295	Laurel Street and Proj Dwy N	Two-way stop	HCM 7th Edition	SWB Left	0.061	15.2	C
296	Laurel Street and Proj Dwy S	All-way stop	HCM 7th Edition	NWB Thru	0.513	10.7	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Marsh Rd (SR 84)/US 101 SB Offramp

Control Type:	Signalized	Delay (sec / veh):	23.2
Analysis Method:	HCM 7th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.805

Intersection Setup

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
22	Willow Rd/Durham St-VA Med Entrance	Signalized	HCM 7th Edition	NB Left	1.025	75.3	E
254	Glenwood Ave and Laurel Street	Signalized	HCM 7th Edition	NWB Thru	0.508	16.2	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
22	Willow Rd/Durham St-VA Med Entrance	Signalized	HCM 7th Edition	NB Left	0.877	55.8	E
115	Orange Ave/Santa Cruz Ave	Signalized	HCM 6th Edition	SWB Left	0.481	22.1	C
254	Glenwood Ave and Laurel Street	Signalized	HCM 6th Edition	NEB Right	0.612	25.3	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 22: Willow Rd/Durham St-VA Med Entrance

Control Type:	Signalized	Delay (sec / veh):	55.8
Analysis Method:	HCM 7th Edition	Level Of Service:	E
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.877

295	Laurel Street and Proj Dwy N	Two-way stop	HCM 7th Edition	SWB Left	0.038	16.0	C
296	Laurel Street and Proj Dwy S	All-way stop	HCM 7th Edition	NWB Thru	0.505	11.0	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: Marsh Rd (SR 84)/US 101 SB Offramp

Control Type:	Signalized	Delay (sec / veh):	24.5
Analysis Method:	HCM 7th Edition	Level Of Service:	C
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.869

Intersection Setup

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
22	Willow Rd/Durham St-VA Med Entrance	Signalized	HCM 7th Edition	NB Left	0.586	14.1	B
254	Laurel Street and Glenwood Ave	Signalized	HCM 7th Edition	NWB Thru	0.280	11.8	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
22	Willow Rd/Durham St-VA Med Entrance	Signalized	HCM 7th Edition	NB Left	0.562	15.2	B
115	Orange Ave/Santa Cruz Ave	Signalized	HCM 7th Edition	SWB Left	0.600	17.0	B
254	Laurel Street and Glenwood Ave	Signalized	HCM 7th Edition	NEB Thru	0.410	13.0	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 22: Willow Rd/Durham St-VA Med Entrance

Control Type:	Signalized	Delay (sec / veh):	15.2
Analysis Method:	HCM 7th Edition	Level Of Service:	B
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.562

Appendix D
Internal Trip Capture Calculations

Table D-1
Local Area Characteristics Inputs for EPA MXD Model V4

Factor	Input Value	Source
Project Acreage ¹	38 acres	Project Plan
Number of intersections within or on the perimeter of the MXD	13	Project Plan
Is transit present within the site or across the street	Yes	Project Plan
Is the site a Central Business District or TOD	Yes	--
Employment within one mile of the MXD	45,568	http://onthemap.ces.census.gov/
Employment within a 30 min transit trip	199,670	http://onthemap.ces.census.gov/

Notes:
1. Project Acreage is approximately 63 acres. The MXD tool uses only the developed area as an input. Per the project description, 25 acres would be open space, therefore, it is assumed that 38 acres would be the developed area.

Table D-2

Optimal Blend of NCHRP 684 and EPA MXD Methods per APA PAS

	AM Peak Traffic	PM Peak Traffic	Average Daily Traffic
NCHRP 684	10.1%	36.5%	0.0%
EPA MXD	89.9%	63.5%	100.0%
Total	100.0%	100.0%	100.0%

Notes:

ksf = 1,000 square feet; du = dwelling unit

¹ Daily, AM, and PM peak hour average rates published in *ITE Trip Generation Manual, 11th Edition, 2021* were used for each land use.

² Internal Capture developed using *National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Internal Trip Capture Estimation for Mixed-Use Developments* and *US EPA Mixed Use Trip Generation Model v.4, 2010* per the methodology described in *Getting Trip Generation Right: Eliminating the Bias Against Mixed-Use Development, PAS Memo*, American Planning Association, 2020.

³ ITE Trip Generation Manual, 11th Edition, 2021 provides trip rates per field for a soccer complex. The Proposed Project would include active recreational areas in the Ravenswood Avenue Parklet. It is assumed that the park would have play structures and open field areas for warm-ups or casual play. The number of soccer fields on the park was estimated based on the size of a standard soccer field.

⁴ Existing use trip estimates are based on driveway counts conducted by Fehr & Peers in 2021. Of the 1,100 employees on-site, Buildings P, S, T had 700 employees. The trip generation for these buildings is proportioned based on employees.

¹ Daily, AM, and PM peak hour average rates published in *ITE Trip Generation Manual, 11th Edition, 2021* were used for each land use.

² Internal Capture developed using *National Cooperative Highway Research Program (NCHRP) Report 684: Enhancing Internal Trip Capture Estimation for Mixed-Use Developments* and *US EPA Mixed Use Trip Generation Model v.4, 2010* per the methodology described in *Getting Trip Generation Right: Eliminating the Bias Against Mixed-Use Development, PAS Memo*, American Planning Association, 2020.

³ ITE Trip Generation Manual, 11th Edition, 2021 provides trip rates per field for a soccer complex. The Proposed Project would include active recreational areas in the Ravenswood Avenue Parklet. It is assumed that the park would have play structures and open field areas for warm-ups or casual play. The number of soccer fields on the park was estimated based on the size of a standard soccer field.

⁴ Existing use trip estimates are based on driveway counts conducted by Fehr & Peers in 2021. Of the 1,100 employees on-site, Buildings P, S, T had 700 employees. The trip generation for these buildings is proportioned based on employees.

1. Introduction

Parkline is located within the City of Menlo Park, near the City's downtown and close to City Hall and Burgess Park. The site is within one half-mile of Menlo Park Caltrain Station. Parkline will transform the existing Stanford Research Institute (SRI) International campus into an open and inviting transit-oriented mixed-use neighborhood including a new sustainable office/research and development (R&D) campus with no net increase in commercial square footage, new housing units at a range of affordability levels, new bicycle, and pedestrian connections, and approximately 25 acres of open space. **Figure 1** shows the site location and the transportation network surrounding Parkline.

This Transportation Demand Management (TDM) Plan documents the TDM measures proposed for the residential and office/R&D components of Parkline. The primary purpose of any TDM plan is to lower the amount of development-generated vehicle traffic by creating measures, strategies, incentives, and policies to shift workers and residents from driving alone to using other travel modes including transit, carpooling, ridesharing, cycling, and walking. TDM strategies can include informational resources, physical site enhancements, monetary incentives, and more. In addition to reducing vehicles trips, the TDM Plan can reduce the parking demand of residents and office workers. This report presents the comprehensive TDM Plan for Parkline.

The existing and proposed transit, bicycle, and pedestrian facilities near the Parkline site are illustrated in this document to provide transportation context. The TDM Plan describes how Parkline's attributes such as the site's location (adjacent roadways and transit access), land uses (residential and office/R&D), physical design, and proposed improvements support alternative modes of transportation that supplement the proposed TDM measures provided to the Parkline employees and residents.

N:\Projects_SJ21_Projects\SJ21_2095_Parkline_SRI_Lane\Graphics\ADBE\Fig01_Site_Location.ai

 Project Area

Figure 1
Site Location

1.1 Project & Project Variant Descriptions

Figure 2 shows the proposed Parkline site plan. Parkline will include a new office/research and development (R&D) campus with no increase in office/R&D square footage compared to existing conditions; up to 550 new rental dwelling units at a range of affordability levels (comprised of 450 multi-family units and townhomes, and a proposed land dedication to an affordable housing developer that could accommodate up to 100 affordable units); new bicycle and pedestrian connections; approximately 26 acres of Parkline to be available as open space; removal and replacement of trees; and decommissioning of a 6 megawatt natural gas cogeneration plant.

In total, Parkline will include approximately 1,768,802 square feet (sf) of mixed-use development, with approximately 1,093,602 sf of office/R&D uses and approximately 675,200 sf of residential uses. Parkline will demolish all buildings on SRI International's Campus, excluding Buildings P, S, and T, which would remain onsite and be operated by SRI International and its tenants.

The City is also considering an Increased Development Variant, which is being studied under the Environmental Impact Report being prepared for Parkline pursuant to the California Environmental Quality Act. The Increased Development Variant is a variation of the Parkline proposal located at the same site, generally with the same objectives, background, and development controls, but with two specific differences: (1) the variant would include up to 250 additional residential rental dwelling units compared to the Parkline proposal (an increase from 550 to 800 units, inclusive of the 100 units to be developed by an affordable housing developer) as requested by the City Council during the scoping process in order to evaluate the potential impacts associated with increased residential density, and (2) the variant would include an underground emergency water reservoir that would be built and operated by the City of Menlo Park. The total office/R&D development in the Office/R&D District would remain the same as Parkline.

The TDM Plan will apply to the Parkline land uses as ultimately approved by the City.

