused by traffic. (Pub. Res. Code § 21099(b)(3).)

The City has experienced a drastic increase in traffic over the last ten to fifteen years as the City has continued to approve newer corporate campuses and mixed biotechnology, commercial, office, and residential land uses. **The construction resulting from and traffic generated by the Project will severely exacerbate the already stifling traffic in the downtown area, and the safety issues posed thereby. These impacts will severely inhibit the District’s ability to operate its educational programs, including at TIDE Academy.**

The proposed Project is anticipated to impede circulation in the Project area, and clog the access roads to, from, and around the District’s TIDE Academy. (See, 5 Cal. Code Regs. § 14010(k), which requires that school facilities be easily accessible from arterial roads.) The District’s TIDE Academy is located approximately 0.8 miles from the Project. Both TIDE Academy and the proposed Project would be accessed by the same roads, including those mentioned above. In addition to drawing a large number of new residents to the area, the Proposed Project will draw thousands of daily office commuters, visitors, and emergency access vehicles from around the Bay Area. The immediate roads surrounding TIDE Academy will bear the burden of the increased traffic patterns. Such increases to traffic in the area will not only make it much more difficult for students and staff to travel to and from TIDE Academy, but will also **drastically**

**increase the risk of vehicular accidents to District families, students, and staff traveling to and from school.**

In addition to increased risks of vehicular accidents, the traffic and parking impacts posed by the Project may severely impact the safety and convenience of TIDE Academy students who walk or bike to school. Title 5 of the California Code of Regulations requires that school sites be located within a proposed attendance area that encourages student walking and avoids extensive bussing. (5 Cal. Code Regs. § 14010(1).)

The EIR must analyze and mitigate all of the above traffic and related impacts, including those impacts related to student safety and ability to get to school, the District's ability to implement its transportation and safety mitigation measures for TIDE Academy, and the District's ability to promote alternative modes of transportation to and from TIDE Academy. It is important that these traffic impacts are not only assessed through a VMT analysis, but also through an LOS analysis, as traffic congestion surrounding the District's TIDE Academy caused by the proposed Project will in turn cause significant issues related to safety, noise, and air quality. It is anticipated that these impacts will extend far beyond the Project area. Rather, the District requests that all intersections that could be impacted by the Project, including those within and outside of the Project area, be analyzed for LOS and related safety impacts. The District further suggests that the lead agency consult with the District's own traffic engineering company regarding the placement of driveways to service the proposed Project, so as to achieve a plan that minimizes, to the greatest extent possible, the risk of potential injuries to students walking and biking to school in the downtown area.

**(b) City Must Consider Cumulative Traffic and Related Impacts.**

Environmental impact reports must address cumulative impacts of a project when the project's effects on the environment, viewed in conjunction with impacts of other past, present, or reasonably foreseeable future projects, is cumulatively considerable. (14 CCR 15130(a).) (See *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 CA4th 713, 720, finding that piecemeal approval of several projects with related impacts could lead to severe environmental harm.) While a lead agency may incorporate information from previously-prepared program EIRs into the agency's analysis of a project's cumulative impacts, the lead agency must address all cumulative impacts that were not previously addressed in the program EIR. (Pub. Res. Code § 21083.3(c); 14 CCR 14183(b)(3).)

The Project's above- and below-discussed anticipated impacts on the District, combined with the anticipated impacts of the vast number of development projects that have recently been approved and are being considered for approval in the City are cumulatively considerable. All of these impacts are exacerbated by the volume of projects that the City is considering and approving, as the District will be unable to accommodate the influx of students through facilities, infrastructure, and related improvements. When considered together, the collective impacts on traffic, safety, and air quality in the neighborhood will be devastating. **These cumulative impacts on the District's Menlo-Atherton High School, TIDE Academy, and Sequoia High School must be analyzed and mitigated.**

**B. Air Quality**

- 7. Identify and assess the direct and indirect air quality impacts of the Project on sensitive receptors, such as the District's TIDE Academy.**
- 8. Identify and assess cumulative air quality impacts on schools and the community in general resulting from increased vehicular movement and volumes expected from additional development already approved or pending in the downtown area.**

The Bay Area Air Quality Management District's ("BAAQMD") CEQA Guidelines (May 2017) impose numerous limitations on the exposure of "sensitive receptors," such as schools, to odors, toxins, and pollutants, including pollutants from vehicular exhaust.

It is anticipated that the Project, including when viewed in conjunction with all of the other developments being considered and approved in the vicinity of TIDE Academy, will have a significant impact on the air quality of the neighborhood due to extensive construction activities and increases in vehicular traffic. Even more pressing, the proposed Project is anticipated to result in significant impacts to sensitive receptors as an increased number of vehicles enter and exit the Project area, creating increased levels of air toxins and particulate matter that could negatively impact student health. These impacts, as they relate to the District's students at TIDE Academy, must be analyzed in the Draft EIR. This analysis also dovetails with the discussion above regarding the necessity of LOS analysis. Decreased levels of service at intersections generally mean lengthier amounts of time for cars to idle, including near schools, resulting in decreased air quality and the potential for substantial impacts on students.

**C. Noise**

- 9. Identify any noise sources and volumes which may affect school facilities, classrooms and outdoor school areas.**

It is expected that noise from construction stemming from the implementation of the proposed Project will cause impacts on the District's educational programs at TIDE Academy. Request No. 9 is intended to clarify that the EIR's consideration of noise issues take into account all of the various ways in which noise may impact schools, including increases in noise levels in the immediate vicinity of TIDE Academy.

**D. Population**

- 10. Describe historical, current, and future population projections for the District.**
- 11. Assess the impacts of population growth within the District on the District's ability to provide its educational program.**

In addition to 99 anticipated residential units, it is anticipated that the proposed Project's 1,500 square feet of ground floor commercial space and structure parking will draw thousands of

residents into the area on a permanent, or at least a daily basis. As the Project proposes the development of a residential apartment building, the District believes that the student generation rate for multifamily units will apply. Using the District's multifamily student generation rate of 0.1, 99 anticipated residential units are likely to generate approximately 10 new high school students to the District. TIDE Academy is currently close to or over capacity.

The District, therefore, specifically demands that historic, current, and future population projections for the District be addressed in the EIR. Population growth or shrinkage is a primary consideration in determining the impact that development may have on a school district, as a booming population can directly impact the District and its provision of educational services, largely because of resulting school overcrowding, while a district with declining enrollment may depend on new development to avoid school closure or program cuts. Overcrowding can constitute a significant impact within the meaning of CEQA. (See, 14 Cal. Code Regs. §§ 15064(e).) This is particularly true where the overcrowding results in unsafe conditions, decreased quality of education, the need for new bus routes, and a need for new school construction. The same can hold true for potential school closures or program cuts resulting from a declining population.

#### **E. Housing**

**12. Describe the type and number of anticipated dwelling units indirectly resulting from the Project.**

**13. Describe the average square footage for anticipated dwelling units, broken down by type of unit, indirectly resulting from the Project.**

**14. Estimate the amount of development fees to be generated by development in accordance with implementation of the Project.**

The foregoing categories of information are critical for determining the extent of both physical and fiscal impacts on the District caused by increased population growth.

California school districts are dependent on developer fees authorized by the provisions of Government Code sections 65995, *et seq.*, and Education Code sections 17620, *et seq.*, for financing new school facilities and maintenance of existing facilities. The developer fees mandated by Section 65995 provide the District a significant portion of its local share of financing for facilities needs related to development.

The adequacy of the statutory development fees to offset the impact of new development on local school districts can be determined only if the types of housing and average square footage can be taken into consideration. For instance, larger homes often generate approximately the same number of students as smaller homes. At the same time, however, a larger home will generate a greater statutory development fee, better providing for facilities to house the student being generated. It is for these reasons that the Government Code now requires a school district to seek – and presumably to receive – such square footage information from local planning departments. (Gov. Code § 65995.5(c)(3).)

While the foregoing funding considerations raise fiscal issues, they also translate directly into physical, environmental impacts, in that inadequate funding for new school construction results in overcrowding of existing facilities. Without funding to build new facilities or land on which to expand, students may need to attend schools outside their attendance boundaries, creating significant traffic impacts, among others. Furthermore, fiscal and social considerations are relevant to an EIR, particularly when they either contribute to or result from physical impacts. (Pub. Resources Code § 21001(g); 14 Cal. Code Regs. §§ 15021(b), 15131(a)-(c), 15142 & 15382.)

Phasing of development is also a crucial consideration in determining the extent of impacts on schools, which is especially relevant considering the volume of development occurring in the downtown area. The timing of the development will determine when new students are expected to be generated, and therefore is an important consideration particularly when considering the cumulative impact of a project in conjunction with other approved or pending development.

#### **F. Public Services**

- 15. Describe existing and future conditions within the District, on a school-by-school basis, including size, location and capacity of facilities.**
- 16. Describe the adequacy of both existing infrastructure serving schools and anticipated infrastructure needed to serve future schools.**
- 17. Describe the District's past and present enrollment trends.**
- 18. Describe the District's current uses of its facilities.**
- 19. Describe projected teacher/staffing requirements based on anticipated population growth and existing State and District policies.**
- 20. Describe any impacts on curriculum as a result of anticipated population growth.**
- 21. Identify the cost of providing capital facilities to properly accommodate students on a per-student basis, by the District (including land costs).**
- 22. Identify the expected shortfall or excess between the estimated development fees to be generated by the Project and the cost for provision of capital facilities.**
- 23. Assess the District's present and projected capital facility, operations, maintenance, and personnel costs.**
- 24. Assess financing and funding sources available to the District, including but not limited to those mitigation measures set forth in section 65996 of the Government Code.**

25. **Identify any expected fiscal impacts on the District, including an assessment of projected cost of land acquisition, school construction, and other facilities needs.**
26. **Assess cumulative impacts on schools resulting from additional development already approved, pending, or anticipated.**
27. **Identify how the District will accommodate students from the Project who are not accommodated at current District schools, including the effects on the overall operation and administration of the District, the students and employees.**

CEQA Guidelines, Appendix G, states that a project may have public services impacts on schools if the project would “result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives” for the provision of school services.

There are myriad ways in which large residential and commercial development projects can impact a school district’s need for new or physically altered facilities in order to maintain performance objectives. The Draft EIR’s examination of the Project should analyze all potential impacts under this standard, including but not limited to: (1) whether the influx of students would require “physically altered” school facilities unrelated to the accommodation of additional enrollment; (2) whether other impacts of the Project, such as increased traffic, noise, or air pollutants in the neighborhood surrounding TIDE Academy, could impact the District’s need for new or physically altered school facilities; and (3) whether other impacts of the Project could otherwise interfere with the District’s ability to accomplish its own performance objectives. Consideration of the above-listed categories of information is essential to properly making these determinations.

Lead agencies often cite to SB 50 (specifically, Government Code sections 65995(h) and 65996(a)), for the proposition that the payment of school impact fees (commonly referred to as “developer fees”) excuses them from their obligations to analyze and mitigate impacts posed on school districts by development. This, however, is a misstatement of the law related to developer fees and CEQA. While SB 50 does declare that the payment of the developer fees authorized by Education Code section 17620 constitutes “full and complete mitigation of the impacts of any legislative or adjudicative act on the provision of adequate school facilities,” (Gov. Code § 65995(h)), SB 50 does not excuse lead agencies from analyzing such impacts on school facilities in the first place. Further, **California courts have since acknowledged that developer fees do not constitute full and complete mitigation for school-related impacts other than school overcrowding.** (*Chawanakee Unified Sch. Dist. v. County of Madera* (2011) 196 Cal.App.4th 1016.) Thus, the payment of fees does not constitute full mitigation for all impacts caused by development related to traffic, noise, biological, pedestrian safety, and all other types of impacts related to the District and its educational program. The District expects the City to analyze and mitigate all such impacts in the EIR for the Project.

Fahteen Khan  
City of Menlo Park  
January 10, 2024  
Page 9

**Conclusion**

The District does not oppose development within District boundaries, and recognizes the importance of housing on the health and welfare of the community. However, the District maintains that the community can only thrive if the District's educational program and its facilities are viable and sufficient, and District staff, families, and students are safe. Accordingly, the needs of the District must be appropriately considered in the environmental review process for all proposed new development that will impact the District, such as the very large project under consideration.

We request that all notices and copies of documentation with regard to the Project be mailed both to the District directly, and also to our attention as follows:

Subject: 3705 Haven Avenue Project, Notice of Preparation of an Environmental Impact Report, SCH No. 2023120023, City of Menlo Park, San Mateo County

Dear Mr. Khan:

The California Department of Fish and Wildlife (CDFW) reviewed the City of Menlo Park's Notice of Preparation (NOP) of a Draft Environmental Impact Report (EIR) for the City of Menlo Park (City) 3705 Haven Avenue Housing Project (Project) pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines<sup>1</sup>.

## **CDFW ROLE**

CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the state. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines, § 15386, subd. (a)). CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (Id., § 1802). For purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW is also submitting these comments as a **Responsible Agency** under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority over the Project pursuant to the Fish and Game Code. Likewise, to the extent the Project may result in "take," as defined by state law, of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), related authorization as provided by the Fish and Game Code will be required.

---

<sup>1</sup>CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Mr. Fahteen Khan  
City of Menlo Park  
December 22, 2023  
Page 2

## **PROJECT DESCRIPTION AND LOCATION**

**Proponent:** 3705 Haven LLC

The Project site is approximately 0.66-acre at 3705 Haven Avenue and is currently developed with a one-story commercial building and parking lot. The Project site is located to the west of the intersection of Marsh Road/Bayfront Expressway (State Route 84) and Haven Avenue (APN 055-170-240).

The Project proposes the redevelopment of an existing parcel, to demolish the existing commercial building, and redevelop the Project site with an eight-story (approximately 93 feet tall), 99-unit residential apartment building with approximately 1,550 square feet of ground floor commercial space. Also, the Project includes a total of approximately 11,730 square feet of common open space and 4,670 square feet of publicly accessible outdoor space.

The Project also proposes changes to infrastructure including undergrounding of overhead electrical lines and new utility lateral connections, driveways, sidewalks, curbs, and gutters.

The Project includes the removal of 13 trees, three of which are heritage trees. The Project proposes to plant a total of 15 new trees (four silver linden, six African fern pine, and five Saratoga laurel trees) to compensate for the removal of the three heritage trees. In addition, the Project proposes 24 new trees would be located on the podium courtyard and rooftop deck.

The CEQA Guidelines (§§15124 & 15378) require that the draft EIR incorporate a full Project description, including reasonably foreseeable future phases of the Project, and that contains sufficient information to evaluate and review the Project's environmental impact. Please include a complete description of the following Project components in the Project description including, but not limited to, the below information.

- Land use changes resulting from, for example, rezoning certain areas;
- Footprints of permanent Project features and temporarily impacted areas, such as staging areas and access routes;
- Area and plans for any proposed buildings/structures, ground-disturbing activities, fencing, paving, stationary machinery, landscaping, and stormwater systems;
- Operational features of the Project, including level of anticipated human presence (describe seasonal or daily peaks in activity, if relevant), artificial lighting/light reflection, noise, traffic generation, and other features; and

Mr. Fahteen Khan  
 City of Menlo Park  
 December 22, 2023  
 Page 3

- Construction schedule, activities, equipment, and crew sizes.

## ENVIRONMENTAL SETTING

Sufficient information for meaningful review regarding the environmental setting is necessary to understand any potentially significant impacts on the environment of the proposed Project and any alternatives identified in the EIR (CEQA Guidelines, §§ 15125 & 15360). CDFW recommends the EIR provide baseline habitat assessments for special-status plant, fish, and wildlife species located and potentially located within the Project area and surrounding lands, including all rare, threatened, and endangered species (CEQA Guidelines, §15380). The EIR should describe aquatic habitats, such as wetlands or waters of the U.S. or state, and any sensitive natural communities or riparian habitat occurring on or adjacent to the Project site (for sensitive natural communities see:

<https://wildlife.ca.gov/Data/VegCAMP/NaturalCommunities#sensitive%20natural%20communities>), and any stream or wetland set back distances the [City or County] may require. Fully protected, threatened or endangered, candidate, and other special-status species that are known to occur, or have the potential to occur, in or near the Project site include, but are not limited to:

Common Name	Scientific Name	Status
salt-marsh harvest mouse	<i>Reithrodontomys raviventris</i>	FE, SE, SP
California least tern	<i>Sternula antillarum browni</i>	FE, SE, SP
California Ridgway's rail	<i>Rallus obsoletus obsoletus</i>	FE, SE, SP
Nesting birds Bats		
<b>Notes:</b> FE = listed as endangered under the federal Endangered Species Act; SE = listed as endangered under CESA; SP = state listed as fully protected.		

Habitat descriptions and species profiles included in the EIR should include robust information from multiple sources: aerial imagery, historical and recent survey data, field reconnaissance, scientific literature and reports, U.S. Fish and Wildlife Service's (USFWS) Information, Planning, and Consultation System; California Aquatic Resources Inventory; and findings from "positive occurrence" databases such as California Natural Diversity Database (CNDDDB). Only with sufficient data and

Mr. Fahteen Khan  
City of Menlo Park  
December 22, 2023  
Page 4

information from the habitat assessment can the City adequately assess which special-status species are likely to occur in the Project vicinity.

CDFW recommends that prior to Project implementation, surveys be conducted for special-status species with potential to occur, following recommended survey protocols if available. Survey and monitoring protocols and guidelines are available at: <https://wildlife.ca.gov/Conservation/Survey-Protocols>.

Botanical surveys for special-status plant species, including those listed by the California Native Plant Society (<http://www.cnps.org/cnps/rareplants/inventory/>), should also be conducted during the blooming period for all sensitive plant species potentially occurring within the Project area and include the identification of reference populations. Please refer to CDFW protocols for surveying and evaluating impacts to special-status plants available at: <https://wildlife.ca.gov/Conservation/Plants>.

## **IMPACT ANALYSIS AND MITIGATION MEASURES**

The CEQA Guidelines necessitate the EIR discuss all direct and indirect impacts (temporary and permanent) that may occur with implementation of the Project. (CEQA Guidelines, § 15126.2). This includes evaluating and describing impacts such as:

- Potential for “take” of special-status species;
- Loss or modification of breeding, nesting, dispersal, and foraging habitat, including vegetation removal, alternation of soils and hydrology, and removal of habitat structural features (e.g. snags, roosts);
- Permanent and temporary habitat disturbances associated with ground disturbance, noise, lighting, reflection, air pollution, traffic, or human presence;
- Water quality impacts resulting from construction and operation of the Project;
- Impacts both from construction and operation of the Project; and
- Impacts to bed, channel, bank, and riparian habitat, and the direct and indirect effects to fish, wildlife, and their habitat.

The EIR should also identify existing and reasonably foreseeable future projects in the Project vicinity, disclose any cumulative impacts associated with these projects, determine the significance of each cumulative impact, and assess the significance of the Project’s contribution to each impact (CEQA Guidelines, § 15355). Although a project’s impacts may be insignificant individually, its contributions to a cumulative impact may be considerable; a contribution to a significant cumulative impact (e.g.,

Mr. Fahteen Khan  
City of Menlo Park  
December 22, 2023  
Page 5

reduction of available habitat for a listed species) should be considered cumulatively considerable without mitigation to minimize or avoid the impact.

The CEQA Guidelines direct the City, as the Lead Agency, to consider and describe in the EIR all feasible mitigation measures to avoid and/or mitigate potentially significant impacts of the Project on the environment based on comprehensive analysis of the potential direct, indirect, and cumulative impacts of the Project. (CEQA Guidelines, §§ 15021, 15063, 15071, 15126.2, 15126.4 & 15370). This should include discussion of take avoidance and minimization measures for special-status species, which should be developed in consultation with the USFWS, the National Marine Fisheries Service, and CDFW. These measures can then be incorporated as enforceable Project conditions to reduce potential impacts to biological resources to less-than-significant levels.

Fully protected species, such as California Ridgway's rail (*Rallus obsoletus obsoletus*), may not be taken or possessed at any time except in limited circumstances (Fish & G. Code, §§ 3511, 4700, 5050, & 5515). Therefore, the CEQA document should include measures to completely avoid take of fully protected species.

## **REGULATORY REQUIREMENTS**

### **California Endangered Species Act**

A CESA Incidental Take Permit (ITP) must be obtained from CDFW if the Project has the potential to result in “take” of plants or animals listed under CESA, either during construction or over the life of the Project. Under CESA, “take” means “hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill.” (Fish & G. Code, § 86). If the Project will impact CESA listed species, early consultation with CDFW is encouraged, as significant modification to the Project and mitigation measures may be required to obtain an ITP. Issuance of an ITP is subject to CEQA and to facilitate permit issuance, any such Project modifications and mitigation measures must be incorporated into the EIR’s analysis, discussion, and mitigation monitoring and reporting program.

CEQA requires a mandatory finding of significance if a Project is likely to substantially impact threatened or endangered species. (Pub. Resources Code, §§ 21001, subd. (c) & 21083; CEQA Guidelines, §§ 15380, 15064 & 15065). In addition, pursuant to CEQA, the Lead Agency cannot approve a project unless all impacts to the environment are avoided or mitigated to less-than-significant levels, or the Lead Agency makes and supports Findings of Overriding Consideration (FOC) for impacts that remain significant despite the implementation of all feasible mitigation. FOC under CEQA, however, do not eliminate the Project proponent’s obligation to comply with the Fish and Game Code.

Mr. Fahteen Khan  
City of Menlo Park  
December 22, 2023  
Page 6

## **Lake and Streambed Alteration Agreement**

CDFW requires a Lake and Streambed Alteration (LSA) Notification, pursuant to Fish and Game Code section 1600 et seq., for Project activities affecting lakes or streams and associated riparian habitat. Notification is required for any activity that may substantially divert or obstruct the natural flow; change or use material from the bed, channel, or bank (including associated riparian or wetland resources); or deposit or dispose of material where it may pass into a river, lake, or stream. Work within ephemeral streams, drainage ditches, washes, watercourses with a subsurface flow, and floodplains is generally subject to notification requirements. In addition, infrastructure installed beneath such aquatic features, such as through hydraulic directional drilling, is also generally subject to notification requirements. Therefore, any impact to the mainstems, tributaries, or floodplains or associated riparian habitat caused by the proposed Project will likely require an LSA Notification. CDFW may not execute a final LSA Agreement until it has considered the final EIR and complied with its responsibilities as a responsible agency under CEQA.

## **Migratory Birds and Raptors**

CDFW has authority over actions that may result in the disturbance or destruction of active bird nest sites or the unauthorized take of birds. Fish and Game Code sections protecting birds, their eggs, and nests include section 3503 (regarding unlawful take, possession, or needless destruction of the nests or eggs of any bird), section 3503.5 (regarding the take, possession, or destruction of any birds-of-prey or their nests or eggs), and section 3513 (regarding unlawful take of any migratory non-game bird). Migratory birds are also protected under the federal Migratory Bird Treaty Act (MBTA).

## **COMMENTS AND RECOMMENDATIONS**

CDFW offers the below comments and recommendations to assist the City in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources.

**Issue:** The Project includes the removal of 13 trees, three of which are heritage trees. The Project proposes to plant a total of 15 new trees (four silver linden, six African fern pine, and five Saratoga laurel trees) to compensate for the removal of the three heritage trees. In addition, the Project proposes 24 new trees would be located on the podium courtyard and rooftop deck.

Removal of heritage and other trees can cause impacts to roosting bats and nesting birds. Planting new trees as proposed may not be sufficient to offset impacts to wildlife resources.

Mr. Fahteen Khan  
City of Menlo Park  
December 22, 2023  
Page 7

Bat species may also occur within and surrounding the Project site, including in existing buildings. Bats are considered non-game mammals and are protected by state law from take and/or harassment (Fish and Game Code §4150, CCR §251.1). Several bat species are also considered Species of Special Concern.

**Recommendations:** CDFW recommends the Project avoid heritage tree removal to the greatest extent feasible. Where heritage tree removal is unavoidable, CDFW recommends Project mitigation focus on using native tree species such as regionally adapted native oak trees for replacements.

CDFW encourages that Project implementation occur during the bird non-nesting season; however, if ground-disturbing or vegetation-disturbing activities must occur during the breeding season (February through early-September), the Project applicant is responsible for ensuring that implementation of the Project does not result in violation of the MBTA or Fish and Game Codes.

**Evidence:** The comprehensive ecological benefits associated with the healthy urban forests have been extensively documented (Tyrväinen, Pauleit, Seeland, & De Vries, 2005; Pawlak et al., 2023), so there is a strong scientific rationale for selecting native trees for and preserving the canopy cover of urban forests. Indigenous tree species within urban settings play a pivotal role in supporting local wildlife and fostering biodiversity (Burghardt et al., 2009). For instance, McPherson's study (1998) showed how Sacramento County's urban forest reduces greenhouse gas emissions and sequesters substantial amounts of carbon dioxide. Additionally, several scientific inquiries have emphasized the importance of native trees in urban forest inventories because they are critical habitat for of avian, bat, and insect populations (Wood and Esaian, 2020).

Urban development activities in California significantly contribute to the decline of native tree species, an overall reduction in urban tree cover, as well as an increase in non-native and invasive tree varieties (Pawlak et al., 2023). Although California's urban forests yield numerous ecological advantages, they predominantly feature non-native species potentially poorly suited for a changing climate (Conway and Vecht, 2015; Pawlak et al., 2023). In contrast, native species are often better adapted to local environmental conditions, necessitating less water and fewer pesticides to persist (Pawlak et al., 2023), native species selection is therefore critical to mitigate the loss of existing trees.

Species selection for urban forest cultivation involves multiple factors, encompassing site-specific conditions like soil quality, available space, and tree-specific attributes such as native status, susceptibility to pests, water needs, and the overall species diversity within the area (Conway and Vecht, 2015; Pawlak et al., 2023). A resilient urban forest is comprised of a diverse array of native tree species, serves as critical habitat for

Mr. Fahteen Khan  
City of Menlo Park  
December 22, 2023  
Page 8

numerous birds, bats, and insects, encompassing both common and protected species (Burghardt et al., 2009; Ordóñez & Duinker, 2013). Choosing appropriate tree species becomes crucial to boost the presence of native species in urban forests to optimize ecosystem services and uphold regional ecological integrity (Ordóñez and Duinker, 2013). Numerous scientific studies provide evidence that native trees are often best species to propagate in the urban forest to support healthy regional ecosystems and local wildlife (Conway and Vecht, 2015; Pawlak et al., 2023):

- *Biodiversity Preservation*: Research often indicates that native trees support local biodiversity better than non-native species. Native trees have evolved within specific ecosystems, providing food, shelter, and support to a variety of native wildlife, such as insects, birds, and mammals;
- *Ecosystem Functioning*: Studies show that native trees contribute significantly to the overall health and functioning of ecosystems. They often have complex relationships with other species, including soil microbes, fungi, and other plants, which can be disrupted by introducing non-native species;
- *Resilience to Climate Change*: Native trees are generally better adapted to local environmental conditions, making them more resilient to climate change impacts like drought, extreme temperatures, and pests. They may require less water and fewer resources to thrive, reducing maintenance efforts;
- *Invasive Species Control*: Planting native trees helps to suppress the proliferation of invasive species that might outcompete or negatively impact native flora and fauna, thereby preserving the integrity of the ecosystem; and
- *Soil Health and Nutrient Cycling*: Native trees may have symbiotic relationships with soil microorganisms, aiding in nutrient cycling and maintaining soil health. Introducing non-native species can negatively impact overall soil quality and nutrient cycling.

### **Recommended Mitigation Measure 1: Nesting Bird Surveys**

CDFW recommends that a qualified avian biologist conduct pre-activity surveys for active nests no more than seven (7) days prior to the start of ground or vegetation disturbance and every fourteen (14) days during Project activities to maximize the probability that nests that could potentially be impacted are detected. CDFW also recommends that surveys cover a sufficient area around the Project site to identify nests and determine their status. A sufficient area means any area potentially affected by the Project. Prior to initiation of ground or vegetation disturbance, CDFW recommends that a qualified biologist conduct a survey to establish a behavioral baseline of all identified nests. Once Project activities begin, CDFW recommends

Mr. Fahteen Khan  
City of Menlo Park  
December 22, 2023  
Page 9

having the qualified biologist continuously monitor nests to detect behavioral changes resulting from the Project. If behavioral changes occur, CDFW recommends halting the work causing that change and consulting with CDFW for additional avoidance and minimization measures.

### **Recommended Mitigation Measure 2: Nesting Bird Buffers**

If continuous monitoring of identified nests by a qualified avian biologist is not feasible, CDFW recommends a minimum no-disturbance buffer of 250 feet around active nests of non-listed bird species and a 500-foot no-disturbance buffer around active nests of non-listed raptors. These buffers are advised to remain in place until the breeding season has ended or until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest or on-site parental care for survival. Variance from these no-disturbance buffers is possible when there is compelling biological or ecological reason to do so, such as when the Project site would be concealed from a nest site by topography. CDFW recommends that a qualified avian biologist advise and support any variance from these buffers.

### **Recommended Mitigation Measure 3: Bat Habitat Assessment**

To evaluate Project impacts to bats, a qualified bat biologist should conduct a habitat assessment for bats at the site seven (7) days prior to the start of Project activities. The habitat assessment shall include a visual inspection of features within 50 feet of the work area for potential roosting features (bats need not be present). Habitat features found during the survey shall be flagged or marked.

### **Recommended Mitigation Measure 4: Bat Habitat Monitoring**

If any habitat features identified in the habitat assessment will be altered or disturbed by Project construction, the qualified bat biologist should monitor the feature daily to ensure bats are not disturbed, impacted, or fatalities are caused by the Project.

### **Recommended Mitigation Measure 5: Bat Project Avoidance**

If bat colonies are observed at the Project site, at any time, all Project activities should stop until the qualified bat biologist develops a bat avoidance plan to be implemented at the Project site. Once the plan is implemented, Project activities may recommence.

### **Recommended Mitigation Measure 6: Bat Roosting Structures**

If active bat roosts or signs of bat presence are observed at the Project site within habitat or structures (i.e., trees or buildings) that will be impacted as a result of Project, permanent bat roosting structures shall be incorporated into the design of the Project in consultation with CDFW. Temporary structures shall also be installed to provide habitat

Mr. Fahteen Khan  
City of Menlo Park  
December 22, 2023  
Page 10

from the timeframe to when the old structure is demolished, and the new structure is complete.

## ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to prepare subsequent EIRs or to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subds. (d) & (e)). Accordingly, please report any special-status species and natural communities detected during Project surveys to CNDDDB. The CNDDDB online field survey form and other methods for submitting data can be found here: <https://wildlife.ca.gov/Data/CNDDDB/Submitting-Data>. The types of information reported to CNDDDB can be found here: <https://wildlife.ca.gov/Data/CNDDDB/Plants-and-Animals>.

## FILING FEES

CDFW anticipates that the proposed Project will have an impact on fish and/or wildlife, and assessment of environmental document filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the environmental document filing fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089).

## CONCLUSION

CDFW appreciates the opportunity to provide comments on the proposed Project to assist the City in identifying and mitigating Project impacts on biological resources.

Questions regarding this letter or further coordination should be directed to Jason Teichman, Environmental Scientist at (707) 210-5104 or [Jason.Teichman@wildlife.ca.gov](mailto:Jason.Teichman@wildlife.ca.gov), or Wesley Stokes, Senior Environmental Scientist (Supervisory), at (707) 944-5554 or [Wesley.Stokes@wildlife.ca.gov](mailto:Wesley.Stokes@wildlife.ca.gov).

## **Introduction**

The purpose of this report is to address the impacts of project emissions on air quality and greenhouse gases (GHGs). The project is a proposed residential development located at 3705 Haven Avenue in Menlo Park, California. The air quality and GHG impacts from this project would be associated with demolition of the existing building, construction of the new building, and operation of the project. Air pollutants and GHG emissions were predicted using industry-standard computer models. In addition, this report evaluates the potential health risks on nearby and proposed sensitive receptors associated with toxic air contaminant (TAC) sources during construction and operation of the project. The analysis was conducted following guidance provided by the Bay Area Air Quality Management District (BAAQMD).<sup>1</sup>

## **Project Description**

The 0.66-acre project site is developed with a commercial building and associated surface parking lot and landscaping. The project proposes to demolish the existing improvements and construct an approximately 117,781 square foot (sf), eight-story residential building with 112 units. The project also proposes two levels of above grade podium parking totaling approximately 35,226-sf. There would be 104 parking spaces inclusive of 16 EV supply equipment (EVSE) spaces or more if required by the California Green Building Standards Code (CALGreen) Tier 2 standards in effect at the time of building permit. The project would be all electric, with no natural gas connection. Construction is expected to begin in October 2024 and will be completed by September 2026.<sup>2</sup>

## **Setting**

The project is located in San Mateo County, which is in the San Francisco Bay Area Air Basin. Ambient air quality standards have been established at both the State and federal level. The Bay Area meets all ambient air quality standards with the exception of ground-level ozone, respirable particulate matter (PM<sub>10</sub>), and fine particulate matter (PM<sub>2.5</sub>).

## **Air Pollutants of Concern**

High ozone concentrations in the air basin are caused by the cumulative emissions of reactive organic gases (ROG) and nitrogen oxides (NO<sub>x</sub>). These precursor pollutants react under certain meteorological conditions to form ozone. Controlling the emissions of these precursor pollutants is the focus of the Bay Area's attempts to reduce ambient ozone concentrations. The highest ozone concentrations in the Bay Area occur in the eastern and southern inland valleys that are downwind of air pollutant sources. High ozone concentrations aggravate respiratory and cardiovascular diseases, reduced lung function, and increase coughing and chest discomfort.

---

<sup>1</sup> Bay Area Air Quality Management District, 2023. *CEQA Air Quality Guidelines*. April.

<sup>2</sup> At the time of this analysis, the construction schedule began in October of 2024. The project now likely will not begin construction before 2025. No re-analysis based on a later construction start date is necessary because emission quantities from project construction, and operation, would simply shift into the future and would not materially change. Further, project emissions are likely to decrease the later construction begins because new emission control technology on construction equipment, trucks, and passenger vehicles will be phased in over time and the Building Code likely will become more stringent.

Particulate matter is another problematic air pollutant in the air basin. Particulate matter is assessed and measured in terms of respirable particulate matter or particles that have a diameter of 10 micrometers or less (PM<sub>10</sub>) and fine particulate matter where particles have a diameter of 2.5 micrometers or less (PM<sub>2.5</sub>). Elevated concentrations of PM<sub>10</sub> and PM<sub>2.5</sub> are the result of both region-wide (or cumulative) emissions and localized emissions. High particulate matter concentrations aggravate respiratory and cardiovascular diseases, reduce lung function, increase mortality (e.g., lung cancer), and result in reduced lung function growth in children.

### Toxic Air Contaminants

Toxic air contaminants (TAC) are a broad class of compounds known to cause morbidity or mortality (usually because they cause cancer). TACs are found in ambient air, especially in urban areas, and are caused by industry, agriculture, fuel combustion, and commercial operations (e.g., dry cleaners). TACs are typically found in low concentrations, even near their source (e.g., diesel particulate matter [DPM] near a freeway). Because chronic exposure of TACs can result in adverse health effects, they are regulated at the regional, State, and federal level.

Diesel exhaust is the predominant TAC in urban air and is estimated to represent about three-quarters of the cancer risk from TACs (based on the Bay Area average). According to the California Air Resources Board (CARB), diesel exhaust is a complex mixture of gases, vapors, and fine particles. This complexity makes the evaluation of health effects from diesel exhaust exposure a complicated scientific issue. Some of the chemicals in diesel exhaust, such as benzene and formaldehyde, have been previously identified as TACs by the CARB, and are listed as carcinogens either under the State's Proposition 65 or under the Federal Hazardous Air Pollutants programs. The most recent Office of Environmental Health Hazard Assessment (OEHHA) risk assessment guidelines were published in February of 2015 and incorporated into BAAQMD's current CEQA guidance.<sup>3</sup>

### Sensitive Receptors

There are groups of people more affected by air pollution than others. CARB has identified the following persons who are most likely to be affected by air pollution: children under 16, people over 65, athletes, and people with cardiovascular and chronic respiratory diseases. These groups are classified as sensitive receptors. Locations that may contain a high concentration of these sensitive population groups include residential areas, hospitals, daycare facilities, elder care facilities, and elementary schools. For cancer risk assessments, children are the most sensitive receptors, since they are more susceptible to cancer causing TACs. Residential locations are assumed to include infants and small children. The closest sensitive receptors to the project site are the multi-family residences adjacent to the northwest. There are additional single- and multi-family residences to the southwest opposite Highway 101. This project would introduce new sensitive receptors (i.e., residents) to the area.

## Regulatory Setting

### Federal Regulations

The United States Environmental Protection Agency (EPA) sets nationwide emission standards for mobile sources, which include on-road (highway) motor vehicles such trucks, buses, and automobiles, and non-road (off-road) vehicles and equipment used in construction, agricultural, industrial, and mining activities (such as bulldozers and loaders). The EPA also sets nationwide fuel standards. California also has the ability to set motor vehicle emission standards and standards for fuel, as long as they are the same or more stringent than the nationwide standards.

In the past twenty years, the EPA has established a number of emission standards for on- and non-road heavy-duty diesel engines used in trucks and other equipment. This was done in part because diesel engines are a significant source of NO<sub>x</sub> and particulate matter (PM<sub>2.5</sub>) and because the EPA has identified DPM as a probable carcinogen. Implementation of the heavy-duty diesel on-road vehicle standards and the non-road diesel engine standards are estimated to reduce particulate matter and NO<sub>x</sub> emissions from diesel engines up to 95 percent in 2030 when the heavy-duty vehicle fleet is completely replaced with newer heavy-duty vehicles that comply with these emission standards.<sup>4</sup>

In concert with the diesel engine emission standards, the EPA has also substantially reduced the amount of sulfur allowed in diesel fuels. The sulfur contained in diesel fuel is a significant contributor to the formation of particulate matter in diesel-fueled engine exhaust. The current standards limit the amount of sulfur allowed in diesel fuel to 15 parts per million by weight (ppmw). Ultra-low sulfur diesel (ULSD), as it is referred to, is required for use by all vehicles in the U.S.

All of the above federal diesel engine and diesel fuel requirements have been adopted by California, in some cases with modifications making the requirements more stringent or the implementation dates sooner.

### State Regulations

To address the issue of diesel emissions in the state, CARB developed the *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles*.<sup>5</sup> In addition to requiring more stringent emission standards for new on-road and off-road mobile sources and stationary diesel-fueled engines to reduce particulate matter emissions by 90 percent, a significant component of the plan involves application of emission control strategies to existing diesel vehicles and equipment. Many of the measures of the Diesel Risk Reduction Plan have been approved and adopted, including the federal on-road and non-road diesel engine emission standards for new engines, as well as adoption of regulations for low sulfur fuel in California.

---

<sup>4</sup> USEPA, 2000. *Regulatory Announcement, Heavy-Duty Engine and Vehicle Standards and Highway Diesel Fuel Sulfur Control Requirements*. EPA420-F-00-057. December.

<sup>5</sup> California Air Resources Board, 2000. *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles*. October.

CARB has adopted and implemented a number of regulations for stationary and mobile sources to reduce emissions of DPM. Several of these regulatory programs affect medium and heavy-duty diesel trucks that represent the bulk of DPM emissions from California highways. CARB regulations require on-road diesel trucks to be retrofitted with particulate matter controls or replaced to meet 2010 or later engine standards that have much lower NO<sub>x</sub>, DPM and PM<sub>2.5</sub> emissions. This regulation substantially reduced these emissions between 2013 and 2023. While new trucks and buses will meet strict federal standards, this measure was intended to accelerate the rate at which the fleet either turns over so there are more, cleaner vehicles on the road or retrofitted to meet similar standards. With this regulation, older, more polluting trucks have been removed from the roads sooner.

CARB has also implemented regulations to reduce DPM and NO<sub>x</sub> emissions from in-use (existing) and new off-road heavy-duty diesel vehicles (e.g., loaders, tractors, bulldozers, backhoes, off-highway trucks, etc.). The regulations apply to diesel-powered off-road vehicles with engines 25 horsepower (hp) or greater. The regulations are intended to reduce DPM and NO<sub>x</sub> exhaust emissions by requiring owners to turn over their fleet (replace older equipment with newer equipment) or retrofit existing equipment in order to achieve specified fleet-averaged emission rates. Implementation of this regulation, in conjunction with stringent federal off-road equipment engine emission limits for new vehicles, will significantly reduce emissions of DPM and NO<sub>x</sub>. These regulations will have been in place for 10 years when project construction begins in 2025.

#### Bay Area Air Quality Management District (BAAQMD)

BAAQMD has jurisdiction over an approximately 5,600-square mile area, commonly referred to as the San Francisco Bay Area (Bay Area). The District's boundary encompasses the nine San Francisco Bay Area counties, including Alameda County, Contra Costa County, Marin County, San Francisco County, San Mateo County, Santa Clara County, Napa County, southwestern Solano County and southern Sonoma County.

BAAQMD is the lead agency in developing plans to address attainment and maintenance of the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS). The District also has permit authority over most types of stationary equipment utilized for the proposed project. The BAAQMD is responsible for permitting and inspection of stationary sources; enforcement of regulations, including setting fees, levying fines, and enforcement actions; and ensuring that public nuisances are minimized.

BAAQMD's Community Air Risk Evaluation (CARE) program was initiated in 2004 to evaluate and reduce health risks associated with exposures to outdoor TACs in the Bay Area.<sup>6</sup> The program examines TAC emissions from point sources, area sources, and on-road and off-road mobile sources with an emphasis on diesel exhaust, which is a major contributor to airborne health risk in California. The CARE program is an on-going program that encourages community involvement and input. The technical analysis portion of the CARE program has been implemented in three phases that includes an assessment of the sources of TAC emissions, modeling and measurement programs to estimate concentrations of TAC, and an assessment of exposures and health risks. Throughout the program, information derived from the technical analyses has been used to develop emission reduction activities in areas with high TAC exposures and high density of sensitive

populations. Risk reduction activities associated with the CARE program are focused on the most at-risk communities in the Bay Area. Seven areas have been identified by BAAQMD as impacted communities. They include Eastern San Francisco, Richmond/San Pablo, Western Alameda, San José, Vallejo, Concord, and Pittsburgh/Antioch. The project site is not within any of the BAAQMD CARE areas.

Overburdened communities are areas located (i) within a census tract identified by the California Communities Environmental Health Screening Tool (CalEnviroScreen), Version 4.0 implemented by OEHHA, as having an overall CalEnviroScreen score at or above the 70<sup>th</sup> percentile, or (ii) within 1,000 feet of any such census tract.<sup>6</sup> The BAAQMD has identified several overburden areas within the air district's boundaries. However, the project site is not within an overburdened area as the project site and surrounding area are scored at the 10<sup>th</sup> percentile on CalEnviroScreen.<sup>7</sup>

### BAAQMD CEQA Air Quality Guidelines

In June 2010, BAAQMD adopted thresholds of significance to assist in the review of projects under CEQA. In 2022, the BAAQMD revised the *California Environmental Quality Act (CEQA) Air Quality Guidelines* that include significance thresholds to assist in the evaluation of air quality impacts of projects and plans proposed within the Bay Area. The current BAAQMD guidelines provide recommended procedures for evaluating potential air impacts during the environmental review process consistent with CEQA requirements including thresholds of significance, mitigation measures, and background air quality information. They include assessment methodologies for criteria air pollutants, air toxics, odors, and GHG emissions, as shown in Table 1.<sup>8</sup> Air quality impacts and health risks are considered potentially significant if they exceed these thresholds.

The BAAQMD recommends all projects include a “basic” set of best management practices (BMPs) to manage fugitive dust and consider impacts from dust (i.e., fugitive PM<sub>10</sub> and PM<sub>2.5</sub>) to be less than significant if BMPs are implemented (listed below). BAAQMD strongly encourages enhanced BMPs for construction sites near schools, residential areas, other sensitive land uses, or if air quality impacts were found to be significant.

**Table 1. BAAQMD CEQA Air Quality Significance Thresholds**

Criteria Air Pollutant	Construction Thresholds	Operational Thresholds	
	Average Daily Emissions (lbs./day)	Average Daily Emissions (lbs./day)	Annual Average Emissions (tons/year)
ROG	54	54	10
NO <sub>x</sub>	54	54	10
PM <sub>10</sub>	82 (Exhaust)	82	15
PM <sub>2.5</sub>	54 (Exhaust)	54	10
CO	Not Applicable	9.0 ppm (8-hour average) or 20.0 ppm (1-hour average)	
Fugitive Dust (PM <sub>10</sub> /PM <sub>2.5</sub> )	Best Management Practices (BMPs)*	Not Applicable	
<b>Health Risks and Hazards</b>	<b>Single Sources Within 1,000-foot Zone of Influence</b>	<b>Combined Sources (Cumulative from all sources within 1000-foot zone of influence)</b>	
Excess Cancer Risk	>10.0 in a million	>100 in a million	
Hazard Index	>1.0	>10.0	
Incremental annual PM <sub>2.5</sub>	>0.3 µg/m <sup>3</sup>	>0.8 µg/m <sup>3</sup>	
<b>Greenhouse Gas Emissions</b>			
Land Use Projects – (Must Include A or B)	<p>A. Projects must include, at a minimum, the following project design elements:</p> <ol style="list-style-type: none"> <li>1. Buildings                             <ol style="list-style-type: none"> <li>a. The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).</li> <li>b. The project will not result in any wasteful, inefficient, or unnecessary energy usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.</li> </ol> </li> <li>2. Transportation                             <ol style="list-style-type: none"> <li>a. Achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target, reflecting the recommendations provided in the Governor’s Office of Planning and Research’s Technical Advisory on Evaluating Transportation Impacts in CEQA:                                     <ol style="list-style-type: none"> <li>i. Residential projects: 15 percent below the existing VMT per capita</li> <li>ii. Office projects: 15 percent below the existing VMT per employee</li> <li>iii. Retail projects: no net increase in existing VMT</li> </ol> </li> <li>b. Achieve compliance with off-street electric vehicle requirements in the most recently adopted version of CALGreen Tier 2.</li> </ol> </li> </ol> <p>B. Be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).</p>		
<p>Note: ROG = reactive organic gases, NO<sub>x</sub> = nitrogen oxides, PM<sub>10</sub> = coarse particulate matter or particulates with an aerodynamic diameter of 10 micrometers (µm) or less, PM<sub>2.5</sub> = fine particulate matter or particulates with an aerodynamic diameter of 2.5µm or less. GHG = greenhouse gases.</p> <p>* BAAQMD strongly recommends implementing all feasible fugitive dust management practices especially when construction projects are located near sensitive communities, including schools, residential areas, or other sensitive land uses.</p>

## City of Menlo Park General Plan

The City of Menlo Park General Plan, adopted November 29, 2016, includes goals, policies, and programs to reduce exposure of the City's sensitive population to exposure of air pollution and toxic air contaminants or TACs. The following goals, policies, and programs are applicable to the proposed project and this assessment:

### Land Use Element

- Goal LU-2                      Maintain and enhance the character, variety and stability of Menlo Park's residential neighborhoods.
- Goal LU-6                      Preserve open-space lands for recreation; protect natural resources and air and water quality; and protect and enhance scenic qualities.
- Goal LU-7                      Promote the implementation and maintenance of sustainable development, facilities, and services to meet the needs of Menlo Park's residents, businesses, workers, and visitors.

### *Applicable Policies – Land Use Element*

- Policy LU-2.3                      **Mixed Use Design.** Allow mixed-use projects with residential units if project design addresses potential compatibility issues such as traffic, parking, light spillover, dust, odors, and transport and use of potentially hazardous materials.
- Policy LU-6.9                      **Pedestrian and Bicycle Facilities.** Provide well-designed pedestrian and bicycle facilities for safe and convenient multi-modal activity through the use of access easements along linear parks or paseos.
- Policy LU-7.1                      **Sustainability.** Promote sustainable site planning, development, landscaping, and operational practices that conserve resources and minimize waste.
- Policy LU-7.9                      **Green Building.** Support sustainability and green building best practices through the orientation, design, and placement of buildings and facilities to optimize their energy efficiency in preparation of State zero-net energy requirements for residential construction in 2020 and commercial construction in 2030.

### *Applicable Programs – Land Use Element*

- Program LU-7.A                      **Green Building Operation and Maintenance.** Employ green building and operation and maintenance best practices, including increased energy efficiency, use of renewable energy and reclaimed water, and install drought-tolerant landscaping for all projects.

- Program LU-7.D      **Performance Standards.** Establish performance standards in the Zoning Ordinance that requires new development to employ environmentally friendly technology and design to conserve energy and water and minimize the generation of indoor and outdoor pollutants.
- Program LU-7.E      **Greenhouse Gas Emissions.** Develop a Greenhouse Gas (GHG) standard for development projects that would help reduce communitywide GHG emissions to meet City and Statewide reduction goals.

Circulation Element

- Goal CIRC-1      Provide and maintain a safe, efficient, attractive, user-friendly circulation system that promotes a healthy, safe, and active community and quality of life throughout Menlo Park.
- Goal CIRC-2      Increase accessibility for and use of streets by pedestrians, bicyclists, and transit riders.
- Goal CIRC-5      Support local and regional transit that is efficient, frequent, convenient, and safe.
- Goal CIRC-6      Provide a range of transportation choices for the Menlo Park community.

*Applicable Policies – Circulation Element*

- Policy CIRC-1      **Safe Routes to Schools.** Support Safe Routes to School programs to enhance the safety of school children who walk and bike to school.
- Policy CIRC-2.7      **Walking and Biking.** Provide for the safe, efficient, and equitable use of streets by pedestrians and bicyclists through appropriate roadway design and maintenance, effective traffic law enforcement, and implementation of the City’s Comprehensive Bicycle Development Plan and the El Camino Real/Downtown Specific Plan.
- Policy CIRC-2.8      **Pedestrian Access at Intersections.** Support full pedestrian access across all legs of signalized intersections.
- Policy CIRC-2.9      **Bikeway System Expansion.** Expand the Citywide bikeway system through appropriate roadway design, maintenance, effective traffic law enforcement, and implementation of the City’s Comprehensive Bicycle Development Plan, and the El Camino Real/Downtown Specific Plan.
- Policy CIRC-2.13      **County Congestion Management.** Work with the County Congestion Management Agency to implement the Countywide Congestion Management Program and Deficiency Plans for City and State facilities,

and avoid adding any Menlo Park streets or intersections to the Countywide Congestion Management Program.

- Policy CIRC-2.14     **Impacts of New Development.** Require new development to mitigate its impacts on the safety (e.g., collision rates) and efficiency (e.g., vehicle miles traveled (VMT) per capita) of the circulation system, by minimizing cut-through vehicle traffic on residential streets and speeding traffic; reducing the number of vehicle trips, providing bicycle, pedestrian, and transit connections, amenities and improvements in proportion with the scale of proposed projects; and facilitating appropriate or adequate response times and access for emergency vehicles.
- Policy CIRC-2.15     **Regional Transportation Improvements.** Work with neighboring jurisdictions and appropriate agencies to identify and secure adequate funding for regional transportation improvements to improve transportation options and reduce congestion in Menlo Park and adjacent communities.
- Policy CIRC-5.1     **Transit Service and Ridership.** Promote improved public transit service and increased transit ridership, especially to employment centers, commercial destinations, schools, and public facilities.
- Policy CIRC-5.2     **Transit Proximity to Activity Centers.** Promote the clustering of as many activities as possible within easy walking distance of transit stops, and locate any new transit stops as close as possible to housing, jobs, shopping areas, open space, and parks.
- Policy CIRC-5.3     **Rail Service.** Promote increasing the capacity and frequency of commuter rail service, including Caltrain; protect rail rights-of-way for future transit service; and support efforts to reactivate the Dumbarton Corridor for transit, pedestrian, bicycle, and emergency vehicle use.
- Policy CIRC-5.4     **Caltrain Enhancements.** Support Caltrain safety and efficiency improvements, such as positive train control, grade separation (with priority at Ravenswood Avenue), and electrification, provided that Caltrain service to Menlo Park increases and use of the rail right-of-way is consistent with the City’s Rail Policy.
- Policy CIRC-5.6     **Bicycle Amenities and Transit.** Encourage transit providers within San Mateo County to provide improved bicycle amenities to enhance convenience, including access to transit including bike share programs, secure storage at transit stations and onboard storage where feasible.
- Policy CIRC-5.7     **New Development.** Ensure that new nonresidential, mixed-use, and multiple-dwelling residential development provides associated needed

transit service, improvements and amenities in proportion with demand attributable to the type and scale of the proposed development.

Policy CIRC-6.1     **Transportation Demand Management.** Coordinate Menlo Park’s transportation demand management efforts with other agencies providing similar services within San Mateo and Santa Clara Counties.

Open Space/Conservation Element

Goal OSC-2           Provide parks and recreation facilities. Develop and maintain a parks and recreation system to provide areas and facilities conveniently located, sustainable, properly designed and well-maintained to serve the recreation needs and promote healthy living of residents, workers and visitors to Menlo Park.

Goal OSC-4           Promote sustainability and climate action planning. Promote a sustainable energy supply and implement the City’s Climate Action Plan to reduce greenhouse gas emissions and improve the sustainability of actions by City government, residents, and businesses in Menlo Park. This includes promoting land use patterns that reduce the number and length of motor vehicle trips, and encouraging recycling, reduction and reuse programs.

Goal OSC-5           Ensure healthy air and water quality. Enhance and preserve air quality in accord with State and regional standards, and encourage the coordination of total water quality management including both supply and wastewater treatment.

*Applicable Policies – Open Space/Conservation Element*

Policy OSC-2.7       **Conservation of Resources at City Facilities.** Reduce consumption of water, energy, landfilled waste, and fossil fuels in the construction, operations and maintenance of City owned and/or operated facilities.

Policy OSC-4.1       **Sustainable Approach to Land Use Planning to Reduce Resource Consumption.** Encourage, to the extent feasible, (1) a balance and match between jobs and housing, (2) higher density residential and mixed-use development to be located adjacent to commercial centers and transit corridors, and (3) retail and office areas to be located within walking and biking distance of transit or existing and proposed residential developments.

Policy OSC-4.2       **Sustainable Building.** Promote and/or establish environmentally sustainable building practices or standards in new development that would conserve water and energy, prevent stormwater pollution, reduce landfilled waste, and reduce fossil fuel consumption from transportation and energy activities.

- Policy OSC-4.3      **Renewable Energy.** Promote the installation of renewable energy technology, such as, on residences and businesses through education, social marketing methods, establishing standards and/or providing incentives.
- Policy OSC-4.4      **Vehicles Using Alternative Fuel.** Explore the potential for installing infrastructure for vehicles that use alternative fuel, such as electric plug in recharging stations.
- Policy OSC-4.5      **Energy Standards in Residential and Commercial Construction.** Encourage projects to achieve a high level of energy conservation exceeding standards set forth in the California Energy Code for Residential and Commercial development.
- Policy OSC-4.6      **Waste Reduction Target.** Strive to meet the California State Integrated Waste Management Board per person target of waste generation per person per day through their source reduction, reuse, and recycling programs.
- Policy OSC-4.7      **Waste Management Collaboration.** Continue to support and participate in efforts such as the South Bayside Waste Management Authority, which provides waste reduction, recycling, and solid waste programs and solutions.
- Policy OSC-4.8      **Waste Diversion.** Develop and implement a zero waste policy, or implement standards, incentives, or other programs that would lead the community towards a zero waste goal.
- Policy OSC-4.9      **Climate Action Planning.** Undertake annual review and updates, as needed, to the City’s Climate Action Plan (CAP).
- Policy OSC-4.10      **Energy Upgrade California.** Consider actively marketing and providing additional incentives for residents and businesses
- Policy OSC-5.1      **Air and Water Quality Standards.** Continue to apply standards and policies established by the Bay Area Air Quality Management District (BAAQMD), San Mateo Countywide Water Pollution Prevention Program (SMCWPPP), and City of Menlo Park Climate Action Plan through the California Environmental Quality Act (CEQA) process and other means as applicable.
- Policy OSC-5.3      **Water Conservation.** Encourage water-conserving practices in businesses, homes and institutions.

City of Menlo Park ConnectMenlo Environmental Impact Report (EIR) and Housing Element Update (HEU) Draft Subsequent Environmental Impact Report (SEIR)

In January 2023, the City of Menlo Park certified the City of Menlo Park Housing Element Update (HEU) Subsequent Environmental Impact Report (SEIR)<sup>9</sup> and adopted the HEU. The HEU amended the City’s General Plan (ConnectMenlo) to provide goals, policies, and implementing programs to address housing needs citywide. This project, after accounting for Density Bonus Law, is consistent with the project site’s General Plan land use designation (put in place by ConnectMenlo) and zoning.

The ConnectMenlo General Plan Update in 2016 enabled opportunities for over 5,000 new housing units in the City, including housing on the project site. The HEU SEIR evaluated the potential for housing sites sufficient to accommodate 4,000 new dwelling units, as well as accounting for General Plan growth, pipeline projects and potential accessory dwelling units (ADUs) to consider a maximum build-out and cumulative scenarios. Specifically, the HEU SEIR began with the 2015 baseline data from ConnectMenlo and updated it to a 2021 baseline by incorporating approved and constructed housing units, estimated population, and estimated jobs added since the adoption of ConnectMenlo in 2016. In addition to 4,000 new housing units that could be developed through zoning changes as part of the HEU, the SEIR accounted for 2,733 new residential units from projects that have been submitted and are currently under review, 85 anticipated accessory dwelling units, and an additional 299 units of cumulative development.

The following air quality impacts and mitigation measures were identified in the HEU SEIR:

**Impact AQ-1:** Implementation of the HEU would not conflict with or obstruct implementation of the applicable air quality plan. (*Less than Significant*)

**Impact AQ-2:** Implementation of the HEU would result in a cumulatively considerable net increase of criteria pollutants for which the project region is in non-attainment under an applicable federal or state ambient air quality standard. (*Significant and Unavoidable Impact, with Mitigation*)

**Mitigation Measure AQ-2: Emission Reduction Measures**

The following mitigation measures are recommended to reduce criteria air pollutant emissions from multi-family housing developments under the HEU.

- a) As part of the City’s development approval process, the City shall require applicants for future development projects to comply with current Bay Area Air Quality Management District’s basic control measures for reducing construction emissions of PM<sub>10</sub>.

---

<sup>9</sup> City of Menlo Park, URL: <https://menlopark.gov/files/sharedassets/public/v/1/community-development/documents/projects/housing-element-update/menlo-park-housing-element-update-draft-seir.pdf>

- b) Prior to issuance of building permits, development project applicants that are subject to CEQA and exceed the screening sizes in the BAAQMD's CEQA Guidelines shall prepare and submit to the City of Menlo Park a technical assessment evaluating potential project construction-related air quality impacts. The evaluation shall be prepared in conformance with the BAAQMD methodology in assessing air quality impacts. If construction-related criteria air pollutants are determined to have the potential to exceed the BAAQMD thresholds of significance, as identified in the BAAQMD CEQA Guidelines, the City of Menlo Park shall require that applicants for new development projects incorporate emission reduction measures to reduce air pollutant emissions during construction activities to below the thresholds of significance. These identified measures shall be incorporated into all appropriate construction documents submitted to the City and shall be verified by the City's Building Division and/or Planning Division.
  
- c) In the event that a project-specific analysis finds that the project could result in significant construction criteria air pollutant emissions that exceed significance thresholds, the project sponsor shall implement the following emission reduction measures to the degree necessary to reduce the impact to less than significance thresholds, and shall implement other feasible measures as needed to reduce the impact to less than the significance thresholds.
  - 1) Diesel off-road equipment shall have engines that meet the Tier 4 Final off-road emission standards, as certified by CARB, as required to reduce the emissions to less than the thresholds of significance shown in Table 2-1 of the BAAQMD CEQA Guidelines (BAAQMD, 2017b). This requirement shall be verified through submittal of an equipment inventory that includes the following information: (1) Type of Equipment, (2) Engine Year and Age, (3) Number of Years Since Rebuild of Engine, (4) Type of Fuel Used, (5) Engine HP, (6) Verified Diesel Emission Control Technology (VDECS) information if applicable and other related equipment data. A Certification Statement is also required to be made by the Contractor for documentation of compliance and for future review by the BAAQMD as necessary. The Certification Statement must state that the Contractor agrees to compliance and acknowledges that a violation of this requirement shall constitute a material breach of contract.

The City may waive the equipment requirement above only under the following unusual circumstances: if a particular piece of off-road

equipment with Tier 4 Final standards is technically not feasible or not commercially available; the equipment would not produce desired emissions reduction due to expected operating modes; installation of the equipment would create a safety hazard or impaired visibility for the operator; or there is a compelling emergency need to use other alternate off-road equipment. If the City grants the waiver, the contractor shall use the next cleanest piece of off-road equipment available.

- 2) The project sponsor shall require the idling time for off-road and on-road equipment be limited to no more than 2 minutes, except as provided in exception to the applicable state regulations regarding idling for off-road and on-road equipment. Legible and visible signs shall be posted in multiple languages (English, Spanish, Chinese) in designated queuing areas and at the construction site to remind operators of the 2-minute idling limit.
  
- d) Prior to issuance of building permits, development project applicants that are subject to CEQA and exceed the screening sizes in the BAAQMD CEQA Guidelines shall prepare and submit to the City of Menlo Park a technical assessment evaluating potential project operation-phase-related air quality impacts. The evaluation shall be prepared in conformance with the BAAQMD methodology in assessing air quality impacts. If operational-related criteria pollutants are determined to have the potential to exceed the BAAQMD thresholds of significance, as identified in BAAQMD's CEQA Guidelines, the City of Menlo Park Community Development Department shall require that applicants for new development projects incorporate emission reduction measures to reduce air pollutant emissions during operational activities to below the thresholds of significance.

**Impact AQ-3:** Implementation of the HEU would not expose sensitive receptors to substantial pollutant concentrations. (*Less than Significant with Mitigation*).

**Mitigation Measure AQ-3: Health Risk Reduction Measures.**

- a) Applicants for residential and other sensitive land use projects (e.g., hospitals, nursing homes, day care centers) in Menlo Park within 1,000 feet of major sources of toxic air contaminants (TACs) (e.g., warehouses, industrial areas, freeways, and roadways with traffic volumes over 10,000 vehicles per day), as measures from the property line of the project to the property line of the source/edge of the nearest travel lane, shall submit a health risk assessment (HRA) to the City of Menlo Park prior to future discretionary Project approval. The HRA shall be prepared in accordance

with policies and procedures of State Office of Environmental Health Hazard Assessment (OEHHA) and the Bay Area Air Quality Management District. The latest OEHHA guidelines shall be used for the analysis, including age sensitivity factors, breathing rates, and body weights appropriate for children ages 0 to 16 years. If the HRA shows that the incremental cancer risk exceeds ten in one million ( $10E^{06}$ ),  $PM_{2.5}$  concentrations exceed  $0.3 \mu\text{g}/\text{m}^3$ , or the appropriate noncancer hazard index exceeds 1.0, including appropriate enforcement mechanisms. Measures to reduce risk include but are not limited to: Air intakes located away from high volume roadways and/or truck loading zones; Heating, ventilation, and air conditioning systems of the buildings provided with appropriately sized maximum efficiency rating value (MERV) filters. Measures identified in the HRA shall be included in the environmental document and/or incorporated into the site development plan as a component of the proposed project. The air intake design and MERV filter requirements shall be noted and/or reflected on all building plans submitted to the City and shall be verified by the City's Building Division and/or Planning Division.

Project sponsors proposing multifamily development projects within 1,000 feet of sensitive receptors, including residences, schools, day care centers, and hospitals, shall prepare a project-level health risk assessment at the time the project is proposed. In lieu of a project-level health risk assessment, a comparison of the project with other similar-sized projects located a similar distance from receptors and with a similar type of development (e.g., bedroom counts) where a quantitative analysis has been conducted and were found to not exceed the BAAQMD health risk thresholds can be used to demonstrate less than significant health risk impacts. The selection of comparison projects shall be subject to preapproval by the City. If the comparison does not show the project will have the same or less impact, a project-level health risk assessment is required.

In the event that a project-level health risk assessment finds that the project could result in health risks that exceed significance thresholds, the project sponsor shall implement the clean construction equipment requirement of Mitigation Measure AQ-2(c) to the degree necessary to reduce the impact to less than significance thresholds, and shall implement other feasible measures as needed to reduce the impacts to less than significant thresholds.

**Impact AQ-4:** Implementation of the HEU would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. (*Less than Significant*)

**Impact AQ-5:** Implementation of the HEU, in conjunction with cumulative sources, would not result in exposure of sensitive receptors to a cumulatively considerable increase in levels of fine particulate matter (PM<sub>2.5</sub>) and TACs under cumulative conditions. (*Less than Significant*)

**Impact AQ-6:** Implementation of the HEU, when combined with other past, present, or reasonably foreseeable projects, would not combine with other sources of odors that would adversely affect a substantial number of people. (*Less than Significant*).

## **AIR QUALITY IMPACTS**

### **Impact AIR-1: Conflict with or obstruct implementation of the applicable air quality plan?**

The project is consistent with the development potential established by the General Plan and zoning, after accounting for Density Bonus Law. According to the ConnectMenlo EIR and HEU SEIR, planned City growth would not hinder BAAQMD's implementation of the Bay Area Clean Air Plan. The primary goals of the Clean Air Plan are to protect air quality and public health at the regional and local scale by reducing regional criteria air pollutant emissions and reducing local air quality-related health risks (by meeting the CAAQS and NAAQS) and protect the climate by encouraging actions that reduce GHG emissions. To determine consistency with the 2017 Clean Air Plan, the HEU SEIR analysis considered whether the HEU would: (1) support the primary goals of the Clean Air Plan; (2) include applicable control measures of the Clean Air Plan; and (3) avoid disrupting or hindering implementation of control measures identified in the Clean Air Plan. The HEU SEIR concluded that residential growth in the City would not conflict with or obstruct implementation of the 2017 Clean Air Plan because that growth would be in dense multi-family housing that would support the implementation of transportation-, energy-, building-, waste-, and water conservation-related measures discussed in the Clean Air Plan.

The proposed project would not conflict with the latest Clean Air planning efforts since it would support the primary goals of the Clean Air Plan. The project would have emissions below the BAAQMD thresholds (see Impact below), which means that it would not contribute to exceedances of the CAAQS or NAAQS. The project also would support climate reduction goals because it is dense multi-family housing on a previously developed site served by existing utilities and services in a job-rich area. These features reduce per capita GHG emissions compared to single-family residences not near jobs, with density that does not support the growth of transit service.

**Conclusion AIR-1: Less than significant.** Compared to the environmental effects analyzed in the ConnectMenlo EIR and HEU SEIR, the project has none of the following: (1) peculiar effects, (2) effects not analyzed as significant in the analysis on the General Plan as updated by the HEU, (3) new potentially significant off-site impacts or cumulative impacts, or (4) more severe adverse impacts than discussed in the ConnectMenlo EIR as updated by the HEU SEIR.

**Impact AIR-2: Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**

Consistent with BAAQMD's recommendations for the analysis of plans, the ConnectMenlo EIR compared the VMT and population increases anticipated from the plan and concluded that ConnectMenlo would not make a cumulatively considerable contribution to the net increase of any criteria pollutant for which the project region is in nonattainment. The HEU SEIR reached the same conclusion as the ConnectMenlo EIR under the plan threshold. The HEU SEIR also evaluated the significance of the HEU's impacts under the BAAQMD threshold for individual projects and concluded that the additional residential growth planned under the HEU would result in a *significant and unavoidable* impact with mitigation with respect to Impact AIR-2 because of uncertainty that construction and operational criteria air pollutant impacts associated with all subsequent projects would be reduced to less than significant. This is because projects with substantial ground disturbance, specialty construction equipment, or compressed and highly intensive construction schedules would be expected to exceed emissions significance thresholds. As a result, Mitigation Measures AQ-2(b) and AQ-2(d) are required for implementation by any project in the area but are insufficient to guarantee that all projects would have less than cumulatively considerable impacts.

HEU SEIR Mitigation Measure AQ-2a would require all projects within Menlo Park to implement BAAQMD basic BMPs to control emissions of fugitive dust during construction. HEU SEIR Mitigation Measures AQ-2b also requires the project to prepare a construction-related criteria air pollutant assessment. If construction emissions result in criteria air pollutant emissions that exceed BAAQMD significance thresholds, the project would be required to implement additional measures listed in HEU SEIR Mitigation Measure AQ-2c to reduce construction emissions below significance thresholds. These could include use of clean construction equipment and engine idle time restrictions.

#### Project Analysis – Construction

Pursuant to the BAAQMD CEQA Guidelines, if a project is at or below the applicable screening level size and meets additional screening criteria identified, the project is assumed to have impacts related to construction criteria air pollutants that are less than significant. While the project is below the applicable screening level size of 416 apartment units identified in the BAAQMD CEQA Guidelines, the project would include demolition of the existing building on-site.<sup>10</sup> Therefore, the project's construction-related criteria pollutant emissions was evaluated per HEU Mitigation Measure AQ-2b. As discussed below, the project construction emissions would be below BAAQMD's thresholds for criteria air pollutants and therefore would not make a cumulatively considerable contribution to significant cumulative impacts of such pollutants.

---

<sup>10</sup> One of the BAAQMD listed screening criteria include construction-related activities such as demolition, simultaneous occurrence of two or more construction phases, extensive site preparation, extensive materials transport, or stationary sources subject to Air District rules and regulations.

## Construction Period Emissions

The California Emissions Estimator Model (CalEEMod) Online Version 2022 was used to estimate emissions from on-site construction activity, construction vehicle trips, and evaporative emissions. The project land use types and size, and anticipated construction schedule were input to CalEEMod. The CalEEMod model output along with construction inputs are included in *Attachment 1*.

### CalEEMod Inputs

#### *Land Use Inputs*

The proposed project land uses were entered into CalEEMod as described in Table 2.

**Table 2. Summary of Project Land Use Inputs<sup>11</sup>**

Project Land Uses	Size	Units	Square Feet (sf)	Acreage
Apartments Mid Rise	112	Dwelling Unit	117,781	0.66
Unenclosed Parking with Elevator	99	Parking Spaces	35,226	

#### *Construction Inputs*

CalEEMod computes annual emissions for construction that are based on the project type, size, and acreage. The model provides emission estimates for both on-site and off-site construction activities. On-site activities are primarily made up of construction equipment emissions, while off-site activity includes worker, hauling, and vendor traffic. The construction build-out scenario, including equipment quantities, average hours per day, total number of workdays, and schedule, was provided by the project applicant (see *Attachment 1*). The construction schedule assumed that the earliest possible start date would be October 2024 and the project would be built out over a period of approximately 23 months or 512 construction workdays. The earliest year of operation was assumed to be 2027.<sup>12</sup>

#### *Construction Truck Traffic Emissions*

Construction would produce traffic in the form of worker trips and truck traffic. The traffic-related emissions are based on worker and vendor trip estimates produced by CalEEMod and haul trips that were computed based on the amount of demolition material to be exported, soil imported and/or exported to the site, and the amount of concrete and asphalt truck trips to and from the site. CalEEMod provides daily estimates of worker and vendor trips for each applicable phase. Daily haul trips for demolition and grading were estimated by CalEEMod using the provided demolition

---

<sup>11</sup> Since the original analysis was completed, the parking space quantity has increased to 104 parking spaces from 99 parking spaces. This change would have no effect on the outcomes of this report.

<sup>12</sup> At the time of this analysis, the construction schedule began in October of 2024. Construction now likely will not begin before 2025. No reanalysis based on a later construction start date is necessary because emission quantities from project construction, and operation, would simply shift into the future and would not materially change. Further, project emissions are likely to decrease the later construction begins because new emission control technology on construction equipment, trucks, and passenger vehicles will be phased in over time and the Building Code likely will become more stringent.

and grading volumes. The number of concrete and asphalt total round haul trips were provided for the project and converted to daily one-way trips, assuming two trips per delivery. These values are shown in the project construction equipment worksheets included in *Attachment 1*.

**Conclusion – Construction Emissions**

Average daily emissions were annualized for each year of construction by dividing the annual construction emissions by the number of active workdays during that year. Table 3 shows the unmitigated annualized average daily construction emissions of ROG, NOx, PM<sub>10</sub> exhaust, and PM<sub>2.5</sub> exhaust during construction of the project. As indicated in Table 3, the predicted average daily project construction emissions would not exceed the BAAQMD significance thresholds during any year of construction.

**Table 3. Construction Period Emissions - Unmitigated**

Year	ROG	NOx	PM <sub>10</sub> Exhaust	PM <sub>2.5</sub> Exhaust
<i>Construction Emissions Per Year (Tons)</i>				
2024	0.02	0.22	0.01	0.01
2025	0.34	0.51	0.01	0.01
2026	0.55	0.05	<0.01	<0.01
<i>Average Daily Construction Emissions Per Year (pounds/day)</i>				
2024 (66 construction workdays)	0.57	6.58	0.23	0.21
2025 (261 construction workdays)	2.63	3.87	0.11	0.11
2026 (185 construction workdays)	6.00	0.49	0.02	0.02
<i>BAAQMD Thresholds (pounds per day)</i>	54 lbs./day	54 lbs./day	82 lbs./day	54 lbs./day
<b>Exceed Threshold?</b>	No	No	No	No

**Compliance with HEU SEIR Mitigation Measure AQ-2a**

Construction activities, particularly during site preparation and grading, would temporarily generate fugitive dust in the form of PM<sub>10</sub> and PM<sub>2.5</sub>. Sources of fugitive dust would include disturbed soils at the construction site and trucks carrying uncovered loads of soils. Unless properly controlled, vehicles leaving the site would deposit mud on local streets, which could be an additional source of airborne dust after it dries. The BAAQMD CEQA Air Quality Guidelines consider these impacts to be less than significant if BMPs are implemented to reduce these emissions. Mitigation Measure AQ-2a of the HEU SEIR requires implementation of BAAQMD’s basic BMPs:

***HEU SEIR Mitigation Measure AQ-2a:* Include measures to control dust and exhaust during construction.**

The project applicant for any subsequent development project in Menlo Park shall require all construction plans to specify implementation of the following BMPs:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.

3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as practicable. Building pads shall be laid as soon as practicable after grading unless seeding or soil binders are used.
6. All excavation, grading, and/or demolition activities shall be suspended when average wind speeds exceed 20 mph.
7. All trucks and equipment, including their tires, shall be washed off prior to leaving the site.
8. Unpaved roads providing access to site located 100 feet of further from a paved road shall be treated with a 6- to 12-inch layer of compacted layer of wood chips, mulch, or gravel.
9. Publicly visible signs shall be posted with the telephone number and name of the person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's General Air Pollution Complaints number shall be visible to ensure compliance with applicable regulations.

#### *Effectiveness of HEU SEIR Mitigation Measure AQ-2a*

*HEU SEIR Mitigation Measure AQ-2a* is consistent with BAAQMD-recommended basic BMPs for reducing fugitive dust contained in the BAAQMD CEQA Air Quality Guidelines and is a uniformly applied development standard in the City. Only the basic set of BMPs are required as the unmitigated fugitive dust emissions from construction are below the BAAQMD single-source threshold.

Additional measures under HEU SEIR Mitigation Measure AQ-2c are not necessary because the project does not have criteria air pollutant emissions that exceed criteria pollutant significance thresholds during the construction period.

#### **Project Analysis – Operations**

The project is significantly smaller than the BAAQMD screening thresholds. Therefore, under HEU SEIR Mitigation Measure AQ-2d, no technical assessment evaluating potential project operation-phase-related air quality impacts is required. Nevertheless, this report provides such an assessment, which reaches the expected conclusion, which is that project operational emissions would be below BAAQMD's thresholds for criteria air pollutants and therefore would not make a cumulatively considerable contribution to significant cumulative impacts of such pollutants.

## Operational Emissions

Operational air emissions from the project would be generated primarily from autos driven by future residents. Evaporative ROG emissions from architectural coatings and maintenance products (classified as consumer products) are also typical ROG emission sources from these types of land uses. CalEEMod was used to estimate emissions from operation of the proposed project assuming full build-out.

### CalEEMod Inputs

#### *Land Uses*

The project land uses were input to CalEEMod as described above for the construction period modeling.

#### *Model Year*

Emissions associated with vehicle travel depend on the year of analysis because emission control technology requirements are phased-in over time. Therefore, the earlier the year analyzed in the model, the higher the emission rates utilized by CalEEMod. The earliest year of full operation would be 2027 if construction begins in 2024. Emissions associated with build-out later than 2027 would be lower.

#### *Traffic Information*

CalEEMod allows the user to enter specific vehicle trip generation rates. Therefore, the project-specific daily trip generation rate provided by the traffic consultant was entered into the model.<sup>13</sup> The project would produce approximately 508 daily trips. When considering the 35% *Transportation Demand Management (TDM) Reduction* adjustments applied in the traffic analysis, the project would produce 331 daily trips<sup>14</sup>. The daily trip generation was calculated using ITE trip generation rates, the size of the project land uses, and the adjusted total automobile trips. The Saturday and Sunday trip rates were derived by multiplying the ratio of the CalEEMod default rates for Saturday and Sunday trips to the default weekday rate with the project-specific daily weekday trip rate. The default trip lengths and trip types specified by CalEEMod were used because those rates have proved to be indicative of trip lengths and type in the City.

#### *Energy*

CalEEMod defaults for energy use were used, which include the 2019 Title 24 Building Standards. GHG emissions modeling includes those indirect emissions from electricity consumption. The electricity produced emission rate was modified in CalEEMod. The CalEEMod default emission

---

<sup>13</sup> Email correspondence from Fiona Phung, Project Manager, David J. Powers, Inc., May 2, 2024, *Haven Ave Residential TIA\_Traffic Volumes\_VMT (5-2-24).xlsx*. ”

<sup>14</sup> Total trips are utilized for criteria pollutant modeling to capture the full emissions profile of the traffic generated by the project.

factor for electricity produced, which is based on Peninsula Clean Energy's 2019 emissions rate, was utilized for this analysis.

The project plans do not show any natural gas infrastructure, and the applicant has confirmed the building will be all electric. Therefore, natural gas use for the project land uses was set to zero and reassigned to electricity use in CalEEMod.

### *Other Inputs*

Default model assumptions for emissions associated with solid waste generation and water use were used. Wastewater treatment was estimated to be 100% aerobic conditions to represent City wastewater treatment plant conditions. The project site would not send wastewater to on-site septic tanks or facultative lagoons.

### *Existing Use*

An existing commercial building and associated parking lot currently occupies the project site. CalEEMod was used to estimate the emissions generated by operation of the current building. The 10,361-sf commercial building would generate approximately 112 daily trips as estimated by the traffic consultant.<sup>15</sup> CalEEMod defaults were used to estimate energy use emissions, including emissions from natural gas usage and solid waste generation. Emissions from wastewater use were based on 100 percent aerobic treatment to represent wastewater treatment plant conditions. The CalEEMod model inputs and output for the existing facility are included in *Attachment 1*.

## **Conclusion**

Annual operational emissions were predicted using CalEEMod as described above. The daily emissions were calculated assuming 365 days of operation. Table 4 shows average daily emissions of ROG, NO<sub>x</sub>, total PM<sub>10</sub>, and total PM<sub>2.5</sub> during operation of the project. The operational period emissions would not exceed the BAAQMD significance thresholds. Therefore, additional measures under the HEU SEIR Mitigation Measure AQ-2d are not necessary since the project does not have criteria air pollutant emissions that exceed criteria pollutant significance thresholds during the operational period.

Note: <sup>1</sup>Assumes 365-day operation.

**Conclusion AIR-2:** The project would not exceed the BAAQMD significance thresholds during operation and would include appropriate BMPs recommended in the BAAQMD CEQA Air Quality Guidelines. As a result, impacts from the project emissions of criteria air pollutants would be less than significant and the project would not make a cumulatively considerable contribution to significant cumulative criteria air pollutant impacts. Compared to the environmental effects analyzed in the ConnectMenlo EIR and HEU SEIR, the project has none of the following: (1) peculiar effects, (2) effects not analyzed as significant in the analysis on the General Plan as updated by the HEU, (3) new potentially significant off-site impacts or cumulative impacts, or (4) more severe adverse impacts than discussed in the ConnectMenlo EIR as updated by the HEU SEIR.

**Impact AIR-3: Expose sensitive receptors to substantial pollutant concentrations?**

Summary of the ConnectMenlo EIR and HEU SEIR

The ConnectMenlo EIR addressed two types of pollutant concentrations that can adversely affect sensitive receptors: CO hotspots and TACs. Areas of vehicle congestion can create CO hotspots with the potential to exceed the state ambient air quality standards. The ConnectMenlo EIR found that the developments under the General Plan would be consistent with C/CAG’s 2013 Congestion Management Program and therefore localized air quality impacts related to pollutant concentrations from mobile-source emissions would be less than significant. According to the HEU SEIR, the land use and circulation elements are the same as those contained within the ConnectMenlo EIR and therefore, the HEU would be consistent with C/CAG’s 2021 Congestion Management Program (San Mateo County, 2021), and localized air quality impacts related to pollutant concentrations from mobile-source emissions would be less than significant.

The ConnectMenlo EIR did not specifically address TACs from the construction of residential projects, and instead focused on operational TACs, finding impacts would be less than significant with mitigation. As the HEU SEIR states, construction and operation of multi-family development projects could expose existing sensitive receptors near the sites to levels of TACs and PM<sub>2.5</sub> that could lead to potentially significant health risk impacts. Although residential projects that are below the BAAQMD screening sizes are not expected to have a significant impact from criteria pollutant emissions, screening is infeasible because the severity of the impact depends on the proximity of the emissions-generating activity to sensitive receptors, meteorological conditions, and the duration of exposure. Therefore, the HEU SEIR requires Mitigation Measure AQ-3a to

address exposure of sensitive receptors to TACs. Under this mitigation measure, projects that may result in TAC emissions that are located within 1,000 feet of sensitive receptors are required to prepare a Health Risk Assessment (HRA). Based on the results of the HRA, the project may be required to identify and implement measures (such as Tier 4 Final construction equipment or air filtration systems) to reduce potential exposure to particulate matter, carbon monoxide, diesel fumes, and other potential health hazards<sup>16</sup>. Measures identified in the HRA are to be included into the site development plan as a component of a proposed project.

## Project Analysis

Project impacts related to increased health risk can occur by generating emissions of TACs and air pollutants. This project would introduce new sources of TACs during construction (i.e., on-site construction and truck hauling emissions) and operation (i.e., mobile sources). Project construction activity would generate dust and equipment exhaust that would affect nearby sensitive receptors. The project would not include stationary sources but would generate some traffic consisting of mostly light-duty gasoline-powered vehicles, which would produce TAC and air pollutant emissions.

Project impacts to existing sensitive receptors were addressed for temporary construction activities and long-term operational conditions. There are also several sources of existing TACs and localized air pollutants in the vicinity of the project. The impact of existing sources of TACs was assessed in terms of the cumulative risk which includes the project contribution; as well as the risk on the new sensitive receptors introduced by the project.

## Local Carbon Monoxide (CO) Impacts

According to BAAQMD CEQA Guidelines, the project would result in less than significant localized CO concentrations if it is consistent with county and local congestion management plans and does not increase traffic volumes at affected intersections to over 24,000 vehicles per hour.

As mentioned above, the project would generate 331 daily trips, significantly less than the 24,000 vehicles per hour threshold. The project trips also do not interfere with the Santa Clara Valley Transportation Authority's Congestion Management Plan as the project includes a TDM program to reduce project trips by 35 percent, as mentioned above. As a result, project operational impacts from CO emissions would be less than significant.

## Health Risk Methodology for Construction and Operation

Health risk impacts were addressed by predicting increased cancer risk, the increase in annual PM<sub>2.5</sub> concentrations, and by computing the Hazard Index (HI) for non-cancer health risks. The risk impacts from the project are the combination of risks from construction and operation sources. These sources include on-site construction activity, construction truck hauling, and increased traffic from the project. To evaluate the increased cancer risks from the project, a 30-year exposure

---

<sup>16</sup> Tier 4 Final in this context is intended as an example of a measure a project can use to reduce health related impacts to sensitive receptors. This project, however, required Tier 4 Interim emission controls, as discussed below.

period was used, per BAAQMD guidance,<sup>17</sup> with the sensitive receptors being exposed to both project construction and operation emissions during this timeframe.

The project increased cancer risk is computed by summing the project construction cancer risk and operation cancer risk contributions. Unlike the increased maximum cancer risk, the annual PM<sub>2.5</sub> concentration and HI values are not additive but based on the annual maximum values for the entirety of the project. The project maximally exposed individual (MEI) is identified as the sensitive receptor that is most impacted by the project's construction and operation.

The methodology for computing health risks impacts is contained in Appendix E of the BAAQMD CEQA Guidelines. TAC and PM<sub>2.5</sub> emissions are calculated, a dispersion model used to estimate ambient pollutant concentrations, and cancer risks and HI calculated using DPM concentrations.

### Modeled Sensitive Receptors

Receptors for this assessment included locations where sensitive populations closest to the project would be present for extended periods of time (i.e., chronic exposures). This includes the existing residences near the site, as shown in Figure 1. Residential receptors are assumed to include all receptor groups (i.e., third trimester, infants, children, and adults) with almost continuous exposure to project emissions. While there are additional sensitive receptors within 1,000 feet of the project site, the receptors chosen are adequate to identify maximum impacts from the project.

### **Compliance with HEU SEIR Mitigation Measure AQ-3a**

The primary health risk impact issues associated with construction projects are cancer risks associated with diesel exhaust (i.e., DPM), which is a known TAC, and exposure to high ambient concentrations of dust (i.e., PM<sub>2.5</sub>). DPM poses both a potential health and nuisance impact to nearby receptors. A health risk assessment of the project construction activities was conducted that evaluated potential health effects to nearby sensitive receptors from construction emissions of DPM and PM<sub>2.5</sub>.<sup>18</sup> This assessment included dispersion modeling to predict the offsite concentrations resulting from project construction, so that lifetime cancer risks and non-cancer health effects could be estimated.

### Construction Emissions

The CalEEMod model provided total annual PM<sub>10</sub> exhaust emissions (assumed to be DPM) for the off-road construction equipment and for exhaust emissions from on-road vehicles, with total emissions from all construction stages being 0.01 tons (29 pounds). The on-road vehicle emissions are a result of haul truck travel on-site during demolition and grading activities, worker travel on-site, and vendor travel on-site during construction. A trip length of one mile was used to represent vehicle travel while at or near the construction site. Fugitive PM<sub>2.5</sub> dust emissions were calculated by CalEEMod as 0.01 tons (14 pounds) for the overall construction period.

---

<sup>17</sup> BAAQMD, 2022. *BAAQMD CEQA Air Quality Guidelines Appendix E*. April 2023.

<sup>18</sup> DPM is identified by California as a toxic air contaminant due to the potential to cause cancer.

## Dispersion Modeling

The U.S. EPA AERMOD dispersion model was used to predict DPM and PM<sub>2.5</sub> concentrations at sensitive receptors (i.e., residences) in the vicinity of the project construction area. The AERMOD dispersion model is a BAAQMD-recommended model for use in modeling analysis of these types of emission activities for CEQA projects.<sup>19</sup> Emission sources for the construction site were grouped into two categories: exhaust emissions of DPM and fugitive PM<sub>2.5</sub> dust emissions.

### *Construction Sources*

Combustion equipment DPM exhaust emissions were modeled as an array of point sources to reflect construction equipment and trucks operating at the site. These sources included nine-foot release heights (construction equipment exhaust stack height) that were placed at 23 feet (7 meter) intervals throughout the construction site. This resulted in 62 individual point sources being used to represent mobile equipment DPM exhaust emissions in the construction. The total DPM emissions were divided into each of the point sources that were spread throughout the project construction site. In addition, the following stack parameters were used: a vertical release, a stack diameter of 2.5 inches, an exhaust temperature of 918°F, and an exit velocity of 309 feet per second. Point source plume rise is calculated by the AERMOD dispersion model. Emissions from vehicle travel on- and off-site were also distributed among the point sources throughout the site. The array of point sources used for the modeling are shown in Figure 1.

For modeling fugitive PM<sub>2.5</sub> emissions, a near-ground level release height of 7 feet (2 meters) was used for the area source. Fugitive dust emissions at construction sites come from a variety of sources, including truck and equipment travel, grading activities, truck loading (with loaders) and unloading (rear or bottom dumping), loaders and excavators moving and transferring soil and other materials, etc. All of these activities result in fugitive dust emissions at various heights at the point(s) of generation. Once generated, the dust plume will tend to rise as it moves downwind across the site and exit the site at a higher elevation than when it was generated. For all these reasons, a 7-foot release height was used as the average release height across the construction site. Emissions from the construction equipment and on-road vehicle travel were distributed throughout the modeled area sources. Figure 1 shows the project construction site and receptors.

### *AERMOD Inputs and Meteorological Data*

The modeling used a five-year meteorological data set (2011-2015) from the San Carlos Airport prepared for us with the AERMOD model by the BAAQMD. Construction emissions were modeled as occurring daily between 7:00 a.m. to 6:00 p.m., per the project applicant's construction schedule. Annual DPM and PM<sub>2.5</sub> concentrations from construction activities during the 2024-2026 period were calculated using the model. DPM and PM<sub>2.5</sub> concentrations were calculated at nearby sensitive receptors. Receptor heights of 5 feet (1.5 meters), 15 feet (4.5 meters), 25 feet (7.6 meters), and 35 feet (10.7 meters) were used to represent the breathing height on the first through fourth floors of nearby single- and multi-family residences.<sup>20</sup>

<sup>19</sup> BAAQMD, 2023, *Appendix E of the 2022 BAAQMD CEQA Guidelines*. April.

<sup>20</sup> BAAQMD, 2022. *BAAQMD CEQA Air Quality Guidelines Appendix E*. April 2023.

## Summary of Construction Health Risk Impacts

The maximum increased cancer risks were calculated using the modeled TAC concentrations combined with the BAAQMD CEQA guidance for age sensitivity factors and exposure parameters. Age-sensitivity factors reflect the greater sensitivity of infants and small children to cancer causing TACs. Third trimester, infant, child, and adult exposures were assumed to occur at all residences during the entire construction period.

Non-cancer health hazards and maximum PM<sub>2.5</sub> concentrations were also calculated and identified. The maximum modeled annual PM<sub>2.5</sub> concentration was calculated based on combined exhaust and fugitive concentrations. The maximum computed HI value was based on the ratio of the maximum DPM concentration modeled and the chronic inhalation reference exposure level of 5 µg/m<sup>3</sup>.

The maximum modeled annual DPM and PM<sub>2.5</sub> concentrations were identified at nearby sensitive receptors (as shown in Figure 1) to find the maximally exposed individuals (MEI). Results of this assessment indicated that the construction MEIs were located at two different receptors. The cancer risk MEI was located on the third floor (25 feet above the ground) of a multi-family home west of the project site. The annual PM<sub>2.5</sub> concentration MEI was located at a receptor adjacent to the cancer risk MEI but on the first floor (5 feet above the ground) of a multi-family home west of the project site. Table 5 summarizes the maximum cancer risks, PM<sub>2.5</sub> concentrations, and HI for project's construction activities at the MEIs. *Attachment 2* to this report includes the emission calculations used for the construction area source modeling and the cancer risk calculations.

## **Health Risks from Project Operation**

The project would not include stationary sources (e.g., emergency generators) of TACs. Diesel powered vehicles are the primary concern with local traffic-generated TAC impacts. This project would generate 508 daily trips or 331 daily trips<sup>21</sup> with a majority of the trips being from light-duty gasoline-powered vehicles (i.e., passenger cars)<sup>22</sup>. The project is not anticipated to generate large amounts of truck trips that would involve diesel vehicles. In addition, projects with the potential to cause or contribute to increased cancer risk from traffic include those that have high numbers of diesel-powered on road trucks or use off-road diesel equipment on site, such as a distribution center, a quarry, or a manufacturing facility, may potentially expose existing or future planned receptors to substantial cancer risk levels and/or health hazards. TAC emissions from project-related vehicle trips are considered negligible and not included in this analysis.

## Summary of Project-Related Health Risks at the Off-Site Project MEI

For this project, the sensitive receptors identified in Figure 1 as the construction MEIs are also the project MEIs. Project risk impacts are shown in Table 5. The unmitigated maximum cancer risks,

---

<sup>21</sup> Email correspondence from Fiona Phung, Project Manager, David J. Powers, Inc., May 2, 2024, *Haven Ave Residential TIA\_Traffic Volumes\_VMT (5-2-24).xlsx*. ”

<sup>22</sup> If the total trip quantity had been high enough to warrant dispersion modeling, total (rather than net) trips would have been utilized for health risk modeling to capture the full emissions profile of the traffic generated by the project.

annual PM<sub>2.5</sub> concentration, and HI from project construction activities at the residential project MEI locations would not exceed the single-source significance thresholds.

**Table 5. Construction Risk Impacts at the Off-Site Project MEIs**

Source		Cancer Risk <sup>1</sup> (per million)	Annual PM <sub>2.5</sub> <sup>1</sup> (µg/m <sup>3</sup> )	Hazard Index
Project Construction	Unmitigated	7.70 (infant)	0.07	<0.01

<i>Exceed Threshold?</i>	Unmitigated	<i>No</i>	<i>No</i>	<i>No</i>

Note: <sup>1</sup> Maximum cancer risk and PM<sub>2.5</sub> concentration occur at different receptors.

**Figure 1. Locations of Project Construction Site, DPM Point Sources, Off-Site Sensitive Receptors, and Maximum TAC Impacts (MEIs)**

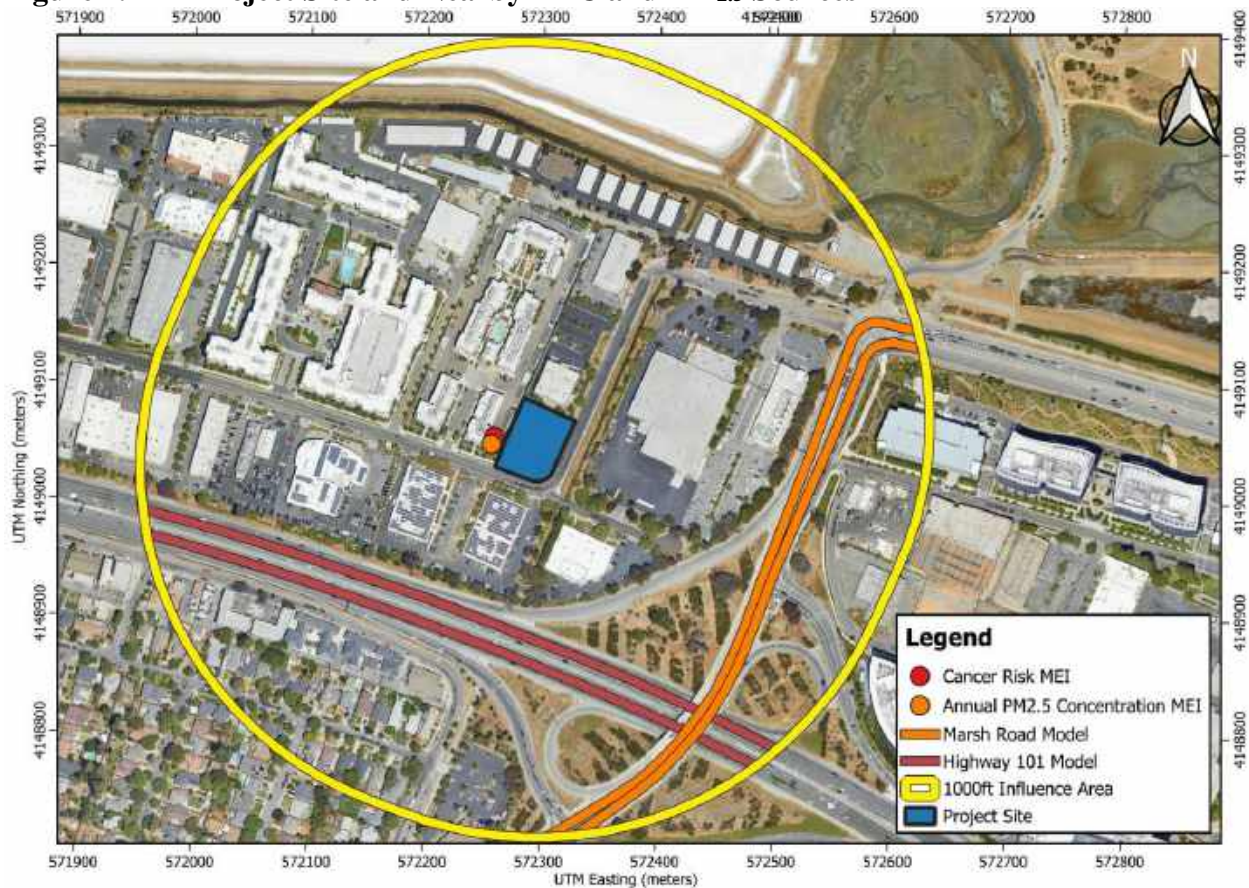

**Cumulative Health Risks of all TAC Sources at the Off-Site Project MEIs**

Cumulative health risk assessments look at all substantial sources of TACs located within 1,000 feet of a project site (i.e., influence area) that can affect sensitive receptors. These sources include freeways or highways, busy surface streets, and stationary sources identified by BAAQMD. A review of the project area using BAAQMD’s geographic information systems (GIS) screening maps identified the existing health risks from nearby sources at the MEIs. Highway 101 and Marsh Road were identified as potential TAC sources that could affect the project MEIs. No existing stationary sources were identified within the influence area. Figure 2 shows the location of the

sources affecting the MEIs. Health risk impacts from these sources upon the MEIs are reported in Table 6. Details of the modeling and health risk calculations are included in *Attachment 3*.

**Figure 2. Project Site and Nearby TAC and PM<sub>2.5</sub> Sources**

### Highways – Highway 101

The project MEIs are located near Highway 101. A refined analysis of the impacts of TACs and PM<sub>2.5</sub> to the MEI receptors is necessary to evaluate potential cancer risks and PM<sub>2.5</sub> concentrations from Highway 101. A review of the traffic information reported by Caltrans indicates that Highway 101 traffic includes 170,000 vehicles per day (based on an annual average)<sup>23</sup> that are about 4.50 percent trucks, of which 1.8 percent are considered diesel heavy duty trucks and 2.7 percent are medium duty trucks.<sup>24</sup>

### Local Roadways – Marsh Road

A refined analysis of potential health impacts from vehicle traffic on Marsh Road was conducted since the roadway was identified as a potential TAC source. The refined analysis involved predicting emissions for the traffic volume and mix of vehicle types on the roadway near the

<sup>23</sup> Caltrans. 2021. *2021 Traffic Volumes California State Highways*.

<sup>24</sup> Caltrans. 2021. *2021 Annual Average Daily Truck Traffic on the California State Highway System*.

project site and using an atmospheric dispersion model to predict exposure to TACs. The associated cancer risks are then computed based on the modeled exposures.

### *Traffic Emissions Modeling*

This analysis involved the development of DPM, organic TACs, and PM<sub>2.5</sub> emissions for traffic on Highway 101 and Marsh Road using the Caltrans version of the CARB EMFAC2021 emissions model, known as CT-EMFAC2021. CT-EMFAC2021 provides emission factors for mobile source criteria pollutants and TACs, including DPM. Emission processes modeled include running exhaust for DPM, PM<sub>2.5</sub> and total organic compounds (TOG), running evaporative losses for TOG, and tire and brake wear and fugitive road dust for PM<sub>2.5</sub>. All PM<sub>2.5</sub> emissions from all vehicles were used, rather than just the PM<sub>2.5</sub> fraction from diesel powered vehicles, because all vehicle types (i.e., gasoline and diesel powered) produce PM<sub>2.5</sub>. Additionally, PM<sub>2.5</sub> emissions from vehicle tire and brake wear from re-entrained roadway dust were included in these emissions. DPM emissions are projected to decrease in the future and are reflected in the CT-EMFAC2021 emissions data. Inputs to the model include region (San Mateo County), type of road (freeway and major/collector), traffic mix assigned by CT-EMFAC2021 for the county, adjusted for the local truck mix on Highway 101 and truck percentage for non-state highways in San Mateo County (3.13 percent)<sup>25</sup> for the local roadway, year of analysis (2024 – construction start year), and season (annual).

To estimate TAC and PM<sub>2.5</sub> emissions over the 30-year exposure period used for calculating the increased cancer risks for sensitive receptors at the MEIs, the CT-EMFAC2021 model was used to develop vehicle emission factors for the year 2024 (construction start year). Emissions associated with vehicle travel depend on the year of analysis because emission control technology requirements are phased-in over time. Therefore, the earlier the year analyzed in the model, the higher the emission rates utilized by CT-EMFAC2021. Year 2024 emissions were conservatively assumed as being representative of future conditions over the time period that cancer risks are evaluated since, as discussed above, overall vehicle emissions, and in particular diesel truck emissions, will decrease in the future.

The average daily traffic (ADT) volumes and truck percentages were based on Caltrans data for Highway 101. Traffic volumes were assumed to increase 1 percent per year for a total of 175,099 vehicles. Hourly traffic distributions specific to these segments of Highway 101 were obtained from Caltrans Performance Measurement System (PeMS). PeMS data is collected in real-time from nearly 40,000 individual detectors spanning the freeway system across all major metropolitan areas of California.<sup>26</sup> The fraction of traffic volume each hour was calculated and applied to the 2024 average daily traffic volumes estimate to estimate hourly traffic emission rates for Highway 101.

---

<sup>25</sup> Bay Area Air Quality Management District, 2012, *Recommended Methods for Screening and Modeling Local Risks and Hazards, Version 3.0*. May. Web: <https://www.baaqmd.gov/~media/files/planning-and-research/ceqa/risk-modeling-approach-may-2012.pdf?la=en>

<sup>26</sup> Caltrans Performance Measurement System (PeMS) Data Source. URL: <https://dot.ca.gov/programs/traffic-operations/mpr/pems-source>

Based on traffic data from the Caltrans PeMS, traffic speeds during the daytime and nighttime periods were identified. For northbound and southbound traffic on Highway 101, the following was assumed for all vehicles:

- 70 mph – From 12:00 a.m. until 6:00 a.m. and 7:00 p.m. until 12:00 a.m.
- 65 mph – From 6:00 a.m. until 7:00 a.m. and 10:00 a.m. until 7:00 p.m.
- 60 mph – From 7:00 a.m. until 10:00 a.m.

The ADT for Marsh Road was calculated based on traffic data provided by the City of Menlo Park traffic volumes website.<sup>27</sup> Assuming a 1 percent per year increase, the predicted ADT on Marsh Road was 45,451 vehicles. Average hourly traffic distributions for San Mateo County roadways were developed using the EMFAC model,<sup>28</sup> which were then applied to the ADT volumes to obtain estimated hourly traffic volumes and emissions for Marsh Road. An average travel speed of 45 mph was used for all hours of the day based on posted speed limit signs on each roadway.

This analysis involved the development of DPM, organic TACs, and PM<sub>2.5</sub> emissions for future traffic on Highway 101 and Marsh Road and using these emissions with an air quality dispersion model to calculate TAC and PM<sub>2.5</sub> concentrations at the project MEI receptor locations. Maximum increased lifetime cancer risks and annual PM<sub>2.5</sub> concentrations for the receptors were then computed using modeled TAC and PM<sub>2.5</sub> concentrations and BAAQMD methods and exposure parameters.

### *Dispersion Modeling*

Dispersion modeling of TAC and PM<sub>2.5</sub> emissions was conducted using the EPA AERMOD air quality dispersion model, which is recommended by the BAAQMD for this type of analysis.<sup>29</sup> TAC and PM<sub>2.5</sub> emissions from traffic on Highway 101 and Marsh Road within 1,000 feet of the project site were evaluated. Vehicle traffic on the roadways was modeled using a series of area sources along a line (line area sources); with line segments used for travel on the roadways in opposing directions. The same meteorological data and off-site sensitive receptors used in the previous construction site dispersion modeling scenario were used in the roadway modeling. Other inputs to the model included road geometry, hourly traffic emissions, and receptor locations. Annual TAC and PM<sub>2.5</sub> concentrations using 2024 emissions from traffic on each roadway were calculated using the model. Concentrations were calculated at the MEIs with receptor heights of 5 feet (1.5 meters) and 25 feet (7.6 meters) to represent the breathing heights on the first and third floors of residents in the multi-family residences.

<sup>28</sup> The Burden output from EMFAC2007, a previous version of CARB's EMFAC model, was used for this since the current web-based version of EMFAC2021 does not include Burden type output with hour by hour traffic volume information.

<sup>29</sup> BAAQMD. *Recommended Methods for Screening and Modeling Local Risks and Hazards*. May 2012

### *Computed Cancer and Non-Cancer Health Impacts*

The cancer risk, PM<sub>2.5</sub> concentration, and HI impacts from each roadway on the off-site MEIs are shown in Table 6. Figure 2 shows the roadway links modeled and receptor locations where concentrations were calculated. Details of the emission calculations, dispersion modeling, and cancer risk calculations for the receptors with the maximum cancer risk from traffic on each roadway are provided in *Attachment 3*.

### BAAQMD Permitted Stationary Sources

Permitted stationary sources of air pollution near the project site were identified using BAAQMD's *Permitted Stationary Sources 2021* GIS website,<sup>30</sup> which identifies the location of nearby stationary sources and their estimated risk and hazard impacts, based on emissions and adjustments to account for OEHHA's risk guidance. There were no identified sources within the project's 1,000-foot influence area.

### **Conclusion**

Table 6 reports both the project and cumulative health risk impacts at the sensitive receptors most affected by the project (i.e., the MEI). The project would not have a significant project-level impact or a cumulative impact with respect to health risk to sensitive receptors caused by project construction and operational TACs since none of the risk values exceed their respective BAAQMD single-source or cumulative-source thresholds. Additional measures under HEU SEIR Mitigation Measure AQ-3 (namely, the measures in AQ-2c) are not necessary because the project does not have health risk impacts that exceed significance thresholds. Compared to the environmental effects related to TAC emissions analyzed in the ConnectMenlo EIR and HEU SEIR, the project has none of the following: (1) peculiar effects, (2) effects not analyzed as significant in the analysis on the General Plan as updated by the HEU, (3) new potentially significant off-site impacts or cumulative impacts, or (4) more severe adverse impacts than discussed in the ConnectMenlo EIR as updated by the HEU SEIR.

<b>Exceed Threshold?</b>	Unmitigated	<i>No</i>	<i>No</i>	<i>No</i>

Note: <sup>1</sup> Maximum cancer risk and PM<sub>2.5</sub> concentration occur at different receptors.

**Impact AIR-4: Create objectionable odors affecting a substantial number of people?**

The ConnectMenlo EIR and HEU SEIR analyzed odors and found the project to be less than significant without mitigation.

Project construction activities could result in odorous emissions from diesel exhaust associated with construction equipment. Because of the temporary nature of these emissions and the highly diffusive properties of diesel exhaust, these odor emissions would not adversely affect a substantial number of people. Operationally, the project would not emit noticeably odorous emissions.

**Conclusion**

Compared to the environmental effects related to odors analyzed in the ConnectMenlo EIR and HEU SEIR, the project has none of the following: (1) peculiar effects, (2) effects not analyzed as significant in the analysis on the General Plan as updated by the HEU, (3) new potentially significant off-site impacts or cumulative impacts, or (4) more severe adverse impacts than discussed in the ConnectMenlo EIR as updated by the HEU SEIR.

**Non-CEQA: On-site Health Risk Assessment for TAC Sources - New Project Sensitive Residences**

Although not required by CEQA, the ConnectMenlo EIR and HEU SEIR analyzed impacts of the environment on new sensitive receptors, which resulted in Mitigation Measure AQ-3 (modifying ConnectMenlo EIR Mitigation Measure AQ-3b), which states in relevant part: “Applicants for residential and other sensitive land use projects (e.g., hospitals, nursing homes, day care centers) in Menlo Park within 1,000 feet of a major sources of toxic air contaminants (TACs) (e.g., warehouses, industrial areas, freeways, and roadways with traffic volumes over 10,000 vehicle per day), as measured from the property line of the project to the property line of the source/edge of the nearest travel lane, shall submit a health risk assessment (HRA) to the City of Menlo Park prior to future discretionary Project approval” that analyzes impacts on the project.

Accordingly, a health risk assessment was completed to assess the effects that the existing TAC sources would have on the new proposed sensitive receptors (i.e., residents) introduced by the project. The same TAC sources identified above were used in this assessment. BAAQMD's recommended thresholds for health risks and hazards, shown in Table 1, are used to evaluate on-site exposure. Figure 3 shows the on-site sensitive receptors in relation to the nearby TAC sources. Results are listed in Table 7. *Attachment 3* includes the dispersion modeling and risk calculations for TAC source impacts upon the proposed on-site sensitive receptors.

### Highways and Local Roadways – Highway 101 & Marsh Road

The analysis of the effects from highway and roadway TACs on project residents was conducted in the same manner as described above for the off-site MEIs. However, the year 2027 (operational year) emission factors were assumed as being representative of all future conditions, which is a conservative assumption because it does not account for regulations that will be phased in that would reduce vehicle emissions. An analysis based on 2027 resulted in an increased ADT on Highway 101 of 180,199 vehicles and 46,801 vehicles on Marsh Road. On-site receptors were placed throughout the project site with a spacing of 7 meters (23 feet). Roadway impacts were modeled at receptor heights of 16 feet (4.9 meters) and 30 feet (9.1 meters) representing sensitive receptors on the second and third floors (first and second residential floors) of the proposed building. The portion of the roadways included in the modeling is shown in Figure 3 along with the project site and receptor locations where impacts were modeled.

Maximum increased cancer risks were calculated for the residents at the project site using the maximum modeled TAC concentrations. A 30-year exposure period was used in calculating cancer risks assuming the residents would include infants and adults were assumed to be in the new apartments for 24 hours per day for 350 days per year. The highest combined impacts from Highway 101 and Marsh Road occurred at a receptor on the second floor at the southern corner of the multi-family building. Cancer risks associated with the roadways are greatest closest to the roadways and decrease with distance from the roads. The roadway impacts at the project site are shown in Table 7. Details of the emission calculations, dispersion modeling, and cancer risk calculations are contained in *Attachment 3*.

### Stationary Sources

As mentioned above, there are no nearby stationary sources within 1,000 feet of the project site.

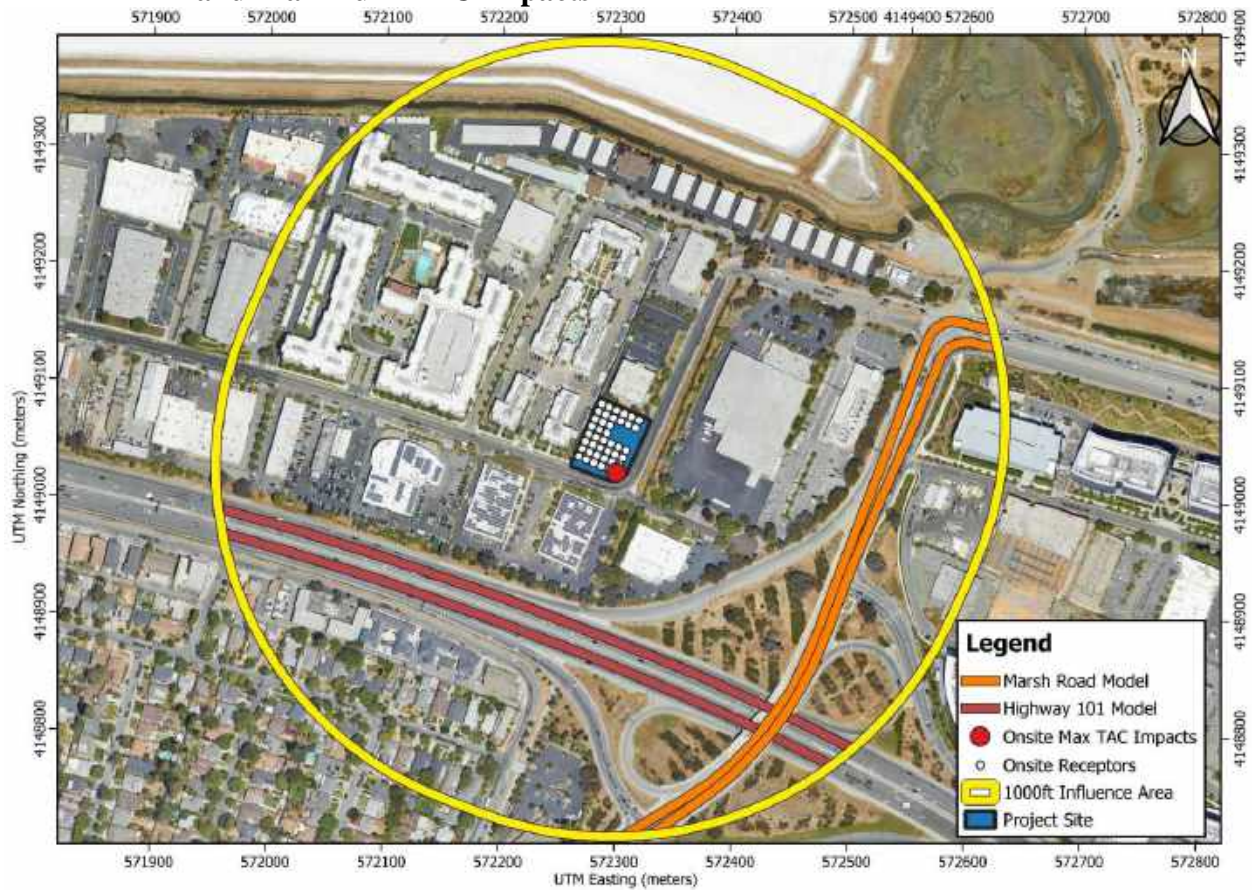

### Non-CEQA Analysis

Health risk effects from the existing and TAC sources upon the project are reported in Table 7. The risks from the singular TAC sources are compared against the BAAQMD single-source threshold. The risks from all the sources are then combined and compared against the BAAQMD cumulative-source threshold. As shown, the BAAQMD single-source and cumulative-source thresholds are not exceeded at the onsite MEI from environmental TAC sources.

**Table 7. Impacts from Combined Sources to Project Site Receptors**

Source	Cancer Risk (per million)	Annual PM <sub>2.5</sub> (µg/m <sup>3</sup> )	Hazard Index
Highway 101, ADT 180,199	6.79	0.21	<0.01
Marsh Road, ADT 46,801	0.32	0.03	<0.01
<b>BAAQMD Single-Source Threshold</b>	<b>10</b>	<b>0.3</b>	<b>1.0</b>

<b>BAAQMD Cumulative Source Threshold</b>	<b>100</b>	<b>0.8</b>	<b>10.0</b>
Exceed Threshold?	No	No	No

**Figure 3. Locations of Project Site, On-Site Residential Receptors, Roadway Models, and Maximum TAC Impacts**

## GREENHOUSE GAS EMISSIONS

### Setting

Gases that trap heat in the atmosphere, GHGs, regulate the earth's temperature. This phenomenon, known as the greenhouse effect, is responsible for maintaining a habitable climate. The most common GHGs are carbon dioxide (CO<sub>2</sub>) and water vapor but there are also several others, most importantly methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF<sub>6</sub>). These are released into the earth's atmosphere through a variety of natural processes and human activities. Sources of GHGs are generally as follows:

- CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O are byproducts of fossil fuel combustion.
- N<sub>2</sub>O is associated with agricultural operations such as fertilization of crops.
- CH<sub>4</sub> is commonly created by off-gassing from agricultural practices (e.g., keeping livestock) and landfill operations.
- Chlorofluorocarbons (CFCs) were widely used as refrigerants, propellants, and cleaning solvents but their production has been stopped by international treaty.
- HFCs are now used as a substitute for CFCs in refrigeration and cooling.
- PFCs and sulfur hexafluoride emissions are commonly created by industries such as aluminum production and semi-conductor manufacturing.

Each GHG has its own potency and effect upon the earth's energy balance. This is expressed in terms of a global warming potential (GWP), with CO<sub>2</sub> being assigned a value of 1 and sulfur hexafluoride being several orders of magnitude stronger. In GHG emission inventories, the weight of each gas is multiplied by its GWP and is measured in units of CO<sub>2</sub> equivalents (CO<sub>2</sub>e).

An expanding body of scientific research supports the theory that global climate change is currently affecting changes in weather patterns, average sea level, ocean acidification, chemical reaction rates, and precipitation rates, and that it will increasingly do so in the future. The climate and several naturally occurring resources within California are adversely affected by the global warming trend. Increased precipitation and sea level rise will increase coastal flooding, saltwater intrusion, and degradation of wetlands. Mass migration and/or loss of plant and animal species could also occur. Potential effects of global climate change that could adversely affect human health include more extreme heat waves and heat-related stress; an increase in climate-sensitive diseases; more frequent and intense natural disasters such as flooding, hurricanes and drought; and increased levels of air pollution.

### Federal and Statewide GHG Emissions

The U.S. EPA reported that in 2022, total gross nationwide GHG emissions were 5,215.6 million metric tons (MMT) carbon dioxide equivalent (CO<sub>2</sub>e).<sup>31</sup> These emissions were lower than peak levels of 7,416 MMT that were emitted in 2007. CARB updates the statewide GHG emission

---

<sup>31</sup> United States Environmental Protection Agency, 2022. *Draft Inventory of U.S. Greenhouse Gas Emissions and Sinks 1990-2020*. February. Web: <https://www.epa.gov/ghgemissions/inventory-us-greenhouse-gas-emissions-and-sinks>

inventory on an annual basis where the latest inventory includes 2000 through 2020 emissions.<sup>32</sup> In 2020, GHG emissions from statewide emitting activities were 369.2 MMT CO<sub>2</sub>e. The 2020 emissions have decreased by 25 percent since peak levels in 2004 and are 35.3 MMT CO<sub>2</sub>e lower than 2019 emissions level and almost 62 MMT CO<sub>2</sub>e below the State's 2020 GHG limit of 431 MMT CO<sub>2</sub>e. Per capita GHG emissions in California have dropped from a 2001 peak of 13.8 MT CO<sub>2</sub>e per person to 9.7 MT CO<sub>2</sub>e per person in 2021.

### Recent Regulatory Actions for GHG Emissions

#### *Executive Order S-3-05 – California GHG Reduction Targets*

Executive Order (EO) S-3-05 was signed by Governor Arnold Schwarzenegger in 2005 to set GHG emission reduction targets for California. The three targets established by this EO are as follows: (1) reduce California's GHG emissions to 2000 levels by 2010, (2) reduce California's GHG emissions to 1990 levels by 2020, and (3) reduce California's GHG emissions by 80 percent below 1990 levels by 2050.

#### *Assembly Bill 32 – California Global Warming Solutions Act (2006)*

Assembly Bill (AB) 32, the Global Warming Solutions Act of 2006, codified the State's GHG emissions target by directing CARB to reduce the State's global warming emissions to 1990 levels by 2020. AB 32 was signed and passed into law by Governor Schwarzenegger on September 27, 2006. Since that time, the CARB, CEC, California Public Utilities Commission (CPUC), and Building Standards Commission have all been developing regulations that will help meet the goals of AB 32 and Executive Order S-3-05, which has a target of reducing GHG emissions 85 percent below 1990 levels.

The first Scoping Plan for AB 32 was adopted by CARB in December 2008. Its most recent update was completed in December of 2022<sup>33</sup>. It contains the State's main strategies to achieve carbon neutrality by 2045. This plan extends and expands upon the earlier versions with a target of reducing anthropogenic emissions to 85 percent below 1990 levels by 2045. It also takes the step of adding carbon neutrality as a science-based guide and touchstone for California's climate work. Measures to achieve carbon neutrality include rapidly moving to zero emission vehicles (ZEV), removing natural gas as an option for space conditioning, increasing the number of solar arrays and wind turbines, and scaling up renewable hydrogen for hard-to-electrify end uses.

#### *Senate Bill 375 – California's Regional Transportation and Land Use Planning Efforts (2008)*

California enacted legislation (SB 375) to expand the efforts of AB 32 by controlling indirect GHG emissions caused by urban sprawl. SB 375 provides incentives for local governments and applicants to implement new conscientiously planned growth patterns. This includes incentives for creating attractive, walkable, and sustainable communities and revitalizing existing communities.

---

<sup>32</sup> CARB. 2022. *California Greenhouse Gas Emission for 2000 to 2020*. Web: [https://ww2.arb.ca.gov/sites/default/files/classic/cc/inventory/2000-2020\\_ghg\\_inventory\\_trends.pdf](https://ww2.arb.ca.gov/sites/default/files/classic/cc/inventory/2000-2020_ghg_inventory_trends.pdf)

<sup>33</sup> CARB. 2022. *Final 2022 Scoping Plan Update and Appendices*. Web: <https://ww2.arb.ca.gov/our-work/programs/ab-32-climate-change-scoping-plan/2022-scoping-plan-documents>

The legislation also allows applicants to bypass certain environmental reviews under CEQA if they build projects consistent with the new sustainable community strategies. Development of more alternative transportation options that would reduce vehicle trips and miles traveled, along with traffic congestion, would be encouraged. SB 375 enhances CARB's ability to reach the AB 32 goals by directing the agency in developing regional GHG emission reduction targets to be achieved from the transportation sector for 2020 and 2035. CARB works with the metropolitan planning organizations (e.g. Association of Bay Area Governments [ABAG] and Metropolitan Transportation Commission [MTC]) to align their regional transportation, housing, and land use plans to reduce vehicle miles traveled and demonstrate the region's ability to attain its GHG reduction targets. A similar process is used to reduce transportation emissions of ozone precursor pollutants in the Bay Area.

#### *Senate Bill 350 - Renewable Portfolio Standards*

In September 2015, the California Legislature passed SB 350, which increases the states Renewables Portfolio Standard (RPS) for content of electrical generation from the 33 percent target for 2020 to a 50 percent renewables target by 2030.

#### *Executive Order B-30-15 & Senate Bill 32 GHG Reduction Targets – 2030 GHG Reduction Target*

In April 2015, Governor Brown signed EO B-30-15, which extended the goals of AB 32, setting a GHG emissions target at 40 percent of 1990 levels by 2030. On September 8, 2016, Governor Brown signed Senate Bill (SB) 32, which legislatively established the GHG reduction target of 40 percent of 1990 levels by 2030. In November 2017, CARB issued *California's 2017 Climate Change Scoping Plan*.<sup>34</sup> While the State is on track to exceed the AB 32 scoping plan 2020 targets, this plan is an update to reflect the enacted SB 32 reduction target.

SB 32 was passed in 2016, which codified a 2030 GHG emissions reduction target of 40 percent below 1990 levels. CARB has drafted a 2022 Scoping Plan Update to reflect the 2030 target set by Executive Order B-30-15 and codified by SB 32. The 2022 draft plan:

- Identifies a path to keep California on track to meet its SB 32 GHG reduction target of at least 40 percent below 1990 emissions by 2030.
- Identifies a technologically feasible, cost-effective path to achieve carbon neutrality by 2045 or earlier.
- Focuses on strategies for reducing California's dependency on petroleum to provide consumers with clean energy options that address climate change, improve air quality, and support economic growth and clean sector jobs.
- Integrates equity and protecting California's most impacted communities as a driving principle.
- Incorporates the contribution of natural and working lands to the state's GHG emissions, as well as its role in achieving carbon neutrality.
- Relies on the most up to date science, including the need to deploy all viable tools,

---

<sup>34</sup> California Air Resource Board, 2017. *California's 2017 Climate Change Scoping Plan: The Strategy for Achieving California's 2030 Greenhouse Gas Targets*. November. Web: [https://ww2.arb.ca.gov/sites/default/files/classic/cc/scopingplan/scoping\\_plan\\_2017.pdf](https://ww2.arb.ca.gov/sites/default/files/classic/cc/scopingplan/scoping_plan_2017.pdf)

including carbon capture and sequestration as well a direct air capture.

- Evaluates multiple options for achieving our GHG and carbon neutrality targets, as well as the public health benefits and economic impacts associated with each.

The Scoping Plan was updated in 2022 and lays out how the state can get to carbon neutrality by 2045 or earlier. It is the first Scoping Plan that adds carbon neutrality as a science-based guide and touchstone beyond statutorily established emission reduction targets.<sup>35</sup>

The mid-term 2030 target is considered critical by CARB on the path to obtaining an even deeper GHG emissions target of 80 percent below 1990 levels by 2050, as directed in Executive Order S-3-05. The 2022 Scoping Plan outlines the suite of policy measures, regulations, planning efforts, and investments in clean technologies and infrastructure, providing a blueprint to continue driving down GHG emissions and to not only obtain the statewide goals, but cost-effectively achieve carbon-neutrality by 2045 or earlier. In the 2022 Scoping Plan, CARB recommends:

- VMT per capita reduced 12% below 2019 levels by 2030 and 22% below 2019 levels by 2045.
- 100% of Light-duty vehicle sales are zero emissions vehicles (ZEV) by 2035.
- 100% of medium duty/heavy duty vehicle sales are ZEV by 2040.
- 100% of passenger and other locomotive sales are ZEV by 2030.
- 100% of line haul locomotive sales are ZEV by 2035.
- All electric appliances in new residential and commercial building beginning 2026 (residential) and 2029 (commercial).
- 80% of residential appliance sales are electric by 2030 and 100% of residential appliance sales are electric by 2035.
- 80% of commercial appliance sales are electric by 2030 and 100% of commercial appliance sales are electric by 2045.