Figure 2
Parkline - Proposed Project Site Plan

2. Site Context – Transportation Services

The Parkline site is well served by the existing transportation system, which includes roadways, pedestrian and bicycle facilities, and transit services (i.e., Caltrain, SamTrans and Menlo Park community shuttles). The existing transit, bicycle, and pedestrian facilities, and planned Parkline improvements that will support travel to the site by modes of transportation other than driving alone, are described below. The data presented represents transit operating conditions based on the current published schedules.

2.1 Transit Service

Parkline is near several transit service options, including Caltrain, SamTrans and Menlo Park community shuttles. The City of Menlo Park encourages the use of transit as an alternative mode of transportation and is served by two major transit providers: San Mateo County Transit District (SamTrans) and Caltrain. SamTrans provides bus service throughout San Mateo County and into parts of San Francisco and Palo Alto. Caltrain provides commuter rail service between San Francisco and San José. In addition, Menlo Park operates community shuttles to Belle Haven / Bohannon Drive area, Sharon Heights, and in between Caltrain and Ivy Drive. The community shuttles offer connections with other regional transit agencies like Caltrain, SamTrans, and VTA. Additionally, the Menlo Park community shuttle includes the Shopper's Shuttle program, which is a door-to-door service for people who require extra assistance. The Shopper's Shuttle service operates three days a week for travel within Menlo Park, Palo Alto, and Redwood City. Paratransit services are also available for seniors and people with disabilities. The transit district also offers Redi-Wheels paratransit service for persons with disabilities who are unable to ride SamTrans' regular buses.

Figure 3 shows the existing transit bus routes and bus stops serving Parkline. **Table 1** summarizes hours of operation and service frequencies for the bus routes nearest the site.

2.1.1 Caltrain

Caltrain provides weekday commuter rail service between San José and San Francisco. There are currently 52 trains traveling northbound from San José to San Francisco and 52 trains traveling southbound from San Francisco to San José each weekday. A total of 75 trains serve the Menlo Park station each weekday.

The Caltrain weekday service in Menlo Park includes limited and local service. Limited service is an express service that stops at a limited number of stations between San Francisco and San José, improving travel times for patrons. Local service stops at all stations, providing greater geographic coverage, but travel times are slower. There are 31 limited trains and 44 local trains serving Menlo Park on a weekday. The

Menlo Park Downtown station is located less than one half-mile (~2,500 feet) west of Parkline and can be accessed by a ten-minute walk or five-minute bicycle ride.

2.1.2 SamTrans Bus Service

SamTrans is a public transportation agency that provides bus service throughout San Mateo County including service in Menlo Park.

SamTrans also operates commuter shuttles to Caltrain and BART stations as well as community shuttles in several local jurisdictions.

SamTrans operates six regularly scheduled routes that either directly connect to or are within a short walking distance (less than one half-mile) of Parkline. Five of the routes provide service to Parkline along Middlefield Road, Ravenswood Avenue, or Laurel Street. The fifth route operates on El Camino Real.

Routes 82, 83, and 88 provide local service within the City of Menlo Park and Atherton, and only operate on days school is in session. The other three routes provide regional or subregional service. Routes 296 and 397 operate on Middlefield Road and serve East Palo Alto, west Menlo Park, and extends into Redwood City connecting to the downtown Caltrain Station. Route ECR provides service along El Camino Real from the Palo Alto Transit Center in the south to Daly City BART Station in the north.

2.1.3 Menlo Park Community Shuttles

The Menlo Park community shuttle service has been in operation since 1989 and is funded through grants from San Mateo City/County Association of Governments, Bay Area Air Quality Management District,

and the City of Menlo Park. There are a total of five community shuttles routes: M1 Crosstown Shuttle, M3 Marsh Road Shuttle, M4 Willow Road Shuttle, Menlo Gateway Shuttle, and Shoppers' Shuttle. Three of the shuttles could be utilized by future Parkline residents and workers. With route modifications, M1 Crosstown Shuttle and M4 Willow Road Shuttle could serve Parkline. Residents of Parkline would also have access to the Shopper's Shuttle.