### *SB 743 Transportation Impacts*

Senate Bill 743 required lead agencies to abandon the old “level of service” metric for evaluating a project’s transportation impacts, which was based solely on the amount of delay experienced by motor vehicles. In response, the Governor’s Office of Planning and Research (OPR) developed a VMT metric that considered other factors such as reducing GHG emissions and developing multimodal transportation<sup>36</sup>. A VMT-per-capita metric was adopted into the CEQA Guidelines Section 15064.3 in November 2017. Given current baseline per-capita VMT levels computed by CARB in the 2030 Scoping Plan of 22.24 miles per day for light-duty vehicles and 24.61 miles per day for all vehicle types, the reductions needed to achieve the 2050 climate goal are 16.8 percent for light-duty vehicles and 14.3 percent for all vehicle types combined. Based on this analysis (as well as other factors), OPR recommended using a 15-percent reduction in per capita VMT as an appropriate threshold of significance for evaluating transportation impacts.

<sup>36</sup> Governor’s Office of Planning and Research. 2018. *Technical Advisory on Evaluating Transportation Impacts in CEQA*. December.

### *Executive Order B-55-18 – Carbon Neutrality*

In 2018, a new statewide goal was established to achieve carbon neutrality as soon as possible, but no later than 2045, and to maintain net negative emissions thereafter. CARB and other relevant state agencies are tasked with establishing sequestration targets and create policies/programs that would meet this goal.

### *Senate Bill 100 – Current Renewable Portfolio Standards*

In September 2018, SB 100 was signed by Governor Brown to revise California’s RPS program goals, furthering California’s focus on using renewable energy and carbon-free power sources for its energy needs. The bill would require all California utilities to supply a specific percentage of their retail sales from renewable resources by certain target years. By December 31, 2024, 44 percent of the retail sales would need to be from renewable energy sources, by December 31, 2026 the target would be 40 percent, by December 31, 2027 the target would be 52 percent, and by December 31, 2030 the target would be 60 percent. By December 31, 2045, all California utilities would be required to supply retail electricity that is 100 percent carbon-free and sourced from eligible renewable energy resource to all California end-use customers.

### *Senate Bill 1020 – Clean Energy, Jobs, and Affordability Act of 2022*

In 2022, the state revised updated its policy to provide renewable and carbon-free targets for the years between 2030 and 2045. Specifically, SB 1020 requires that eligible renewable energy resources and zero-carbon resources supply 90 percent of all retail sales of electricity to California end-use customers by December 31, 2035, 95 percent by December 31, 2040, and 100 percent by December 31, 2045. SB 1020 also requires that eligible renewable energy resources and zero-carbon resources supply 100 percent of electricity procured to serve all state agencies by December 31, 2035.

### *California Building Standards Code – Title 24 Part 11 & Part 6*

The California Green Building Standards Code (CALGreen Code) is part of the California Building Standards Code under Title 24, Part 11.<sup>37</sup> The CALGreen Code encourages sustainable construction standards that involve planning/design, energy efficiency, water efficiency resource efficiency, and environmental quality. These green building standard codes are mandatory statewide and are applicable to residential and non-residential developments. The most recent CALGreen Code (2022 California Building Standard Code) was effective as of January 1, 2023.

The California Building Energy Efficiency Standards (California Energy Code) is under Title 24, Part 6 and is overseen by the California Energy Commission (CEC). This code includes design requirements to conserve energy in new residential and non-residential developments, while being cost effective for homeowners. This Energy Code is enforced and verified by cities during the planning and building permit process. The current energy efficiency standards (2022 Energy Code) replaced the 2019 Energy Code as of January 1, 2023. Under the 2019 standards, single-family

---

<sup>37</sup> See: <https://www.dgs.ca.gov/BSC/Resources/Page-Content/Building-Standards-Commission-Resources-List-Folder/CALGreen#:~:text=CALGreen%20is%20the%20first%2Din,to%201990%20levels%20by%202020>.

homes are predicted to be 53 percent more efficient than homes built under the 2016 standard due to more stringent energy-efficiency standards and mandatory installation of solar photovoltaic systems. For nonresidential developments, it is predicted that these buildings will use 30 percent less energy due to lightening upgrades.<sup>38</sup>

Requirements for electric vehicle (EV) charging infrastructure are set forth in Title 24 of the California Code of Regulations. The CALGreen standards consist of a set of mandatory standards required for new development, as well as two more voluntary standards known as Tier 1 and Tier 2. The CALGreen 2022 standards require deployment of additional EV chargers in various building types, including multi-family residential and nonresidential land uses. They include requirements for both EV capable parking spaces and the installation of Level 2 EV supply equipment for multi-family residential and nonresidential buildings. The 2022 CALGreen standards include requirements for both EV readiness, installation of EV chargers, and include both mandatory requirements and more aggressive voluntary Tier 1 and Tier 2 provisions. Providing EV charging infrastructure that meets current CALGreen requirements will not be sufficient to power the anticipated more extensive level of EV penetration in the future that is needed to meet SB 30 climate goals.

CEC studies have identified the most aggressive electrification scenario as putting the building sector on track to reach the carbon neutrality goal by 2045.<sup>39</sup> Installing new natural gas infrastructure in new buildings will interfere with this goal. To meet the State's goal, communities have been adopting "Reach" codes that prohibit natural gas connections in new and remodeled buildings.

### *Advanced Clean Cars*

The Advanced Clean Cars Program, originally adopted by CARB in 2012, was designed to bring together CARB's traditional passenger vehicle requirements to meet federal air quality standards and also support California's AB 32 goals to develop and implement programs to reduce GHG emissions back down to 1990 levels by 2020, a goal achieved in 2016 as a result of numerous emissions reduction programs.

*Advanced Clean Cars II (ACC II)* is phase two of the original rule. ACC II establishes a year-by-year process, starting in 2026, so all new cars and light trucks sold in California will be zero-emission vehicles by 2035, including plug-in hybrid electric vehicles. The regulation codifies the light-duty vehicle goals set out in Governor Newsom's Executive Order N-79-20. Currently, 16 percent of new light-duty vehicles sold in California are zero emissions or plug-in hybrids. By 2030, 68 percent of new vehicles sold in California would be zero emissions and 100 percent by 2035.

Since this regulation was recently adopted, the air pollutant and GHG emissions computed in this assessment do not reflect the emissions reductions. Future updates to the State's mobile emission factor model, EMFAC, will include these effects.

## City of Menlo Park General Plan

The City of Menlo Park General Plan includes policies and programs to reduce exposure of the City's sensitive population to exposure of air pollution, TACs, and GHG emissions. The following policies and programs are applicable to the proposed project:

### *Applicable Programs – Land Use Element*

Program LU-7E      **Greenhouse Gas Emissions.** Develop a Greenhouse Gas (GHG) standard for development projects that would help reduce communitywide GHG emissions to meet City and Statewide reduction goals.

### Circulation Element

Goal CIRC-3      Increase mobility options to reduce traffic congestion, greenhouse gas emissions, and commute travel time.

Goal CIRC-4      Improve Menlo Park's overall health, wellness, and quality of life through transportation enhancements.

### *Applicable Policies – Circulation Element*

Policy CIRC-3.1      Support development and transportation improvements that help reduce per service population (or other efficiency metric) VMT [vehicle miles traveled].

Policy CIRC-4.1      Encourage the safer and more widespread use of nearly zero-emission modes, such as walking and biking, and lower emission modes like transit, to reduce GHG emissions.

Policy CIRC-4.2      Promote non-motorized transportation to reduce exposure to local air pollution, thereby reducing risks of respiratory diseases, other chronic illnesses, and premature death.

### Open Space/Conservation Element

Goal OSC-4      Promote sustainability and climate action planning. Promote a sustainable energy supply and implement the City's Climate Action Plan to reduce greenhouse gas emissions and improve the sustainability of actions by City government, residents, and businesses in Menlo Park. This includes promoting land use patterns that reduce the number and length of motor vehicle trips, and encouraging recycling, reduction and reuse programs.

Goal OSC-5      Ensure healthy air and water quality. Enhance and preserve air quality in accord with State and regional standards, and encourage the coordination of

total water quality management including both supply and wastewater treatment.

*Applicable Policies – Open Space/Conservation Element*

- Policy OSC-4.1      **Sustainable Approach to Land Use Planning to Reduce Resource Consumption.** Encourage, to the extent feasible, (1) a balance and match between jobs and housing, (2) higher density residential and mixed-use development to be located adjacent to commercial centers and transit corridors, and (3) retail and office areas to be located within walking and biking distance of transit or existing and proposed residential developments.
- Policy OSC-4.2      **Sustainable Building.** Promote and/or establish environmentally sustainable building practices or standards in new development that would conserve water and energy, prevent stormwater pollution, reduce landfilled waste, and reduce fossil fuel consumption from transportation and energy activities.
- Policy OSC-4.3      **Renewable Energy.** Promote the installation of renewable energy technology, such as, on residences and businesses through education, social marketing methods, establishing standards and/or providing incentives.
- Policy OSC-4.4      **Vehicles Using Alternative Fuel.** Explore the potential for installing infrastructure for vehicles that use alternative fuel, such as electric plug in recharging stations.
- Policy OSC-4.5      **Energy Standards in Residential and Commercial Construction.** Encourage projects to achieve a high level of energy conservation exceeding standards set forth in the California Energy Code for Residential and Commercial development.
- Policy OSC-4.6      **Waste Reduction Target.** Strive to meet the California State Integrated Waste Management Board per person target of waste generation per person per day through their source reduction, reuse, and recycling programs.
- Policy OSC-4.7      **Waste Management Collaboration.** Continue to support and participate in efforts such as the South Bayside Waste Management Authority, which provides waste reduction, recycling, and solid waste programs and solutions.
- Policy OSC-4.8      **Waste Diversion.** Develop and implement a zero waste policy, or implement standards, incentives, or other programs that would lead the community towards a zero waste goal.
- Policy OSC-4.9      **Climate Action Planning.** Undertake annual review and updates, as needed, to the City’s Climate Action Plan (CAP).

Policy OSC-4.10      **Energy Upgrade California.** Consider actively marketing and providing additional incentives for residents and businesses

Policy OSC-5.3      **Water Conservation.** Encourage water-conserving practices in businesses, homes and institutions.

### City of Menlo Park 2030 Climate Action Plan

The City of Menlo Park adopted the 2030 Climate Action Plan (CAP) on July 2020 and amended it on April 20,2021.<sup>40</sup> The CAP aims to reduce emissions 90% by 2030 relative to 2005 levels. The City has a goal of being a zero carbon city by 2030.

### ConnectMenlo Environmental Impact Report (EIR) and City of Menlo Park Housing Element Update (HEU) Draft Subsequent Environmental Impact Report (SEIR)

As described above, in January 2023, the City of Menlo Park certified the HEU SEIR, which updates and supplements the analysis in the ConnectMenlo EIR<sup>41</sup>. The HEU amends the City’s General Plan to provide goals, policies, and implementing programs to address housing needs citywide.

The ConnectMenlo EIR determined implementation of ConnectMenlo would result in a substantial increase in GHG emissions by the horizon year of 2040 and would not achieve the 2040 efficiency target, pursuant to EO S-03-05, resulting in a significant and unavoidable impact even with mitigation incorporated. The HEU SEIR disclosed that the HEU would comply with two of the four BAAQMD thresholds for impacts that are less than significant (i.e., all development under the HEU would not result in any wasteful, inefficient, or unnecessary energy usage and would result in VMT that is 15 percent below the citywide average). The HEU SEIR also disclosed that since the City’s Reach Code allows exceptions to the no natural gas standard and could not ensure compliance with Tier 2 CALGreen requirements for EV infrastructure, the implementation of the HEU could result in a significant GHG impact. With the implementation of HEU SEIR Mitigation Measures GHG-1a and GHG-1b, the HEU SEIR concluded that GHG impacts associated with future development would be reduced to less than significant.

The HEU SEIR identified the following greenhouse gas impacts and mitigation measures:

**Impact GHG-1:**      Implementation of the HEU would not generate greenhouse gas emissions, either directly or indirectly, that would have a significant impact on the environment. (*Less than Significant Impact, with Mitigation*)

**Mitigation Measure GHG-1a: Enforce No Natural Gas Requirement.**  
Subsequent housing development projects proposed under the HEU shall

---

<sup>40</sup> City of Menlo Park Climate Action Plan, URL: <https://menlopark.gov/Government/Departments/City-Managers-Office/Sustainability/Climate-Action-Plan>

<sup>41</sup> City of Menlo Park, URL: <https://menlopark.gov/files/sharedassets/public/v/1/community-development/documents/projects/housing-element-update/menlo-park-housing-element-update-draft-seir.pdf>

not be eligible for exceptions for the “all electric” requirement in the City’s Reach Codes.

**Mitigation Measure GHG-1b: Enforce EV Charging Requirements in CALGreen Tier 2.** Subsequent housing development projects proposed under the HEU shall comply with EV charging requirements in the most recently adopted version of CALGreen Tier 2 at the time that a building permit application is filed.

**Impact GHG-2:** Implementation of the HEU would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases. (*Less than Significant Impact, with Mitigation*)

**Mitigation: Implement Mitigation Measures GHG-1a and GHG-1b.**

#### BAAQMD GHG Significance Thresholds

As noted in the HEU SEIR, on April 20, 2022, BAAQMD adopted new project-level thresholds of significance for operational GHG emissions from land use projects for projects beginning the CEQA process. The current thresholds of significance are:

- A. Projects must include, at a minimum, the following project design elements:
  - a. Buildings
    - i. The project will not include natural gas appliances or natural gas plumbing (in both residential and non-residential development).
    - ii. The project will not result in any wasteful, inefficient, or unnecessary energy usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the State CEQA Guidelines.
  - b. Transportation
    - i. Achieve a reduction in project-generated vehicle miles traveled (VMT) below the regional average consistent with the current version of the California Climate Change Scoping Plan (currently 15 percent) or meet a locally adopted Senate Bill 743 VMT target, reflecting the recommendations provided in the Governor’s Office of Planning and Research’s Technical Advisory on Evaluating Transportation Impacts in CEQA:
      - 1. Residential Projects: 15 percent (16.8 percent in Petaluma) below the existing VMT per capita
      - 2. Office Projects: 15 percent (16.8 percent in Petaluma) below the existing VMT per employee
      - 3. Retail Projects: no net increase in existing VMT
    - ii. Achieve compliance with off-street electric vehicle requirements in the most recently adopted version of CALGreen Tier 2.
- B. Be consistent with a local GHG reduction strategy that meets the criteria under State CEQA Guidelines Section 15183.5(b).

New land use projects are required to meet either section A or B from the above list, not both, to be considered less than significant. Although the City adopted a 2030 Climate Action Plan, that plan is not a “qualified” climate action plan, and therefore the HEU SEIR assessment uses the BAAQMD’s Option A threshold to evaluate whether the project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. This analysis follows the same approach for Impact GHG-1.

**Impact GHG-1:      Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?**

GHG emissions associated with development of the proposed project would occur over the short-term from construction activities, consisting primarily of emissions from equipment exhaust and worker and vendor trips. There would also be long-term operational emissions associated with vehicular traffic within the project vicinity, energy and water usage, and solid waste disposal. Emissions for the proposed project are discussed below. Additionally, the HEU SEIR included measures that would apply to the project:

Mitigation Measure GHG-1a would implement a natural gas ban via the City’s Reach Codes for new residential developments.

Mitigation Measure GHG-1b would enforce compliance with CALGreen Tier 2 EV charging requirements for new residential development.

CalEEMod Modeling

CalEEMod was used to predict GHG emissions from operation of the site assuming full build-out of the project. The project land use types and size and other project-specific information were input to the model, as described above within the construction period emissions. CalEEMod output is included in *Attachment 1*.

Construction GHG Emissions

GHG emissions associated with construction were computed at 321 MT of CO<sub>2</sub>e for the total construction period. These are the emissions from on-site operation of construction equipment, vendor and hauling truck trips, and worker trips. Neither the City nor BAAQMD have an adopted threshold of significance for construction-related GHG emissions, though the California Office of Planning and Research (OPR) recommends quantifying emissions and disclosing that GHG emissions would occur during construction, even in cases where BAAQMD does not.

Operational GHG Emissions

The CalEEMod model was used to estimate daily emissions associated with operation of the fully developed site under the proposed project. For informational purposes, annual GHG emissions resulting from operation of the proposed project in Table 8 are predicted to be 362 MT of CO<sub>2</sub>e in 2027.

**Table 8. Annual Project GHG Emissions (CO<sub>2</sub>e) in Metric Tons**

Source Category	Existing Use in 2024	2027 Proposed Project
Mobile	122	295
Area	<1	2
Energy Consumption	23	36
Water Usage	2	3
Solid Waste Generation	3	26
Refrigerants	<1	<1
Total (MT CO <sub>2</sub> e/year)	150	362
Net Total (MT CO <sub>2</sub> e/year)		212

For this impact to be considered less than significant, it must be consistent with a local GHG reduction strategy (Threshold B) or meet the minimum project design elements recommended by BAAQMD (Threshold A). As noted above, Threshold A is being applied to the analysis of this project. Threshold A requires the project:

1. Avoid construction of new natural gas connections for the residential building,
  - Conforms – The project will be all electric.
2. Avoid wasteful or inefficient use of electricity,
  - Conforms – The project would meet CALGreen Building Standards Code requirements that result in energy efficient buildings. The project also is located in a job-rich area, providing an opportunity to reduce inefficient fuel use, and is at a density supportive of transit, which is an energy efficient mode of transportation compared to cars. The project also responds to a need for housing and thus its energy use is necessary to meet the need.
3. Include electric vehicle charging infrastructure that meets current Building Code CALGreen Tier 2 compliance, and
  - Conforms – the project is intending to install 15 EVSE parking spots or more, as needed to meet the CALGreen Tier 2 EV charging requirements in effect at the time of building permit submission.
4. Reduce VMT per service population by 15 percent over regional average.
  - Conforms – The project would include and implement a TDM plan that would reduce vehicle trips by more than 35 percent. This TDM plan would provide at least a 27 percent reduction in VMT per capita to meet a 15 percent reduction from the regional average per capita VMT.<sup>42</sup>

Based on the above analysis, the project would not make a cumulatively considerable contribution to significant cumulative climate change impacts. Compared to the environmental effects related to GHG emissions analyzed in the ConnectMenlo EIR and HEU SEIR, the project has none of the following: (1) peculiar effects, (2) effects not analyzed as significant in the analysis on the General Plan as updated by the HEU, (3) new potentially significant off-site impacts or cumulative impacts,

<sup>42</sup> File: *Haven Ave Residential TIA\_Traffic Volumes\_VMT (5-2-24).xlsx*

or (4) more severe adverse impacts than discussed in the ConnectMenlo EIR as updated by the HEU SEIR.

**Impact GHG-2: Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?**

The ConnectMenlo EIR disclosed that development under ConnectMenlo would be consistent with Plan Bay Area 2040 and the City’s CAP (i.e., the 2015 CAP Update) and implement ConnectMenlo EIR Mitigation Measure GHG-1 that requires the City update its CAP prior to January 1, 2020 to address the GHG reduction goals and targets to comply with EO B-30-15 and EO S-03-05. Pursuant to ConnectMenlo EIR Mitigation Measure GHG-1, the City updated its CAP. The HEU SEIR concluded that with the implementation of HEU SEIR Mitigation Measures GHG-1a and GHG-1b, the HEU would not conflict with the CARB’s 2017 Scoping Plan, Plan Bay Area 2040, and the City’s CAP.

The project is consistent with ConnectMenlo and HEU and would comply with HEU Mitigation Measures GHG-1a and GHG-1b. Because the Scoping Plan and Plan Bay Area have been updated, and to show consistency with the CAP, a project-level consistency analysis is provided.

**Consistency with the 2022 Scoping Plan**

The 2022 Scoping Plan reflects the 2030 target of a 40 percent reduction below 1990 levels codified by SB 32, and the 2045 target of carbon neutrality established by EO B-55-18. Appendix D to the 2022 Scoping Plan recommends three potential ways for determining whether a local project would be in alignment with State climate goals.

First, Appendix D “strongly recommends” that local governments adopt a local CAP complies with CEQA requirements. Consistency with a locally adopted CAP would be evidence of consistency with State-wide goals to reduce GHG emissions. Table 10 contains the analysis of the project’s consistency with the City’s CAP, concluding that the project would be consistent. Accordingly, the project also would be in alignment with the Scoping Plan.

Second, CARB also identified residential and mixed-use project attributes that would “clearly” cause the project to be consistent with the State’s climate strategy (CARB 2022). Per the Scoping Plan, empirical evidence shows that residential development projects that are consistent with these project attributes to reduce GHG emissions will accommodate growth in a manner that aligns with the GHG and equity goals of SB 32. Additionally, consistency with the project attributes will ensure that projects are: (1) addressing the largest sources of their operational emissions, (2) are in alignment with the priority areas defined for Local Climate Action (see Table 9), and (3) are in alignment with the State’s climate goals. The attributes and the project’s consistency with them are in Table 9. As shown in Table 9, the project is consistent with most, but not all, of the project attributes identified by the 2022 Scoping Plan that would clearly cause a project to be consistent with State climate goals. According to the 2022 Scoping Plan, these attributes are a guide to determine residential projects that are clearly consistent with the State’s climate strategy for CEQA purposes and are not necessarily required. The Scoping Plan notes that even projects with some (but not all) of these attributes may well be consistent with the State’s climate strategy, though they will likely need to provide further evidence to demonstrate consistency. The project has

demonstrated such consistency by showing it is consistent with the City’s 2030 CAP and BAAQMD’s thresholds.

Third, Appendix D states that a project can show alignment with State climate goals by showing that it would meet a local air quality management agency’s adopted GHG threshold. As discussed above, the project is consistent with the BAAQMD’s GHG threshold.

**Table 9. Project Consistency with 2022 Scoping Plan Climate Change Guidance**

Project Attributes	Project Consistency
At least 20 percent of the units are affordable to lower-income residents <sup>a, b</sup>	<i>Potentially inconsistent.</i> The project proposes 112 residential units with 14 Below Market Rate (BMR) units consisting of 10 very low-income units and 4 moderate-income units. These 14 units comprise approximately 21 percent of the base units before accounting for the bonus provided by Density Bonus Law, but only 12.5 percent of the total units. Nevertheless, most of the BMR units would be for very-low rather than low-income households and the project has demonstrated consistency with the Scoping Plan by showing that it is consistent with the City’s 2030 CAP and BAAQMD’s GHG threshold.
Result in no net loss of existing affordable units	<i>Consistent.</i> The proposed project would include demolition of an existing commercial building. There are no affordable housing units currently within the project site and no affordable housing units would be lost as a result of the project.
Utilize existing infill sites that are surrounded by urban uses, and reuse or redevelop previously developed, underutilized land presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer) <sup>c</sup>	<i>Consistent.</i> The project involves redevelopment of an existing urban, developed area. The project site is served by existing utilities, streets, bike lanes, water, sewer, and a bus stop with service by the Menlo Park Shuttle Service and the SamTrans bus service.
Include transit-supportive densities (minimum of 20 residential dwelling units/acre <sup>d</sup> ), or are in proximity to existing transit (within ½ mile), <sup>e</sup> or satisfy more detailed and stringent criteria specified in the region’s Sustainable Communities Strategy (SCS), for “SCS consistency” that would go further to reduce emissions	<i>Consistent.</i> The project site is within the Residential Mixed-Use Bonus (R-MU-B) zoning district which is subject to the requirements of the Menlo Park Municipal Code Chapter 16.45, R-MU Residential Mixed-Use District. The project proposes a density of 169.7 dwelling units per acre, which far exceeds 20 dwelling units per acre. Further, the project site is served by the Menlo Park Shuttle Service and the SamTrans bus service, which provide local and regional public transit within the project area.

**Table 9. Project Consistency with 2022 Scoping Plan Climate Change Guidance**

Project Attributes	Project Consistency
Do not result in the loss or conversion of the State’s natural and working lands	<i>Consistent.</i> The project involves redevelopment of an existing urban, developed area and implementation of project would not result in land use conversion that would reduce the State’s natural and working lands.
Use all electric appliances, without any natural gas connections, and would not use propane or other fossil fuels for space heating, water heating, or indoor cooking <sup>f,g</sup>	<i>Consistent.</i> The project consists of new development and would be all-electric, consistent with the Menlo Park Municipal Code.
Provide EV charging infrastructure at least in accordance with CALGreen Tier 2 standards <sup>h</sup>	<i>Consistent.</i> The project would provide EV charging in compliance with the Menlo Park Municipal Code and CALGreen Tier 2 requirements.
Relax parking requirements <sup>i</sup> by: <ul style="list-style-type: none"> <li>• Eliminating parking requirements or including maximum allowable parking ratios.</li> <li>• Providing residential parking supply at a ratio of &lt;1 parking space per unit.</li> <li>• Unbundling residential parking costs from costs to rent or lease.</li> </ul>	<i>Consistent.</i> The project provides unbundled parking at a ratio of less than one parking spot per unit.

Plan Bay Area 2050

MTC and ABAG’s Plan Bay Area 2050 is a regional growth-management strategic plan that focuses on reducing GHG emissions associated with transportation, pursuant to SB 375. Plan Bay Area 2050 incorporates local land use projections and circulation networks as identified in city and county general plans and presents 35 strategies across the elements of housing, the economy, transportation and the environment. These strategies identify public policies and investments that can be implemented in the Bay Area at the city, county, regional, and/or state level over the next 30 years.

Typically, a project would be consistent with the Regional Transportation Plan (RTP)/SCS if the project does not exceed the underlying growth assumptions within the RTP/SCS. The project would provide a minor amount of growth, but is consistent with the bonus-level residential capacity permitted by the project site’s General Plan land use designation and zoning, after accounting for Density Bonus Law, and is within the housing units ABAG projected the City would need. As such, the project is within the population growth projections in the City and the ABAG region.

The project’s consistency with Plan Bay Area 2050 is demonstrated via the project’s land use characteristics and features that would reduce vehicular trips and VMT. The project site is designated as Mixed-Use Residential on the ConnectMenlo land use designation map and is within the City’s Residential Mixed-Use Bonus (R-MU-B) zoning district. The project proposes to develop 112 rental apartments, consistent with these designations and Density Bonus Law. Because the project would result in the development of uses and growth that are consistent with the City’s General Plan and zoning designations it is concluded to have been anticipated in the MTC and ABAG’s Plan Bay Area 2050 growth projections. In addition, according to the VMT analysis prepared for the project, the estimated per capita VMT for the project at buildout and with implementation of the proposed TDM Plan is estimated to be at least 15 percent less than the per capita VMT for the transportation analysis zone in which the project site is located. Therefore, the project would not exceed the regional (City) VMT per service population estimates and the project is anticipated to be consistent with Plan Bay Area 2050 strategies.

Based on the analysis above, the project would not conflict with the strategies of Plan Bay Area 2050.

### 2030 CAP

The City of Menlo Park 2030 CAP identifies a variety of actions, which will help the City make progress towards achieving the CAP goals with respect to conservation of energy, reducing GHG emissions associated with transportation, and adapting to sea level rise. Notably, the six actions detailed below were selected from over 76 actions included in the City’s prior Bold and Moderate Plans, because they offered the most benefit for reductions in GHG emissions per cost. The list of actions presented within the 2030 CAP are outlined in Table 10, along with analysis of the project’s consistency with them.

**Table 10. Project Consistency with the City of Menlo Park CAP**

CAP Actions	Project Consistency
Action 1: Explore policy/program options to convert 95 percent of existing buildings to all-electric by 2030.	<i>Not Applicable.</i> The project consists of new residential development and would be built all-electric consistent with the Menlo Park Municipal Code.
Action 2: Set citywide goal for increasing EVs and decreasing gasoline sales.	<i>Consistent.</i> The project would provide EV charging in compliance with the Menlo Park Municipal Code Section 12.18.050 and CALGreen Tier 2 requirements.

**Table 10. Project Consistency with the City of Menlo Park CAP**

CAP Actions	Project Consistency
Action 3: Expand access to EV charging for multi-family and commercial properties.	<i>Consistent.</i> The project would provide EV charging in compliance with the Menlo Park Municipal Code Section 12.18.050 and CALGreen Tier 2 requirements.
Action 4: Reduce VMT by 25 percent or an amount recommended by the Complete Streets Commission.	<p><i>Consistent.</i> The 25 percent VMT reduction goal is intended to be applied citywide, rather than as a mandate for each individual project to achieve a 25 percent reduction in VMT. This action is described in the CAP as being implemented with a two-pronged approach that includes encouraging higher density development, especially housing, near transit and making the city easier to navigate without a car by implementing the Transportation Master Plan.</p> <p>The project proposes higher density housing through bonus-level development, as permitted by the site’s zoning designation and Density Bonus Law. Transit services are available proximate to and within walking distance of the project site. The project also incorporates pedestrian and bicycle facilities to support non-motor vehicle mobility. The project also places housing in a job-rich area, which promotes the ability of workers to live near their jobs and reduce commute miles.</p> <p>The proposed project would implement a TDM Plan that would reduce the project-specific VMT per capita by 60 percent compared to the existing VMT per capita.</p>
Action 5: Eliminate the use of fossil fuels from municipal operations.	<i>Not Applicable.</i> Applies to City facilities. However, until all municipal operations have eliminated use of fossil fuels, the project’s water conservation measures would contribute to reduced fossil fuel consumption associated with operation of Menlo Park Municipal Water facilities.
Action 6: Develop a climate adaptation plan to protect the community from sea level rise and flooding.	<i>Not Applicable.</i> This action describes a City initiative. However, as part of this Action, the City has adopted a requirement that all new residential units in areas subject to sea level rise must be raised 2 feet above the 5-foot Federal Emergency Management Agency (FEMA) floodplain. The proposed project design is consistent with this requirement.
<b>Source:</b> City of Menlo Park. <i>2030 Climate Action Plan</i> . June 2020 (amended April 2021).	

For these reasons, the project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs, including the 2022 Scoping Plan, Plan Bay Area 2050, and the 2030 CAP.

### **Conclusion GHG-2**

The project is consistent and would not interfere with plans adopted to reduce GHG emissions. Therefore, the project would make a less than cumulatively considerable contribution to significant cumulative climate change impacts. The project is consistent with the ConnectMenlo EIR, as modified by the HEU SEIR. Compared to the environmental effects related to GHG emissions analyzed in the ConnectMenlo EIR and HEU SEIR, the project has none of the following: (1) peculiar effects, (2) effects not analyzed as significant in the analysis on the General Plan as updated by the HEU, (3) new potentially significant off-site impacts or cumulative impacts, or (4) more severe adverse impacts than discussed in the ConnectMenlo EIR as updated by the HEU SEIR.

## **Supporting Documentation**

*Attachment 1* includes the CalEEMod output for project construction and operational criteria air pollutant emissions. Also included are any modeling assumptions.

*Attachment 2* is the health risk assessment. AERMOD dispersion modeling files for these assessments, which are quite voluminous, are available upon request and would be provided in digital format.

*Attachment 3* includes the cumulative health risk calculations, modeling results, and health risk calculations from sources affecting the MEI and on-site receptors.

Annual	—	—	—	—	—	—	—	—	—
Apartments Mid Rise	0.14	0.10	< 0.005	0.31	0.31	< 0.005	0.08	0.08	295
Unenclosed Parking with Elevator	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Total	0.14	0.10	< 0.005	0.31	0.31	< 0.005	0.08	0.08	295

## 4.2. Energy

### 4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—

Apartments Mid Rise	—	—	—	—	—	—	—	—	188
Unenclosed Parking with Elevator	—	—	—	—	—	—	—	—	27.7
Total	—	—	—	—	—	—	—	—	215
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
Apartments Mid Rise	—	—	—	—	—	—	—	—	188
Unenclosed Parking with Elevator	—	—	—	—	—	—	—	—	27.7
Total	—	—	—	—	—	—	—	—	215
Annual	—	—	—	—	—	—	—	—	—
Apartments Mid Rise	—	—	—	—	—	—	—	—	31.0
Unenclosed Parking with Elevator	—	—	—	—	—	—	—	—	4.59
Total	—	—	—	—	—	—	—	—	35.6

#### 4.2.2. Electricity Emissions By Land Use - Mitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
Apartments Mid Rise	—	—	—	—	—	—	—	—	188
Unenclosed Parking with Elevator	—	—	—	—	—	—	—	—	27.7
Total	—	—	—	—	—	—	—	—	215

Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
Apartments Mid Rise	—	—	—	—	—	—	—	—	188
Unenclosed Parking with Elevator	—	—	—	—	—	—	—	—	27.7
Total	—	—	—	—	—	—	—	—	215
Annual	—	—	—	—	—	—	—	—	—
Apartments Mid Rise	—	—	—	—	—	—	—	—	31.0
Unenclosed Parking with Elevator	—	—	—	—	—	—	—	—	4.59
Total	—	—	—	—	—	—	—	—	35.6

#### 4.2.3. Natural Gas Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%

## 5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	238,507	79,502	0.00	0.00	—

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	2,000	—
Site Preparation	—	—	17.5	0.00	—
Grading	—	2,000	3.34	0.00	—
Paving	0.00	0.00	0.00	0.00	0.00

### 5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%

### 5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
Unenclosed Parking with Elevator	0.00	100%

### 5.8. Construction Electricity Consumption and Emissions Factors

#### kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	100.0	0.03	< 0.005
2024	0.00	100.0	0.03	< 0.005
2026	0.00	100.0	0.03	< 0.005

### 5.9. Operational Mobile Sources

#### 5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Apartments Mid Rise	332	299	249	114,990	2,595	2,341	1,947	900,238
Unenclosed Parking with Elevator	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00

## 5.9.2. Mitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Apartments Mid Rise	332	299	249	114,990	2,595	2,341	1,947	900,238
Unenclosed Parking with Elevator	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00

## 5.10. Operational Area Sources

### 5.10.1. Hearths

#### 5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Apartments Mid Rise	—
Wood Fireplaces	0
Gas Fireplaces	0
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	0
Conventional Wood Stoves	0
Catalytic Wood Stoves	0
Non-Catalytic Wood Stoves	0
Pellet Wood Stoves	0

### 5.10.1.2. Mitigated

Hearth Type	Unmitigated (number)
Apartments Mid Rise	—
Wood Fireplaces	0
Gas Fireplaces	0
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	0
Conventional Wood Stoves	0
Catalytic Wood Stoves	0
Non-Catalytic Wood Stoves	0
Pellet Wood Stoves	0

### 5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
238506.525	79,502	0.00	0.00	—

### 5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	180

### 5.10.4. Landscape Equipment - Mitigated

Season	Unit	Value
Snow Days	day/yr	0.00

Summer Days	day/yr	180
-------------	--------	-----

### 5.11. Operational Energy Consumption

#### 5.11.1. Unmitigated

##### Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Apartments Mid Rise	671,067	100.0	0.0330	0.0040	0.00
Unenclosed Parking with Elevator	99,267	100.0	0.0330	0.0040	0.00

#### 5.11.2. Mitigated

##### Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Apartments Mid Rise	671,067	100.0	0.0330	0.0040	0.00
Unenclosed Parking with Elevator	99,267	100.0	0.0330	0.0040	0.00

### 5.12. Operational Water and Wastewater Consumption

#### 5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Apartments Mid Rise	3,590,374	0.00
Unenclosed Parking with Elevator	0.00	0.00

#### 5.12.2. Mitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
----------	-------------------------	--------------------------

Apartments Mid Rise	3,590,374	0.00
Unenclosed Parking with Elevator	0.00	0.00

## 5.13. Operational Waste Generation

### 5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Apartments Mid Rise	82.9	—
Unenclosed Parking with Elevator	0.00	—

### 5.13.2. Mitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Apartments Mid Rise	82.9	—
Unenclosed Parking with Elevator	0.00	—

## 5.14. Operational Refrigeration and Air Conditioning Equipment

### 5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Apartments Mid Rise	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Apartments Mid Rise	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

### 5.14.2. Mitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
---------------	----------------	-------------	-----	---------------	----------------------	-------------------	----------------

Apartments Mid Rise	Average room A/C & Other residential A/C and heat pumps	R-410A	2,088	< 0.005	2.50	2.50	10.0
Apartments Mid Rise	Household refrigerators and/or freezers	R-134a	1,430	0.12	0.60	0.00	1.00

## 5.15. Operational Off-Road Equipment

### 5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

### 5.15.2. Mitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
----------------	-----------	-------------	----------------	---------------	------------	-------------

## 5.16. Stationary Sources

### 5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
----------------	-----------	----------------	---------------	----------------	------------	-------------

### 5.16.2. Process Boilers

Equipment Type	Fuel Type	Number	Boiler Rating (MMBtu/hr)	Daily Heat Input (MMBtu/day)	Annual Heat Input (MMBtu/yr)
----------------	-----------	--------	--------------------------	------------------------------	------------------------------

## 5.17. User Defined

Equipment Type	Fuel Type
----------------	-----------

## 5.18. Vegetation

### 5.18.1. Land Use Change

#### 5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

#### 5.18.1.2. Mitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

### 5.18.1. Biomass Cover Type

#### 5.18.1.1. Unmitigated

### 5.18.2. Sequestration

#### 5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

#### 5.18.2.2. Mitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

## 6. Climate Risk Detailed Report

## 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	11.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	10.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about  $\frac{3}{4}$  an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

## 6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

### 6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

### 6.4. Climate Risk Reduction Measures

## 7. Health and Equity Details

### 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	10.6

AQ-PM	16.4
AQ-DPM	87.6
Drinking Water	29.1
Lead Risk Housing	96.6
Pesticides	0.00
Toxic Releases	25.1
Traffic	94.4
Effect Indicators	—
CleanUp Sites	82.2
Groundwater	71.7
Haz Waste Facilities/Generators	91.9
Impaired Water Bodies	0.00
Solid Waste	67.4
Sensitive Population	—
Asthma	23.9
Cardio-vascular	10.4
Low Birth Weights	45.3
Socioeconomic Factor Indicators	—
Education	78.5
Housing	86.1
Linguistic	87.2
Poverty	56.8
Unemployment	36.4

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
-----------	---------------------------------

Economic	—
Above Poverty	42.61516746
Employed	87.75824458
Median HI	40.5363788
Education	—
Bachelor's or higher	33.61991531
High school enrollment	100
Preschool enrollment	68.52303349
Transportation	—
Auto Access	16.95110997

2016 Voting	43.5

### 7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	60.0
Healthy Places Index Score for Project Location (b)	52.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

### 7.4. Health & Equity Measures

No Health & Equity Measures selected.

### 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

## 8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	Menlo Park's default clean energy provider is Peninsula Clean Energy.
Land Use	Total lot acreage, square footage, number of units, and number of parking spaces provided by filled out construction worksheet.
Construction: Construction Phases	Provided by filled out construction worksheet (dates are located in Column C under HP.)
Construction: Off-Road Equipment	Provided by filled out construction worksheet.
Construction: Trips and VMT	Demolition = 1,200 tons of pavement demo (17.143 trips/day), Building Construction = 500 concrete truck round trips (5 trips/day), Paving = 130-cy asphalt (2.08 trips/day).
Operations: Hearths	No hearths.
Operations: Energy Use	Project design is all-electric. Confirmed no natural gas. Convert natural gas to electricity.
Operations: Water and Waste Water	Wastewater treatment 100% aerobic - no septic tanks or lagoons.
Operations: Vehicle Data	Provided trip gen with reduction adjustments.

## 2. Emissions Summary - HRA

### 2.2 Construction Emissions by Year, Unmitigated

  - 4.3. Area Emissions by Source

4.3.1. Unmitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

## 5. Activity Data

### 5.9. Operational Mobile Sources

#### 5.9.1. Unmitigated

### 5.10. Operational Area Sources

#### 5.10.1. Hearths

##### 5.10.1.1. Unmitigated

#### 5.10.2. Architectural Coatings

#### 5.10.3. Landscape Equipment

### 5.11. Operational Energy Consumption

#### 5.11.1. Unmitigated

### 5.12. Operational Water and Wastewater Consumption

#### 5.12.1. Unmitigated

### 5.13. Operational Waste Generation

#### 5.13.1. Unmitigated

### 5.14. Operational Refrigeration and Air Conditioning Equipment

#### 5.14.1. Unmitigated

### 5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

## 7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

## 8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	23-152 3705 Haven Avenue, Menlo Park Existing
Operational Year	2024
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	4.20
Precipitation (days)	18.8
Location	3705 Haven Ave, Menlo Park, CA 94025, USA
County	San Mateo
City	Menlo Park
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1209
EDFZ	1
Electric Utility	Peninsula Clean Energy
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.22

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
General Office Building	10.4	1000sqft	0.24	10,355	0.00	—	—	—

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

## 2. Emissions Summary

### 2.4. Operations Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
Unmit.	0.68	0.37	0.01	0.91	0.92	0.01	0.23	0.24	1,185

## 4. Operations Emissions Details

### 4.1. Mobile Emissions by Land Use

#### 4.1.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
General Office Building	0.35	0.30	0.01	0.91	0.91	0.01	0.23	0.24	1,015
Total	0.35	0.30	0.01	0.91	0.91	0.01	0.23	0.24	1,015
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
General Office Building	0.35	0.35	0.01	0.91	0.91	0.01	0.23	0.24	967
Total	0.35	0.35	0.01	0.91	0.91	0.01	0.23	0.24	967
Annual	—	—	—	—	—	—	—	—	—
General Office Building	0.05	0.05	< 0.005	0.12	0.12	< 0.005	0.03	0.03	122
Total	0.05	0.05	< 0.005	0.12	0.12	< 0.005	0.03	0.03	122

### 4.2. Energy

#### 4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—

General Office Building	—	—	—	—	—	—	—	—	61.3
Total	—	—	—	—	—	—	—	—	61.3
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	61.3
Total	—	—	—	—	—	—	—	—	61.3
Annual	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	10.1
Total	—	—	—	—	—	—	—	—	10.1

#### 4.2.3. Natural Gas Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
General Office Building	< 0.005	0.07	0.01	—	0.01	0.01	—	0.01	79.0
Total	< 0.005	0.07	0.01	—	0.01	0.01	—	0.01	79.0
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
General Office Building	< 0.005	0.07	0.01	—	0.01	0.01	—	0.01	79.0
Total	< 0.005	0.07	0.01	—	0.01	0.01	—	0.01	79.0
Annual	—	—	—	—	—	—	—	—	—
General Office Building	< 0.005	0.01	< 0.005	—	< 0.005	< 0.005	—	< 0.005	13.1
Total	< 0.005	0.01	< 0.005	—	< 0.005	< 0.005	—	< 0.005	13.1

### 4.3. Area Emissions by Source

#### 4.3.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Source	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
Consumer Products	0.22	—	—	—	—	—	—	—	—
Architectural Coatings	0.03	—	—	—	—	—	—	—	—
Landscape Equipment	0.07	< 0.005	< 0.005	—	< 0.005	< 0.005	—	< 0.005	1.86
Total	0.33	< 0.005	< 0.005	—	< 0.005	< 0.005	—	< 0.005	1.86
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
Consumer Products	0.22	—	—	—	—	—	—	—	—
Architectural Coatings	0.03	—	—	—	—	—	—	—	—
Total	0.25	—	—	—	—	—	—	—	—
Annual	—	—	—	—	—	—	—	—	—
Consumer Products	0.04	—	—	—	—	—	—	—	—
Architectural Coatings	0.01	—	—	—	—	—	—	—	—
Landscape Equipment	0.01	< 0.005	< 0.005	—	< 0.005	< 0.005	—	< 0.005	0.15
Total	0.05	< 0.005	< 0.005	—	< 0.005	< 0.005	—	< 0.005	0.15

### 4.4. Water Emissions by Land Use

## 4.4.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	10.2
Total	—	—	—	—	—	—	—	—	10.2
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	10.2
Total	—	—	—	—	—	—	—	—	10.2
Annual	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	1.68
Total	—	—	—	—	—	—	—	—	1.68

## 4.5. Waste Emissions by Land Use

## 4.5.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	18.2
Total	—	—	—	—	—	—	—	—	18.2
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	18.2

Total	—	—	—	—	—	—	—	—	18.2
Annual	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	3.01
Total	—	—	—	—	—	—	—	—	3.01

## 4.6. Refrigerant Emissions by Land Use

### 4.6.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	0.03
Total	—	—	—	—	—	—	—	—	0.03
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	0.03
Total	—	—	—	—	—	—	—	—	0.03
Annual	—	—	—	—	—	—	—	—	—
General Office Building	—	—	—	—	—	—	—	—	< 0.005
Total	—	—	—	—	—	—	—	—	< 0.005

## 4.7. Offroad Emissions By Equipment Type

### 4.7.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Equipment Type	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
Total	—	—	—	—	—	—	—	—	—
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—
Total	—	—	—	—	—	—	—	—	—
Annual	—	—	—	—	—	—	—	—	—
Total	—	—	—	—	—	—	—	—	—

#### 4.8. Stationary Emissions By Equipment Type

##### 4.8.1. Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Equipment Type	ROG	NOx	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—
Total	—	—	—	—	—	—	—	—	—
Daily, Winter (Max)	—	—	—	—	—	—	—	—	—

## 6. Climate Risk Detailed Report

### 6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	11.8	annual days of extreme heat
Extreme Precipitation	4.05	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	10.7	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento–San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

### 6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
----------------	----------------	-------------------	-------------------------	---------------------

Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

### 6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

## 6.4. Climate Risk Reduction Measures

# 7. Health and Equity Details

## 7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	10.6
AQ-PM	16.4
AQ-DPM	87.6
Drinking Water	29.1
Lead Risk Housing	96.6
Pesticides	0.00
Toxic Releases	25.1
Traffic	94.4
Effect Indicators	—
CleanUp Sites	82.2
Groundwater	71.7
Haz Waste Facilities/Generators	91.9
Impaired Water Bodies	0.00
Solid Waste	67.4
Sensitive Population	—
Asthma	23.9
Cardio-vascular	10.4
Low Birth Weights	45.3
Socioeconomic Factor Indicators	—

Education	78.5
Housing	86.1
Linguistic	87.2
Poverty	56.8
Unemployment	36.4

## 7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	42.61516746
Employed	87.75824458
Median HI	40.5363788
Education	—
Bachelor's or higher	33.61991531
High school enrollment	100
Preschool enrollment	68.52303349
Transportation	—
Auto Access	16.95110997
Active commuting	77.53111767
Social	—
2-parent households	34.64647761
Voting	49.83959964
Neighborhood	—

2016 Voting	43.5

### 7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	60.0
Healthy Places Index Score for Project Location (b)	52.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No

Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

## 7.4. Health & Equity Measures

No Health & Equity Measures selected.

## 7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

## 7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

# 8. User Changes to Default Data

Screen	Justification
Characteristics: Utility Information	Menlo Park default clean energy provider is Peninsula Clean Energy.
Operations: Vehicle Data	Provided trip gen.
Operations: Water and Waste Water	Wastewater treatment 100% aerobic - no septic tanks or lagoons.

30 Year Residential Exposure**

**Cancer Risk Calculation Method**

Cancer Risk (per million) = CPF x Inhalation Dose x ASF x ED/AT x FAH x 1.0E6

Where: CPF = Cancer potency factor (mg/kg-day)<sup>-1</sup>  
 ASF = Age sensitivity factor for specified age group  
 ED = Exposure duration (years)  
 AT = Averaging time for lifetime cancer risk (years)  
 FAH = Fraction of time spent at home (unitless)

Inhalation Dose = C<sub>air</sub> x DBR x A x (EF/365) x 10<sup>-6</sup>

Where: C<sub>air</sub> = concentration in air (µg/m<sup>3</sup>)  
 DBR = daily breathing rate (L/kg body weight-day)  
 A = Inhalation absorption factor  
 EF = Exposure frequency (days/year)  
 10<sup>-6</sup> = Conversion factor

**3705 Haven Ave, Menlo Park, CA - Marsh Road Traffic Cancer Risk  
Impacts at Project MEIs - 7.6 & 1.5 meter receptor height  
30 Year Residential Exposure**

**Cancer Risk Calculation Method**

Cancer Risk (per million) = CPF x Inhalation Dose x ASF x ED/AT x FAH x 1.0E6

Where: CPF = Cancer potency factor (mg/kg-day)<sup>-1</sup>  
 ASF = Age sensitivity factor for specified age group  
 ED = Exposure duration (years)  
 AT = Averaging time for lifetime cancer risk (years)  
 FAH = Fraction of time spent at home (unitless)

Inhalation Dose = C<sub>air</sub> x DBR x A x (EF/365) x 10<sup>-6</sup>

Where: C<sub>air</sub> = concentration in air (µg/m<sup>3</sup>)  
 DBR = daily breathing rate (L/kg body weight-day)  
 A = Inhalation absorption factor  
 EF = Exposure frequency (days/year)  
 10<sup>-6</sup> = Conversion factor

**Cancer Potency Factors (mg/kg-day)<sup>-1</sup>**

**3705 Haven Ave, Menlo Park, CA - Highway 101 Traffic Cancer Risk  
Impacts at Onsite MEI - 9.1 meter receptor height  
30 Year Residential Exposure**

**Cancer Risk Calculation Method**

Cancer Risk (per million) = CPF x Inhalation Dose x ASF x ED/AT x FAH x 1.0E6

Where: CPF = Cancer potency factor (mg/kg-day)<sup>-1</sup>  
 ASF = Age sensitivity factor for specified age group  
 ED = Exposure duration (years)  
 AT = Averaging time for lifetime cancer risk (years)  
 FAH = Fraction of time spent at home (unitless)

Inhalation Dose = C<sub>air</sub> x DBR x A x (EF/365) x 10<sup>-6</sup>

Where: C<sub>air</sub> = concentration in air (µg/m<sup>3</sup>)  
 DBR = daily breathing rate (L/kg body weight-day)  
 A = Inhalation absorption factor  
 EF = Exposure frequency (days/year)  
 10<sup>-6</sup> = Conversion factor

**Cancer Potency Factors (mg/kg-day)<sup>-1</sup>**

Re: Tree protection for proposed apartment building at 3705 Haven Avenue, Menlo Park, CA 94025

Dear Oliver,

At your request, we have visited the property referenced above to evaluate the trees present with respect to the proposed project. The report below contains our analysis.

## **Summary**

There are 17 trees present on and adjacent to this property. Three are heritage trees, two are street trees, and the rest are non-protected. Four of the non-protected trees inventoried are stumps. All three heritage trees, which are all on this property, are recommended for removal, as they conflict with project features.

The two street trees are in good condition and should be retained and protected as detailed in the Recommendations, below. With proper protection, both are expected to survive and thrive during and after construction. No impact analysis was performed for the non-protected trees.

## Assignment and Limits of Report

We have been asked to write a report detailing impacts to trees from the proposed apartment building on this property. This report may be used by our client and other project members as needed to inform all stages of the project.

All observations were made from the ground with basic equipment. No root collar excavations or aerial inspections were performed. No project features had been staked at the time of our site visit.

## Tree Regulations

In the City of Menlo Park, native oak trees are protected at 10 inches DBH (diameter at breast height, 4.5 feet above grade), and all other trees are protected at 15 inches DBH. Street trees are protected regardless of size.

According to the Heritage Tree Ordinance Administrative Guidelines, the dollar value of replacement trees is determined as follows:

- One (1) #5 container – \$100
- One (1) #15 container – \$200
- One (1) 24-inch tree box – \$400
- One (1) 36-inch tree box – \$1,200
- One (1) 48-inch tree box – \$5,000
- One (1) 60-inch tree box – \$7,000

We highly recommend that all members of the project team familiarize themselves with the following documents guiding tree protection during construction in Menlo Park, as they are complex, and failure to follow them can result in project delays:

1. Heritage Tree Ordinance Administrative Guidelines - <https://www.menlopark.org/DocumentCenter/View/25577/Heritage-tree-ordinance-administrative-guidelines---draft>
2. Arborist Report Requirements: Large Projects - <https://www.menlopark.org/DocumentCenter/View/25468/Arborist-report-large-proj>

[ect-requirements#:~:text=The%20Arborist%20Report%20shall%20include,proposed%20for%20removal%20of%20heavy](#)

3. Tree Protection Specifications -

<https://www.menlopark.org/DocumentCenter/View/90/Tree-Protection-Specifications>

## Observations

### *Trees*

There are 17 trees on and adjacent to this property (Images 1-17, below). Five are Callery pears (*Pyrus calleryana*), four are stumps, two are coast live oaks (*Quercus agrifolia*), and the remaining six are of various species.

Protected statuses - only trees #8, 14, and 15 are Heritage Trees. Trees #9 and 13 are street trees. The rest are non-protected. Trees #6 and 17 overhang the property from adjacent properties.

Health - Most of the trees present are in reasonably good health, with the exception of the stumps.

Structural issues - eucalyptus #8 has poor structure resulting from utility clearance, and also appears to have been topped in the past beyond what is usually done for utilities. All other trees present have reasonably strong branching architecture.

### OTHER NOTES

#### *Current Site Conditions*

This is a corner property with one existing one-story office-type commercial building. There is a landscaped area wrapping around the building on both street frontages, and a parking lot with two smaller landscaped areas wrapping around the other two sides.

There is a typical wooden fence along the western property line, and no fencing on the other three sides.

## *Project Features*

A seven-story apartment building is proposed, to occupy most of the site. Parking will be on the first two floors. There appears to be landscaping proposed on the north, west, and south sides of the building. External bike parking areas are proposed at the southwest and southeast corners of the building.

No hardscape work is shown on the plans provided to me. Driveways and public sidewalks appear to be shown in the existing locations. A new walkway to the lobby/lounge doors will be needed on the south side toward the middle of the building. Other hardscape may also be needed.

No grading, drainage, utilities, or fencing are shown on the plans provided to me. Grading requirements appear minimal, as the site appears flat.

## *Potential Conflicts (Protected Trees Only)*

Trees #1-7, 10-12, 16, and 17 - these trees are not protected and have not, therefore, been evaluated for potential conflicts.

Trees #3 and 10-12 are stumps.

Trees #8, 14, and 15 - these trees lie within the proposed building footprint. Tree #8 is in the proposed utilities area; tree #14 is in the proposed bike parking area; and tree #15 is in the proposed lobby/lounge.

Trees #9 and 13 - these street trees are small enough that their entire TPZs<sup>1</sup> are contained within the existing park strip, which appears to be proposed for retention.

Note that all tree locations are approximate, as no survey was provided.

## **Testing and Analysis**

Tree DBHs were taken using a diameter tape measure if trunks were accessible. Multistemmed trees were measured below the point where the leaders diverge, if possible. The DBHs of trees with non-accessible trunks were estimated visually. All trees over four inches in DBH were inventoried, as well as street trees of all sizes.

---

<sup>1</sup> Tree protection zones. See Discussion, Tree Map, and Tree Table for more detail.

Vigor ratings are based on tree appearance and experiential knowledge of each species.

Tree location data was collected using a GPS smartphone application and processed in GIS software to create the maps included in this report. Due to the error inherent in GPS data collection, and due also to differences between GPS data and CAD drawings, tree locations shown on the map below are approximate.

We visited the site once, on 4/29/2022. All observations and photographs in this report were taken at that site visit.

The tree protection analysis in this report is based on the seven-page plan set titled "3705 Haven Ave, Menlo Park, CA," dated 4/11/2022, provided to us electronically by the client. No survey was provided.

## **Discussion**

### *Tree Protection Zones (TPZs)*

Tree roots grow where conditions are favorable, and their spatial arrangement is therefore unpredictable. Favorable conditions vary among species, but generally include the presence of moisture, and soft soil texture with low compaction.

Contrary to popular belief, roots of all tree species grow primarily in the top two to three feet of soil in the clay soils typical for this geographic region, with a small number of roots sometimes occurring at greater depths. Some species have taproots when young, but these almost universally disappear with age. At maturity, a tree's root system may extend out from the trunk farther than the tree is tall, and the tree maintains its upright position in much the same manner as a wine glass.

The optimal size of the area around a tree which should be protected from disturbance depends on the tree's size, species, and vigor, as shown in the following table (adapted from *Trees & Construction*, Matheny and Clark, 1998):

<b>Species tolerance</b>	<b>Tree vitality<sup>2</sup></b>	<b>Distance from trunk (feet per inch trunk diameter)</b>
Good	High	0.5
	Moderate	0.75
	Low	1
Moderate	High	0.75
	Moderate	1
	Low	1.25
Poor	High	1
	Moderate	1.25
	Low	1.5

It is important to note that some roots will almost certainly be present outside the TPZ; however, root loss outside the TPZ is unlikely to cause tree decline.

Some of the tree species present here are not evaluated in Trees & Construction. Our own evaluation of them based on our experience with the species is as follows:

<b>Species</b>	<b>Estimated tolerance</b>	<b>Reason for tolerance rating</b>
Crape myrtle	2	Performs well in most landscapes but grows relatively slowly
Zelkova	1	Disturbance tolerance unknown, so we have assigned this tree the lowest value.

### *Critical Root Zones (CRZs)*

Although any root loss inside the TPZ may cause a short-term decline in tree condition, trees can often recover adequately from a small amount of root loss in the TPZ.

Tree stability is impacted at a shorter distance from the tree trunk. For linear cuts on one side of the tree, the minimum distance typically recommended is three times the DBH, measured from the edge of the trunk (*Best Management Practices: Root Management*, Costello, Watson, and Smiley, 2017). This is called the critical root zone (CRZ), as any distance shorter than this increases a tree's likelihood of failure.

---

<sup>2</sup> Matheny & Clark uses tree age, but we feel a tree's vitality more accurately reflects its ability to handle stress.

### *Tree Appraisal Methods*

We use the trunk formula technique with discounting for condition and functional and external limitations, as detailed in the second printing of the 10th Edition of the *Guide for Plant Appraisal* (Council of Tree and Landscape Appraisers, 2019).

For palms, we use the approximate height of clear trunk (estimated visually) multiplied by the per-foot cost given in the regional plant appraisal committee species classification for California.

### **Conclusions**

Trees #1-7, 16, and 17 - these trees are not protected and have not, therefore, been evaluated for construction impacts.

Trees #3 and 10-12 are stumps.

Trees #8, 14, and 15 - these trees are incompatible with the project as proposed.

Trees #9 and 13 - minimal impacts are likely from the project as proposed.

Trees #10-12 are stumps.

Note that all tree locations are approximate, as no survey was provided.

## Recommendations

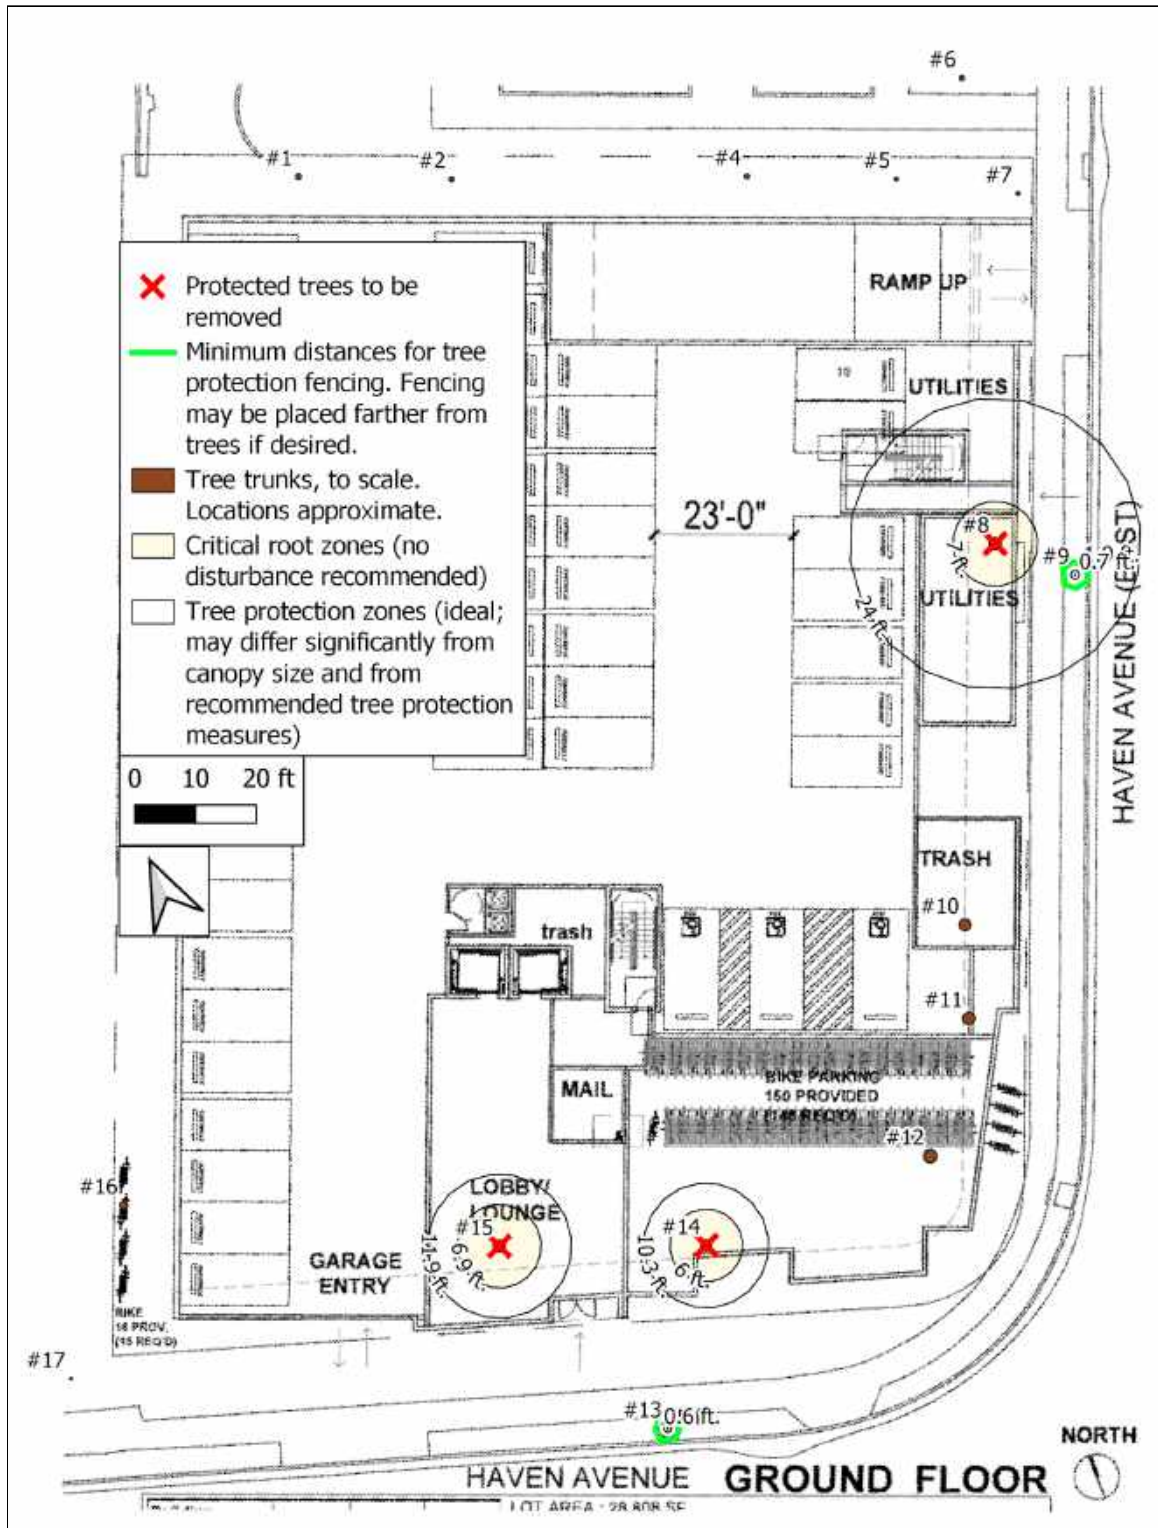

1. Remove trees #8, 14, and 15, upon receipt of a permit from the City of Menlo Park.
  - a. Unless otherwise specified by city staff, non-protected trees #1-5, 7, and 16 may be removed with no restrictions.<sup>3</sup>
2. Install tree protection fencing approximately as shown in the Tree Map, below.
  - a. Minimum distances from trunk centers are given on the Tree Map. A larger area may be protected if desired.
  - b. Where existing barriers which will be retained impede access comparably to tree protection fencing, these barriers are an acceptable substitute for tree protection fencing.
  - a. Please be aware that tree protection fencing may differ from ideal tree protection zones, and from canopy sizes.
  - c. Tree protection fencing shall comprise 6' chain link fabric mounted on 1.5" diameter metal posts driven into the ground.
  - d. Place a 6" layer of wood chips inside tree protection fencing.
  - e. Tree protection fencing shall adhere to the requirements in the document titled "Tree Protection Specifications," available at <https://www.menlopark.org/DocumentCenter/View/90/Tree-Protection-Specifications>
3. After construction is complete, install new trees or pay in-lieu fees to mitigate the removal of trees #8, 14, and 15, as specified by city staff.
  - a. The total appraised value of these trees is \$37,700.00, with individual values given in the Tree Table, below.