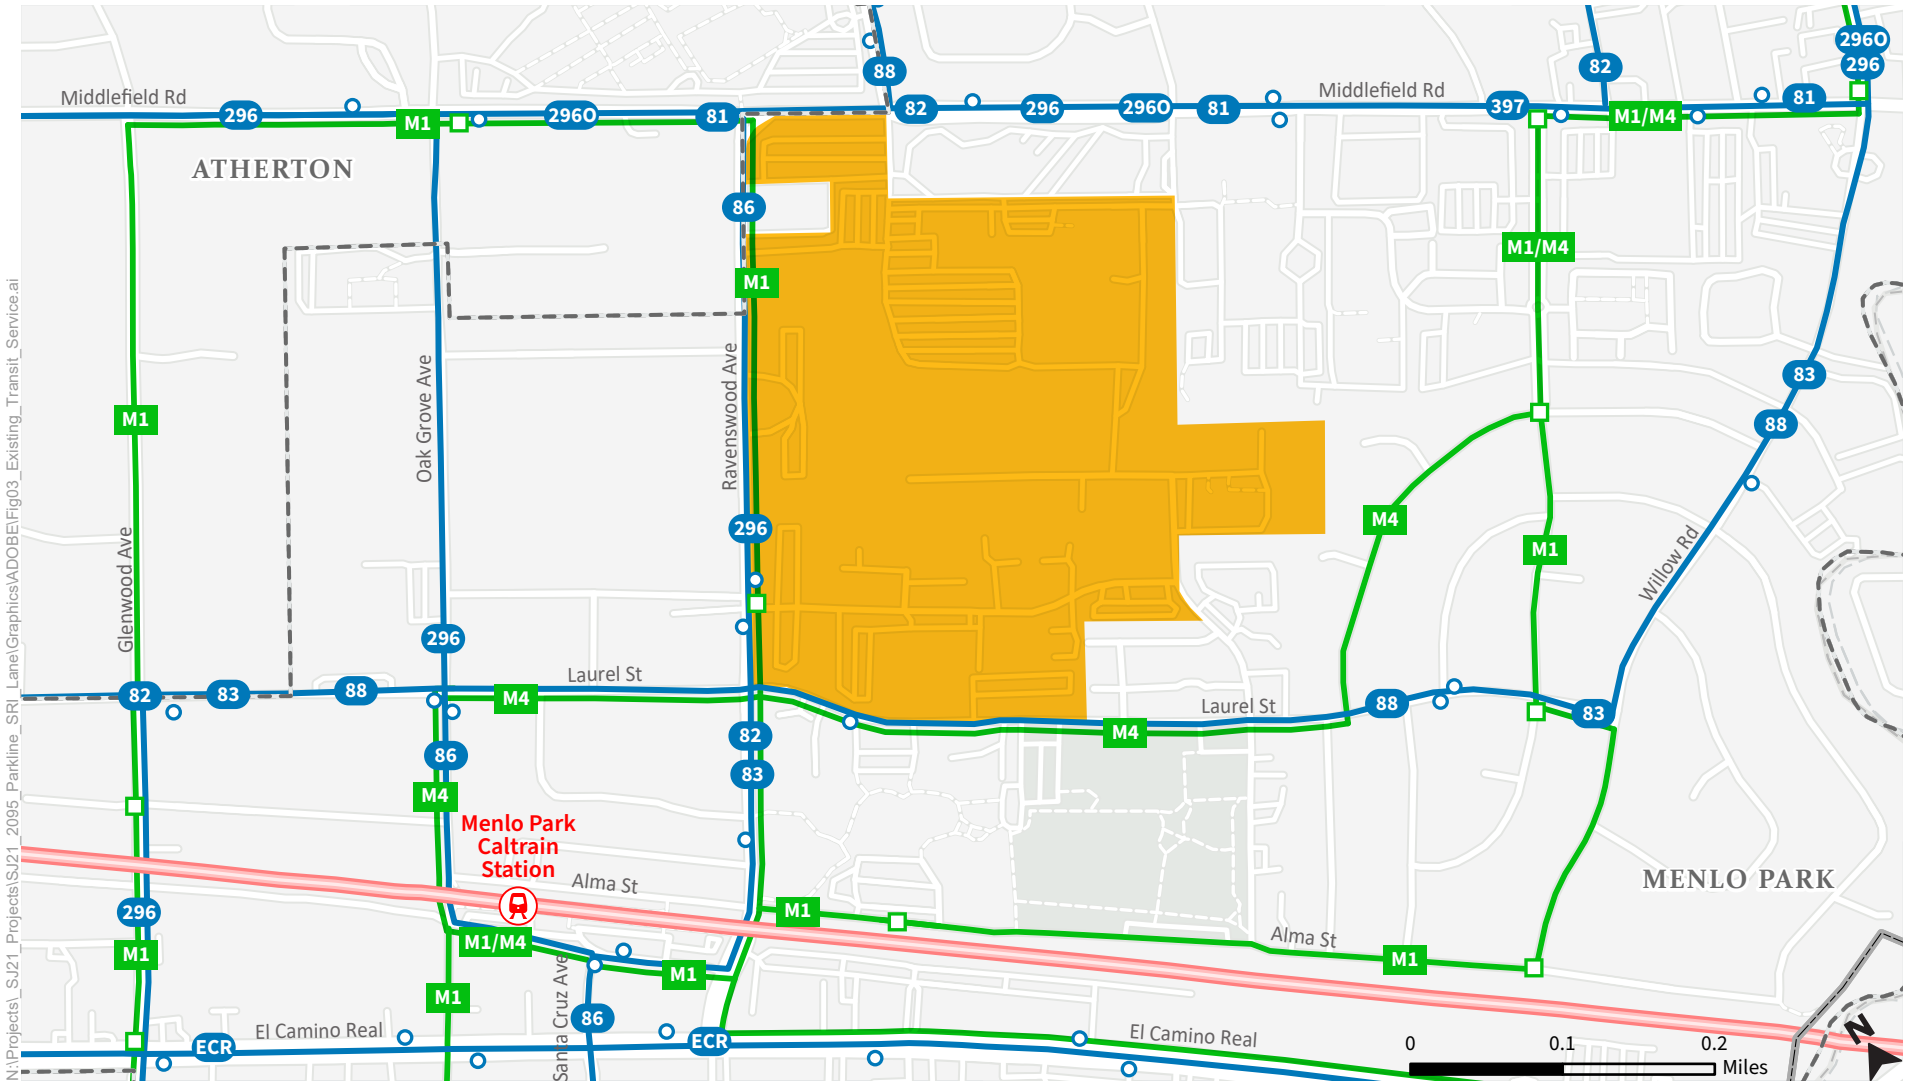

The M1 Crosstown Shuttle route runs between the Belle Haven neighborhood in east Menlo Park to the Menlo Commons/Sharon Height Shopping Center in west Menlo Park. The shuttle circulates through downtown Menlo Park and connects with both the Menlo Park and Palo Alto Caltrain stations. The current route does not directly connect to Parkline. The closest stops are located south and west of Parkline along Linfield Drive and Alma Street.

The M4 Willow Road Shuttle route runs between the Menlo Park Caltrain station and the business parks located along O'Brien Drive. While this shuttle travels on Laurel Street, there are no existing shuttle stops on Parkline frontages. The M4 shuttle schedule operates Monday through Friday to coincide with the peak period Caltrain schedule.

Shoppers' Shuttle is an on-demand, door-to-door service that provides trips to multiple destinations in Menlo Park, Palo Alto, and Redwood City. Reservation-only service is only available on limited number of days for a limited number of hours.

M4- Willow Road Shuttle	Menlo Park Caltrain Station	Menlo Park Caltrain Station	6:41 am-9:47 am	3:58 pm-5:21 pm	No Service		Free of Cost
Shoppers' Shuttle	Home	Multiple facilities and back to home	Tue & Wed 9:30 am-1:30 pm	N/A	Only on Saturdays 9:30 am- 1:30 pm		Free of Cost

Source: Fehr & Peers, August 2023.

2.1.4 Paratransit

SamTrans paratransit service is provided to eligible individuals with disabilities who are prevented from using regular transit services. SamTrans provides paratransit service using Redi-Wheels on the bayside of the county and RediCoast on the coast side. Parkline residents and employees that live within San Mateo County would be eligible to use this ADA paratransit service to reach nearby destinations within the county.

SamTrans' Peninsula Rides provides seniors and those with accessibility needs in San Mateo County with the resources to stay mobile and get around the community. There are other services specifically for seniors besides public transit or shuttles: Senior Center Services transport seniors to and from their homes to designated senior centers; and there are many other community services at a reasonable cost for people who require extra assistance.

2.2 Existing Pedestrian and Bicycle Facilities

2.2.1 Existing Pedestrian Facilities

Parkline's perimeter is served by a range of pedestrian facilities near including sidewalks, crosswalks, curb ramps, and pedestrian signals. There are continuous sidewalks on both sides of the roadways on Laurel Street and Middlefield Road along Parkline frontages. On Ravenswood Avenue there is a continuous sidewalk on the south side of the roadway. On the north side of Ravenswood Avenue, a sidewalk extends between Laurel Street and Marcussen Drive; however, there is no sidewalk between Marcussen Drive and Middlefield Road. This section of roadway is within the Town of Atherton, which does not provide sidewalks on most of its streets.

Table 2 summarizes locations of existing pedestrian crosswalks at the intersections adjacent to Parkline. Crosswalks are located at the signalized intersections adjoining the site. The intersection of Middlefield Road/Ravenswood Avenue does not have a crosswalk on the north approach due to the signal phasing. In addition, there are no existing sidewalks on Ravenswood Avenue and Middlefield Road on the northwest corner of the intersection (within the Town of Atherton). The intersections of Pine Street/Ravenswood Avenue and Ringwood Avenue/Ravenswood Avenue have crosswalks on all approaches.

There are no crosswalks at the two of the stop-sign controlled intersections: Pine Street/Ravenswood Avenue and Marcussen Drive/Ravenswood Avenue. At the stop-sign controlled intersection of Seminary Drive/Middlefield Road there is only one crosswalk, on the east approach on Seminary Drive.

The intersection of Alma Street/Ravenswood Avenue provides access to the Menlo Park Caltrain Station. There are crosswalks on three of the approaches. On the east approach on Ravenswood there is a high-visibility crosswalk with a pedestrian activated flashing beacon.

Table 2: Existing Pedestrian Crosswalk Locations

Intersection	Intersection Control	North Approach	East Approach	South Approach	West Approach
Laurel Street & Ravenswood Avenue	Signal	Yes	Yes	Yes	Yes
Pine Street & Ravenswood Avenue	Side Street Stop Sign	No	No	No	No
Marcussen Drive & Ravenswood Avenue	Side Street Stop Sign	No	No	No	No
Middlefield Road & Ravenswood Avenue ¹	Signal	No	NA	Yes	Yes
Middlefield Road & Ringwood Avenue ¹	Signal	Yes	Yes	Yes	Yes
Middlefield Road & Seminary Drive	Side Street Stop Sign	No	Yes	No	No
Alma Street & Ravenswood Avenue ²	Side Street Stop Sign	Yes	Yes	Yes	No

1 – Designated school crosswalks with yellow striping.

2 – The Alma Street & Ravenswood Avenue crosswalks provide access to the Meno Park Caltrain Station.

NA – Not applicable.

Source: Fehr & Peers, August 2023.

There are no existing mid-block crosswalks on the perimeter or the site. On Ravenswood there are no mid-block crosswalks between Laurel Street and Middlefield Road. On Middlefield Road there are no mid-block crosswalks between Ringwood Avenue and Linfield Avenue. On Laurel Street there are no mid-block crosswalks between Ravenswood Avenue and Burgess Drive.

Planned Pedestrian Improvements

The City of Menlo Park Transportation Master Plan, adopted by the Menlo Park City Council on November 17, 2020, establishes a detailed vision, sets goals and performance metrics for network performance, and outlines an implementation strategy for improvements to be implemented locally and for local contributions towards regional improvements. Many of the improvements identified in the Transportation Master Plan are focused on enhancing access to Menlo-Atherton High School.

The Transportation Master Plan identifies a range of planned pedestrian and bicycle improvements within the City, including several Tier 1 pedestrian and bicycle improvements near Parkline, most of which are planned along Middlefield Road. The key pedestrian projects surrounding Parkline include the following:

- *TMP #63 – Middlefield Road & Ravenswood Avenue* – Remove eastbound Ravenswood Avenue channelized right-turn lane, install right-turn overlap phase, modify signal timing, install crosswalk and cross-bike markings on north Middlefield Road leg, install bike signal. Construct “jughandle” bicycle left-turn on east side of Middlefield Road to allow bicycle left-turns onto Ravenswood

Avenue. Install “bicycle leaning rail” with push button for bicycles to initiate crossing phase on “jughandle” left-turn.

- *TMP #64 – Middlefield Road & Ringwood Avenue* – Remove southbound Middlefield Road channelized right turn. Reconstruct curb ramp and reduce curb radius on northwest corner. Replace crosswalks on north and west legs. Install two-stage left-turn queue boxes for cyclists traveling from Middlefield Road to Ringwood Avenue.
- *TMP #65 – Middlefield Road & Lindfield Drive-Santa Monica Avenue* – Install High Intensity Activated Crosswalk (HAWK) or traffic signal with emergency pre-emption on Middlefield Road at Linfield Drive/Santa Monica Avenue. Install “Keep Clear” striping at Menlo Fire Protection District Station No. 1. Close sidewalk/pathway gap on eastern side of Middlefield Road between Linfield Drive and Santa Monica Avenue. Coordinate with Menlo Fire Protection District.

2.2.2 Existing and Proposed Bicycle Facilities

The California Department of Transportation (Caltrans) recognizes four classifications of bicycle facilities:

- **Class I Shared-Use Path**, commonly referred to as a Bikeway or Bike Path, is a facility separated from automobile traffic for the exclusive use of bicyclists. Class I facilities can be designed to accommodate other modes of transportation, including pedestrians and equestrians, in which case they are referred to as shared use paths.