---

<sup>3</sup> Note that trees #6 and 17 are on neighboring properties.

## Terms of Assignment

The following terms and conditions apply to all oral and written reports and correspondence pertaining to the consultations, inspections, and activities of Aesculus Arboricultural Consulting:

1. All property lines and ownership of property, trees, and landscape plants and fixtures are assumed to be accurate and reliable as presented and described to the consultant, either orally or in writing. The consultant assumes no responsibility for verification of ownership or locations of property lines, or for results of any actions or recommendations based on inaccurate information.
2. It is assumed that any property referred to in any report or in conjunction with any services performed by Aesculus Arboricultural Consulting is in accordance with any applicable codes, ordinances, statutes, or other governmental regulations, and that any titles and ownership to any property are assumed to be good and marketable. The existence of liens or encumbrances has not been determined, and any and all property is appraised and/or assessed as though free and clear, under responsible ownership and competent management.
3. All reports and other correspondence are confidential and are the property of Aesculus Arboricultural Consulting and its named clients and their assigns or agents. Possession of this report or a copy thereof does not imply any right of publication or use for any purpose, without the express permission of the consultant and the client to whom the report was issued. Loss, removal, or alteration of any part of a report invalidates the entire appraisal/evaluation.
4. The scope of any report or other correspondence is limited to the trees and conditions specifically mentioned in those reports and correspondence. Aesculus Arboricultural Consulting assumes no liability for the failure of trees or parts of trees, inspected or otherwise. The consultant assumes no responsibility to report on the condition of any tree or landscape feature not specifically requested by the named client.
5. All inspections are limited to visual examination of accessible parts, without dissection, excavation, probing, boring or other invasive procedures, unless otherwise noted in the report, and reflect the condition of those items and features at the time of inspection. No warranty or guarantee is made, expressed or implied, that problems or deficiencies of the plants or the property will not occur in the future, from any cause. The consultant shall not be responsible for damages caused by any tree defects, and assumes no responsibility for the correction of defects or tree related problems.
6. The consultant shall not be required to provide further documentation, give testimony, be deposed, or to attend court by reason of this appraisal/report unless subsequent contractual arrangements are made, including payment of additional fees for such services as set forth by the consultant or in the fee schedule or contract.
7. Aesculus Arboricultural Consulting makes no warranty, either expressed or implied, as to the suitability of the information contained in any reports or correspondence, either oral or written, for any purpose. It remains the responsibility of the client to determine applicability to his/her particular case.
8. Any report and the values, observations, and recommendations expressed therein represent the professional opinion of the consultant, and the fee for services is in no manner contingent upon the reporting of a specified value nor upon any particular finding.
9. Any photographs, diagrams, charts, sketches, or other graphic material included in any report are intended solely as visual aids, are not necessarily to scale, and should not be construed as engineering reports or surveys unless otherwise noted in the report. Any reproduction of graphic material or the work product of any other persons is intended solely for clarification and ease of reference. Inclusion of said information does not constitute a representation by Aesculus Arboricultural Consulting as to the sufficiency or accuracy of that information.

## 1.0 INTRODUCTION

The purpose of this Biological Resources Assessment (BRA) is to provide a biological evaluation in compliance with Mitigation Measure BIO-1 from both ConnectMenlo Environmental Impact Report and Housing Element Update Supplemental Environmental Impact Report.

This assessment provides technical biological resources information to support environmental review for the residential development at 3705 Haven Avenue in Menlo Park, San Mateo County, California (Project) and evaluates the potential for the parcel and adjacent areas (Study Area) to support special-status plant and wildlife species, sensitive vegetation communities, and aquatic features and the potential for impacts to these biological resources as a result of Project implementation. A desktop review and a site visit were used for this analysis.

For the purpose of this assessment, the Study Area included the entire 0.66-acre parcel and 0.11-acre of immediately adjacent areas in order to account for the potential impacts to surrounding areas. The Study Area is currently developed and is embedded within Menlo Park's mixed use residential area that is characterized by having a high percentage of unnatural landcover dominated by buildings, streets, and associated infrastructure. Conclusions are based on currently available information used in combination with a site visit and the professional judgement of the biologists completing this study.

### 1.1 Project Description

The proposed Project consists of demolition of an existing single-story commercial building and subsequent construction of a 112-unit housing project located on a fully developed site at 3705 Haven Avenue in Menlo Park (City), San Mateo County, California (APN 055-170-240; Appendix A; Figure 1). The Project will comply with Menlo Park's local tree ordinance. The Project will proceed through the California Environmental Quality Act (CEQA) under a Section 15183 Exemption that tiers from the ConnectMenlo Environmental Impact Report and Housing Element Update Supplemental Environmental Impact Report. The Project will implement safe bird standards described in Mitigation Measure BIO-1 subsections 3(a) to (g) of the ConnectMenlo Mitigation Monitoring and Reporting Program, copied here:

#### **Bird-Friendly Design**

- a. No more than ten percent (10%) of façade surface area shall have non-bird- friendly glazing.
- b. Bird- friendly glazing includes, but is not limited to opaque glass, covering the outside surface of clear glass with patterns, paned glass with fenestration, frit or etching patterns, and external screens over nonreflective glass. Highly reflective glass is not permitted.
- c. Occupancy sensors or other switch control devices shall be installed on non-emergency lights and shall be programmed to shut off during non-work hours and between 10 PM and sunrise.
- d. Placement of buildings shall avoid the potential funneling of flight paths towards a building façade.
- e. Glass skyways or walkways, freestanding (see-through) glass walls and handrails, and transparent building corners shall not be allowed.

- f. Transparent glass shall not be allowed at the rooflines of buildings, including in conjunction with roof decks, patios and green roofs.
- g. Use of rodenticides shall not be allowed.

## 1.2 Summary of Results

Of the approximately 0.77-acre Study Area, only one landcover type was identified: developed/disturbed. The Project will not impact sensitive habitats potentially regulated by the County of San Mateo, United States (U.S.) Army Corps of Engineers (Corps), Regional Water Quality Control Board (RWQCB), and/or California Department of Fish and Wildlife (CDFW).

No special-status plant and wildlife species have potential to occur on the site. However, some common species that receive protections from existing regulations, specifically nesting birds, could use the site. Pre-construction surveys are recommended if the project is to begin during the nesting bird season which is generally between February 15 to September 1. In addition, the site contains trees that are subject to the local municipal tree ordinance. Avoidance and compliance measures consistent with Mitigation Measure BIO-1 are provided herein to mitigate potential impacts to these resources.

## 2.0 REGULATORY BACKGROUND

The following sections explain the regulatory context of the BRA, including applicable laws and regulations that were applied to the field investigations and analysis of potential project impacts. Table 1 shows the correlation between these regulations and each Biological Resources question in the Environmental Checklist Form (Appendix G) of the CEQA guidelines.

### 2.1 Federal and State Regulatory Setting

#### 2.1.1 Special-status Species

##### ENDANGERED AND THREATENED PLANTS, FISH, AND WILDLIFE

Specific species of plants, fish, and wildlife species may be designated as threatened or endangered by the federal Endangered Species Act (ESA), or the California Endangered Species Act (CESA). Specific protections and permitting mechanisms for these species differ under each of these acts, and a species' designation under one law does not automatically provide protection under the other.

The ESA (16 USC 1531 et seq.) is implemented by the USFWS and the National Marine Fisheries Service (NMFS). The USFWS and NMFS maintain lists of endangered and threatened plant and animal species (referred to as "listed species"). "Proposed" or "candidate" species are those that are being considered for listing and are not protected until they are formally listed as threatened or endangered. Under the ESA, authorization must be obtained from the USFWS or NMFS prior to take of any listed species. "Take" under the ESA is defined as "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Take under the ESA includes direct injury or mortality to individuals, disruptions in normal behavioral patterns resulting from factors such as noise and visual disturbance and impacts to habitat for listed species. Actions that may result in take of an ESA-listed species may obtain a permit under ESA Section 10, or via the interagency consultation described in ESA Section 7. Federal-listed plant

species are only protected when removal or destruction occurs on federal land; however, if a federal agency authorizes, funds, or carries out an action, that agency must insure through Section 7 consultation that the action is not likely to jeopardize the continued existence of the species.

The ESA also provides for designation of critical habitat, which are specific geographic areas containing physical or biological features “essential to the conservation of the species.” Protections afforded to designated critical habitat apply only to actions that are funded, permitted, or carried out by federal agencies. Critical habitat designations do not affect activities by private landowners if there is no other federal agency involvement.

The CESA (CFGF 2050 et seq.) prohibits the take of any plant and animal species that the CFGF determines to be an endangered or threatened species in California. CESA regulations include take protection for threatened and endangered plants on private lands, as well as extending this protection to candidate species that are proposed for listing as threatened or endangered under CESA. The definition of a “take” under CESA (“hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill”) only applies to direct impact to individuals, and does not extend to habitat impacts or harassment. CDFW may issue an Incidental Take Permit under CESA to authorize take if it is incidental to otherwise lawful activity and if specific criteria are met. Take of these species is also authorized if the geographic area is covered by a Natural Community Conservation Plan (NCCP), as long as the NCCP covers that activity. CDFW may also authorize take for voluntary restoration projects through the Restoration Management Permit (RMP).

#### **FULLY PROTECTED SPECIES AND DESIGNATED RARE PLANT SPECIES**

This category includes specific plant and wildlife species that are designated in the CFGF as protected even if not listed under CESA or ESA. Fully Protected Species includes specific lists of birds, mammals, reptiles, amphibians, and fish designated in CFGF. Fully protected species may not be taken or possessed at any time. No licenses or permits may be issued for take of fully protected species, except for necessary scientific research and conservation purposes. The definition of “take” is the same under the California Fish and Game Code and the CESA. By law, CDFW may not issue an Incidental Take Permit for Fully Protected Species. Under the California Native Plant Protection Act (NPPA), take of plant species listed by CDFW as “rare” or “endangered” is prevented, with few exceptions. CDFW may authorize take of species protected by the NPPA through the Incidental Take Permit process, or under a NCCP. CDFW may also authorize take for voluntary restoration projects through the RMP.

#### **SPECIAL PROTECTIONS FOR NESTING BIRDS AND BATS**

The federal Bald and Golden Eagle Protection Act provides relatively broad protections to both of North America’s eagle species (bald eagle [*Haliaeetus leucocephalus*] and golden eagle [*Aquila chrysaetos*]) that in some regards are similar to those provided by the ESA. In addition to regulations for special-status species, most native birds in the U.S., including non-status species, have baseline legal protections under the Migratory Bird Treaty Act of 1918 and CFGF, i.e., sections 3503, 3503.5 and 3513. Under these laws/codes, the intentional harm or collection of adult birds as well as the intentional collection or destruction of active nests, eggs, and young is illegal. For bat species, the Western Bat Working Group (WBWG) designates conservation status for species of bats, and those with a high or medium-high priority are typically given special consideration under CEQA.

## **SPECIES OF SPECIAL CONCERN, MOVEMENT CORRIDORS, AND OTHER SPECIAL-STATUS SPECIES UNDER CEQA**

A Species of Special Concern (SSC) is a species formally designated by the CDFW which meets one or more criteria related to a Federal ESA status (if it is not listed under CESA), including extirpation from California, documented population declines, or small population size within California and risk of declines. In addition, CDFW has developed a special animals list as “a general term that refers to all of the taxa the CNDDDB is interested in tracking, regardless of their legal or protection status.” This list includes lists developed by other organizations, including for example, the Audubon Watch List Species, the Bureau of Land Management Sensitive Species, and USFWS Birds of Conservation Concern. Plant species on the California Native Plant Society (CNPS) Rare Plant Inventory (Inventory; CNPS 2024a) with California Rare Plant Ranks (Rank) of 1 and 2, as well as some with a Rank of 3 or 4, are also considered special-status plant species and must be considered under CEQA. Some Rank 3 and Rank 4 species are typically only afforded protection under CEQA when such species are particularly unique to the locale (e.g., range limit, low abundance/low frequency, limited habitat) or are otherwise considered locally rare. Additionally, any species listed as sensitive within local plans, policies and ordinances are likewise considered sensitive. Movement and migratory corridors for native wildlife (including aquatic corridors) as well as wildlife nursery sites are given special consideration under CEQA.

### **2.1.2 Vegetation and Aquatic Communities**

CEQA requires consideration and evaluation for natural communities defined as sensitive by the CDFW and aquatic features protected by laws and regulations administered by the Corps, State Water Resources Control Board (SWRCB), and RWQCB. The laws and regulations that provide protection for these resources are summarized below.

## **SENSITIVE NATURAL COMMUNITIES**

Sensitive natural communities include habitats that fulfill special functions or have special values. Natural communities considered sensitive are those identified in local or regional plans, policies, regulations, or by the CDFW. CDFW ranks sensitive communities as "threatened" or "very threatened" (CDFW 2024a) and keeps records of their occurrences in its California Natural Diversity Database (CNDDDB; CDFW 2024b). Natural communities are ranked 1 through 5 in the CNDDDB based on NatureServe's (2024) methodology, with those communities ranked globally (G) or statewide (S) as 1 through 3 considered sensitive. Impacts to sensitive natural communities identified in local or regional plans, policies, or regulations or those identified by the CDFW or U.S. Fish and Wildlife Service (USFWS) must be considered and evaluated under CEQA guidelines (California Code of Regulations [CCR] Title 14, Div. 6, Chap. 3, Appendix G). In addition, these sensitive natural communities include oak woodlands that are protected by local ordinances under the Oak Woodlands Protection Act and Section 21083.4 of California Public Resources Code.

## **WATERS OF THE UNITED STATES, INCLUDING WETLANDS**

The Corps regulates “Waters of the United States” under Section 404 of the Clean Water Act (CWA). Waters of the U.S. are defined in the Code of Federal Regulations (CFR) as including the territorial seas, and waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, such as tributaries, lakes and ponds, impoundments of waters of the U.S., and wetlands that are surface hydrologically connected with these navigable features (33 CFR 328.3). Potential wetland areas, according to the three criteria used to delineate wetlands as defined in the *U.S. Army Corps of Engineers Wetlands Delineation*

*Manual* (Corps Manual; Environmental Laboratory 1987), are identified by the presence of (1) hydrophytic vegetation, (2) hydric soils, and (3) wetland hydrology. Unvegetated waters including lakes, rivers, and streams may also be subject to Section 404 jurisdiction and are characterized by an ordinary high water mark (OHWM) identified based on field indicators such as the lack of vegetation, sorting of sediments, and other indicators of flowing or standing water. The placement of fill material into Waters of the U.S. generally requires a permit from the Corps under Section 404 of the CWA.

The Corps also regulates construction in navigable waterways of the U.S. through Section 10 of the Rivers and Harbors Act (RHA) of 1899 (33 U.S. Code [USC] 403). Section 10 of the RHA requires Corps approval and a permit for excavation or fill, or alteration or modification of the course, location, condition, or capacity of, any port, roadstead, haven, harbor, canal, lake, harbor or refuge, or enclosure within the limits of any breakwater, or of the channel of any navigable water of the U.S. Section 10 requirements apply only to navigable waters themselves, and are not applicable to tributaries, adjacent wetlands, and similar aquatic features not capable of supporting interstate commerce.

### **WATERS OF THE STATE, INCLUDING WETLANDS**

The term “Waters of the State” is defined by the Porter-Cologne Act as “any surface water or groundwater, including saline waters, within the boundaries of the state.” The SWRCB and nine RWQCB protect waters within this broad regulatory scope through many different regulatory programs. Waters of the State in the context of a CEQA Biological Resources evaluation include wetlands and other surface waters protected by the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (SWRCB 2019). The SWRCB and RWQCB issue permits for the discharge of fill material into surface waters through the State Water Quality Certification Program, which fulfills requirements of Section 401 of the CWA and the Porter-Cologne Water Quality Control Act. Projects that require a CWA permit are also required to obtain a Water Quality Certification. If a project does not require a federal permit but does involve discharge of dredge or fill material into surface waters of the State, the SWRCB and RWQCB may issue a permit in the form of Waste Discharge Requirements.

### **SECTIONS 1600-1616 OF CALIFORNIA FISH AND GAME CODE**

Streams and lakes, as habitat for fish and wildlife species, are regulated by CDFW under Sections 1600-1616 of California Fish and Game Code (CFGF). Alterations to or work within or adjacent to streambeds or lakes generally require a 1602 Lake and Streambed Alteration Agreement. The term “stream,” which includes creeks and rivers, is defined in the CCR as “a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life [including] watercourses having a surface or subsurface flow that supports or has supported riparian vegetation” (14 CCR 1.72). The term “stream” can include ephemeral streams, dry washes, watercourses with subsurface flows, canals, aqueducts, irrigation ditches, and other means of water conveyance if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife (CDFG 1994). Riparian vegetation has been defined as “vegetation which occurs in and/or adjacent to a stream and is dependent on, and occurs because of, the stream itself” (CDFG 1994). Removal of riparian vegetation also requires a Section 1602 Lake and Streambed Alteration Agreement from CDFW.

## 2.2 Local Plans and Policies

### 2.2.1 Menlo Park Tree Ordinance

Menlo Park Municipal Code Chapter 13.20 “Street Trees” and Chapter 13.24 “Heritage Trees” outlines expectations for the preservation of heritage trees, which are defined by the following metrics:

- A tree or group of trees of historical significance, special character or community benefit, specifically designated by resolution of the City Council;
- An oak tree, which is native to California and has a trunk with a circumference of 31.4 inches (diameter of 10 inches) or more, measured at 54 inches above natural grade; and
- All trees other than oaks, which have a trunk circumference of 47.1 inches (diameter of 15 inches) or more, measured 54 inches above natural grade, except trees that are less than 12 feet in height (Municipal Code Section 13.24.030 (5)(A-C)).

For residential developments, a tree must be planted for each one that is removed, subject to approval by the City Arborist. Per Section 13.24.030 of the City’s Municipal Code, a City-approved certified arborist is required to prepare a tree protection plan for any work performed within an area 10 times the diameter of the tree, referred to as a tree protection zone. A permit from the Director of Public Works, as well as payment of a fee, is required for any removal of heritage trees.

### 3.0 ASSESSMENT METHODOLOGY

Prior to the site visit, the WRA biologist reviewed literature resources and performed database searches to assess the potential for sensitive biological communities (e.g., wetlands) and special-status species (e.g., endangered plants), including:

- Palo Alto 7.5-minute U.S. Geological Survey (USGS) quadrangle (USGS 2024)
- Contemporary aerial photographs (Google Earth 2024)
- Historical aerial photographs (NETR 2024)
- National Wetlands Inventory (USFWS 2024)
- California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDDB) (CDFW 2024)
- California Native Plant Society Inventory of Rare Plants (CNPS 2024)
- Consortium of California Herbaria (CCH1, CCH2 2024)
- U.S. Fish and Wildlife Service (USFWS) List of Federal Endangered and Threatened Species (USFWS 2024)
- A Manual of California Vegetation, Online Edition (CNPS 2024)
- Preliminary Descriptions of the Terrestrial Natural Communities (Holland 1986)
- CDFW Publication, *California Bird Species of Special Concern in California* (Shuford and Gardali 2008)
- CDFW and University of California Press publication *California Amphibian and Reptile Species of Special Concern* (Thomson et al. 2016)
- ebird: An online database of bird distribution and abundance [web application; accessed May 22, 2024]

Database searches (i.e., CNDDDB, CNPS) for special-status species focused on the Palo Alto USGS 7.5-minute quadrangle.

Following the remote assessment, a WRA biologist completed a field review to document: (1) land cover types (e.g., terrestrial communities, aquatic resources); (2) existing conditions and to determine if such provided suitable habitat for any special-status plant or wildlife species; (3) if and what type of aquatic natural communities (e.g., wetlands) were present; and (4) if special-status species were present. The Study Area was reviewed for the presence of aquatic resources including wetlands and unvegetated waters of the State and waters of the U.S. Methods for identifying these areas relied on the Corps Wetlands Delineation Manual (Environmental Laboratory 1987), Arid West Regional Supplement (Corps 2008), A Field Guide to the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States (Lichvar 2008), Corps of Engineers Regulatory Guidance Letter 05-05 (Corps 2005), and related documentation. For any streams observed, the top of bank is identified in the field by indicators such as benching and changes in vegetation.

#### 3.1 Vegetation Communities and Other Land Cover Types

On May 21, 2024, a WRA biologist visited the Study Area to map land cover types, document plant and wildlife species present, and evaluate on-site habitat for the potential to support special-status species. During the site visit, WRA evaluated the species composition and area occupied by

distinct vegetation communities, aquatic communities, and other land cover types within the Study Area. Mapping of these classifications utilized a combination of aerial imagery and ground surveys. In most instances, communities are characterized and mapped based on distinct shifts in plant assemblage (vegetation) and follow the *California Natural Community List* (CDFW 2024a) and *A Manual of California Vegetation, Online Edition* (CNPS 2024b). These resources cannot anticipate every component of every potential vegetation assemblage in California, and so in some cases, it is necessary to identify other appropriate vegetative classifications based on best professional judgment of WRA biologists. When undescribed variants are used, it is noted in the description. Vegetation alliances (natural communities) with a CDFW Rank of 1 through 3 (globally critically imperiled [S1/G1], imperiled [S2/G2], or vulnerable [S3/G3]) (CDFW 2024a), were evaluated as sensitive as part of this evaluation.

## 3.2 Delineation of Aquatic Resources

WRA biologists evaluated the site for aquatic resources potentially subject to Corps, RWQCB, and California Coastal Conservancy (CCC) jurisdictions within the Study Area. Prior to conducting the evaluation, WRA reviewed a range of background materials including the Web Soil Survey (USDA 2024), SoilWeb (CSRL 2024), the National Wetlands Inventory (NWI; USFWS 2024b), the California Aquatic Resource Inventory (SFEI 2024), and the USGS Palo Alto 7.5-minute quadrangle maps. WRA also reviewed current and historic aerial imagery (Google Earth 2024, NETR 2024).

### 3.2.1 Waters of the U.S. and State (Corps/RWQCB Jurisdiction)

During the on-site evaluation, WRA followed the methods outlined in the Corps Wetlands Delineation Manual (Corps Manual; Environmental Laboratory 1987) and the Regional Supplement to the Corps Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region (Version 2.0) (WMVC Supplement; Corps 2010).

WRA followed the above-described methodology to evaluate the Study Area for the presence or absence of indicators of the three wetland parameters described in the Corps Manual (Environmental Laboratory 1987) and WMVC Supplement (Corps 2010). No jurisdictional wetlands were identified since the site contained no aquatic resources, only data on vegetation was collected. The vegetation adjacent to a channel across the street was collected and hydrology was noted, however no soils were collected at sample points within potential wetland communities and adjacent upland areas.

## 3.3 Special-status Species

### 3.3.1 General Assessment

Potential occurrence of special-status species in the Study Area was evaluated by first determining which special-status species occur in the vicinity of the Study Area through a literature and database review as described above. The presence of suitable habitat for special-status species was evaluated during the site visit based on physical and biological conditions of the site as well as the professional expertise of the investigating biologists. The potential for each special-status species to occur in the Study Area was then determined according to the following criteria:

- **No Potential.** Habitat on and adjacent to the site is clearly unsuitable for the species requirements (foraging, breeding, cover, substrate, elevation, hydrology, plant community, site history, disturbance regime).
- **Unlikely.** Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site.
- **Moderate Potential.** Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.
- **High Potential.** All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.
- **Present.** Species is observed on the site or has been recorded (i.e., CNDDDB, other reports) on the site in the recent past.

The site assessment was intended to identify the presence or absence of suitable habitat for each special-status species with a potential to occur in the Study Area.

### 3.4 Wildlife Corridors and Native Wildlife Nursery Sites

To account for potential impacts to wildlife movement/migratory corridors, biologists reviewed maps from the California Essential Connectivity Project (CalTrans 2010), and habitat connectivity data available through the CDFW Biogeographic Information and Observation System (CDFW 2023b). Additionally, aerial imagery (Google Earth 2024) for the local area was referenced to assess if local core habitat areas were present within, or connected to the Study Area. This assessment was refined based on observations of on-site physical and/or biological conditions, including topographic and vegetative factors that can facilitate wildlife movement, as well as on-site and off-site barriers to connectivity.

The potential presence of native wildlife nursery sites is also evaluated as part of the site visit and discussion of individual wildlife species below. Examples of native wildlife nursery sites include nesting sites for native bird species (particularly colonial nesting sites) and colonial roosting sites for other species (such as for monarch butterfly [*Danaus plexippus*]).

## 4.0 ECOLOGICAL SETTING

The Study Area is located at 3705 Haven Avenue, in Menlo Park, San Mateo County, California. It is located to the southwest of the intersection of Marsh Road/Bayfront Expressway (State Route 84) and Haven Avenue, in the southeast corner/turn of Haven Avenue where it meets Haven Court (Appendix A; Figure 1). A list of all plant and wildlife species observed during the site visit is included as Appendix B. Photographs of the Study Area are provided as Appendix C. Additional details of the local setting are below.

### 4.1 Land Use

The Study Area is entirely developed. The majority of the site is taken up by an existing single-story commercial building and surface parking lot. The remaining area is maintained landscaping. There are some mature trees on the site. The surrounding land use is also characterized by densely developed areas. The Atherton channel, a transitional tidal channel with predominantly freshwater

vegetation, is located about 65 feet to the east of the Project Area, with Haven Avenue being between the two. About 800 feet to the north, the densely developed area gives way to tidal areas and associated habitats and the Bay.

## 5.0 ASSESSMENT RESULTS

### 5.1 Vegetation Communities and Other Land Cover

WRA observed one land cover type within the Study Area: developed/disturbed. Land cover types within the Study Area are shown on Figure 2 in Appendix A and summarized in Table 2, below.

**Table 2. Vegetation Communities and Other Land Cover Types**

COMMUNITY / LAND COVERS	SENSITIVE STATUS	RARITY RANKING	TOTAL ACREAGE
<b>TERRESTRIAL LAND COVER</b>			
Developed/Disturbed	Non-sensitive	None	0.77

#### 5.1.1 Terrestrial Land Cover

##### **DEVELOPED/DISTURBED (NO VEGETATION ALLIANCE). CDFW RANK: NONE**

Developed/disturbed areas in the Study Area include paved roads, parking lots and a large commercial building. Vegetation in developed/disturbed areas is typically absent, except in maintained landscaped areas. These areas support some mature trees of native and ornamental types. This land cover type is not considered sensitive.

#### 5.1.2 Aquatic Resources

No aquatic resources are present in the Study Area.

## 5.2 Special-status Species

### 5.2.1 Special-status Plants

Based upon a review of the resource databases listed in Section 3.0, 60 special-status plant species have been documented within a 5-mile radius of the Study Area. No special-status species were observed during the site visit. All of these species were determined to have no potential to occur within the Study Area for one or more of the following reasons:

- Hydrologic conditions (e.g., tidal, riverine) necessary to support the special-status plant species are not present in the Study Area;
- Edaphic (soil) conditions (e.g., volcanic tuff, serpentine) necessary to support the special-status plant species are not present in the Study Area;
- Topographic conditions (e.g., montane) necessary to support the special-status plant species are not present in the Study Area;

- Unique pH conditions (e.g., alkali scalds, acidic bogs) necessary to support the special-status plant species are not present in the Study Area;
- Associated natural communities (e.g., interior chaparral, tidal marsh) necessary to support the special-status plant species are not present in the Study Area;
- The Study Area is geographically isolated (e.g., below elevation) from the documented range of the special-status plant species;
- Land use history and contemporary management (e.g., grading, paving) has degraded the localized habitat necessary to support the special-status plant species.

### 5.2.2 Special-status Wildlife

Of the 50 special-status wildlife species documented within a 5-mile radius of the Study Area, none were observed, and all are excluded from the Study Area based on a lack of habitat features, such as:

- Ponds, lakes, freshwater or tidal marsh areas,
- Streams and rivers,
- Vertical cliffs, banks, or canyons,
- Dense eucalyptus stands,
- Large trees with peeling bark, cracks or cavities,
- Saltwater estuaries,
- Redwood old growth coniferous forests, or
- Sandy beaches, salt pond levees, and the shores of large alkali lakes.

The absence of such habitat features eliminates components critical to the survival or movement of special-status species found in the vicinity. For instance, California Ridgway's rail is known to occur tidal areas in the vicinity. However, suitable habitat in the Study Area is absent, precluding this species from the Study Area. Given the Study Area's relative proximity to sensitive habitats on the central California coast, many species documented nearby are additionally obligates to open waters and tidal marsh habitat, which are not present on or within 500 feet of the Study Area. There is no suitable maternity roosting or day roosting habitat for bats. No nesting birds were found during the site visit. However, non-special-status migratory and non-migratory birds have potential to nest within the Study Area in the trees and building structures.

### 5.3 Wildlife Corridors and Native Wildlife Nursery Sites

Wildlife movement between suitable habitat areas can occur via open space areas lacking substantial barriers. The terms "landscape linkage" and "wildlife corridor" are often used when referring to these areas. The key to a functioning corridor or linkage is that it connects two larger habitat blocks, also referred to as core habitat areas (Beier and Loe 1992; Soulé and Terbough 1999). It is useful to think of a "landscape linkage" as being valuable in a regional planning context, a broad scale mapping of natural habitat that functions to join two larger habitat blocks. The term "wildlife corridor" is useful in the context of smaller, local area planning, where wildlife movement may be facilitated by specific local biological habitats or passages and/or may be restricted by barriers to movement. Above all, wildlife corridors must link two areas of core habitat and should not direct wildlife to developed areas or areas that are otherwise void of core habitat (Hilty et al. 2019).

The Study Area is not within a designated wildlife corridor depicted in the Essential Connectivity Areas dataset published by CDFW, which provides baseline data on landscape-scale corridor areas (CalTrans 2010, CDFW 2024c). Overall, the site is located within a densely developed area. Therefore, re-development within these areas will not significantly alter the current landscape or affect its ability to facilitate local wildlife movement.

The Study Area lacks any streams or freshwater or marine aquatic features suitable for anadromous fish. No EFH is present in the Study Area. No USFWS-designated Critical Habitat is present in the Study Area.

## 6.0 ANALYTICAL METHODOLOGY AND SIGNIFICANCE THRESHOLD CRITERIA

Pursuant to Appendix G, Section IV of the State CEQA Guidelines, a project would have a significant impact on biological resources if it would:

1. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or U.S. Fish and Wildlife Service;
2. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or U.S. Fish and Wildlife Service;
3. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;
4. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
5. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; and/or,
6. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

These thresholds were utilized in completing the analysis of potential project impacts for CEQA purposes. For the purposes of this analysis, a “substantial adverse effect” is generally interpreted to mean that a potential impact could directly or indirectly affect the resiliency or presence of a local biological community or species population. Potential impacts to natural processes that support biological communities and special-status species populations that can produce similar effects are also considered potentially significant. Impacts to individuals of a species or small areas of existing biological communities may be considered less than significant if those impacts are speculative, beneficial, de minimis, and/or would not affect the resiliency of a local population.

## 7.0 IMPACTS AND MITIGATION EVALUATION

Using the CEQA analysis methodology outlined in Section 6.0 above, the following section describes potential significant impacts to sensitive resources within the Study Area as well as suggested compliance and avoidance measures which will avoid significant impacts.

### 7.1 Special-status Species

This section analyzes the Project's potential impacts and mitigation for special-status species in reference to the significance threshold outlined in CEQA Appendix G, Part IV (a):

*Does the project have the potential to have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or U.S. Fish and Wildlife Service?*

Potential impacts and mitigation for potentially significant impacts are discussed below.

#### 7.1.1 Special-Status Plants

No potential impacts were identified because no special-status species were observed during the site visit and no habitat with potential to support these species is present. No measures are recommended.

#### 7.1.2 Special-Status Wildlife and Nesting Birds and Roosting Bats

##### NATIVE NESTING BIRDS

To comply with existing standards and the ConnectMenlo Mitigation Monitoring and Reporting Program BIO-1 of the ConnectMenlo EIR and the Housing Element Update SEIR BIO-1, a preconstruction breeding bird survey is recommended, and will be conducted by a qualified biologist, if vegetation and/or ground disturbance will occur between February 1 and September 1. The survey will occur no more than 14 days prior to the start of construction and will need to review areas within 250 feet of the proposed areas of construction disturbance. If occupied nests are observed during the preconstruction survey, the biologist will establish a "no disturbance buffer" surrounding the active nest or burrow and construction within that buffer zone will be prohibited until any young present have fledged. The buffer distance will be established by the biologist based on factors such as the species observed, type of adjacent disturbance, and sensitivity of the nesting bird to disturbance. If more than 7 days lapse between the completion of the nesting bird survey and the start of construction, the survey will be repeated to determine if any new nests have been established. Given the low probability that sensitive species would be present within or adjacent to the area of construction, potential impacts to special status wildlife species are less than significant. Upon completion of the survey, a report detailing its methods and results shall be supplied. With implementation of this survey and observance of recommended avoidance buffers, if applicable, the Project will be in compliance with BIO-1 and existing standards including CFGC and the MBTA.

##### SPECIAL-STATUS SPECIES

Upon review of existing conditions, species distributions, and habitat requirements, there are no special-status plant and no special-status wildlife species that have moderate potential or higher

to occur within the Study Area. No special status species were detected during the site visit, and habitat for all local special status species is absent.

### **ROOSTING BATS**

The onsite building and landscaping trees generally lack the thermal stability necessary to support bat maternity roosts. The condition of the building is relatively well maintained and no cracks or crevices that are likely to support bat roosting were detected. Trees on the site are also lacking suitable crevices, holes or exfoliating bark to support maternity roosts. No additional surveys or measures with respect to special-status species is recommended for work in the Project Area.

## **7.2 Sensitive Natural Communities and Land Cover Types**

This section addresses the question:

*b) Does the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or U.S. Fish and Wildlife Service;*

No sensitive natural communities or land cover types are present therefore no impacts to sensitive natural communities will occur. No measures to avoid impacts to these features are recommended.

## **7.3 Aquatic Resources**

This section analyzes the Project's potential impacts and mitigation for wetlands and other areas presumed or determined to be within the jurisdiction of the Corps or BCDC in reference to the significance threshold outlined in CEQA Appendix G, Part IV (c):

*c) Does the Project have the potential to have a substantial adverse effect on state or federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;*

No sensitive aquatic resources are present therefore no impacts to sensitive natural communities will occur. No measures to avoid impacts to these features are recommended.

## **7.4 Wildlife Corridors and Native Wildlife Nursery Sites**

This section analyzes the Project's potential impacts and mitigation for habitat corridors and linkages in reference to the significance threshold outlined in CEQA Appendix G, Part IV (d):

*d) Does the Project have the potential to interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;*

As noted in Section 5.3, the Study Area is not within a designated wildlife corridor and does not provide connectivity between core habitat areas in the region. Therefore, no impacts to wildlife corridors or nursery sites will occur. No measures to avoid impacts to these features are recommended.

## 7.5 Local Policies and Ordinances

This section analyzes the Project's potential impacts and mitigation based on conflicts with local policies and ordinances in reference to the significance threshold outlined in CEQA Appendix G, Part IV (e):

*e) Does the Project have the potential to conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance;*

Local plans and policies related to biological resources examined in this analysis are:

### 7.5.1 Tree Protection

Two trees, eucalyptus #8 and coast live oak #15, meet the criteria of heritage trees under Menlo Park Municipal Code Chapter 13.24 and will be removed as part of the Project under heritage tree removal permit HTR#2022-00164. Tree #15 was also a heritage tree, however, that tree is no longer present within the Study Area. Replacement trees shall be from the City's replacement tree list or comparable in equal value to each tree removed, following the *10<sup>th</sup> Guide for Plant Appraisal* (CTLA 2019). Appraisal valuations were a total \$37,700.00 for two coast live oaks and one eucalyptus (Aesculus Consulting 2022), the Project will be compliant with the "Heritage Tree Ordinance Administrative Guidelines" adopted pursuant to Municipal Code 13.24.080 (Menlo Park 2024a; Menlo Park 2024b).

One street tree, *Zelkova serrata*, shall be protected on site using a tree protection fencing at 0.6 feet from the trunk to ensure no stockpiling, grading, trenching, or filling occurs within the tree protection zone. The tree protection fencing shall comprise of 6-foot chain link fabric mounted on 1.5-inch diameter metal posts driven into the ground. A 6-inch layer of wood chips shall be placed within the tree protection fencing. The Project proposes to incorporate each of the protection measures to avoid conflict with the local tree protection ordinance; therefore, impacts will be less than significant. No additional measures are recommended.

## 7.6 Habitat Conservation Plans

This section analyzes the Project's potential impacts and mitigation based on conflicts with any adopted local, regional, and state habitat conservation plans in reference to the significance threshold outlined in CEQA Appendix G, Part IV (f):

*f) Does the Project have the potential to conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.*

The Study Area is not located within the plan area of any adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved regional or state habitat conservation plan and therefore would not have the potential to impact or conflict with any such plans. No additional measures are recommended.

REGARDING 3705 Haven Avenue, Menlo Park

---

**Part II, Items 10 through 13**

The following section is in response to Part II, items 10 through 13 of the City of Menlo Park Planning Division Request for Evaluation for Potential Historic Significance for the building at 3705 Haven Avenue in Menlo Park, California.

**10. Does the property have any known association with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States?**

3705 Haven Avenue does not appear to be associated with any events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States. Built in 1963, the property was one of many post-war office parks constructed in the Bohannon Industrial Tract and around Santa Clara and San Mateo Counties. The existing building was not one of the earliest post-war office parks in the area, nor does it appear to have influenced the development of the area or design of other office parks. RO Associates, an occupant of the subject building from 1968 through at least 1973, was a notable developer and manufacturer of specialty military and industrial grade modular power converters ("RO Associates in new HQ in Menlo Park," The Peninsula Times Tribune, March 5, 1968). They are credited with designing the first commercial 20KHz switching power supply, the 5V 10A Model210, in 1967 ("Ro Associates - Astrodyne Profile," ProcureInc.com).

Although these developments were important in their specific fields of work, they were not impactful to the broad patterns of local, regional, California, or national history or cultural heritage.

Imagining change in historic environments through  
design, research, and technology

Furthermore, RO Associates only occupied the subject building for a few years, and its most notable development in the field of power converters occurred in 1967, before they occupied the subject building. RO Associates was not individually influential in, or especially associated with, the rise of Silicon Valley or with the electronics industry in the 1960s compared to the numerous other major electronics corporations in the region. No other occupants of the subject building were found to have contributed to the broad patterns of local, regional, California, or national history or cultural heritage, nor was it the location of any known significant events.

**11. Does the property have any known association with the lives of persons important to local, California, or national history?**

3705 Haven Avenue does not appear to have any known significant association with the lives of persons important to local, California, or national history. The original owner, David Dewey Bohannon, was a prolific real estate developer. Beginning in the 1920s, Bohannon began a real estate and development empire that would eventually produce 25,965 residential units, 136 subdivisions, and 367 acres of industrial parks and commercial developments ("David Dewey Bohannon . . .," San Mateo County Times, November 16, 1999.). Bohannon was the first president of the National Association of Homebuilders during World War II and was inducted into the California Building Industry Hall of Fame in 1986. Bohannon was especially active in post-war suburban developments, including the Hillsdale Mall in 1956, which was home to the first suburban Macy's. Bohannon's industrial parks include the Bohannon Industrial Tract, where the subject building was constructed for his company in 1963.

Although the building was originally owned by D. D. Bohannon and is a post-war suburban development, his significance is better represented by the extant Hillsdale Mall. The Bohannon Industrial Tract has seen numerous redevelopments, and the subject building is not individually or especially associated with Bohannon's work compared to the numerous other extant large-scale developments that defined his career. No other owners or individual occupants of the subject building were found to have significance that would directly relate to the subject building.

**12. Does the property retain distinctive characteristics of a type, period, region, or construction method, or represent the work of a master or possess high artistic values?**

3705 Haven Avenue does not appear to have distinctive characteristics of a type, period, region, or construction method, or represent the work of a master or possess high artistic values. According to the original building permit (Permit No. A-8645, inspection card on file with the City of Menlo Park), it was constructed in 1963 by contractor Howard J. White for original owner D. D. Bohannon as a warehouse and office building. The building is a minimal example of a post-war suburban office park, and does not demonstrate any particular style. No evidence was uncovered through research to suggest that the builder, Howard J. White, was a designer or builder of merit.

**13. Has the property yielded or does it have the potential to yield information important to the prehistory or history of the local area, California or the nation?**

The property at 3705 Haven Avenue does not appear to have the potential to provide information important to the prehistory or history of the local area, California, or nation. It does not feature construction or material types, or embody engineering practices that would, with additional study, provide important information. Evaluation of this property was limited to age-eligible resources above ground and did not involve survey or evaluation of the subject property for the purposes of archaeological information.

In conclusion, the property at 3705 Haven Avenue does not appear to be eligible for listing in the California Register of Historical Resources or National Register of Historic Places under any significance criteria. The City of Menlo Park maintains no local register of historic resources.

**GEOTECHNICAL INVESTIGATION  
PROPOSED RESIDENTIAL BUILDING  
3705 HAVEN AVENUE  
Menlo Park, California**

## **1.0 INTRODUCTION**

This report presents the results of the geotechnical investigation performed by Rockridge Geotechnical for the proposed residential building to be constructed at 3705 Haven Avenue in Menlo Park, California. The project site is on the northwestern side of the intersection of Haven Avenue and Haven Court, as shown on the Site Location Map, Figure 1.

The site is a relatively level, rectangular-shaped lot with plan dimensions of approximately 150 by 198 feet. It is bordered by commercial properties to the north and west, and by Haven Avenue to the east and south. The site is currently occupied by a one-story commercial building with adjacent landscaping and asphalt-paved parking.

We understand plans include demolition of the existing improvements and construction of an at-grade, seven-story, podium-style residential building. The proposed building will be constructed with five stories of Type V materials over a two-story concrete podium.

## **2.0 SCOPE OF SERVICES**

Our investigation was performed in accordance with our proposal dated December 13, 2021. Our scope of work consisted of exploring subsurface conditions at the site by performing seven cone penetration tests (CPTs), drilling one test boring, performing laboratory testing on selected soil samples, and performing engineering analyses to develop conclusions and recommendations regarding:

- site seismicity and seismic hazards, including the potential for liquefaction and liquefaction-induced ground failure
- design groundwater table
- the most appropriate foundation type(s) for the proposed building
- design criteria for the recommended foundation type(s)

- estimates of foundation settlement
- slab-on-grade floors
- lateral earth pressures for permanent below-grade walls
- site grading and fill placement, including fill quality and compaction requirements
- 2019 California Building Code (CBC) site class and design spectral response acceleration parameters
- corrosivity of the near-surface soil and the potential effects on buried concrete and metal structures and foundations, and recommendations for corrosion protection
- rigid and flexible pavement design
- permeable and non-permeable pavers
- construction considerations.

### **3.0 FIELD INVESTIGATION AND LABORATORY TESTING**

We explored the subsurface conditions at the site by performing seven CPTs and drilling one test boring. Prior to performing the CPTs and drilling the boring, we filed drilling notification forms with San Mateo County Environmental Health (SMCEH) and contacted Underground Service Alert (USA) to notify them of our work, as required by law. We also retained C. Cruz Subsurface Locators, a private utility locator, to check that the boring and CPT locations were clear of underground utilities. Details of our field exploration are described in this section.

#### **3.1 Cone Penetration Tests**

Seven CPTs, designated as CPT-1 through CPT-7, were performed by Middle Earth Geo Testing, Inc. of Orange, California on January 21, 2022. The CPTs were performed at the approximate locations shown on the Site Plan, Figure 2. The CPTs were advanced to depths of 50 to 100 feet below ground surface (bgs) by hydraulically pushing a 1.7-inch-diameter, cone-tipped probe into the ground. The cone-tipped probe measured tip resistance, and the friction sleeve behind the cone tip measured frictional resistance. Electrical strain gauges within the cone continuously measured soil parameters for the entire depth advanced. A special cone was also used to measure the in-situ soil shear wave velocity in approximately five-foot intervals at CPT-3. Soil data, including tip resistance, frictional resistance, and shear wave velocity, were recorded

by a computer while the test was conducted. Accumulated data were processed by computer to provide engineering information, such as the soil behavior types and approximate strength characteristics of the soil encountered. The CPT logs showing tip resistance and friction ratio, as well as interpreted soil behavior type and shear wave velocity profiles, are presented on Figures A-1 through A-7 in Appendix A.

Upon completion, the CPT holes were backfilled with neat cement grout in accordance with SMCEH requirements, and the pavement surface was patched with quick-set concrete.

### **3.2 Test Boring**

One boring, designated as B-1, was drilled on January 12, 2022, by Pitcher Services, LLC of East Palo Alto, California at the approximate location shown on the Site Plan, Figure 2. Boring B-1 was drilled to a depth of 91 feet bgs using a truck-mounted drill rig equipped with rotary-wash equipment. During drilling, our field engineer logged the soil encountered and obtained samples for visual classification and laboratory testing. The log of Boring B-1 is presented in Appendix A on Figures A-8a through A-8c. The soil encountered in the boring was classified in accordance with the classification chart shown on Figure A-9.

Soil samples were obtained using the following samplers:

- Modified California (MC) split-barrel sampler with a 3.0-inch outside diameter and 2.5-inch inside diameter, lined with 2.43-inch inside diameter brass/stainless steel tubes.
- Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside and 1.5-inch inside diameter, without liners.
- Dames and Moore (DM) thin-walled tubes with a 2.5-inch outside and 2.43-inch inside diameter.

The MC and SPT samplers were driven with a 140-pound, automatic safety hammer falling 30 inches per drop. The samplers were driven up to 18 inches, and the hammer blows required to drive the samplers were recorded every six inches and are presented on the boring log. A “blow count” is defined as the number of hammer blows per six inches of penetration or 50 blows for six inches or less of penetration. The blow counts required to drive the MC and SPT samplers

were converted to approximate SPT N-values using factors of 0.84 and 1.44, respectively, to account for sampler type, approximate hammer energy (previously measured by the drilling subcontractor), and the fact that the SPT sampler was designed to accommodate liners, but liners were not used. The blow counts used for this conversion were the last two 6-inch blow counts, the last one blow count if the sampler was driven more than six inches but less than 12 inches, or the only blow count if the sampler was driven six inches or less. The converted SPT N-values are presented on the boring log.

The DM tubes were used in an attempt to obtain relatively undisturbed samples of medium stiff to stiff, fine-grained soils. The DM tubes were slowly advanced using the weight of the drill rods and hydraulic pressure, as needed. The hydraulic pressure required to obtain each DM sample is listed on the boring log.

Upon completion of drilling, the boreholes were backfilled with cement grout in accordance with SMCEH requirements and the pavement was patched with quick-set concrete. The soil cuttings from the borings were placed in 55-gallon drums and are scheduled to be removed from the site for disposal on February 24, 2022.

### **3.3 Laboratory Testing**

Laboratory tests were performed on selected soil samples from our boring to assess their engineering properties and physical characteristics. Soil samples were tested by B. Hillebrandt Soils Testing, Inc. of Alamo, California to measure moisture content, dry density, plasticity (Atterberg limits), and fines content. Three soil samples were also tested by Inspection Services Inc. of Berkeley, California to measure consolidation properties. Soil corrosivity testing was also performed on near-surface soil samples by Project X Corrosion Engineering of Murrieta, California. The results of the geotechnical laboratory tests are presented on the boring log and attached in Appendix B.

## 4.0 SUBSURFACE CONDITIONS

As presented on the Regional Geologic Map (Figure 3), the site is mapped as being underlain by Holocene-age alluvial deposits (Qha). The results of our boring and CPTs indicate the alluvium primarily consists of stiff to very stiff clay with occasional medium stiff layers up to about one foot thick. The clay is interbedded with layers of medium dense to very dense sand and gravel to the maximum depth explored of about 100 feet bgs. The granular layers encountered at this site vary in thickness from approximately 1 to 16 feet.

The results of an Atterberg limits test performed on a sample of the near-surface clay obtained from the boring indicate it is highly expansive<sup>1</sup>.

### 4.1 Groundwater Conditions

Groundwater was measured in each CPT with a weighted tape measure immediately following removal of the CPT rods. Depth to groundwater was recorded when first encountered while drilling the boring and again after waiting approximately 30 minutes. The measurements indicate the depth to groundwater ranged from about 6 to 11 feet bgs at the time of our field investigation. To further evaluate the depth to groundwater at the site, we reviewed information on the State of California Water Resources Control Board GeoTracker website (<http://geotracker.swrcb.ca.gov>). The nearest site with groundwater data is immediately to the north of the project site, at 3695-3723 and 3750 Haven Avenue. Groundwater was measured in eight monitoring wells from November 1999 to September 2001. The data indicates the groundwater level fluctuated from 3.91 to 7.09 feet bgs during that time. The closest monitoring well to the project site is MW-5B, where the depth to groundwater ranged from 5.71 to 7.09 feet bgs.

The groundwater level at the site is expected to fluctuate several feet seasonally, depending on the amount of rainfall. Based on our review of available historic groundwater information within the site vicinity, we conclude a high groundwater level of five feet bgs should be used for this project.

---

<sup>1</sup> Highly expansive soil undergoes large volume changes with changes in moisture content.

## 5.0 SEISMIC CONSIDERATIONS

Because the project site is in a seismically active region, we evaluated the potential for earthquake-induced geologic hazards, including ground shaking, ground surface rupture, liquefaction,<sup>2</sup> lateral spreading,<sup>3</sup> and cyclic densification<sup>4</sup>. The results of our evaluation regarding seismic considerations for the project site are presented in the following sections.

### 5.1 Regional Seismicity and Faulting

The site is located in the Coast Ranges Geomorphic Province of California that is characterized by northwest-trending valleys and ridges. These topographic features are controlled by folds and faults that resulted from the collision of the Farallon Plate and North American Plate and subsequent strike-slip faulting along the San Andreas Fault system. The San Andreas Fault is more than 600 miles long from Point Arena in the north to the Gulf of California in the south. The Coast Ranges Province is bounded on the east by the Great Valley and on the west by the Pacific Ocean.

The major active faults in the area are the San Andreas, Hayward, and Calaveras faults. These and other faults in the region are shown on Figure 4. Numerous damaging earthquakes have occurred along these faults in recorded time. For these and other active faults within a 50-kilometer radius of the site, the distance from the site and estimated characteristic moment magnitude<sup>5</sup> [Petersen et al. (2014) & Thompson et al. (2016)] are summarized in Table 1. These

---

<sup>2</sup> Liquefaction is a phenomenon where loose, saturated, cohesionless soil experiences temporary reduction in strength during cyclic loading such as that produced by earthquakes.

<sup>3</sup> Lateral spreading is a phenomenon in which surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. Upon reaching mobilization, the surficial blocks are transported downslope or in the direction of a free face by earthquake and gravitational forces.

<sup>4</sup> Cyclic densification is a phenomenon in which non-saturated, cohesionless soil is compacted by earthquake vibrations, causing ground-surface settlement.

<sup>5</sup> Moment magnitude ( $M_w$ ) is an energy-based scale and provides a physically meaningful measure of the size of a faulting event. Moment magnitude is directly related to average slip and fault rupture area.

references are based on the Third Uniform California Earthquake Rupture Forecast (UCERF3), prepared by Field et al. (2013).

Greenville (North)	49	Northeast	6.86
Concord	49	Northeast	6.45

Since 1800, four major earthquakes have been recorded on the North San Andreas Fault. In 1836, an earthquake with an estimated maximum intensity of VII on the Modified Mercalli (MM) scale occurred east of Monterey Bay on the San Andreas Fault (Topozada and Borchardt 1998). The estimated moment magnitude ( $M_w$ ) for this earthquake is about 6.25. In 1838, an

earthquake occurred with an estimated intensity of about VIII-IX (MM), corresponding to an  $M_w$  of about 7.5. The San Francisco Earthquake of 1906 caused the most significant damage in the history of the Bay Area in terms of loss of lives and property damage. This earthquake created a surface rupture along the San Andreas Fault from Shelter Cove to San Juan Bautista approximately 470 kilometers in length. It had a maximum intensity of XI (MM), an  $M_w$  of about 7.9, and was felt 560 kilometers away in Oregon, Nevada, and Los Angeles. The Loma Prieta Earthquake of October 17, 1989 had an  $M_w$  of 6.9 and occurred about 57 kilometers south of the site.

In 1868, an earthquake with an estimated maximum intensity of X on the MM scale occurred on the southern segment (between San Leandro and Fremont) of the Hayward Fault. The estimated  $M_w$  for the earthquake is 7.0. In 1861, an earthquake of unknown magnitude (estimated  $M_w$  of about 6.5) was reported on the Calaveras Fault. The most recent significant earthquake on this fault was the 1984 Morgan Hill Earthquake ( $M_w = 6.2$ ).

As a part of the UCERF3 project, researchers estimated that the probability of at least one  $M_w \geq 6.7$  earthquake occurring in the greater San Francisco Bay Area during a 30-year period (starting in 2014) is 72 percent. The highest probabilities are assigned to sections of the Hayward (South), Calaveras (Central), and the North San Andreas (Santa Cruz Mountains) faults. The respective probabilities are approximately 25, 21, and 17 percent.

## **5.2 Geologic Hazards**

During a major earthquake on a segment of one of the nearby faults, strong to very strong ground shaking is expected to occur at the project site. Strong shaking during an earthquake can result in ground failure such as that associated with soil liquefaction, lateral spreading, and cyclic densification.

### **5.2.1 Ground Shaking**

The seismicity of the site is governed by the activity of the San Andreas and Hayward faults, although ground shaking from future earthquakes on other faults, including the Monte Vista-

Shannon and Calaveras faults, will also be felt at the site. These and other faults in the region are shown in relation to the site on Figure 4. The ground shaking intensity felt at the project site will depend on: 1) the size of the earthquake (magnitude), 2) the distance from the site to the fault source, 3) the focusing of earthquake energy along the fault in the direction of the rupture (directivity), and 4) site-specific soil conditions. We judge that strong to very strong ground shaking could occur at the site during a large earthquake on one of the nearby faults.

### **5.2.2 Liquefaction and Associated Hazards**

When a saturated, cohesionless soil liquefies, it experiences a temporary loss of shear strength created by a transient rise in excess pore pressure generated by strong ground motion. Soil susceptible to liquefaction includes loose to medium dense sand and gravel, low-plasticity silt, and some low-plasticity clay deposits. Flow failure, lateral spreading, differential settlement, loss of bearing strength, ground fissures and sand boils are evidence of excess pore pressure generation and liquefaction.

The subject property is located in an area of Menlo Park designated as a potential liquefaction hazard zone on the map prepared by California Geological Survey (CGS) titled *State of California, Earthquake Zones of Required Investigation, Palo Alto Quadrangle*, dated October 18, 2006 (Figure 6). Special Publication 117 prepared by the CGS (2008) recommends subsurface investigations in mapped liquefaction potential areas be performed using rotary-wash borings and/or CPTs.

We evaluated the liquefaction potential of soil encountered below groundwater at the site using data collected in the CPTs with consideration of subsurface information from the rotary-wash boring and laboratory test results. We assessed the liquefaction susceptibility using the software CLiq 3.7.1.10 (GeoLogismiki, 2022). CLiq uses measured CPT data and assesses liquefaction susceptibility and post-earthquake vertical settlement, given a user-defined earthquake magnitude and peak ground acceleration (PGA). Our liquefaction analyses were performed using the methodology proposed by Boulanger and Idriss (2014). We calculated “free-field”

liquefaction-induced settlements of these layers and then modified the settlements using the methodology proposed by Çetin et al. (2009) to account for the depth of the liquefiable layers.

Our analyses were performed using an assumed high groundwater depth of five feet below existing grades for the “during earthquake” groundwater level. In accordance with the 2019 CBC, we used a peak ground acceleration of 0.70 times gravity (g) in our liquefaction evaluation; this peak ground acceleration is consistent with the Maximum Considered Earthquake Geometric Mean ( $MCE_G$ ) peak ground acceleration adjusted for site effects ( $PG_{AM}$ ). We also used a moment magnitude 8.04 earthquake, which is consistent with the characteristic moment magnitude for the San Andreas Fault, as presented in Table 1.

Most of the soils at the site are sufficiently cohesive and/or dense to resist liquefaction; however, several layers of potentially liquefiable material were encountered in the CPTs below a depth of 13 feet bgs. The layers consist of loose to medium dense sand to silty sand/sandy silt that are discontinuous and vary in thickness from about 6 inches to 5 feet. We estimate total ground surface settlement associated with liquefaction (referred to as post-liquefaction reconsolidation) following a major earthquake on a nearby fault will be up to 1-1/2 inches, with differential settlement of up to 3/4 inch over a horizontal distance of 30 feet.

Ishihara (1985) presented an empirical relationship that provides criteria used to evaluate whether liquefaction-induced ground failure, such as sand boils, would be expected to occur under a given level of shaking for a liquefiable layer of given thickness overlain by a resistant, or protective, surficial layer. We conclude the non-liquefiable soil overlying the potentially liquefiable soil layers is sufficiently thick such that the potential for liquefaction-induced ground failure at the ground surface is low.

Considering the potentially liquefiable layers are not continuous, we conclude the risk of lateral spreading is nil.

### **5.2.3 Cyclic Densification**

Cyclic densification (also referred to as differential compaction) of non-saturated sand (sand above groundwater table) can occur during an earthquake, resulting in settlement of the ground surface and overlying improvements. The soil above the groundwater at the site primarily consists of fine-grained deposits that are sufficiently cohesive or coarse-grained deposits that are sufficiently dense, such that they are not susceptible to cyclic densification. Therefore, we conclude the potential for cyclic densification to impact the proposed development is very low.

### **5.2.4 Ground Surface Fault Rupture**

Historically, ground surface displacements closely follow the trace of geologically young faults. The site is not within an Earthquake Fault Zone, as defined by the Alquist-Priolo Earthquake Fault Zoning Act, and no known active or potentially active faults exist on the site. We therefore conclude the risk of fault offset at the site from a known active fault is very low. In a seismically active area, the remote possibility exists for future faulting in areas where no faults previously existed; however, we conclude the risk of surface faulting and consequent secondary ground failure from previously unknown faults is also very low.

## **6.0 DISCUSSION AND CONCLUSIONS**

Based on the results of our engineering analyses using the subsurface data collected from our field investigation and laboratory testing, we conclude the site may be developed as proposed provided the geotechnical issues discussed below are properly addressed. The primary geotechnical issues to be addressed are: (1) foundation settlement due to compression of the underlying clay soils, (2) potentially liquifiable soil layers underlying the site that can result in liquefaction-induced settlement following a major earthquake, and (3) the presence of highly expansive near-surface soil. These and other geotechnical issues as they pertain to the proposed development are discussed in this section.

## **6.1 Expansive Soil**

An Atterberg limits test performed on a sample of the near-surface clay indicates it is highly expansive. Highly expansive near-surface soil is subject to volume changes during seasonal fluctuations in moisture content. These volume changes can cause movement and cracking of foundations, slabs, and pavements. Therefore, foundations and slabs should be designed and constructed to mitigate the adverse effects of the expansive clay. These effects can be mitigated by moisture-conditioning the expansive soil below slabs, providing non-expansive soil below slabs, and either supporting foundations below the zone of severe moisture change or providing a stiff, shallow foundation that can limit deformation of the superstructure as the underlying soil shrinks and swells.

## **6.2 Foundation Support and Settlement**

The highly expansive near-surface clay is subject to large volume changes during seasonal fluctuations in moisture content. Shrinking and swelling associated with these volume changes can cause cracking of foundations and slabs if not properly addressed during design and construction. The potential adverse effects of the highly expansive soil can be mitigated by moisture conditioning the expansive soil, providing select, non-expansive fill or lime-treated soil below interior and exterior slabs, and either supporting foundations below the zone of severe moisture change or providing a stiff, shallow foundation that can limit deformation of the superstructure as the underlying soil shrinks and swells.

Foundation alternatives for sites underlain by highly expansive clay include deepened spread footings, stiffened shallow foundations such as conventionally reinforced concrete mats or post-tensioned slabs-on-grade (P-T slabs), and deep foundations. We judge that the anticipated total and differential settlements due to a combination of static foundation loads and post-liquefaction reconsolidation will exceed the typical tolerance of a conventional spread footing foundation system. Therefore, we judge conventional spread footings are not appropriate for support of the proposed building. Based on our experience with similar structures and soil conditions, we conclude the most appropriate foundation type for the proposed building would consist of a

conventionally reinforced concrete mat foundation, provided the estimated static and liquefaction-induced settlements are acceptable to the project team. Recommendations for design of a mat foundation are presented in Section 7.3 below.

We estimate total settlement of the proposed building supported on a properly designed mat slab under static loading will be on the order of 1 to 1-1/2 inches and differential settlement will be on the order of 3/4 inch in 30 feet. As discussed in Section 5.2.3, we estimate additional total and differential settlement as a result of post-liquefaction reconsolidation during an MCE event could be up to 1-1/2 and 3/4 inches across a horizontal distance of 30 feet, respectively.

### **6.3 Construction Considerations**

The soil to be excavated generally consists of clay which can be excavated with conventional earth-moving equipment such as loaders and backhoes. If site grading is performed during the rainy season, the near-surface clay will likely be wet and will have to be dried before compaction can be achieved. Heavy rubber-tired equipment, such as scrapers and vibratory rollers, could cause excessive deflection (pumping) of the wet clay and, therefore, should be avoided. If the project schedule or weather conditions do not permit sufficient time for drying of the soil by aeration, the subgrade can be treated with lime prior to compaction or imported granular fill can be used. The appropriate amount of lime should be determined during construction based on a visual examination and, if necessary, laboratory testing of the soil to be treated. It is also important that the moisture content of the subgrade soil is sufficiently high to reduce the expansion potential. If the grading work is performed during the dry season, moisture-conditioning may be required.

Excavations that will be deeper than five feet and will be entered by workers should be sloped or shored in accordance with CAL-OSHA standards (29 CFR Part 1926). The contractor should be responsible for the construction and safety of temporary slopes.

## 6.4 Soil Corrosivity

Corrosivity tests were performed by Project X Corrosion Engineering of Murrieta, California on two soil samples obtained from soil borings at depths of 2-3/4 and 5-1/2 feet bgs. The corrosivity test results are presented in Appendix B of this report.

The resistivity test results (938 and 1,541 ohm-cm) indicate the near-surface soil is “highly to extremely corrosive<sup>6</sup>” to buried metallic structures, which is typical of clayey soils. Accordingly, buried iron, steel, cast iron, ductile iron, galvanized steel and dielectric-coated steel or iron may need to be protected against corrosion depending upon the critical nature of the structure. If it is necessary to have metal in contact with soil, a corrosion engineer should be consulted to provide recommendations for corrosion protection.

The chloride ion concentrations (5.6 and 11.8 mg/kg) indicate the chlorides in the soil do not pose a threat to buried metallic structures and reinforcing steel in concrete structures below ground. The results of the pH tests indicate the near-surface soil has a pH of 8.2 and 8.6, which should not have an adverse effect on buried concrete or steel; however, it may be corrosive to buried copper and aluminum. The results also indicate the sulfate ion concentrations (11.0 and 37.0 mg/kg) are sufficiently low such that sulfates do not to pose a threat to buried concrete.

## 7.0 RECOMMENDATIONS

Our recommendations for site preparation and grading, design of foundations, seismic design, and other geotechnical aspects of the project are presented in this section.

### 7.1 Site Preparation and Grading

Site clearing should include the removal of all existing underground utilities and buried foundations. In general, abandoned underground utilities should be removed to the property line or service connections and properly capped or plugged with concrete. Where existing utility lines

---

<sup>6</sup> Roberge, Pierre R. (2018). Corrosion Basics, an Introduction, Third Edition. NACE International, P. 189.

are outside of the proposed building footprint and will not interfere with the proposed construction, they may be abandoned in-place provided the lines are filled with lean concrete or cement grout to the property line. It may be feasible to abandon small-diameter utility lines below the mat foundation; however, these should be evaluated on a case-by-case basis. Voids resulting from demolition activities should be properly backfilled with compacted fill following the recommendations provided later in this section.

The near-surface clay at the site is highly expansive. To mitigate the detrimental effects of expansive near-surface clay, exterior concrete flatwork should be underlain by at least eight inches of select fill compacted per requirements in Table 2. At a minimum, the upper four inches of the select fill should consist of Class 2 aggregate base (AB). The soil subgrade beneath proposed improvements or areas for new fill should be scarified to a depth of at least 12 inches, moisture-conditioned to at least four percent above optimum moisture content and compacted to between 88 and 92 percent relative compaction<sup>7</sup>.

On-site soil may be used as general fill, provided the material is free of organic matter, contain no rocks or lumps larger than three inches in greatest dimension, and be approved by the Geotechnical Engineer. If material to be used as fill is imported to the site, it should meet the requirements for select fill provided below in Section 7.1.2. A summary of the compaction recommendations for the various types of fill that may be used at the site is presented in Table 2.

---

<sup>7</sup> Relative compaction refers to the in-place dry density of soil expressed as a percentage of the maximum dry density of the same material, as determined by the ASTM D1557-09 laboratory compaction procedure.

**TABLE 2**  
**Summary of Compaction Recommendations**

<b>Location</b>	<b>Recommended Relative Compaction (percent)</b>	<b>Moisture Recommendation</b>
Building pad subgrade – native high-plasticity clay	88 – 92	4+% above optimum
General fill – lime-treated clay and low-plasticity on-site and imported	90+	Above optimum
General fill – native high-plasticity clay	88 – 92	4+% above optimum
Utility trench backfill – native high-plasticity clay	88 – 92	4+% above optimum
Utility trench backfill – low-plasticity	90+	Above optimum
Utility trench - clean sand or gravel	95+	Near optimum
Pavement subgrade – native high-plasticity clay	90+	2+% above optimum
Pavement subgrade – low-plasticity soil or lime-treated clay	95+	Above optimum
Pavement – Class 2 AB	95+	Near optimum
Exterior slabs – native high-plasticity clay	88 – 93	4+% above optimum
Exterior slabs – low-plasticity	90+	Above optimum
Exterior slabs – select fill/Class 2 AB	90+	Above optimum

Where the above recommended compaction requirements conflict with the City of Menlo Park standard details for pavements and sidewalks within the public right-of-way, the City Engineer or inspector should determine which compaction requirements should take precedence.

**7.1.1 Soil Subgrade Stabilization**

In some areas, soft, wet soil may be exposed during grading, causing the subgrade to deflect and rut under the weight of grading equipment. Although, the majority of the soil beneath the site consists of stiff to very stiff clay, if heavy wheeled equipment is used during the rainy season,

these materials may become disturbed and soften. In these areas, some form of subgrade stabilization may be required if disturbance occurs. Several options for stabilizing subgrade are presented below.

### Aeration

Aeration consists of mixing and turning the soil to naturally lower the moisture content to an acceptable level. Aeration typically requires several days to a week of warm, dry weather to effectively dry the material. Material to be dried by aeration should be scarified to a depth of at least 12 inches; the scarified material should be turned at least twice a day to promote uniform drying. Once the moisture content of the aerated soil has been reduced to acceptable levels, the soil should be compacted in accordance with our previous recommendations. Aeration is typically the least costly subgrade stabilization alternative; however, it generally requires the most time to complete and may not be effective if the soft material extends to great depths. Aeration will likely not be effective if the building subgrade extends below or near the groundwater table; however, it depends on the time of year construction is performed.

### Overexcavation

Another method of achieving suitable subgrade in areas where soft, wet soil is exposed is to overexcavate the soft subgrade soil and replace it with drier, granular material. If the soft material extends to great depths, the upper 18 to 24 inches of soft material may be overexcavated and a geotextile tensile fabric (Mirafi 500X or equivalent) placed beneath the granular backfill to help span over the weaker material. The fabric should be pulled tight and placed at the base of the overexcavation, extending at least two feet laterally beyond the limits of the overexcavation in all directions. The fabric should be overlapped by at least two feet at all seams. Granular material such as Class 2 AB should then be placed and compacted over the geotextile tensile fabric.

Where very soft subgrade conditions are encountered, a bi-directional geogrid, such as Tensar TriAx TX-140 or equivalent, may be required in lieu of tensile fabric. Where geogrids are used, the depth of overexcavation will likely be on the order of 12 to 18 inches. The geogrids should

be overlapped by at least two feet and tied with hog rings or nylon ties at a spacing not to exceed 10 feet. The geogrids should be covered with a well-graded granular fill such as Class 2 AB; open-graded rock should not be used. All backfill placed over the geogrid should be compacted in accordance with our previous recommendations.

### Chemical Treatment

Lime and/or cement have been successfully used to dry and stabilize fine-grained soils with varying degrees of success. Lime- and/or cement-treatment will generally decrease soil density, change its plasticity properties, and increase its strength. The degree to which lime will react with soil depends on variables such as type of soil, mineralogy, quantity of lime, and length of time the lime-soil mixture is cured. Cement is generally used when a significant amount of granular material or low-plasticity silt is present in the soil. The quantity of lime and/or cement added generally ranges from 3 to 7 percent by weight and should be determined by laboratory testing. The specialty contractor performing the chemical treatment should select the most appropriate additive and quantity for the soil conditions encountered.

Lime treatment of fine-grained soils generally includes site preparation, application of lime, mixing, compaction, and curing of the lime-treated soil. Field quality control measures should include checking the depth of lime treatment, degree of pulverization, lime spread rate measurement, lime content measurement, moisture content and density measurements, and mixing efficiency.

The lime treatment process should be designed by a contractor specializing in its use and who is experienced in the application of lime in similar soil conditions. Based on our experience with lime treatment, we judge that the specialty contractor should be able to treat the highly expansive on-site material to produce a non-expansive fill for building pad subgrades and, if desired, for exterior flatwork and pavement subgrades. For planning purposes, we recommend assuming the lime treatment will consist of five percent Dolomitic Quicklime by dry weight of soil. The dry weight of soil should be assumed to be 105 pounds per cubic foot (pcf) for calculating lime quantities. The specialty contractor should: 1) perform a lime demand test prior to treatment to

determine the percentage of Quicklime required to achieve a pH of 12.4 or higher in the treated soil, 2) perform an Atterberg limits test to confirm the proposed percentage of Quicklime will reduce the plasticity index of the treated soil to 15 or less, and 3) prepare a lime treatment procedure for our review prior to construction.

### **7.1.2 Select Fill**

Select fill should consist of imported soil that is free of organic matter, contain no rocks or lumps larger than three inches in greatest dimension, have a liquid limit less than 40 and plasticity index less than 15, and be approved by the Geotechnical Engineer. Select fill should be placed in lifts not exceeding eight inches in loose thickness, moisture-conditioned to above optimum moisture content, and compacted to at least 90 percent relative compaction beneath concrete flatwork and sidewalks. Beneath vehicular pavements, the select fill should be compacted to at least 95 percent relative compaction. Samples of proposed select fill material should be submitted to the Geotechnical Engineer at least three business days prior to use at the site.

The grading contractor should provide analytical test results or other suitable environmental documentation indicating the imported fill is free of hazardous materials at least three days before use at the site. If this data is not provided, a minimum of two weeks will be required to perform any necessary analytical testing.

### **7.1.3 Exterior Flatwork Subgrade Preparation**

Exterior flatwork and sidewalks should be at least four inches thick and reinforced with No. 3 bars at 18 inches on center. We recommend at least eight inches of select fill be placed beneath proposed exterior concrete flatwork, including patio slabs and sidewalks; the select fill should extend at least six inches beyond the slab edges where the flatwork is adjacent to landscaping. At a minimum, the upper four inches of the select fill should consist of Class 2 AB. Select fill and AB beneath exterior slabs-on-grade, such as patios and sidewalks, should be moisture-conditioned and compacted in accordance with the requirements provided above in Table 2.

Even with eight inches of select fill, exterior slabs may experience some cracking due to shrinking and swelling of the underlying expansive soil. Thickening the slab edges and adding additional reinforcement will control this cracking to some degree. In addition, where slabs provide access to buildings, it would be prudent to dowel the entrance to the building to permit rotation of the slab as the exterior ground shrinks and swells and to prevent a vertical offset at the entries.

#### **7.1.4 Utility Trench Backfill**

Excavations for utility trenches can be readily made with a backhoe. All trenches should conform to the current CAL-OSHA requirements. To provide uniform support, pipes or conduits should be bedded on a minimum of four inches of sand or fine gravel. After the pipes and conduits are tested, inspected (if required) and approved, they should be covered to a depth of six inches with sand or fine gravel, which should be mechanically tamped. Backfill for utility trenches and other excavations is also considered fill, and should be placed and compacted in accordance with the recommendations previously presented. If imported clean sand or gravel (defined as soil with less than 10 percent fines) is used as backfill, it should be compacted to at least 95 percent relative compaction. Jetting of trench backfill should not be permitted. Special care should be taken when backfilling utility trenches in pavement areas. Poor compaction may cause excessive settlements, resulting in damage to the pavement section.

Foundations for the proposed building should be bottomed below an imaginary line extending up at a 1.5:1 (horizontal to vertical) inclination from the base of utility trenches that run parallel to the edge of the foundation. Alternatively, the portion of the utility trench (excluding bedding) that is below the 1.5:1 line can be backfilled with controlled low-strength material (CLSM) with a 28-day unconfined compressive strength of at least 100 pounds per square inch (psi) or Class 2 AB compacted to at least 95 percent relative compaction.

Where utility trenches enter the building pad, an impermeable plug consisting of CLSM, at least three feet in length, should be installed where the trenches enter the building footprint (see Figure 6). Furthermore, where sand- or gravel-backfilled trenches cross planter areas and pass

below asphalt or concrete pavements, a similar plug should be placed at the edge of the pavement. The purpose of these recommendations is to reduce the potential for water to become trapped in trenches beneath the building or pavements. This trapped water can cause heaving of soils beneath slabs and softening of subgrade soil beneath pavements.

## **7.2 Surface Drainage and Landscaping**

### **7.2.1 Surface Drainage**

Positive surface drainage should be provided around the building to direct surface water away from the foundations. To reduce the potential for water ponding adjacent to the building, we recommend the ground surface within a horizontal distance of five feet from the building slope down away from the building with a surface gradient of at least two percent in unpaved areas and one percent in paved areas. In addition, roof downspouts should be discharged into controlled drainage facilities to keep the water away from the foundations. The use of water-intensive landscaping around the perimeter of the building should be avoided to reduce the amount of water introduced to the expansive clay subgrade.

Care should be taken to minimize the potential for subsurface water to collect beneath flatwork and pavements. Where landscape beds and tree wells are immediately adjacent to pavements and flatwork that are not designed as permeable systems, we recommend vertical cutoff barriers be incorporated into the design to prevent irrigation water from saturating the subgrade and AB. These barriers may consist of either flexible impermeable membranes or deepened concrete curbs.

### **7.2.2 Landscaping**

Storm water treatment systems (infiltration basins, rain gardens, bio-retention systems, vegetated swales, flow-through planters, etc.), if constructed at the site, should be provided with underdrains, as well as impermeable liners. Due to the low permeability and expansion potential of the near-surface soil, these systems should be designed for no exfiltration into the subgrade soil. The drainage layer beneath the “treatment” soil should consist of a minimum 12-inch-thick layer

of Caltrans Class 2 Permeable drainage material and include a minimum 6-inch-diameter perforated drain pipe with perforations facing downward. An impermeable liner consisting of a high-density polyethylene membrane (or equivalent) that is at least 10 mils thick should line the entire bottom and sides of the system.

Prior experience and industry literature indicate that some species of high water-demand<sup>8</sup> trees can induce ground-surface settlement by drawing water from the expansive clay, causing it to shrink. Where these types of trees are planted near buildings, the ground-surface settlement may result in damage to structure. This problem usually occurs 10 or more years after planting, as the trees reach mature height. To reduce the risk of tree-induced, building settlement, we recommend trees of the following genera not be planted within 25 feet of the proposed buildings unless adequate deep irrigation is provided at the tree locations: Eucalyptus, Populus, Quercus, Crataegus, Salix, Sorbus (simple-leafed), Ulmus, Cupressus, Chamaecyparis, and Cupressocyparis. Because this is a limited list and does not include all genera that may induce ground-surface settlement, a tree specialist should be consulted prior to selection of trees to be planted at the site.

### **7.3 Mat Foundation**

Provided the estimated settlements presented in Section 6.2 are acceptable from a structural and architectural standpoint, the proposed building may be supported on a mat foundation. If portions of the mat foundation will be constructed below the design groundwater level, such as the elevator pit foundation, the mat should be underlain by waterproofing and designed to resist hydrostatic uplift pressures.

For mat design, we recommend using a modulus of subgrade reaction of 15 pounds per cubic inch (pci) for dead-plus-live load conditions; this value has been reduced to account for the size of the mat/equivalent footings (therefore, this is not  $k_{v1}$  for 1-foot-square plate) and may be

---

<sup>8</sup> “Water-demand” refers to the ability of the tree to withdraw large amounts of water from the soil subgrade, rather than soil suction exerted by the root system.

increased by 50 percent for total load conditions. Once the structural engineer estimates the distribution of bearing stress on the bottom of the mat, we should review the distribution and revise the modulus of subgrade reaction, if appropriate.

The edges of the mat should be thickened such that the foundation edge is bottomed at least one foot below the adjacent exterior finished grade. Where the mat is constructed near a bioswale or other stormwater treatment area, the edge of the mat should be founded below an imaginary line extending up at an inclination of 1.5:1 (horizontal:vertical) from the base of the bioswale/treatment area. We expect the average bearing stress under the mat to be relatively low; however, concentrated stresses will occur at column locations and at the edges of the mat. The mat should be designed to impose a maximum dead-plus-live bearing pressure of 3,000 pounds per square foot (psf) on the foundation subgrade soil for dead-plus-live load conditions; this pressure may be increased by one-third for total load conditions. The allowable bearing pressures recommended for dead-plus-live and total load conditions include factors of safety of at least 2.0 and 1.5, respectively.

Lateral loads may be resisted by a combination of passive pressure on the vertical faces of the mat and friction between the bottoms of the mat and the supporting soil. To compute passive resistance, we recommend using an allowable uniform pressure of 1,500 psf for transient load conditions and an equivalent fluid weight of 240 pounds per cubic foot (pcf) for sustained load conditions. The upper foot of soil should be ignored unless confined by a slab or pavement. Frictional resistance should be computed using a base friction coefficient of 0.30 where the mat is in contact with the soil. Where a vapor retarder is placed beneath the mat, a base friction coefficient of 0.20 should be used. The passive pressure and frictional resistance values include a factor of safety of at least 1.5 and may be used in combination without further reduction.

To reduce water vapor transmission through the mat foundation, we recommend a vapor retarder be placed between the bottom of the mat and the underlying subgrade soil in areas where water vapor transmission through the mat would be detrimental. The vapor retarder should be at least 15 mils thick and meet the requirements for Class A vapor retarders stated in ASTM E1745. The vapor retarder should be placed in accordance with the requirements of ASTM E1643. These

requirements include overlapping seams by six inches, taping seams, and sealing penetrations in the vapor retarder. Concrete can be placed directly on the vapor retarder provided the water/cement (w/c) ratio of the concrete does not exceed 0.45 and water is not added in the field. If necessary, workability may be increased by adding plasticizers. In addition, the concrete for the mat should be properly cured. Before floor coverings are placed over the mat, the contractor should check that the concrete surface and the moisture emission levels (if emission testing is required) meet the manufacturer's requirements.

Recommendations for preparation of the mat subgrade are presented in Section 7.1. The mat subgrade should consist of properly moisture-conditioned and compacted native clay and/or engineered fill and should be free of standing water, debris, and disturbed materials prior to placing the vapor retarder or waterproofing. If loose soil is encountered at mat subgrade elevation, the soil should be removed and the overexcavation should be backfilled with engineered fill or CLSM with minimum 28-day unconfined compressive strength of 50 pounds per square inch (psi). It is critical the mat subgrade be kept moist and free of shrinkage cracks until the vapor retarder is placed. If the mat subgrade dries during installation of utilities, it should be re-scarified and moisture-conditioned to meet the recommendations in Table 2 prior to placement of the vapor retarder. If the mat will be constructed during the rainy season, we recommend a three-inch-thick unreinforced concrete "rat" slab be placed on the prepared subgrade to prevent it from softening if exposed to rain. We should check the foundation subgrade prior to placement of the vapor retarder.

#### **7.4 Retaining Walls**

Retaining walls should be designed to resist static lateral earth pressures, lateral pressures caused by earthquakes, vehicular surcharge pressures, and surcharges from adjacent foundations, where appropriate. We recommend retaining walls that are restrained from movement at the top and/or sides, such as elevator pit walls, be designed for the more critical of the following criteria:

- At-rest equivalent fluid weight of 73 pcf above the design groundwater table and 97 pcf below.

- Active pressure of 27 pcf plus a seismic increment of 19 pcf (triangular distribution) above the design groundwater level, and 87 pcf plus a seismic increment of 9 pcf (triangular distribution) below the groundwater level.

The recommended lateral earth pressures above are based on a level backfill condition with no additional surcharge loads. Where the below-grade wall is subject to traffic loading within 10 feet of the wall, an additional uniform lateral pressure of 50 psf, applied to the upper 10 feet of the wall, should be used.

To protect against moisture migration, below-grade walls should be waterproofed and water stops should be placed at all construction joints. The design pressures above assume site retaining walls and the portion of below-grade walls above the design groundwater table are fully drained to prevent accumulation of water behind the walls from rainfall, irrigation, broken water lines, etc. One acceptable method for backdraining a retaining wall is to place a prefabricated drainage panel against the back of the wall. The drainage panel should extend down to a perforated PVC collector pipe at the design high groundwater level (or higher if confirmed acceptable by the Structural Engineer). The pipe should be surrounded on all sides by at least four inches of Caltrans Class 2 permeable material or 3/4-inch drain rock wrapped in filter fabric (Mirafi NC or equivalent). The pipe should be connected to a suitable discharge point; a sump and pump system may be required to drain the collector pipes. In lieu of installing a backdrain behind below-grade walls, the walls may be designed using the undrained lateral earth pressure acting over the entire height of the wall.

If backfill is required behind below-grade walls prior to pouring the building slabs, the walls should be braced, or hand compaction equipment used, to prevent unacceptable surcharges on walls (as determined by the Structural Engineer).

## 7.5 Pavement Design

Design recommendations for asphalt and Portland cement concrete pavements are presented in the following sections. Because of the near-surface soil in highly expansive, permeable pavements are not recommended at this site because of the potential for distress of pavements and surrounding improvements due to wetting-induced heave of the soil.

### 7.5.1 Flexible (Asphalt Concrete) Pavement Design

The State of California flexible pavement design method was used to develop the recommended asphalt concrete (AC) pavement sections. On the basis of our experience, we selected an R-value of 5, which is appropriate for highly expansive clay soils. Recommended pavement sections for traffic indices (TIs) ranging from 4.5 to 6.5 are presented in Table 3. The project Civil Engineer for the project should check that the TIs presented in this report are appropriate for the intended use. We can provide additional pavement sections for different TIs upon request.

**TABLE 3**  
**Asphalt Concrete Pavement Sections**

TI	Asphaltic Concrete (inches)	Class 2 AB R = 78 (inches)
4.5	2.5	9.5
5.0	3.0	10.0
5.5	3.0	12.0
6.0	3.5	13.0
6.5	4.0	13.5

The upper 12 inches of the subgrade should be moisture-conditioned and compacted in accordance with requirements presented in Section 7.1 and be non-yielding. The AB should be moisture-conditioned to near optimum and compacted to at least 95 percent relative compaction and be non-yielding.

If pavements are adjacent to irrigated landscaped areas (including infiltration basins), curbs adjacent to those areas should extend through the AB and at least three inches into the underlying soil to reduce the potential for irrigation water to infiltrate into the pavement section. If drip irrigation is used in the landscaping adjacent to the pavement, however, deepening of the curbs is not required.

### **7.5.2 Rigid (Portland-Cement Concrete) Pavement**

Concrete pavement design is based on a maximum single-axle load of 20,000 pounds, a maximum tandem axle load of 32,000 pounds, and light truck traffic (i.e., a few trucks per week). The recommended rigid pavement section for these axle loads is six inches of Portland cement concrete over six inches of Class 2 AB. Where fire truck traffic is expected, the pavement section should consist of 6.5 inches of Portland cement concrete over six inches of Class 2 AB. Where only passenger cars or light trucks will use the pavement, the recommended minimum pavement section is five inches of Portland cement concrete over six inches of Class 2 AB.

The modulus of rupture of the concrete should be at least 500 psi at 28 days. Contraction joints should be constructed at maximum spacing of 12.5 and 15 feet for 5 inch, 6-inch, and 6.5-inch-thick pavement sections, respectively. Where the outer edge of a concrete pavement meets asphalt concrete pavement, the concrete slab should be thickened by 50 percent at a taper not to exceed a slope of 1 in 10. For areas that will receive moderate truck traffic, such as weekly garbage truck traffic, we recommend the slab be reinforced with a minimum of No. 4 bars at 16-inch spacing in both directions. Recommendations for subgrade preparation and AB compaction for concrete pavement are the same as those we have described above for asphalt concrete pavement.

## **7.6 Pavers**

Recommendations for non-permeable and permeable pavers, as well as grass pavers are presented in the following sections. The recommendations below may also be used for cast-in-place permeable concrete pavements.

### 7.6.1 Non-Permeable Concrete Pavers

Non-permeable concrete pavers for pedestrian traffic should be underlain by at least four inches of Class 2 AB compacted to at least 90 percent relative compaction. The soil subgrade beneath the AB should be scarified to a depth of at least eight inches, moisture-conditioned, and compacted in accordance with the recommendations presented in Section 7.1.

Where non-permeable concrete pavers will be subject to vehicular traffic, we recommend they consist of fully dentated, interlocking shapes and be at least 80 millimeters (3.15 inches) thick. The pavers should be placed on a 1- to 2-inch-thick sand leveling course underlain by Class 2 AB. The thickness of the Class 2 AB beneath non-permeable pavers subject to vehicular traffic should be consistent with the sections presented for asphalt pavement in Section 7.5.1 for the applicable TI. The subgrade and AB should be compacted in accordance with the recommendations for AC pavement in Section 7.5.1.

### 7.7 Seismic Design

The results of CPT-3 indicate the shear wave velocity for the upper 100 feet of soil ( $V_{s30}$ ) at the site is about 760 feet per second. As discussed in Section 5.2.2, thin layers of potentially liquefiable soil were encountered beneath the site. The 2019 CBC calls for a Site Class F designation for sites underlain by potentially liquefiable soil; however, we judge that these layers are relatively thin and discontinuous and conclude that the soil at the site will not incur significant non-linear behavior. Therefore, we conclude a Site Class D designation is appropriate for seismic design.

The latitude and longitude of the site are  $37.4837^\circ$  and  $-122.1771^\circ$ , respectively. Hence, in accordance with the 2019 CBC, we recommend the following:

- Site Class D (stiff soil)
- $S_s = 1.5g$ ,  $S_1 = 0.6g$

The 2019 CBC is based on the guidelines contained within ASCE 7-16 which stipulates that where  $S_1$  is greater than 0.2 times gravity (g) for Site Class D, a ground motion hazard analysis is

needed unless the seismic response coefficient ( $C_s$ ) value will be calculated as outlined in Section 11.4.8, Exception 2. Assuming the  $C_s$  value will be calculated as outlined in Section 11.4.8, Exception 2, we recommend the following seismic design parameters:

- $F_a = 1.0$ ,  $F_v = 1.7$
- $S_{MS} = 1.5g$ ,  $S_{M1} = 1.02g$
- $S_{DS} = 1.0g$ ,  $S_{D1} = 0.68g$
- Seismic Design Category D for Risk Factors I, II, and III.

## **8.0 GEOTECHNICAL SERVICES DURING CONSTRUCTION**

Prior to construction, Rockridge Geotechnical should review the project plans and specifications to verify that they conform to the intent of our recommendations. During construction, our field engineer should provide on-site observation and testing during placement and compaction of fill, grading, and installation of foundations. These observations will allow us to compare actual with anticipated soil conditions and to verify that the contractor's work conforms to the geotechnical aspects of the plans and specifications.

## **9.0 LIMITATIONS**

This geotechnical investigation has been conducted in accordance with the standard of care commonly used as state-of-practice in the profession. No other warranties are either expressed or implied. The recommendations made in this report are based on the assumption that the subsurface conditions do not deviate appreciably from those disclosed in the exploratory boring and CPTs. If any variations or undesirable conditions are encountered during construction, we should be notified so that additional recommendations can be made. The foundation recommendations presented in this report are developed exclusively for the proposed development described in this report and are not valid for other locations and construction in the project vicinity.

Boring terminated at a depth of 91 feet below ground surface.  
Boring backfilled with cement grout.  
Groundwater encountered at a depth of 11 feet during drilling.

<sup>1</sup> MC and SPT blow counts for the last two increments were converted to SPT N-Values using factors of 0.84 and 1.44, respectively, to account for sampler type and hammer energy.

Project No.: 22-2153

## UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions	Symbols	Typical Names
<b>Coarse-Grained Soils</b> (more than half of soil > no. 200 sieve size)	Gravels (More than half of coarse fraction > no. 4 sieve size)	<b>GW</b> Well-graded gravels or gravel-sand mixtures, little or no fines
		<b>GP</b> Poorly-graded gravels or gravel-sand mixtures, little or no fines
		<b>GM</b> Silty gravels, gravel-sand-silt mixtures
		<b>GC</b> Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	<b>SW</b> Well-graded sands or gravelly sands, little or no fines
		<b>SP</b> Poorly-graded sands or gravelly sands, little or no fines
		<b>SM</b> Silty sands, sand-silt mixtures
		<b>SC</b> Clayey sands, sand-clay mixtures
<b>Fine-Grained Soils</b> (more than half of soil < no. 200 sieve size)	Silts and Clays LL = < 50	<b>ML</b> Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		<b>CL</b> Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		<b>OL</b> Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	<b>MH</b> Inorganic silts of high plasticity
		<b>CH</b> Inorganic clays of high plasticity, fat clays
		<b>OH</b> Organic silts and clays of high plasticity
<b>Highly Organic Soils</b>	<b>PT</b>	Peat and other highly organic soils

### GRAIN SIZE CHART

Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel coarse fine	3" to No. 4	76.2 to 4.76
	3" to 3/4"	76.2 to 19.1
	3/4" to No. 4	19.1 to 4.76
Sand coarse medium fine	No. 4 to No. 200	4.76 to 0.075
	No. 4 to No. 10	4.76 to 2.00
	No. 10 to No. 40	2.00 to 0.420
	No. 40 to No. 200	0.420 to 0.075
Silt and Clay	Below No. 200	Below 0.075

### SAMPLE DESIGNATIONS/SYMBOLS

	Sample taken with California or Modified California split-barrel sampler. Darkened area indicates soil recovered
	Classification sample taken with Standard Penetration Test sampler

## Sign-off Sheet and Signatures of Environmental Professionals

This document entitled Phase I Environment Site Assessment was prepared by Stantec Consulting Services Inc. ("Stantec") for the account of 3705 Haven LLC (the "Client"). The conclusions in the Report are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec can neither warrant nor guarantee that information received from the "Client" and third parties in the preparation of the Report is correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client (the Master Services Agreement, or "MSA"). While the Report may be provided to applicable authorities having jurisdiction and others for whom the Client is responsible, Stantec does not warrant the services to any third party. The report may not be relied upon by any other party without the express written consent of Stantec, which may be withheld at Stantec's discretion.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of Title 40 of the Code of Federal Regulations, Part 312, (40 CFR 312). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

## 1.0 EXECUTIVE SUMMARY

Stantec Consulting Services Inc. (Stantec) has completed a Phase I Environmental Site Assessment (ESA) report of the property located at 3705 Haven Avenue in Menlo Park, California (the “Subject Property”), on behalf of 3705 Haven LLC (the “Client”). The work was performed according to Stantec’s proposal and terms, and conditions dated January 9, 2023, and accepted by the Client on January 11, 2023. 3705 Haven LLC (the “User”) has been designated as the User of this report. The intended use of this Phase I ESA is for due diligence in support of redevelopment.

The Phase I ESA was conducted in conformance with the requirements of ASTM International (ASTM) Designation E1527-13 and the draft version of E1527-21, and All Appropriate Inquiries (AAI) as defined by the United States Environmental Protection Agency (EPA) in Title 40 of the Code of Federal Regulations, Part 312 (40 CFR 312), except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM or AAI practice are described in Section 2.3.

The Subject Property is approximately 0.66 acres of land and is identified by Assessor’s Parcel Number (APN): 055-170-240, located at 3705 Haven Avenue, Menlo Park, San Mateo County, California. According to records obtained through Environmental Data Resources (EDR), the Subject Property was vacant until the 1960s, when it was developed with its present-day, single-story commercial building. The Subject Property currently operates as several commercial businesses. The surrounding vicinity is largely commercial/industrial. A Subject Property Location Map is provided as Figure 1. A Subject Property Vicinity Map illustrating the main features of the Subject Property and vicinity is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

The Subject Property is listed in the State Water Resources Control Board (SWRCB) Geotracker database as a leaking underground storage tank (LUST) cleanup site with an open case status. The Subject Property, as well as 3715 and 3723 Haven Avenue, were formerly operated by the Siltec Corporation from 1970 to 1989. This facility reportedly manufactured polished silicon wafers. Chlorinated solvents were used in the process and were found to have impacted soil and groundwater beneath the Subject Property. By the late 1990s, volatile organic compounds (VOCs) were detected in soil and groundwater. It is reported that the VOC-impacted soil was excavated and removed from the Subject Property, and monitoring wells were installed on-site. In the reports reviewed indicate that between 1999 and 2001, approximately 3,530 tons of VOC impacted soil was excavated and disposed of offsite, clean soil was used to backfill the excavations created by this removal action, and the area was paved to create a parking lot. A risk-management plan (RMP) was prepared in 1999, which contained construction and post-construction protocols for future contractors and owners/lessees of the Subject Property. Groundwater monitoring occurred semi-annually on the Subject Property between 2002 and 2008.

A covenant/environmental restriction was recorded on title, based on requirements from the California Regional Water Quality Control Board (CRWQCB), which prohibited residential development of the Subject Property, and other sensitive uses (e.g., day care facilities), related to the impacts on-site. In 2014, a No Further Action letter was issued based on current commercial site use by the Regional Water

**3705 HAVEN AVENUE, MENLO PARK, CALIFORNIA 94025**  
**PHASE I ENVIRONMENTAL SITE ASSESSMENT**  
Executive Summary

Quality Control Board (RWQCB). In 2019, groundwater samples were taken at the Subject Property to assess decreases in VOC concentrations in groundwater. It is reported that trichloroethene (TCE) was detected above action levels in groundwater. Based on these detections, indoor air samples were subsequently taken, and results indicated that indoor air was not impacted by TCE or other VOCs including cis-1,2-dichloroethylene (cis-1,2-DCE) above RWQCB commercial and residential risk-based screening levels. However, tetrachloroethene (PCE) was detected in indoor air at a level that exceeded residential risk-based screening levels, despite not being detected in groundwater below the Site. PCE impacts to indoor air were reportedly likely attributed to outdoor ambient air accumulating within the building or attributed to other potential on-site sources.

In 2020, additional soil vapor samples were collected at the Site. The chemicals PCE, TCE, benzene, and chloroform were detected in concentrations exceeding residential screening levels. However, it was recommended in a 2020 sampling report, reviewed and approved by CRWQCB, that the Subject Property would be suitable for residential redevelopment with the implementation of a vapor mitigation system. In 2021, the RWQCB issued a deed variance for the Subject Property to allow for residential development, to be effectively managed by the RMP that includes vapor mitigation (vapor barriers) for future construction. The adjacent properties, 3715 (formerly 3717) and 3723 Haven Avenue, also formerly operated by Siltec, remain under the covenant restrictions due to higher contaminant levels still present onsite. The 3715 Haven Avenue building was also determined to be the source of the contaminants present at 3705 Haven Avenue (Subject Property) and the adjacent property located at 3723 Haven Avenue.

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 and E1527-13 of the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 2.3 of this report. This assessment has no evidence of recognized environmental conditions (RECs) in connection with the Subject Property, but identified the following Controlled REC (CREC):

- The open LUST case status for the adjacent properties (for which no requirements are being imposed on the Subject Property), the presence of residual VOC contaminants at the Subject Property from the off-site releases, and the adjoining off-site VOC-impacted sites (with impacts to groundwater) represent a potential vapor encroachment condition (VEC). The variance to the Land Use Covenant allows for the Subject Property to be redeveloped for residential purposes provided that a vapor mitigation system is installed. Therefore, with this control (in the form of the vapor mitigation systems), the environmental impacts described above represent a CREC. It is anticipated that any residual impacts from historical contamination can be properly managed in accordance with the RWQCB-approved RMP, which includes soil management procedures and a health and safety plan. Accordingly, Stantec recommends that redevelopment work at the Subject Property proceed in accordance with the RMP (including in regard to the soil management procedures described therein) and that future residential construction include vapor mitigation systems as required by the Land Use Covenant and Variance.

This assessment has also revealed the following non-ASTM scope environmental issues in connection with the Subject Property.

**3705 HAVEN AVENUE, MENLO PARK, CALIFORNIA 94025**

**PHASE I ENVIRONMENTAL SITE ASSESSMENT**

Executive Summary

- The Subject Property structure appears to have been constructed in the 1960s, and the presence of lead-based paint (LBP) and asbestos-containing materials (ACMs) in building materials is possible. An LBP and ACM survey is recommended prior to any renovation or demolition activities in accordance with applicable local and federal regulations.
- The Subject Property is located within a 1% Special Flood Hazard Area and Liquefaction zone. It is recommended that these be taken into account during Subject Property redevelopment.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

## 2.0 INTRODUCTION

The objective of this Phase I ESA was to perform All Appropriate Inquiries (AAI) into the past ownership and uses of the Subject Property consistent with good commercial or customary practice as outlined by ASTM International (ASTM) in “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process”, Designation E1527-21 and E1527-13. “All Appropriate Inquiries” (AAI) is the process for evaluating a property’s environmental conditions for the purpose of qualifying for landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), following final rule of Part 312 of Title 40, Code of Federal Regulations (40 CFR Part 312). The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions (“RECs”) of the Subject Property. While the AAI Rule still references the ASTM E1527-13 standard until fully accepted by the United States Environmental Protection Agency (USEPA), this report incorporates procedures as prescribed in ASTM E1527-21, which is the current published ASTM standard for Phase I ESAs.

The ASTM E1527-21 standard indicates that the goal of the Phase I ESA is to identify RECs, including historical recognized environmental conditions (“HRECs”), and controlled recognized environmental conditions (“CRECs”) that may exist at a property. The term “recognized environmental conditions” means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property:

- 1) the presence of *hazardous substances* or *petroleum products* in, on, or at the *Subject Property* due to a *release* to the *environment*;
- 2) the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *Subject Property* due to a *release* or *likely release* to the *environment*; or
- 3) the presence of *hazardous substances* or *petroleum products* in, on, or at the *Subject Property* under conditions that pose a *material threat* of a future *release* to the *environment*.

ASTM defines a “HREC” as a previous release of hazardous substances or petroleum products affecting the Subject property that has been addressed to the satisfaction of the applicable regulatory authority and meets current unrestricted use criteria established by a regulatory authority, without subjecting the property to any controls (e.g., activity and use limitations or other property use limitations). An HREC is not a REC.

ASTM defines a “CREC” as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, activity and use limitations, institutional controls, or engineering controls).

As defined by ASTM, RECs can include hazardous substances or petroleum products present under conditions in compliance with laws if that presence represents a material threat of future release. The release of hazardous substances or petroleum products is, however, not a REC if that presence is a *de*

**3705 HAVEN AVENUE, MENLO PARK, CALIFORNIA 94025**  
**PHASE I ENVIRONMENTAL SITE ASSESSMENT**

Introduction

*minimis* condition. *De minimis* conditions are minor releases that generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies. ASTM also considers the potential for a business environmental risk (BER), defined as a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of the Subject Property, not necessarily limited to those environmental issues required to be investigated by the ASTM standard. Consideration of BERs may involve addressing one or more ASTM non-scope considerations.

This Phase I ESA was conducted in accordance with the MSA. The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Subject Property, interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Subject Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform an independent evaluation of the purchase or lease price of the Subject Property and its relationship to current fair market value. The conclusions presented in this Phase I ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-21 notes that the availability of record information varies from source to source. The User or Environmental Professional (EP) is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. "Reasonably ascertainable" means:

1. Information that is publicly available;
2. Information that is obtainable from its source within reasonable time and cost constraints; and
3. Information that is practicably reviewable.

## **2.1 SUBJECT PROPERTY DESCRIPTION**

The Subject Property is approximately 0.66 acres and is identified by Assessor's Parcel Number (APN): 055-170-240, located at 3705 Haven Avenue, Menlo Park, San Mateo County, California. According to records obtained through Environmental Data Resources (EDR), the Subject Property was vacant until the 1960s, when it was developed with its present-day, single-story commercial building. The Subject Property currently operates as several commercial businesses. The vicinity is largely commercial/industrial. A Subject Property Location Map is provided as Figure 1. A Subject Property Vicinity Map illustrating the main features of the Subject Property and vicinity is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

## **2.2 SPECIAL TERMS, CONDITIONS, AND ADDITIONAL ASSUMPTIONS**

There were no special terms, conditions, or additional assumptions associated with this Phase I ESA.

## 2.3 EXCEPTIONS AND LIMITING CONDITIONS

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided and given the schedule and budget constraints established by the client. No other representations, warranties, or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the Subject Property.

This report provides an evaluation of selected environmental conditions associated with the Subject Property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information received from others.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report and are based solely on the scope of work described in the report, the limited data available, and the results of the work. They are not a certification of the Subject Property's environmental condition.

The client did not provide or contract Stantec to provide recorded title records or search results for environmental liens or activity and use limitations encumbering the property or in connection with the Subject Property. Stantec did not obtain historical records that document the property history in 5-year intervals, and this resulted in data gaps. Although this represents data gaps, these data gaps are not considered to impact the EPs ability to identify RECs and are not significant. Based on the information obtained during the course of this ESA and general knowledge of development at and near the Subject Property, the absence of this information did not affect the ability of the EPs to identify RECs, HRECs, CRECs, or *de minimis* conditions.

This report has been prepared for the exclusive use of the client identified herein, and March Capital Management (which may also rely on it), and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

Project Specific limiting conditions are provided in Section 2.2.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures, are not guaranteed. Before starting site work, the exact location of all such utilities and structures must be confirmed by the client and the party performing the work, and Stantec assumes no liability resulting from damage to such utilities and structures.

The conclusions are based on the conditions encountered at the Subject Property by Stantec at the time the work was conducted.

As the purpose of this report is to identify Subject Property conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the Subject Property is beyond the scope of this assessment.

The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning the compliance of any past or present owner or operator of the Subject Property which is the subject of this report with any Federal, state, provincial or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations, or policies of Federal, state, provincial or local governmental agencies.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change. In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA, the MSA shall control.

## **2.4 PERSONNEL QUALIFICATIONS**

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an EP. The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

### 3.0 USER-PROVIDED INFORMATION

ASTM E1527-13 and pending ASTM E1527-21 describe responsibilities of the User to complete certain tasks in connection with the performance of “All Appropriate Inquiries” into the Subject Property. The ASTM standard requires that the EP request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or *de minimis* conditions in connection with the Subject Property. Towards that end, Stantec requested that the User provide the following documents and information:

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire and/or Interview	No	At the time of the preparation of this report, no completed user questionnaire was provided. Given the previous reports and documents provided for review the lack of a completed user questionnaire is not considered a significant data gap.
Environmental Liens or Activity and Use Limitations (AUL)	Yes	The following land use covenants (LUCs) were issued for the Subject Property: <ul style="list-style-type: none"> <li>• 1999 Covenant and Environmental Restriction on Property, 3695-3723 Haven Avenue; and</li> <li>• 2021 Variance from Covenant and Environmental Restriction on 3705 Haven Avenue.</li> </ul>
Previous Environmental Permits or Reports Provided by User	Yes	See Section 4.2.1 for more information regarding these document findings.
Purpose of the Phase I ESA	Yes	The intended use of the Phase I is for due diligence in support of redevelopment.

The User provided information is included in Appendix C.

## 4.0 RECORDS REVIEW

The objective of consulting historical sources of information is to develop the history of the Subject Property and surrounding area and evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Subject Property. During the review of historical records, Stantec attempted to identify uses of the Subject Property from the present to the first developed use of the Subject Property. Stantec’s research included the reasonably ascertainable and useful records described in this section.

### 4.1 PHYSICAL SETTING

A summary of the physical setting of the Subject Property is provided in the table below with additional details in the following subsections.

<b>Topography:</b>	According to the USGS Palo Alto Topographic Map, the Subject Property is approximately 10 feet above mean sea level (amsl) with a regional topographic gradient to the north northeast (EDR, 2023).
<b>Soil/Bedrock Data:</b>	The United States Department of Agriculture – Natural Resources Conservation Service (USDA-NRCS), Web Soil Survey identifies the soils beneath the Subject Property as: <ul style="list-style-type: none"> <li>• Urban land-Orthents, reclaimed complex, with 0-2 percent slopes consisting of well drained soils within a tidal flat landform, and a typical soil profile consisting of variable soils (0-40 inches), and silty clay (40-60 inches) (USDA 2023).</li> </ul>
<b>Estimated Depth to Groundwater/ Estimated Direction of Gradient:</b>	Site specific groundwater investigations were not conducted during this ESA; however, according to a 2019 Groundwater and Indoor Air Investigation Report prepared by ACC Environmental Consultants for the Subject Property, groundwater was measured approximately 3.6-19 feet below ground surface (bgs) with a flow direction to the north-northeast.
<p><b>NOTE:</b>          Site-specific groundwater flow direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.</p>	

#### 4.1.1 Subject Property Topography and Surface Water Flow

The Subject Property is located at approximately 10 feet above mean sea level (ft amsl). Based on topography of the area, storm water from the Property is expected to flow towards the north northeast.

#### **4.1.2 Regional and Subject Property Geology**

The Subject Property is situated within the Santa Clara Valley Groundwater Basin, San Mateo Subbasin (2-009.03). The subbasin is a northwest trough that runs parallel to the Coast Ranges, situated at the southwest end of San Francisco Bay. The subbasin is bound to the north by the Westside basin, to the west by the Santa Cruz Mountains, to the east by San Francisco Bay, and to the south by San Francisquito Creek. Alluvial fan deposits within the subbasin drain through tributaries into the San Francisco Bay. Average annual rainfall within the subbasin is 16-24 inches (DWR, 2003).

According to California Department of Conservation's (DOC) Earthquake Zone Map ([Department of Conservation Map Server \(ca.gov\)](#)), the Subject Property is not located within an Alquist-Priolo (AP) Earthquake Fault Zone boundary. The closest fault zone, San Andreas Fault, is located approximately five miles to the west of the Subject Property. However, the Subject Property is located within a Liquefaction Zone.

#### **4.1.3 Regional and Subject Property Hydrogeology**

Water-bearing deposits of the subbasin are largely comprised of the Plio-Pleistocene Santa Clara Formation and Quaternary alluvial deposits. The Santa Clara Formation underlies the alluvium and is composed on gravel, sand, silt, and clay, with permeability increasing from west to east. The Quaternary alluvium layer is the primary water-bearing formation and is comprised of gravel, sand, silt and clay. Permeable alluvium in the central portion of the valley allows streams to converge and flow east towards the Bay. Streams closest to the Bay have shifted course over time, creating discontinuous layers of gravel, sand and clay, which has allowed for a shallow water table aquifer to overlie confined and semi-confined aquifers in this lower area. Recharge within the basin occurs through infiltration of water into streams that descend into the valley from higher elevations, as well as rainfall percolation directly on the floor of the valley (DWR, 2003).

Site specific groundwater investigations were not conducted during this ESA; however, according to a 2019 Groundwater and Indoor Air Investigation Report prepared by ACC Environmental Consultants for the Subject Property, groundwater was measured approximately 3.6-19 feet below ground surface (bgs) with a flow direction to the north-northeast.

### **4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS**

A regulatory agency database search report was obtained from Environment Data Resources (EDR), a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Subject Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Subject Property. As described in 4.1.3, the inferred shallow groundwater flow direction is likely to be in the north

northeast. Observations about the Subject Property and adjoining properties made during the Subject Property reconnaissance are provided in more detail in Section 5.

#### 4.2.1 Listings for Subject Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions on the Property to pose a REC, CREC, or HREC for the Subject Property. The evaluation included an opinion of the potential for contamination by hazardous substances or petroleum products including by vapor migration or encroachment (i.e., potential for a vapor encroachment condition [VEC]).

Listed Facility Name/Address	Database Listing	REC? (YES / NO)
Thysen Management Company/Siltec/BSG Associates 3705 Haven Ave. Menlo Park, CA	CA RGA LUST, CA LUST, CA CPS-SLIC, CA SAN MATEO CO. BI, CA CORTESE, CA HIST CORTESE, CA CERS, FINDS, CA HAZNET, CA HWTS, CA SPILLS 90	Yes

The Subject Property is listed in the State Water Resources Control Board (SWRCB) Geotracker database as a leaking underground storage tank (LUST) cleanup site with an open case status. This listing applied to the Subject Property and 3715 and 3723 Haven Avenue. The former USTs was formerly operated by the Siltec Corporation from 1970 to 1989. This facility reportedly manufactured polished silicon wafers. Chlorinated solvents were used in the process and were found to have impacted soil and groundwater beneath the Subject Property and surrounding properties. By the late 1990s, volatile organic compounds (VOCs) were detected in soil and groundwater in the area of the Subject Property. It is reported that the VOC impacted soil was excavated and removed from the Subject Property, and monitoring wells were installed on-site. In the reports reviewed indicate that between 1999 and 2001, approximately 3,530 tons of VOC impacted soil was excavated and disposed of offsite, clean soil was used to backfilled the excavations created by this removal action, and the area was paved to create a parking lot. No further LUST-related investigation or remediation requirements appear to apply to the Subject Property. A risk-management plan (RMP) was prepared in 1999, which contained construction and post-construction protocols for future contractors and owners/lessees of the Subject Property. Groundwater monitoring occurred semi-annually on the Subject Property between 2002 and 2008.

A covenant/environmental restriction was issued which prevented residential development of the 3715 and 3723 Haven Avenue, and also the Subject Property, in relation to the historical contamination. In 2014, a No Further Action letter was issued based on current commercial site use by the Regional Water Quality Control Board (RWQCB). In 2019, groundwater samples were taken at the Subject Property to assess the decrease in VOC concentrations in groundwater. It is reported that

Listed Facility Name/Address	Database Listing	REC? (YES / NO)
<p>trichloroethene (TCE) was detected above action levels in groundwater. Based on these detections, indoor air samples were subsequently taken, and results indicated that indoor air was not impacted by TCE or other VOCs including cis-1,2-dichloroethylene (cis-1,2-DCE) above RWQCB either commercial or residential risk-based screening levels. However, tetrachloroethene (PCE) was detected in indoor air at a level that exceeded residential risk-based screening levels, despite not being detected in groundwater. PCE impacts to indoor air were reportedly likely attributed to outdoor ambient air accumulating within the building or attributed to other potential on-site sources.</p> <p>In 2020, additional soil vapor samples were collected at the Site. The chemicals PCE, TCE, benzene, and chloroform were detected in concentrations exceeding residential screening levels. However, it was recommended in a 2020 sampling report, submitted for RWQCB review and approval, that the Subject Property would be suitable for residential redevelopment with the implementation of a vapor mitigation system. In 2021, the RWQCB issued a deed variance for the Subject Property to allow for residential development, to be effectively managed by the RMP that includes vapor mitigation (vapor barriers) for future construction. The adjacent properties, 3715 (formerly 3717) and 3723 Haven Avenue, also formerly operated by Siltec, remain under the covenant restrictions due to higher contaminant levels still present onsite. The 3715 Haven Avenue building was also determined to be the source of the contaminants present at 3705 Haven Avenue (Subject Property) and the adjacent property located at 3723 Haven Avenue.</p> <p>The open LUST case status, the presence of residual VOCs affecting the Subject Property, and the continued presence of adjoining off-site VOC contaminant sources represent a potential vapor encroachment condition (VEC). With the requirement to install vapor mitigation systems as a condition to residential redevelopment, the impacts described above represent a CREC in connection with the Subject Property. While the Subject Property has received a variance to the Land Use Covenant, allowing for residential development, redevelopment or maintenance at the Subject Property result in the discovery of previously-unidentified environmental impacts. Accordingly, and in accordance with the RMP, soil management procedures should be implemented during site development activities to specify the protocol for addressing new contamination (if discovered).</p>		

#### 4.2.2 Listings for Adjoining and Nearby Sites with Potential to Impact Subject Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions on adjoining and nearby sites to pose a REC, CREC, or HREC for the Subject Property. The evaluation included an opinion of the potential for contamination by hazardous substances or petroleum products to migrate to the Subject Property from an adjoining or nearby site, including by vapor migration or encroachment (i.e., potential for a vapor encroachment condition [VEC]).

**3705 HAVEN AVENUE, MENLO PARK, CALIFORNIA 94025**

**PHASE I ENVIRONMENTAL SITE ASSESSMENT**

Records Review

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
Industrial Garden Maintenance 3700 Haven Ave. Menlo Park, CA	CA HIST UST	0.011 mile/60 feet southwest at higher elevation	No
The site is listed as having three USTs containing regular, unleaded, and diesel fuels. No additional details are provided. No violations, spills or releases are reported. This does not represent a REC for the Subject Property.			
Luis Vasquez Mulch Supply 3665 Haven Ave. Menlo Park, CA	CA SWF/LF	0.017 mile/91 feet north northwest at lower elevation	No
The site is listed as a closed chipping and grinding mulch solid waste facility. No violations, spills or releases are reported. This does not represent a REC for the Subject Property.			
Siltec Corporation (Building 5) 3698 Haven Avenue Redwood City, CA	CA HIST UST	0.025 mile/131 feet west southwest at higher elevation	No
The site is listed as having two USTs containing waste, one 420- and one 1,500-gallon. No additional details are provided. No violations, spills or releases are reported. This does not represent a REC for the Subject Property.			
Chemo Centryx/Advanced Polymer Systems Inc/Synthego Corp/Kovio, Inc/Synthego Haven/Envivo, Nanostellar Inc/Ubiquitous Energy/Aldea Pharmaceuticals 3696 Haven Ave. Redwood City, CA	CA SAN MATEO CO. BI, CA CERS HAZ WASTE, CA HAZNET, CA CERS, CA HWTS, RCRA-LQG, RCRA NONGEN/NLR	0.025 mile/131 feet west southwest at higher elevation	No
The site is listed as a hazardous waste generator of oxygenated solvents, and organic liquid/solid wastes since at least 2014. The site received permit-related violations in 2018-2022; all were returned to compliance with the exception of the 2022 violations. Due to lack of reported releases or spills, this site does not represent a REC for the Subject Property.			
Bay Materials LLC/IGH Corporation 3700 Haven Ct. Menlo Park, CA	RRA NONGEN/NLR, CA LUST, CA SAN MATEO CO. BI, CA HIST CORTESE, CA CERS, CA SWEEPS UST, CA HIST UST, CA FID UST, CA HAZNET, CA HWTS	0.044 mile/234 feet south southeast at lower elevation	No
The site is listed as a LUST cleanup site in the SWRCB's Geotracker database with case closure dated 09/16/1994. Gasoline is listed as contaminant in groundwater. Based on the case closure date and status, and elevation from the Subject Property, this does not appear to represent a REC for the Subject Property.			
Correll Properties/Design Co./Barient Inc. 3641 Haven Ave.	CA HIST UST, CA HAZNET, CA HWTS, RCRA NONGEN/NLR,	0.053 mile/282 feet west at higher elevation	No

**3705 HAVEN AVENUE, MENLO PARK, CALIFORNIA 94025**  
**PHASE I ENVIRONMENTAL SITE ASSESSMENT**  
Records Review

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
Menlo Park, CA	RCRA-SQG, FINDS, ECHO, CA CERS HAZ WASTE, CA SAN MATEO CO. BI, CA CERS		
The site is listed as a hazardous waste generator since at least 1996 and as having at least two 2,000-gallon USTs containing regular and diesel product. The site received permit-related violations in 2015-2021, all of which were returned to compliance. Due to lack of reported releases or spills, this site does not represent a REC for the Subject Property.			
CT International Sales 3645 Have Ave. Menlo Park, CA	CA LUST, CA CPS-SLIC, CA DEED, CA SAN MATEO CO. BI, CA CERS	0.062 mile/325 feet north northwest at higher elevation	No
The site is listed in the SWRCBs Geotracker database as a LUST cleanup case with closure dated 01/21/2014. Soil and groundwater are listed as impacted by VOCs. The site was remediated; however, due to small amounts of contaminated soil left onsite, a deed use restriction was implemented which prevents residential use of the property. Based on case closure and status and distance from the Subject Property, this does not appear to represent a REC for the Subject Property.			

The remaining listings in the database search report, including listings of Orphan Sites, provided in Appendix D, do not constitute a potential REC for the Subject Property.

### 4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Subject Property use and/or indications of RECs in connection with the Subject Property:

#### 4.3.1 Local Health Department

Agency Name, Contact Information, Date	Finding
San Mateo County Environmental Health Via online: <a href="https://smchealth.org">Online Form - Environmental Records Request (smchealth.org)</a> January 18, 2023	A written request subject to the Freedom of Information Act (FOIA) was submitted to the San Mateo County Environmental Health Department to review their files regarding the Subject Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Subject Property.  As of the writing of this report, a complete response has not been received from the agency.

#### 4.3.2 Fire Department

Agency Name, Contact Information, Date	Finding
Custodian of Records Menlo Park Fire Protection District Via online: <a href="https://www.menlofire.org/public-records-act-request-form">Menlo Park Fire District - Public Records Act Request Form (menlofire.org)</a>  January 18, 2023	A written request subject to the FOIA was submitted to the Menlo Park Fire Protection District to review their files regarding the Subject Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Subject Property.  As of the writing of this report, a complete response has not been received from the agency.

#### 4.3.3 Local Building and/or Planning Department Records

Agency Name, Contact Information, Date	Findings
Custodian of Records City of Menlo Park Via online: <a href="https://www.cityofmenlo.org/public-records-center">Public Records Center   City of Menlo Park (mycusthelp.com)</a>  January 18, 2023	A written request subject to the FOIA was submitted to the City of Menlo Park to review their files regarding the Subject Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Subject Property.  As of the writing of this report, a complete response has not been received from the agency.

#### 4.3.4 Local/Regional Pollution Control Agency Department Records

Agency Name, Contact Information, Date	Findings
Custodian of Records Department of Toxic Substances Control (DTSC) Via email: <a href="mailto:Berkeleyfileroom@dtsc.ca.gov">Berkeleyfileroom@dtsc.ca.gov</a>  January 18, 2023	A written request subject to the FOIA was submitted to Berkeley Regional Office of the DTSC to review their files regarding the Subject Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Subject Property.  On January 19, 2023, the agency responded that they have no records for the Subject Property.

Agency Name, Contact Information, Date	Findings
Bay Area Air Quality Management District (BAAQMD) Via online: <a href="http://baaqmd.gov">Request Public Records (baaqmd.gov)</a> January 18, 2023	A written request subject to the Freedom of Information Act (FOIA) was submitted to the BAAQMD to review their files regarding the Subject Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concerns at the Subject Property.  On January 20, 2023, the agency responded with no records for the Subject Property.

#### 4.3.5 Local/Regional Water Quality Agency Records

Agency Name, Contact Information, Date	Findings
Custodian of Records San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Via email: <a href="mailto:info2@waterboards.ca.gov">info2@waterboards.ca.gov</a>  January 18, 2023	A written request subject to the FOIA was submitted to the SFBRWQCB to review their files regarding the Subject Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concerns at the Subject Property.  As of the writing of this report, a complete response has not been received from the agency. Records available for the Subject Property on the SWRCB's online database Geotracker are described in Section 4.2.1. Based on its review of information from other sources, however, Stantec believes any lack of information from SFRWQCB here is unlikely to affect the conclusions or recommendations of this report.

### 4.4 HISTORICAL RECORDS REVIEW

#### 4.4.1 Land Title Records/Deeds

The following land use covenants (LUCs) were issued for the Subject Property:

- 1999 Covenant and Environmental Restriction on Property, 3695-3723 Haven Avenue
- 2021 Variance from Covenant and Environmental Restriction on 3705 Haven Avenue.

No other land title records, deeds, environmental liens, and activity and use limitation documentation were provided by the User, and public records were not searched by Stantec.

#### 4.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs.

Year	Scale	Observations of Subject Property and Adjoining/Nearby Properties
1943 1948 1950	1" = 500'	The Subject Property and adjoining properties appear graded and vacant. A road is depicted adjacent to the east of the Subject Property. A marsh area is shown ¼ mile to the north. Several structures and roads are shown in the vicinity to the south. By 1948, dense residential development is shown in the vicinity to the south.
1958	1" = 500'	The Subject Property appears vacant and bound to the east and south by roads. Several structures and what appears to be a salvage yard are depicted adjoining to the west. Across the road to the south commercial development, a highway, and residential development are shown. North and east adjoining properties appear undeveloped.
1963	1" = 500'	The Subject Property appears to contain two small structures on the southern edge. Adjoining properties to the south, west and northwest are depicted with commercial structures, parked vehicles, and a salvage yard. The east adjoining property appears vacant. A salvage yard is shown in the vicinity to the east. Residential development, highways, and commercial buildings are observed in the southern vicinity.
1968	1" = 500'	The Subject Property appears developed with a commercial structure and parking lot. Adjoining properties to the west, north and south appear densely commercially/industrially developed. Adjoining properties to the west appear vacant/mowed and developed with commercial/industrial structures.
1974 1982 1991 1998 2005 2009 2012 2020	1" = 500'	The Subject Property appears similar to the 1968 photograph. Commercial/industrial development and salvage yards are depicted on the adjoining properties. By 1998, a large industrial structure and parking lot are shown adjoining to the east. By 2016, The adjoining properties to the west and northwest appear redeveloped with several buildings and parking lots.

Name of aerial photograph source: EDR, Appendix E.

#### 4.4.3 City Directories

Stantec retained a third party to research available city directories for the Subject Property and adjoining and nearby properties, in approximately five-year intervals. The Subject Property is listed in the City

**3705 HAVEN AVENUE, MENLO PARK, CALIFORNIA 94025**  
**PHASE I ENVIRONMENTAL SITE ASSESSMENT**  
Records Review

Directory between 2017 and 1969. The table below summarizes City Directory listings for the Subject Property. Adjoining and nearby properties generally include commercial/industrial listings.