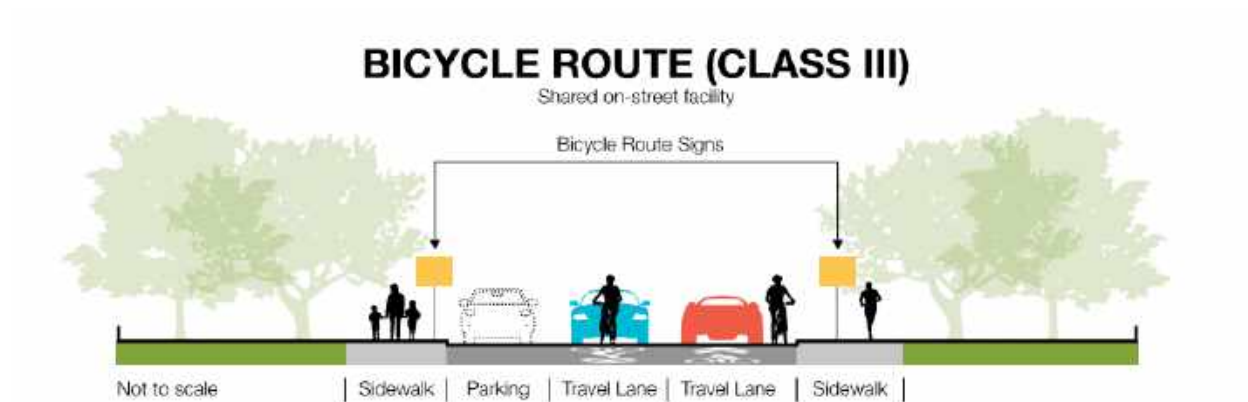

- **Class II Bicycle Lane** is a dedicated facility for bicyclists immediately adjacent to automobile traffic. Class II facilities are identified with striping, pavement markings, and signage, and can be modified with a painted buffer to become a buffered bicycle lane (Class II)

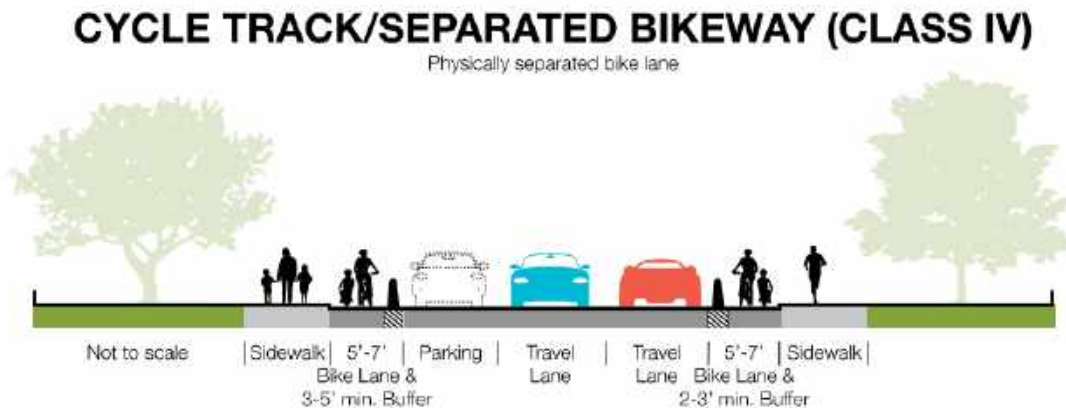

- **Class III Bicycle Route** is an on-street route where bicyclists and automobiles share the road. They are identified with pavement markings and signage and are typically assigned to low-volume and/or low-speed streets.

- **Class IV Cycle Track or Separated Bikeway**, commonly referred to as a protected bicycle lane, is a facility that combines elements of Class I and Class II facilities. They offer an exclusive bicycle route immediately adjacent to a roadway like a Class II facility but provide physical separation from traffic with plastic delineators, raised curb, parked automobiles, or other treatments.

As shown in **Figure 4**, there are existing Class II and Class IV bicycle facilities on the roadways bounding Parkline. Ravenswood Avenue has Class IV separated bicycle lanes between Laurel Street and Middlefield Road. Laurel Street and Middlefield Road both have Class II bicycle lanes. The bicycle lanes on Laurel extend from Burgess Drive in the south to Encinal Avenue in the north. The bicycle lanes on Middlefield Road extend from the Menlo Park city limits in the south into the City of Redwood City in the north (passing through the Town of Atherton).

Planned Bicycle Improvements

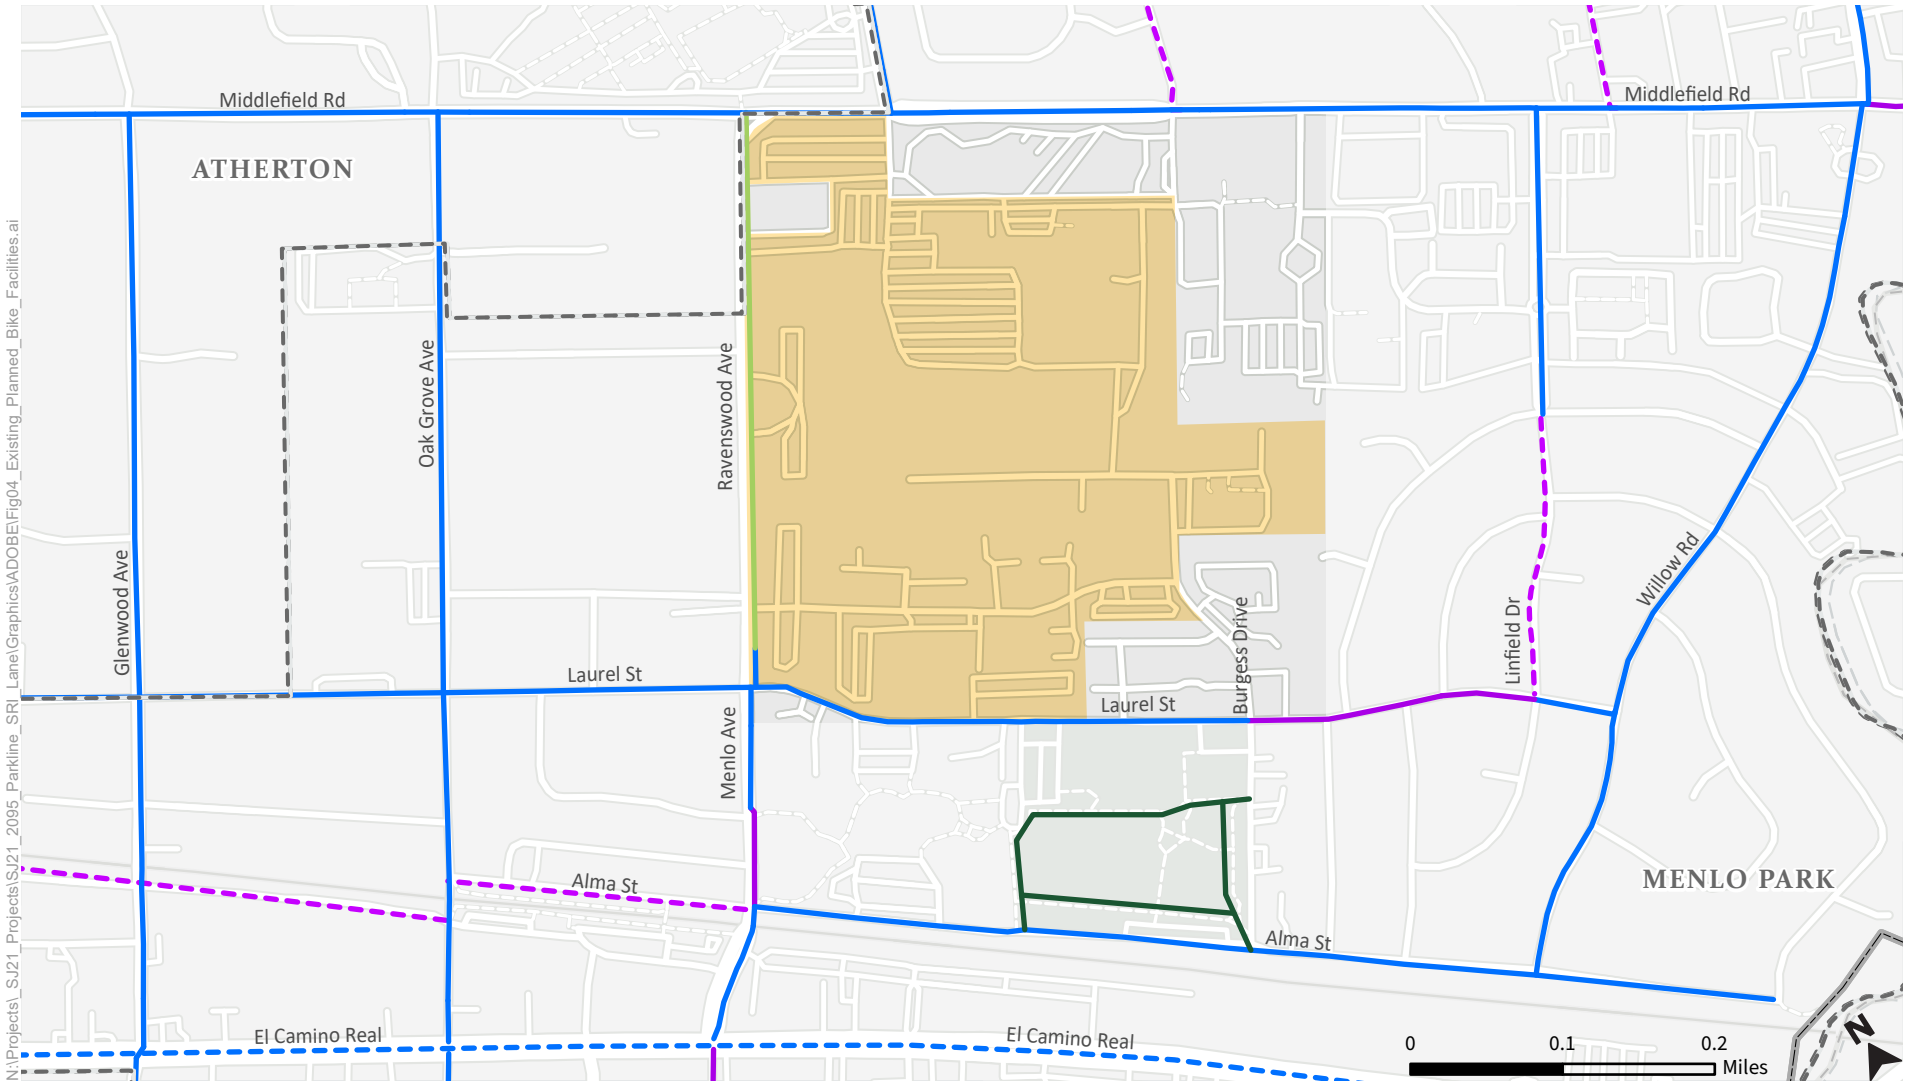

As also shown in **Figure 4**, there are four Transportation Master Plan Tier 1 bicycle improvements planned near Parkline. (Note that **Figure 4** shows only planned bicycle improvements as included in the Transportation Master Plan; Parkline proposes additional bicycle improvements, which are further shown in **Figure 5**.) One of the planned improvements was recently implemented by the City of Menlo Park:

- *TMP #74 – Ravenswood Avenue & Laurel Street* – Remove parking south of Ravenswood Avenue on west side of Laurel Street for approximately 150 feet and shift northbound lanes to establish a Class II bicycle lane. Widen and modify eastbound Ravenswood Avenue to shared thru-left lane and a right turn lane. Upgrade existing crosswalks to high-visibility. Modify southbound Laurel Street to a left-turn lane and a shared thru-right lane. Maintain existing Class II bicycle lanes. Remove parking on west side of Laurel Street north of Ravenswood Avenue for approximately 100 feet.

The other planned improvements that have not been implemented by the City of Menlo Park are:

- *TMP #75 – Laurel Street from Burgess Drive to Willow Road* – Establish Class II bicycle lanes (requires removal of parking on both sides of the street).
- *TMP #79 – Alma Street from Ravenswood Avenue to Burgess Drive* – Install sidewalk on the east side of Alma Street to connect to Burgess Park path. Upgrade crosswalks to high-visibility.

Figure 4
Existing and Planned Regional Bicycle Facilities

- *TMP #81 – Middle Avenue Caltrain Crossing – Construct pedestrian and bicycle crossing at El Camino Real/Middle Avenue intersection. Connect to future plaza, to be funded and constructed via private development (Middle Plaza). Install pedestrian crossing improvements across Alma Street from Caltrain Crossing to Burgess Park.*

2.2.3 Existing Roadway Network

The roadway network near Parkline consists of local and state facilities. As shown in **Figure 1**, direct access to the site is via seven existing driveways located on Ravenswood Avenue, Middlefield Avenue, and Laurel Street. There are four driveways located on Ravenswood Avenue, one driveway on Middlefield Road, and two driveways on Laurel Street. The following sections describe roadway connections between the site and local and regional networks.

US 101 is a north-south freeway located north of Parkline with four to five travel lanes in each direction. One travel lane in each direction is designated as an express (toll) lane that high occupancy (HOV) vehicles can use for free or a reduced toll. Solo drivers can pay a toll to use the lane. US 101 extends from San Francisco to Gilroy in the Bay Area. Access to Parkline from US 101 is via Willow Road or Marsh Road.

Willow Road is an east-west roadway that extends from the Bayfront Expressway in the east to Alma Street in the west. Willow Road has a four-lane cross-section between Bayfront Expressway and US 101, and a two-lane cross-section from US 101 to Alma Street. Access to Parkline from Willow Road is via Middlefield Road.

Marsh Road is an east-west roadway that extends from Bayfront Expressway in the east to Middlefield Road in the west. Marsh Road is four- to six-lanes between Bayfront Expressway and Bay Road. Marsh Road becomes a two-lane road west of Bay Road, extending to Middlefield Road.

Middlefield Avenue is a north-south roadway that runs from Palo Alto to Redwood City. Middlefield Road is a two- to four-lane road that extends from the Menlo Park city limits in the south into the City of Redwood City in the north (traversing the Town of Atherton). Most of Middlefield Road is a two-lane roadway; however, the roadway widens to four lanes at key intersections including Ringwood Avenue, Linfield Drive, and Willow Road.

Ravenswood Avenue is an east-west roadway on the north side of Parkline extending from Middlefield Road into downtown Menlo Park. It is a two-lane road from Middlefield Road to the Caltrain crossing widening to four-lanes at El Camino Real.

Laurel Street is a north-south two-lane roadway that extends from Willow Road in the south to Encinal Avenue in the north. Laurel Street is the western frontage of Parkline. The section of Laurel between Willow Road and Ravenswood Road has traffic calming devices installed to reduce traffic volumes in the residential areas.

Ringwood Avenue is an east-west two-lane road that extends from Bay Road to Middlefield Road. The western approach of the Ringwood Avenue and Middlefield Road intersection is an existing site entrance.

El Camino Real (State Highway 82) is a north-south arterial that extends from San José in the south to San Francisco in the north. El Camino Real is four- to six-lanes and passes through Menlo Park. El Camino Real is part of the state highway system; therefore, El Camino Real is maintained and managed by the California Department of Transportation (Caltrans).

Planned Roadway Improvements

Most of the Menlo Park Transportation Master Plan Tier 1 improvements are focused on pedestrian, bicycle, and local roadway safety improvements. However, there is one major roadway improvement planned near Parkline: the Caltrain Grade Separation project. The City of Menlo Park is working with the San Mateo County Transportation Authority on funding for the design and environmental phase. The Menlo Park grade separation project is a pipeline project identified within the Measure A grade separation program. The City is working with Caltrain on an agreement to pursue these design and environmental review phases of work, which will be led by Caltrain in coordination with the City.

3. TDM Measures and Strategies

3.1 Overview of TDM Strategies

There are numerous TDM strategies that can encourage residents and workers to use modes of transportation other than driving alone and, therefore, reduce the vehicle miles traveled (VMT) and parking demand generated by a development. TDM strategies fall into two categories: physical design features and operational TDM programs.

Physical design features encourage users to reduce the amount of driving they do by making alternatives more attractive. These strategies can include combining residential, retail and office uses, building design features such as showers and changing areas for bicycle and pedestrian commuters, and providing pedestrian and bicycle facilities.

Operational TDM programs are offered by the landowner, employers (tenants), and residential building managers on an ongoing basis to reduce vehicle trips. Cities often require land owners to pass down TDM requirements to property managers and office tenants through lease agreements.

TDM programs promote the use of transit, carpooling, vanpooling, biking, and walking to reduce vehicle trips, complementing physical design features.

Each TDM strategy has an associated range of effectiveness in reducing vehicle trips; combined, they provide an overall range of effectiveness. The overall effectiveness is not simply additive when strategies are combined since some programs target the same users and/or use similar approaches to affect user behavior.

3.2 Parkline TDM Requirements

There is no specific Citywide or other TDM ordinance that is directly applicable to Parkline; however, as a transit-oriented development, Parkline proposes to incorporate a robust TDM Plan to reduce vehicle trips and, thereby, reduce vehicle miles traveled (VMT). As further detailed below, Parkline will incorporate TDM measures yielding a 25% reduction from the ITE standard rates for Project-related residential trips and 28% reduction from the ITE standard rates for Project-related general office and research and development (R&D) trips, which exceeds C/CAG's requirements and is required in order to ensure a less than significant VMT impact.

3.2.1 Trip Reduction Targets

The trip reduction targets/caps for future TDM Plan monitoring will be calculated based on the land uses approved for the Parkline development. The City of Menlo Park has a practice of applying TDM trip reductions after considering any internal trip reductions for mixed use developments (i.e., Menlo Park does not allow for TDM reductions based on land use decisions such as proposing mixed use developments which reduce trips due to internal capture). Therefore, Parkline will be required to have an effective 28% trip reduction for residential trips and 31% for office/R&D trips after accounting for trip internalization, due to the mixed-use

nature of the Project (office and residential uses). The estimated trip reduction due to internal capture is approximately 3%.