<b>Subject Property</b>	<b>Year</b>	<b>Listed Occupants</b>
Subject Property – 3705 Haven Avenue	2017	Alex Abela Properties Cal Pac Advisors Haven Property Mgmt Kanler Philanthropedia
	2014	Brandon Hymes Cal Pac Advisors Foxfam LLC Haven Property Mgmt Hi Five Sports Jeff Schreiner Townii Inc
	2010	Blue Ridge Masonry Inc Foxfam LLC Human Service Management Corp Menlo Partners Staffing Inc Strategic Financial Telecom Medical & Finance Assoc.
	2005	Blue Ridge Masonry Fatima Funding Solutions Friendly Isle Home Care HMC Medimension Inc MS Brokerage Inc Reddy Software
	1995	BSG Assoc. Inc
	1992	BSG Assoc. Inc
	1986	Siltec Corp Siltec Packaging Div.
	1978	RO Associates Inc Electronic Power Supplies
	1973	RO Associates Inc Electronic Power Supplies
	1969	Heuttig & Schromm Inc Landscape Gardeners Industrial Garden Maintenance

Name of city directories and source: EDR, Appendix E

No RECs were noted during the review of the City Directories.

#### 4.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Subject Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Subject Property and adjoining and nearby property uses.

Stantec contracted with a third party to search for copies of historical fire insurance maps covering the Subject Property and adjoining and nearby properties. The Sanborn® Map Search Report indicating “No Coverage” is presented in Appendix E.

Historical fire insurance maps source: The Sanborn® Map Search Report

#### 4.4.5 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-minute Topographic Maps of the Palo Alto and Redwood Point, California Quadrangles (scale 1:24,000), the historical USGS 15-minute Topographic Maps of the Palo Alto and Hayward, California Quadrangles (scales 1:50,000 and 1:62,500), and the historical USGS 30-minute Topographic Maps of the Santa Cruz, California Quadrangles (scale 1:125,000) to help identify past Subject Property and adjoining and nearby property usage and areas of potential environmental concern. Copies of the historical maps are provided in Appendix E.

The following table summarizes the maps reviewed and our observations.

Year	Scale	Observations of Subject Property and Adjoining/Nearby Properties
1897 1899 1902	1:62,500 1:62,500 1:125,000	The Subject Property, adjoining properties and vicinity appear to be vacant. Several structures and roads are shown ½ mile to the south. A slough is shown adjacent to the north.
1943 1947 1948	1:62,500 1:50,000 1:50,000	The Subject Property and adjoining properties appear vacant. A slough is depicted ¼ mile to the north. Several roads, structures, and a railroad are depicted ¼ mile to the south. By 1948, a road and several structures are depicted adjoining to the west. A sewage disposal site is shown one mile to the north.
1959	1:24,000 1:24,000	The Subject Property is depicted as vacant and bound to the east and south by roads. A structure is depicted adjoining to the west. Commercial/industrial structures are depicted adjacent to the south and east. Dense urban development is shown to the south across a multi-lane highway.
1968 1973	1:24,000	The Subject Property appears developed with one structure. Adjoining properties are depicted with structures. The vicinity appears similar to the 1959 map.

Year	Scale	Observations of Subject Property and Adjoining/Nearby Properties
1994 1999	1:24,000	The Subject Property and vicinity are shaded gray, indicating dense development.
2012 2015 2018	1:24,000 1:24,000 1:24,000	Structures are not depicted on the map.

Name of maps and source: EDR, Appendix E

No RECs were noted during the review of the topographic maps.

#### 4.4.6 Other Historical Sources

The California Department of Conservation Geologic Energy Management Division (CalGEM, formerly, the Division of Oil, Gas, and Geothermal Resources [DOGGR]) website (<https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspx>) was searched to identify the potential existence of oil and gas production wells within the vicinity of the Subject Property. No wells were observed within approximately 15 miles of the Subject Property.

## 5.0 SITE RECONNAISSANCE

A visit to the Subject Property and its vicinity was conducted by Mr. Eric Booker on January 17, 2023. Access to the Subject Property was provided by Mr. Howard Gruber, Property Manager. Stantec was accompanied by Mr. Gruber during the Subject Property visit. Figure 2 provides information about the Subject Property and adjoining sites and the location of potential areas of environmental concern. Detailed Subject Property features are provided on Figure 2. Photographs collected during the site reconnaissance are included in Appendix A.

### 5.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Subject Property that may indicate the presence of RECs. The reconnaissance of the Property was conducted on foot and Stantec utilized the following methodology to observe the Property:

- Traverse the outer Subject Property boundary
- Traverse transects across the Subject Property
- Traverse the periphery of all structures on the Subject Property
- Visually observe accessible interior areas expected to be used by occupants or the public maintenance and repair areas, utility areas, and a representative sample of occupied spaces

Weather conditions during the visit to the Subject Property were clear and sunny. There were no weather-related Subject Property access restrictions encountered during the reconnaissance visit.

### 5.2 GENERAL DESCRIPTION

<b>Subject Property and Area Description:</b>	The Subject Property, addressed 3705 Haven Avenue in the City of Menlo Park, CA, is located at approximately 375 feet north of Highway 101, approximately 774 feet south of San Francisco Bay and approximately 650 feet west of Marsh Road and consists of one commercial building containing several offices, paved parking areas and landscaped areas. The Subject Property was accessed via entrances to the paved parking lot on the northeast and southwest. The area consists primarily of residential and commercial development.
<b>Subject Property Operations:</b>	Commercial businesses.
<b>Structures, Roads, Other Improvements:</b>	The Subject Property consists of an approximately 10,000 square foot single-story building, asphalt paved parking areas to the north and to the west, and landscaped areas to the east and to the south.

<b>Subject Property Size (acres):</b>	Approximately 0.66 acres.
<b>Estimated % of Subject Property Covered by Buildings and/or Pavement:</b>	80%
<b>Observed Current Subject Property Use/Operations:</b>	Office space
<b>Observed Evidence of Past Subject Property Use(s):</b>	None observed during site reconnaissance.
<b>Sewage Disposal Method (and age):</b>	Municipal
<b>Potable Water Source:</b>	Municipal
<b>Electric and Natural Gas Utilities:</b>	PG&E

### 5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

The following table summarizes Stantec's observations during the Subject Property reconnaissance.

<b>Observations</b>	<b>Description/Location</b>
<b>Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14) with identified uses:</b>	None observed.
<b>Drums/Totes/Intermediate Bulk Containers (≥ 5 gallons):</b>	None observed.
<b>Strong, Pungent, or Noxious Odors:</b>	None observed.
<b>Pools of Liquid:</b>	None observed.
<b>Unidentified Substance Containers:</b>	None observed.
<b>Polychlorinated biphenyl (PCB)-Containing Equipment:</b>	None observed.
<b>Other Observed Evidence of Hazardous Substances or Petroleum Products:</b>	None observed.

### 5.4 INTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of the building interiors at the Subject Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
<b>Heating/Cooling Method:</b>	Roof Mounted HVAC units observed.
<b>Surface Stains or Corrosion:</b>	Minor staining on the carpet of the utility closet and minor rust colored staining was observed in the restrooms.
<b>Floor Drains and Sumps:</b>	Floor drains were observed in the shower areas of two restrooms.
None observed.	None observed.

## 5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Subject Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
<b>On-site Pits, Ponds, or Lagoons:</b>	None observed.
<b>Stained Soil or Pavement:</b>	None observed.
<b>Stressed Vegetation:</b>	None observed.
<b>Waste Streams and Waste Collection Areas:</b>	None observed.
<b>Solid Waste Disposal:</b>	No areas indicative of solid waste disposal were observed.
<b>Potential Areas of Fill Placement:</b>	No mounds, piles, or depressions suggesting the placement of fill material were observed on the Subject Property.
<b>Wastewater:</b>	No exterior wastewater discharge was observed.
<b>Stormwater:</b>	Although the topography of the Subject Property is generally flat, stormwater generated on the Subject Property would likely flow to the east and to the south towards Haven Avenue and into a storm drain to the south.
<b>Wells:</b>	No wells were observed.
<b>Septic Systems:</b>	No visible evidence of the existence of a septic system was observed.
<b>Other Exterior Observations:</b>	None observed.

## 5.6 UNDERGROUND STORAGE TANKS/STRUCTURES

<b>Existing USTs:</b>	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), which would indicate the presence of USTs, was discovered during the site reconnaissance.
<b>Former USTs:</b>	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), reports, or other evidence of the former presence of USTs was discovered during this Phase I ESA.

<b>Other Underground Structures:</b>	None observed.
--------------------------------------	----------------

## 5.7 ABOVEGROUND STORAGE TANKS

<b>Existing ASTs:</b>	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), which would indicate the presence of ASTs, was discovered during the site reconnaissance.
<b>Former ASTs:</b>	No visible evidence (fill pipes, vent pipes, dispensers, surface stains), reports, or other evidence of the former presence of ASTs was discovered during this Phase I ESA.

## 5.8 ADJOINING PROPERTIES

### 5.8.1 Current Uses of Adjoining Properties

As viewed from the Subject Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining sites:

<b>NORTH</b>	Commercial development.
<b>EAST</b>	Residential development.
<b>SOUTH</b>	Commercial development.
<b>WEST</b>	Commercial development across Haven Avenue and drainage canal.

Refer to Figure 2.

### 5.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining sites providing indications of past use and activities, if any, are described below.

<b>NORTH</b>	None observed
<b>EAST</b>	None observed
<b>SOUTH</b>	None observed
<b>WEST</b>	None observed

### 5.8.3 Pits, Ponds, or Lagoons on Adjoining Properties

As viewed from the Subject Property and/or from public rights-of-way, Stantec made the following observations about the presence of pits, ponds, and lagoons on adjoining sites:

<b>NORTH</b>	None observed
<b>EAST</b>	A drainage canal with flowing water was observed to the east of the Subject Property.

<b>SOUTH</b>	None observed
<b>WEST</b>	None observed

## 5.9 OBSERVED PHYSICAL SETTING

<b>Topography of the Subject Property and Surrounding Area:</b>	Observed topography of the vicinity appeared to be generally flat terrain. However, water in the drainage canal to the east of the Subject Property appeared to flow north towards San Francisco Bay.
---	---

## 6.0 INTERVIEWS

Stantec conducted interviews with the following individuals:

<b>Name, Contact Information, and Date of Interview</b>	<b>Relationship to Subject Property</b>	<b>Key findings:</b>
Mr. Howard Gruber	Key Site Manager	Mr. Gruber stated that the Subject Property was used as office space and provided access to all areas of the Subject Property. He was not aware of any current or past environmental hazards related to the Subject Property.

Copies of interview documentation are provided in Appendix G.

### 6.1 FINDINGS FROM INTERVIEWS WITH SUBJECT PROPERTY OWNER

An interview with the Subject Property Owner was not conducted during the site visit. However, an interview with the Property Manager was conducted. No significant findings were obtained from this interview.

## 7.0 EVALUATION

This section provides a summary overview of or Findings, Opinions, and Conclusions.

### 7.1 FINDINGS AND OPINIONS

Information gathered from interviews, reviews of existing data, and an inspection was evaluated to determine if RECs are present in connection with the Subject Property. Based on this information, Stantec made the following findings and developed the following opinions.

- Due to the Subject Property's open release case status, contaminants remaining onsite, and adjoining off-site contaminant sources still present, and the existence of the Land Use Covenant, Stantec recommends that future construction at the Property include vapor mitigation systems. It is anticipated that the residual impacts from contamination can be properly managed pursuant to the RMP documentation, including as it pertains to soil management and worker protection issues.
- The Subject Property structure appears to have been constructed 1960s, and the presence of LBP and ACMs in building materials is possible. An LBP and ACM survey is recommended prior to any renovation or demolition activities in accordance with applicable local and federal regulations.
- The Subject Property is located within a 1% Special Flood Hazard Area and Liquefaction zone. It is recommended that these be taken into account during Subject Property redevelopment.

### 7.2 DATA GAPS

The federal AAI final rule [40 CFR 312.10(a)] and ASTM E1527-21 identify a "data gap" as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the EP or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Gap	Discussion
<b>Deletions or Exceptions from Scope of Work Referenced in Section 1.4:</b>	None.
<b>Weather-Related Restrictions to Site Reconnaissance:</b>	None.
<b>Facility Access Restrictions to Site Reconnaissance:</b>	None.
<b>Other Site Reconnaissance Restrictions:</b>	None.

Gap	Discussion
<b>Data Gaps from Environmental Records Review:</b>	To date, some requested agency records have not been received; however, this is not anticipated to affect the EP's ability to identify RECs for the Subject Property.
<b>Data Gaps from Historical Records Review:</b>	None.
<b>Data Gaps from Interviews:</b>	None.
<b>Other Data Gaps:</b>	At the time of the preparation of this report no completed user questionnaire was provided. Given the previous reports and documents provided for review the lack of a completed user questionnaire is not considered a significant data gap.

### 7.3 CONCLUSIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-21 and E1527-13 of the Subject Property. Any exceptions to, or deletions from, this practice are described in Section 2.3 of this report. This assessment has no evidence of recognized environmental conditions (RECs) in connection with the Subject Property, but identified the following Controlled REC (CREC):

- The open LUST case status for the adjacent properties (for which no requirements are being imposed on the Subject Property), the presence of residual VOC contaminants at the Subject Property from the off-site releases, and the adjoining off-site VOC-impacted sites (with impacts to groundwater) represent a potential vapor encroachment condition (VEC). The variance to the Land Use Covenant allows for the Subject Property to be redeveloped for residential purposes provided that a vapor mitigation system is installed. Therefore, with this control (in the form of the vapor mitigation systems), the environmental impacts described above represent a CREC. It is anticipated that any residual impacts from historical contamination can be properly managed in accordance with the RWQCB-approved RMP, which includes soil management procedures and a health and safety plan. Accordingly, Stantec recommends that redevelopment work at the Subject Property proceed in accordance with the RMP (including in regard to the soil management procedures described therein) and that future residential construction include vapor mitigation systems as required by the Land Use Covenant and Variance.

This assessment has also revealed the following non-ASTM scope environmental issues in connection with the Subject Property.

- The Subject Property structure appears to have been constructed in the 1960s, and the presence of lead-based paint (LBP) and asbestos-containing materials (ACMs) in building materials is possible. An LBP and ACM survey is recommended prior to any renovation or demolition activities in accordance with applicable local and federal regulations.
- The Subject Property is located within a 1% Special Flood Hazard Area and Liquefaction zone. It is recommended that these be taken into account during Subject Property redevelopment.

## 8.0 NON-SCOPE CONSIDERATIONS

The following ASTM E1527-13 non-scope services were performed as part of this Phase I ESA:

### 8.1 LEAD-BASED PAINT

Concern for LBP is primarily related to residential structures. The EPA's Final Rule on Disclosure of Lead-Based Paint in Housing (40 CFR Part 745) defines LBP as paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or 0.5 percent by weight.

The risk of lead toxicity in LBP varies based upon the condition of the paint and the year of its application. The U.S. Department of Housing and Urban Development (HUD) has identified the following risk factors:

- The age of the dwelling as follows:
  - Maximum risk is from paint applied before 1950.
  - There is severe risk from paint applied before 1960.
  - There is moderate risk from deteriorated paint applied before 1970.
  - There is slight risk from the paint that is intact but applied before 1977.
- The condition of the painted surfaces.
- The presence of children and certain types of households in the building.
- Previously reported cases of lead poisoning in the building or area.

Construction Date	Residential (Yes/No)	Observed Condition of Painted Surfaces
1960s	No	An LBP survey is recommended prior to renovation.

### 8.2 ASBESTOS

Asbestos can be found in many applications, including sprayed-on or blanket-type insulation, pipe wraps, mastics, floor and ceiling tiles, wallboard, mortar, roofing materials, and a variety of other materials commonly used in construction. The greatest asbestos-related human health risks are associated with friable asbestos, which is ACM that can be reduced to powder by hand pressure. Friable asbestos can become airborne and inhaled, which has been associated with specific types of respiratory disease. The manufacturing and use of asbestos in most building products was curtailed during the late 1970s.

The Subject Property structures were constructed in the 1960s; an ACM survey is recommended prior to renovation activities.

### 8.3 RADON

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 PicoCuries per liter of air (pCi/L) for residential properties. Radon gas has a very short half-life of 3.8 days. The health

**3705 HAVEN AVENUE, MENLO PARK, CALIFORNIA 94025**  
**PHASE I ENVIRONMENTAL SITE ASSESSMENT**  
 Non-Scope Considerations

risk potential of radon is primarily associated with its rate of accumulation within confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

Stantec reviewed regional data published by the EPA on average indoor radon concentrations in the vicinity of the Property (<http://www.epa.gov/radon/zonemap.html>).

<b>EPA Radon Zones (w/Average Measured Indoor Radon concentrations)</b>		
Zone 1 – High (>4.0 pCi/L)	Zone 2 – Moderate (2 to 4 pCi/L)	Zone 3 – Low (<2 pCi/L)
	X	
<b>Normally occupied sub grade areas present? (i.e., basement apartments, offices, stores, etc.)</b>		
No subgrade areas currently present at the Property.		

The Subject Property is located in Zone 2 and is considered to have a moderate potential for radon. To determine Subject Property-specific radon levels, a radon survey would have to be conducted. However, because the Subject Property does not have any occupied subgrade areas and is planned for redevelopment, radon appears unlikely to represent an environmental concern and Stantec recommends no further investigation regarding this issue.

## 8.4 FLOOD ZONES

According to the Physical Setting summary portion of the EDR report, the Subject Property is located within a 1% Special Flood Hazard Area.

## Appendix B STANTEC RESUMES

# Alicia Jansen CAC, LRCIA

Senior Scientist  
21 years of experience

Alicia is a Senior Scientist with over twenty years of experience in Phase I and II Environmental Assessments, with strong emphasis in water quality and environmental research. Alicia has managed the preparation of environmental documents, training programs, and environmental compliance during large scale environmental monitoring projects. Alicia's environmental consulting experience includes performing asbestos and lead-based paint surveys, oversight of contractors during asbestos abatement, hazardous materials surveys, and Phase I Environmental Site Assessments (ESAs) in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-21 and the Standard Practice for Environmental Site Assessments for Forestland or Rural Property, ASTM Designation E 2247-16.

## EDUCATION

BA, Environmental Studies, San Jose State University, San Jose, California, 2004

## CERTIFICATIONS & TRAINING

Residential Measurement Provider, 108212, National Radon Proficiency Program, Anaheim, California, 2015

## REGISTRATIONS

Certified Asbestos Consultant #CAC #15-5379, State of California Division of Occupational Safety and Health

Lead Inspector/Risk Assessor #LRC-00005363, California Department of Public Health

## MEMBERSHIPS

Member, Groundwater Resources Association of California

## PROJECT EXPERIENCE

### HEALTH, SAFETY & INDUSTRIAL HYGIENE

Cochise County, Asbestos, Lead-Based Paint, and Hazardous Materials Survey | Arizona | Field Lead and Certified Asbestos Consultant

Alicia conducted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple vacant structures including schools, multi-tenant apartment

buildings, and commercial structures. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings. Role: Field Lead | Dates involved: 2020-2022

Confidential Health Care Company, Asbestos, Lead-Based Paint, and Hazardous Materials Survey | Northern California | Staff

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple occupied hospitals and office spaces. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings. Role: Field Lead | Dates involved: 2013-2020

State of California General Services, Asbestos, Lead-Based Paint, and Hazardous Materials Survey | Northern California | 2009 | Technical Support

Alicia assisted with site inspections for asbestos, lead-based paint, and hazardous materials at multiple communication towers in remote areas. The scope of work involved sample collection for asbestos and lead-based paint in addition to the quantification of universal wastes (PCBs, mercury containing equipment, refrigerants, etc.) that would require special handling and disposal. She assisted with the preparation of reports summarizing findings. Role: Technical Support | Cost: Unknown | Dates involved: 10/2009-10/2009

Indoor Air Quality Assessments\* | San Jose, California | 2002-2005 | Staff

Alicia performed site inspections, interviews, and collected air samples to be analyzed for various air pollutants and molds including formaldehyde, penicillium, aspergillus, cladosporium, and stachybotry. She prepared reports summarizing findings and made recommendations.

Veteran's Administration of Puget Sound, Asbestos and Lead-Based Paint Survey | Seattle, Washington | 2009 | Project Scientist

Alicia served as the Project Scientist responsible for hazardous building material assessments, specifically asbestos and lead-based paint. These services were required as part of the pre-design tasks for this project. Over 300 samples were collected over the span of four days culminating in a final hazardous building materials report to be incorporated into the facility design as well as demolition activities once the construction phase of the

\* denotes projects completed with other firms

project commences.

**Interim Remedial Action, Indoor Air Sampling, and Sub-Slab Soil Gas Sampling | Sunnyvale, California | 2004–2014 | Task Manager and Field Support**

Alicia conducted an indoor air sampling survey using air sampling pumps, dosimeter badges, and flame ionization detector (FID) during a sump excavation. She performs semi-annual sub-slab soil vapor sampling and indoor air quality surveys using summa canisters. She assists with the preparation and submittal of reports summarizing the findings and provides recommendations to the local regulatory agency. Role: Indoor Air Sampling Survey | Cost: Unknown | Dates involved: 09/2004-09/2014

**Lead Dust Assessment and Abatement Oversight | Fremont, California | 2009 | Technical Support**

Alicia assisted with the evaluation of lead dust in an industrial facility. A total of 307 dust wipe samples were collected in order to evaluate the potential presence of lead dust throughout the two-story, 500,000 square foot manufacturing building. Role: Technical Support | Cost: Unknown | Dates involved: 01/2009-03/2009

**Former Tesoro Coke Facility, Asbestos, Lead-Based Paint Survey | Pittsburg, California | Technical Support**

Alicia assisted with an asbestos and lead paint survey of 20 structures at the facility ultimately scheduled for demolition. More than 200 samples were collected over the span of two days. She prepared a report for demolition while also providing the information needed for worker safety during demolition activities at the facility. Role: Technical Support | Cost: Unknown | Dates involved: 04/2009-04/2009

**State of California General Services, Asbestos and Lead-Based Paint Survey | Southern California | 2014-2019 | Certified Asbestos Consultant**

Alicia conducted with site inspections for asbestos and lead-based paint at multiple bridges, maintenance stations, and roadways throughout Southern California. The scope of work involved sample collection for asbestos and lead-based paint that would require special handling and disposal. She assisted with the review and approval of reports summarizing findings. Role: Certified Asbestos Consultant | Cost: Unknown | Dates involved: 9/2014-10/2019

**Confidential Client, Asbestos and Lead-Based Paint Survey | Multiple Sites, California | Task Manager and Certified Asbestos Consultant**

Alicia conducts pre-demolition asbestos and lead paint surveys of structures ultimately scheduled for demolition. She prepared a report for demolition while also providing the information needed for worker safety during demolition activities at the facility. Role: Task Manager and Certified Asbestos Consultant | Dates involved: 2006 - present

## **PERMITTING, COMPLIANCE, AUDITING**

**Tesoro Refinery, Initial Study\* | Benicia, California | 2005 | Staff**

Alicia assisted with the background research and preparation of applicant-prepared initial study for the

upgrade of a refinery.

**Transmission Line Upgrade\* | San Mateo to San Francisco, California | 2005 | Environmental Research and Compliance Staff**

Alicia supported the environmental compliance program for the construction of a 27-mile 230 kV underground and overhead transmission line. She assisted with the preparation and submittal of variance requests, extra work space requests, and daily and weekly reports for submittal to the California Public Utilities Commission. She also conducted research and assisted with training and report preparation.

## **REMEDIAL INVESTIGATIONS & ASSESSMENTS**

**California Department of Transportation Portfolio | Multiple Sites, Northern California and Southern California, California | 2008-2019 | Task Lead Manager**

Alicia prepared quarterly groundwater monitoring reports, subsurface investigation reports, sensitive receptor surveys, and preferential pathway studies for various California Department of Transportation locations throughout Northern California. She assisted with the utility locating, work plan preparation, field coordination, archived data onto the State Water Resource Control Board's (RWQCB) Geotracker electronic filing system. Alicia currently conducts site inspections for asbestos, lead-based paint, and hazardous materials for bridges, salt barns, and maintenance buildings associated with California Department of Transportation locations throughout Southern California. The scope of work involves sample collection for asbestos and lead-based paint that would require special handling and disposal. She assists with the preparation of reports summarizing findings. Role: Task Lead Manager | Cost: Unknown | Dates involved: 06/2008-02/2019

**Soil Gas Sampling and Human Health Risk Assessment | San Jose, California | 2014 | Project Lead**

Alicia performed a soil vapor survey in conformance with the DTSC Advisory Active Soil Gas Investigations, using soil vapor sampling devices and a mobile laboratory for onsite chemical analysis. She also assisted with the report preparation summarizing the findings and providing recommendations for further assessment. Role: Task Lead Manager | Cost: Unknown | Dates involved: 2014

**Confidential Clients, Phase I Environmental Site Assessments | Multiple Sites, California, Arizona, New Mexico, Texas, Virginia | Task Manager**

Alicia performs Phase I Environmental Site Assessments for multiple confidential clients in accordance with the practices identified in the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-13; ASTM E 1527-21; and Standard Practice for Environmental Site Assessments for Forestland or Rural Property, ASTM Designation E 2247-16 to achieve compliance with requirements of the "All Appropriate Inquiries" rule required to obtain protection from liability under the federal Comprehensive Environmental Response, Cleanup and Liability Act (CERCLA). Previous sites include large industrial warehouses, multi-tenant

\* denotes projects completed with other firms

commercial buildings, large lots of vacant land, and residential properties. She reviews topographic maps, Sanborn Fire Insurance Maps, and files at local regulatory agencies. She interviews present and former property owners and performed site and adjacent property reconnaissance. She prepares reports summarizing the findings and provides recommendations for further assessment if applicable. Role: Task Lead Manager | Cost: \$3,000-8,000 per report. | Dates involved: 2006-present

**Goodyear Portfolio | California and Hawaii | 2005–2020 | Project Lead**

Alicia performed Phase I Environmental Site Assessments (ESA) and Phase II Site Assessments for various Goodyear Tire & Rubber Company locations throughout California and Hawaii. She assisted with the installation of monitoring wells and exploratory borings; underground storage tank removals; site restoration; product removal with passive recovery system; archived data onto the State Water Resource Control Board's Geotracker electronic filing system; and assisted with the preparation of quarterly groundwater monitoring reports, sensitive receptor surveys, site conceptual models, and subsurface investigation reports. Approximately 250 Sites

- Cost: \$8,000 per site.

## Jenny Alvarado

Project Biologist  
9 years of experience

A wildlife biologist who specializes in the avian and botanical fields, Jenny performs threatened and endangered species surveys, protocol nesting bird surveys, biological resource assessments, habitat characterization surveys, and restoration monitoring across Southern California. Jenny has prepared permit applications for CDFG Streambed Alteration Agreements (CDFG Section 1600), Regional Water Quality Control Board Water Quality Certifications (Clean Water Act Section 401), and U.S. Army Corps of Engineers Permits (Clean Water Act Section 404). Jenny is also experienced with California Environmental Quality Act and National Environmental Policy Act compliance. Although her background is mainly avian biology, she has experience identifying mammals, reptiles, and aquatic species. She performs compliance monitoring for a wide array of clients, including Southern California Gas Company, Plains All American Pipeline, and Caltrans. She assists in preparing Initial Studies, Mitigated Negative Declarations, Environmental Assessments, and Environmental Impact Reports for a variety of land uses. Additionally, she has experience assisting with asbestos and lead building surveys in California and Hawaii.

### EDUCATION

Ecology, Zoology, Ornithology, Santa Barbara City College, Santa Barbara, California, 2011  
BA, Physical Anthropology, University of California, Santa Barbara, Santa Barbara, California, 2008  
AA, Liberal Arts, Ventura College, Ventura, California, 2005

### CERTIFICATIONS & TRAINING

Asbestos Building Inspector Initial, Natec International, Inc., Thousand Oaks, California, 2016  
Asbestos 40-Hr Contractor/Supervisor, Natec International, Inc., Thousand Oaks, California, 2016  
CPR and First Aid Certification, American Red Cross, Port Hueneme, California, 2015  
California Plant Family Identification Workshop, California Native Plant Society, Ojai, California, 2015  
40-Hr HAZWOPER, OSHA, Temecula, California, 2015  
Desert Tortoise Field Techniques Workshop, Desert Tortoise Council, Ridgecrest, California, 2014

Metrolink Contractor Safety Railroad Training, Metrolink, Pico Rivera, California, 2014

10-Hr Industrial Safety Training, OSHA, Ventura, California, 2014

### REGISTRATIONS

Certified Erosion, Sediment and Storm Water Inspector #1586, Certified Inspector of Sediment and Erosion Control

Certified Erosion, Sediment and Storm Water Inspector #1586, CISEC, Inc., 6/30/2018

### PROJECT EXPERIENCE

#### WILDLIFE BIOLOGY

Los Angeles County Beaches and Harbors Beach Berm Construction\* | Los Angeles County, California | Snowy Plover Monitor

Jenny conducted snowy plover monitoring on five Los Angeles County beaches during berm construction and deconstruction. Daily monitoring reports were submitted to the County.

United Water District, Least Tern Surveys\* | United Water Conservation District | Saticoy, California | Biologist

Jenny conducted weekly least tern surveys over two nesting seasons at the United Water facility. She drafted the final results report for the District.

McGrath State Beach Tidewater Goby and Water Quality Monitoring\* | California Department of Fish and Wildlife | Ventura, California | Biologist

Jenny conducted daily tidewater goby sein netting surveys and relocation for an emergency construction project in the Santa Clara River estuary. She also performed daily water quality sampling and invasive species removal.

Ormond Beach Snowy Plover and Least Tern Surveys\* | California Department of Fish and Wildlife | Ventura, California | Biologist

Jenny conducted protocol nesting bird surveys for the snowy plover and least tern within protected enclosures. Nesting behaviors, nest location, and young were tracked, documented and monitored throughout the nesting season.

California State University Channel Islands, Least Bell's Vireo Surveys\* | California State University Channel Islands | Camarillo, California | Biologist

Jenny conducted least Bell's vireo surveys on the CSUCI campus for one nesting season, and assisted in preparation of final reporting.

**Special-Status Species Surveys\* | Recurrent Energy | Kern County, California | Biologist**

Jenny conducted desert tortoise, burrowing owl and kit fox surveys for several solar projects across Kern County.

**Stantec Architecture, FedEx Construction Site Burrowing Owl Survey | Bloomington, California | Biologist**

Jenny performed a pre-construction special status species survey as well as burrowing owl presence/absence surveys in support of a proposed expansion project at a FedEx Ground facility. While conducting the survey, Jenny observed one burrowing owl within the proposed project area and helped coordinate additional protocol surveys in accordance with the project's mitigation requirements.

**Luis Oasis Senior Center, Biological Constraints Analysis | Orcutt, California | Biologist**

Jenny performed a field reconnaissance survey to document existing site conditions, the potential for sensitive biological resources, and took an inventory of protected native trees. Jenny also drafted the Biological Constraints Analysis Report for the project.

**Town Building and Development, ISBA | Ventura County, California | Biologist**

Jenny performed a field reconnaissance survey and prepared an ISBA to document existing habitat conditions and the potential for sensitive biological resources in accordance with County of Ventura ISBA requirements.

**Algonquin Power, SKIC 10 Solar Project San Joaquin Kit Fox, Burrowing Owl, Nesting Bird and Wildlife Clearance Surveys | Bakersfield, California | Biologist**

Jenny performed San Joaquin kit fox, burrowing owl, nesting bird, and wildlife clearance surveys prior to project construction.

**Comstock Homes, Burrowing Owl Surveys | Camarillo, California | Biologist**

Jenny prepared a proposal and conducted burrowing owl presence/absence surveys for a residential development project in Camarillo. She also concurrently performed a nesting bird survey of the project area and prepared a report of the results.

**ENVIRONMENTAL MONITORING**

**Pipeline Safety Enhancement Plan\* | Southern California Gas Company | Ventura and Los Angeles Counties, California | Lead Environmental Monitor**

Jenny conducted environmental monitoring for several gas pipeline replacement projects. She monitored biological resources, storm water and air quality, hazardous waste control, and cultural and archaeological resources, as well as performing water and polychlorinated biphenyl sampling. She also conducted pre-construction surveys, prepared project reports, and compliance monitoring documents.

**Caltrans Bridge Replacement Project\* | Santa Barbara, California | Biologist**

Jenny conducted the biological monitoring for two bridge replacements that required monitoring stream diversion installation and removal. She performed aquatic species surveys, nesting bird surveys, and water diversion as well as general construction compliance monitoring.

**Biological Monitoring, Line 63 Pipeline Replacement Project | Plains All American Pipeline Company | Castaic, California | Biologist**

Jenny conducted biological and restoration monitoring of a petroleum pipeline replacement within the Angeles National Forest. She conducted sensitive species clearance surveys prior to daily construction activities and monitored habitat restoration and Best Management Practices (BMP) installation.

**Plains All American Pipeline Drilling Project | Posey Canyon, Angeles National Forest, California | Biologist**

Jenny provided biological resource monitoring, and nesting bird and wildlife surveys for a drilling project in the Angeles National Forest.

**Riparian Habitat Assessment, Line 63 Replacement Project | Plains All American Pipeline Company (PAALP) | Santa Clara River, Los Angeles County, California | Biologist**

Jenny was approved by CDFW as a qualified biological monitor and conducted environmental compliance monitoring for installation of a pipeline through the Santa Clara River via Horizontal Directional Drilling (HDD). During monitoring of construction activities Jenny also surveyed for potential frac- out during HDD operations.

**Carpinteria Sanitary District, Carpinteria Creek Aquatic Species Surveys and Horizontal Direction Drilling (HDD) Monitoring | Carpinteria, California | Biologist**

Jenny conducted pre-construction aquatic surveys within Carpinteria Creek for red-legged frog, southwestern pond turtle, tidewater goby, and two-striped garter snake. She also provided biological construction monitoring during HDD construction activities within the creek. Jenny detected a frac-out and was able to prevent any frac-out material from entering Carpinteria Creek by promptly alerting project personnel.

**Phillips 66 Pipeline Biological Monitoring Project | Phillip 66 Pipeline LLC | Arroyo Grande, California | Biologist**

Jenny conducted environmental compliance monitoring for a 5.6 mile pipeline project that crossed the Arroyo Grande Creek and an additional tributary. The project entailed dewatering a 70- foot section of creek and replacing a portion of pipeline underneath. Jenny also conducted SWPPP inspections for the entire project.

## **STREAM/RIVER RESTORATION**

California State University Channel Islands, Restoration Monitoring\* | Camarillo, California | Biologist

Jenny conducted quarterly and annual qualitative and quantitative monitoring for a creek restoration site on CSUCI campus. She also prepared quarterly status memos and annual restoration monitoring reports in accordance with agency requirements.

Restoration Monitoring\* | City of Santa Barbara | Santa Barbara, California | Biologist

Jenny performed quarterly and annual qualitative and quantitative monitoring for two bridge projects over Mission Creek. She prepared annual restoration monitoring reports in accordance with agency requirements.

## **BOTANICAL SURVEYS**

California State University Channel Islands, Vegetation Mapping\* | California State University Channel Islands | Camarillo, California | Biologist

Jenny conducted vegetation habitat mapping on CSUCI campus and prepared survey results reports.

Oak Tree Inventory and Vegetation Mapping\* | Confidential | Castaic, California | Biologist

Jenny conducted oak tree inventories for several hundred trees and prepared vegetation habitat maps for three adjacent parcels.

High Speed Rail Special-Status Floral Surveys\* | Tehachapi, California | Biologist

Jenny conducted focused, rare plant surveys for a portion of a high-speed rail project through Tehachapi.

## **NATURAL RESOURCE DAMAGE ASSESSMENT AND OIL SPILL RESPONSE**

Habitat Restoration Monitoring, Refugio Oil Spill | Plains All American Pipeline Company | Goleta, California | Biologist

Jenny conducted restoration monitoring and assisted with habitat assessments at multiple sites along the California coast following spill cleanup response efforts.

## **ASBESTOS, LEAD BASED PAINT, AND HAZARDOUS MATERIAL (MERCURY, PCB) ASSESSMENTS**

Asbestos and Lead Surveys | Hawaii | Environmental Scientist

Jenny assisted with asbestos and lead surveys for several multi-story buildings for a confidential client. The surveys included exterior and interior sampling, mapping, and reporting. Additionally, inventories of hazardous materials were taken, including potential mercury and PCB-containing materials.

Asbestos and Lead Surveys | Westlake and Thousand Oaks, California | Environmental Scientist

Jenny assisted with asbestos and lead surveys for several shopping centers for a confidential client. The surveys included exterior and interior sampling, mapping, and reporting. Additionally, inventories of hazardous materials were taken, including potential mercury and PCB-containing materials.

## **PUBLICATIONS**

A VanDwerwarker, J Alvarado, P Webb. *Analysis and Interpretation of Intrasite Variability in Paleoethnobotanical Remains: A Consideration and Application of Methods at the Ravensford Site, North Carolina. In: Method and Theory in Paleoethnobotany.*, 2014.

---

Kyle has more than 28 years of professional experience—17 of those years with Stantec—providing geotechnical and environmental consulting. During the course of his experience, he has been involved with a wide variety of geological and engineering projects. He has been in direct charge of quality control/quality assurance (QA/QC) work for Stantec and previous firms for geological, engineering geological, and environmental services primarily in California. Additionally, Kyle has been a primary contact for Stantec with many different clients (including multi-party actions) and regulatory bodies involving contracting, workplan approvals, site assessments and closures, permitting, remedial action, and litigation support. With regard to litigation services, Kyle has extensive experience providing expert witness testimony, second-party review, and litigation support and analysis.

Kyle's extensive experience includes assessment and remediation of property-specific and regional issues involving soil and groundwater contaminated with petroleum hydrocarbons, chlorinated solvents, heavy metals, pesticides, and PCBs.

He currently serves as the managing principal geologist in Stantec's Redlands, California office.

## **EDUCATION**

Engineering Geology/Hydrogeology, California State University, Los Angeles, California, 1984

AS, General Science, Crafton Hills College, Yucaipa, California, 1975

BS, Geological Sciences, California State University, Long Beach, California, 1982

## **REGISTRATIONS**

Certified Engineering Geologist #1271, State of California Issued 1985, Expires 2011

Professional Geologist #4066, State of California Issued 1985, Expires 2011

## **PROJECT EXPERIENCE**

### **Bioremediation**

#### **Excavation and Treatment of Petroleum-Contaminated Soil**

Kyle designed the excavation and treatment of 45,000 cubic yards of petroleum-contaminated soil. Soil treatment included utilizing vapor extraction, combined with bioremediation.

*\* denotes projects completed with other firms*

## Kyle D. Emerson PG, CEG

Managing Principal Geologist

---

### **Chemicals & Polymers**

#### **Two Former Chemical Plants, Environmental Site Assessments and Remediation, Vernon, California**

Mr. Emerson was part of the team for conducting Phase I and Phase II Environmental Site Assessments (ESA) and developing remedial action plans for two former chemical plant sites with 80-year industrial histories. Phase I ESAs used historical files, maps, aerial photographs, available documents, and data from public agencies and historical directories for identifying recognized environmental concerns. Extensive Phase II ESA survey activities aided in identifying below-grade structures such as vaults/USTs, as well as assessing the extent of influence and nature of the contamination. These investigations confirmed the presence of heavy metals, petroleum hydrocarbons, volatile organic compounds, polychlorinated biphenyls, radioactive materials, semi-volatile organic compounds, and polycyclic aromatic compounds in the soils for these sites. Specific areas of concern included former settling ponds, a bone yard, maintenance areas, transformer and substations, wastewater treatment facilities, and above-ground storage tank farms. A conceptual model was developed for use in a health risk assessment and developed risk-based corrective actions to address potential health and environmental concerns. He assisted with the development and implementation of a remedial action plan, combined administrative controls, engineering controls, and active remediation; this resulted in the cost-effective return of one site to active use, and is reducing health risks to occupants and the public at the second site.

#### **CONFIDENTIAL: Aerospace Adhesives and Coatings Plant, Glendale, California**

Mr. Emerson was part of the team that conducted feasibility studies to evaluate remedial alternatives for remediation of chlorinated VOCs, 1,4 dioxane, and hexavalent chromium (CrVI) in soil, soil vapor, and groundwater. Feasibility studies included groundwater pump testing, benchscale column testing to evaluate in situ alternatives for reducing CrVI to the less mobile CrIII valence state, soil vapor extraction, capping, and excavation. Field pilot studies were performed to evaluate the efficiency of various CrVI reductants including the use of ferrous sulfate, calcium polysulfide, emulsified oil, and fructose. Extensive multi-depth soil vapor testing was conducted to evaluate the distribution of VOCs in the subsurface and to support vapor intrusion risk assessment. Feasibility studies were completed in 2008. Remedial actions are expected to be completed in 2011.

### **Condition Assessments**

#### **Assessment and Mitigation of Manufacturing Facility**

Kyle managed the assessment and mitigation of an ammunition manufacturing facility covering 1,100 acres in a complex geologic environment. The contaminants involved red and white phosphorous, TNT, chlorinated solvents, solid wastes, and live ordinance.

#### **Soil Contamination Assessment Supervision and Management**

Kyle managed and supervised soil contamination assessment and in-situ remediation of heavy metals involving chromium, cadmium, nickel and zinc by chemical fixation to depths in excess of 40 feet below ground surface beneath existing structures within several manufacturing facilities.

\* denotes projects completed with other firms

## Kyle D. Emerson PG, CEG

Managing Principal Geologist

---

### **Litigation Support and Expert Testimony**

Kyle provided litigation support and expert testimony on more than 20 separate projects involving service stations, chlorinated solvent cases, heavy metal, and semi-volatile releases.

### **Corporate / Office**

#### **Commercial Developer - Environmental Remediation of Former Dry Cleaners, El Centro, California**

Mr. Emerson was responsible for assessments and remediation at this former dry cleaners which released the dry cleaning chemical tetrachloroethene (PCE) to the ground and underlying groundwater. The work included initial site assessment, agency interaction and negotiations with the California Regional Water Quality Control Board (CRWQCB), and Colorado Basin Region human health risk assessment (HHRA), design and implementation of remedial investigations, feasibility studies, remedial action plans, and implementation of remediation in mitigating chlorinated solvent contamination in vadose and saturated zones at concentrations indicative of DNAPL. The results of the completed remediation, as well as continued confirmation sampling and monitoring, allowed the CRWQCB to issue site closure in 2008. The site has since been redeveloped into a new commercial development.

### **Environmental Assessments**

#### **Siting Studies**

Kyle performed initial siting studies for potential Class I, II, and III landfills. The project included detailed geologic mapping, hydrogeological studies, and permeability studies of caps and liners.

### **Environmental Site Remediation**

#### **Assessment and Remedial Design, California (Project Supervisor)**

Kyle supervised the assessment and remedial design of a system to eliminate salt brine contamination in shallow perched water horizons in the Yucaipa, San Bernardino, and Riverside areas of southern California.

#### **Design and Installation of Recovery Systems\***

Kyle designed and installed numerous free-product recovery systems that successfully recovered product. One of the sites contained product up to 11-feet thick covering more than three city blocks. The dissolved phase had affected a multi-aquifer system and a public drinking water system.

#### **Geophysical Characterizations\***

Kyle performed and supervised numerous geophysical characterizations to determine the extent of old landfills. He provided classification studies, landfill gas monitoring, removal verification during grading, methane collection and mitigation plans, permitting, and closure plans.

#### **Domestic Landfill Development\***

Kyle designed and supervised the dynamic consolidation of a domestic landfill for development. He used this process to minimize expected settlement to overlying structures. Kyle designed commercial developments on closed landfills that involved complex methane collection and monitoring systems and building settlement controls.

\* denotes projects completed with other firms

## Kyle D. Emerson PG, CEG

Managing Principal Geologist

---

### **Clay Borrow Site Studies**

Kyle performed more than 10 separate clay borrow site studies for determining sources of material to cap landfills; ranged from a 20-acre dry lakebed to a 450-acre parcel in complex folded marine sediments.

### **Assessment, Clean Up, and Regulatory Support Management, Santa, Monica (Project Manager)**

Kyle managed the assessment, clean up, and complex regulatory support of a PRP site in an MTBE case (Charnock subbasin). His work involved more than 20 environmental professionals working full time for two years to complete the assessment and clean up mandated by the regulatory agencies.

### **Hazardous Waste**

#### **San Gabriel Valley Superfund Site, Remediation & Closure of Multiple Source Areas, Industry, California**

Mr. Emerson performed feasibility studies to evaluate appropriate and relevant remedial alternatives to mitigate constituents of concern in five AOCs contaminated with chlorinated hydrocarbons, heavy metals, petroleum fuel, and cutting oils. Ultimately, a combination of remedial alternatives was implemented that included large-diameter auger excavation to 45 feet to minimize impacts on facility operations, vapor extraction, vapor intrusion risk assessment, deed restriction, and monitored natural attenuation. At the completion of remedial actions, confirmation soil, soil vapor, and groundwater sampling were conducted and followed with risk assessment to demonstrate that remedial objectives had been achieved. No further action was recently granted by the US EPA and Los Angeles Regional Water Quality Control Board.

### **Mixed-Use**

#### **Port of San Diego Rohr Facility, Chula Vista, California**

Mr. Emerson assisted in a detailed subsurface assessment of the Rohr facility. The intent of the assessment was to evaluate the 40-acre former aircraft part manufacturing facility for acquisition by the Port of San Diego for redevelopment into a business park and entertainment complex. The assessment identified the presence of soil, soil vapor, and groundwater impacts by petroleum hydrocarbons, VOCs, heavy metals, PCBs, and semi-volatile organic compounds. He utilized many sampling techniques to assess the limits and concentrations of contaminants in the subsurface. Ultimately, the team was able to develop a cost estimate for potential remedial action cost associated to corrective action to allow redevelopment.

#### **Master Planned Commercial/Residential Redevelopment Project, Whittier, California (Project Manager)**

Kyle oversaw the assessment of 26 contiguous properties that are part of a 21-acre master planned commercial/residential redevelopment project. The properties included industrial facilities, platting lines, fuel USTs, and metal processing plants, among others. The estimated cleanup costs are approximately \$2 million.

\* denotes projects completed with other firms

## Kyle D. Emerson PG, CEG

Managing Principal Geologist

---

### **Multi-Unit / Family Residential**

#### **Residential Development Assessment, Ventura, California (Project Director)**

Kyle directed an assessment of a 40-acre former agricultural property proposed for residential development. Pesticides were identified above hazardous waste levels and preliminary remediation goals established by the U.S. Environmental Protection Agency. Through corrective grading methods and onsite placement of the pesticide impacted soils, all material were re-used on site without offsite disposal. The overall cost savings for the client was more than \$1 million. Total cost was less than \$250,000 for all necessary activities.

### **Oil & Gas**

#### **Oil Field Site Assessments\***

Kyle performed site assessments at oil field leases involving refineries, bulk storage areas, piping systems and wellhead, and drilling mud pit contamination.

#### **Environmental Protection Agency Superfund Action, Culver City, California (Project Manager)**

Kyle served as the project manager representing a major oil company in the assessment, remedial action, and litigation support in a multi-party contamination case affecting a City water supply. The assessment involved more than 250 continuous core borings up to 100 feet, as well as extensive remedial actions. The total cost for all related activities was \$22 million. The case is settled and the closure of the site is pending.

### **Project Management**

#### **Liability and Property Management Consulting Services**

Kyle is providing liability and property management consulting services to more than 10 medium to large property development firms in the US. His work involves property transaction assessments, contract review, acquisition guideline development, liability management evaluation, insurance acquisition, and strategic planning.

### **Residential Development**

#### **Environmental Development Management and Review (Project Manager)**

Kyle manages and reviews environmental development issues for a large residential developer specializing in development of contaminated industrial properties by providing innovative solutions in developing contaminated properties for residential use through risk assessment, engineering, and administrative and property development controls.

### **Site Management and Remediation**

#### **Design and Implementation of Biodegradation Programs\*, California**

Kyle designed and implemented one of the first in-situ biodegradation programs in California; it involved 50,000 cubic yards of diesel-contaminated soils, and groundwater to depths of 70 feet below ground surface.

\* denotes projects completed with other firms

## Kyle D. Emerson PG, CEG

Managing Principal Geologist

---

### **Soil and Groundwater Remediation Systems Soil and Groundwater Contamination Assessments and Mitigation\*, California (Project Manager)**

Kyle managed numerous chlorinated solvent soil and groundwater contamination assessments and mitigation programs in southern California. The projects involved releases that impacted soil and groundwater to depth of groundwater more than 700 feet in multi-aquifer systems. One case involved with plume dimensions more than 1 mile from the source affecting residential properties.

### **Soil and Groundwater Assessment and Remediation Programs\***

Implemented hundreds of soil and groundwater assessment and remediation programs at various service station facilities in Southern and Northern California, and Nevada. Work involved assessment, remedial design, installation, maintenance and monitoring. Closure has been received on a majority of these sites.

### **Assessment and Remediation Management\***

Kyle managed the assessment and remediation of soil and groundwater manufacturing at dry cleaning facilities contaminated with chlorinated solvents.

### **Warehouse / Light Industrial**

#### **Glendale Redevelopment Project, Glendale, California (Project Manager)**

Kyle managed the assessment and remedial actions during the redevelopment of an industrial property. The project involved the demolition of a historic manufacturing facility and a commercial dry cleaner. Each of these facilities were associated with releases of solvents and petroleum hydrocarbons. Remedial actions involved excavation by pattern drilling and off site disposal along with removal of former USTs. The total cost of remediation and assessment was \$450,000.00.

#### **Compton Redevelopment Project, Compton, California (Project Manager)**

Kyle is serving as project manager for the assessment and remedial actions for a large redevelopment project. The project involves the redevelopment of a historic manufacturing facility and a former dry cleaner. Each of these facilities were associated with releases of solvents and petroleum hydrocarbons. The industrial facility was also associated with significant volumes of buried waste that required removal and disposal. These wastes also included the chemical referenced above, as well as PCBs and heavy metals. Remediation has included excavation, vapor extraction, and chemical fixation. The total cost of this project has been \$2.8 million to date.

## Appendix C USER PROVIDED RECORDS

**Recording Requested By:**

Integris/Millennium Joint Venture LLC,  
A California Limited Liability Company

**When Recorded, Mail To:**

Loretta K. Barsamian, Executive Officer  
California Regional Water Quality Control Board  
San Francisco Bay Region  
1515 Clay Street, Suite 1400  
Oakland, California 94612

**COVENANT AND ENVIRONMENTAL RESTRICTION  
ON PROPERTY**

**3695-3723 Haven Avenue  
Menlo Park, California**

This Covenant and Environmental Restriction on Property (this "Covenant") is made as of the 9th day of Aug., 1999 by Integris/Millennium Joint Venture LLC ("Covenantor") who is the Owner of record of that certain property situated at 3695-3723 Haven Avenue, in the City of Menlo Park, County of San Mateo, State of California, which is more particularly described in Exhibit A attached hereto and incorporated herein by this reference (such portion hereinafter referred to as the "Burdened Property"), for the benefit of the California Regional Water Quality Control Board for the San Francisco Bay Region (the "Board"), with reference to the following facts:

A. **The Burdened Property and groundwater underlying the property contain hazardous materials.**

B. **Contamination of the Burdened Property.** It is believed that certain industrial operations caused soil and groundwater at the Burdened Property to be contaminated with halogenated volatile organic compounds, including trichloroethene and vinyl chloride, which constitute hazardous materials as that term is defined in Health & Safety Code section 25260. To mitigate potential exposure to such chemicals, soil excavation, in-situ chemical oxidation, if feasible, and institutional controls, including this Covenant, are to be implemented.

C. **Exposure Pathways.** The contaminants addressed in this Covenant are present in soil and groundwater on the Burdened Property. Without the mitigation measures described above, exposure to these contaminants could take place via direct contact, resulting in dermal exposure, inhalation, or ingestion by humans. The risk of public exposure to the contaminants has been and will be substantially lessened by the remediation and controls described herein.

D. **Adjacent Land Uses and Population Potentially Affected.** The Burdened Property is currently vacant but has been used for industrial and commercial uses, and is adjacent to industrial and commercial land uses.

E. Full and voluntary disclosure to the Board of the presence of hazardous materials on the Burdened Property has been made and extensive sampling of the Burdened Property has been conducted.

F. Covenantor desires and intends that in order to benefit the Board, and to protect the present and future public health and safety, the Burdened Property shall be used in such a manner as to avoid potential harm to persons or property that may result from hazardous materials that may have been deposited on portions of the Burdened Property.

## ARTICLE I

### GENERAL PROVISIONS

1.1 Provisions to Run with the Land. This Covenant sets forth protective provisions, covenants, conditions and restrictions (collectively referred to as "Restrictions") upon and subject to which the Burdened Property and every portion thereof shall be improved, held, used, occupied, leased, sold, hypothecated, encumbered, and/or conveyed. The restrictions set forth in Article III are reasonably necessary to protect present and future human health and safety or the environment as a result of the presence on the land of hazardous materials. Each and all of the Restrictions shall run with the land, and pass with each and every portion of the Burdened Property, and shall apply to, insure to the benefit of, and bind the respective successors in interest thereof, for the benefit of the Board and all Owners and Occupants. Each and all of the Restrictions are imposed upon the entire Burdened Property unless expressly stated in the Risk Management Plan, see below, as applicable to a specific portion of the Burdened Property. Each and all of the Restrictions run with the land pursuant to section 1471 of the Civil Code. Each and all of the Restrictions are enforceable by the Board.

1.2 Concurrence of Owners and Lessees Presumed. All purchasers, lessees, or possessors of any portion of the Burdened Property shall be deemed by their purchase, leasing, or possession of such Burdened Property, to be in accord with the foregoing and to agree for and among themselves, their heirs, successors, and assignees, and the agents, employees, and lessees of such owners, heirs, successors, and assignees, that the Restrictions as herein established must be adhered to for the benefit of the Board and the Owners and Occupants of the Burdened Property and that the interest of the Owners and Occupants of the Burdened Property shall be subject to the Restrictions contained herein.

1.3 Apportionment of Burden Among Multiple Owners. Where ownership of the Burdened Property is held by multiple persons, holding by several titles, the burdens imposed by this Covenant shall be apportioned between them proportionate to the value of the property held by each owner, if such value can be ascertained, and if not, then according to their respective interests in point of quantity. (Cal. Civ. Code § 1467.)

1.4 Incorporation into Deeds and Leases. Covenantor desires and covenants that the Restrictions set out herein shall be incorporated in and attached to each and all deeds and leases of any portion of the Burdened Property. Recordation of this Covenant shall be deemed binding on all successors, assigns, and lessees, regardless of whether a copy of this Covenant and Agreement has been attached to or incorporated into any given deed or lease.

1998-135815  
08/09/1999 03:24P  
DR Page: 2 of 163

1.5 Purpose. It is the purpose of this instrument to convey to the Board real property rights, which will run with the land, to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

## ARTICLE II

### DEFINITIONS

2.1 Board. "Board" shall mean the California Regional Water Quality Control Board for the San Francisco Bay Region and shall include its successor agencies, if any.

2.2 Improvements. "Improvements" shall mean all buildings, roads, driveways, regradings, and paved parking areas, constructed or placed upon any portion of the Burdened Property.

2.3 Occupants. "Occupants" shall mean Owners and those persons entitled by ownership, leasehold, or other legal relationship to the exclusive right to occupy any portion of the Burdened Property.

2.4 Owner or Owners. "Owner" or "Owners" shall mean the Covenantor and/or its successors in interest, who hold title to all or any portion of the Burdened Property.

2.5 Risk Management Plan. "Risk Management Plan" (also referred to herein as "RMP") shall mean that certain Plan concerning the Burdened Property, prepared by Erier & Kalinowski, Inc. and dated March 12, 1999, and any and all subsequent addenda thereto, on file with the California Regional Water Quality Control Board, San Francisco Bay Region; the San Mateo County Division of Environmental Health and the City of Menlo Park Building Department. Covenantor shall cause the RMP to be filed with the aforementioned three agencies. Owner, at the time of any addenda to the RMP, shall cause the addenda to be filed with the aforementioned three agencies. The RMP is attached hereto and incorporated herein by this reference as Exhibit B.

## ARTICLE III

### DEVELOPMENT, USE AND CONVEYANCE OF THE BURDENED PROPERTY

3.1 Restrictions on Development and Use. Covenantor promises to restrict the use of the Burdened Property as follows:

- a. Development of the Burdened Property shall be restricted to industrial, commercial or office space;
- b. No residence for human habitation shall be permitted on the Burdened Property;
- c. No hospitals shall be permitted on the Burdened Property;

d. No schools for persons under 21 years of age shall be permitted on the Burdened Property;

e. No day care centers for children or day care centers for Senior Citizens shall be permitted on the Burdened Property;

f. No Owners or Occupants of the Burdened Property or any portion thereof shall conduct any excavation work on the Burdened Property, except in strict compliance with the RMP or unless expressly permitted in writing by the Board. Any contaminated soils brought to the surface by grading, excavation, trenching, or backfilling shall be managed by Covenantor or his agent in accordance with all applicable provisions of local, state and federal law;

g. All uses and development of the Burdened Property shall be consistent with the Risk Management Plan or any applicable Board Order, each of which is hereby incorporated by reference including future amendments thereto. All uses and development shall preserve the integrity of any cap, any remedial measures taken or remedial equipment installed, and any groundwater monitoring system installed on the Burdened Property pursuant to the requirements of the Board, unless otherwise expressly permitted in writing by the Board;

h. No Owners or Occupants of the Property or any portion thereof shall drill, bore, otherwise construct, or use a well for the purpose of extracting water for any use, including but not limited to, domestic, potable, or industrial uses, unless expressly permitted in writing by the Board;

i. The Owner shall notify the Board of each of the following: (1) The type, cause, location and date of any disturbance to any cap, any remedial measures taken or remedial equipment installed, and of the groundwater monitoring system installed on the Burdened Property pursuant to the requirements of the Board, which could affect the ability of such cap or remedial measures, remedial equipment, or monitoring system to perform their respective functions and (2) the type and date of repair of such disturbance. Notification to the Board shall be made by registered mail within ten (10) working days of both the discovery of such disturbance and the completion of repairs;

j. The Covenantor agrees that the Board, and/or any persons acting pursuant to Board orders, shall have reasonable access to the Burdened Property for the purposes of inspection, surveillance, maintenance, or monitoring, as provided for in Division 7 of the Water Code;

k. No Owner or Occupant of the Burdened Property shall act in any manner that will aggravate or contribute to the existing environmental conditions of the Burdened Property. All use and development of the Burdened Property shall preserve the integrity of any capped areas;

3.2 Enforcement. Failure of an Owner or Occupant to comply with any of the restrictions, as set forth in paragraph 3.1, shall be grounds for the Board, by reason of this Covenant, to have the authority to require that the Owner modify or remove any Improvements constructed in violation of that paragraph. Violation of the Covenant shall be grounds for the Board to file civil actions against the Owner as provided by law.

3.3 Notice in Agreements. After the date of Recordation hereof, all Owners and Occupants shall execute a written instrument which shall accompany all purchase agreements or leases relating to the property. Any such instrument shall contain the following statement:

This statement is not a declaration that a hazard exists. The land described herein contains hazardous materials in soils and in the groundwater under the property, and is subject to a deed restriction dated as of July \_\_\_\_\_, 1999, and recorded on July \_\_\_\_\_, 1999, in the Official Records of San Mateo County, California, as Document No. \_\_\_\_\_, which Covenant and Restriction imposes certain covenants, conditions, and restrictions on usage of the property described herein.

#### ARTICLE IV

#### VARIANCE AND TERMINATION

4.1 Variance Any Owner or, with the Owner's consent, any Occupant of the Burdened Property or any portion thereof may apply to the Board for a written variance from the provisions of this Covenant.

4.2 Termination Any Owner or, with the Owner's consent, any Occupant of the Burdened Property or a portion thereof may apply to the Board for a termination of the Restrictions as they apply to all or any portion of the Burdened Property.

4.3 Term Unless terminated in accordance with paragraph 4.2 above, by law or otherwise, this Covenant shall continue in effect in perpetuity.

#### ARTICLE V

#### MISCELLANEOUS

5.1 No Dedication Intended. Nothing set forth herein shall be construed to be a gift or dedication, or offer of a gift or dedication of the Burdened Property or any portion thereof to the general public.

5.2 Notices. Whenever any person gives or serves any notice, demand, or other communication with respect to this Covenant, each such notice, demand, or other communication shall be in writing and shall be deemed effective (1) when delivered, if personally delivered to the person being served or official of a government agency being served, or (2) three (3) business days after deposit in the mail if mailed by United States mail, postage paid certified, return receipt requested:

5.3 Partial Invalidity. If any portion of the Restrictions or terms set forth herein is determined to be invalid for any reason, the remaining portion shall remain in full force and effect as if such portion had not been included.

5.4 Article Headings. Headings at the beginning of each numbered article of this Covenant are solely for the convenience of the parties and are not a part of the Covenant.

5.5 Recordation. This instrument shall be executed by the Covenantor and by the Executive Officer of the Board. This instrument shall be recorded by the Covenantor in the County of San Mateo within ten (10) days of the date of execution.

5.6 References. All references to Code sections include successor provisions

5.7 Construction. Any general rule of construction to the contrary notwithstanding, this instrument shall be liberally construed in favor of the Covenant to effect the purpose of this instrument and the policy and purpose of the Water Code. If any provision of this instrument is found to be ambiguous, an interpretation consistent with the purpose of this instrument that would render the provision invalid shall be favored over any interpretation that would render it invalid.

5.8 Effective Date. This Covenant, its terms and conditions, and the burdens imposed and the benefits derived therefrom, shall become effective upon Recordation of this Covenant.

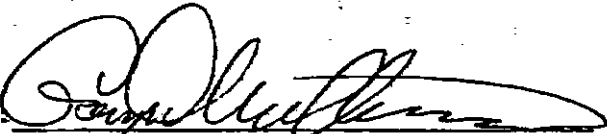

IN WITNESS WHEREOF, the parties execute this Covenant as of the date set forth above.

## **1. INTRODUCTION**

This Risk Management Plan is intended to address residual concentrations of chemicals of concern in environmental media at the 3695-3673 Haven Avenue property located in Menlo Park, California (the "Site"; Figure 1). The term Site, as used in this Risk Management Plan, refers to the entire property at the address 3695 -3723 Haven Avenue, Menlo Park, California and any parcels or subdivided parcels that may result from sale of portions of the current property to other owners. Mitsubishi Silicon America ("MSA"), the present owner, has made the property available for sale in whole or in part. Because current zoning of the Site is industrial, the Risk Management Plan contemplates redevelopment of the Site for a variety of industrial/commercial purposes.

The Risk Management Plan provides a decision framework to manage residual chemicals [(i.e., halogenated volatile organic compounds ("VOCs"))] in soil and groundwater at the Site in a manner that is: (1) satisfactory to the RWQCB, as lead agency, and other involved regulatory agencies with oversight authority, as required, (2) protective of human health and the environment, and (3) consistent with planned land uses. This Risk Management Plan contains the following:

- description of the Site background, including a brief history of Site usage, discussion of environmental investigations and remedial actions performed at the Site, and a summary of identified remaining environmental conditions;
- summary of the risk assessment that was conducted to evaluate potential human health impacts at the Site;
- short-term risk management plan to be implemented during construction at the Site, which includes worker health and safety planning requirements and construction impact mitigation measures; and,
- non-construction risk management plan for mitigation of potential long-term risks to human health and the environment, which includes a provision to ensure long-term compliance with this Risk Management Plan.

### **1.1 Representations**

This Risk Management Plan is based on a current understanding of environmental conditions at the Site as well as current environmental policies, laws, and regulations. If environmental conditions are found to differ from those described herein or in the environmental reports referenced in Section 2.3.1, or if environmental policies, laws, and regulations change, then the Risk Management Plan may have to be modified to accommodate those differing conditions. No representation is made by any present or future owner or developer of the Site or their consultants, agents, and contractors as to the

1999-135815  
08/05/1999 09:24P  
OR Page 17 of 183

applicability of this Risk Management Plan with respect to future environmental policies, laws, and regulations.

## **1.2 Owner Responsibilities**

All owners, developers, and any other entities with responsibility for Site activities shall have a continuing obligation to:

- determine the adequacy of this Risk Management Plan in light of the conditions actually encountered and the intended land use;
- comply with policies, laws, and regulations applicable at the time; and,
- establish a notification procedure and protocols for future sub-surface activity to ensure long-term compliance with the Risk Management Plan.

DR Page: 18 of 153

## 2. SITE BACKGROUND

This section describes the Site background, including the previous Site uses and the geology and hydrology at the Site.

### 2.1 Site Setting

The Site is located in an industrial section of east Menlo Park, adjacent to San Francisco Bay (Figures 1 and 2). Directly to the east of the Site is a channelized creek that runs to the Bay via Flood and Westpoint Sloughs. A public storage facility, salt evaporators, and Bayfront Park (the former Menlo Park landfill) are located north of the Site. West of the Site is a yard that contains used equipment and materials, and to the south, across Haven Avenue, are two-story buildings that are occupied by light industrial and commercial tenants. Figure 2 is an aerial photograph taken during early October 1998 of the Site and vicinity, prior to demolition of "Building 2".

### 2.2 Site History

The Site, as defined in Chapter 1, refers to the entire property at the address 3695 -3723 Haven Avenue, Menlo Park, California. Currently, the MSA Property is occupied by two vacant buildings ("Building 1" and "Building 3" in Figure 2) and covered by asphalt or concrete pavement with narrow planted areas along Haven Avenue.

Based on a review of historical aerial photographs performed by EKI, the MSA Property was formerly bare land with a few scattered buildings and cars prior to its development in 1969. In the 1969 aerial photograph, the MSA Property was developed with three buildings, two of which are standing as of this writing.

Based on a review of file information from the San Mateo County Department of Health Services and files provided by MSA, uses of the MSA Property have included:

- the fabrication and manufacturing of magnetic materials and electronic devices;
- manufacturing and fabrication of electronic components;
- manufacturing of polished silicon wafers;
- distribution of electronic equipment;
- warehousing and installation of automobile wheels and automotive accessories; and,
- a musical recording studio.

One of the prior tenants of the MSA Property was Siltec Corporation, a corporate predecessor to MSA. From 1970 through 1989, Siltec Corporation used the MSA

Property as manufacturing facility for polished silicon wafers, and as office space. Other more recent tenants of the MSA Property have included KOB Auto Inc., Nor Cal Tire and Wheel, Multiplex Studios, Huettig & Schromm Landscape Contractors, and BSG Associates, Inc.

During October 1998, the middle of the three buildings originally built at the Site during 1969 was demolished. The purpose of demolishing this building (Building 2) was to allow excavation of Site soils with elevated concentrations of halogenated VOCs.

### 2.3 Summary of Site Investigations and Remedial Actions

This section summarizes:

- the reports submitted to the RWQCB regarding investigative work, risk assessments, treatability studies, and work plans describing future work to be performed at the Site;
- the subsurface geology at the Site;
- the local hydrology;
- the chemicals detected in both soil and groundwater at the Site; and
- the remedial actions performed or planned for the Site.

#### 2.3.1 Documents Summary

The following documents describe the results of previous investigations and remedial, treatability, and risk assessments performed at the Site:

- *Feasibility Study and Remedial Action Plan, 3695 - 3723 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 10 March 1999 (EKI 1999a)*
- *In Situ Chemical Oxidation Bench-Scale Treatability Test Results, 3695-3723 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 8 January 1999 (EKI 1999b)*
- *Revised Risk Calculations and Cleanup Goals for Source Area Soil Excavation, 3695-3723 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 12 February 1999 (EKI 1999c)*
- *Results of Sampling and Analysis, 3645 and 3665 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 30 June 1998 (EKI 1998a)*
- *Results of Sampling and Analysis, Vicinity of 3695-3723 Haven Avenue, Menlo Park, California, Erler & Kalinowski, Inc., 28 October 1998 (EKI 1998b)*

Directly underlying the A-zone are sediments that are generally coarser grained, consisting of sand and gravel. For the purposes of this report, these sediments that occur between approximately 15 and 38 feet bgs are referred to as the "B-zone".

### 2.3.3 Hydrology

During the on-Site and off-Site investigations, selected groundwater samples from borings and monitoring wells were measured for density, total dissolved solids, and chloride. The purpose of collecting such data for groundwater was to allow generalized mapping of the various water bodies that are present along the bay margin: fresh water, salt water associated with the Bay, and brines associated with the evaporation ponds. The available data indicate that brines have apparently leaked from salt evaporation ponds and have intruded primarily into the B-zone. Landward incursion of brines is pronounced beneath the Site as well as at the adjacent Fedex Facility to the east. It appears that the presence of brines in the subsurface has served as a barrier, limiting off-Site migration of chemicals of concern (see Section 2.3.4).

During drilling at the Site, groundwater has been encountered in the subsurface at depths of approximately 8 to 11 feet bgs in fine-grained sediments of the A-zone (EKI 1997a). During October 1998, the piezometric surface for the A-zone occurred at elevations of approximately 0.8 to 1.2 feet relative to the National Geodetic Vertical Datum 1929 (EKI 1999a). The groundwater gradient was to the southeast with a magnitude of approximately 0.003 ft/ft (EKI 1999a). During October 1998, the piezometric surface for the B-zone, corrected for variable density, occurred at elevations of 1.3 to 1.9 feet, relative to the National Geodetic Vertical Datum 1929. The groundwater gradient for the B-zone was generally to the north with a magnitude of approximately 0.003 ft/ft (EKI 1997a). These data indicate that there is a relative upward groundwater gradient at the Site. It should be noted that the local groundwater gradient is strongly affected by density variations. Thus, changes in operation of the nearby salt evaporation ponds could result in changed groundwater gradients.

### 2.3.4 Chemicals of Concern Detected in Soil and Groundwater

The primary chemicals of concern ("COCs") at the Site, based on prevalence in soil and groundwater at the Site and the results from the risk assessment, are halogenated VOCs. The VOCs that contribute most to the estimated risks at the Site are trichloroethene ("TCE") and vinyl chloride ("VC"). Tables 1 and 2 list all the VOCs that have been detected in soil or groundwater samples collected from the Site. The VOCs that have been detected in more than ten groundwater samples collected at the Site include, in order of decreasing frequency of detection:

- TCE;
- cis-1,2-dichloroethene ("cis-1,2-DCE");
- chloroform;
- 1,1,2-trichloro-1,2,2-trifluoro ethane ("CFC-113");
- carbon tetrachloride; and
- VC.

TCE and CFC-113 are believed to have been used historically at the Site. Further, the cis-1,2-DCE and VC found at the Site are presumed to be daughter products of naturally occurring reductive dechlorination of TCE in the soil and groundwater.

TCE is present in groundwater samples collected from the Site in the vicinity of former Building 2 at concentrations that suggest the presence of separate-phase dense non-aqueous phase liquid ("DNAPL"). The presence of separate-phase DNAPL can result in the long-term persistence of VOCs in groundwater. Furthermore, DNAPL liquids can, in some instances, migrate to deeper depths if remedial activities or other subgrade activities penetrate confining media or alter the hydrologic conditions.

Carbon tetrachloride has been detected at significantly higher concentrations in groundwater samples collected from the adjacent property to the west. The source of carbon tetrachloride is unknown but appears to be up-gradient of the Site. The chloroform found in groundwater samples collected on-Site may be a product of the naturally occurring degradation of the carbon tetrachloride.

### 2.3.5 Soil Remedial Actions

As discussed in the FS/RAP, source area soil near the northwestern corner of the former Building 2 will be excavated to a depth of approximately 6 feet during 1999. The extent of planned excavation is shown on Figure 3 (EKI 1998c). The remedial excavation will remove soil known to contain concentrations of COCs above the risk-based action levels listed in Table 3. Results of the remedial excavation will be documented in the Remedial Action Completion Report anticipated to be submitted to the RWQCB as described in Section 2.5.1.

After source area soil is excavated, clean backfill will be placed in the excavation. A high-density polyethylene ("HDPE") liner will be installed as a vapor barrier in the backfill at approximately 4 feet bgs. The vapor barrier will reduce the potential for the clean backfill to be contaminated by VOC vapors emanating from the underlying groundwater. The vapor barrier will also reduce the potential for migration of VOC vapors from groundwater into any buildings that may be constructed in that location in the future, thereby further reducing the potential future risks at the Site.

As discussed below, future owners of the property will be required to protect the integrity of the vapor barrier by not penetrating through the barrier during construction or maintenance activity at the Site unless (a) damage to the barrier can be effectively repaired, or (b) the underlying groundwater no longer contains VOCs above risk-based action levels.

### 2.3.6 Groundwater Remedial Actions

As discussed in the FS/RAP, a pilot test is planned to evaluate the efficacy of ICO by injecting potassium permanganate ("Oxidant") into saturated zone soils and groundwater

1998-135819  
08/08/1998 03:24P  
OR Page: 23 of 163

near the northwestern corner of the former Building 2 (EKI 1998d). The oxidant is intended to oxidize halogenated VOCs in soil and groundwater to less toxic daughter products. If the pilot test is successful, full-scale ICO treatment will be performed as described in the FS/RAP.

## 2.4 Remaining Environmental Conditions

This Section describes the available information regarding the residual concentrations of VOCs in soil, groundwater, and soil gas beneath concrete slabs. For the purposes of this document, it is assumed that soil excavation activities, including removal of the concrete slab and installation of a vapor barrier, as proposed in EKI (1998c) will have been executed.

### 2.4.1 Residual Concentrations of Halogenated VOCs in Soil

Figure 3 shows the locations of soil borings drilled in and around the source area at the northwestern corner of the former Building 2 as well as the proposed extent of the remedial soil excavation. Table 1 summarizes the data for soil samples collected from the area outside the remedial excavation area and represents the available data regarding residual concentrations of VOCs in Site soils post-excitation. The concentrations of TCE and VC in post-excitation Site soils are shown on Figures 4 and 5, respectively.

For the purposes of this Risk Management Plan, it has been assumed that there may exist on the Site areas of contamination undetected by previous investigations. Therefore, risk management for all future activities involving disturbance of soil at the Site will be performed under the assumption that VOCs may be present in soil, as discussed further in Chapter 4.

### 2.4.2 Residual Concentrations of Halogenated VOCs in Groundwater

Figures 6, 7, and 8 show the extents of TCE, VC, and carbon tetrachloride, respectively, in groundwater at the Site. Table 2 summarizes data for groundwater samples collected from the Site.

Elevated concentrations of VOCs have been detected in groundwater in the vicinity of the northern portion of former Building 2. The area of groundwater containing VOCs in excess of the risk-based action levels for groundwater is shown on Figure 9. For the purposes of this Risk Management Plan, this area is defined as the Groundwater Risk Area.

### 2.4.3 Possible Presence of Chlorinated VOCs Under Concrete Slabs

The VOCs detected in soil gas during the remedial investigation include trichloroethene, cis-1,2-dichloroethene, CFC-113, chloroform, and benzene (EKI 1997a). Trichloroethene, cis-1,2-dichloroethene, and CFC-113 are the three chemicals detected at highest concentrations (EKI 1997a). Elevated concentrations of these chemicals were

detected in soil gas from the vicinity of the northwestern corner of the former Building 2, both inside and outside of the former building.

It should be noted that some of the soil gas samples from locations within the former building were collected within the gravel base beneath the building slab. It is possible that the concentrations of chemicals detected in these samples reflect some relatively increased lateral migration because of the permeable gravel base. It is possible that, in the future, without proper engineering controls, VOCs could migrate from groundwater into permeable subgrade material beneath new structures. Chapter 5 discusses the use of engineering controls to prevent this type of VOC migration.

1999-135815  
03/09/1999 03:29P  
DR Page: 26 of 153

### 3. SUMMARY OF HUMAN HEALTH RISK ASSESSMENT

A human health risk assessment was undertaken to:

- Evaluate potential impacts to human health by chemicals of concern ("COCs") present in soil and groundwater at the Site; and
- Develop risk-based action levels for soil and groundwater at the Site.

The risk assessment is included in Attachment A.

Note that baseline risks at the Site were calculated previously for development of risk-based action levels for soil excavation using data collected prior to April 1998 (EKI 1998c; EKI 1999b). However, some additional groundwater data were collected for the Site after April 1998. Therefore, the data set used herein and in Appendix A to calculate the baseline risk at the Site has been updated to include the soil and groundwater data for the Site available as of February 1999. Also, the proposed risk-based action levels have now been developed to consider VOCs in both soil and groundwater, and one of the physical assumptions (soil saturated porosity) for the Site has been modified.

The risk assessment was conducted assuming hypothetical exposure scenarios for future occupants of the Site. Occupants were subdivided into several receptor populations based on their expected locations and activities. Each group was assumed to be subjected to different concentrations of chemicals for different amounts of time. All assumptions used in the risk assessment are quantified in the text and tables included in Attachment A.

Baseline risks were calculated for the following three hypothetical receptor populations at the Haven Avenue Site:

- Future commercial/industrial building occupants, who will work indoors on-Site over a long period of time ("Indoor Workers");
- Workers involved in the construction of new buildings or subsurface utilities on-Site, who will occupy the Site for much more limited periods ("Construction Workers"); and,
- Future maintenance personnel such as groundskeepers, who will labor primarily outdoors over a long period of time ("Maintenance Workers").

#### 3.1 Risk Calculations

As discussed in the risk assessment (Attachment A), summation of Hazard Indices over all pathways and chemicals gives the non-carcinogenic effects Hazard Index for each hypothetical receptor population. A total Hazard Index less than or equal to one indicates

that the population will not be exposed to the chemical beyond a dosage considered safe for non-carcinogenic adverse health effects.

Summation of the estimated incremental carcinogenic risk from all carcinogenic chemicals over all pathways valid for a particular receptor population gives an estimated overall incremental excess carcinogenic risk ("Cancer Risk") for the hypothetical receptor population (Appendix A). The National Oil and Hazardous Substances Pollution Contingency Plan (40 CFR §300) mandates an acceptable range of Cancer Risk between  $10^{-4}$  (1 in 10,000) and  $10^{-5}$  (1 in 1,000,000). California law requires notification of on-Site workers if the Cancer Risk is estimated to exceed  $10^{-5}$  (1 in 100,000) (California Code of Regulations ("CCR") Title 22, Section 12703). The targeted maximum Cancer Risk of  $10^{-5}$ , used in the risk assessment for the Site, satisfies both sets of regulations.

### 3.2 Estimated Baseline Risks

The estimated baseline risks for the three hypothetical future populations at the Site are summarized below based on the results of the risk assessment in Attachment A. Several references are made below to tables in Attachment A (e.g., "Table A-19").

Estimated baseline Hazard Indices and Cancer Risk for Indoor Workers are listed in Table A-19. Non-carcinogenic hazard for this population is calculated to have a Hazard Index equal to 0.08, less than the maximum target value of 1. The estimated Cancer Risk is  $1.9 \times 10^{-5}$ , above the maximum target level of  $10^{-5}$ . The most significant chemical/pathway combination for Indoor Workers, in terms of the estimated Cancer Risk, is inhalation of TCE and VC evaporating from groundwater.

Estimated baseline Hazard Indices and Cancer Risks for Maintenance Workers through all pathways are listed in Table A-20. Non-carcinogenic hazard for this population is calculated to be 0.03, less than the maximum target level of 1. The estimated Cancer Risk is  $4.5 \times 10^{-6}$ , below the maximum target level of  $1.0 \times 10^{-5}$ . The most significant chemical/pathway combination for the Maintenance Worker receptor population is inhalation of VC evaporating from soil.

Estimated baseline risk and Hazard Indices and Cancer Risk for all Construction Worker exposure pathways are listed in Table A-21. The estimated Cancer Risk is  $1.0 \times 10^{-7}$ , less than the target level of  $10^{-5}$ . Non-carcinogenic hazard for this population is calculated to be 0.01, less than the target level of 1. The most significant chemical/pathway combination, both in terms of Cancer Risk and non-carcinogenic health hazard for the Construction Worker receptor population is inhalation of VC evaporating from soil.

### **3.3 Calculation of Risk-Based Action Levels for Soil and Groundwater**

Using the baseline risks calculated for the hypothetical receptor populations at the Site, risk-based action levels for soil and groundwater have been calculated, as discussed below. Risk-based action levels have been calculated considering potential exposures to the future hypothetical receptor populations, i.e., Maintenance Workers, Construction Workers, and Indoor Workers.

Risk-based action levels (cleanup goals) for soil and groundwater were calculated to apportion post-remediation risk such that Cancer Risk to the Indoor Worker, Construction Worker, and Maintenance Worker populations are each at or below  $10^{-5}$ , and Hazard Indices are at or below 1.0. The method used for apportioning risk was to allocate most of the risk to the more hazardous chemicals and those more commonly found at the Site. This approach minimizes the volume of material to be remediated, while keeping future hypothetical populations' exposure to hazardous chemicals below the target maximum risk levels.

Tables 3 and 4 (and Tables A-22 and A-23 in Attachment A) list the calculated risk-based action levels for soil and groundwater, respectively. For soil, the risk-based action levels for TCE and VC are 3.2 mg/kg and 0.075 mg/kg, respectively. For groundwater, the risk-based action levels for TCE and VC are 8,000 ug/L and 500 ug/L, respectively, and carbon tetrachloride and chloroform have action levels of 2,600 ug/L and 2,000 ug/L, respectively.

Tables A-24, A-25, and A-26 show the estimated Hazard Indices and Cancer Risks for the receptor populations, i.e., Indoor Workers, Maintenance Workers and Construction Workers, assuming VOCs are present in soil and groundwater at the risk-based action level concentrations. For each population, the estimated total Hazard Index is less than 1 and the estimated cumulative Cancer Risk is less than or equal to  $10^{-5}$ . Therefore, the risk-based action levels result in an acceptable level of risk for the future potentially exposed populations.

Future collection and analysis of soil or groundwater samples from the Site could potentially indicate the presence of chemical concentrations different from the current dataset. In this case, risk-based action levels for the Site may be recalculated to reflect the improved understanding of the distribution and concentrations of chemicals in Site soil or groundwater.

#### 4. RISK MANAGEMENT DURING CONSTRUCTION

Risk management during construction activities at the Site involves precautions that will be taken by the property owner to mitigate risks to human health and the environment from possible exposure to chemicals of concern during various activities that involve disturbing soil at the Site. As discussed in Section 2.4.1, it is assumed for the purposes of this Risk Management Plan that residual VOCs may be present in soils located anywhere on-Site. Therefore, construction-related risk management procedures should be evaluated and implemented by the property owner, its contractors, agents, and consultants any time work will be performed that involves disturbing soil at the Site.

When establishing the procedures and precautions to be implemented, the evaluation should include, but not necessarily be limited to, the following:

- Establishing a notification procedure and protocols for future sub-surface activity to ensure long-term compliance with this Risk Management Plan;
- Establishment of health and safety training, worker protection procedures, and worker notification procedures for workers who may be exposed to VOC-containing soil or groundwater during any subsurface works;
- Use of construction methods that ensure that conduits to deeper groundwater zones are not created; and,
- Establishment of soil and groundwater management procedures to:
  - (1) appropriately manage soil and groundwater encountered during construction;
  - (2) characterize soil and groundwater that have indicators of VOC contamination;
  - (3) manage potential VOC vapors that could emanate from excavated soils or groundwater;
  - (4) properly store and dispose of soil and groundwater; and
  - (5) control or prevent storm water from contacting stored soils.

##### 4.1 Site-Specific Health And Safety Worker Planning Requirements

Considering that VOCs may remain in soil, groundwater, and soil gas at the Site following completion of the remedial actions, preparation and implementation of health and safety plans ("HSPs") will be required for activities at the Site during which workers may encounter VOCs in soil, groundwater, or soil gas during subgrade work. Separate HSPs may be prepared for different types of work, i.e., depending on the nature of the work and the estimated potential for exposure to VOCs based on the available data. It will be the responsibility of the property owner to evaluate work activities at the Site and identify those activities that require preparation of a HSP, subject to the constraints described below.

It will be assumed for the preparation of HSPs that VOCs may be present in soil throughout the Site. Therefore, subgrade work activities requiring a HSP include, but are not limited to, (a) excavation and grading during demolition or construction activity, (b) subgrade utility installation or repair, (c) entrance into subgrade confined spaces, such as utility vaults or manholes, and (d) landscaping work that disturbs native soil, including but not limited to activities such as tree and shrub planting, sprinkler installation, and soil relocation.

A HSP is not required by this RMP for activities where no more than the upper 12 inches of soil will be disturbed if the work is in an area where clean fill soil has been imported during 1999 or later (e.g., new topsoil in landscaped areas, backfill installed in the source area soil excavation). For those activities, however, a HSP should still be prepared if required by applicable laws or regulations or if determined appropriate by the responsible party.

A HSP is not required by this RMP for workers who will perform activities at the Site without disturbing soil (e.g., carpenters, painters, carpet installers). When constructed, buildings and cover materials such as roads and walk-ways will prevent exposure to VOC-containing soil. It remains the responsibility of the property owner to determine if a health and safety plan is required for compliance with other federal, state, and local requirements.

#### **4.2 Site-Specific Health And Safety Plans**

Each HSP prepared pursuant to the requirements of this RMP will be required to address potential worker exposures to VOCs that could result from the work if VOCs are encountered in soil, groundwater, or soil gas during the work. To the extent required by applicable law, each HSP will be prepared in accordance with Federal and California Occupational Safety and Health Administration ("OSHA") standards for hazardous waste operations (29 CFR 1910.120 and 8 CCR 5192), or applicable regulations promulgated in the future. The HSP should also include but not be limited to a description of health and safety training requirements for the affected workers, a description of the level of personal protective equipment to be used, if any, air quality monitoring plans if necessary, and any other applicable precautions to reduce potential exposure to VOCs to acceptable levels.

#### **4.3 Construction Impact Mitigation Measures**

This section outlines measures that should be considered to mitigate potential impacts to human health and the environment during construction at the Site. The need to implement any active measures should be identified in a Construction Impact Mitigation Plan to be prepared by the property owner or its agent. Identified mitigation measures should be implemented during construction. At a minimum, measures to be considered for implementation should include:

- Management of soil;

1999-135816  
08/06/1999 03:24P  
DR Page: 30 of 153

- Management of groundwater (e.g., during excavation dewatering);
- Preventing creation of migration pathways for contamination to deeper aquifer zones;
- Protection of the vapor barrier installed by MSA in the source area soil excavation backfill (see Section 2.3.5); and
- Protection of groundwater monitoring wells at the Site.

#### 4.3.1 Soil Management Plan

The Construction Impact Mitigation Plan should include a section that establishes procedures for safely managing excavated soil. The soil management plan should consider, at a minimum, the following:

- Methods for the safe excavation and on-Site storage of removed soil;
- Methods for screening excavated soil for the presence of VOCs, as discussed in Section 4.3.1.1;
- Methods for preventing exposure to VOC vapors that may emanate from excavated soil;
- Methods for controlling storm water runoff such that contact with excavated soils is eliminated; and
- Procedures for characterizing and properly disposing excavated soil.

##### 4.3.1.1 Soil Screening Methodology During Construction

During future excavation of soil, an appropriate field instrument should be used during the excavation to help determine if VOCs are present in the soil. VOC screening measurements should be taken periodically as soil is excavated at the Site. A soil screening plan also should be developed as part of the Site-specific health and safety plan generally described in Section 4.2. The soil screening plan should describe procedures for screening soil for the presence of VOCs and action levels for terminating work activities or upgrading worker personal protective equipment. Elevated VOC screening readings may be an indication of VOC contamination in soil.

##### 4.3.1.2 Management of Soil with Indications of VOC Contamination

Contingency protocols should be included in the Construction Impact Management Plan for management of soils should VOC screening indicate the presence of VOC contamination. These contingency protocols should include methods for safely stockpiling soil until the actual concentrations of VOCs in soil are identified and, based

on regulations governing management of excavated soil, an appropriate management method is determined. Excavated soil should be stored in a manner so as to limit access to and contact by unauthorized personnel and to minimize contact with storm water.

#### 4.3.2 Groundwater Management Plan

If construction at the Site is performed such that groundwater will be removed, a groundwater management plan should be included in the Construction Impact Mitigation Plan. The groundwater management plan should, at a minimum, consider implementing methods in accordance with applicable regulations to perform the following:

- safely remove and store groundwater during construction;
- limit exposure to VOC vapors that may emanate from groundwater; and
- characterize and properly dispose of stored groundwater.

#### 4.3.3 Use Of Construction Methods that Minimize the Potential for Creating Vertical Conduits

As discussed in Section 2.6.2, residual concentrations of VOCs currently exist in shallow groundwater at concentrations that suggest the presence of separate-phase DNAPL. The top of this shallow groundwater zone is typically encountered at a depth of approximately 6 to 8 feet bgs (EKI 1997a). DNAPLs can, in some instances, migrate to deeper depths if conduits are created in confining media or hydrologic conditions are altered.

If in the future chemical concentrations in groundwater suggest the presence of DNAPL, construction activities should be conducted such that the potential for DNAPL migration is limited. For example, penetrations through the bottom of the B-zone at the Site into deeper aquifers could potentially provide a conduit for the migration of groundwater containing elevated concentrations of VOCs to deeper aquifers that are currently not impacted. A specific example of a penetration to a deeper aquifer is the installation of pilings for the foundation of new construction.

Penetrations to below the B-zone will not be allowed in areas where VOCs are present in groundwater above California Maximum Contaminant Levels ("MCLs") for drinking water, unless (a) sufficient precautions are taken to prevent migration of impacted groundwater to deeper groundwater zones, and (b) RWQCB concurs that the design is adequate to prevent impacts to deeper groundwater.

#### 4.3.4 Protection of Vapor Barrier

A vapor barrier will be installed at approximately 4 feet bgs in the backfill for the source area soil excavation. The barrier is designed to prevent possible migration of VOC vapors from underlying groundwater into the clean backfill. The barrier would also reduce the rate at which VOCs from groundwater could migrate into any overlying

1999-135815  
08/08/1999 03:24P  
DR Page 32 of 163

structures. Owners of the property are required to protect the integrity of the vapor barrier by not penetrating through the barrier during construction or maintenance activity at the Site unless (a) damage to the barrier can be effectively repaired, or (b) the underlying groundwater no longer contains VOCs above risk-based action levels.

#### 4.3.5 Protection of Monitoring Wells

It is anticipated that selected existing groundwater monitoring wells at the Site will be required for future groundwater monitoring. Existing monitoring wells at the Site include monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5B, MW-6B, and MW-7B. Of these, monitoring wells MW-2, MW-5B, MW-6B, and MW-7B are planned for a future groundwater monitoring program. In addition two additional on-Site wells, MW-8 and MW-9 are planned for installation and monitoring. Existing and proposed on-Site monitoring wells are shown on Figure 10.

As long as groundwater monitoring is required by the RWQCB or other regulatory agency, construction procedures should be implemented to prevent accidental damage to the required groundwater monitoring wells. With the approval of the RWQCB, groundwater monitoring wells may be abandoned and replaced with new groundwater monitoring wells at a different locations.

## **5. DESIGN CONSIDERATIONS FOR NEW CONSTRUCTION**

Based on the results of the human health risk assessment (Chapter 3), the highest identified risk to indoor workers at the Site is exposure to VOCs migrating into enclosed spaces. No buildings currently exist over the Groundwater Risk Area, discussed in Section 2.4.2. Unless it is demonstrated that VOC concentrations in groundwater are less than risk-based action levels, any new buildings should be designed so that migration of VOCs into new buildings is limited. Materials and methods (e.g., liners, sub-slab aeration, low permeability concrete, crack sealants) are available to restrict vapor intrusion through building floors. At the time of building design, a professional engineer experienced in this type of work should be consulted to design appropriate barriers to prevent the potential migration of VOCs into new buildings.

1999-135815  
08/09/1998 03:28P  
DR Page 34 of 183

## 6. NON-CONSTRUCTION RISK MANAGEMENT

This risk management plan also addresses precautions that should be implemented to mitigate long-term risks to human health and the environment related to exposure to COCs during periods of normal, non-construction activity. Any construction that will disturb the soil, building foundations, or pavement should be completed in a manner that is consistent with Chapters 4 and 5 and applicable environmental policies, laws, and regulations.

Components of the risk management plan for non-construction activities are as follows:

- Ensuring that future land uses are consistent with the commercial/industrial uses assumed under this Risk Management Plan;
- Monitoring groundwater at the perimeter of the Groundwater Risk Area to monitor for possible future expansion of the Groundwater Risk Area, unless VOC concentrations in groundwater samples collected in all on-Site wells are less than risk-based action levels;
- Prohibiting the use of groundwater at the Site, unless VOC concentrations in groundwater are less than MCLs;
- Establishing a notification procedure and protocols for future sub-surface activity to ensure long-term compliance with this Risk Management Plan; and
- Inspecting the Site as necessary to verify that risk management controls are being implemented and that they are effective in limiting potential exposure to VOCs at the Site.

### 6.1 Property Manager and Tenant Notification

The property owner shall provide notification of the known environmental conditions at the Site and of the requirements of this RMP to (a) the property manager, and (b) tenants and other entities leasing or otherwise exercising control over space at the Site.

### 6.2 Maintaining Commercial/Industrial Land Use

The Site is restricted to commercial/industrial use, except that uses for day-care or primary education are explicitly not allowed. If other uses are proposed, the owner may make a proposal to the RWQCB or other appropriate agency, supported by analysis, that the provisions of this RMP should be changed.

### 6.3 Monitoring of Existing Buildings

As discussed in Section 2.4.2, groundwater with VOC concentrations above the risk-based action levels has not been detected outside the Groundwater Risk Area shown on Figure 7. However, over time, it is possible that the groundwater flow regime at the Site

Notes

- (a) Depth of groundwater interval sampled in feet below ground surface ("ft bgs").
- (b) 1,1,2-Trichloro-1,2,2-Trifluoroethane = Freon 113
- (c) Trichlorofluoromethane = Freon 11
- (d) Less than symbol (" $<$ ") denotes that analyte was not present above the laboratory detection limit indicated.
- (e) A hyphen (-) indicates that no analysis was performed for the chemical.
- (f) Sample collected by Geomatrix, 1995; value unknown.
- (g) Duplicate sample.
- (h) Laboratory indicates this result is an estimated value.

**Table 3**  
**Risk-Based Action Levels for Soil**  
 3695-3723 Haven Avenue Property  
 Menlo Park, California

Chemical	Risk-Based Action Level for Soil (mg/kg)
Acetone	1000
Benzene	0.50
Carbon Tetrachloride	0.50
Chloroform	0.50
1,2-Dichlorobenzene	50
1,1-Dichloroethane	5.0
1,2-Dichloroethane	0.50
1,1-Dichloroethene	5.0
cis-1,2-Dichloroethene	500
trans-1,2-Dichloroethene	50
Methylene Chloride	0.50
Tetrachloroethene	0.50
Toluene	5.0
1,1,1-Trichloroethane	5.0
Trichloroethene	3.2 (b)
1,1,2-Trichloro-1,2,2-Trifluoroethane	1000
Vinyl Chloride	0.075 (b)

Note:

- (a) Risk-based action level concentrations rounded to two significant digits.
- (b) These volatile organic compounds have been detected in Site soil at concentrations greater than the risk-based action level.

## EXECUTIVE SUMMARY

This human health risk assessment was performed to:

- Evaluate potential impacts to human health by chemicals of concern ("COCs") present in soil and groundwater at the commercial/industrial property located at 3695-3723 Haven Avenue, Menlo Park, California (the "Site"); and,
- Develop risk-based action levels for soil and groundwater at the Site.

An analysis of risk was conducted assuming hypothetical exposure scenarios for potential future occupants of the Site. Occupants were subdivided into three hypothetical receptor populations based on their expected locations and activities. Each hypothetical population is described herein with a unique set of environmental and physiological assumptions, and was thus assumed to be exposed to different concentrations of chemicals for different amounts of time. All assumptions used in the risk assessment are quantified in the attached tables.

Baseline risks were calculated for the following three hypothetical receptor populations at the Site:

- Future commercial/industrial building occupants, who will work indoors on-Site over a long period of time ("Indoor Workers");
- Future maintenance personnel such as groundskeepers, who will labor primarily outdoors over a long period of time ("Maintenance Workers").
- Workers involved in the construction of new buildings or subsurface utilities on-Site, who will occupy the Site for much more limited periods ("Construction Workers"); and

A summary table of calculated baseline risks to each of the hypothetical future populations is shown below (Table A-1). These values represent the estimated total (a) Hazard Index for non-carcinogenic adverse health affects, and (b) incremental excess carcinogenic risk ("Cancer Risk"), to the hypothetical populations due to current Site conditions. In general, potential exposure pathways considered in the calculation of these baseline risks include exposure through incidental ingestion of soil, dermal contact with soil, inhalation of vapors from soil, and inhalation of vapors from groundwater.

One of the assumptions regarding the future Indoor Worker receptor population is that, unlike future Maintenance and Construction Workers, its members never work directly with soil. Thus, incidental ingestion and dermal contact with contaminated soil are not considered exposure pathways for this population. Inhalation of volatile organic

compounds evaporating from soil and groundwater were considered as complete pathways for all hypothetical populations.

HYPOTHETICAL POPULATION	BASELINE HAZARD INDEX	BASELINE CANCER RISK
Future Indoor Workers	0.08	$1.9 \times 10^{-5}$
Future Maintenance Workers	0.03	$4.5 \times 10^{-6}$
Construction Workers	0.01	$1.0 \times 10^{-7}$

Table A-I. Summary of Baseline Risks to Hypothetical Future Site Populations.

A more complete summary of estimated Hazard Index and Cancer Risk for the above populations may be found in Tables A-19, A-20, and A-21. Risk calculations are further documented in Tables A-9 through A-18.

### Risk Calculations

Table A-19 is a summary of estimated baseline risks for Indoor Workers. The most significant chemical/pathway combination for Indoor Workers, in terms of Cancer Risk, is inhalation of TCE evaporating from groundwater. The non-carcinogenic Hazard Index for this population is dominated by inhalation of vinyl chloride, trichloroethene ("TCE"), and *cis*-1,2-dichloroethene ("*cis*-1,2-DCE") from groundwater.

Baseline estimated Hazard Indices and Cancer Risk for Maintenance Workers through all pathways are listed in Table A-20. The most significant chemical/pathway combination for the Maintenance Worker receptor population is inhalation of vinyl chloride volatilizing from soil.

Baseline estimated Hazard Indices and Cancer Risk for all Construction Worker exposure pathways are listed in Table A-21. The most significant chemical/pathway combination, both in terms of Cancer Risk and the non-carcinogenic Hazard Index for the Construction Worker receptor population is inhalation of vinyl chloride volatilizing from soil.

### Calculation of Risk-Based Action Levels

Using the baseline risks calculated for the hypothetical receptor populations at the Site, risk-based action levels for soil and groundwater have been calculated, as discussed below.

1888-138810  
 08/09/1989 03 24P  
 DR Page 58 of 182

Risk-based action levels for soil and groundwater were calculated to apportion post-remediation risk such that overall Cancer Risk to the Indoor Worker, Maintenance Worker, and Construction Worker are each at or below  $1.0 \times 10^{-5}$ , and overall Hazard Index is at or below 1.0.

Table A-II is a listing of the risk-based action levels for those chemicals found in Site soil at concentrations exceeding the risk-based action levels. These include vinyl chloride and TCE. A more complete listing of risk-based action levels in soil for all chemicals of concern is provided in Table A-22.

VOLATILE ORGANIC COMPOUND	RISK-BASED ACTION LEVEL IN SOIL (ug/kg)
vinyl chloride	75
trichloroethene	3,200

Table A-II. Risk-Based Action Levels for VOCs in Soil

Table A-III is a summary of risk-based action levels for chemicals with maximum concentrations found in Site groundwater exceeding the risk-based action levels, i.e. TCE and vinyl chloride. Table A-23 is a more detailed enumeration of the calculated groundwater risk-based action levels.

VOLATILE ORGANIC COMPOUND	RISK-BASED ACTION LEVEL IN GROUNDWATER (ug/L)
vinyl chloride	500
trichloroethene	8,000

Table A-III. Risk-Based Action Levels for VOCs in Groundwater.

The method used for apportioning risk was to allocate most of the "available" risk to the more hazardous chemicals and those more commonly found at the Site. This approach minimizes the volume of soil and groundwater potentially requiring remediation, while keeping future hypothetical populations' estimated risks below target levels. Concentrations of vinyl chloride and TCE have been encountered in soil and groundwater samples from the Site in exceedence of their risk-based action levels. Other chemicals of concern have been discovered at concentrations consistently below the action levels.

Tables A-24, A-25, and A-26 are summaries of Hazard Index and Cancer Risk to each of the three hypothetical future worker populations at the calculated risk-based action levels

1999-135815  
08/09/1999 03:28P  
DR Page: 70 of 153

for soil and groundwater. Cumulative Hazard Indices and Cancer Risks are equal to or below 1.0 and  $1.0 \times 10^{-5}$ , respectively, in each case. Therefore, the risk-based action levels for soil and groundwater presented in Tables A-II and A-III result in an acceptable level of risk for future potentially exposed populations.

Future installation of monitoring wells (or other on-Site environmental work) may involve the collection of soil or groundwater samples for chemical analysis. Such analyses could potentially indicate the presence of chemical concentrations different from the current dataset. In this case, risk-based action levels for the Site may be recalculated to reflect the improved understanding of the distribution and concentrations of chemicals in Site soil or groundwater.

## 1. INTRODUCTION

This appendix presents a human health risk assessment that was performed to:

- evaluate potential impacts to human health by chemicals of concern ("COCs") present in soil and groundwater at the commercial/industrial property located at 3705-3723 Haven Avenue, Menlo Park, California (the "Site"), and
- develop risk-based action levels for soil and groundwater at the Site.

Note that baseline risks at the Site were calculated previously for development of risk-based action levels for soil excavation using data collected prior to April 1998 (EKI 1998c; EKI 1999b). The methods and assumptions used in the risk calculations described herein are consistent with the previous risk calculations, with the following exceptions. The previous risk assessment used the most conservative measured values of vadose and capillary zone saturated porosities for Site soil. The calculated risks presented herein have instead assumed Site-average values for each parameter. Some additional groundwater data were collected for the Site after April 1998. Therefore, the data set used herein to calculate the baseline risk at the Site has been updated to include all the soil and groundwater data for the Site available as of February 1999. Also, the proposed risk-based action levels have now been developed to consider VOCs in both soil and groundwater.

The risk assessment was conducted assuming hypothetical exposure scenarios for future occupants of the Site. Occupants are subdivided into several receptor populations based on their expected locations and activities. Each group was assumed to be subjected to different concentrations of chemicals for different amounts of time. All assumptions used in the risk assessment are quantified in the attached tables.

This report is divided into three major sections. The first discusses criteria used to define each of the future occupant populations, outlines the chemicals present at the Site and their representative concentrations, and explains the toxicity criteria used in calculations. The second section presents and discusses the calculation of risk-based cleanup goals at the Site, and the third section discusses conservative assumptions used and uncertainty involved in the calculations.

This risk assessment was performed using guidelines published by the U.S. Environmental Protection Agency ("USEPA"), the California Environmental Protection Agency ("Cal-EPA"), and the American Society for Testing and Materials ("ASTM"), in the following documents:

- USEPA, December 1989, *Risk Assessment Guidance for Superfund, Volume 1, Human Health Evaluation Manual*.

08/08/1999 03:24P  
DR Page 72 of 163

- Cal-EPA, July 1992, *Supplemental Guidance for Human Health Multimedia Risk Assessments of Hazardous Waste Sites and Permitted Facilities*.
- ASTM, September 1995, *Standard Guide for Risk-Based Corrective Action Applied at Petroleum Release Sites ("RBCA")*.

Although all three documents are used for guidance in the risk assessment calculations, RBCA was the source of transport models used to calculate indoor and outdoor air exposure point concentrations for the assessment.

Chemicals of concern at the Site include halogenated volatile organic compounds ("VOCs"), acetone, and the aromatics benzene and toluene. Ordered by frequency of detection, the most common contaminants in soil and groundwater are trichloroethene ("TCE"), *cis*-1,2-dichloroethene ("*cis*-1,2-DCE"), and 1,1,2-trichloro-1,2,2-trifluoroethane ("CFC-113"). In groundwater, chloroform is also a common constituent. Based on the current set of samples, more chemicals appear to be present at detectable levels in groundwater than in soil.

## 2. ASSESSMENT OF BASELINE HUMAN HEALTH RISKS

The objective of a risk assessment for a particular location is to calculate the potential for adverse health effects, caused by chemicals present at the Site, to hypothetical current and future populations that may use the Site. The Site is currently unoccupied. Therefore, risk calculations in this report concern only hypothetical future populations. This section presents a discussion of the following topics:

- Potentially exposed receptor populations and relevant exposure pathways,
- Chemicals of concern present in soil and groundwater,
- Toxicity criteria for the chemicals of concern used in risk calculations,
- Assumptions used to calculate representative and exposure-point contaminant concentrations, and
- Results of the risk calculations.

### 2.1 Identification of Potentially Exposed Receptor Populations and Relevant Exposure Pathways

The Site is a commercial/industrial property, previously used for the manufacture of polished silicon wafers. It is located in a low-elevation, industrial/commercial area, approximately one hundred feet south of the salt evaporation ponds at the margin of San Francisco Bay. Two buildings are located on the Site; both are currently vacant. Populations at risk of potential exposure to chemicals of concern at the Site are therefore limited to hypothetical future populations of workers, which for the purpose of this study are grouped into three categories:

- Future commercial/industrial building occupants, who will work indoors on-Site over a long period of time ("Indoor Workers");
- Future maintenance personnel such as groundskeepers, who will labor primarily outdoors over a long period of time ("Maintenance Workers"); and
- Workers involved in the construction of new buildings or subsurface utilities on-Site, who will occupy the Site for much more limited periods ("Construction Workers").

Based on current land use and zoning, no residential, health-care, or educational facilities are expected to be built on-Site. Thus, all potentially exposed receptor populations in the risk assessment are assumed to be adults. Each potentially exposed future population at the Site has a set of possible exposure mechanisms, or pathways, through which it may come in contact with various chemicals of concern. These exposure pathways are dependent upon the type of activity or tasks expected from the population.

Oral ingestion of groundwater is a potential exposure pathway that was considered and rejected. Analytical results for samples of groundwater from the Site range from 8,600 mg/L to 154,200 mg/L total dissolved solids ("TDS") [EKL, 1999a], which classifies the water as brackish to saline [Drever, 1988]. The groundwater beneath the Site cannot be considered a potential source of drinking water because these values exceed the California state TDS guideline of 3,000 mg/L for drinking water sources (CRWOCB, 1995).

Dermal contact with groundwater was also rejected. Historic depth to groundwater at the Site is six to eight feet below ground surface ("bgs") [EKL, 1997a]. Expected depth of excavation for future construction utility installation or repair is estimated to be less than six to eight feet, so direct dermal exposure to groundwater is not treated as a valid exposure pathway for any of the hypothetical future Site receptor populations.

For the purpose of calculating baseline risk, parameters assumed in this study for each of the receptor populations are the following:

- INDOOR WORKERS

- \* Exposure Pathways:

- Inhalation of volatiles from groundwater
- Inhalation of volatiles from soil

- \* Exposure Parameters:

- Frequency: 250 working days per year, none doing excavation work; all days spent working indoors
- Duration: 25 years

- MAINTENANCE WORKERS

- \* Exposure Pathways:

- Inhalation of volatiles from soil
- Inhalation of volatiles from groundwater
- Dermal contact with soil
- Incidental ingestion of soil

- \* Exposure Parameters:

- Frequency: 250 working days per year: 5 days of excavation work, 245 days of non-excavation work; all working days spent outside
- Duration: 25 years

• CONSTRUCTION WORKERS

• Exposure Pathways:

- Inhalation of volatiles from soil
- Inhalation of volatiles from groundwater
- Dermal contact with soil
- Incidental ingestion of soil

• Exposure Parameters:

- Frequency: 250 working days per year, 87 spent doing excavation work
  - Duration: 4 months

Unlike the Indoor Worker population, Maintenance and Construction Workers are assumed to have contact with Site soil in the course of their jobs during excavation work. Thus, dermal contact and incidental ingestion pathways are considered for these populations. Although the hypothetical Maintenance and Construction Worker populations share the same potential exposure pathways, the two groups differ in exposure duration. Maintenance Workers, being permanent employees, are assumed to undergo exposure through activities at the Site for 25 years [USEPA, 1991].

Construction Workers are assumed to have a much shorter per-individual exposure of one year, a span of time assumed to encompass the earthwork stage of a construction project. An additional difference between the two outdoor receptor populations is the assumption that Maintenance Workers engage in excavation-type activities for an average of 5 days per year of 250 days, whereas Construction Workers perform excavation 87 days (four months) of their work year. This is significant in that excavation work is modeled with a higher soil ingestion rate than non-excavation activity.

The Site is almost completely covered by asphalt or concrete. Due to this cover, mobilization of chemicals through inhalation of particulate matter from surficial soils is not considered as a viable exposure pathway. The assumption was made that the Site will retain a similar type of cover, such as asphalt, concrete, or clean landscaping fill, in the future. Volatilization of chemicals from surficial soils to ambient air is similarly precluded, as almost none of the soil at the Site exists at the surface. For modeling purposes, all contaminated soil is treated as subsurface soil.

Mobilization and diffusion of vapor-phase chemicals (volatilized from soil or groundwater) from the subsurface to the surface is driven by a concentration gradient between the subsurface source of the vapors and the local atmosphere. Many chemicals at the Site are present in both soil and groundwater, and are conservatively assumed, in the baseline risk calculations, to volatilize and diffuse from both soil and groundwater into the atmosphere.

1992a; Cal-EPA, 1992]. The conservative assumption is made whereby analyses that did not detect a particular chemical of concern are treated as though the chemical had been detected at a concentration of one half the detection limit [USEPA, 1989].

Representative concentrations for all chemicals of concern at the Site are shown in Table A-3.

## 2.3 Toxicity Criteria

Accumulated data from various laboratory toxicity studies have been compiled and interpreted by a number of Federal and State agencies, among them the U.S. Environmental Protection Agency and the California Environmental Protection Agency. Results from human and, more commonly, animal trials are summarized into reference doses ("RfDs") for non-carcinogenic chemicals and risk slope factors ("SFs") for carcinogens. Toxicity values used in this risk assessment are taken from a hierarchy of several sources. If the needed value was not available in the preferred source, the next most reviewed source was consulted, and so on.

Non-carcinogen RfDs are preferentially obtained from the U.S. EPA Integrated Risk Information System ("IRIS") [USEPA, 1996], an on-line database of peer-reviewed toxicity information. The next most desirable RfD sources, in order of preference, are the U.S. EPA Health Effects Summary Tables ("HEAST") [USEPA, 1997], the U.S. EPA National Center for Environmental Assessment ("NCEA") Risk Assessment Issue Papers, and the Cal-EPA Office of Environmental Health Hazard Assessment Technical Support Document for the Determination of Non-Cancer Chronic Reference Exposure Levels ("OEHHA") [Cal-EPA, 1997].

Carcinogen SFs are preferentially culled from the Cal-EPA Memorandum Concerning Cancer Potency Factors: Update [Cal-EPA, 1996]. Values unavailable in that document are obtained from one of the above references for RfDs, in the same order of preference.

### 2.3.1 Non-Carcinogenic Toxicity Criteria

Toxicity of non-carcinogenic chemicals is expressed through reference doses, or RfDs, in units of milligrams per kilogram of body weight per day (mg/kg-day). The RfD for a particular chemical of concern is the hypothetical dose which will cause no adverse effects in human populations. An oral or ingestion reference dose ("RfDo") for a chemical is calculated from a different set of experiments than is an inhalation reference dose ("RfDi"). When one quantity or the other is unavailable, a "route-to-route extrapolation," or substitution, is sometimes used in the above data sources to estimate the missing value. As most toxicity studies are performed on laboratory animals, direct quantitative data for human toxicity of a particular chemical are uncommon. Published RfDs therefore generally contain safety factors of one or two orders of magnitude, to account for cross-species uncertainty, uncertainty from experimental procedures, and other effects. RfDs may be interpreted as representing the maximum "safe" dosage of a non-carcinogenic chemical. A low RfD indicates a low threshold dose, and therefore a

more toxic chemical; a high RfD denotes a substance with less toxicity. Reference doses for each chemical of concern at the Site are listed in Table A-4, together with a summary of demonstrated health effects and sources of the toxicological data.

### 2.3.2 Carcinogenic Toxicity Criteria

Toxicity for carcinogens is expressed as a risk slope factor, or "SF". Units of an SF are inverse exposure units, or (mg/kg-day)<sup>-1</sup>. When multiplied by a dose, the inverse dosage units cancel, resulting in a dimensionless value that represents the risk associated with that dose. Slope factors are therefore the "plausible upper-bound estimates of the probability of a carcinogenic response per unit of chemical intake over a lifetime" [USEPA, 1989]. As opposed to RfDs, chemicals with low SFs are less carcinogenic than those with high SFs. Slope factors for chemicals of concern at the Site are summarized in Table A-5, along with carcinogenic effects and SF data sources for each chemical.

### 2.4 Calculation of Exposure Point Concentrations and Chronic Daily Intakes

Based on the calculated representative concentrations for the chemicals of concern at the Site, estimates can be calculated for the concentration each potentially exposed receptor population might experience through a particular set of exposure pathways. Called exposure point concentrations ("EPCs"), these values, along with parameters describing the potentially exposed populations, allow determination of a Chronic Daily Intake ("CDI") for each chemical, population, and pathway. CDIs are expressed as dosages, in units of milligram of chemical per kilogram of body weight per day (mg/kg-day). Carcinogenic CDIs are calculated differently from non-carcinogenic CDIs. Averaging time is assumed to be 25 years for non-carcinogens but a full lifetime of 70 years for carcinogens. Assumed values for all parameters, along with the sources of the assumptions, are summarized in Table A-6.

#### 2.4.1 Ingestion and Dermal Contact Exposure Pathways

For the cases of soil ingestion and dermal contact, exposure point concentrations are identical to representative concentrations. CDIs for the two potential future receptor populations assumed to have the greatest likelihood of contact with Site soil, Maintenance Workers and Construction Workers, are calculated according to equations [1] and [2]:

Ingestion:

$$CDI_i = \frac{C_s \times IR_s \times EF \times ED \times 10^{-6} \frac{\text{kg}}{\text{mg}}}{BW \times AT} \quad [1]$$

where

CDI<sub>i</sub> = Chronic daily intake through ingestion (mg/kg-day)

C<sub>s</sub> = Representative Concentration = Concentration in soil (mg/kg)

- IR<sub>s</sub> = Ingestion rate of soil (mg/day)  
 EF = Exposure frequency (days/year)  
 ED = Exposure duration (years)  
 BW = Body weight (kg)  
 AT = Averaging time (days)

Dermal Contact:

$$CDI_{dc} = \frac{C_s \times SA_s \times ABS \times AF \times EF \times ED \times 10^{-6} \frac{kg}{mg}}{BW \times AT} \quad [2]$$

where

- CDI<sub>dc</sub> = Chronic daily intake through dermal contact (mg/kg-day)  
 C<sub>s</sub> = Representative Concentration = Concentration in soil (mg/kg)  
 SA<sub>s</sub> = Surface area of skin exposed to soil contact (cm<sup>2</sup>/event)  
 ABS = Soil-dermal absorption fraction (unitless)  
 AF = Soil adherence factor (mg/cm<sup>2</sup>)  
 EF = Exposure frequency (days/year)  
 ED = Exposure duration (years)  
 BW = Body weight (kg)  
 AT = Averaging time (days)

The Maintenance and Construction Worker scenarios differ with regard to incidental ingestion of soil. A Maintenance Worker is assumed to excavate soil for a total of 5 days during a work year of 250 days. In contrast, a Construction Worker is assumed to engage in excavation labor for four months (approximately 87 days) throughout the 250-day work year. Soil ingestion is assumed to occur at a rate of 480 mg/day during excavation activity and 50 mg/day during routine maintenance activities [USEPA, 1991; Cal-EPA, 1992]. See Table A-6 for more details of human exposure assumptions.

2.4.2 Inhalation Exposure Pathways

Chemicals of concern can volatilize from the subsurface into the air, posing a potential hazard to on-Site workers breathing in the vicinity. Different algorithms are used to calculate Exposure Point Concentrations ("EPCs") for indoor and outdoor air. When chemicals evaporate from soil and groundwater, the rate of transfer, based on each chemical's volatility, must first be determined before air EPCs can be calculated. Volatilization is modeled as a linear transfer function of the chemical's concentration in soil or groundwater [ASTM, 1995]. Expressed as a volatilization factor ("VF"), the transfer function is based, in part, on a chemical's Henry's Law constant, diffusion coefficients in air and water, and organic carbon partition coefficient. Exposure point concentrations in air due to volatilization of chemicals present in soil and groundwater are calculated for all future worker receptor populations through equations [3], and [4]:

$$C_a = VFx \times RC \times AgF \quad [3]$$

for excavation work, and

$$C_a = VFx \times RC \quad [4]$$

for non-excavation work, where

- $C_a$  = Concentration in air, or EPC (mg/m<sup>3</sup>)
- RC = Representative concentration of the chemical (mg/kg or mg/L)
- AgF = Agitation factor to model enhanced evaporation from excavation (unitless)

and the general term VFx refers to one of the following pathway and chemical-specific Volatilization Factors ("VFs"):

$VF_{s_{amb}}$  = Soil-to-outdoor air (ambient) pathway (kg soil/m<sup>3</sup> air):

$$VF_{s_{amb}} = \frac{H \times \rho_s \times 10^3 \frac{cm^3 \text{ kg}}{m^3 \text{ g}}}{[\theta_{ws} + (k_{oc} \times f_{oc} \times \rho_s) + (H \times \theta_{AS})] \times \left( 1 + \frac{U_{AIR} \times \delta_{AIR} \times L_S}{D_S^{eff} \times W} \right)} \quad [5]$$

$VF_{w_{amb}}$  = Groundwater-to-outdoor air (ambient) pathway (L H<sub>2</sub>O/m<sup>3</sup> air):

$$VF_{w_{amb}} = \frac{H \times 10^3 \frac{L}{m^3}}{\left( 1 + \frac{U_{AIR} \times \delta_{AIR} \times L_{GW}}{D_{ws}^{eff} \times W} \right)} \quad [6]$$

$VF_{s_{esp}}$  = Soil-to-indoor air (enclosed space) pathway (kg soil/m<sup>3</sup> air):

$$VF_{s_{esp}} = \frac{\frac{H \times \rho_s}{[\theta_{ws} + (k_{oc} \times f_{oc} \times \rho_s) + (H \times \theta_{AS})]} \times \left[ \frac{D_S^{eff}}{L_S \times ER \times L_B} \right] \times 10^3 \frac{cm^3 \text{ kg}}{m^3 \text{ g}}}{1 + \left[ \frac{D_S^{eff}}{L_S \times ER \times L_B} \right] + \left[ \frac{D_S^{eff} \times L_{CRACK}}{L_S \times D_{CRACK}^{eff} \times \eta} \right]} \quad [7]$$

1999-135815  
 08/09/1998 03:24P  
 DR Page 91 of 153

$VFW_{exp}$  = Groundwater-to-indoor air (enclosed space) pathway (L H<sub>2</sub>O/m<sup>3</sup> air):

$$VFW_{exp} = \frac{H \times \left[ \frac{D_{ws}^{eff}}{L_{GW} \times ER \times L_B} \right] \times 10^3 \frac{L}{m}}{1 + \left[ \frac{D_{ws}^{eff}}{L_{GW} \times ER \times L_B} \right] + \left[ \frac{D_{ws}^{eff} \times L_{CRACK}}{L_{GW} \times D_{CRACK}^{eff} \times \eta} \right]} \quad [8]$$

VFs are based, in part, upon effective diffusion coefficients for each chemical, calculated as follows:

$D_s^{eff}$  = Effective diffusion coefficient in soil based on vapor concentration (cm<sup>2</sup> / s):

$$D_s^{eff} = \left[ D^{air} \times \frac{(\theta_{AS})^{10/3}}{(\theta_T)^2} \right] + \left[ D^{water} \times \frac{(\theta_{WS})^{10/3}}{H \times (\theta_T)^2} \right] \quad [9]$$

$D_{CAP}^{eff}$  = Effective diffusion coefficient through capillary fringe (cm<sup>2</sup> / s):

$$D_{CAP}^{eff} = \left[ D^{air} \times \frac{(\theta_{ACAP})^{10/3}}{(\theta_T)^2} \right] + \left[ D^{water} \times \frac{(\theta_{WCAP})^{10/3}}{H \times (\theta_T)^2} \right] \quad [10]$$

$D_{ws}^{eff}$  = Effective diffusion coefficient between groundwater and surface (cm<sup>2</sup> / s):

$$D_{ws}^{eff} = \frac{(h_{CAP} + h_y)}{\left[ \frac{h_{CAP}}{D_{CAP}^{eff}} + \frac{h_y}{D_s^{eff}} \right]} \quad [11]$$

$D_{CRACK}^{eff}$  = Effective diffusion coefficient through floor or wall cracks (cm<sup>2</sup> / s):

$$D_{CRACK}^{eff} = \left[ D^{air} \times \frac{(\theta_{ACRACK})^{10/3}}{(\theta_T)^2} \right] + \left[ D^{water} \times \frac{(\theta_{WCRACK})^{10/3}}{H \times (\theta_T)^2} \right] \quad [12]$$

Where:

$D^{air}$  = Diffusion coefficient of the chemical in air (cm<sup>2</sup> / s)

$D^{water}$  = Diffusion coefficient of the chemical in water (cm<sup>2</sup> / s)

$ER$	= Enclosed-space air exchange rate (L / sec)
$f_{OC}$	= Fraction of organic carbon in soil (g C / g soil)
$H$	= Henry's Law constant ( $\text{cm}^3 \text{H}_2\text{O} / \text{cm}^3 \text{air}$ )
$h_{cap}$	= Thickness of capillary fringe (cm)
$h_v$	= Thickness of vadose zone (cm)
$k_{OC}$	= Organic carbon-water sorption coefficient ( $\text{cm}^3 \text{H}_2\text{O} / \text{g C}$ )
$L_B$	= Enclosed-space volume / infiltration area ratio (cm)
$L_{CRACK}$	= Enclosed-space floor or wall thickness (cm)
$L_{GW}$	= Depth to groundwater, i.e. $h_{cap} + h_v$ (cm)
$L_S$	= Depth to subsurface soil sources (cm)
$U_{AIR}$	= Wind speed above ground surface in ambient mixing zone (cm / sec)
$W$	= Width of source area parallel to wind or groundwater flow direction (cm)
$\delta_{AIR}$	= Ambient air mixing zone height (cm)
$\delta_{GW}$	= Groundwater mixing zone thickness (cm)
$\eta$	= Areal fraction of cracks in floor or wall ( $\text{cm}^2 \text{cracks} / \text{cm}^2 \text{total area}$ )
$\theta_{ACAP}$	= Volumetric air content in capillary fringe soil ( $\text{cm}^3 \text{air} / \text{cm}^3 \text{soil}$ )
$\theta_{ACRACK}$	= Volumetric air content in floor or wall cracks ( $\text{cm}^3 \text{air} / \text{cm}^3 \text{crack vol.}$ )
$\theta_{AS}$	= Volumetric air content in vadose zone soil ( $\text{cm}^3 \text{air} / \text{cm}^3 \text{soil}$ )
$\theta_T$	= Total soil porosity ( $\text{cm}^3 / \text{cm}^3 \text{soil}$ )
$\theta_{WCAP}$	= Volumetric water content in capillary fringe soil ( $\text{cm}^3 \text{water} / \text{cm}^3 \text{soil}$ )
$\theta_{WCRACK}$	= Volumetric water content in floor or wall cracks ( $\text{cm}^3 \text{water} / \text{cm}^3 \text{crack vol.}$ )
$\theta_{WS}$	= Volumetric water content in vadose zone soil ( $\text{cm}^3 \text{water} / \text{cm}^3 \text{soil}$ )
$\rho_S$	= Soil bulk density (g soil / $\text{cm}^3 \text{soil}$ )

Volatilization Factors are calculated according to the method described in the ASTM RBCA guidance [ASTM, 1995]. Air diffusion coefficients (" $D_{air}$ ") for chemicals of concern at the Site are estimated using the FSG method [Lyman, et al., 1990; USEPA, 1988]. Water diffusion coefficients (" $D_{water}$ ") are calculated through the method of Hayduk and Laudie [Lyman, et al., 1990]. Ambient-air VFs are used for calculations regarding Construction and Maintenance Workers, while enclosed-space air VFs are used for Indoor Worker EPC calculations. Specific physical parameter assumptions used in the above VF equations can be found in Table A-7; the quantities are Site-specific and noted as such where available, and otherwise are default values from the ASTM RBCA guidance [ASTM, 1995]. Table A-8 lists the resulting VFs and other data for each chemical of concern and volatilization pathway.

Construction Workers are modeled herein as performing excavation for their four month on-Site tenure of 87 working days (USEPA, 1991; Cal-EPA, 1992), consequently equation [3] is applied throughout. Maintenance Workers, however, are assumed to only labor five days per year in excavation tasks; AgF is only factored in through the use of equation [3] for those five days annually. The rest of the time, Maintenance Worker air EPCs are calculated using equation [4]. Indoor Workers are assumed to never perform excavation tasks, thus air EPCs are calculated with equation [4].