3.2.2 Regulatory Framework for Parkline TDM Strategy

There is no specific City of Menlo Park TDM ordinance applicable to Parkline; as such, this TDM Plan has been developed consistent with the *Transportation Demand Management (TDM) Policy* as set forth by the County and City Association of Governments (C/CAG). C/CAG is the regional transportation planning agency for San Mateo County. C/CAG is responsible for overseeing the San Mateo Congestion Management Program (CMP), which includes the Land Use Impact Analysis Program Policy, also known as the “TDM Policy.” As of January 1, 2022, C/CAG’s *Transportation Demand Management (TDM) Policy* requires that local jurisdictions in San Mateo County, including the City of Menlo Park, notify C/CAG of any new development project that is estimated to generate at least 100 Average Daily Trips (ADT). Jurisdictions may apply for exemption if their local TDM policy equals or exceeds that of C/CAG’s.

The City of Menlo Park has not updated its local TDM guidelines since C/CAG updated its countywide policy. However, our understanding is that the City of Menlo Park intends to follow the recommended process in the updated C/CAG Countywide TDM Policy (January 2022) when evaluating Parkline’s TDM Plan. As such, the TDM Plan for Parkline utilizes C/CAG’s TDM Policy guidelines.

3.2.3 Commute.org Certification

C/CAG has teamed with Commute.org to establish a *Certified Development Program* to certify TDM plans. The *Certified Development Program* is designed to provide developers with projects in San Mateo County with a formal certification of their active participation in Commute.org programs and services. Generally, active participation may be a requirement for developments that are subject to the C/CAG Countywide TDM Policy and may also be a TDM requirement imposed on developers by jurisdictions that are not subject to the C/CAG policy. The goal of the *Certified Development Program* is to provide developers access to a set of TDM programs and services that can be integrated into other tools they will use to reduce VMT and trip counts to new commercial, residential, or mixed-use developments in San Mateo County.

Parkline intends to participate in the Commute.org programs and seek certification through the *Certified Development Program*. The Commute.org TDM certification process includes the following steps:

- Register with Commute.org and provide the required information.
- Consult with Commute.org staff to verify the certification process and requirements for active participation.
- Submit a signed Letter of Commitment confirming that the developer and/or their successor(s) will be active participants with Commute.org.
- Provide a copy of the C/CAG TDM Policy Checklist or equivalent documentation from local jurisdiction (if applicable).
- Receive a Pre-Certification Letter from Commute.org that confirms registration and commitment to active participation. Commute.org will send a letter to the developer and appropriate jurisdiction contact. This letter must be submitted to C/CAG along with the TDM Checklist (if applicable).

- Achieve certification status within six months of receiving Certificate of Occupancy. Requires completion of Commute.org program training and submittal of initial TDM Survey.
- Maintain annual certification status with Commute.org by complying with the requirements for active participation.

3.3 Proposed TDM Measures for Parkline

Table 3 provides a comprehensive list of TDM strategies that could be used by Parkline to reduce vehicle trips and, thereby, reduce vehicle miles traveled (VMT). Because Parkline includes both residential and commercial components, the list of TDM strategies includes certain measures that would apply to just the residential or commercial (office / R&D) component, and certain strategies that would apply to both.

Table 3 includes a strategy name and description followed by five columns. The columns indicate the following:

- **C/CAG** – Whether the strategy is included in the County and City Association of Governments (C/CAG) check list used by Commute.org to certify development projects in San Mateo. The City of Menlo Park requires new development projects to obtain Commute.org certification.
- **VMT Reduction Potential** – The range of VMT reduction that a given TDM strategy may achieve based on data from the *Handbook for Analysis Greenhouse Gas Emission Reductions* (California Air Pollution Control Officers Association, 2021) and other published sources.
- **Residential TDM** – Whether the physical design feature or TDM strategy is applicable to Parkline’s residential component.
- **Office/R&D TDM** – Whether the physical design feature or TDM strategy is applicable to Parkline’s office/R&D component.
- **Owner/Property Management** – Whether the office TDM feature, or strategy is implemented by the property owner or property management. Ongoing residential and commercial TDM programs are typically enforced through lease agreements and managed by property management, often through an assigned TDM Coordinator.
- **Office/R&D Tenant** – Whether the office TDM feature, or strategy is implemented by the office/R&D tenant. These are typically strategies that require direct coordination with the employee such as payroll deductions.

The proposed TDM measures in **Table 3** represent a toolbox of options that can be used by Parkline to meet the required trip reductions for residential and office/R&D uses. As a general matter, TDM plans need to be flexible to meet the changing needs and travel behavior of the end users. Programs that start out reducing trips may grow ineffective and should be replaced with other programs. In addition, new TDM programs may arise due to changes in technologies, innovations in travel modes, or public policies that support alternative modes of travel. Therefore, the Parkline TDM plan should be considered a living document that can be updated as needed.

Table 3: Proposed TDM Measures for Parkline

TDM Measure	Description	C/CAG	VMT Reduction Potential ¹	Residential TDM	Office/R&D TDM	
					Owner/Property Management ²	Tenants
<i>Bicycle and Pedestrian</i>						
Provide bicycle parking (short-term, on-sidewalk or similar)	Provide traditional bike racks designed for short-term parking, in a visible publicly accessible space.	✓	0.1% – 1.6%		✓	
Provide on-site bicycle maintenance services	Include dedicated space for a bicycle repair shop or agree to provide concierge service for individuals to drop off bicycles for repairs and pick them up later.	✓	Unknown		✓	
Fund bicycle lanes / expansion of bicycle network	<p>Construct or improve a bicycle lane facility (Class I, II, III, or IV) that connects to a larger existing bikeway network. This encourages mode shift from parallel roadways to bicycles, displacing VMT.</p> <ul style="list-style-type: none"> Class I – Bicycle & pedestrian path parallel to Ravenswood Av extending from Laurel St to Middlefield Rd (at Ringwood) Class IV – Cycle Track along project frontage on Laurel St from Ravenswood to property line Class I – Bicycle & pedestrian path connecting Burgess Dr and Middlefield Rd on east side of the property Class I – Bicycle & pedestrian path connecting between Laurel St and internal circulation roadway Class II or III – Internal circulation (loop) will included either Class II (bike lanes) or III (sharrows) to accommodate bicycles 	✓	0.2% – 0.8%	✓	✓	
Provide bicycle parking (long-term, secure)	Provide secure bicycle parking in either a dedicated room, via bicycle lockers, or a bike station incorporated into the project.	✓	0.1% – 1.6%	✓	✓	
Provide on-site bicycle repair station	Provide a bicycle repair station that includes basic tools and space for common repair tasks. This may include a stand, air pump, tire lever, wrenches, and other common bicycle maintenance tools.	✓	0.1% – 1.6%	✓	✓	
Provide showers and lockers	Provide space for active transportation users to shower, change, and store any equipment they use during their commute.	✓	0.1% – 2.8%		✓	

TDM Measure	Description	C/CAG	VMT Reduction Potential ¹	Residential TDM	Office/R&D TDM	
					Owner/Property Management ²	Tenants
Provide pedestrian network improvements	Improve pedestrian spaces both within the project and on roadways approaching the project. Improvements may include providing sidewalks on both sides of the street, incorporating ADA-compliant improvements, and providing sidewalk amenities such as trees, plants, and benches, and otherwise improving the pedestrian experience.	✓	0.5% to 6.4%	✓	✓	
Provide traffic calming measures	Roadways will be designed to reduce motor vehicle speeds and encourage pedestrian and bicycle trips with traffic calming features. Traffic calming features may include marked crosswalks, count-down signal timers, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others.		0.25 – 1.0%	✓	✓	
Enhanced Program: Maintain fleet of bicycles	Maintain a fleet of bicycles for use by project residents or employees only. While like bike share, this system is not open to the public, and may be more informal; for instance, a residential development with a shared bike room that includes a few building-owned bicycles.		0.02%	✓	✓	
Land Use and Design						
Integrate affordable and below-market-rate housing	Incorporate affordable housing into the development program. Affordable housing can be defined as housing affordable to households earning less than 80% of the area median income. Affordable or below-market-rate housing can comprise anywhere from a small percentage to 100% of total residential units in a project. Because lower income households tend to generate less VMT per person, this may reduce vehicle trips.		Up to 28.6% (relative to market rate single family housing)	✓		
Locate project near bike path/bike lane or another non-auto corridor	Locate project on a roadway that has existing high-quality bicycle and pedestrian infrastructure, such as bike lanes (class I, II, or IV). Project may also be oriented toward a dedicated bus facility (such as BRT), light rail line or commuter rail; in this instance, orientation means that the site's primary and easiest form of access should be from the transit corridor, and that the transit corridor should not have competing automotive traffic.		0.25 – 0.5%	✓	✓	

TDM Measure	Description	C/CAG	VMT Reduction Potential ¹	Residential TDM	Office/R&D TDM	
					Owner/Property Management ²	Tenants
Provide delivery-supportive amenities	Designate a central package room or package area where deliveries can be safely kept until picked up by a resident or employee. This helps to reduce excessive driving by delivery vehicles and may help residents to be zero car households.	✓	Unknown	✓		
Provide multimodal wayfinding signage	Indicate via prominent and well-designed signage the best walking and bicycling routes to major destinations, distances and walk/bike times to those destinations, locations of transit stops (including all relevant bus, rail, or shuttle services) and high-level information on those transit services.		Unknown	✓	✓	
Improve design of development	The project will include improved design elements to enhance walkability and connectivity. Improved street network characteristics within a neighborhood include street accessibility, usually measured in terms of average block size, proportion of four-way intersections, or number of intersections per square mile.	✓	3.0 – 21.3%	✓	✓	
Shared Mobility						
Implement a car-sharing program	Deploy car-share vehicles in the project area / community. Carshare vehicles are automobiles that can be rented on a short-term basis and may be either point-to-point or roundtrip. Access to carshare vehicles can help reduce the need for a private car and can result in decreased vehicle ownership.	✓	0.15% – 0.7%	✓	✓	
<i>Enhanced:</i> Provide bicycle and/or scooter sharing program subsidy	Fully or partially pay for tenants'/employees'/students' yearly membership fee and insurance associated with bike-sharing.	✓	Unknown	✓	✓	✓
Ridesharing						
Provide carpool subsidies	Provide subsidies in the form of cash or gas cards to individuals carpooling to/from work.	✓	0.0 – 8.0%		✓	✓
Preferential Carpool Parking Spaces	Provide carpool parking spaces near building entrances to incentivize carpool use.		0.0 – 8.0%		✓	✓

TDM Measure	Description	C/CAG	VMT Reduction Potential ¹	Residential TDM	Office/R&D TDM	
					Owner/Property Management ²	Tenants
Parking						
Unbundle parking costs.	For residential developments, require that parking spaces be paid for separately from the primary mortgage/HOA dues/rent. This effectively reduces housing costs for households with no cars / fewer cars		2.6 – 15.7%	✓		
Transit and Shuttle						
Pre-Tax Commuter Benefits <i>(tenant or employer action)</i>	Provide employees the opportunity to enroll in WageWorks or other services to help with pre-tax commuter savings. This strategy allows employees to deduct monthly transit passes or other amounts using pre-tax dollars. This can help to lower payroll taxes and allows employees to save on transit costs.	✓	0% – 1.5%			✓
Promote real-time transportation apps	Provide information on transportation apps that residents and workers can use to find out information on schedules and departure times to facilitate trip planning		Unknown	✓	✓	✓
Provide subsidies for transit riders	Provide subsidies in the form of cash, transit passes, or contributions to a regional fare card to transit riders. An employer typically implements this program.	✓	Up to 20%	✓	✓	
Provide shuttle services <i>(last mile service to Caltrain or midday services to downtown Menlo Park)</i>	Provide a publicly available shuttle service between a regional transit facility and employment, residential, or shopping centers located 1-5 miles away.	✓	0.1% to 8.2%	✓	✓	
Marketing						
Provide TDM coordinator <i>(owner, property management, and/or tenants)</i>	Designate a staff person as the site wide TDM coordinator to develop, monitor, and publicize TDM activities. The site TDM coordinator will work with the designated TDM coordinators identified by building property managers and individual tenants (employers).	✓	Unknown	✓	✓	
Actively Participate in Commute.org or a local Transportation Management Association (TMA)	Participation in a TMA allows all members to benefit from the economies of scale when it comes to mutually funded TDM programs or marketing activities. Programs could include Caltrain shuttles, guaranteed rides home (see below) and transit agency coordination.	✓	Unknown	✓	✓	

TDM Measure	Description	C/CAG	VMT Reduction Potential ¹	Residential TDM	Office/R&D TDM	
					Owner/Property Management ²	Tenants
Provide guaranteed ride home <i>(Commuter.org provides this service in San Mateo County for a fee)</i>	Provide free (or reimbursed) taxi, Lyft, or Uber rides home for employees that used transit or carpooling to reach work and must travel home either mid-day due to an emergency, at a time other than their carpool, or after transit service has concluded. This helps address uncertainty for individuals considering using alternative modes.	✓	Unknown		✓	
Provide move-in / new hire packets on transportation options	Provide standardized materials including information on transit routes and schedules, bicycle pathways, available commuter facilities, subsidies, parking cash-out, and any other commuter programs available.		Unknown	✓	✓	
Provide one-on-one trip planning	Offer one-on-one sessions to employees/residents to discuss commute options specific to their commute and provide them with a plan. This may also include information on relevant subsidies or bicycle facilities. Like "intensive targeted marketing program" but typically relies on voluntary sign-up for information sessions.		Unknown		✓	
Provide on-demand ridesharing <i>(tenant action)</i>	Provide access to and/or promote an app that allows drivers and potential carpoolers to identify each other on a short term or occasional basis (as compared to traditional carpooling/ridesharing where carpools tend to adhere to a regular schedule)		0.0 – 8.0%			✓
Provide TNC vouchers or discounts for pooled trips only <i>(tenant action)</i>	Provide subsidies or credits in popular ride-hailing apps (such as Uber or Lyft) for pooled trips only, encouraging employees or residents to select the pooled option for such trips.	✓	Unknown	✓		✓
Encourage telecommuting and alternative work schedules <i>(tenant action)</i>	Allow and encourage employees to telecommute or adopt alternative work schedules. Examples may include working from home a certain share of the time or working a 9/80 or 4/40 work week.	✓	Up to 5.5%			✓

1 – Range of VMT reduction for the individual program or activity based on the *Handbook for Analysis Greenhouse Gas Emission Reductions* (California Air Pollution Control Officers Association, 2021) and other published research. Unknown indicates that no value is assigned to the individual strategy; however, these strategies are components that complement other programs and make them more effective.

2 – Owners / Property Managers refers to actions that would be implemented by the property owner and/or property managers. For example, the property owner is responsible for the design features built into the property. Property managers are responsible for implementing programs for their development and collaborating with tenants to implement TDM programs.

Source: Fehr & Peers, August 2023

This TDM Plan will be updated later to include a monitoring plan that demonstrates how Parkline proposes to monitor ongoing compliance and to measure the effectiveness of the office/R&D and residential TDM components.