Chronic Daily Intakes in air due to volatilization of chemicals present in soil are calculated for all future worker receptor populations through equation [13]:

$$CDI_{inh} = \frac{C_a \times IR_a \times EF \times ED}{BW \times AT} \quad [13]$$

where

- CDI<sub>inh</sub> = Chronic daily intake through inhalation (mg/kg-day)
- C<sub>a</sub> = Concentration in air, or EPC (mg/m<sup>3</sup>)
- IR<sub>a</sub> = Inhalation rate of air (m<sup>3</sup>/day)
- EF = Exposure frequency (days/year)
- ED = Exposure duration (years)
- BW = Body weight (kg)
- AT = Averaging time (days)

Chronic daily intakes of chemicals of concern for each valid population/pathway combination are summarized in Table A-9 through Table A-18.

## 2.5 Baseline Risk Characterization

For the purpose of risk assessment at the Site, effects from chemicals of concern are split into two broad categories, Cancer Risk and non-carcinogenic Hazard Index. Each of these types of risk is calculated differently, although many contaminants at the Site have both effects, and are assigned both classifications. The separation is driven by the toxicity data for the two chemical effect categories. Non-carcinogens are assigned a Reference Dose ("RfD") in mg/kg-day, and carcinogens are assigned a Slope Factor ("SF"), having inverse dosage units of (mg/kg-day)<sup>-1</sup>. This section outlines assumptions used to calculate quantitative, Site-specific estimates of potential health hazards from non-carcinogens and of incremental lifetime Cancer Risk from carcinogens occurring at the Site.

Note that baseline risks are calculated assuming receptor populations are unprotected from exposure to hazardous chemicals (i.e. no engineering controls or personal protection equipment used).

As discussed in Section 1.3, non-carcinogenic RfDs are generally based on the highest no-adverse-effects chronic dosages from several studies. The hazard of a chemical of concern through a particular exposure pathway is calculated as the Chronic Daily Intake ("CDI") divided by the RfD for that pathway. This quantity is called the Hazard Index ("HI"). It is unique to the site, chemical, exposure pathway, and receptor population:

$$HI_n = \frac{CDI_n}{RfD_n} \quad [14]$$

where

- $HI_n$  = Hazard Index for the  $n^{\text{th}}$  combination of population, exposure pathway, and chemical of concern (dimensionless)  
 $CDI_n$  = Chronic Daily Intake for the  $n^{\text{th}}$  combination of population, exposure pathway, and chemical of concern (mg/kg-day)  
 $RfD_n$  = Reference Dose for the  $n^{\text{th}}$  combination of exposure pathway and chemical of concern (mg/kg-day)

For an explanation of CDI calculation for each population / pathway combination, please see footnotes to Tables A-9 through A-18, as appropriate.

Summation of Hazard Indices over all pathways and chemicals gives the Hazard Index for each population, which is targeted to remain at or below a value of one. A total HI less than or equal to one indicates that the population will not be exposed to the chemical beyond a dosage considered safe.

Carcinogenic chemicals are assigned, based on experimental evidence and mathematical modeling, a published Slope Factor for each exposure pathway. When multiplied by the CDI for that pathway, a unitless quantity results which represents the incremental risk of developing cancer from exposure to that chemical, through that exposure pathway, over a lifetime of 70 years [USEPA, 1989].

$$CR_n = CDI_n \times SF_n \quad [15]$$

where

- $CR_n$  = Estimated incremental excess Cancer Risk for the  $n^{\text{th}}$  combination of population, exposure pathway, and chemical of concern (dimensionless)  
 $CDI_n$  = Chronic Daily Intake for the  $n^{\text{th}}$  combination of population, exposure pathway, and chemical of concern (mg/kg-day)  
 $SF_n$  = Slope Factor for the  $n^{\text{th}}$  combination of exposure pathway and chemical of concern (mg/kg-day)<sup>-1</sup>

As with the non-cancer Hazard Index, summation of risk from all chemicals over all pathways valid for a particular receptor population gives an overall Cancer Risk for the population at the Site. This value is targeted to remain at or below  $10^{-5}$ . The National Oil and Hazardous Substances Pollution Contingency Plan (40 CFR §300) mandates an acceptable range of maximum incremental carcinogenic risk between  $10^{-4}$  and  $10^{-5}$ . California law requires notification of on-Site workers if Cancer Risk is estimated to exceed  $10^{-5}$  (California Code of Regulations ("CCR") Title 22, Section 12703). The targeted maximum carcinogenic risk of  $10^{-5}$  satisfies both sets of regulations.

All potentially exposed populations are assumed to be unprotected in the baseline risk calculations.

### 2.5.1 Future Indoor Workers

One of the assumptions regarding the future Indoor Worker receptor population is that its members never work with soil, thus, incidental ingestion and dermal contact with contaminated soil are not considered exposure pathways for this population. Inhalation of volatile organic compounds evaporating from soil, however, is valid and is presented in Table A-9. The same data for inhalation of VOCs from groundwater is shown in Table A-10.

A summary of baseline hazard and risk for Indoor Workers may be found in Table A-19. The most significant chemical/pathway combination for Indoor Workers, in terms of Cancer Risk, is inhalation of TCE evaporating from groundwater. The non-carcinogenic Hazard Index for this population is dominated by inhalation of vinyl chloride, TCE, and cis-1,2-DCE from groundwater.

### 2.5.2 Future Maintenance Workers

Baseline risk characterization data for Maintenance Workers is compiled in several tables. Table A-11 summarizes the soil ingestion exposure pathway, and Table A-12 displays similar data for the soil dermal contact exposure pathway. Table A-13 displays Hazard Index and Cancer Risk for the inhalation pathway through volatilization of organic compounds from soil. The same calculations for inhalation of VOCs from groundwater are shown in Table A-14.

Hazard and risk for Maintenance Workers through all pathways is summarized in Table A-20. The most significant chemical/pathway combination for the Maintenance Worker receptor population is inhalation of vinyl chloride volatilizing from soil. Note that under existing Site conditions, potential risks experienced by the hypothetical Maintenance Worker population are within acceptable limits.

### 2.5.3 Construction Workers

Baseline Hazard indices and Cancer Risks for each chemical of concern at the Site are organized in the same way as for Maintenance Workers. Table A-15 lists the soil ingestion exposure pathway, and Table A-16 lists similar data for the soil dermal contact pathway. Table A-17 lists Hazard Index and Cancer Risk for the inhalation pathway of volatile organic compounds evaporating from soil; groundwater VOC volatilization is detailed in Table A-18. A summary of baseline Cancer Risks and Hazard Indices for all Construction Worker exposure pathways is listed in Table A-21. The most significant chemical/pathway combination, both in terms of potential carcinogenic risk and non-carcinogenic health hazard for the Construction Worker receptor population, is inhalation of vinyl chloride volatilizing from soil. Dermal contact with vinyl chloride is also a significant pathway in terms of generation of carcinogenic risk for Construction Workers. Note that under current conditions, potential risks experienced by the hypothetical Construction Worker population are less than the acceptable maximum values.

### 3. CALCULATION OF RISK-BASED ACTION LEVELS FOR SOIL AND GROUNDWATER

Using the baseline risks calculated for the hypothetical receptor populations at the Site, risk-based action levels for soil and groundwater have been calculated, as discussed below. Risk-based action levels have been calculated considering potential exposures to future hypothetical receptor populations, i.e., Indoor Workers, Maintenance Workers, and Construction Workers.

Risk-based action levels for soil and groundwater were calculated to apportion post-remediation risk such that overall Cancer Risk to all hypothetical worker populations is at or below  $1.0 \times 10^{-5}$ , and overall Hazard Index is at or below 1.0. The method used for apportioning risk was to allocate most of the risk to the more hazardous chemicals and those more commonly found at the Site. This approach minimizes the volume of soil and groundwater potentially requiring remediation, while keeping future hypothetical populations' estimated risks below target levels.

Table A-22 lists risk-based action levels for soil, and Table A-23 lists risk-based action levels for groundwater. Current representative concentrations of chemicals within soil and groundwater are also shown on Tables A-22 and A-23 for comparison. TCE and vinyl chloride have been detected in Site soil and groundwater at concentrations greater than their respective risk-based action levels.

Estimates of future estimated Hazard Indices and Cancer Risks for each of the hypothetical populations are listed in Tables A-24, A-25, and A-26. These risks represent estimates of what would result from cleanup of both soil and groundwater at the Site to the respective risk-based action levels. Estimated cumulative Hazard Indices and Cancer Risks for each hypothetical population are equal to or below 1.0 and  $1.0 \times 10^{-5}$ , respectively. Therefore, the risk-based action levels for soil and groundwater listed in Tables A-22 and A-23 would result in an acceptable level of risk for future potentially exposed populations.

If, in the future, chemicals are measured in soil or groundwater samples that differ significantly from the current dataset, risk-based action levels may be recalculated to more accurately reflect the distribution and concentrations of the chemicals.

#### 4. CONSERVATIVE ASSUMPTIONS IN THE RISK ASSESSMENT

The estimated baseline risks and the risk-based action levels presented in the attached tables are upper-bound, health conservative estimates of baseline risks and risk-based action levels for reasonable maximum exposure scenarios. Actual risks may be lower. This section discusses the conservative nature of some of the assumptions in the risk assessment.

Major conservative assumptions include:

- the method used to calculate representative concentrations for chemicals in soil and groundwater;
- the use of all chemicals detected on-Site for risk calculation, even if the frequency of detection was very low;
- the use of conservative exposure frequency assumptions (in days of exposure per year) for hypothetical future worker populations;
- "double counting" of certain calculated risks caused by summing the risks due to volatilization of VOCs from soil and from groundwater; and
- apportionment of risk to each chemical of concern in both soil and groundwater, even when the chemical was actually detected in only one medium.

##### 4.1 Calculation of Representative Concentrations

Representative concentrations of chemicals used to calculate baseline risks are assumed to be the lesser of the maximum detected concentration or the 95% upper confidence limit of the mean concentration ("95% UCL"), based on a lognormal model. When calculating the 95% UCL, samples without detectable concentrations were conservatively assumed to contain chemicals at concentrations equal to half the detection limit for the analyses. Potentially exposed populations may actually be exposed to a lesser concentration than either the maximum or the 95% UCL, as the distribution of chemicals at the Site is not homogeneous.

##### 4.2 Frequency of Detection

Chemicals detected in Site soil and groundwater are dominated by TCE and cis-1,2-DCE. As a conservative approach, however, all detected chemical species were used in calculation of baseline risks, regardless of each chemical's frequency of detection. Table A-3 shows frequencies of detection for all chemicals detected on-Site.

Given the overall conservative nature of the risk assessment, actual non-carcinogenic and carcinogenic risks to potentially exposed populations are likely to be significantly lower than reported herein. The calculated health risk-based action levels are founded on the same conservative assumptions as the baseline risk calculations. Consequently, chemicals present in soil and groundwater at their human health risk-based action level concentrations should not pose an adverse risk to occupants at the Site.

Notes:

- (a) Sample depth range in feet below ground surface (ft bgs).
- (b) A hyphen (-) indicates that the sample was not analyzed for the chemical.
- (c) The 95% upper confidence limit of the mean concentration was calculated assuming a log-normal data distribution. One-half the detection limit value was used for samples in which the analyte concentration was reported as below the detection limit.
- (d) The representative concentration was selected as the lesser of either the 95% upper confidence limit or the maximum detected concentration.

**Table A-4**  
**Oral and Inhalation Non-Carcinogenic Toxicity Information for Chemicals of Concern**  
**3695-3723 Haven Avenue Property, Menlo Park, California**

**Notes:**

- (a) Reference doses ("RfDs") were obtained from the California EPA Office of Environmental Health Hazard Assessment, 1997 Technical Support Document for the Determination of Noncancer Chronic Reference Exposure Levels ("OEHHHA"); the U.S. Environmental Protection Agency Integrated Risk Information System ("IRIS"); the U.S. EPA 1997 Health Effects Assessment Summary Tables ("HEAST"); or the U.S. EPA National Center for Environmental Assessment Risk Assessment Issue Papers ("NCEA"); in order of precedence. Notation: (o) = oral reference dose, (i) = inhalation reference dose.
- (b) An inhalation RfD is not defined in the listed sources, so the corresponding oral RfD (i.e. route-to-route extrapolation) is shown.
- (c) A hyphen (-) indicates that no data for the indicated parameter was available from the listed sources.
- (d) An oral RfD is not defined in the listed sources, so the corresponding inhalation RfD (i.e. route-to-route extrapolation) is shown.

**Table A-5**  
**Oral and Inhalation Carcinogenic Toxicity Information for Chemicals of Concern**  
**3695-3723 Haven Avenue Property, Menlo Park, California**

**Notes:**

(a) U.S. EPA weight-of-evidence classification is as follows:

A = Human Carcinogen

B1 or B2 = Probable Human Carcinogen; B1 indicates that limited human data are available; B2 indicates that there is sufficient evidence in animals and inadequate or no evidence in humans.

C = Possible Human Carcinogen

D = Not Classifiable as to Human Carcinogenicity.

E = Evidence of Non-Carcinogenicity for Humans

Weight-of-evidence information obtained from the U.S. Environmental Protection Agency Integrated Risk Information System database ("IRIS"); the July 1997 U.S. EPA Health Effects Assessment Summary Tables ("HEAST"); or the U.S. EPA National Center for Environmental Assessment Risk Assessment Issue Papers ("NCEA"); in order of precedence.

(b) Slope factors were obtained from the California Environmental Protection Agency, 1996 Memorandum of Cancer Potency Factors Update ("Memo", see below); the U.S. EPA IRIS database; the 1997 U.S. EPA HEAST; or the U.S. EPA NCEA, in order of precedence.

(c) A hyphen (-) indicates that no data for the indicated field was available in the listed sources.

(d) 1,1-Dichloroethene is not recognized as a human carcinogen by the State of California (source: California EPA, 1996, *California Cancer Potency Factors*, California Environmental Protection Agency, Office of Environmental Health Hazard Assessment, Sacramento, California, 1 April 1996).

Notes:

(a) Solubility values from Montgomery, J.H. and L.M. Wilkom, 1991, *Groundwater Chemicals Desk Reference*, Lewis Pub. Co., Chelsea, Mich.

(b) Saturation soil concentration ("C<sub>sat</sub>") calculated through the equation:

$$C_{sat} = (S \times \theta_m / \rho_s) \times (K_{oc} \times \rho_s \times \theta_w + \theta_w + H' \times \theta_{air})$$

(Parameters and values used in the above equation are shown in Table A-7 and Table A-8.)

(c) Definition of terms (for an explanation of calculations, see section 2.4 of the text):

- S = Solubility
- C<sub>sat</sub> = Saturation concentration
- C<sub>max</sub> = Maximum analysed concentration in soil samples
- H' = Dimensionless Henry's Law constant
- D<sub>air</sub> = Diffusivity in air
- D<sub>water</sub> = Diffusivity in water
- K<sub>oc</sub> = Organic carbon partition coefficient
- VF<sub>w,exp</sub> = Volatilization factor for the groundwater to enclosed space air pathway
- VF<sub>s,exp</sub> = Volatilization factor for the soil to enclosed space air pathway
- VF<sub>w,amb</sub> = Volatilization factor for the groundwater to ambient air pathway
- VF<sub>s,amb</sub> = Volatilization factor for the soil to ambient air pathway

<b>Total Estimated Risk due to Inhalation of COCs Volatilized from Soil to Indoor Air:</b>									<b>2.35E-06</b>

**Notes:**

(a) Refer to Table A-3 for compilation of representative concentrations ("RCs").

(b) Volatilization factor from soil to enclosed-space air ("V<sub>f,encsp</sub>") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") (ASTM, 1995). Parameters used in the RBCA model are listed in Tables 7 and 8.

(c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{Ca \cdot IR \cdot Ef \cdot ED}{BW \cdot AT}$$

Table A-9

Characterization of Human Health Risks due to Inhalation of COCs Volatilized from Subsurface Soil  
for Future Indoor Workers  
3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)

$Ca$  = Exposure Point Air Concentration ( $mg/m^3$ ) =  $VF_{resp} \cdot RC$

$IRa$  = Air Inhalation Rate ( $m^3/day$ )

$EF$  = Exposure Frequency (days/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects (U.S. EPA, 1989). If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

<b>Total Estimated Risk due to Inhalation of COCs Volatilized from Groundwater to Outdoor Air:</b>									<b>1.7E-05</b>

**Notes:**

- (a) Refer to Table A-3 for compilation of representative concentrations ("RCs").
- (b) Volatilization factor from groundwater to enclosed-space air ("V<sub>Fw,sp</sub>") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") [ASTM, 1995]. Parameters used in the RBCA model are listed in Tables 7 and 8.
- (c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{C_a \cdot IR_a \cdot EF \cdot ED}{BW \cdot AT}$$

**Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Groundwater  
for Future Indoor Workers  
3695-3723 Haven Avenue Property, Menlo Park, California**

**Table A-10**

where:

$CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)

$Ca$  = Exposure Point Air Concentration (mg/m<sup>3</sup>) \* VPwamb \* RC

$IRa$  = Air Inhalation Rate (m<sup>3</sup>/day)

$EF$  = Exposure Frequency (days/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Inhalation of COCs Volatilized from Soil to Outdoor Air:									
								0.03	3.0E-06

Notes:

- (a) Refer to Table A-3 for compilation of representative concentrations ("RCs").
- (b) Volatilization factor from soil to ambient air ("VF<sub>s,amb</sub>") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") (ASTM, 1995). Parameters used in the RBCA model are listed in Tables 7 and 8.
- (c) Chronic daily intakes ("CDI<sub>s</sub>") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDI<sub>s</sub> for parameter values used in calculations:

$$CDI_{(inhalation)} = \frac{C_p \cdot IR_a \cdot EF \cdot ED}{BW \cdot AT}$$

Table A-13

Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Subsurface Soil  
for Future Maintenance Workers  
3695-3723 Haven Avenue Property, Menlo Park, California

where:

- $CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)
- $Ca$  = Exposure Point Air Concentration (mg/m<sup>3</sup>) =  $VF_{amb} \cdot RC$  for non-excavation work and  $Ca = VF_{pamb} \cdot RC \cdot AgF$  for excavation work, where  $AgF = Agitation Factor \times 18$ .
- $IRa$  = Air Inhalation Rate (m<sup>3</sup>/day)
- $EF$  = Exposure Frequency (days/year)
- $ED$  = Exposure Duration (years)
- $BW$  = Body Weight (kg)
- $AT$  = Averaging Time (days)

- (d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.
- (e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.
- (f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects (U.S. EPA, 1989). If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.
- (g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

<b>Total Estimated Risk due to Inhalation of COCs Volatilized from Groundwater to Outdoor Air:</b>									<b>1.4E-06</b>

**Notes:**

- (a) Refer to Table A-3 for compilation of representative concentrations ("RCs").
- (b) Volatilization factor from groundwater to ambient air ("V<sub>Fw</sub><sup>amb</sup>") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") (ASTM, 1995). Parameters used in the RBCA model are listed in Tables 7 and 8.
- (c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{C_a \cdot IR \cdot EF \cdot ED}{BW \cdot AT}$$

# Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Groundwater for Future Maintenance Workers

3695-3723 Haven Avenue Property, Menlo Park, California

Table A-14

where:

$CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)

$Ca$  = Exposure Point Air Concentration ( $mg/m^3$ ) =  $VF \cdot w_{amb} \cdot RC$

$IRa$  = Air Inhalation Rate ( $m^3/day$ )

$EF$  = Exposure Frequency (days/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Ingestion of Soil Containing COCs:							
						0.0009	1.7E-09

Notes:

(a) Refer to Table A-3 for compilation of representative concentrations.

(b) Chronic daily intakes (CDIs) were estimated using methods recommended by U.S. EPA or Cal-EPA, as follows:

(Note that different soil ingestion rates were assumed for excavation and non-excavation work. See Table A-6 for details.)

$$CDI_{(ingestion)} = \frac{Cs \cdot IRs \cdot Ef \cdot ED \cdot 10^{-4} \text{ kg/mg}}{BW \cdot At}$$

where:

$CDI_{(ingestion)}$  = Chronic daily intake (mg/kg-day)

$Cs$  = Concentration in soil (mg/kg)

$IRs$  = Ingestion Rate of soil (mg/day)

Table A-15

**Characterization of Baseline Human Health Risks due to Ingestion of COCs in Soil  
for Construction Workers  
3695-3723 Haven Avenue Property, Menlo Park, California**

EF = Exposure Frequency (days/year)  
ED = Exposure Duration (years)  
BW = Body Weight (kg)  
AT = Averaging Time (days)  
and assuming Cs = RC<sub>soil</sub>

- (c) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.
- (d) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.
- (e) Non-carcinogenic hazard index (HI) for a compound "i" is defined as the CDI/RfD<sub>i</sub>. The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects (U.S. EPA, 1989). If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.
- (f) Estimated lifetime incremental cancer risk for compound "i" is defined as CDI<sub>i</sub> x SF<sub>i</sub>. The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Total Estimated Risk due to Inhalation of COCs Volatilized from Soil to Outdoor Air:										
									0.0	4.2E-08

Notes:

- (a) Refer to Table A-3 for compilation of representative concentrations ("RCs").
- (b) Volatilization factor from soil to ambient air ("VF<sub>s,amb</sub>") was calculated for each chemical using the Risk-Based Corrective Action model ("RBCA") [ASTM, 1995]. Parameters used in the RBCA model are listed in Tables 7 and 8.
- (c) Chronic daily intakes ("CDIs") were estimated using methods recommended by U.S. EPA or Cal-EPA. The following equation was used to calculate CDIs (Refer to Table A-6 for parameter values used in calculations):

$$CDI_{(inhalation)} = \frac{C_a \cdot IR_a \cdot EF \cdot ED}{BW \cdot AT}$$

Table A-17

Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Subsurface Soil  
for Construction Workers  
3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)

$Ca$  = Exposure Point Air Concentration ( $mg/m^3$ ) =  $Vf_{samb} * RC$  for non-excavation work and  $Ca = Vf_{samb} * RC * AgF$  for excavation work, where  $AgF$  = Agitation Factor = 1.

$IRa$  = Air Inhalation Rate ( $m^3/day$ )

$EF$  = Exposure Frequency (days/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(e) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.

(g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i * SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

Characterization of Baseline Human Health Risks due to Inhalation of COCs Volatilized from Groundwater  
for Construction Workers  
3695-3723 Haven Avenue Property, Menlo Park, California

where:

$CDI_{(inhalation)}$  = Chronic Daily Intake (mg/kg-day)

$C_a$  = Exposure Point Air Concentration (mg/m<sup>3</sup>) \* V<sub>Fwamb</sub> \* RC

$I_{Ra}$  = Air Inhalation Rate (m<sup>3</sup>/day)

$EF$  = Exposure Frequency (days/year)

$ED$  = Exposure Duration (years)

$BW$  = Body Weight (kg)

$AT$  = Averaging Time (days)

(d) See Table A-4 for an explanation of chronic noncancer reference doses (RfD) used here. A hyphen (-) indicates an RfD was not found for the compound.

(c) See Table A-5 for an explanation of carcinogenic slope factors (SFs) used here. A hyphen (-) indicates an SF was not found for the compound.

(f) Non-carcinogenic hazard index ("HI") for a compound "i" is defined as the  $CDI_i/RfD_i$ . The non-carcinogenic HI, summed for all compounds and exposure pathways, assumes that there is a level of exposure (i.e., RfD) below which it is unlikely even for sensitive populations to experience adverse health effects [U.S. EPA, 1989]. If the chronic daily intake (i.e., CDI) exceeds this RfD threshold (i.e., HI greater than 1), there may be concern for potential adverse non-carcinogenic health effects.  
(g) Estimated lifetime incremental cancer risk for compound "i" is defined as  $CDI_i \times SF_i$ . The estimated incremental lifetime cancer risk to an individual of developing cancer due to COCs is given by the sum of incremental cancer risks for all chemicals and exposure pathways.

## San Francisco Bay Regional Water Quality Control Board

July 30, 2021  
Cost Recovery ID 2020805  
GeoTracker ID: [SL18322742](#)

Integris/Millennium Joint Venture, LLC  
Attn.: Gary D. Williams  
2401 Waterman Blvd., Suite 4A-PMB#172  
Fairfield, CA 94534  
[gilliams@havenoffices.com](mailto:gilliams@havenoffices.com)

**Subject: Variance from Covenant and Environmental Restriction on 3705 Haven Avenue, Menlo Park, San Mateo County**

Dear Mr. Williams:

This letter grants a variance (Variance) from certain use restrictions contained in the [Covenant and Environmental Restriction on Property \(Covenant\)](#) recorded against the subject property, 3705 Haven Avenue in Menlo Park, California, in response to the August 12, 2020 request from Integris/Millennium Joint Venture, LLC (Integris). It is our understanding that Integris is the current owner of the subject property. More specifically, this Variance suspends the Covenant's restriction on residential development.

As set forth in more detail below, granting a variance from certain restrictions in the Covenant is appropriate as to the 3705 Haven Avenue parcel. This Variance reflects the following findings:

- A. The Covenant was recorded on two adjacent parcels on Haven Avenue (Burdened Property) on August 9, 1999, in the Official Records of San Mateo County, California, as Document No. 1999-135815. The Covenant restricted development on the two parcels to commercial and industrial uses because groundwater concentrations of chlorinated volatile organic compounds exceeded residential screening levels. After recordation of the Covenant, the Burdened Property was reparcelized into the following 3 parcels: (1) 3705 Haven Avenue, which is the subject of this Variance (APN 055-170-240), and is more particularly described in [Exhibit A](#) attached hereto ("**3705 Haven Property**"); (2) 3715 Haven Avenue, in the City of Menlo Park, County of San Mateo, State of California, with Assessor's Parcel Number 055-170-340, which is more particularly described in [Exhibit B](#) attached hereto ("**3715 Haven Property**"); and (3) 3723 Haven Avenue, in the City of Menlo Park, County of San Mateo, State of California, with Assessor's Parcel Number 055-170-350, which is

---

JIM McGRATH, CHAIR | MICHAEL MONTGOMERY, EXECUTIVE OFFICER

more particularly described in Exhibit C attached hereto and (“**3723 Haven Property**”).

- B. Between January 31, 2020 and August 12, 2020, the Groundwater and Indoor Air Investigation Report and Soil Vapor Investigation Report were submitted demonstrating there is limited residual contamination on 3705 Haven Property compared to the rest of the site. The highest concentration of trichloroethene (TCE) in groundwater at the 3705 Haven Property is 23 micrograms per liter (µg/L). This is more than two orders of magnitude less than groundwater concentrations remaining on 3715 and 3723 Haven Ave. Soil vapor concentrations of TCE at the 3705 Haven Property are less than residential vapor intrusion-based screening levels.
- C. Integris submitted a request to the Water Board for a variance of the Covenant to allow residential land use on 3705 Haven Property. The Water Board concurs that residential land use is acceptable on 3705 Haven Property due to site conditions, including low soil and soil gas contaminant concentrations and risk management measures for groundwater contamination. Risk to residential receptors (including children and seniors) from residual groundwater contamination at 3705 Haven Property can be effectively managed with the Risk Management Plan (including any subsequent approved addenda) that is required by the Covenant. Specifically, the Risk Management Plan will be updated with an addendum to restrict the construction of subsurface structures that could create a vapor intrusion concern.

The Water Board grants to 3705 Haven Avenue a Variance from the following restrictions in Article III, Section 3.1 of the Covenant, provided that no subsurface structures are constructed on the property and the Risk Management Plan is updated as described in Finding C:

- a. Development of the Burdened Property shall be restricted to industrial commercial or office space;
- b. No residence for human habitation shall be permitted on the Burdened Property;
- e. No day care centers for children or day care centers for Senior Citizens shall be permitted on the Burdened Property.

Exhibit A of the Covenant is replaced with Exhibit A, Exhibit B, and Exhibit C attached to this Variance to distinguish the 3705 Haven Property parcel from the 3715 Haven Property and 3723 Haven Property parcels.

If you have any questions, please contact Nicole Fry of my staff at [Nicole.Fry@waterboards.ca.gov](mailto:Nicole.Fry@waterboards.ca.gov)

Sincerely,

Michael Montgomery

Executive Officer

## 1.0 INTRODUCTION

ACC Environmental Consultants, Inc. (ACC) has prepared this Groundwater and Indoor Air Investigation Report for the property identified as 3705 Haven Avenue in Menlo Park, California (Site) at the request of Integris Millenium Joint Venture, LLC (Client).

The purpose of the investigation was to assess current groundwater conditions at the Site with regard to chemicals-of-concern (COCs) historically detected in groundwater, primarily tetrachloroethene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE). Subsequent to groundwater sampling, ACC conducted an indoor air assessment based on TCE concentrations detected in groundwater.

## 2.0 BACKGROUND

The Site is located along the northwest side of Haven Avenue in the City of Menlo Park, California (Figure 1). The Site is comprised of an approximately 0.60 acre parcel of land developed with a one-story multi-tenant commercial building constructed circa 1969. The building was historically occupied by Siltec Corporation from 1970 to 1989. Siltec Corporation became Mitsubishi Silicon American (MSA) in July 1996, and in February 2002 Mitsubishi Materials including MSA merged with Sumitomo Metals to form Sumitomo Mitsubishi Silicon Corporation (SUMCO USA), which was renamed SUMCO Phoenix Corporation (SUMCO). The SUMCO property was used for various industrial activities including the manufacturing of polished silicon wafers. Chlorinated VOCs were reportedly used during that time.

The Site was purchased by Integris Millenium Joint Venture LLC during 1999 for use as office space. The Site is currently occupied by various professional offices.

The Site is located approximately 800 feet southwest of San Francisco Bay. The documented groundwater flow direction is approximately east to east/northeast.

Groundwater was observed by ACC to be confined at the Site to between approximately 8 and 19 ft bgs, and rose as shallow as approximately 3.6 ft bgs subsequent to advancing soil borings through the confining layer.

Soils encountered by ACC consisted of moist brown silt with gravel extending to approximately 4 ft bgs and underlain by dark brown clay extending to the total depth explored of approximately 15 ft bgs.

## 3.0 ENVIRONMENTAL BACKGROUND

ACC reviewed the following documents:

- *Feasibility Study and Remedial Action Plan, 3695-3723 Haven Avenue, Menlo Park, California*, Erler & Kalinowski, Inc. (EKI), March 12, 1999;
- *Risk Management Plan, 3695-3723 Haven Avenue, Menlo Park, California*, Erler & Kalinowski Inc. (EKI), March 12, 1999;
- *Summary of Environmental Conditions, and Request for Declaration of No Further Active Remediation Status, 3695-3723 Haven Avenue, Menlo Park, California*, Erler & Kalinowski, Inc. (EKI), December 31, 2013; and
- *RWQCB Correspondence: No Further Action Required at the former Siltic Site located at 3675-3723 Haven Avenue, Menlo Park, San Mateo County*, Regional Water Quality Control Board, June 16, 2014.

The Site is part of the former SUMCO property, which included the Site, the north-adjacent property (3715 Haven Avenue), and the property adjacent to the north of 3715 Avenue (3723 Haven Avenue). The SUMCO property was developed with three slab-on-grade commercial buildings, one of which was referred to as “Building 1” and is the structure that currently exists at the Site. Semiconductor manufacturing at the SUMCO property resulted in adverse impacts to soil and groundwater by volatile organic compounds (VOCs), primarily TCE and cis-1,2-DCE. Extensive investigations were conducted from 1994 to 2012 and a former sump at the north-adjacent down-gradient parcel (3715 Haven Avenue) was determined to be the source of documented subsurface VOC impacts associated with the SUMCO property.

1994: One monitoring well was installed at the Site as an up-gradient groundwater monitoring well (MW-1) and numerous groundwater monitoring wells were installed off-site and north (down-gradient) of the Site. MW-1 extended to approximately 15.5 ft bg, was screened between 5.5 and 15.5 ft bgs, and was monitored from 1994 to 1998. During the last documented monitoring event (April 1998), TCE and cis-1,2-DCE were detected up to respective concentrations of 98 and 130 µg/L in MW-1.

1995: Two grab groundwater samples were collected at the Site (soil borings GP-1 and GP-3) as part of a larger investigation at the former SUMCO property. TCE and cis-1,2-DCE were detected in first-encountered groundwater at respective concentrations of up to 1200 and 280 µg/L. The highest TCE concentration detected on-site (1200 µg/L) was detected at the northwest property boundary.

1996: Four grab groundwater samples were collected along the eastern portion of the Site (soil borings EC-1 through EC-4) as part of a larger investigation at the former SUMCO property. TCE and cis-1,2-DCE were detected in first-encountered groundwater in soil boring EC-4 at respective concentrations of 2100 and 3300 µg/L. Soil boring EC-4 was advanced at the northeast boundary of the Site. TCE and cis-1,2-DCE concentrations in first-encountered groundwater decreased moving away from the north boundary of the Site and were detected in first-encountered groundwater in soil boring EC-3 at respective concentrations of 39 and 33 µg/L (approximately 85 feet south of EC-4). TCE and cis-1,2-DCE were detected in first-encountered groundwater at the southeastern boundary of the Site at respective concentrations of 3 and 1 µg/L

(EC-1). TCE and cis-1,2-DCE were not detected in the deeper “B Zone” groundwater horizon investigated by EKI.

1999: Approximately 2860 cubic yards of VOC-impacted soils were excavated from the source identified at the north-adjacent, down-gradient parcel (3715 Haven Avenue) and the parcel adjacent to the west of 3715 Haven Avenue (3645-3665 Haven Avenue) (Figure 1). The former building at 3715 Haven Avenue (“Building 2”, identified as the source area) was demolished and a new two-story building was constructed south of the former Building 2 footprint, outside of the high groundwater risk area. A paved parking lot currently occupies the soil remediation area.

A Risk Management Plan (RMP) was prepared for the SUMCO property in 1999 and incorporated into the Deed Restriction for the Site. The RMP details (a) risk management protocols to be implemented during future construction on Site; and (b) post-construction risk management protocols. The deed restriction prohibits residential development at the Site and documents soil management procedures in the event that soil is disturbed.

2000 to present: The on-site monitoring well (MW-1) was removed and no additional sampling was conducted at the Site subsequent to that time. Additional groundwater monitoring was continued off-site at the down-gradient parcels for thirteen years subsequent to source excavation. EKI concluded that VOCs in groundwater have migrated to the east/northeast of the down-gradient off-site source area, and that the concentrations of COCs in groundwater have stabilized or declined over this time period through natural attenuation process.

A No Further Action letter was issued for the Property by the Regional Water Quality Control Board (RWQCB) on June 16, 2014. According to the Closure Report, “remedial actions implemented to date have effectively removed the source and resulted in stabilized and improving groundwater condition. Further remedial actions will have marginal effect and it is anticipated that groundwater quality will further improve over time due to natural attenuation processes.”

For historical sampling locations and analytical data see Figure 3.

## **4.0 SAMPLING METHODOLOGY**

### **4.1 Groundwater Sampling**

On July 25, 2019, ACC advanced seven exploratory soil borings for purposes of groundwater sampling. Borings were advanced using a hydraulic direct-push rig equipped with two-inch diameter hollow drill rods. The approximate soil boring locations are shown on the attached Figure 2.

Temporary one-inch slotted PVC piping was installed in the soil boring to facilitate groundwater sampling. Groundwater samples were collected into laboratory-supplied volatile organic analysis (VOA) containers using a peristaltic pump, labeled, logged on a chain-of-custody form and stored

immediately on ice in a cooler pending transport to the laboratory following standard chain-of-custody protocol.

Prior to drilling, ACC obtained a drilling permit from San Mateo County Environmental Health Services Groundwater Protection Program (SMCEHS-GPP). ACC marked the proposed soil boring locations and subsequently contacted Underground Services Alert (USA) to mark the locations of underground public utilities. Soil boring locations advanced by ACC were additionally cleared by a private utility locator prior to drilling.

## 4.2 Indoor Air Sampling

On September 10, 2019, ACC collected three indoor air samples and one outdoor ambient air sample. Samples were collected in laboratory-supplied evacuated SIM-certified 6-liter SUMMA canisters with dedicated regulators at each sample location. Intakes were situated between approximately 3 and 5 feet above the ground surface. Sample flow rates allowed for samples to be collected over an approximately 8-hour period. The approximate air sampling locations are shown on the attached Figure 2.

## 5.0 GROUNDWATER ANALYTICAL RESULTS

Groundwater samples were delivered to McCampbell Analytical, Inc. in Pittsburg, California following chain-of-custody protocol. The complete laboratory reports and chains-of-custody are attached as Appendix A. Groundwater samples were analyzed for volatile organic compounds (VOCs, full list) by analytical method 8260. Groundwater analytical results for this sampling event were compared to Human Health Risk Levels (HHRLs) published by the San Francisco Regional Water Quality Control Board (RWQCB) for vapor intrusion risk at residential and commercial properties. Groundwater analytical results and corresponding HHRLs are summarized in the attached Table 1.

TCE was detected in groundwater at concentrations of up to 23 micrograms per liter ( $\mu\text{g/L}$ ), which exceeds the corresponding RWQCB groundwater HHRLs for vapor intrusion at commercial and residential properties.

Cis-1,2- DCE was detected up to 15  $\mu\text{g/L}$ , which does not exceed the RWQCB HHRL for vapor intrusion risk at commercial or residential properties.

Freon 113 and MTBE were detected up to respective concentrations of 4.4 and 0.92  $\mu\text{g/L}$ , which do not exceed corresponding RWQCB HHRLs for vapor intrusion at commercial or residential properties. Additional VOCs, including tetrachloroethene (PCE), were not detected.

## 6.0 INDOOR AIR ANALYTICAL RESULTS

Indoor air samples were delivered to Eurofins Air Toxics, Inc. in Folsom, California following

chain-of-custody protocol. The complete laboratory reports and chain-of-custody are attached as Appendix A. Indoor air samples were analyzed for the chlorinated solvents PCE, TCE, cis-1,2-DC), trans-1,2-dichloroethene (trans-1,2-DCE), and vinyl chloride by analytical method TO-15 SIM. Analytical results for this sampling event were compared to RWQCB HHRLs for direct exposure to indoor air at residential and commercial properties (ESL Table IA-1). Indoor Air analytical results and corresponding HHRLs are summarized in the attached Table 2.

PCE was detected in indoor air up to concentrations of 0.96 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) and at a concentration of 0.046  $\mu\text{g}/\text{m}^3$  in outdoor ambient air. Detected PCE concentrations exceed the RWQCB HHRL for direct exposure to indoor air at residential properties, but do not exceed the RWQCB HHRL for direct exposure to indoor air at commercial properties.

TCE was detected in indoor air up to a concentration of 0.079  $\mu\text{g}/\text{m}^3$ . Concentrations of TCE do not exceed corresponding RWQCB HHRLs for direct exposure to indoor air at commercial or residential properties.

Trans-1,2- DCE was detected in indoor air up to a concentration 0.096  $\mu\text{g}/\text{m}^3$ , which does not exceed the corresponding RWQCB HHRLs for direct exposure to indoor air at commercial or residential properties.

Cis-1,2-DCE and vinyl chloride were not detected in indoor air during this sampling event. Reporting limits for vinyl chloride exceed the RWQCB HHRLs for direct exposure to indoor air at residential properties, however the method detection limits (MDLs) for vinyl chloride are approximately equal to the HHRL. ACC regularly corresponded with the laboratory prior and during indoor air sampling in order to collect indoor air samples in a manner that would minimize sample dilution in order to minimize the potential for elevated laboratory reporting limits (RLs) and elevated method detection levels (MDLs).

## 7.0 QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

QA/QC procedures followed in the field were as follows:

- Air space was not present in the VOAs;
- ACC regularly corresponded with the laboratory prior and during indoor air sampling in order to collect indoor air samples in a manner that would minimize sample dilution in order to minimize the potential for elevated laboratory reporting limits (RLs) and elevated method detection levels (MDLs);
- Low flow groundwater sampling was conducted via a peristaltic pump in order to minimize sediment content in groundwater samples;
- Sampling equipment was decontaminated prior to advancement at each soil boring location using an Alconox solution and double rinsed with potable water;

- Nitrile gloves were worn and changed frequently (at a minimum of once between each sampling location) when handling samples in order to prevent cross-contamination of samples; and
- Samples were labeled in the field and chain-of-custody procedures were followed during the sample collection and analysis.

Laboratory QA/QC data area included in the attached Appendix A.

## 8.0 CONCLUSIONS

### 8.1 Groundwater

The primary chemicals-of-concern (COCs) in groundwater at the Site are TCE and cis-1,2-DCE. During this investigation TCE was detected in first-encountered groundwater at the Site at concentrations of up to 23 micrograms per liter ( $\mu\text{g/L}$ ), which exceeds the corresponding Regional Water Control Board (RWQCB) Human Health Risk Level (HHRL) for vapor intrusion at commercial and residential properties of 7.5 and 1.2  $\mu\text{g/L}$ , respectively. Cis-1,2-DCE was detected at concentrations of up to 15  $\mu\text{g/L}$ , which does not exceed the corresponding RWQCB HHRL for vapor intrusion at commercial and residential properties of 49 and 210  $\mu\text{g/L}$ , respectively.

The highest concentrations of TCE and cis-1,2,-DCE detected in groundwater during this investigation were detected at boring B7, which was advanced at the northeast portion of the Site. TCE and cis-1,2,-DCE concentrations detected in additional samples during this investigation were at least one order of magnitude less than at soil boring B7.

COC concentrations in groundwater at the Site have decreased significantly since the off-site source was remediated in 1999. Former on-site groundwater monitoring well MW-1 was last sampled in April 1998. At that time, TCE and cis-1,2,-DCE were detected at respective concentrations of 130 and 98  $\mu\text{g/L}$ . ACC collected one groundwater sample at the approximate location of former groundwater monitoring well MW-1 (ACC soil boring B1) and the analytical results indicated non-detectable concentrations of TCE and cis-1,2-DCE in groundwater at that location.

	MW-1 (1998)	B1 (2019)
TCE ( $\mu\text{g/L}$ )	130	ND<0.5
Cis-1,2-DCE ( $\mu\text{g/L}$ )	98	ND<0.5

One historical groundwater sample (GP-1) collected in 1995 along the southern portion of the Site indicated TCE and cis-1,2-DCE in groundwater at respective concentrations of 170 and 280  $\mu\text{g/L}$ . ACC collected one groundwater sample at the approximate location of GP-1 (ACC soil

boring B2) and analytical results indicate TCE and cis-1,2,-DCE in groundwater at respective concentrations of 1.3 and 0.66 µg/L at that location.

	GP-1 (1995)	B2 (2019)
TCE (µg/L)	170	1.3
Cis-1,2-DCE (µg/L)	280	0.66

In addition, TCE and cis-1,2-DCE were detected up to respective concentrations of 2100 and 3300 µg/L at the northern boundary of the Site in 1996 (EC-4). Detections of TCE and cis-1,2-DCE along the northern portion of the Site (in the general vicinity of EC-4) during this ACC groundwater investigation were up to 23 and 15 µg/L (B7).

	EC-4 (1996)	B7 (2019)
TCE (µg/L)	2100	23
Cis-1,2-DCE (µg/L)	3300	15

For historical sampling locations and analytical data see Figure 3.

## 8.2 Indoor Air

The highest concentration of TCE detected in groundwater during this sampling event exceeded the RWQCB Short-Term Action Level for TCE in groundwater at a commercial property of 20 µg/L. In response to the reported TCE concentrations in groundwater, ACC collected indoor air samples.

Analytical results from this sampling event indicate that indoor air at the Site is not impacted by TCE or cis-1,2-DCE at concentrations exceeding the corresponding RWQCB HHRLs for direct exposure to indoor air at commercial and residential properties.

PCE was detected in indoor air samples up to a concentration of 0.96 µg/m<sup>3</sup>, which exceeds the RWQCB HHRL for direct exposure to indoor air at residential properties, but not for commercial properties. PCE was non-detect in groundwater. Although PCE concentrations detected in outdoor ambient are one order of magnitude less than PCE concentrations detected in indoor air, ACC's opinion is that the PCE impacts to indoor air are likely the result of outdoor ambient air accumulating in the building, and may additionally be attributed to other potential sources not associated with soil, groundwater, and soil vapor at the Site.

## 9.0 RECOMMENDATIONS

Concentrations of dissolved chlorinated solvents in groundwater (particularly TCE and cis-1,2,-DCE) have decreased significantly since the off-site source was remediated in 1999. Current data does not indicate an on-site source and ACC agrees with the RWQCB closure letter for the

SUMCO property that that “further remedial actions will have marginal effect and it is anticipated that groundwater quality will further improve over time due to natural attenuation processes” (Section 3.0). No additional on-site groundwater characterization is recommended by ACC at this time.

ACC’s opinion is that impacts to indoor air as a result of residual subsurface contamination at the Site are minimal. ACC’s understanding is that the owner is proposing to sell the property, and that there is a high demand with regard to redeveloping the Site as residential units constructed on ground floor commercial units.

The deed restriction for the Site currently limits Site use to commercial. ACC requests that the RWQCB review the deed restriction with regard to the current groundwater data and ACC findings documented in this report. Based on current industry standards with regard to vapor intrusion and redevelopment, ACC’s opinion is that redevelopment of the Site as residential units constructed above commercial ground floor units in a manner that minimizes vapor intrusion concerns is highly feasible.

## **10.0 LIMITATIONS**

The service performed by ACC has been conducted in a manner consistent with the levels of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the area. No other warranty, expressed or implied, is made.

The conclusions presented in this report are professional opinions based on the indicated data described in this report and applicable regulations and guidelines currently in place. They are intended only for the purpose, site, and project indicated. Opinions and recommendations presented herein apply to site conditions existing at the time of our study. Site conditions could change over time due to unforeseen circumstances.

ACC has included analytical results from a state-certified laboratory, which performs analyses according to procedures suggested by the U.S. Environmental Protection Agency and/or the State of California. ACC shall not be responsible for laboratory errors.

We appreciate the opportunity to assist you with this project. If you have any questions regarding this report please contact (510) 638-8400 x110 or [isutherland@accenv.com](mailto:isutherland@accenv.com).

Analytical Report reviewed & approved for release on 08/02/2019 by:

Christine Askari  
Project Manager

*The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.*

## Glossary of Terms & Qualifier Definitions

**Client:** ACC Environmental Consultants, Inc.  
**Project:** 1744-001.00  
**WorkOrder:** 1907D02

### Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

## **Glossary of Terms & Qualifier Definitions**

**Client:** ACC Environmental Consultants, Inc.

**Project:** 1744-001.00

**WorkOrder:** 1907D02

### **Analytical Qualifiers**

J Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.

### **Quality Control Qualifiers**

F2 LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.

**NOTES:** - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

\* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Dear Ms. Kim Bunting

The following report includes the data for the above referenced project for sample(s) received on 9/13/2019 at Air Toxics Ltd.

The data and associated QC analyzed by Modified TO-15 SIM are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics Inc. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Sarah Westerman at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Sarah Westerman  
Project Manager

**LABORATORY NARRATIVE**  
**Modified TO-15 SIM**  
**ACC Environmental Consultants**  
**Workorder# 1909272**

Four 6 Liter Summa Canister (100% SIM Ambient) samples were received on September 13, 2019. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the SIM acquisition mode.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

<i>Requirement</i>	<i>TO-15</i>	<i>ATL Modifications</i>
ICAL %RSD acceptance criteria	<math>\leq 30\%</math> RSD with 2 compounds allowed out to <math>< 40\%</math> RSD	Project specific; default criteria is <math>\leq 30\%</math> RSD with 10% of compounds allowed out to <math>< 40\%</math> RSD
Daily Calibration	+/- 30% Difference	Project specific; default criteria is <math>\leq 30\%</math> Difference with 10% of compounds allowed out up to <math>\leq 40\%</math>.; flag and narrate outliers
Blank and standards	Zero air	Nitrogen
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases

### **Receiving Notes**

The Chain of Custody (COC) information for sample IA2 did not match the information on the canister with regard to canister barcode. The sample labeled 6L0886 on the COC is labeled as 6L0880 on the canister. The client was notified of the discrepancy and the information on the canister was used to process and report the sample.

### **Analytical Notes**

As per client project requirements, the laboratory has reported estimated values for target compound hits that are below the Reporting Limit but greater than the Method Detection Limit. Concentrations that are below the level at which the canister was certified may be false positives.

### **Definition of Data Qualifying Flags**

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

- B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
- J - Estimated value.
- E - Exceeds instrument calibration range.
- S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Lists of Federal CERCLA sites with NFRAP***

## EXECUTIVE SUMMARY

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/27/2022 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

### ***Lists of Federal RCRA facilities undergoing Corrective Action***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 11/21/2022 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

### ***Lists of Federal RCRA generators***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

## EXECUTIVE SUMMARY

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/21/2022 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

### ***Lists of state- and tribal hazardous waste facilities***

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/24/2022 has revealed that there are 9 CA ENVIROSTOR sites within approximately 1 mile of the target property.

### ***Lists of state and tribal landfills and solid waste disposal facilities***

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there are 2 CA SWF/LF sites within approximately 0.5 miles of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 14 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

### **Local Lists of Registered Storage Tanks**

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 11/21/2022 has revealed that there are 30 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 01/03/2022 has revealed that there are 9 PFAS ECHO sites within approximately 0.25 miles of the target property.

**CPS-SLIC:**

Name: 3705 HAVEN AVENUE  
Address: 3705 HAVEN AVENUE  
City,State,Zip: MENLO PARK, CA 94025  
Region: STATE  
**Facility Status: Open - Assessment & Interim Remedial Action**  
Status Date: 05/31/2020  
Global Id: T10000013783  
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
Lead Agency Case Number: Not reported  
Latitude: 37.48552  
Longitude: -122.18228  
Case Type: Cleanup Program Site  
Case Worker: NF  
Local Agency: Not reported  
RB Case Number: 41S0217  
File Location: All Files are on GeoTracker or in the Local Agency Database  
Potential Media Affected: Not reported  
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), MTBE / TBA / Other Fuel Oxygenates  
Site History: Site is part of former SILTEC site closed in June 2014. Currently deed restriction on the property prohibits residential development. RP wishes to pursue residential development at the site and remove the deed restriction on this parcel. Site was reopened for data collection to assess whether residual contamination at this site supports unrestricted residential development without further remediation.

Violations:

Site ID: 369939  
Site Name: SYNTHEGO CORP  
Violation Date: 10-18-2018  
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1

Violation Description: Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.

Violation Notes: Returned to compliance on 11/18/2018. Please notify property owner that the facility is subject to the HMBP reporting requirement within 30 days.

Violation Division: San Mateo County Environmental Health  
Violation Program: HMRRP  
Violation Source: CERS,

Site ID: 369939  
Site Name: SYNTHEGO CORP  
Violation Date: 03-01-2022  
Citation: 22 CCR 15 66265.35 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.35

Violation Description: Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the Department that aisle space is not needed for any of these purposes.

Violation Notes: Aisle space was tight in Suite C synthesis and the suite with the Hamiltons.

Violation Program: HW  
Violation Source: CERS,

Site ID: 369939  
Site Name: SYNTHEGO CORP  
Violation Date: 03-01-2022  
Citation: 22 CCR 15 66265.174 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.174

Violation Description: Failure to inspect weekly, areas where hazardous waste containers are stored or transferred. The owner or operator shall look for leaking containers and for deterioration of containers and the containment system caused by corrosion or other factors.

Violation Notes: Weekly inspection records for all hazardous waste (HW) storage containers and areas inadequate to identify issues per HW storage area and/or container. Adequate inspections would have identified some of the issues observed as violations during the inspection (unlabeled, illegible, and open HW containers). Revise inspection checklists to identify separate areas and individual containers with issues, ensure issues are addressed. Immediately begin proper inspection of all HW containers; provide verification (copies of inspection reports) to inspector within 15 days.

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.  
Violation Notes: Returned to compliance on 07/12/2022. On 3-1 observed in the waste tank building that the 3 large ACN HW tanks are not marked with contents. Please add contents, ensure labels indicate the filling sequence (first, second, and third), frequency of waste removal, and reference the label on the pump for accumulation start and pickup dates; send inspector photo-verification in 30 days. For hazardous waste (HW) containers that are emptied daily, Accumulation Start Date must be written "Emptied Daily," not "Daily" to avoid confusion. On 3-4 in Suite C, observed accumulation start times as either "emptied daily" or blank. Many labels were illegible. For those labeled "emptied daily" ensure the container is truly emptied daily (several had very old labels and seemed to hold more waste than might be generated through the morning). For those with no date, mark the correct start date and ensure all labels are legible. Send photo verification to inspector within 30 days. For the Hamilton instruments in Suite C's [Truncated]

Violation Notes: container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

In the bottle cleaning area off the main synthesis lab, small bottles with a drying trap were cleaned with solvent and rinsate stored in plastic HW labeled containers (like transfer containers only some were not empty), or it was disposed in larger HW storage container. The bottles were inverted to drain and dry before disposal. These containers are not considered HW if they meet DTSC s definition of an Empty Container: if the waste is pourable, empty is when nothing but a few drops fall from the inverted container. If the waste is non-pourable, empty is when all contents are removed that can feasibly be removed by physical methods, including scraping and chipping, but not rinsing. See guidance attached to inspection report. Note that the procedure is different for containers that held extremely acutely hazardous waste (See <https://www.ecfr.gov/current/title-40/chapter-I/subchapter-J/part-355>. ) Note that the pad under the inverted bottles are contaminated with whatever [Truncated]

Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Housekeeping could be improved. Observed the following: pipette tips on a lower shelf next to HW container in the Hamilton area of Suite C; spray bottle on the ground in synthesis next to the window between synthesis and the Hamilton area in Suite C; spill stains on floor and waste containers in bottle cleaning room off synthesis lab, materials stored in a haphazard manner under the bottle-cleaning hood and in the open closet near the cartridge cleaning alcove. Develop a plan to ensure HW is placed in proper containers, chemical and other supplies are put away, and spills are cleaned up immediately; inform inspector within 30 days.

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: Returned to compliance on 07/12/2022. In the cartridge cleaning alcove in Suite C, observed a container with a HW label under the frit filter that may not contain HW, in Suite A observed one container in the main lab labeled "waste" with an NFPA diamond and one in the quality lab marked "waste." Determine whether these are HW and if so, label properly and send photo-verification; if not, inform the inspector of the waste determination within 30 days. In general, ensure all wastes generated are evaluated for whether the contents are hazardous.

Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Observed many containers using parafilm to "close" HW containers. Observed in the main Suite C lab and in the "clean room" in Suite C on a centrifuge tube being used to prepare the instrument for use and standard carboys connected to analytical instruments. Please replace the parafilm with proper caps with adaptors for the lines and tubes leading to the container. Provide photo-verification within 30 days. Funnel for hazardous waste tank in bottle-cleaning room off the synthesis lab closed during inspection. Large gray bins containing contaminated tips under the Hamilton instruments in Suite C were unlabeled and open. Immediately close and properly label these containers; provide inspector photo-verification within 30 days.

Violation Description: Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.

Violation Notes: All HW tanks must receive a written assessment by a PE before use. An assessment was not available for any of the HW tanks at the facility.

Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Notes: Training records for hazardous waste generators/handlers not available or inadequate. Provide training records for all employees involved in hazardous waste management (this includes generation) within 30 days. All employees must be thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies. Requirements can be found at CCR 66265.16.

Hazardous Waste Summary:

Waste Code: D001  
Waste Description: IGNITABLE WASTE

Waste Code: D002  
Waste Description: CORROSIVE WASTE

Waste Code: D003  
Waste Description: REACTIVE WASTE

Waste Code: D009  
Waste Description: MERCURY

Waste Code: D011  
Waste Description: SILVER

Waste Code: D019  
Waste Description: CARBON TETRACHLORIDE

Waste Code: D022  
Waste Description: CHLOROFORM

Waste Code: D038  
Waste Description: PYRIDINE

Waste Code: F002  
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003  
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005  
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: D011  
Waste Description: SILVER

Waste Code: F001  
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002  
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003  
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005  
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation: 22 CCR 23 66273.35 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.35  
Violation Description: Failure of the universal waste handler to properly process accumulated universal waste within a maximum accumulation time of one year and /or demonstrate the length of time that the universal waste has been accumulated from the date it became a waste or was received. The universal waste handler may make this demonstration by: 1) Placing the universal waste in a container and marking or labeling the container with the earliest date that any universal waste in the container became a waste or was received; 2) Marking or labeling the individual item of universal waste (e.g., each battery or thermostat) with the date it became a waste or was received; 3) Maintaining an inventory system onsite that identifies the date the universal waste being accumulated became a waste or was received; 4) Maintaining an inventory system onsite that identifies the earliest date that any universal waste in a group of items of universal waste or a group of containers of universal waste became a waste or was received; 5) Placing the universal waste in a specific accumulation area and marking or labeling the area to identify the earliest date that any universal waste in the area became a waste or was received; or 6) Any other method which clearly demonstrates the length of time that the universal waste has been accumulated from the date it became a waste or was received.  
Violation Notes: Returned to compliance on 03/08/2016. Documents unavailable at time of inspection. Documents must be available upon request by the inspector. Provide documentation to the County within 30 days.

Local Agency: Not reported  
RB Case Number: Not reported  
File Location: Local Agency Warehouse  
Potential Media Affected: Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Gasoline  
Site History: Extracted from Geologica's October 2, 2013 Supplemental Soil Sampling and Remedial Excavation Completion Report. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. In April 2013, GEOLOGICA completed a supplemental soil quality sampling investigation of the former CT International site at 3645 Haven Avenue in Menlo Park, CA. The investigation was conducted to evaluate soil quality conditions relative to the current Residential Environmental Screening Levels (ESLs) established by the San Francisco Bay Regional Water Quality Control Board (RWQCB). Between June and August 2013, GEOLOGICA conducted a focused soil excavation program to remove soil containing petroleum hydrocarbons and/or lead at concentrations greater than the RWQCBs Residential ESLs. This scope of work was developed by GEOLOGICA based on discussion with Mr. Charles Ice of the San Mateo County Environmental Health System (SMCEHS). The purpose of the investigation and excavation was to remove the no-residential use deed restriction on the property.

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 01/13/2017. OBSERVATION: The hazardous waste caddies (Five for used oil and one for used antifreeze.) have incomplete information on their hazardous waste labels. The partially full black 55 gallon drum of waste fuel lacked an accumulation start date and was just picked up on 12-15-16. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. OBSERVATION: The used oil tank lacked an accumulation start date and was just picked up on 11-3-16. The used antifreeze tank lacked an accumulation start date and was just picked up on 6-30-16. All hazardous waste tanks shall be marked with the words Hazardous Waste and the accumulation start date. CORRECTIVE ACTION: Immediately ensure that all hazardous waste tanks are marked with the required information. If it is determined that the used antifreeze has been on site longer than 90 days, immediately contact a licensed hazardous waste hauler to dispose [Truncated]

Violation Description: 15, Section(s) 66265.16  
Failure to provide employees with hazardous waste training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility.

Violation Notes: Returned to compliance on 01/19/2017. OBSERVATION: The documentation for proper training of personnel who handle hazardous waste was not found on site. CORRECTIVE ACTION: Immediately provide employees with initial or refresher hazardous waste training as required. Submit a copy of the roster and the syllabus to the San Mateo County CUPA by 1-16-17.

integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.

Violation Notes: Returned to compliance on 09/12/2018. OBSERVATION: A written hazardous waste tank assessment has not been obtained for the [HAZARDOUS WASTE] tank system prior to placing system into service. CORRECTIVE ACTION: Obtain a written hazardous waste tank system assessment for the [HAZARDOUS WASTE] tank system in accordance with 22 CCR 15 66265.192 and submit a copy to the CUPA.

**Hazardous Waste Summary:**

Waste Code: D039  
 Waste Description: TETRACHLOROETHYLENE

Waste Code: F001  
 Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002  
 Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Case Type: Cleanup Program Site  
 Case Worker: NF  
 Local Agency: Not reported  
 RB Case Number: 41S0211  
 File Location: All Files are on GeoTracker or in the Local Agency Database  
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Vapor  
 Potential Contaminants of Concern: Dichloroethene (DCE), Trichloroethylene (TCE), Vinyl chloride, Benzene  
 Site History: Former Siltec Site was closed in 2014 using Low Threat Closure Assessment Tool for Chlorinated Solvent Sites. Site remediation completed in 1999 with TCE source contaminated soil removal. Residual shallow groundwater contamination (isolated pocket of TCE at concentrations exceeding ESLs) remained in 2004. 2019 groundwater monitoring data showed increased TCE concentrations (nearly two orders of magnitude from 2004 levels in MW-8, indicating that the groundwater TCE plume is not stable. Contamination appears to be migrating from unmitigated source to the south - 3715 Haven Ave). Elevated concentrations of TCE and vinyl chloride were detected in 2019 soil vapor samples in the vicinity of the well with high TCE concentrations. Case being reopened to assess the extent of the mobilized groundwater TCE plume; and evaluate additional remedial actions necessary to degrade COCs for future site redevelopment.

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**Violations:**

Site ID: 29880  
Site Name: FEDERAL EXPRESS-PAOA  
Violation Date: 04-17-2018  
Citation: 22 CCR 12 66262.20 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.20  
Violation Description: Failure to prepare a Uniform Hazardous Waste Manifest and, if necessary, a Continuation Sheet, before the transport of a hazardous waste off-site for transfer, treatment, storage, or disposal.  
Violation Notes: Returned to compliance on 05/04/2018. Manifests unavailable at the time of inspection. Within 7 days please send inspector last 3 years manifests for disposal of hazardous waste (used oil, used oil filter, waste coolant, batteries, fluorescent tubes, etc.).  
Violation Division: San Mateo County Environmental Health  
Violation Program: HW  
Violation Source: CERS,

Site ID: 29880  
Site Name: FEDERAL EXPRESS-PAOA  
Violation Date: 09-05-2013  
Citation: 19 CCR 4 2729.2(a)(3) - California Code of Regulations, Title 19, Chapter 4, Section(s) 2729.2(a)(3)  
Violation Description: Failure to complete and/or submit an annotated site map if required by CUPA.  
Violation Notes: Returned to compliance on 10/04/2013. Site map is inaccurate based on the location of tanks/cylinders and drums in the shop.  
Violation Division: San Mateo County Environmental Health  
Violation Program: HMRRP  
Violation Source: CERS,

Site ID: 29880  
Site Name: FEDERAL EXPRESS-PAOA  
Violation Date: 09-25-2020  
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.  
Violation Notes: Returned to compliance on 10/08/2020. Several hazardous waste containers were missing accumulation start dates: waste coolant tank, 3 black drums of oily solids, aerosols, and oil filters. 2 drums of damaged good destined for disposal (hand sanitizer and lithium batteries) had no hazardous waste storage information. Please correct these labeling errors and send photo verification to the inspector within 14 days. Once negotiations with the customer indicate that a material that is hazardous will be disposed, the container must be marked with standard hazardous waste label information.