3.3.1 Proposed Parkline Pedestrian and Bicycle Facilities, and Reduced Parking Ratios

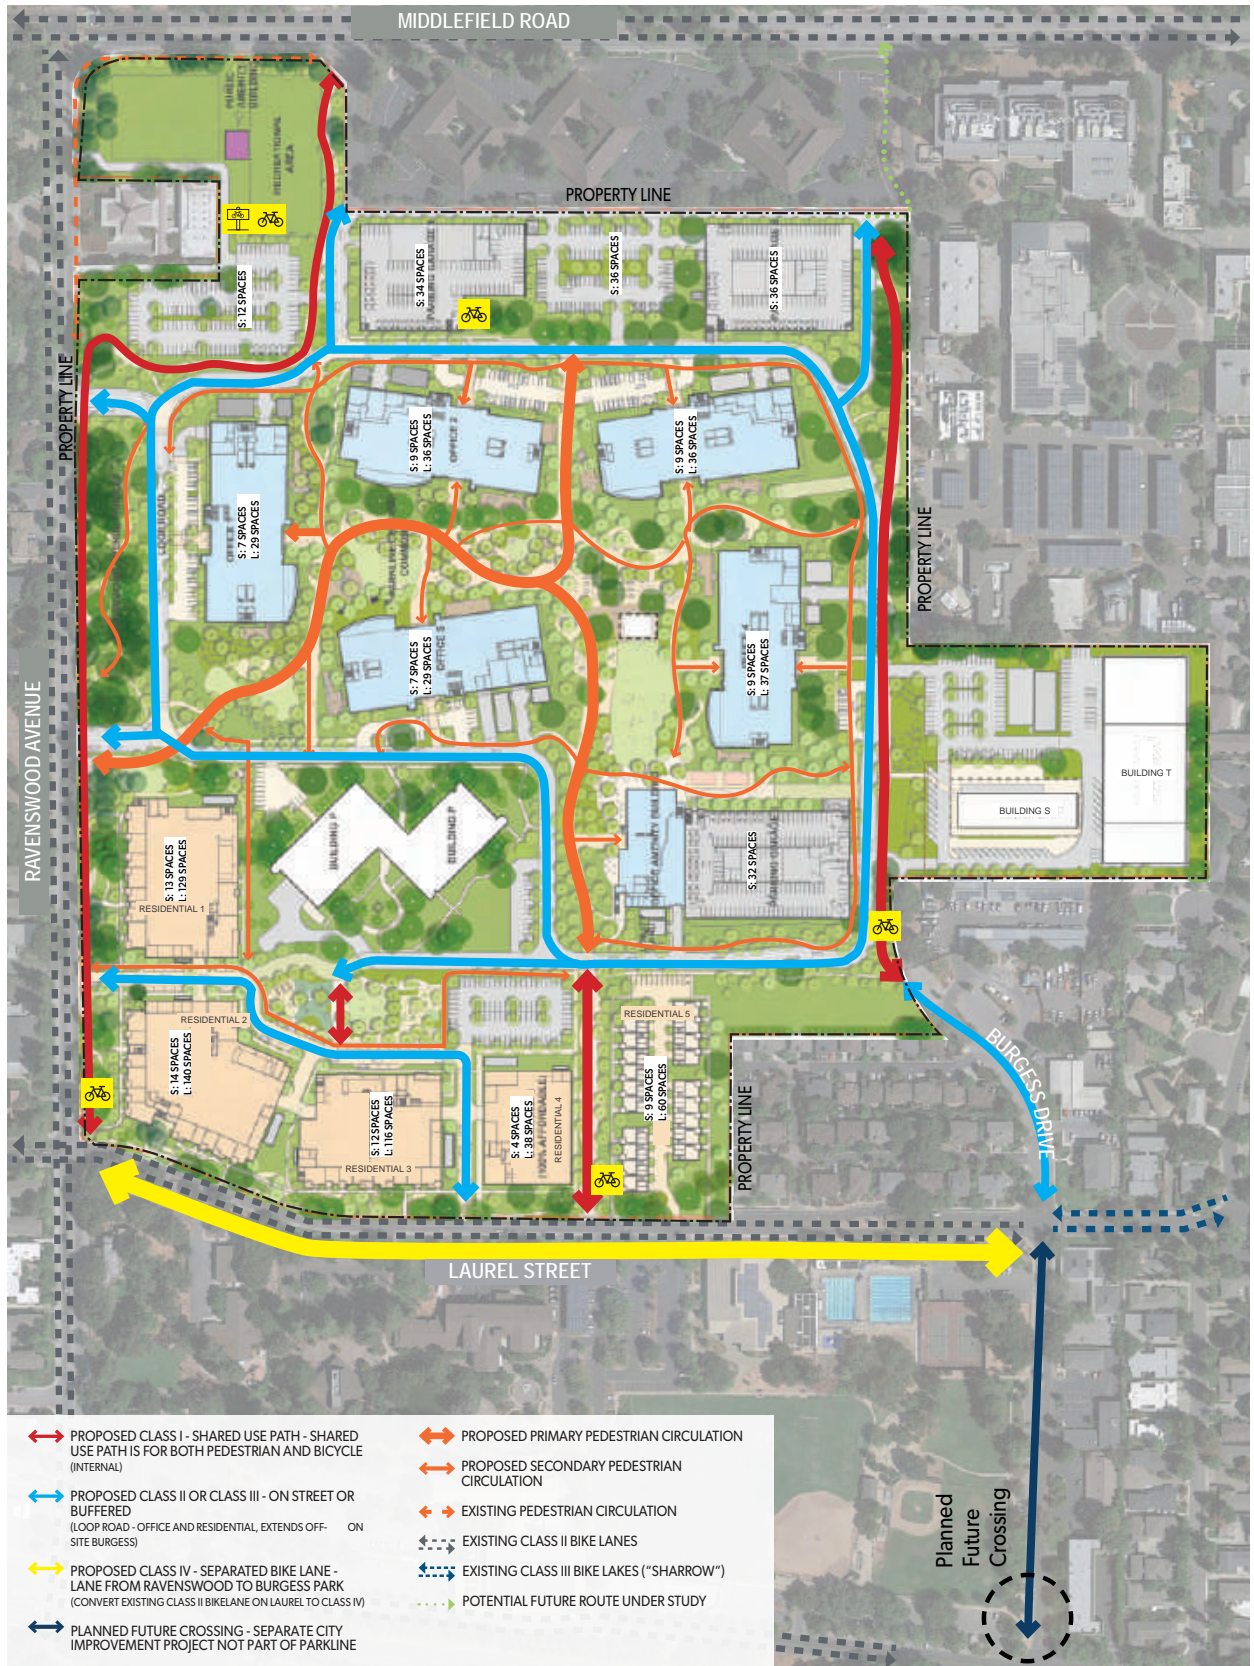

Under existing conditions, the Parkline site is currently closed to the public and surrounded by a secured perimeter, thereby limiting bicycle and pedestrian connectivity. The existing bicycle and pedestrian facilities are limited to on-street bicycle lanes and narrow sidewalks along the perimeter of the site's roadway frontages within the public right-of-way. Parkline would eliminate the existing security perimeter and would open the site to the surrounding community by creating accessible and safe multi-modal pathways, allowing bicyclists and pedestrians to circulate throughout the site. These bicycle and pedestrian pathways would be located along the perimeter of Parkline and throughout the interior of the site to create east-west bicycle and pedestrian linkages that would connect through Parkline to Burgess Park, the future Caltrain undercrossing, and the Menlo Park downtown area.

Figure 5 shows the planned pedestrian and bicycle facilities that will be included in Parkline. With the consolidation of the office/R&D space into fewer buildings, the open space created will allow pedestrians and bicyclists to travel throughout the site on a new network of paths and sidewalks. **Figure 5** also shows the location and amount of short-term and long-term bicycle parking, which is designed to meet the City of Menlo Park's bicycle parking requirements, and to meet or exceed the bicycle parking requirement under the Cal Green standards.

In addition to creating a new internal bicycle network and providing bicycle parking, Parkline proposes to provide five do-it-yourself (DIY) bicycle repair stations and provide staffed bicycle maintenance services on-site. **Figure 5** shows the conceptual locations of these bicycle repair facilities; the final location and design will be determined through the review and approval process. Three of the DIY repair stations are anticipated to be located on the western perimeter of the site where bicyclists enter and exit the internal bicycle network. Another DIY repair station would be located on the eastern side of the site near parking structures. The last DIY repair station would be located adjacent to the bicycle maintenance service center.

With respect to parking, under existing conditions, onsite parking for the SRI International Campus is provided primarily in large surface parking areas, resulting in extensive impervious areas and limited opportunities for landscaping and accessible open space. Parkline would demolish existing surface parking areas, and instead would provide three above-ground parking garages, two one-level below-ground parking garages, podium parking, and limited surface parking to provide parking for all uses. Parkline proposes low parking ratios that are consistent with other transit-oriented projects within the City and reflect Parkline's proximity to the Menlo Park Caltrain station and implementation of this TDM Plan. Reduced parking ratios are well regarded as a key strategy in reducing vehicle trips and resulting VMT.

BICYCLE MAINTENANCE SERVICES - QTY. 1

BICYCLE REPAIR STATION - QTY. 5

S SHORT-TERM BICYCLE PARKING (SEE PLAN FOR QUANTITIES)
 L LONG-TERM BICYCLE PARKING (SEE PLAN FOR QUANTITIES)

Figure 5
 Project Bicycle Facilities

Parkline’s parking ratio is one space per multifamily unit; 0.5 space per BMR unit within the dedicated area for the 100% affordable units; and 2 spaces per 1,000 SF for commercial office/R&D uses.¹

3.3.2 Parkline C/CAG TDM Policy Checklist Compliance

Fehr & Peers evaluated the residential and office/R&D components of Parkline using the appropriate C/CAG TDM Policy Checklist. Based on the size of the residential and office/R&D components, Parkline falls into the following land use categories for purposes of the C/CAG TDM Policy:

- **Residential (Multi-Family) Land Use: Large Project** with average daily trips (ADT) of >500 trips and more than 50 dwelling units.
- **Non-Residential (Office, Industrial, Institutional) Land Use: Large Project** with ADT of >500 trips and more than 50,000 square feet.

Parkline qualifies as a transit oriented development (TOD) since it is located less than one half-mile from high quality transit service (Caltrain). The C/CAG TDM Checklist trip reduction target for TOD projects is 25%.

The estimated trip reduction for Parkline’s residential component from the C/CAG TDM Checklist Required and Additional Recommended Measures yielded 30.0%. The estimated trip reduction for Parkline’s office/R&D component from the Required and Additional Recommended measures yielded 35.5%. These levels of trip reductions were achieved without the provision of transit passes/subsidies for employees and residents. However, Parkline proposes to provide transit passes or subsidies, therefore, the total reductions would be anticipated to result in further trip reductions of 40.0% and 45.5%, respectively.

Table 4 shows the C/CAG checklist scoring for each of the Parkline components with and without transit passes or subsidies. The completed C/CAG TDM checklists are included in **Appendix A**.

Table 4: C/CAG TDM Checklist Scores

Land Use	Provide Transit Passes	Required Measures	Additional Recommended Measures	Total Reduction	C/CAG Target Reduction
Residential (Multi-Family): Large Project	No	8.5%	21.5%	30.0%	25%
Residential (Multi-Family): Large Project	Yes	18.5%	21.5%	40.0%	25%
Non-Residential (Office): Large Project	No	15.0%	20.5%	35.5%	25%
Non-Residential (Office): Large Project	Yes	25.0%	20.5%	45.5%	25%

Source: Fehr & Peers, August 2023.

¹ For reference, the default parking requirement for the C-1 zoning district is 1 space per 200 SF

4. TDM Monitoring Plan

This section will be added later.

C/CAG TDM Checklists

Parkline C/CAG Large Residential TDM Checklist

500+ ADT; ~50+ Units

About this Form

Any new development project anticipated to generate at least 100 average daily trips is subject to the C/CAG TDM Policy and must complete a TDM Checklist and implement associated measures to mitigate traffic impacts. [Read more at ccagtdm.org](http://ccagtdm.org)
